Change Your Body with LEANSPA!

In a pilot study on 17 subjects, the LeanSpa Formula showed a significant, average weight loss over a 2-month period. More important, the change in weight was PROPER weight loss in that the subjects lost fat while gaining muscle, weight loss from dietary changes alone causes loss of muscle as well as fat.

Also, many weight loss/dieting regimens result in bone mineral loss, an undesirable outcome. This was not the case with LeanSpa. Much of the observed fat loss in this study occurred in the abdominal region, the area of most concern to physicians. Decreases in abdominal fat are important to physicians who understand that accumulation of fat in this area seems to be closely associated with many chronic disorders, such as blood pressure elevations, diabetes, and perturbations of circulating lipids in the blood.

At least part of the weight loss in this study is accounted for by an 8% increase in basal metabolism, approximating over starting values. Notably, blood pressure and heart rate were virtually unchanged even though a significant increase in the basal metabolic rate occurred. Blood work revealed no significant adverse side effects, and various psychological testings suggest improvement in the quality of life and an improvement in healthy eating habits.

By Dr. Harry Preuss author of the "The Natural Weight Loss Pharmacy" and leading researcher on dietary supplements.

The Media is SOLD on Acai

News MEDIA

Acai berries are among the most nutritious foods of the Amazon, rich in B vitamins, minerals, fiber, protein and omega-3 fatty acids. Acai berries also contain oleic acid (omega-9), a beneficial fatty acid (often mistakenly referred to as essential).

*Graph depicts results from 3 individual study subjects out of 17 participants who completed the study. Other individual participant results varied. The study was an open label 60 day short term trial to assess safety and efficacy. LeanSpa continues to invest in research and is in the process of developing next phase research with a larger double blind placebo controlled trial.

News MEDIA

Studies show that the acai berry is one of the most nutritious foods in the world. Acai pulp contains 10 times more antioxidants than red grapes and 10 to 30 times the anthocyanins of red wine: a synergy of dietary fiber and phytoesters to help promote cardiovascular and digestive health.

News MEDIA

Acai is packed full of antioxidants, amino acids and essential omegas. The pulp also contains a concentration of antioxidants, to help combat premature aging, with 10-30 times the anthocyanins of red wine. Acai has an almost-perfect essential amino acid complex vital to proper muscle contraction and regeneration.

Sculpt your Body and Melt Away Tummy Fat with an Optimum Combination of Weight-Loss Ingredients*

Acai

The Acai Berry has one of the highest antioxidant value of any edible substance in the world - 50 times that of red grapes!

Green Tea

Green tea helps promote fat burning and provides EGCG, a powerful metabolism booster and an essential anti-oxidant.

Octopamine HCL

Octopamine HCL stimulates receptors involved in the processes of fat metabolism that directly cause fatty acids to be released from the adipose tissue and metabolized.

Caffeine

Caffeine acts as a dietary aid to promote increased fat oxidation and breakdown.

5-Hydroxytryptophan

5-HTP increases the production of serotonin. Serotonin is essential for weight loss as it is a brain chemical which controls appetite. Serotonin is the satiety or satisfaction chemical. When your brain makes more serotonin, your appetite is more readily controlled, for example your thirst is when you drink enough water.

Garcinia Cambogia

HCA works by blocking lipogenesis or conversion of starches and sugars into fat that is stored and increases our weight. HCA also lessens existing fat through increased breakdown. Additionally, HCA raises the levels of Serotonin that have a role in appetite regulation.

Chromium

Chromium may help to control type 2 diabetes or the glucose and insulin responses in persons at high risk of developing the disease. Additionally, chromium can have an impact on blood lipid levels. Studies indicate that chromium can decrease total and low-density-lipoprotein (LDL or "bad") cholesterol and triglyceride levels and increased concentrations of apolipoprotein A (a component of high-density-lipoprotein cholesterol known as HDL or "good" cholesterol)
