

This letter concerns every multilevel distributing company.

The F.T.C. is trying to make things harder, or possibly make it so difficult for all people concerned, & that number runs into thousands not only distrib but the Management of those companies. All companies around the world will be watching, it won't be going unnoticed. Even top contestants, have been known to make mistakes. No one is infallible & to think so one would have to be ~~bloody stupid~~. So okay read this letter very carefully & re-think along the lines.

Here is why the decision would be wrong. Not thousands of not even distributors, but all people as we would be affected, & those people would run into millions. It would also affect Companies, very reputable Companies at that. People like

Donald Trump, will be undoubtably be taking, very careful notice of what is happening & of the decisions made by F.T.C. Also very reputable business, people Randy Ray & Wendy Lewis the Co-owners & Co-Founders of FFI my business & myself are proud to be members!

reputable people, we have also found the Com
be extremely caring about their distributors, we
looking forward to meeting Ray & Wendy into the
future. We would also like to meet Donal
his, efforts have helped, so many millions of
American people in the past, & people like
& Ray & Wendy Lewis, will continue into the
future.

No 2 It would affect thousands of user
people, we can't afford to do that.

No 3 It would affect Companies, also distri

No 4. It would cost the government, me
& into the future Billions of dollars. Obv
not enough careful thought has been put in
we urge the FTC to again re think carefully
the decision would affect them personally, &
financially now & into the future.

No 5 It would affect our trade with other
countries, if you think I'm wrong, then re think

No 6 It will no doubt, step onto the wrong
of very large Companies, not only here but all
the globe.

7 I would be surprised if John Howard
would see, such a stupid decision to be
To make such a decision would be impossible
every Australian person. I'm trying to keep it
letter polite.

8 Thousands & thousands of poor & middle
income earners, would be affected. They co

have better efficiency out of all vehicles & vehicles into the future that run on different fuels, well as having other benefits of these vehicles like smoother running, easier starting etc.

¶ The effects would affect our government, the spill offs in many other different ways, think about it. There is no way this decision can made fast. In my words, there is no way a bloody stupid, & irresponsible decision can put forward by the F.T.C. To whoever came with this idea, wants to re think fast, & correct the mistake to the F.T.C

As I said before mistakes have been made experts there is no shame in that, but there would be if such a decision were to be passed. I'm sure there is people there that have more brains? but they have got me thinking, along with thousands of others. By reading & thinking carefully, I've decided to put my thoughts on the matter, to whoever it concerns.

I can only say once again, to the F.T.C. to be more careful before they even think of making any decisions. Because they have shown to not only Australians, but to people overseas that they maybe capable of making extremely bad decisions for now & maybe into the future. It would have to have a dramatic effect on how to whom anyone voted. Thank you.
