

on) an alternative concentration of 3.7 ppt TEQ in residential soil and 17 ppt TEQ in commercial/industrial soil as draft interim PRGs. These alternative draft interim PRGs would be protective for cancer and non-cancer effects and are consistent with the NCP provision for PRGs reflecting a 1E-06 risk level as a point of departure for determining remediation goals. OSWER notes that PRGs based on a 1E-06 cancer risk level would likely be within or possibly below the average concentration of dioxins in rural U.S. soils. Generally, it is OSWER's policy not to clean below background (for more information about this policy visit <http://cfpub.epa.gov/ncea/CFM/recorisplay.cfm?deid=150944>).

Dated: December 30, 2009.  
**Mathy Stanislaus,**  
*Assistant Administrator, Office of Solid Waste and Emergency Response.*

**BILLING CODE 6560-50-P**

Commission and the Assistant Attorney General advance notice and to wait designated periods before consummation of such plans. Section 7A(b)(2) of the Act permits the agencies, in individual cases, to terminate this waiting period prior to its expiration and requires that notice of this action be published in the **Federal Register**.

**FEDERAL TRADE COMMISSION**

**Granting of Request for Early Termination of the Waiting Period Under the Premerger Notification Rules**

Section 7A of the Clayton Act, 15 U.S.C. 18a, as added by Title II of the Hart-Scott Rodino Antitrust Improvements Act of 1976, requires persons contemplating certain mergers or acquisitions to give the Federal Trade

The following transactions were granted early termination of the waiting period provided by law and the premerger notification rules. The grants were made by the Federal Trade Commission and the Assistant Attorney General for the Antitrust Division of the Department of Justice. Neither agency intends to take any action with respect to these proposed acquisitions during the applicable waiting period.

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### National Institutes of Health

#### Government-Owned Inventions; Availability for Licensing

**AGENCY:** National Institutes of Health,  
Public Health Service, HHS.

**ACTION:** Notice.

**SUMMARY:** The inventions listed below  
are owned by an agency of the U.S.  
Government and are available for  
licensing in the U.S. in accordance with  
35 U.S.C. 207 to achieve expeditious  
commercialization of results of  
federally-funded research and  
development. Foreign patent  
applications are filed on selected  
inventions to extend market coverage  
for companies and may also be available  
for licensing.

**ADDRESSES:** Licensing information and  
copies of the U.S. patent applications  
listed below may be obtained by writing  
to the indicated licensing contact at the  
Office of Technology Transfer, National  
Institutes of Health, 6011 Executive  
Boulevard, Suite 325, Rockville,  
Maryland 20852–3804; telephone: 301–

496–7057 fax: 301/402–0220. A signed  
Confidential Disclosure Agreement will  
be required to receive copies of the  
patent applications.

#### Method of Preventing and Treating Metastatic Disease

*Description of Technology:* Cancer  
that recurs as metastatic disease many  
years after primary tumor resection and  
adjuvant therapy appears to arise from  
tumor cells that disseminated early in  
the course of disease but did not  
develop into clinically apparent lesions.  
These long-term surviving,  
disseminated tumor cells maintain a  
state of dormancy, but may be triggered  
to proliferate through largely unknown  
factors. Inventors at the National  
Institutes of Health have discovered  
agents that prevent or treat recurrent  
metastatic cancer by inhibiting type I  
collagen production and downstream  
signaling through beta 1 integrin  
activation. Blocking activation of beta-1  
integrin signaling using  
pharmacological approaches or using  
RNA interference was found to prevent  
reorganization of the cytoskeleton that is  
associated with proliferation of the  
dormant tumor cells. The technology  
provides compositions and methods for  
modulating the switch from tumor cell  
dormancy to proliferation clinical  
metastatic disease in a patient by  
administering beta-1 integrin signaling  
inhibitors.

#### Applications

- Method of treating metastatic  
disease by targeting components of the  
beta-1 integrin signaling pathway.
- Method of preventing metastatic  
disease after removal of primary tumors.

*Advantage:* Discovery of beta-1  
integrin signaling pathway involvement  
provides a number of therapeutic targets

for development of novel cancer  
therapeutics.

*Market:* In the U.S., it is estimated  
that 192,370 women will be diagnosed  
with and 40,170 women will die of  
cancer of the breast in 2009. Although  
improved detection and treatment of  
primary tumors has raised the rate of  
survival there remains a high  
probability of recurrence of metastatic  
disease leading to mortality.

*Inventors:* Dalit Barkan and Jeffrey E.  
Green (NCI).

*Publications:* None related to this  
technology.

*Patent Status:* U.S. Provisional  
Application No. 61/179,641 filed 19  
May 2009 (HHS Reference No. E–192–  
2009/0–US–01).

*Licensing Status:* Available for  
licensing.

*Licensing Contact:* Surekha Vathyam,  
PhD, 301–435–4076;  
[vathyams@mail.nih.gov](mailto:vathyams@mail.nih.gov).

*Collaborative Research Opportunity:*  
The Center for Cancer Research,  
Laboratory of Cancer Biology and  
Genetics, is seeking statements of  
capability or interest from parties  
interested in collaborative research to  
further develop, evaluate, or  
commercialize this technology. Please  
contact John D. Hewes, PhD at 301–435–  
3121 or [hewesj@mail.nih.gov](mailto:hewesj@mail.nih.gov) for more  
information.

#### Diamidine Inhibitors of Tdp1 as Anti- Cancer Agents

*Description of Technology:* Available  
for licensing and commercial  
development are methods and  
compositions for treating cancer, using  
novel compounds derived from  
diamidine. Diamidine and its  
derivatives are potent inhibitors of  
tyrosyl-DNA-phosphodiesterase (Tdp1),  
which may be useful in chemotherapy.
