1 System Overview

1.1 Describe the project/system and its purpose.

Microsoft 365 (M365) is a Software-as-a-Service (SaaS) product that combines the familiar Office Productivity suite with online versions of Microsoft's next-generation communications and collaboration services. M365 will allow the FTC to simplify administration of licenses and subscriptions to services at an enterprise level and facilitate system-wide user management, password administration, and oversight of security controls. The initial M365 implementation centers on Outlook, with other applications to follow. This privacy impact assessment (PIA) evaluates privacy implications for FTC's use of the cloudbased M365 service products listed below:

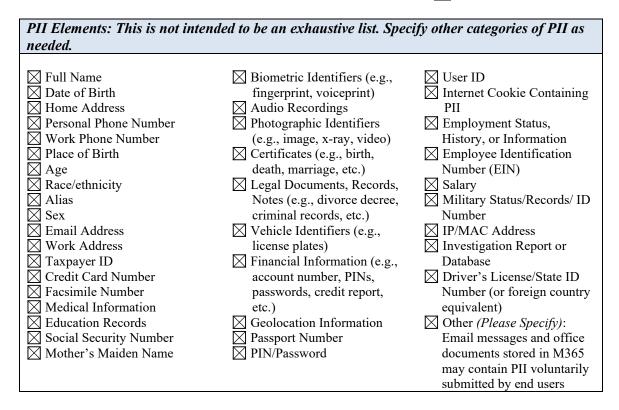

- MS Teams business collaboration communication platform that provides audio and video conferencing and application integration
- OneDrive file hosting and synchronization service
- Outlook email system that includes such functions as calendar, task manager, contact manager, notes, etc.
- SharePoint collaborative platform that allows for document management and storage
- Word word processing software
- Excel spreadsheet application that allows for calculation, graphing, and macro programming
- PowerPoint presentation application that allows for text, graphics, as well as video and audio clips
- OneNote notetaking program for free-form information gathering and multi-user collaboration
- Access database management system

1.2 What specific legal authority allows for the collection, maintenance, or dissemination of information for this project/system?

The information in this system is collected, maintained and disseminated pursuant to the Federal Trade Commission Act, 15 U.S.C. §§ 41-58, and <u>other laws and regulations</u> the Commission enforces.

2 Data Type, Sources, and Use

2.1 Specify in the table below what types of personally identifiable information (PII)¹ may be collected or maintained in the system/project. Check <u>all</u> that apply.

2.2 What types of information other than PII will be collected, disseminated, or maintained by the project/system? Provide a general description below and be sure to include all data elements.

The FTC houses a variety of non-PII information in M365 depending on the needs and purposes of the offices that use this software. Documents that could be created or housed in M365 applications may include a variety of law enforcement documents, internal staff memoranda, Congressional correspondence, and Federal Register notices of Rulemakings.

The MS Teams application allows for individuals to send messages to participants while in an active virtual meeting. These messages appear in the chat box and are visible to all participants in the meeting. Messages exchanged could contain any type of information; this information is not logged or maintained by the FTC. Participants cannot retrieve these messages after the meeting has adjourned, nor are they saved to the platform. The capability to record virtual meetings is not available to individual users but is controlled by the OCIO Media team group. A request to have a virtual meeting recorded must be submitted with

¹ Per OMB Circular A-130, personally identifiable information (PII) means information that can be used to distinguish or trace an individual's identity, either alone or when combined with other information that is linked or linkable to a specific individual.

sufficient justification and all participants are then notified of the intent to record; and therefore have the option to not participate.

2.3 What is the purpose for collection of the information listed above?

Information in M365 applications is collected, used, disseminated, and maintained for the Commission to perform its law enforcement, policy, personnel management, and other activities. Due to the range of supported services, personal information may be present for a variety of reasons in the course of conducting communication, collaboration, creation and management of records, and information security.

2.4 What are the sources of the information in the system/project? How is the information collected?

Source of Data	Type of Data Provided & How It Is Collected
FTC Staff and	FTC staff and contractors upload data that has been created or
Contractors	obtained in connection with the Commission's law
	enforcement, policy and other activities. User-created content
	may also include information in the user's profile, within MS
	Teams, in emails, calendars, and other information voluntarily
	stored within M365.
Members of the Public	The public's information is not collected directly by M365.
	However, information provided by and pertaining to members
	of the public may be stored in M365. These individuals may
	include consumers, witnesses or individual targets in law
	enforcement matters, individuals commenting on agency
	rulemakings and workshops, etc. They also include
	participants in virtual meetings conducted via MS Teams.
	When FTC employees and contractors initiate and/or
	participate in meetings with external parties, information
	pertaining to those individuals (names and email addresses)
	are collected and maintained in M365.

3 Data Access and Sharing

3.1 In the table below, specify the systems/applications and groups (both FTC and non-FTC) that will have access to or share data in the system/project.

Data Will Be Accessed By and/or Provided To:	How and Why the Data Will Be Accessed/Shared
FTC Staff	Access to M365 is restricted to authorized FTC end users.
	All end users must adhere to the FTC Rules of Behavior.
	Access to the information stored within M365 is dependent
	on the particular business purpose and the access

Data Will Be Accessed By and/or Provided To:	How and Why the Data Will Be Accessed/Shared
	permissions granted to a specific user. For example, system
	administrators may have access to system data and system
	audit logs to manage access roles, monitor system usage,
	perform system audits, and complete other necessary job
	functions.
FTC Contractors	FTC may have contractor support within program areas, and
	these contractors will have access to the information in
	M365 as required to perform their duties.
Office of Inspector	Under appropriate circumstances, data showed within M365
General (OIG)	or M365 log data may be provided to the OIG for auditing or
	law enforcement purposes.
Members of the Public	While non-FTC individuals do not have direct access to FTC
	data maintained in M365, they have access to their own
	account information in MS Teams. Users can choose to
	upload their own profile picture, manage contacts, and call
	settings, etc.

3.2 Do contractors and/or third party service providers have access to data in the project/system? If yes, explain what privacy requirements are in place to ensure that data is properly protected.

Authorized FTC contractors have access to information in M365, when necessary. Some authorized FTC contractors have access to M365 simply as users, and one or more authorized FTC contractors has access to certain administrative functions.

All FTC contractors are required to sign nondisclosure agreements, complete security and privacy training prior to obtaining access to any FTC systems, and complete annual security and privacy training to maintain network access and access to those systems.

3.3 If you answered "yes" to 3.2, describe the privacy incident response plan maintained by the contractor's organization or third party service provider.

Contractors who access M365 are subject to the same rules and policies as FTC staff. Contractors must also follow the reporting and other procedures in the FTC's Breach Notification Response Plan.

4 Notice and Consent

4.1 How are individuals provided with notice prior to the collection of their PII? If notice is not provided, explain why.

Wherever possible, the FTC provides timely and effective notice to the public and/or to individuals about activities that impact privacy. For information that is collected pursuant to a request from the FTC, notice is provided as part of that request. The FTC's Privacy Act statements are included on all forms, websites, and other instruments by which Privacy Act information is collected from individuals, either in written or oral form. For those occasions where the FTC cannot provide notice at the time the information is collected (e.g., when the information is collected by another law enforcement agency or another organization), the FTC provides notice via its Privacy Policy, its Privacy Act system of records notices (SORNs), and its PIAs, including this one.

\boxtimes Notice is provided via (<i>check all that apply</i>):	
\boxtimes Privacy Act Statement (\boxtimes Written \square Oral)	
FTC Website Privacy Policy	
Privacy Notice (e.g., on Social Media platforms)	
Login banner	
Other (<i>explain</i>):	

Notice is not provided (explain):

4.2 Do individuals have the opportunity to decline to provide information or to consent to particular uses of their information (other than required or authorized uses)?

The opportunity or right depends on how the information is collected. The FTC does not use M365 to collect information, including PII, directly from the public. However, FTC staff and contractors use M365 in furtherance of the FTC's law enforcement or policy mission. Information collected through other sources, which includes PII, is maintained in M365. Please see the list of the <u>FTC's Privacy Impact Assessments</u> for more information on how the FTC collects information from the public.

For example, FTC staff may include information obtained from a consumer complaint filed with the FTC's Consumer Sentinel Network in a document (Word) or an email (Outlook) that includes PII from members of the public. In that instance, the consumer has notice and opportunity to decline to provide information prior to filing the complaint. However, when PII obtained from a company pursuant to compulsory process is included in M365, individuals may not have received notice or been provided with an opportunity to decline to provide the information.

4.3 Are there procedures in place to allow individuals access to their personally identifiable information? Explain.

An individual may make a <u>request under the Privacy Act</u> for access to information maintained and retrieved according to personal identifier by the FTC about themselves in the FTC's Privacy Act systems, including any data stored in M365 applications. The FTC's Privacy Policy provides links to the FTC's <u>System of Records Notices (SORNs)</u>, as well as information about making <u>Freedom of Information Act (FOIA) requests</u> and the <u>online FOIA request form</u>. Individuals seeking access must follow the FTC's Privacy Act rules and procedures, published in the Code of Federal Regulations (C.F.R.) at 16 C.F.R. 4.13. Access to information under the Privacy Act is subject to certain exemptions.

4.4 Are there procedures in place to allow individuals the ability to correct inaccurate or erroneous information? What is the process for receiving and responding to complaints, concerns, or questions from individuals? Explain.

As specified above in Section 4.3, to the extent the Privacy Act applies, the FTC provides a process for individuals to correct or amend any inaccurate PII maintained by the FTC, including any information that may be stored in M365. The FTC's Privacy Policy provides links to the FTC's SORNs, which include information about how to correct or amend records. An individual may make a request under the Privacy Act for access to information maintained by the FTC about themselves in Privacy Act systems, including data in M365. Access to the information under the Privacy Act is subject to certain exemptions. Individuals may also file FOIA requests for agency records about them (if they are not exempt from disclosure to them under those laws). Additionally, individuals may contact the FTC with any complaints, questions or concerns via phone or email available on www.ftc.gov or contact the Chief Privacy Officer directly. Where appropriate, the FTC disseminates corrected or amended PII to other authorized users of that PII, such as external information sharing partners.

5 Data Accuracy and Security

5.1 Are there procedures in place to ensure that the information maintained is accurate, complete, and up-to-date?

Due to the nature of the system and the anticipated broad use of these services across the enterprise, information that is stored in M365 generally will not be checked for accuracy, completeness, accuracy, completeness, or currency. It is the responsibility of the user to ensure the completeness, accuracy and currency of data at the time it is created or used.

Information that is used by the FTC as part of its law enforcement and other activities will be reviewed for accuracy and timeliness as required by the particular activity and the laws and authorities, if any, applicable at the time the agency compiles the records (e.g., FTC Act, personnel laws, administrative or court evidentiary rules and procedures).

System administrators ensure user information is complete and accurate for access control through Active Directory (AD) authentication, but will not ensure that data created or entered by end users is complete, accurate, or current. AD is updated immediately when a user account is disabled or terminated. User contact information is removed once the user account is deleted. Within the organization, users have the ability to enter their own information and to ensure that it is current.

5.2 Are there administrative procedures and technical safeguards in place to protect the data in the system/project? What controls are in place to ensure proper use of the data? Please specify.

FTC's M365 implementation is not accessible to anyone outside the FTC. The principle of least privilege is used to grant access to FTC staff and contractors, and user actions are tracked in the M365 audit logs. All potential FTC staff and contractors are subject to background investigations and suitability reviews in accordance with OPM guidance. Before accessing M365, these individuals must first attend new employee orientation and successfully complete the FTC's Information Security Awareness and Privacy training. All staff must annually acknowledge procedures for handling PII – including minimizing PII – and attest that all PII maintained by the individual has been properly secured and accounted for as part of the FTC's annual privacy and security training.

5.3 Is PII used in the course of system testing, training, or research? If so, what steps are taken to minimize and protect PII during this process?

Not Applicable. The FTC does not use PII to conduct M365 system testing, training, or research.

6 Data Retention and Disposal

6.1 Specify the period of time that data is retained in the system/project. What are the specific procedures for disposing of the data at the end of the retention period?

Information in the FTC M365 cloud instance is retained and destroyed in accordance with applicable FTC policies and procedures, as well as with the FTC records disposition schedule and General Records Schedules approved by the National Archives and Records Administration (NARA). FTC staff receive training and reminders about their records and destruction obligations. All information will be securely and irreversibly disposed of/destroyed in accordance with applicable FTC policies and procedures, OMB, NARA, and NIST regulations and guidelines.

7 Website Privacy Evaluation

7.1 Does the project/system employ the use of a website? If so, describe any tracking technology used by the website and whether the technology is persistent or temporary (e.g., session cookie, persistent cookie, web beacon). Describe the purpose of using such tracking technology.

No. The FTC's M365 configuration is an intranet site accessible through the FTC network, and only FTC staff and contractors have access to it. Temporary and session cookies keep M365 from timing out while a user is logged into it, but these cookies are used for internal purposes only. M365 does not collect information directly from the public.

8 Privacy Risks and Evaluation

Risk	Mitigation Strategy
Misuse of data by	Prior to receiving access to the FTC's network, all users must
authorized users	agree to the FTC Rules of Behavior, which includes consent
	to monitoring and restrictions on data usage.
Unauthorized system	All users must have an FTC account and government-issued
access	personal identity verification (PIV) card to access M365.
	FTC's user identity management processes include
	authentication with Active Directory (AD) to control and
	manage access restrictions to authorized personnel on an
	official need-to-know basis. The FTC utilizes a combination
	of technical and operational controls to reduce risk in the
	M365 environment, such as encryption, passwords, audit
	logs, firewalls, malware identification, and data loss
	prevention policies. As a FedRAMP-approved cloud service
	provider, M365 undergoes regular reviews of its security
	controls.
Data leakage	The contract between FTC and M365 does not allow the
	service provider to access, review, audit, transmit, or store
	FTC data, which minimizes privacy risks from the vendor
	source.

8.1 Considering the type of information collected and sources of collection, what privacy risks were identified and how were these risks mitigated?

8.2 Does the project/system employ the use of automated privacy controls or enhanced capabilities designed to support privacy? Explain.

User access is managed through the FTC's Active Directory (AD) infrastructure, which uniquely identifies, authenticates, and applies permissions to authorized user sessions based on FTC policies and procedures. This allows the FTC to leverage organizational multifactor authentication solutions, including FIPS-201 compliant PIV cards, already deployed to meet

internal identification and authentication requirements. The use of AD also allows automatic enforcement of certain policies and requirements, such as password complexity and maximum log in attempts, for organizational users.

Additionally, FTC security policies require automated monitoring of information system components with regard to flaw remediation.

8.3 Has a Privacy Act System of Records Notice (SORN) been published in the Federal Register for this system/project? If so, list the applicable SORN(s).

M365 does not itself require a SORN; however, SORNs that cover documents and records in M365 that are considered part of Privacy Act systems are accessible at <u>https://www.ftc.gov/site-information/privacy-policy/privacy-act-systems</u>.

8.4 How does the project/system ensure that the information is collected, used, stored, or disseminated in accordance with stated practices in this PIA?

The administrative and technical controls described in section 5.2 of this document provide assurance that the collection, use, and maintenance of the information will be conducted as described in this PIA. This PIA aligns with the FTC's existing privacy policies and procedures.
