FEDERAL TRADE COMMISSION
BUREAU OF COMPETITION

DEPARTMENT OF JUSTICE
ANTITRUST DIVISION

ANNUAL REPORT TO CONGRESS
FISCAL YEAR 2002

Pursuant to Subsection (j) of Section 7A of the Clayton Act
Hart-Scott-Rodino Antitrust Improvements Act of 1976
(Twenty-Fifth Report)

Timothy J. Muris
Chairman
Federal Trade Commission

R. Hewitt Pate
Assistant Attorney General
Antitrust Division

INTRODUCTION

The Hart-Scott-Rodino Antitrust Improvements Act of 1976 ("HSR Act" or the "Act"), together with Section 13(b) of the Federal Trade Commission Act and Section 15 of the Clayton Act, gives the Federal Trade Commission (the "Commission") and the Antitrust Division of the Department of Justice (the "Antitrust Division" or "Division") the opportunity to obtain effective preliminary relief against anticompetitive mergers and to prevent interim harm to competition and consumers. The premerger notification program was instrumental in detecting transactions that were the subject of the numerous enforcement actions brought in fiscal year 2002 to protect consumers -- individuals, businesses, and government -- against anticompetitive mergers.

Fiscal year 2002 marked the first full year of operation under the extensive reforms to the HSR Act.[1] The increase in the reporting thresholds inherently resulted in a decrease in the number of reportable transactions as did the overall decline in merger activity from that of recent years. (*See* Figure 1 below.) In fiscal year 2002, 1,187 transactions were reported under the Act, representing about a 50 percent decrease from the number of transactions reported in fiscal year 2001, and about a 76 percent decrease from the 4,926 transactions reported in fiscal year 2000, the last full fiscal year under the previous reporting thresholds.[2]

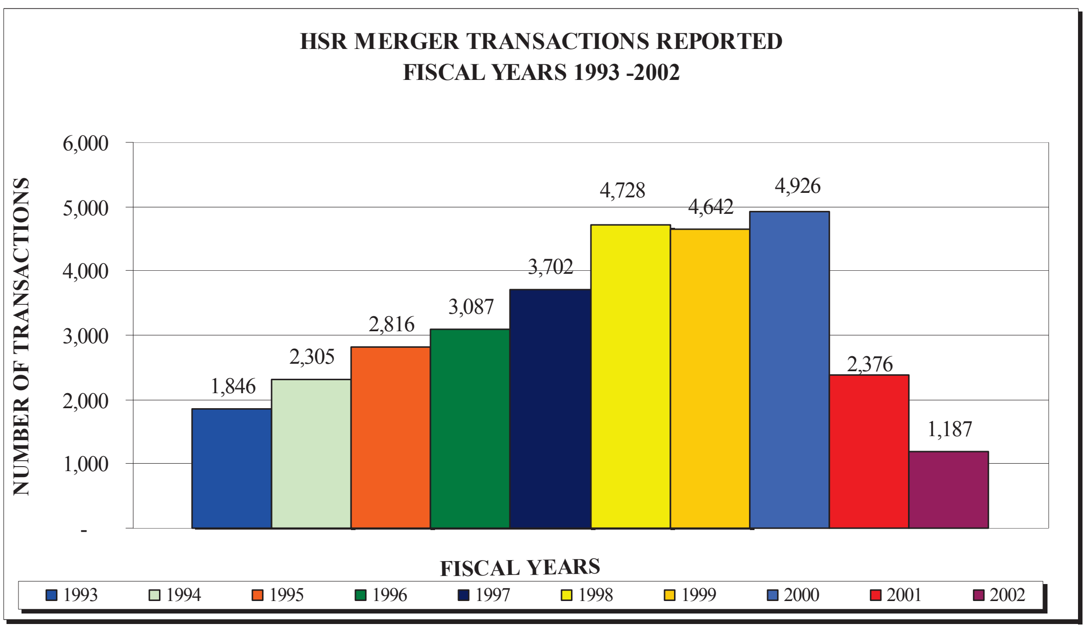

Figure 1

During the year, the Commission challenged twenty-four transactions, leading to ten consent orders, two administrative complaints, and seven abandoned transactions. The

---

[1] Section 630 of the Department of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations Act, FY 2001, Pub. L. No. 106-553, 114 Stat. 2762. The legislation, which became effective February 1, 2001, raised the size-of-transaction threshold from $15 million to $50 million and made other changes to the filing and waiting period requirements.

[2] *See* Appendix A.

Commission also authorized staff to seek injunctive relief in five matters, one of which was filed in district court. Most notably, the Commission challenged the proposed merger of Nestle Holdings, Inc., the world's largest food producer, and Ralston Purina Company,[3] the world's largest producer of dry pet foods. The merger would have eliminated direct competition between the companies in the dry cat food market and increased the likelihood of higher prices for consumers. The Commission also challenged the proposed merger of Valero Energy Corporation and Ultramar Diamond Shamrock Corporation,[4] which would have likely increased the price of California Air Resources Board ("CARB") gasoline for consumers in California due to loss of competition from the merger.

The Antitrust Division challenged ten merger transactions, leading to two consent decrees, two abandoned transactions, and five other transactions that were restructured after the Division informed the parties of its antitrust concerns relating to the transaction. The Division's merger challenges included General Dynamics Corporation's proposed acquisition of Newport News Shipbuilding, Inc., which would have eliminated competition for nuclear submarines and harmed competition for other military ships.[5] The Division also challenged Archer-Daniels-Midland Company's proposed acquisition of Minnesota Corn Processors[6] that, as originally structured, would have reduced the number of independent competitors in the corn wet milling industry to four, making coordination among the remaining firms more likely.

In fiscal year 2002, the Commission's Premerger Notification Office ("PNO") continued to respond to thousands of telephone calls seeking information concerning the reportability of transactions under the HSR Act and the details involved in completing and filing the Notification and Report Form ("the filing form"). The HSR website, www.ftc.gov/bc/hsr/, continued to provide improved access to information necessary to the notification process. The website includes such information as the premerger notification filing form and instructions, the premerger notification statute and rules, formal interpretations of the rules, grants of early termination, filing fee instructions, HSR events, tips for completing the filing form, procedures for submitting post-consummation filings, frequently asked questions regarding the HSR filing requirements, and other useful information. In particular, the website is the paramount source of information for HSR practitioners seeking information on the changes to the Act and the premerger rules as a result of last fiscal year's HSR reform legislation, and includes Federal Register notices finalizing the rules. A recent addition is a database of informal interpretation letters which provide PNO staff interpretations of the premerger notification rules and the Act.

This fiscal year the PNO staff continued its outreach efforts by providing an in-depth introductory seminar about the HSR filing requirements, specifically targeting new HSR

---

[4] *See infra* p. 16.

[5] *See* infra p. 10.

[6] *See infra* p. 10.

practitioners and others who are not familiar with the program, and incorporated those seminar materials on the website.

BACKGROUND OF THE HSR ACT

Section 201 of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, Pub. L. No. 94-435, amended the Clayton Act by adding a new Section 7A, 15 U.S.C. §18a. Subsection (j) of Section 7A provides:

> Beginning not later than January 1, 1978, the Federal Trade Commission, with the concurrence of the Assistant Attorney General, shall annually report to Congress on the operation of this section. Such report shall include an assessment of the effects of this section, of the effects, purpose, and the need for any rule promulgated pursuant thereto, and any recommendations for revisions of this section.

This is the twenty-fifth annual report to Congress pursuant to this provision. It covers fiscal year 2002 -- October 1, 2001 through September 30, 2002.

In general, the Act requires that certain proposed acquisitions of voting securities or assets must be reported to the Commission and the Antitrust Division prior to consummation. The parties must then wait a specified period, usually 30 days (15 days in the case of a cash tender offer or a bankruptcy sale), before they may complete the transaction. Whether a particular acquisition is subject to these requirements depends upon the value of the acquisition and, in certain acquisitions, the size of the parties as measured by their sales and assets. Small acquisitions, acquisitions involving small parties, and other classes of acquisitions that are less likely to raise antitrust concerns are excluded from the Act's coverage.

The primary purpose of the statutory scheme, as the legislative history makes clear, is to provide the antitrust enforcement agencies with the opportunity to review mergers and acquisitions before they occur. The premerger notification program, with its filing and waiting period requirements, provides the agencies with both the time and the information necessary to conduct this antitrust review. Much of the information for a preliminary antitrust evaluation is included in the notification filed with the agencies by the parties to the proposed transactions and is immediately available for review during the waiting period.

However, if either agency determines during the waiting period that further inquiry is necessary, it is authorized by Section 7A(e) of the Clayton Act to issue a request for additional information and documentary material ("a second request"). The second request extends the waiting period for a specified period after all parties have complied with the request (or, in the case of a tender offer or a bankruptcy sale, after the acquiring person complies).[7] This additional time provides the reviewing agency with the opportunity to

[7] Under the statutory changes cited in footnote 1, this waiting period extension was increased to 30 days for most transactions. The 10-day waiting period extension for cash tender offers and bankruptcies remains the same.

analyze the information and to take appropriate action before the transaction is consummated. If the reviewing agency believes that a proposed transaction may substantially lessen competition, it may seek an injunction in federal district court to prohibit consummation of the transaction.

The Commission, with the concurrence of the Assistant Attorney General, promulgated final rules implementing the premerger notification program on July 31, 1978. At that time, a comprehensive Statement of Basis and Purpose was also published, containing a section-by-section analysis of the rules and an item-by-item analysis of the filing form. The program became effective on September 5, 1978. The Commission, with the concurrence of the Assistant Attorney General, has amended the rules and the filing form on several occasions over the years to improve the program's effectiveness and to lessen the burden of complying with the rules.[8]

A STATISTICAL PROFILE OF THE PREMERGER NOTIFICATION PROGRAM

The appendices to this report provide a statistical summary of the operation of the premerger notification program. Appendix A shows, for a ten-year period, the number of transactions reported,[9] the number of filings received, the number of merger investigations in which second requests were issued, and the number of transactions in which requests for early termination of the waiting period were received, granted, and not granted. Appendix A also shows for fiscal years 1993 through 2002 the number of transactions in which second requests could have been issued, as well as the percentage of transactions in which second requests were issued. Appendix B provides a month-by-month comparison of the number of transactions reported and the number of filings received for fiscal years 1993 through 2002.

The statistics set out in these appendices show that the number of transactions reported in fiscal year 2002 decreased approximately 50 percent from the number of transactions reported in fiscal year 2001. In fiscal year 2002, 1,187 transactions were reported, while 2,376 were reported in fiscal year 2001. The statistics in Appendix A show that the number of merger investigations in which second requests were issued in fiscal year 2002 decreased approximately 30 percent from the number of merger investigations in which second requests were issued in fiscal year 2001. Second requests were issued in 49 merger investigations in

---

[8] 43 Fed. Reg. 3443 (August 4, 1978); 43 Fed. Reg. 36053 (August 15, 1978); 44 Fed. Reg. (November 21, 1979); 45 Fed. Reg. 14205 (March 5, 1980); 48 Fed. Reg. 34427 (July 29, 1983); 50 Fed. Reg. 46633 (November 12, 1985); 51 Fed. Reg. 10368 (March 26, 1986); 52 Fed. Reg. 7066 (March 6, 1987); 52 Fed. Reg. 20058 (May 29, 1987); 54 Fed. Reg. 214251 (May 18, 1989); 55 Fed. Reg. 31371 (August 2, 1990); 60 Fed. Reg. 40704 (August 9, 1995); 61 Fed. Reg. 13666 (March 28, 1996); 63 Fed. Reg. 34592 (June 25, 1998); 66 Fed. Reg. 8680 (February 1, 2001); 66 Fed. Reg. 8723 (February 1, 2001); 66 Fed. Reg. 16241 (March 23, 2001); 66 Fed. Reg. 23561 (May 9, 2001); 66 Fed. Reg. 35531 (July 6, 2001); 67 Fed. Reg. 11898 (March 18, 2002); 67 Fed. Reg. 11904 (March 18, 2002); 68 Fed. Reg. 2425 (January 17, 2003).

[9] The term "transaction," as used in Appendices A and B, and Exhibit A to this report, does not refer only to separate mergers or acquisitions. A particular merger, joint venture or acquisition may be structured such that it involves more than one transaction. For example, cash tender offers, options to acquire voting securities from the issuer, or options to acquire voting securities from someone other than the issuer, may result in multiple acquiring or acquired persons that necessitate separate HSR transaction numbers to track the filing parties and waiting periods.

fiscal year 2002, while second requests were issued in 70 merger investigations in fiscal year 2001. While the number of second requests declined, the percentage of second request transactions increased. (*See* Figure 2 below.)

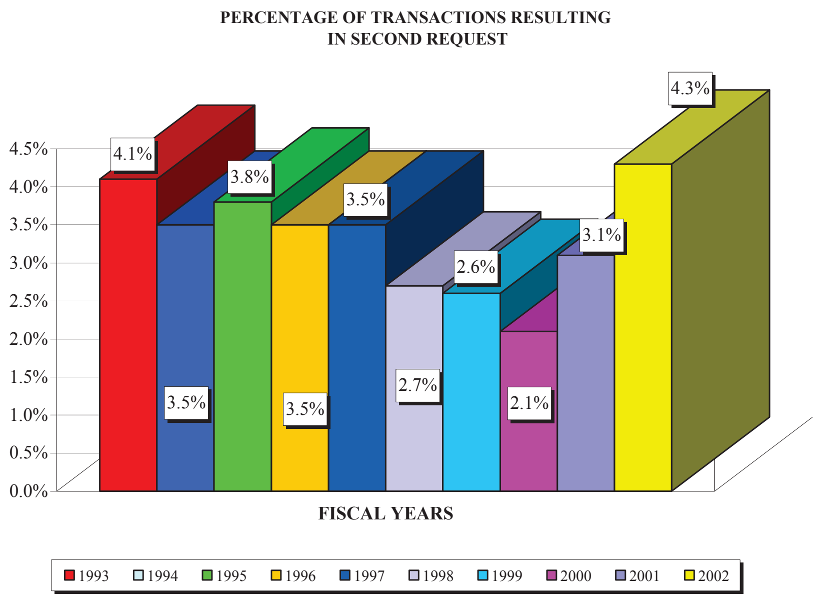

Figure 2

The statistics in Appendix A also show that in recent years, early termination was requested in the majority of transactions. In fiscal year 2002, early termination was requested in 87.8 percent (1,042) of the transactions reported while in fiscal year 2001 it was requested in 86.8 (2,063) percent of the transactions reported. The percentage of requests granted out of the total requested slightly decreased from 77.7 percent in fiscal year 2001 to 76.1 percent in fiscal year 2002.

Statistical tables (Tables I through XI) in Exhibit A contain information about the agencies' enforcement activities for transactions reported in fiscal year 2002. The tables provide, for various statistical breakdowns, the number and percentage of transactions in which clearances to investigate were granted by one antitrust agency to the other and the number of merger investigations in which second requests were issued. Table III of Exhibit A shows that, in fiscal year 2002, clearance was granted to one or the other of the agencies for the purpose of conducting an initial investigation in 18.3 percent of the total number of transactions in which a second request could have been issued.

The tables also provide the number of transactions based on the dollar value of transactions reported and the reporting threshold indicated in the notification report. The total dollar value of reported transactions rose dramatically from fiscal years 1993 to 2000 from about $222 million to about $3 trillion before declining to about $1 trillion in fiscal year 2001. During fiscal year 2002, the dollar value of reported transactions fell to about $565.4 billion.

Tables X and XI provide the number of transactions in each industry group in which the acquiring person or the acquired entity derived revenue. Figure 3 illustrates the percentage of reportable transactions within industry groups for fiscal year 2002 based on the acquired entity's operations.

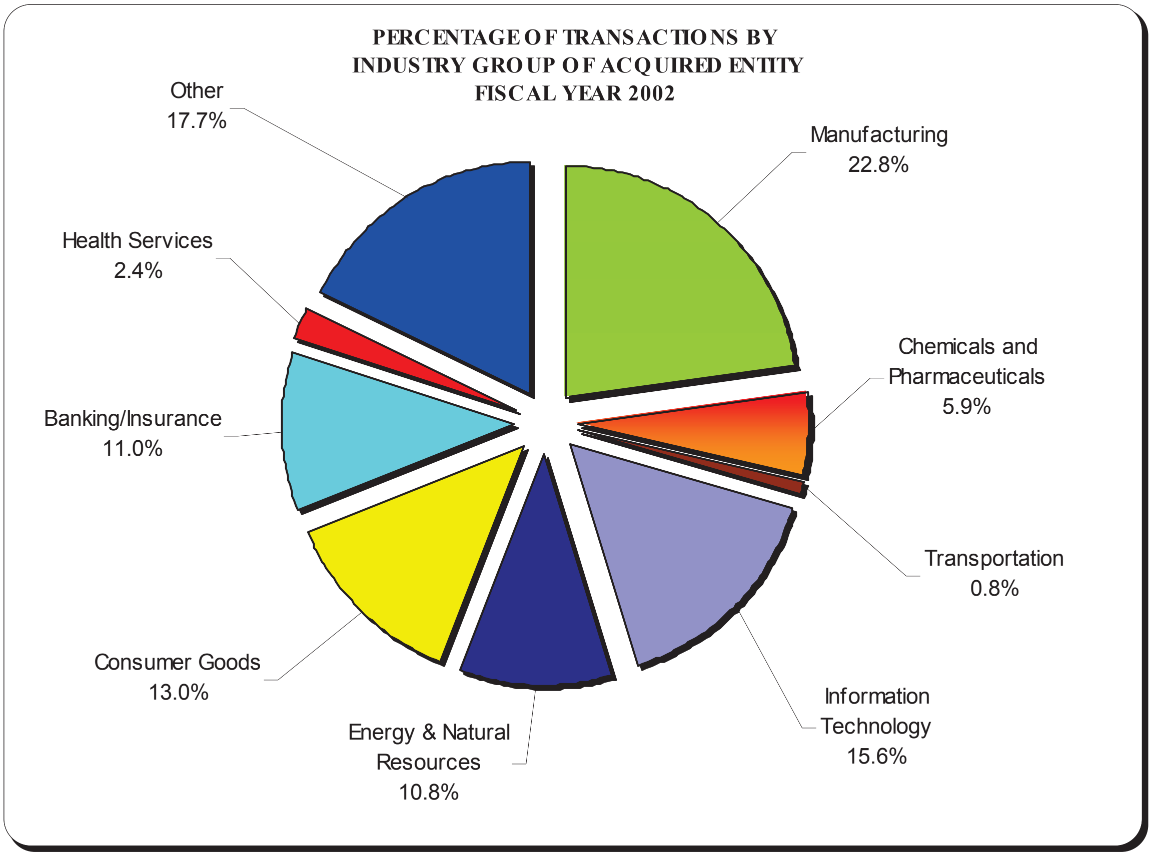

Figure 3

DEVELOPMENTS WITHIN THE PREMERGER PROGRAM

1. *Final Rules*

On February 1, 2001, the Commission, with the concurrence of the Assistant Attorney General, published two Federal Register notices resulting in significant changes to the premerger notification rules. These amendments were discussed in detail in the fiscal year 2001 Annual Report.[10]

The first 2001 Federal Register notice had published Interim Rules[11] that became effective on February 1, 2001, and incorporated the extensive statutory changes to the HSR

[10] See the Annual Report to Congress, Fiscal Year 2001 for a detailed discussion of the substantive changes.

[11] The majority of the Interim Rules became final on January 17, 2003. 68 Fed. Reg. 2425. These

AR_002164

Act into the Premerger Notification Program. In fiscal year 2002, in response to public comments, the Commission, with the concurrence of the Assistant Attorney General, modified one of the Interim Rules. The final rule restored to parties who filed prior to February 1, 2001 the full five-year period following expiration of the waiting period to acquire up to the next notification threshold that was in effect at the time of filing.[12]

The second 2001 Federal Register notice had set forth certain proposed amendments that were not necessary to implement the HSR Act, but consisted instead of updates, corrections and other improvements in the rules that the Commission determined were timely and appropriate. These proposals had included modifying Section 802.2 by removing associated agricultural assets from the agricultural property exemption, revising Section 802.6(b) regarding federal regulatory approval, and restructuring and revising Sections 802.50 and 802.51 to clarify and refocus exemptions for acquisitions of foreign assets and voting securities. During fiscal year 2002, these amendments were finalized (with some changes in response to public comment) and became effective on April 17, 2002.[13]

2. *Compliance*

The Commission and the Department of Justice continued to monitor compliance with the premerger notification program's filing and waiting period requirements and initiated a number of compliance investigations in fiscal year 2002. The agencies monitor compliance through a variety of methods, including the review of newspapers and industry publications for announcements of transactions that may not have been reported in accordance with the requirements of the Act. In addition, industry sources, such as competitors, customers and suppliers, as well as interested members of the public, provide the agencies with information about transactions and possible violations of the Act's requirements. Under Section 7A(g)(1) of the Act, any person that fails to comply with the Act's notification and waiting requirements is liable for a civil penalty of up to $11,000 for each day the violation continues.[14] In fiscal year 2002, corrective filings for thirteen transactions were received[15] and one enforcement action was brought.

---

changes included implementing the increase in the size-of-transaction threshold and the introduction of a three-tiered filing fee structure, and the elimination of Section 802.20 (which applied to acquisitions of 15% but valued at $15 million or less), as well as updating the filing form.

[12] 67 Fed. Reg. 11904 (March 18, 2002).

[13] 67 Fed. Reg. 11898 (March 18, 2002).

[14] Effective November 20, 1996, dollar amounts specified in civil monetary penalty provisions within the Commission's jurisdiction were adjusted for inflation in accordance with the Debt Collection Improvement Act of 1996, Pub. L. No. 104-134 (April 26, 1996). The adjustments included, in part, an increase from $10,000 to $11,000 for each day during which a person is in violation under Section 7A(g)(1). 61 Fed. Reg. 54548 (October 21, 1996), corrected at 61 Fed. Reg. 55840 (October 29, 1996).

[15] When the parties inadvertently fail to file, the enforcement agencies generally do not seek penalties where the parties promptly make corrective filings after discovering the failure to file, submit an acceptable explanation of their failure to file, and have not previously violated the Act.

In *The Hearst Trust*,[16] the complaint alleged that Hearst failed to submit certain key corporate documents that were required for premerger notification review under the HSR Act before acquiring Medi-Span, Inc. in 1998, and that the failure to submit these documents hindered the ability of the federal antitrust agencies to analyze the competitive effects of the acquisition prior to consummation. Hearst's acquisition of Medi-Span, its main competitor in the market for electronic integratable drug information databases, also known as integratable drug data files, allowed Hearst's First DataBank, Inc. subsidiary to institute substantial price increases to its customers for use of the electronic databases which contain clinical, pricing and other information on prescription and non-prescription drugs. Pharmacists, physicians, hospital staff, and health plans use these databases to help them provide high-quality, cost-effective patient care. Most notably, integratable drug data files are needed for pharmacists to get quick, automatic warnings of any dangerous interactions between newly prescribed drugs and other drugs their patients are already taking. A consent decree that was filed simultaneously with the complaint and entered by the court on October 15, 2001 required Hearst to pay $4 million in civil penalties, as of then the largest amount paid by a single company for a violation of the premerger notification law.

MERGER ENFORCEMENT ACTIVITY[17]

1. *The Department of Justice*

During fiscal year 2002, the Antitrust Division challenged ten merger transactions that it concluded may have substantially lessened competition if allowed to proceed as proposed. In four of these transactions, the Antitrust Division filed a complaint in U.S. district court. Two of these cases were settled by consent decree; one transaction was abandoned after filing the complaint; and one case was litigated unsuccessfully in district court. In the six other challenges during fiscal year 2002, the Antitrust Division informed the parties to a proposed transaction that it would likely file suit challenging the transaction unless the parties restructured the proposal to avoid competitive problems or abandoned the proposal altogether.[18] In five of these proposed transactions, the parties restructured the transactions;

---

[16] United States v. The Hearst Trust and The Hearst Corporation, Civil No. 1:01CV02119 (D.D.C. complaint filed October 11, 2001).

In Federal Trade Commission v. The Hearst Trust, Civ. No. 1:01CV00734 (D.D.C. complaint filed April 5, 2001), the Commission filed for a permanent injunction alleging that Hearst and First DataBank illegally acquired a monopoly in the market for electronic integratable drug information drug data files. On December 14, 2001, the Commission voted to approve a proposed settlement that required Hearst to divest the former Medi-Span business and pay $19 million as disgorgement of unlawful profits. The settlement marks the first time the Commission has sought either divestiture or disgorgement of profits in a federal court action for a consummated merger. The funds were required to be distributed to injured customers as part of the settlement of a private class action suit alleging unlawful overcharges by Hearst. The district court approved the final order and stipulated permanent injunction on December 18, 2001. See Annual Report to Congress, Fiscal Year 2001at 19-20.

[17] All cases in this report were not necessarily reportable under the premerger notification program. Because of provisions regarding the confidentiality of the information obtained pursuant to the Act, it would be inappropriate to identify which cases were initiated under the program.

[18] In four instances, the Department of Justice issued press releases: November 29, 2001 – Wells Fargo

and in one, the parties abandoned the proposed transaction entirely.

In *United States v. SunGard Data Systems, Inc. and Comdisco, Inc.*,[19] the Division sued to prevent SunGard from acquiring Comdisco and consequently reducing competition substantially in the sale of shared hot site disaster recovery services provided to consumers in the event of an interruption of a computer data center due to an incapacitating event. The companies were two of three major suppliers of shared hot site services for data recovery. For many customers, SunGard and Comdisco were the closest and best competitive alternatives, based upon considerations of hot site systems offerings, service, and price. After Comdisco filed voluntary Chapter 11 bankruptcy, SunGard offered the highest bid at the auction for the Comdisco assets. The Division sued to block the transaction in the U.S. District Court for the District of Columbia on October 23, 2001. On November 14, 2001, after an expedited trial, the district court entered judgment for the defendants, denied the Division's request for permanent injunction, and dismissed the complaint with prejudice.

In *United States v. General Dynamics Corporation and Newport News Shipbuilding Inc.*,[20] the Division challenged General Dynamics' $2.6 billion acquisition of Newport News, alleging that the cash tender offer, as originally proposed, would eliminate competition for nuclear submarines – a weapon platform of vital importance to the security of the United States – resulting in a monopoly. General Dynamics and Newport News were the only manufacturers of nuclear submarines. The companies were also leaders on the only two teams working to develop electric drive technology for nuclear submarines and surface combatants. The merger, as structured, also would have harmed competition for the manufacture of other military ships, including conventionally powered surface combatants. The parties abandoned their merger agreement on October 29, 2001.

In *United States v. The Manitowoc Company, Inc., Grove Investors, Inc. and National Crane Corporation*,[21] the Division challenged The Manitowoc Company's $170 million

---

and Company merger with Texas Financial Bancorporation, Inc. and its acquisition of certain bank and non-bank subsidiaries of Marquette Bancshares, Inc. – Minnesota and South Dakota banks (business banking services); December 3, 2001 – SunTrust Bank's acquisition of Huntington National Bank – Florida banks (business banking services); December 18, 2001 – Suiza Foods Corporation and Dean Foods Company merger (dairy processing plants in Alabama, Florida, Indiana, Kentucky, Ohio, South Carolina, Virginia and Utah); September 6, 2002 – Aggregate Industries' acquisition of Wakefield Materials Company (ready-mix concrete facility serving northern metropolitan Boston).

In the remaining two challenges, the Division informed the parties of its antitrust concerns but did not issue a press release: American General Media Corp.'s proposed acquisition of Rocky Mountain Broadcasting I, L.L.C. and Salisbury Broadcasting's acquisition of Mass Entertainment Corporation (Aspen and Vail, Colorado radio stations); Oldcastle Materials Group's acquisition of Aggregate Industries' Central Region ((Michigan and Indiana) (aggregate, asphalt and ready-mix concrete facilities)).

[19] United States v. SunGard Data Systems, Inc. & Comdisco, Inc., No.01-2196 (ESH) (D.D.C. Oct. 22, 2001).

[20] United States v. General Dynamics Corp. & Newport News Shipbuilding Inc., No.1:01CV02200 (D.D.C. Oct. 23, 2001).

[21] United States v. The Manitowoc Co., Inc., Grove Investors, Inc. & National Crane Corp., No.

acquisition of Grove Investors. The complaint alleged that the acquisition, as originally proposed, would have reduced competition by combining two of only three major producers of medium- and heavy-lift boom trucks in North America. A boom truck is a stiff boom telescopic crane mounted on a standard flat-bed commercial truck chassis. This general-purpose mobile crane has a broad range of applications in the construction, petroleum, and utility industries. The Division filed a proposed consent decree simultaneously with the complaint, settling the suit. Under the terms of the decree, Manitowoc was required to divest either its own or Grove's boom truck business to a purchaser acceptable to the Division. The Court entered the consent decree on December 11, 2002.

In *United States v. Archer-Daniels-Midland Company and Minnesota Corn Processors,*[22] the companies agreed to dissolve a joint venture with a competing corn wet miller in order for ADM to proceed with its $634 million proposed acquisition of MCP. ADM and MCP were two of the largest wet corn millers in the United States. The complaint alleged that the acquisition, as originally structured, would have lessened competition substantially by reducing the number of independent competitors in the corn wet milling industry to four and making coordination among the remaining firms more likely. The wet mill processing of corn results in the manufacture of corn syrup and high fructose corn syrup ("HFCS"), products found in foods and soft drinks. Americans consume over $2.5 billion in corn syrup and HFCS each year. The Division filed a proposed consent decree simultaneously with the complaint, settling the suit. The decree required ADM and MCP to dissolve the joint venture between MCP and Corn Producers International, Inc. ("CPI"), allowing CPI to compete independently of the merged ADM and MCP. The Court entered the consent decree on July 22, 2003.

During fiscal year 2002, the Division investigated four bank merger transactions for which divestiture was required prior to or concurrently with the acquisition and two others in which conditions were imposed. A "not significantly adverse" letter conditioned upon a letter agreement between the parties and the Division was sent to the appropriate bank regulatory agency in all instances.[23] Also during fiscal year 2002, courts entered consent decrees in two

---

02CV0159 (D.D.C. July 31, 2002).

[22] United States v. Archer-Daniels-Midland Co. & Minnesota Corn Processors, No. 1:02CV01768 (D.D.C. Sept. 6, 2002).

[23] The six letters were: October 4, 2001 letter to the Comptroller of the Currency regarding the application by Community Bank, N.A., Canton, NY, to acquire 36 branches of Fleet National Bank, Providence, RI; October 15, 2001 letter to the Comptroller of the Currency regarding the application for NBT Bank, N.A., Norwich, NY, to acquire Central National Bank, Canajoharie, NY; November 29, 2001 letter to the Board of Governors of the Federal Reserve System regarding the application by Wells Fargo & Company, San Francisco, CA, to acquire certain bank and non-bank subsidiaries of Marquette Bancshares, Inc., MN, and to merge with Texas Financial Bancorporation, TX (the Pohlad Group); December 3, 2001 letter to the Board of Governors regarding the application by SunTrust Bank, Atlanta, GA, to acquire Florida branches of Huntington Bank, Columbus, OH; December 26, 2001 letter to the Board of Governors of the regarding the application by Wesbanco, Inc., Wheeling, WV, to acquire American Bancorporation, Wheeling, OH, and to merge Wheeling National Bank, Wheeling, WV, into Wesbanco Bank, Wheeling, WV; August 8, 2002 letter to the Federal Deposit Insurance Corporation regarding the application by S&T Bank, Indiana, PA, to acquire PFC Bank, Ford City, PA, as part of a transaction wherein S&T Bancorp, Inc. acquired Peoples Financial Corp.

merger cases previously filed by the Division in fiscal year 2001.[24]

Additionally, on September 10, 2002, in *United States v. Earthgrains Co., Specialty Foods Corp. and Metz Holdings, Inc.* (N.D. Ill.), the Division petitioned the Court to find Earthgrains Baking Companies, Inc., successor in interest to Earthgrains Company, in civil contempt for violating an order that had been entered by the court on July 3, 2000.[25] According to the motion, Earthgrains violated the consent decree by failing to maintain assets prior to their divestiture, as required by the Hold Separate Stipulation and Order. To resolve the matter, Earthgrains agreed to pay a $100,000 civil penalty to the United States.

2. *The Federal Trade Commission*

The Commission challenged twenty-four transactions that it concluded would lessen competition if allowed to proceed as proposed during fiscal year 2002,[26] leading to ten consent orders, two administrative complaints, and seven withdrawn filings. In five of the twenty-four matters, the Commission authorized staff to seek injunctive relief; of these, one case was filed in district court and after a preliminary injunction was granted the parties abandoned the transaction, in two cases the parties negotiated a consent agreement, and in two other cases the parties abandoned the transaction.

In *Diageo plc/Vivendi Universal S.A.*,[27] the Commission authorized staff to file for a preliminary injunction to block Diageo's and Pernod Ricard S.A.'s proposed $8.15 billion joint acquisition of Vivendi's Seagram Wine and Spirits business. According to the complaint, the proposed acquisition would have substantially lessened competition in five relevant product markets in the distilled spirits industry. Specifically, the rum market would have become a duopoly controlled by Bacardi U.S.A., the industry leader, and Diageo/Seagram, the second and third largest sellers of rum in the United States. Together, Bacardi U.S.A. and Diageo/Seagram would have controlled 95 percent of all premium rum sales in the United States. The next largest competitor would have a market share in the United States of about only two percent. Diageo would have also acquired highly sensitive commercial business information about Seagram's Gin, its principal competitor in the retail gin market. Prior to the Commission's filing of a complaint seeking the preliminary injunction, a proposed consent agreement was negotiated that allowed the parties to proceed with the transaction under certain conditions. The order required Diageo to divest its Malibu

---

[24] On April 5, 2002, the District Court entered the consent decree in United States v. Premdor, Inc., Premdor U.S. Holdings, Inc., Int'l Paper Co. & Masonite Corp. (D.D.C. Aug. 3, 2001); on April 17, 2002, the consent decree was entered in United States v. 3D Systems Corp. & DTM Corp. (D.D.C. Aug. 16, 2001). See the Annual Report to Congress, Fiscal Year 2001 for a description of these cases.

[25] See the Annual Report to Congress, Fiscal Year 2000 for a description of this case.

[26] In addition to the two administrative complaints discussed on page 14 of this report, an administrative complaint was also issued in Libbey Inc./Newell Rubbermaid, Inc. (See the above discussion). To avoid double counting this report includes only those merger enforcement actions in which the Commission took its first public action during fiscal year 2002.

[27] Diageo plc/Vivendi Universal S.A., Docket No. C-4032 (issued February 4, 2002).

Rum assets, the country's leading coconut-flavored rum, to a Commission-approved buyer and agree not to obtain or use any commercially sensitive business information regarding four brands, including Seagram's Gin, that were to be acquired by Pernod.

In *Libbey, Inc./Newell Rubbermaid, Inc.*,[28] the Commission filed for a preliminary injunction in district court alleging that Libbey's proposed acquisition of Newell Rubbermaid's Anchor Hocking Corporation subsidiary would have substantially lessened competition in the market for soda-lime glassware sold to the food service industry in the United States. According to the complaint, the acquisition would have combined the largest and third-largest sellers of soda-lime glassware to the United States food service industry. The acquisition would have eliminated substantial competition between Libbey and Anchor, increased barriers to entry into the relevant market and increased the likelihood of higher prices for consumers. In April 2002, the court granted the Commission's motion blocking the proposed acquisition. Following the court's preliminary injunction order, in May 2002 the Commission issued an administrative complaint against the parties. The parties subsequently abandoned the transaction.

In *Deutsche Gelatine-Fabriken Stoess AG/Goodman Fielder Limited*,[29] the Commission authorized staff to file for a preliminary injunction to block the proposed acquisition by DGF Stoess of Goodman Fielder's gelatin business. According to the complaint, DGF Stoess and Goodman Fielder were the two largest producers of pigskin and beef hide gelatin in the world. Pigskin and beef hide gelatin are used primarily by the food industry as an ingredient in edible products and by the pharmaceutical industry to produce capsules and tablets. The proposed acquisition would have further consolidated an already concentrated market and increased the likelihood that customers of pigskin and beef hide gelatin would be forced to pay higher prices. Prior to the Commission's filing of a complaint seeking the preliminary injunction, a proposed consent agreement was negotiated to remedy the alleged anticompetitive effects of the merger. Under the terms of the agreement, DGF Stoess could not acquire Goodman Fielder's entire gelatin business; rather, Leiner Davis Gelatin Corporation, a Goodman Fielder subsidiary, would retain its United States and Argentine gelatin plants and related assets.

In *Meade Instruments Corporation/Tasco Holdings, Inc.*,[30] the Commission authorized staff to file for a preliminary injunction in federal district court to pre-empt any attempt by Meade to purchase assets of bankrupt Tasco Holdings, Inc.'s Celestron International subsidiary. According to the complaint, Meade was the leading manufacturer of performance telescopes and Schmidt-Cassegrain telescopes in the United States, with dominant positions in

---

[28] Federal Trade Commission v. Libbey, Inc., Civ. No. 02-0060 (D.D.C. complaint filed January 14, 2002). On June 10, 2002, the respondents announced that they had terminated their merger agreement. On October 7, 2002, the Commission issued a consent order in settlement of the accompanying administrative proceedings (Docket No. 9301).

[29] Deutsche Gelatine-Fabriken Stoess AG/Goodman Fielder Limited, Docket No. C-4045 (issued April 17, 2002).

[30] Meade Instruments Corporation/Tasco Holdings, Inc., File No. 021-0127.

the markets for performance and Schmidt-Cassegrain telescopes. Celestron International was the number two performance telescope provider in the United States and the only other supplier of Schmidt-Cassegrain telescopes. The acquisition would have adversely impacted the performance telescope market by eliminating competition between the two companies and by creating a monopoly in the market for Schmidt-Cassegrain telescopes. In May 2002, Meade notified the Commission that it had abandoned its efforts to bid for the Celestron assets.

In *Cytyc Corporation/Digene Corporation*,[31] the Commission authorized staff to seek a preliminary injunction to block Cytyc's proposed acquisition of Digene. According to the complaint, the combination of the two companies would have lessened competition and increased consumer prices within the highly concentrated market for primary cervical cancer screening tests. Both Cytyc and Digene manufactured and sold products used to screen women for cervical cancer. Cytyc's products accounted for 93 percent of the U.S. liquid-based pap tests, the most widely used sensitive primary screening tool available for the detection of cervical cancer. The only other company producing and selling an FDA-approved liquid pap test in the United States was TriPath Imaging. While three other companies had developed such tests, they had not yet begun clinical trials, and were at least two years away from entering the U.S. market. Digene was the only company in the United States selling a DNA-based test for the human papillomavirus ("HPV"), believed to cause nearly all cervical cancer cases. Digene's HPV test is most commonly and efficiently conducted using a residual sample obtained from a liquid pap test, which requires FDA approval. Thus, it is important that a company manufacturing liquid pap tests have FDA approval to run the Digene HPV test off its sample medium. It is similarly important that a liquid pap test supplier's customers have viable access to Digene's HPV test. By purchasing Digene, Cytyc would have been in a position to eliminate its only existing competitor, TriPath, by limiting access to Digene's HPV test, and thus, could have thwarted the entry of other firms that planned to sell liquid pap tests in the United States. The parties abandoned the transaction prior to the Commission's filing of the complaint in district court.

The Commission issued an administrative complaint in *MSC.Software Corporation,*[32] alleging that MSC's 1999 acquisitions of Universal Analytics, Inc. ("UAI") and Computerized Structural Analysis & Research Corporation ("CSAR") substantially lessened competition in the market for a popular type of advanced computer-aided engineering software used throughout the aerospace and automotive industries known as Nastran. According to the complaint, MSC was the dominant Nastran supplier with an estimated 90 percent of worldwide revenue and UAI and CSAR, each, held an estimated five percent of worldwide revenue. The acquisitions created and enhanced MSC's power to raise prices above a competitive level and prevented other suppliers of engineering software form acquiring UAI and CSAR and increasing competition. Subsequently, the matter was withdrawn from adjudication and a consent agreement was negotiated. The order required MSC to divest at least one clone copy of its current advanced Nastran software, including the

[31] Cytyc Corporation/Digene Corporation, File No. 021-0098.

[32] MSC.Software Corporation, Docket No. 9299 (issued October 9, 2001).

source code. In addition, MSC was required to permit certain customers to terminate paid-up licenses entered into since the acquisitions and required MSC to refund a portion of the advance consideration paid by its customers.

The Commission also issued an administrative complaint in *Chicago Bridge & Iron Company N.V., Chicago Bridge & Iron Company, and Pitt-Des Moines, Inc.*,[33] alleging that CB&I's 2001 acquisition of the Water Division and Engineered Construction Division of Pitt-Des Moines, Inc. ("PDM") substantially lessened competition in four relevant specialty industrial storage tank markets. According to the complaint, CB&I and PDM competed against each other as the two leading U.S. producers of large, field-erected industrial and water storage tanks and other specialized steel-plate structures. The combination of the two companies resulted in a monopoly in the U.S. markets for two of the more difficult and costly products to construct – LNG tanks and thermal vacuum chambers. In addition, the combination of the two companies resulted in a dominant firm in the U.S. markets for LPG tanks and LIN/LOX/LAR tanks. On June 18, 2003, in an Initial Decision, the administrative law judge upheld the administrative complaint allegations. The order entered by the judge required CB&I to divest all of the assets acquired in the February 2001 acquisition, in order to restore competition as it existed prior to the acquisition.

In fiscal year 2002, the Commission accepted consent agreements for public comment in ten merger cases. A complaint and decision and order were issued in eight of these matters during the fiscal year, and a consent agreement in two of these cases became final after September 2002.

In *Airgas, Inc.*,[34] the complaint alleged that Airgas's purchase of the Puritan Bennett Medical Gas business from Mallinckrodt, Inc. in January 2000 had an adverse effect on competition in the nitrous oxide market in the United States and Canada. Nitrous oxide is a clear, odorless gas primarily used in dental and surgical procedures as an analgesic agent or as a supplement to anesthesia. At the time of the acquisition, Puritan Bennett was Airgas's only competitor in the production and sale of nitrous oxide. Airgas was the nation's largest distributor of industrial, medical, and specialty gases and the only producer and seller of nitrous oxide in North America. Puritan Bennett, prior to its $90 million purchase by Airgas, was a leading distributor of medical gases and a producer and seller of nitrous oxide in North America. The acquisition eliminated any competition in this market in North America and increased the likelihood that customers requiring nitrous oxide would pay higher prices. Under the agreement, Airgas was required to divest a nitrous oxide business to Air Liquide America Corporation, a producer of other medical gases, such as medical grade oxygen and nitrogen. The agreement also required Airgas to supply Air Liquide with a sufficient amount of bulk liquid nitrous oxide in order to ensure that Air Liquide has the same volume of nitrous oxide as Airgas did before its acquisition of Puritan Bennett.

---

[33] Chicago Bridge & Iron Company N.V., Chicago Bridge & Iron Company, and Pitt-Des Moines, Inc., Docket No. 9300 (issued October 25, 2001).

[34] Airgas, Inc., Docket No. C-4029 (issued December 12, 2001).

In *Koninklijke Ahold NV/Bruno's Supermarkets, Inc.*,[35] the complaint alleged that Ahold's proposed purchase of Bruno's Supermarkets would have substantially lessened competition in the retail sale of food and grocery items in supermarkets in or near the towns of Milledgeville and Sandersville, Georgia. According to the complaint, Ahold, a global food service distributor and retailer, operated approximately 1,300 United States food stores under the trade names Giant, Stop & Shop, Tops, and BI-LO. Bruno's Supermarkets, a large supermarket chain in the southeastern United States, owned 169 supermarkets under the trade names Bruno's Fine Foods, Food World, Food Max, Food Fair, and Fresh Value. The order required Ahold to divest two of its BI-LO supermarkets in Georgia, one in Milledgeville and one in Sandersville.

In *Nestle Holdings, Inc./Ralston Purina Company*,[36] the complaint alleged that Nestle's proposed $10.3 billion acquisition of Ralston would have substantially lessened competition in the dry cat food market in the United States. According to the complaint, the proposed transaction would have substantially increased concentration in the relevant market, eliminated direct competition between the companies, and increased the ability of the combined company to unilaterally exercise market power, thereby increasing the likelihood that consumers would pay higher prices. Nestle, the largest food corporation in the world, sells its pet food products through its Friskies Pet Care Division, including Alpo, Come N' Get It, Mighty Dog, Friskies, Fancy Feast, Jim Dandy, and Chef's Blend. Ralston, the world's leading producer of dry pet foods, markets brands such as Dog Chow, Puppy Chow, Cat Chow, Kitten Chow, Purina Special Care, Meow Mix, Purina O.N.E., Purina Pro Plan, Fit & Trim, Alley Cat, and Deli-Cat. Under the order, Nestle was required to divest Ralston's Meow Mix and Alley Cat brands to J.W. Childs Equity Partners II, L.P., which owns Hartz Mountain, a leading manufacturer and distributor of pet supplies in the United States.

In *Valero Energy Corp./Ultramar Diamond Shamrock Corp.*,[37] the complaint alleged that the proposed merger of petroleum refiners Valero and Ultramar would have substantially lessened competition in the following markets: 1) the refining and bulk supply of California Air Resources Board ("CARB") 2 and CARB 3 gasoline for sale in Northern California and 2) the refining and bulk supply of CARB 2 and CARB 3 gasoline in the state of California. According to the complaint, both Valero and Ultramar were leading refiners and marketers of CARB gasoline in California and by eliminating the direct competition between the parties the merger would have likely increased the price of CARB gasoline for consumers in California due to loss of competition from the merger. The order required Valero to divest Ultramar's Golden Eagle Refinery, certain bulk gasoline supply contracts, and 70 Ultramar retail service stations in Northern California to a Commission-approved buyer.

In *INA-Holding Schaeffler KG/FAG Kugelfischer Georg Schafer AG*,[38] the complaint

[35] Koninklijke Ahold NV/Bruno's Supermarkets, Inc., Docket No. C-4027 (issued January 16, 2002).

[36] Nestle Holdings, Inc./Ralston Purina Company, Docket No. C-4028 (issued February 4, 2002).

[37] Valero Energy Corp./Ultramar Diamond Shamrock Corp., Docket No. C-4031 (issued February 19, 2002).

[38] INA-Holding Schaeffler KG/FAG Kugelfischer Georg Schafer AG, Docket No. C-4033 (issued February 5, 2002).

alleged that the proposed acquisition of FAG by INA would have lessened competition and created a monopoly in the worldwide market for the research, development, manufacture and sale of cartridge ball screw support bearings ("CBSSB"), a type of bearing used in manufacturing machine tool equipment. According to the complaint, INA and FAG were the only two suppliers of CBSSB in the world and the proposed acquisition, if consummated, would have resulted in a monopoly in the market. Entry into the market was a difficult process because of, among other things, the time and cost associated with researching and developing a line of CBSSB products, acquiring the necessary production assets, and developing the expertise needed to successfully design, produce, and market these products. The order required INA and FAG to divest FAG's CBSSB business to Aktiebolaget SKF, the largest supplier of ball and other roller bearings in the world.

In *Solvay S.A.*,[39] the complaint alleged that Solvay's proposed $1.3 billion acquisition of Ausimont S.p.A. from Italengeria S.p.A. would have lessened competition in the production and sale of all grades of polyvinylidene fluoride ("PVDF") and the production and sale of melt-processible grades of PVDF. PVDF is a fluoropolymer used in a wide variety of applications, including highly durable architectural coatings, wire and cable jacketing, fiber optic raceways, chemical processing equipment, semiconductor manufacturing equipment, and other miscellaneous applications. According to the complaint, Solvay and Ausimont were two of only three producers of PVDF in the United States and were two of the three major PVDF producers in the world. The proposed merger would have eliminated Ausimont as a growing competitor in the market for melt-processible grades of PVDF, increasing the likelihood of higher prices and reduced innovation in the relevant market. The order required Solvay to divest its United States PVDF operations, including its Decatur, Alabama PVDF plant and its interest in Alventia LLC, a joint venture that manufactures the main raw material for PVDF.

In *Bayer AG/Aventis S.A.*,[40] the complaint alleged the proposed $6.2 billion acquisition by Bayer of Aventis's subsidiary Aventis CropScience Holdings S.A. would have lessened competition in the United States in the following markets: 1) new generation chemical insecticide products; 2) new generation chemical insecticide active ingredients and related technologies for various insecticide and animal health products; 3) post-emergent grass herbicides for spring wheat; and 4) cool weather cotton defoliants. According to the complaint, all of the relevant markets were highly concentrated. Bayer and Aventis were two of only three firms competing significantly in the market for new generation chemical insecticide active ingredients and products and the only firms that had developed and successfully sold such products for non-repellent liquid termite control and for veterinarian use in controlling fleas. The companies were also the only two suppliers of cool weather cotton defoliants. The merger would have eliminated a significant competitor, increased barriers to entry, reduced innovation competition for certain products, and increased the possibility of coordinated interaction among the remaining competitors in the relevant

---

[39] Solvay S.A., Docket No. C-4046 (issued June 21, 2002).

[40] Bayer AG/Aventis S.A., Docket No. C-4049 (issued July 24, 2002).

markets. The order required the parties to divest assets relating to their acetamiprid, fipronil, flucarbazone, and folex businesses.

In *Amgen Inc./Immunex Corporation*,[41] the complaint alleged that the proposed $16 billion acquisition by Amgen of Immunex would have lessened competition in the United States in the research, development and sale of the following: 1) neutrophil (white blood cell) regeneration factors; 2) tumor necrosis factor ("TNF") inhibitors used in the treatment of rheumatoid arthritis; and 3) interleukin-1 ("IL-1") inhibitors, also used in the treatment of rheumatoid arthritis. According to the complaint, all three markets in the United States were highly concentrated. Amgen and Immunex were the only two companies competing in the market for neutrophil regeneration products and Immunex was only one of two companies with TNF inhibitors on the market. Amgen's Kineret was the only IL-1 inhibitor approved for sale in the United States for the treatment of rheumatoid arthritis. Immunex and Regeneron Pharmaceuticals Inc. were the only two companies with IL-1 inhibitor products in clinical trials in the United States, but due to the patent position of Amgen and Immunex, Regeneron would have likely been unable to bring its IL-inhibitor to market. To remedy the anticompetitive effects of the proposed merger, the order required the companies to sell all of Immunex's assets related to Leukine, a neutrophil regeneration factor, to Schering AG. The order also required the companies to grant a license to certain intellectual property rights related to TNF inhibitors to Serono S.A. and certain intellectual property rights related to IL-1 inhibitors to Regeneron.

In *Phillips Petroleum Company/Conoco Inc.*,[42] the complaint alleged that the proposed merger of Phillips and Conoco would have lessened competition in the following markets: 1) the bulk supply of light petroleum products in Eastern Colorado and Northern Utah; 2) light petroleum product terminaling services in the metropolitan statistical areas ("MSAs") of Spokane, Washington, and Wichita, Kansas; 3) the bulk supply of propane in Southern Missouri, the St. Louis MSA, and Southern Illinois; 4) natural gas gathering in more than 50 sections of the Permian Basin in New Mexico and Texas; and 5) the fractionation processes in Mont Belvieu, Texas. According to the complaint, the merger would have eliminated ongoing competition between the two companies resulting in the likelihood of increased rates and terminaling services fees and the reduced output of propane, processed natural gas and other products and services, thereby increasing consumer costs. The order required the companies to divest several refineries, a light petroleum products terminal, a propane terminal, and certain gas gathering assets. The parties were also required to create firewalls that prevent the transfer of competitively sensitive information among the Mont Belvieu fractionators.

In *Shell Oil Company/Pennzoil-Quaker State Company*,[43] the complaint alleged that the proposed $1.8 billion acquisition of Pennzoil by Shell would have lessened competition

[41] Amgen Inc./Immunex Corporation, Docket No. C-4056 (issued September 3, 2002).

[42] Phillips Petroleum Company/Conoco Inc., Docket No. C-4058 (issued February 7, 2003).

[43] Shell Oil Company/Pennzoil-Quaker State Company, Docket No. C-4059 (issued November 18, 2002).

and raised prices in the United States and Canadian market for Group II paraffinic base oil. Group II base oil is used to produce motor oil and other lubricants, and is needed to meet current performance standards for lighter-viscosity motor oil formulations, such as 5-W20 and 5-W30, as well as requirements for other lubricants. According to the complaint, Pennzoil had a 50/50 joint venture with Conoco Inc. called Excel Paralubes that operated a base oil refinery at West Lake, Louisiana adjacent to Conoco's petroleum products refinery in Lake Charles, Louisiana. The proposed merger would have eliminated Pennzoil as a major competitor and positioned Shell, the market leader, into a close partnership with Conoco Inc., another leading producer. The price of Group II base oils would have likely increased by a substantial amount, especially as new motor oil standards are developed and require even greater use of Group II base oil. The order required the parties to divest Pennzoil's 50 percent interest in Excel Paralubes, which represents Pennzoil's only base oil ownership position, to a Commission-approved buyer and freeze Pennzoil's ability to obtain additional Group II base oil supply under an existing 10-year agreement with ExxonMobil Corporation at approximately current levels.

ONGOING REASSESSMENT OF THE EFFECTS OF THE PREMERGER NOTIFICATION PROGRAM

The Commission continually reviews the impact of the premerger notification program on the business community and antitrust enforcement. As indicated in past annual reports, the HSR program ensures that virtually all significant mergers or acquisitions that affect American consumers in the United States will be reviewed by the antitrust agencies prior to consummation. The agencies generally have the opportunity to challenge unlawful transactions before they occur, thus avoiding the problem of constructing effective post-acquisition relief. As a result, the HSR Act is doing what Congress intended, giving the government the opportunity to investigate and challenge mergers that are likely to harm consumers *before* injury can arise. Prior to the premerger notification program, businesses could, and frequently did, consummate transactions that raised significant antitrust concerns before the antitrust agencies had the opportunity to adequately consider their competitive effects. The enforcement agencies were forced to pursue lengthy post-acquisition litigation, during the course of which harm from the consummated transaction continued (and afterwards as well, where achievement of effective post-acquisition relief was not practicable). Because the premerger notification program requires reporting before consummation, this problem has been significantly reduced.

Always cognizant of the program's impact and effectiveness, the enforcement agencies continue to seek ways to speed up the review process and reduce burdens for companies. As in past years, the agencies will continue their ongoing assessment of the HSR program in order to increase accessibility, promote transparency and reduce burden on the filing parties without compromising the agencies' ability to investigate and interdict proposed transactions that may substantially lessen competition.

Not Granted[5]	448	573	602	817	850	1,089	1,007	809	460	249

[1] Usually, two filings are received, one from the acquiring person and one from the acquired person when a transaction is reported. Only one application is received when an acquiring party files for an exemption under sections 7A(c)(6) or (c)(8) of the Clayton Act.

[2] These figures omit from the total number of transactions reported all transactions for which the agencies were not authorized to request additional information. These include (1) incomplete transactions (only one party filed a complete notification); (2) transactions reported pursuant to the exemption provisions of sections 7A (c)(6) and 7A(c)(8) of the Act.; and (3) transactions which were found to be non-reportable. In addition, where a party filed more than one notification in the same year to acquire voting securities of the same corporation, e.g., filing one threshold and later filing for a higher threshold, only a single consolidated transaction has been counted because as a practical matter the agencies do not issue more than one Second Request in such a case. These statistics also omit from the total number of transactions reported secondary acquisitions filed pursuant to 801.4 of the Premerger Notification rules. Secondary acquisitions have been deducted in order to be consistent with the statistics presented in most of the prior annual reports.

[3] These statistics are based on the date the request was issued and not the date the investigation was opened.

[4] Second Requests investigations as a percentage of the total number of adjusted transactions.

[5] These statistics are based on the date of the HSR filing and not the date action was taken on the request.

[1] Fiscal Year 2002 figures include transactions reported between October 1, 2001 and September 30, 2002.

[2] The size-of-transactions is based on the aggregate total amount of voting securities and/or assets to be held by the acquiring person as a result of the transaction and is taken from the response to Item 3(b)(ii) and 3(c) of the notification form.

[3] These statistics are based on the date that the second request was issued.

[4] During fiscal year 2002, 1,187 transactions were reported under the HSR Premerger Notification program. The smaller number of 1,142 reflects adjustments to eliminate the following types of transactions: (1) transactions reported under Sections 7A(c)(6) and (c)(8), (transactions involving certain regulated industries and financial businesses); (2) transactions found to be non-reportable; (3) incomplete transactions (only one party in each transaction filed a compliant notification); and (4) transactions withdrawn before the waiting period began. The table does not, however, exclude competing offers or multiple party transactions (transactions involving two or more acquiring persons).

[5] The total number of filings under $50M submitted in Fiscal Year 2002 is corrective filings for transactions occurring before February 1, 2001.

[6] This category includes newly formed acquiring persons, foreign acquiring persons with no United States revenues, and acquiring persons who had not derived any revenues from their investments at the time of filing.

[7] Assets of an acquired entity are not available when the acquired entity's financial data is consolidated within its ultimate parent.

[8] Sales of an acquired entity are taken from responses to Items 4(a) and (b) (SEC documents and annual reports) or Item 5 (dollar revenues) of the Premerger Notification and Report form.

[9] This category includes acquisitions of newly formed corporations or corporate joint ventures from which no sales were generated, and acquisitions of assets which produced no sales or revenues during the prior year to filing the Notification and Report form.

[10] The 3-digit codes are part of the North American Industrial Classification System (NAICS) established by the United States Government North American Industrial Classification System 1997, Executive Office of the President – Office of Management and Budget. The NAICS groups used in this table were determined from responses submitted by the parties to Item 5 of the Premerger Notification and Report effective July 1, 2001.

[11] This number represents the deviation from the FY 2001 percentage.

[12] This category includes transactions by newly formed entities.

[13] The intra-industry transaction column identifies the number of acquisitions in which both the acquiring and acquired persons derived revenues in the same industry.

HART-SCOTT-RODINO ANNUAL REPORT
Fiscal Year 2010

Section 7A of the Clayton Act
Hart-Scott-Rodino Antitrust Improvements Act of 1976
(Thirty-third Annual Report)

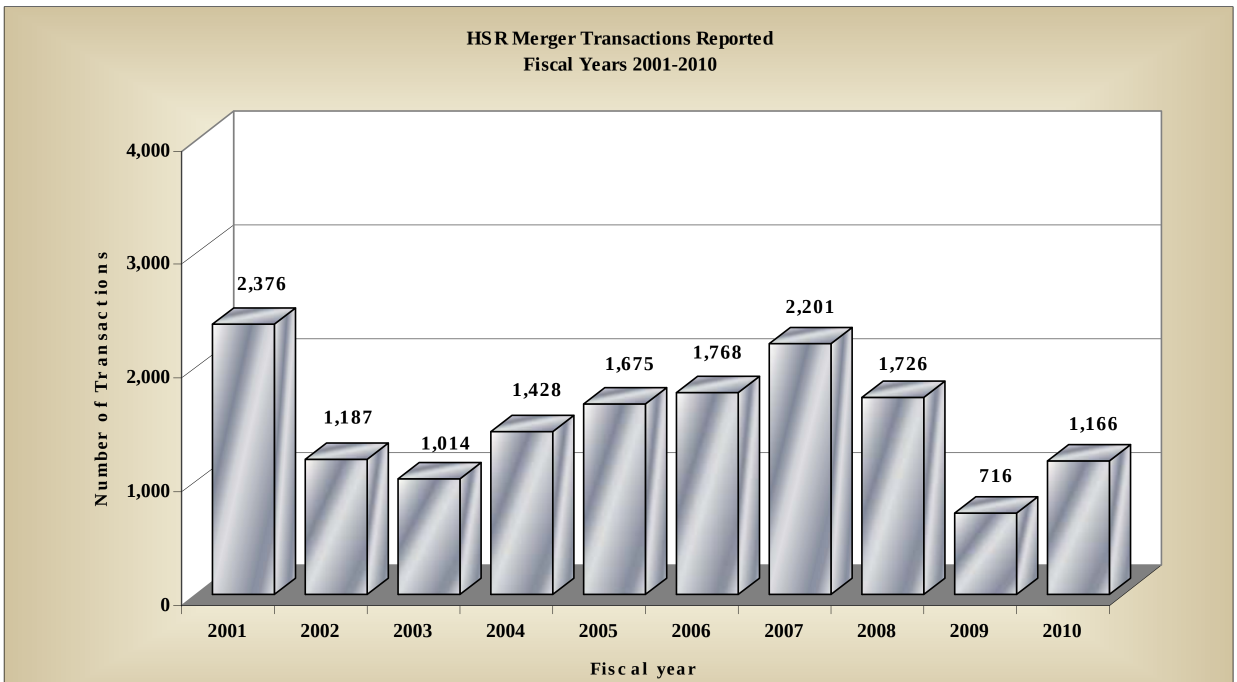
Jon Leibowitz
Chairman
Federal Trade Commission

Christine A. Varney
Assistant Attorney General
Antitrust Division

INTRODUCTION

The Hart-Scott-Rodino Antitrust Improvements Act of 1976 (HSR Act or the Act), together with Section 13(b) of the Federal Trade Commission Act and Section 15 of the Clayton Act, enables the Federal Trade Commission (Commission) and the Antitrust Division of the Department of Justice (Antitrust Division or Division) to obtain effective preliminary relief against anticompetitive mergers and to prevent interim harm to competition and consumers. The premerger notification program was instrumental in alerting the Commission and the Division of transactions that became the subjects of the numerous enforcement actions brought in fiscal year 2010[1] to protect consumers – individual, business, and government – against anticompetitive mergers.

The Commission and the Antitrust Division continue their efforts to protect competition by identifying and investigating those mergers and acquisitions that raise potentially significant competitive concerns. In fiscal year 2010, 1,166 transactions were reported under the HSR Act, representing about a 63% increase from the 716 transactions reported in fiscal year 2009 and about a 51% decrease from the 2,376 transactions reported in fiscal year 2001, the last partial fiscal year under the previous reporting thresholds.[2] (*See* Figure 1 below.)



(Figure 1)

During the year, the Commission challenged 22 transactions, leading to 19 consent orders, one of which was obtained after the Commission filed an administrative complaint, and

[1] The fiscal year covers the period of October 1, 2009 through September 30, 2010.

[2] The decrease in the number of reportable transactions since fiscal year 2001 is, to a considerable extent, a result of the significant statutory changes to the HSR Act that took effect on February 1, 2001. The legislation raised the size-of-transaction threshold from $15 million to $50 million (with annual adjustments for changes in gross national product that began in 2005), and made other changes to the filing and waiting period requirements. In fiscal year 2010, the threshold was adjusted to $63.4 million. Section 630 of the Department of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations Act, FY 2001, Pub. L. No. 106-553, 114 Stat. 2762. *See also* Appendix A.

three transactions that were abandoned after the parties learned of the Commission's concerns. One of the Commission's notable challenges was against Dun & Bradstreet's consummated acquisition of Quality Education Data, which produces data used to sell books, educational materials, and other products to teachers nationwide. The Commission filed an administrative complaint to challenge this acquisition, but before trial, Dun & Bradstreet agreed to divest to a Commission-approved buyer certain assets acquired in the merger to restore competition. Other notable challenges were against proposed mergers in key industries that are critical to consumers, including pharmaceuticals and energy. In the pharmaceutical industry, the Commission challenged Watson Pharmaceutical's proposed acquisition of rival generic drug company Arrow Pharmaceuticals, asserting that the merger, as originally proposed, would have substantially reduced competition in U.S. markets for important generic drugs used to treat Parkinson's disease and the side effects of chemotherapy. To restore the competition that would have been lost as a result of the merger, the Commission required the firms to sell assets related to two drugs. In the energy industry, the Commission also challenged Pilot Corporation's proposed acquisition of Flying J Inc.'s travel center network. To resolve the Commission's concerns, Pilot, owner of the largest travel center network in the United States, agreed to sell 26 travel centers, which provide diesel, food, parking, and other amenities for truckers, as part of a settlement that will replace the competition that would have been lost because of the acquisition.

The Antitrust Division challenged 19 merger transactions. Consent decrees resolved ten of these challenges[3], one matter is currently in litigation, and eight transactions were abandoned or restructured after the Division informed the parties of its antitrust concerns relating to the transaction. Notably, the Division obtained a consent decree requiring Ticketmaster Entertainment Inc. to license its ticketing software, divest ticketing assets and subject itself to anti-retaliation provisions in order to proceed with its proposed merger with Live Nation Inc., thereby remedying anticompetitive effects in the sale of primary ticketing services. The Division also sued and is currently in litigation seeking to undo Dean Foods' acquisition of the Consumer Products Division of Foremost Farms USA, alleging that the acquisition was likely to substantially lessen competition in the sale of school milk and fluid milk to school districts and other purchasers located in Wisconsin, the Upper Peninsula of Michigan, and Northeastern Illinois. In another notable challenge, the Division alleged that an acquisition by Election Systems and Software, Inc., substantially lessened competition in the market for voting equipment systems and obtained a consent decree requiring divestiture of all voting equipment systems assets acquired in that consummated transaction.

In fiscal year 2010, the Commission's Premerger Notification Office (PNO) continued to respond to thousands of telephone calls seeking information concerning the reportability of transactions under the HSR Act and the details involved in completing and filing the Notification and Report Form (the filing form). The HSR website, http://www.ftc.gov/bc/hsr/, continued to provide improved access to information necessary to the notification process. The website includes basic resources such as introductory guides that provide an overview of the premerger notification program and merger review process. It is the primary source of information for HSR practitioners seeking information on the HSR form and instructions, the premerger notification statute and rules, current filing thresholds, notices of grants of early termination, filing fee instructions, scheduled HSR events, training materials for new HSR practitioners, tips for completing the filing form, procedures for submitting post-consummation filings, contact information for PNO staff, and frequently asked questions regarding the HSR filing requirements. Web users can also find up-to-date information on changes to the Act and

[3] One consent decree addressed two separate mergers.

amendments to the premerger rules, including speeches, press releases, summaries and highlights, and Federal Register notices about any amendments. The website also includes a database of informal interpretation letters, giving the public ready access to PNO staff interpretations of the premerger notification rules and the Act. As always, PNO staff is available to help HSR practitioners comply with HSR notification requirements.

BACKGROUND OF THE HSR ACT

Section 201 of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, Pub. L. No. 94-435, amended the Clayton Act by adding a new Section 7A, 15 U.S.C. §18a. In general, the HSR Act requires that certain proposed acquisitions of voting securities or assets be reported to the Commission and the Antitrust Division prior to consummation. The parties must then wait a specified period, usually 30 days (15 days in the case of a cash tender offer or a bankruptcy sale), before they may complete the transaction. Whether a particular acquisition is subject to these requirements depends upon the value of the acquisition and, in certain acquisitions, the size of the parties as measured by their sales and assets. Small acquisitions, acquisitions involving small parties, and certain classes of acquisitions that are less likely to raise antitrust concerns are excluded from the Act's coverage.

The primary purpose of the statutory scheme, as the legislative history makes clear, is to provide the antitrust enforcement agencies with the opportunity to review mergers and acquisitions before they occur. The premerger notification program, with its filing and waiting period requirements, provides the agencies with both the time and the information necessary to conduct this antitrust review. Much of the information for a preliminary antitrust evaluation is included in the notification filed with the agencies by the parties to the proposed transactions and is immediately available for review during the waiting period.

If either agency determines during the waiting period that further inquiry is necessary, the agency is authorized by Section 7A(e) of the Clayton Act to issue a request for additional information and documentary material (second request). The second request extends the waiting period for a specified period (usually 30 days, but 10 days in the case of a cash tender offer or bankruptcy sale) after all parties have complied with the request (or, in the case of a tender offer or a bankruptcy sale, after the acquiring person complies). This additional time provides the reviewing agency with the opportunity to analyze the information and to take appropriate action before the transaction is consummated. If the reviewing agency believes that a proposed transaction may substantially lessen competition, it may seek an injunction in federal district court to prohibit consummation of the transaction. The Commission may also challenge the transaction in administrative litigation.

The Commission, with the concurrence of the Assistant Attorney General for the Antitrust Division, promulgated final rules implementing the premerger notification program on July 31, 1978. At that time, a comprehensive Statement of Basis and Purpose was also published, containing a section-by-section analysis of the rules and an item-by-item analysis of the filing form.[4] The program became effective on September 5, 1978. The Commission, with the concurrence of the Assistant Attorney General, has amended the rules and the filing form on several occasions over the years to improve the program's effectiveness and to lessen the burden of complying with the rules.[5] During fiscal year 2010, the Commission proposed giving the

HSR form its most extensive overhaul since its creation. The proposed changes are intended to reduce the burden of filing parties, while capturing additional information that will significantly assist the agencies in their initial review.[6]

A STATISTICAL PROFILE OF THE PREMERGER NOTIFICATION PROGRAM

The appendices to this report provide a statistical summary of the operation of the premerger notification program. Appendix A shows, for a ten-year period, the number of transactions reported, the number of filings received, the number of merger investigations in which second requests were issued, and the number of transactions in which requests for early termination of the waiting period were received, granted, and not granted.[7] Appendix A also shows, for fiscal years 2001 through 2010, the number of transactions in which second requests could have been issued, as well as the percentage of transactions in which second requests were issued. Appendix B provides a month-by-month comparison of the number of transactions reported and the number of filings received for fiscal years 2001 through 2010.

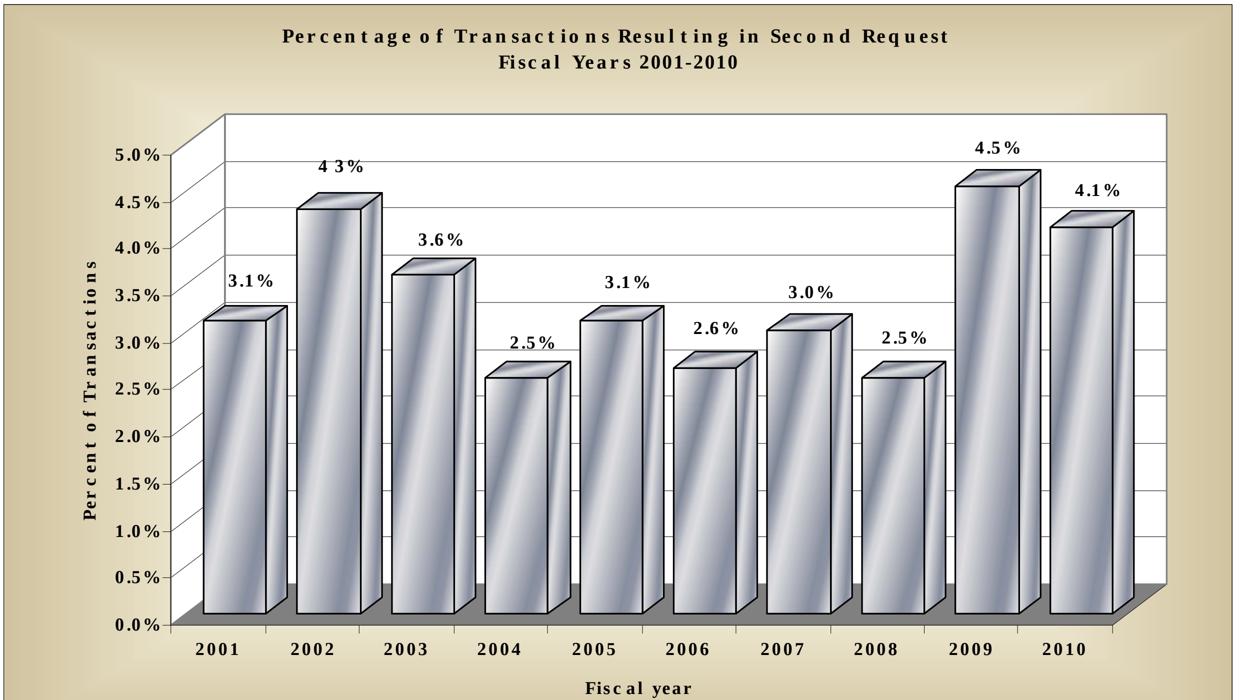
The statistics set out in these appendices show that the number of transactions reported in fiscal year 2010 increased 63% from the number of transactions reported in fiscal year 2009. In fiscal year 2010, 1,166 transactions were reported, while 716 were reported in fiscal year 2009.[8] The statistics in Appendix A also show that the number of merger investigations in which second requests were issued in fiscal year 2010 increased 48% from the number of merger investigations in which second requests were issued in fiscal year 2009. Second requests were issued in 46 merger investigations in fiscal year 2010 (20 issued by the FTC and 26 issued by the Division), while second requests were issued in 31 merger investigations in fiscal year 2009 (15 issued by the FTC and 16 issued by the Division). The percentage of transactions resulting in second requests decreased slightly, from 4.5% in fiscal year 2009 to 4.1% in fiscal year 2010. (*See* Figure 2 below.)

21, 1979); 45 Fed. Reg. 14205 (March 5, 1980); 48 Fed. Reg. 34427 (July 29, 1983); 50 Fed. Reg. 46633 (November 12, 1985); 51 Fed. Reg. 10368 (March 26, 1986); 52 Fed. Reg. 7066 (March 6, 1987); 52 Fed. Reg. 20058 (May 29, 1987); 54 Fed. Reg. 214251 (May 18, 1989); 55 Fed. Reg. 31371 (August 2, 1990); 60 Fed. Reg. 40704 (August 9, 1995); 61 Fed. Reg. 13666 (March 28, 1996); 63 Fed. Reg. 34592 (June 25, 1998); 66 Fed. Reg. 8680 (February 1, 2001); 66 Fed. Reg. 8723 (February 1, 2001); 66 Fed. Reg. 16241 (March 23, 2001); 66 Fed. Reg. 23561 (May 9, 2001); 66 Fed. Reg. 35541 (July 6, 2001); 67 Fed. Reg. 11898 (March 18, 2002); 67 Fed. Reg. 11904 (March 18, 2002); 68 Fed. Reg. 2425 (January 17, 2003); 70 Fed. Reg. 4988 (January 31, 2005); 70 Fed. Reg. 11501 (March 8, 2005); 70 Fed. Reg. 11526 (March 8, 2005); 70 Fed. Reg. 47733 (August 15, 2005); 70 Fed. Reg. 73369 (December 12, 2005; 70 Fed Reg. 77312 (December 30, 2005); 71 Fed. Reg. 2943 (January 18, 2006); 71 Fed. Reg. 35995 (June 23, 2006); 72 Fed. Reg. 2692 (January 22, 2007); 75 Fed. Reg. 57110 (September 17, 2010).

[6] 75 Fed. Reg. 57110 (September 17, 2010).

[7] The term "transaction," as used in Appendices A and B and Exhibit A to this report, does not refer only to separate mergers or acquisitions. A particular merger, joint venture, or acquisition may be structured such that it involves more than one transaction. For example, cash tender offers, options to acquire voting securities from the issuer, or options to acquire voting securities from someone other than the issuer, may result in multiple acquiring or acquired persons that necessitate separate HSR transaction numbers to track the filing parties and waiting periods.

[8] This Report, like previous Reports, also includes annual data on "adjusted transactions in which a second request could have been issued" ("adjusted transactions"). See Appendix A and n. 2 of Appendix A (explaining calculation of that data). There were 1128 adjusted transactions in FY 2010, and the data presented in the Tables and the percentages discussed in the text of this Report (e.g., percentage of transactions resulting in second requests) are based on this figure.



(Figure 2)

The statistics in Appendix A also show that early termination of the waiting period was requested in the majority of transactions. In fiscal year 2010, early termination was requested in 84% (953) of the transactions reported, remaining unchanged from fiscal year 2009 when it was also requested in 84% (575) of the transactions reported. The percentage of requests granted out of the total requested increased from 69% in fiscal year 2009 to 74% in fiscal year 2010.

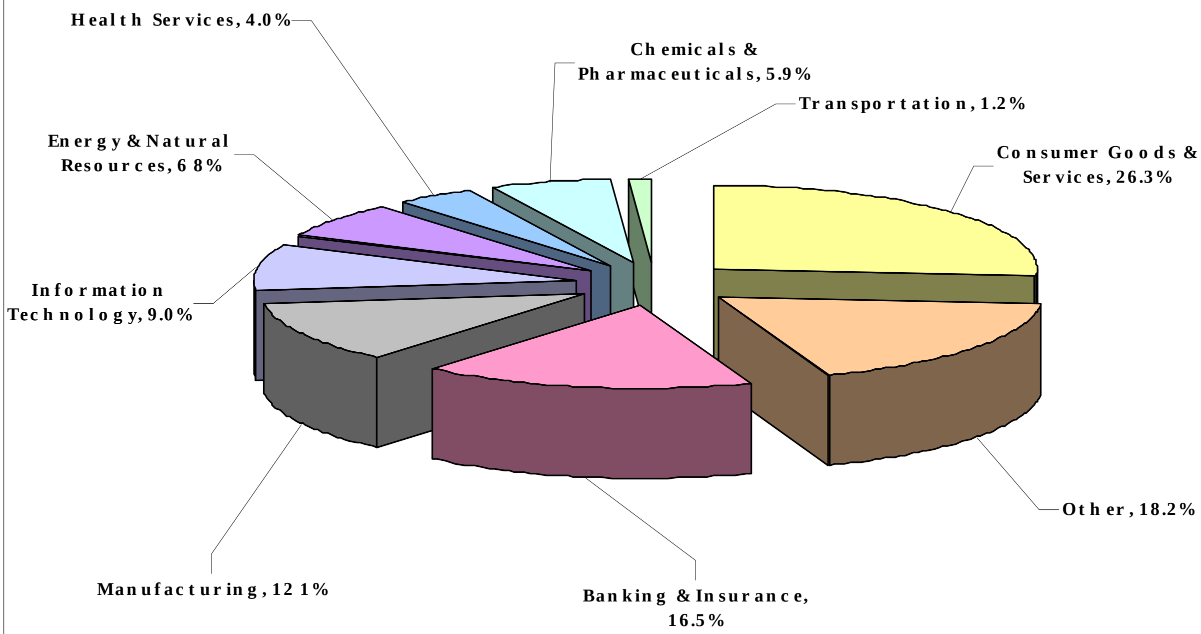
Statistical tables (Tables I through XI) in Exhibit A contain information about the agencies' enforcement activities for transactions reported in fiscal year 2010. The tables provide, for various statistical breakdowns, the number and percentage of transactions in which clearances to investigate were granted by one antitrust agency to the other and the number of merger investigations in which second requests were issued. Table III of Exhibit A shows that, in fiscal year 2010, clearance was granted to one or the other of the agencies for the purpose of conducting an initial investigation in 19.7% of the total number of the transactions reported. The tables also provide the number of transactions based on the dollar value of transactions reported and the reporting threshold indicated in the notification report.

The total dollar value of reported transactions rose dramatically from fiscal years 1996 to 2000, from about $677.4 billion to about $3 trillion. After the statutory thresholds were raised, the dollar value declined to about $1 trillion in fiscal year 2001, $565.4 billion in fiscal year 2002, and $406.8 billion in fiscal year 2003. This was followed by an increase in the dollar value of reported transactions over the next four years: about $630 billion in fiscal year 2004, $1.1 trillion in fiscal year 2005, $1.3 trillion in fiscal year 2006, and almost $2 trillion in 2007. The total dollar value of reported transactions declined to just over $1.3 trillion in fiscal year 2008, and to $533 billion in fiscal year 2009, and increased to $780 billion for fiscal year 2010.[9]

[9] The information on the value of reported transactions for fiscal year 2010 is drawn from the Premerger Database, while data for the previous fiscal years is taken from the corresponding fiscal year Annual HSR Reports (http://www ftc.gov/bc/anncompreports.shtm).

Tables X and XI provide the number of transactions by industry group in which the acquiring person or the acquired entity derived the most revenue. Figure 3 illustrates the percentage of reportable transactions within industry groups for fiscal year 2010 based on the acquired entity's operations.[10]

Percentage of Transactions By Industry Group of Acquired Entity
Fiscal Year 2010



(Figure 3)

DEVELOPMENTS WITHIN THE PREMERGER PROGRAM

1. *Compliance*

The Commission and the Antitrust Division continued to monitor compliance with the premerger notification program's filing and waiting period requirements and initiated a number of compliance investigations in fiscal year 2010. The agencies monitor compliance through a variety of methods, including a review of newspapers and industry publications for announcements of transactions that may not have been reported in accordance with the requirements of the Act. In addition, industry sources, such as competitors, customers and suppliers, interested members of the public, and in some cases the parties themselves, often provide the agencies with information about transactions and possible violations of the Act's requirements.

Under Section 7A(g)(1) of the Act, any person that fails to comply with the Act's notification and waiting period requirements is liable for a civil penalty of up to \$16,000 – increased in 2009 from \$11,000 – for each day the violation continues.[11] The antitrust agencies

---

[10] The "Other" category consists of industry segments that include construction, educational services, performing arts, recreation, and non-classifiable establishments.

[11] Dollar amounts specified in civil monetary penalty provisions within the Commission's jurisdiction are adjusted for inflation in accordance with the Debt Collection Improvement Act of 1996, Pub. L. No. 104-134 (April 26, 1996). The adjustments have included an increase in the maximum civil penalty from \$10,000 to \$11,000 for each day during which a person is in violation under Section 7A(g)(1) (61 Fed. Reg. 54548 (October 21, 1996), corrected at 61 Fed. Reg. 55840 (October 29, 1996)) and to \$16,000 effective February 10, 2009 (74 Fed. Reg. 857-

examine the circumstances of each violation to determine whether penalties should be sought.[12] During fiscal year 2010, 24 corrective filings for violations were received, and the agencies brought one enforcement action, resulting in the payment of $900,000 in civil penalties.

In this enforcement action, *United States v. Smithfield Foods, Inc. and Premium Standard Farms, LLC*,[13] the complaint alleged that prior to the expiration of the statutory waiting period applicable to Smithfield's acquisition of Premium Standard, Premium Standard stopped exercising independent business judgment in its hog purchases. Instead, it submitted for Smithfield's consent each of the three contracts for hog purchases from independent producers that arose during the HSR waiting period. These hog procurement contracts were necessary to Premium Standard's ongoing business and entered into in the ordinary course. Through this conduct, Smithfield exercised operational control over Premium Standard's hog procurement and thereby acquired beneficial ownership of a significant segment of Premium Standard's business. Such "gun jumping" is prohibited by the Act. Under the terms of a consent decree filed simultaneously with the complaint and entered by the Court on January 22, 2010, the companies were required to pay a total of $900,000 in civil penalties to settle the charges.

2. *Threshold Adjustments*

The 2000 amendments to the HSR Act require the Commission to publish adjustments to the Act's jurisdictional and filing fee thresholds annually, based on the change in the gross national product, in accordance with Section 8(a)(5) of the Clayton Act for each fiscal year beginning after September 30, 2004. The Commission amended the rules in 2005 to provide a method for future adjustments as required by the 2000 amendments and to reflect the revised thresholds contained in the rules. The revised thresholds are published annually in January and become effective 30 days after publication.

On January 21, 2010, the Commission published a notice[14] to reflect adjustment of reporting thresholds as required by the 2000 amendments[15] to Section 7A of the Clayton Act, 15 U.S.C. §18a. The revised threshold, which dropped from $65.2 million to $63.4 million, became effective February 22, 2010.

3. *International Cooperation*

The Commission and the Antitrust Division routinely cooperate with their non-U.S. counterparts in merger investigations to promote transparency and predictability as well as convergence, where appropriate, towards the best practices of merger review. These efforts enable multiple jurisdictions to manage the similarities and differences in their approach to merger review with the goal of more efficient and effective merger enforcement worldwide to the benefit of consumers and businesses. Additionally, these efforts reduce the risk of inconsistent outcomes and remedies among agencies. In some instances cooperation with non-U.S. competition authorities is particularly extensive. During the past year, the FTC worked on

---

01 (January 9, 2009)).

[12] When the parties inadvertently fail to file, the enforcement agencies generally do not seek penalties if the parties promptly make corrective filings after discovering the failure to file, submit an acceptable explanation of their failure to file, and have not previously violated the Act.

[13] United States v. Smithfield Foods, Inc. and Premium Standard Farms, LLC, No.1:10-CV-00120 (D.D.C. filed January 21, 2010).

[14] 75 Fed. Reg. 3468 (January 21, 2010).

[15] 15 U.S.C. §18a(a). *See* Pub. L. 106-553, 114 Stat. 2762.

over 15 international merger investigations that involved coordination or cooperation with international counterparts. Highlighted examples from the year are Nufarm/A.H. Marks and Panasonic/Sanyo. In the Nufarm matter, the Commission worked particularly closely with staff from the Canadian Competition Bureau throughout the investigation to arrive at a proposed settlement order that restored competition in both the U.S. and Canadian markets for certain types of herbicides. In the Panasonic/Sanyo matter, the Commission worked with its counterparts in the European Commission (EC), Canada, and Japan to resolve competitive concerns raised by Panasonic's proposed $9 billion acquisition of Sanyo. The FTC and the EC's Directorate General for Competition coordinated to order the divestiture of a battery manufacturing facility in Japan to protect competition in the market for portable NiMH batteries that power two-way radios used by police and fire departments. Of the Antitrust Division's investigations that were closed during fiscal year 2010, the Division coordinated with one or more non-U.S. competition agencies in eleven matters. Amongst the Antitrust Division's most notable instances of international cooperation were its Ticketmaster matter and Cisco Systems Inc.'s acquisition of Tandberg ASA. In its Ticketmaster matter[16], the Division cooperated closely with the Canadian Competition Bureau throughout the investigation, and the two agencies worked together to obtain the same remedy. The Division and the EC cooperated closely to resolve competition issues regarding Cisco Systems Inc.'s acquisition of Tandberg ASA. In announcing that it would not challenge the acquisition, the Division stated that it had taken into account commitments Cisco had made to the EC as part of the EC's merger clearance process, along with various market factors, and stated that the investigation "was a model of international cooperation between the United States and the European Commission."[17] In many instances, international cooperation is aided by the parties' waivers of certain confidentiality rights so the agencies can have more meaningful discussions regarding their analyses of the merger and, if enforcement action is warranted, seek compatible remedies.

MERGER ENFORCEMENT ACTIVITY[18]

1. *The Department of Justice*

During fiscal year 2010, the Antitrust Division challenged 19 merger transactions that it concluded might have substantially lessened competition if allowed to proceed as proposed or as consummated. In eleven of these challenges, the Antitrust Division filed a complaint in U.S. district court.[19] Ten of these challenges were settled by consent decree, and one matter is currently in litigation. In the other eight challenges during fiscal year 2010, when apprised of the Antitrust Division's concerns regarding their proposed transactions, the parties in four instances abandoned the proposed transaction and in four instances restructured the proposed transaction to avoid competitive problems.[20]

---

[16] See *infra* at p. 10.

[17] http://www.justice.gov/atr/public/press_releases/2010/257173.pdf.

[18] The cases listed in this section were not necessarily reportable under the premerger notification program. Because of provisions regarding the confidentiality of the information obtained pursuant to the Act, it would be inappropriate to identify which cases were initiated under the program except in specific instances where such information has already been disclosed.

[19] The Division filed ten complaints. One of those complaints challenged two transactions, and both of those challenges were resolved in one consent decree.

[20] In two instances, the Division issued a press release: March 8, 2010 – proposed acquisition of Physicians Health Plan of Mid-Michigan by Blue Cross Blue Shield of Michigan (commercial health insurance); and August 27, 2010 – proposed merger of Continental Airlines and United Airlines (takeoff and landing rights at Newark Liberty Airport). In the other six instances, the Division informed the parties of its concerns, but did not issue a press release: proposed acquisition of National Amusements, Inc. by New Rave (movie theatres); proposed

In *United States et al. v. AT&T Inc. and Centennial Communications Corp.*,[21] the Division and the State of Louisiana challenged the proposed acquisition of Centennial Communications Corp. by AT&T. The complaint alleged that the transaction, as originally proposed, would have substantially lessened competition for mobile wireless telecommunications services in eight cellular marketing areas (CMAs), as defined by the Federal Communications Commission (FCC), likely resulting in higher prices, lower quality and reduced network investments. AT&T and Centennial were each other's closest competitor for a significant set of customers in the eight CMAs. The Division filed a proposed consent decree simultaneously with the complaint. Under the terms of the decree, which was entered by the court on February 10, 2010, AT&T was required to divest assets in the eight affected CMAs in southwestern and central Louisiana and southwestern Mississippi in order to proceed with the acquisition. The Division coordinated with the FCC throughout its investigation, and the acquisition was also subject to FCC review.

In *United States v. Cameron International Corporation and NATCO Group Inc.*,[22] the Division challenged both Cameron's proposed $780 million acquisition of NATCO and Cameron's previous $8.5 million acquisition of assets of Howe Baker Engineers Ltd. The complaint alleged that the NATCO transaction, as originally proposed, would have substantially lessened competition in the manufacture of refinery desalters in the United States. The complaint also alleged that Cameron's acquisition of the Howe Baker assets in 2005 had substantially lessened competition and created a monopoly in that market. Refinery desalters are used to remove salt from crude oil at the oil refining stage of production. The desalting process is a critical initial stage of the refining process. Cameron and NATCO, a recent entrant, were each other's closest competitor for a significant set of refinery customers domestically. The Division filed a proposed consent decree simultaneously with the complaint. Under the terms of the decree, Cameron was required to divest the desalter and dehydrator assets it purchased from Howe Baker. The decree also required Cameron to divest a non-exclusive, worldwide, irrevocable license to NATCO's refinery desalter technology that utilizes dual frequency transformers. The court entered the consent decree on May 11, 2010.

In *United States et al. v. Stericycle, Inc., ATMW Acquisition Corp., Medserve, Inc., and Avista Capital Partners, L.P.*,[23] the Division and the States of Missouri and Nebraska challenged the acquisition of Medserve by Stericycle. The complaint alleged that the transaction, as originally proposed, would have substantially lessened competition in infectious waste collection and treatment services to hospitals and other critical healthcare facilities in Kansas, Missouri, Nebraska, and Oklahoma, resulting in higher prices and reduced service. Stericycle and Medserve were the two largest providers of infectious waste collection and treatment services in the United States, and were the only two firms able to compete for customers that generated

---

acquisition of NSTAR Corporation's thermal distribution system in the Boston, Massachusetts area by Morgan Stanley Infrastructure Partners and Veolia North America Holdings, Inc. (steam distribution); proposed acquisition of Spheris Holding II, Inc. by Nuance Communications, Inc. (automatic speech recognition); proposed acquisition of Lewis Brothers Bakeries' Butternut brand by Hostess Brands, Inc. (white pan bread); proposed acquisition of CPI International, Inc. by Comtech Telecommunications Corp. (traveling wave tube amplifiers); and Continental Airlines and AirTran Airways (exchange of slots at Newark, LaGuardia, and Reagan Washington National airports).

[21] United States et al. v. AT&T Inc. and Centennial Communications Corp., No. 1:09-CV-01932 (D.D.C. filed October 13, 2009).

[22] United States v. Cameron International Corporation and NATCO Group Inc., No. 1:09-CV-02165 (D.D.C. filed November 17, 2009).

[23] United States et al. v. Stericycle, Inc., ATMW Acquisition Corp., Medserve, Inc., and Avista Capital Partners, L.P., No. 1:09-CV-02268 (D.D.C. filed November 30, 2009).

large quantities of infectious waste in the affected geographic areas. The Division filed a proposed consent decree simultaneously with the complaint, requiring divestiture of all of MedServe's assets primarily used in the provision of infectious waste collection and treatment services to large customers in Kansas, Missouri, Nebraska, and Oklahoma to a viable purchaser approved by the Department. The court entered the decree on April 30, 2010.

In *United States et al. v. Dean Foods Company*,[24] the Division and the States of Illinois, Michigan, and Wisconsin sued seeking to undo Dean's April 2009 acquisition of the Consumer Products Division of Foremost Farms USA, which included two dairy processing plants, located in Waukesha and DePere, Wisconsin. Dairy processors, such as Dean and Foremost, purchase raw milk from dairy farms and agricultural cooperatives and then pasteurize and package the milk for sale to school districts, supermarkets and other commercial customers. The complaint alleged that the acquisition was likely to substantially lessen competition both in the sale of school milk to individual school districts located throughout Wisconsin and the Upper Peninsula of Michigan and in the sale of fluid milk to purchasers located in those areas and in Northeastern Illinois. Dean and Foremost were the first and fourth largest sellers of school milk and fluid milk in the region, and the acquisition resulted in Dean accounting for more than 57% of fluid milk sales. Because the acquisition was valued at $35 million, premerger notification to the federal antitrust agencies under the HSR Act had not been required. On April 7, 2010, the district court denied defendant's motion to dismiss the complaint, and the suit remains in litigation.

In *United States et al. v. Ticketmaster Entertainment, Inc. and Live Nation, Inc.*,[25] the Division, joined by 17 state attorneys general (Arizona, Arkansas, California, Florida, Illinois, Iowa, Louisiana, Massachusetts, Nebraska, Nevada, Ohio, Oregon, Pennsylvania, Rhode Island, Tennessee, Texas, and Wisconsin), challenged the acquisition of Live Nation by Ticketmaster Entertainment. The complaint alleged that the transaction, as originally proposed, would be likely to lessen competition substantially for primary ticketing services to major concert venues located in the United States, and thus likely to result in higher prices and less innovation for consumers. Primary ticketing services facilitate the initial sale of tickets to concertgoers through websites, call centers, and retail networks. Ticketmaster was the largest primary ticketing company in the United States. Live Nation, the largest concert promoter in the United States, had entered the market for primary ticketing services in December, 2008. A proposed consent decree was filed simultaneously with the complaint. Under the terms of the decree, entered by the court on July 30, 2010, the merged firm must license ticket software and divest ticketing assets to two companies, Anschutz Entertainment Group and either Comcast-Spectacor or another buyer suitable to the Division, allowing both companies to compete head-to-head with the merged entity. The decree also prohibits the merged firm from engaging in certain conduct, such as retaliating against any venue owner that chooses to use another company's ticketing services, and requires firewalls to protect confidential and valuable competitor data by preventing the merged firm from using information gleaned from its ticketing business in the day-to-day operations of its promotions or artist management business.

In *United States v. Bemis Company, Inc., Rio Tinto plc and Alcan Corporation*,[26] the Division challenged the proposed $1.2 billion acquisition of the Alcan Packaging Food Americas business by Bemis from Rio Tinto, the parent of Alcan Corporation. The complaint alleged that

[24] United States et al. v. Dean Foods Company, No. 10-C-0059 (E.D. WI filed January 22, 2010).

[25] United States et al. v. Ticketmaster Entertainment, Inc. and Live Nation, Inc., No. 1:10-CV-00139 (D.D.C. filed January 25, 2010).

[26] United States v. Bemis Company, Inc., Rio Tinto plc and Alcan Corporation, No. 1:10-CV-00295 (D.D.C. filed February 24, 2010).

the acquisition, as originally proposed, likely would have substantially lessened competition in the United States and Canada for the development, production, and sale of both flexible-packaging rollstock for chunk, sliced and shredded natural cheese packaged for retail sale and flexible-packaging shrink bags for fresh meat. Flexible packaging products for natural cheese and fresh meat are unique in that they must meet strict performance standards to prevent spoilage, maintain product appearance, operate properly on customers' packaging equipment, and adhere to unique standards specific to the particular products. As a result, these types of flexible packaging are difficult to manufacture and commercialize successfully. The Division filed a proposed consent decree simultaneously with the complaint. Under the terms of the decree, Bemis was required to divest certain assets, including plants and intellectual property, used in the production and sale of flexible packaging for natural cheese and fresh meat. The court entered the decree on July 13, 2010.

In *United States et al. v. Election Systems and Software, Inc*,[27] the Division, joined by nine state attorneys general (Arizona, Colorado, Florida, Maine, Maryland, Massachusetts, New Mexico, Tennessee, and Washington), challenged the 2009 acquisition of Premier Election Solutions, Inc. and PES Holdings, Inc. (collectively, "Premier") by Election Systems and Software, Inc. ("ES&S"). The complaint alleged that the acquisition substantially lessened competition in the market for voting equipment systems, as it combined the two largest providers of systems used to tally votes in federal, state, and local elections in the United States. As a result of the acquisition, which did not require notification under the HSR Act because its $5 million value fell below the Act's reporting threshold, ES&S became the provider of more than 70 percent of the voting equipment systems in the United States. The Division filed a proposed consent decree simultaneously with the complaint. The decree, which was entered by the court on June 30, 2010, required that ES&S divest Premier voting equipment systems assets it had acquired, including the means to produce all versions of Premier's hardware, software, and firmware used to record, tabulate, transmit, or report votes.

In *United States v. Baker Hughes Incorporated and BJ Services Company*,[28] the Division challenged the proposed $5.5 billion acquisition of BJ Services by Baker Hughes. The complaint alleged that the acquisition, as originally proposed, would likely substantially lessen competition by combining two of only four companies that provide specialized pumping services, called vessel stimulation services, necessary for the production of oil and gas from wells in the U.S. Gulf of Mexico. These critical services prevent sand from interfering with the flow of oil and gas from wells in the Gulf and are performed using specially designed and equipped vessels that are operated by experienced crews and supported by scientists, engineers, and other lab technicians who customize the stimulation job for the specific well formation. The Division filed a proposed consent decree simultaneously with the complaint, requiring divestiture of two vessels used for providing stimulation services. The court entered the decree on July 26, 2010.

In *United States et al. v. AMC Entertainment Holdings, Inc. and Kerasotes Showplace Theatres, LLC*,[29] the Division and the States of Illinois, Colorado, and Indiana challenged AMC Entertainment Holdings' proposed acquisition of most of the movie theaters operated by Kerasotes Showplace Theatres. The complaint alleged that the transaction, as originally

[27] United States et al. v. Election Systems and Software, Inc., No.1:10-CV-00380 (D.D.C. filed March 8, 2010).

[28] United States v. Baker Hughes Incorporated and BJ Services Company, No. 1:10-CV-00659 (D.D.C. filed April 27, 2010).

[29] United States et al. v. AMC Entertainment Holdings, Inc. and Kerasotes Showplace Theatres, LLC, No. 1:10-CV-00846 (D.D.C. filed May 21, 2010).

proposed, would likely substantially lessen competition among movie theaters that show first-run, commercial movies in the Chicago, Illinois, Denver, Colorado, and Indianapolis, Indiana metropolitan areas, resulting in higher ticket prices and a decreased quality viewing experience for moviegoers. The Division filed a proposed consent decree simultaneously with the complaint. Under the terms of the decree, which was entered by the court on August 9, 2010, AMC was required to divest the following movie theaters: AMC Gardens 13 and Kerasotes Glen 10 (North Suburban Chicago); AMC Cantera 30 (Upper Southwest Suburban Chicago); Kerasotes Showplace 12 Bolingbrook (Lower Southwest Suburban Chicago); Kerasotes Colony Square 12 (Upper Northwest Denver); Kerasotes Olde Town 14 (Lower Northwest Denver); AMC Castleton Square 14 or Kerasotes Showplace 12 Glendale Town (North Indianapolis); and AMC Greenwood 14 (South Indianapolis).

In *United States v. Amcor Ltd., Rio Tinto Plc and Alcan Corporation*,[30] the Division challenged the proposed acquisition of Rio Tinto's Alcan Packaging Medical Flexibles business by Amcor Ltd. The complaint alleged that the transaction, as originally proposed, would substantially lessen competition in the development, production and sale of vented bags for medical use in the United States. Vented bags are a type of flexible packaging used to package large or bulky medical items such as drapes, gowns, and surgery trays and kits. Vented bags must meet rigorous performance and qualification standards because failure of the package in the sterilization process could expose the contents to microbes, bacteria, or particulates, which could cause injury, sickness, or even death to a patient. Under the terms of the proposed consent decree filed simultaneously with the complaint, the companies were required to divest Alcan Packaging's Marshall, North Carolina plant, which manufactured all of Alcan Packaging's vented bags for medical use. The court entered the decree on October 6, 2010.

Additionally during fiscal year 2010, the Division settled via consent decree a merger challenge brought in 2007. In *United States v. Daily Gazette Company and MediaNews Group, Inc.*, Cv. No: 2:07-0329 (S.D.W.V. filed 5/22/07)[31], the Division filed a proposed consent decree on January 20, 2010. Under the terms of the decree, which was entered by the court on July 19, 2010, the parties were required to restructure their newspaper joint operating arrangement and take other steps to remedy the anticompetitive effects of a series of transactions entered into in 2004. MediaNews Group (now known as Affiliated Media Inc.) will regain independent control over the operations of the *Charleston Daily Mail* and economic incentives to grow the newspaper. The settlement also requires the parties to offer substantial discounts of the *Charleston Daily Mail* in order to rebuild its subscriber base and prohibits the *Daily Gazette* from discriminating against the *Charleston Daily Mail* in circulation, advertising sales, and other key joint activities. In addition, the companies are required to continue publishing the *Charleston Daily Mail* as long as it has not failed financially.

[30] United States v. Amcor Ltd., Rio Tinto Plc and Alcan Corporation, No. 1:10-CV-00973 (D.D.C. filed June 10, 2010) .

[31] See the HSR Annual Report, Fiscal Year 2007 for a description of this case.

2. *The Federal Trade Commission*

During fiscal year 2010, the Commission challenged 22 transactions that it had reason to believe may have lessened competition if allowed to proceed as proposed or, in the case of consummated transactions, to remain unchallenged,[32] leading to 18 consent orders in non adjudicative proceedings, one administrative complaint, and three transactions that were abandoned after Commission staff informed the parties of its antitrust concerns. In the one case in which the Commission issued an administrative complaint, the parties settled the charges by agreeing to a divestiture.

In *The Dun & Bradstreet Corporation/QED*,[33] the Commission issued an administrative complaint challenging The Dun & Bradstreet Corporation's February 2009 acquisition of Quality Education Data (QED) and alleging that the deal hurt consumers by eliminating nearly all competition in the market for kindergarten through twelfth-grade educational marketing databases. The data sold by these companies is used to sell books, education materials, and other products to teachers and other educators nationwide. The combination of the two companies gave Dun & Bradstreet, through its subsidiary Market Data Retrieval, more than 90% of the market for K-12 educational marketing data. To settle the charges, Dun & Bradstreet agreed to divest certain assets to an independent data company, restoring competition that had been eliminated as a result of the transaction.

In fiscal year 2010, the Commission accepted consent agreements and issued proposed orders for public comment in 18 merger cases. Thirteen of the consent orders became final in fiscal year 2010; five either became final in fiscal year 2011 or are still pending.

In *Pfizer Inc./Wyeth*,[34] the Commission challenged Pfizer Inc.'s proposed $68 billion acquisition of Wyeth, alleging that the transaction would have reduced competition in several markets for the manufacture and sale of animal vaccines and pharmaceutical products, leaving veterinarians and other animal health product customers with limited options. To settle the Commission's claims, the companies agreed to sell animal health business assets to a Commission-approved buyer.

In *Merck/Schering-Plough*,[35] the Commission's review of Schering-Plough's proposed $41.1 billion acquisition of Merck resulted in significant divestitures to resolve concerns that the merger would have reduced competition in several animal health care markets and in the market for drugs used to treat nausea and vomiting in surgical and chemotherapy patients. Before the merger, the companies were two of the leading animal health pharmaceutical suppliers in the United States, and competed head-to-head in several markets. In addition, Merck's Emend product is the first and only drug in its class, NK 1 receptor antagonists, approved for human use to treat side effects of chemotherapy. Schering-Plough was in the process of licensing an equivalent drug to a third party when its transaction with Merck was announced. According to the complaint, the merger would likely have reduced the combined firm's incentives to launch Schering-Plough's competing drug. To resolve the Commission's concerns in the market for NK 1 receptor antagonist drugs for nausea and vomiting, Schering-Plough agreed to divest its related

---

[32] To avoid double counting, this report includes only those merger enforcement actions in which the Commission took its first public action during fiscal year 2010.

[33] FTC v. The Dun & Bradstreet Corporation, Dkt. No. 9342 (administrative complaint issued May 7, 2010).

[34] In the matter of Pfizer Inc./Wyeth, Docket No. C-4267 (proposed order issued Oct. 14, 2009).

[35] In the matter of Merck/Schering-Plough, Docket No. C-4268 (proposed order issued Oct. 29, 2009).

assets to Opko Health, Inc. To remedy concerns about animal health product competition, Merck agreed to sell its interest in Merial (an animal health joint venture) to Sanofi-Aventis, its joint venture partner.

In *Panasonic/Sanyo*,[36] the Commission challenged major consumer electronics manufacturer Panasonic Corporation's proposed $9 billion acquisition of Sanyo Electric Co., Ltd., requiring that Sanyo sell its portable nickel metal hydride (NiMH) battery business, including a premier manufacturing plant in Japan. NiMH batteries power two-way radios, among other products, which are used by police and fire departments nationwide. Panasonic and Sanyo were the two largest manufacturers and sellers of these batteries. The Commission order will maintain competition through the divestiture to FDK Corporation.

In *SCI/Palm Mortuary*,[37] the Commission challenged Service Corporation International's (SCI) proposed acquisition of Palm Mortuary, Inc., a competitor in the cemetery services business in Las Vegas, Nevada. The Commission required that SCI, the nation's largest cemetery operator, must sell a cemetery and funeral home in Las Vegas to complete its proposed acquisition of Palm Mortuary.

In *Watson Pharmaceuticals/Arrow Group*,[38] the Commission challenged Watson Pharmaceutical's proposed $1.7 billion acquisition of rival generic drug company Arrow Pharmaceuticals, alleging that the transaction would have substantially reduced competition in the U.S. markets for important generic drugs used to treat Parkinson's disease and the side effects of chemotherapy. To remedy the Commission's concerns, Watson and Arrow agreed to sell certain rights and assets related to the two drugs to Commission-approved buyers to ensure continued competition in these markets.

In *Agrium/CF Industries*,[39] agricultural products supplier Agrium Inc. agreed to sell a range of assets as part of an agreement with the Commission that will allow the company to move forward with its acquisition of competitor CF Industries Holdings, Inc. The consent order settles charges that the acquisition would have eliminated competition in the market for anhydrous ammonia fertilizer, a product that farmers rely on to grow their crops.

In *Danaher Corp./MDS*,[40] the Commission challenged Danaher's proposed acquisition of MDS Analytical Technologies, requiring that MDS divest assets related to its laser microdissection business. Danaher and MDS were two of only four firms in North America selling microdissection devices – a key tool for scientific research. The settlement is designed to preserve competition in this market.

In *PepsiCo Inc./Pepsi Bottling*,[41] the Commission required that carbonated soft drink company PepsiCo, Inc. restrict its access to confidential competitive information of rival Dr Pepper Snapple Group as a condition for proceeding with PepsiCo's proposed $7.8 billion acquisition of its two largest bottlers and distributors, which also distribute Dr Pepper Snapple Group carbonated soft drinks. Under the order, PepsiCo is required to set up a firewall to ensure

---

[36] In the matter of Panasonic/Sanyo, Docket No. C-4274 (proposed order issued Nov. 24, 2009).

[37] In the matter of SCI/Palm Mortuary, Docket No. C-4275 (proposed order issued Nov. 25, 2009).

[38] In the matter of Watson Pharmaceuticals/Arrow Group, Docket No. C-4276 (proposed order issued Dec. 2, 2009).

[39] In the matter of Agrium/CF Industries, Docket No. C-4277 (proposed order issued Dec. 23, 2009).

[40] In the matter of Danaher Corp/MDS, Docket No. C-4283 (proposed order issued Jan. 27, 2010).

[41] In the matter of PepsiCo Inc./Pepsi Bottling, Docket No. C-4301 (proposed order issued Feb. 26, 2010).

that its ownership of these bottlers does not give PepsiCo employees access to commercially sensitive and confidential Dr Pepper Snapple marketing and brand plans.

In *SCI/Keystone North America*,[42] Service Corporation International (SCI), the nation's largest provider of funeral and cemetery services, settled Commission charges that its proposed acquisition of Keystone North America Inc., the fifth-largest funeral and cemetery services provider in North America, would have raised antitrust concerns in the markets for both funeral services and cemetery services. The order requires SCI to sell 22 funeral homes and four cemeteries in 19 local markets to ensure competition is preserved following its acquisition of Keystone.

In *Varian, Inc./Agilent, Inc.*,[43] Agilent Technologies, Inc. and Varian, Inc., two leading global suppliers of high-performance scientific measurement instruments, agreed to sell three of their product lines in order to proceed with their proposed $1.5 billion merger. According to the Commission's complaint, Agilent's acquisition of Varian would have violated U.S. antitrust laws by reducing competition for three types of scientific measurement instruments because the companies currently compete with one another in those markets. To resolve these competitive concerns, the parties agreed to an order requiring them to sell assets related to the manufacture and sale of Micro Gas Chromatography instruments, Triple Quadrupole Gas Chromatography-Mass Spectrometry instruments, and Inductively Coupled Plasma-Mass Spectrometry instruments.

In *Flying J/Pilot Corp.*,[44] the Commission required Pilot Corporation, owner of the largest travel center network in the U.S., to sell 26 travel centers as part of a settlement to replace the competition that would have been lost because of Pilot's proposed $1.8 billion acquisition of Flying J Inc.'s travel center network. Pilot agreed to sell the travel centers, which provide diesel, food, parking, and other amenities for truckers, to Love's Travel Stops and Country Stores. According to the Commission's complaint, the deal between Pilot and Flying J would have reduced competition for certain long-haul trucking fleets for which Pilot and Flying J were the first and second best choices to fulfill their diesel needs.

In *AEA Investors/D.A. Stuart GmbH*,[45] Houghton International, Inc., the leading North American provider of hot rolling oil used to process aluminum, agreed to sell some of the assets it acquired in 2008 through its purchase of D.A. Stuart GmbH, a transaction that included multiple product markets. The Commission's investigation found that Houghton's acquisition of D.A. Stuart GmbH combined the two largest suppliers of aluminum hot rolling oil (AHRO) in North America, giving the combined firm control of almost 75% of the North American market. The Commission's complaint alleges that through its purchase of Stuart, Houghton could unilaterally raise AHRO prices to U.S. consumers. The complaint also alleged that the acquisition could decrease innovation for this vital input into aluminum manufacturing. Under the order settling the Commission's charges, Houghton will sell Stuart's AHRO business to Quaker Chemical Corporation.

[42] In the matter of SCI/Keystone North America, Docket No. C-4284 (proposed order issued Mar. 26, 2010).

[43] In the matter of Varian, Inc./Agilent, Inc., Docket No. C-4292 (proposed order issued May 14, 2010).

[44] In the matter of Flying J/Pilot Corp., Docket No. C-4293 (proposed order issued Jun. 30, 2010).

[45] In the matter of AEA Investors/ D.A. Stuart GmbH, Docket No. C-4297 (proposed order issued Jul. 14, 2010).

In *Fidelity/LandAmerica*,[46] to settle Commission charges that its 2008 acquisition of three LandAmerica Financial, Inc. subsidiaries was anticompetitive, Fidelity National Financial, Inc. agreed to sell several title plants and related assets in the Portland, Oregon, and Detroit, Michigan, metropolitan areas and in four other Oregon counties. Fidelity sells title insurance and provides title information services. Land America also sold title insurance and services. Title plants are databases used by abstractors, title insurers, title insurance agents, and others to determine the ownership of, and interests in, real property in connection with underwriting and issuance of title insurance polices and for other purposes. According to the Commission, Fidelity's acquisition of the LandAmerica assets was anticompetitive in several local markets for the provision of title insurance information services by title plants. The consent will restore independent title plant owners and competition in these markets.

In *NuFarm/A.H. Marks Holdings, Ltd.*,[47] Australian chemical company Nufarm Limited agreed to sell certain assets and modify some of its business agreements to settle charges that its 2008 acquisition of rival A.H. Marks Holding Limited hurt competition in the U.S. market for three herbicides that are relied upon by farmers, landscapers, and consumers. Under the settlement, Nufarm agreed to sell rights and assets associated with two of the herbicides to competitors and to modify agreements with two other companies to allow them to fully compete in the market for the other herbicide. Nufarm's acquisition of United Kingdom-based A.H. Marks gave Nufarm monopolies in the U.S. markets for two herbicides called MCPA and MCPP-P, which also are known as phenoxy herbicides. The transaction also left only two competitors in the market for a third phenoxy herbicide, called 2,4DB. The three herbicides are widely used in the turf, lawn care, and agriculture industries to eliminate certain weeds safely and inexpensively.

In *Tops/Penn Traffic*,[48] the Commission reached a settlement agreement with Tops Markets LLC that protects consumers from the potential anticompetitive effects of Tops' recent acquisition of the bankrupt Penn Traffic Company supermarket chain. To settle Commission charges that the acquisition was anticompetitive in several areas of New York and Pennsylvania, Tops agreed to sell seven Penn Traffic supermarkets to Commission-approved buyers. Because the Commission adopted a flexible process for reviewing the potential anticompetitive effects of the acquisition, none of the 79 Penn Traffic stores was liquidated in the bankruptcy proceeding.

In *Nestle/Novartis*,[49] to settle Commission charges that its proposed acquisition of Alcon, Inc. from Nestle, S.A. would be anticompetitive, Novartis AG agreed to sell to a Commission-approved buyer the rights and assets related to an injectable miotic, an eye care drug used in cataract surgery to constrict the pupil to help check for ruptures in the eye. Novartis and Alcon are the only two U.S. providers of injectable miotics, and the Commission alleged that the acquisition would have created a monopoly in injectable miotics. The settlement requires Novartis to sell its drug Miochol-E to Bausch & Lomb, Inc.

In *Airgas/Air Products and Chemicals*,[50] industrial gas supplier Air Products and Chemicals, Inc. reached an agreement with the Commission requiring the company to sell certain

---

[46] In the matter of Fidelity/LandAmerica, Docket No. C-4300 (proposed order issued Jul. 16, 2010).

[47] In the matter of NuFarm/A.H. Marks Holdings, Ltd. Docket No. C-4298 (proposed order issued Jul. 28, 2010).

[48] In the matter of Tops/Penn Traffic, Docket No. C-4295 (proposed order issued Aug. 4, 2010).

[49] In the matter of Nestle/Novartis, Docket No. C-4296 (proposed order issued Aug. 16, 2010).

[50] In the matter of Airgas/Air Products and Chemicals, Docket No. C-4299 (proposed order issued Sep. 9, 2010).

liquid gas assets to resolve Commission charges that Air Products' proposed acquisition of Airgas, a competing industrial gas supplier, would be anticompetitive. The Commission alleged that the takeover would have harmed competition in five regional markets for bulk liquid oxygen and bulk liquid nitrogen, which are used in a range of applications from hospital patient care to the manufacture of frozen foods. The Commission order would restore this competition.

In *Coca-Cola/Coca-Cola Enterprise*,[51] The Coca-Cola Company agreed to restrict its access to confidential competitive business information of rival Dr Pepper Snapple Group as a condition for completing Coca-Cola's proposed $12.3 billion acquisition of its largest North American bottler, which also distributes Dr Pepper Snapple carbonated soft drinks. Under the settlement, Coca-Cola will set up a "firewall" to ensure that its ownership of the bottling company does not give certain Coca-Cola employees access to commercially sensitive confidential Dr Pepper Snapple marketing information and brand plans. In a complaint filed with the settlement, the Commission charged that access to this information likely would have harmed competition in the U.S. markets for carbonated soft drinks.

ONGOING REASSESSMENT OF THE EFFECTS OF THE PREMERGER NOTIFICATION PROGRAM

The Commission and the Antitrust Division continually review the impact of the premerger notification program on the business community and antitrust enforcement. As indicated in past annual reports, the HSR program ensures that virtually all relatively large mergers or acquisitions that affect consumers in the United States will be reviewed by the antitrust agencies prior to consummation. The agencies generally have the opportunity to challenge unlawful transactions before they occur, thus avoiding the problem of constructing effective post-acquisition relief. As a result, the HSR Act is doing what Congress intended, giving the government the opportunity to investigate and challenge those relatively large mergers that are likely to harm consumers *before* injury can arise. Prior to the premerger notification program, businesses could, and frequently did, consummate transactions that raised significant antitrust concerns before the antitrust agencies had the opportunity to consider adequately their competitive effects. The enforcement agencies were forced to pursue lengthy post-acquisition litigation, during the course of which harm from the consummated transaction continued (and afterwards as well, where achievement of effective post-acquisition relief was not practicable). Because the premerger notification program requires reporting before consummation, this problem has been significantly reduced.

Always cognizant of the program's impact and effectiveness, the enforcement agencies continue to seek ways to speed up the review process and reduce burdens for companies. As in past years, the agencies will continue their ongoing assessment of the HSR program to increase accessibility, promote transparency, and reduce the burden on the filing parties without compromising the agencies' ability to investigate and interdict proposed transactions that may substantially lessen competition.

In August 2010, the Commission proposed giving the HSR form its most extensive overhaul since its creation. The proposed form changes are an attempt to provide the agencies

[51] In the matter of Coca-Cola/Coca-Cola Enterprise, Docket No. C-4305 (proposed order issued Sep. 27, 2010).

with some additional information that would be useful in making an initial evaluation of whether a transaction may raise competitive issues warranting investigation, while at the same time eliminating the need to provide certain information that the agencies have found not as helpful as originally anticipated. The public comment period ended on October 18, and the agencies are considering those comments before implementing HSR form changes.[52]

Note: The data for FY 2004 and FY 2005 "Transactions Reported" and for FY 2004 – FY 2007 "Filings Received" reflect corrections to some prior Annual reports to account for a coding error.

---

1 Usually, two filings are received, one from the acquiring person and one from the acquired person when a transaction is reported. Only one application is received when an acquiring party files for an exemption under Section 7A (c)(6) or (c)(8) of the Clayton Act.

2 These figures omit from the total number of transactions reported all transactions for which the agencies were not authorized to request additional information. These include (1) incomplete transactions (only one party filed a complete notification); (2) transactions reported pursuant to the exemption provisions of Sections 7A (c) (6) and 7A(c)(8) of the Act; and (3) transactions which were found to be non-reportable. In addition, where a party filed more than one notification in the same year to acquire voting securities of the same corporation, e.g., filing one threshold and later filing for a higher threshold, only a single consolidated transaction has been counted because as a practical matter the agencies do not issue more than one Second Request in such a case. These statistics also omit from the total number the transactions reported secondary acquisitions filed pursuant to 801.4 of the Premerger Notification rules. Secondary acquisitions have been deducted in order to be consistent with the statistics presented in most of the prior annual reports.

3 These statistics are based on the date the request was issued and not the date the investigation was opened.

4 Second Requests investigations are a percentage of the total number of adjusted transactions. The total percentage reflected in Figure 2 may not equal the sum of reported component values due to rounding.

5 These statistics are based on the date of the HSR filing and not the date action was taken on the request.

1 Fiscal year 2010 figures include transactions reported between October 1, 2009 and September 30, 2010.

2 The size of transaction is based on the aggregate total amount of voting securities, non-corporate interests and/or assets held by the acquiring person as a result of the transaction and are taken from the response to Item 3 (b)(ii) and 3 (c) of the Notification and Report Form.

3 These statistics are based on the date the Second Request was issued.

4 During fiscal year 2010, 1166 transactions were reported under the HSR Premerger Notification program. The smaller number, 1128, reflects the adjustments to eliminate the following types of transactions: (1) transactions reported under Section 7A(c)(6) and (c)(8) (transactions involving certain regulated industries and financial businesses); (2) transactions deemed non-reportable; (3) incomplete transactions (only one party in each transaction filed a compliant notification); and (4) transactions withdrawn before the waiting period began. The table does not, however, exclude competing offers or multiple HSR transactions resulting from a single business transaction (where there are multiple acquiring persons or acquired persons).

5 The filings for transactions valued under $50M submitted in Fiscal Year 2010 reflects corrective filings.

6 In February 2001, legislation raised the size of transaction from $15 million to $50 million with annual adjustments beginning in February 2005.

7 The category labeled “Sales Not Available” includes newly-formed acquiring persons, foreign acquiring person with no United States revenues, and acquiring persons who had not derived any revenues from their investments at the time of filing.

8 Assets of an acquired entity are not available when the acquired entity’s financial data is consolidated within its ultimate parent.

9 Sales of an acquired entity are taken from responses to Item 4(a) and (b) (SEC documents and annual reports) or item 5 (dollar revenues) of the Premerger Notification and Report Form.

10 This category includes acquisition of newly-formed entities from which no sales were generated, and acquisitions of assets which produced no sales revenues during the prior year to filing the Notification and Report Form.

11 The 3-digit codes are part of the North American Industrial Classification System (NAICS) established by the United States Government North American Industrial Classification System 1997, Executive Office of the President, Office of Management and Budget. The NAICS groups used in this table were determined from responses submitted by the parties to Item 5 of the Premerger Notification and Report Form.

12 This represents the deviation from the fiscal year 2009 percentage.

13 This category includes transactions by newly-formed entities.

14 The intra-industry transactions column identifies the number of acquisitions in which both the acquiring and acquired person derived revenues from the same 3-digit NAICS code.

HART-SCOTT-RODINO ANNUAL REPORT
Fiscal Year 2013

Section 7A of the Clayton Act
Hart-Scott-Rodino Antitrust Improvements Act of 1976
(Thirty-Sixth Annual Report)

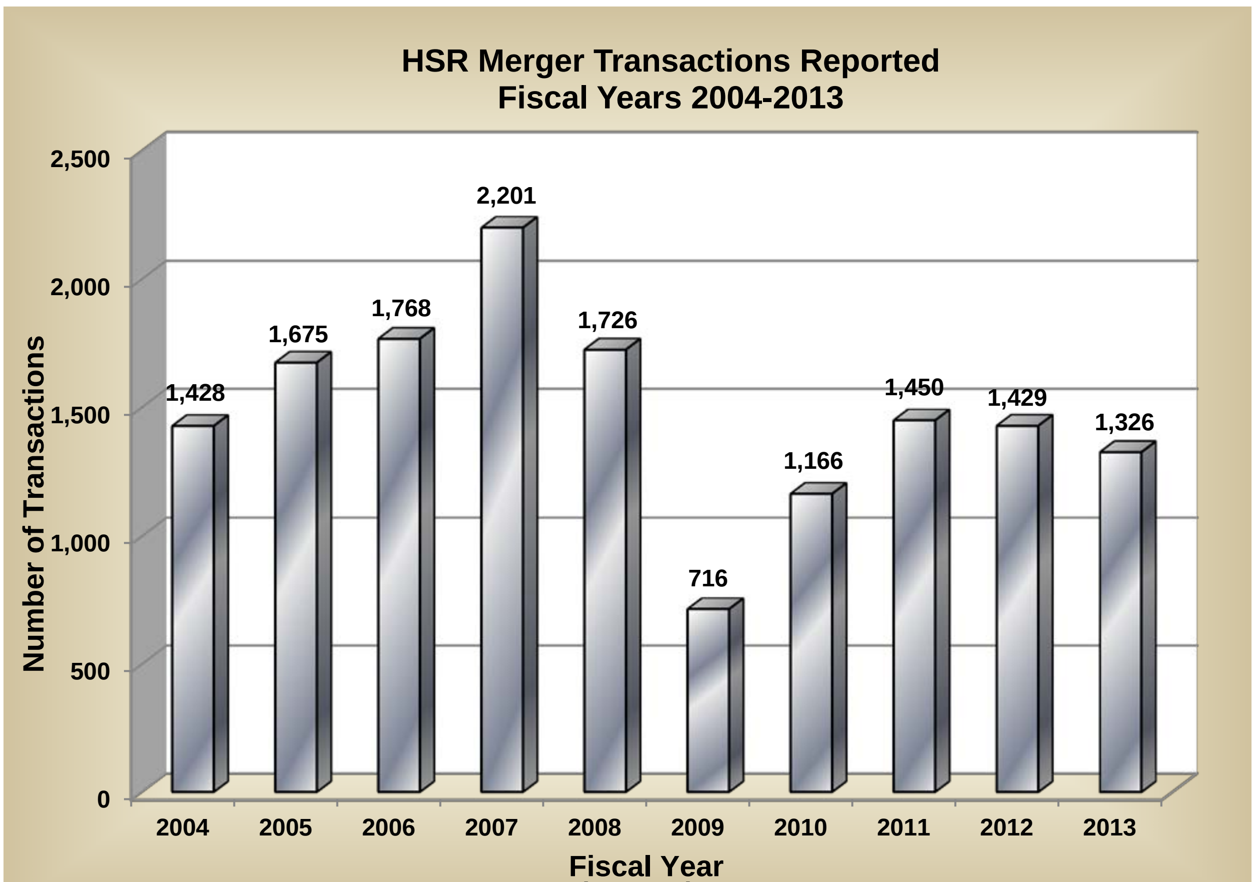
Edith Ramirez
Chairwoman
Federal Trade Commission

William J. Baer
Assistant Attorney General
Antitrust Division

INTRODUCTION

The Hart-Scott-Rodino Antitrust Improvements Act of 1976 ("HSR Act" or "the Act"), together with Section 13(b) of the Federal Trade Commission Act and Section 15 of the Clayton Act, enables the Federal Trade Commission ("FTC" or "Commission") and the Antitrust Division of the Department of Justice ("Antitrust Division" or "Division") to obtain effective preliminary relief against anticompetitive mergers, and to prevent interim harm to competition and consumers. The premerger notification program was instrumental in alerting the Commission and the Division to transactions that became the subjects of the numerous enforcement actions brought in fiscal year 2013[1] to protect consumers—individual, business, and government—against anticompetitive mergers.

The Commission and the Antitrust Division continue their efforts to protect competition by identifying and investigating those mergers and acquisitions that raise potentially significant competitive concerns. In fiscal year 2013, 1,326 transactions were reported under the HSR Act, representing about a 7.2% decrease from the 1,429 transactions reported in fiscal year 2012. (*See* Figure 1 below.)



(Figure 1)

[1] Fiscal year 2013 covers the period of October 1, 2012 through September 30, 2013.

During fiscal year 2013, the Commission brought 23 merger enforcement actions,[2] including 16 in which it accepted consent orders for public comment, all of which resulted in final orders; two in which the transactions were abandoned or restructured as a result of antitrust concerns raised during the investigation; one in which the Commission filed a complaint in federal court to permanently enjoin the acquisition; and four in which the Commission initiated administrative litigation. In one of these administrative matters, the Commission contemporaneously filed a motion for preliminary injunction in federal court. In two of the others, the Commission dismissed its administrative complaints after the parties abandoned their intended transactions, and in the fourth, the Commission issued a consent order requiring divestitures. These enforcement actions preserved competition in numerous sectors of the economy, including pharmaceuticals, hospitals, high tech and industrial goods, casinos, and energy.

One of the Commission's notable challenges was against Idaho-based St. Luke's Health System's acquisition of Idaho's largest independent, multi-specialty physician practice group, Saltzer Medical Group. The Commission, together with the Idaho Attorney General, initiated an action in federal district court to block the transaction. The four-week bench trial began on September 23, 2013. On January 24, 2014, the U.S. District Court for the District of Idaho found that the acquisition violated Section 7 of the Clayton Act and the Idaho Competition Act, and permanently enjoined the consummated acquisition and ordered St. Luke's to fully divest itself of Saltzer's physicians and assets. St. Luke's has appealed the decision.

The Commission also initiated federal district court and administrative proceedings in connection with its challenge of Ardagh Group S.A.'s proposed acquisition of rival glass container manufacturer Saint-Gobain Containers, Inc. To resolve the litigation, Ardagh agreed to sell six of its nine U.S. glass container manufacturing plants. In another challenge, the Commission initiated administrative litigation and authorized staff to seek a temporary restraining order and preliminary injunction in federal district court to block casino operator Pinnacle Entertainment's proposed acquisition of rival Ameristar Casinos. The Commission agreed to resolve the litigation with a consent order that required Pinnacle to divest casino properties in Missouri and Louisiana to settle concerns that the acquisition would hinder competition in those areas.

During fiscal year 2013, the Antitrust Division challenged 15 merger transactions. In seven of these challenges, the Antitrust Division filed a complaint in U.S. district court. The Division prevailed at trial in its challenge to Bazaarvoice's $168 million consummated acquisition of PowerReviews, its closest rival in the U.S. market for internet product ratings and reviews platforms. Subsequently, a proposed consent decree was filed with the court on April 24, 2014, requiring Bazaarvoice to divest the assets it acquired from PowerReviews and to adhere to other requirements to fully restore competition in the provision of online product ratings and reviews platforms. In another court challenge, trial is pending. The other five court challenges resulted in settlements being filed with the court: three times simultaneously with the complaint, and in two other instances, post-complaint. In the eight fiscal year 2013 challenges where the Division did not file a complaint, the parties in three instances abandoned the proposed

[2] To avoid double-counting, this Report includes only those merger enforcement actions in which the Commission or the Antitrust Division took its first public action during fiscal year 2013.

transaction, in three instances restructured the proposed transaction, and in two instances changed their conduct to avoid competitive problems, thus resolving the Division's concerns.

One of the Division's notable challenges was the suit brought, together with several state attorneys general, to block the merger between US Airways and American Airlines. As proposed, this transaction would have reduced competition in air travel—an industry that is increasingly concentrated and oligopolistic—and raised prices for consumers. The settlement, which was entered by the court on April 25, 2014, requires the parties to divest key assets at capacity-constrained airports across the county. These divestitures will provide low cost carrier airlines the opportunity to expand their national footprint and increase system-wide competition to the benefit of the American consumer.

The Division also acted to preserve competition and avoid price increases in the U.S. beer market, suing to stop Anheuser-Busch InBev's (ABI) proposed acquisition of total ownership and control of Grupo Modelo, a leading rival and aggressive competitor. After the Division sued, the parties agreed to divest to Constellation Brands Modelo's entire U.S. business, ensuring that Modelo would remain an independent horizontal competitor of ABI and MillerCoors.

In fiscal year 2013, the Commission's Premerger Notification Office ("PNO") continued to respond to thousands of telephone calls seeking information about the reportability of transactions under the HSR Act, and the details involved in completing and filing the Notification and Report Form (the filing form). The HSR website, http://www.ftc.gov/enforcement/premerger-notification-program, continued to provide improved access to information necessary to the notification process. The website includes basic resources, such as introductory guides, that provide an overview of the premerger notification program and merger review process. It is the primary source of information for HSR practitioners seeking information relating to the HSR form and instructions, the premerger notification statute and rules, current filing thresholds, notices of grants of early termination, filing fee instructions, scheduled HSR events, training materials for new HSR practitioners, tips for completing the filing form, procedures for submitting post-consummation filings, contact information for PNO staff, and frequently asked questions regarding HSR filing requirements. Web users also can find up-to-date information, including speeches, press releases, summaries and highlights, and Federal Register notices regarding any amendments to the HSR rules. The website also includes a database of informal interpretation letters, giving the public ready access to PNO staff interpretations of the premerger notification rules and the Act. As always, PNO staff is available to help HSR practitioners comply with HSR notification requirements.

BACKGROUND OF THE HSR ACT

Section 201 of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, Pub. L. No. 94-435 ("the Act" or "HSR Act"), amended the Clayton Act by adding a new Section 7A, 15 U.S.C. § 18a. In general, the HSR Act requires that certain proposed acquisitions of voting securities or assets be reported to the Commission and the Antitrust Division prior to consummation. The parties must then wait a specified period, usually 30 days (or 15 days in the case of a cash tender offer or bankruptcy sale), before they may complete the transaction.

Whether a particular acquisition is subject to these requirements depends on the value of the acquisition and, in certain acquisitions, the size of the parties as measured by their sales and assets. Acquisitions valued below a certain threshold, acquisitions involving parties with assets and sales below a certain threshold, and certain classes of acquisitions that are less likely to raise antitrust concerns are excluded from the Act's coverage.

The primary purpose of the statutory scheme, as the legislative history makes clear, is to provide the antitrust enforcement agencies with the opportunity to review mergers and acquisitions before they occur. The premerger notification program, with its filing and waiting period requirements, provides the agencies with both the time and the information necessary to conduct this antitrust review. Much of the information for a preliminary antitrust evaluation is included in the notification filed with the agencies by the parties to the proposed transactions.

If either agency determines during the waiting period that further inquiry is necessary, the agency is authorized by Section 7A(e) of the Clayton Act to issue a request for additional information and documentary material ("Second Request").[3] The Second Request extends the waiting period for a specified period of time (usually 30 days, but 10 days in the case of a cash tender offer or bankruptcy sale) after all parties have complied with the Second Request (or, in the case of a tender offer or bankruptcy sale, after the acquiring person complies). This additional time provides the reviewing agency with the opportunity to analyze the information and to take appropriate action before the transaction is consummated. If the reviewing agency believes that a proposed transaction may substantially lessen competition, it may seek an injunction in federal district court to prohibit consummation of the transaction. The Commission also may challenge the transaction in administrative litigation.

The Commission, with the concurrence of the Assistant Attorney General for the Antitrust Division, promulgated final rules implementing the premerger notification program on July 31, 1978. At that time, a comprehensive Statement of Basis and Purpose also was published, containing a section-by-section analysis of the rules and an item-by-item analysis of the filing form.[4] The program became effective on September 5, 1978. The Commission, with the concurrence of the Assistant Attorney General, has amended the rules and the filing form on several occasions over the years to improve the program's effectiveness and to lessen the burden of complying with the rules.[5]

A STATISTICAL PROFILE OF THE PREMERGER NOTIFICATION PROGRAM

The appendices to this Report provide a statistical summary of the operation of the premerger notification program. Appendix A shows, for the ten-year period covering fiscal years 2004-2013, the number of transactions reported; the number of filings received; the number of merger investigations in which Second Requests were issued; and the number of

---

[3] 15 U.S.C. §18a(e)(1)(a) ("The Federal Trade Commission or the Assistant Attorney General may, prior to the expiration of the 30-day waiting period (or in the case of a cash tender offer, the 15-day waiting period)…require the submission of additional information or documentary material relevant to the proposed acquisition").
[4] 43 Fed. Reg. 33450 (July 31, 1978).
[5] *See* http://www.ftc.gov/enforcement/premerger-notification-program/statute-rules-and-formal-interpretations/statements-basis-purpose.

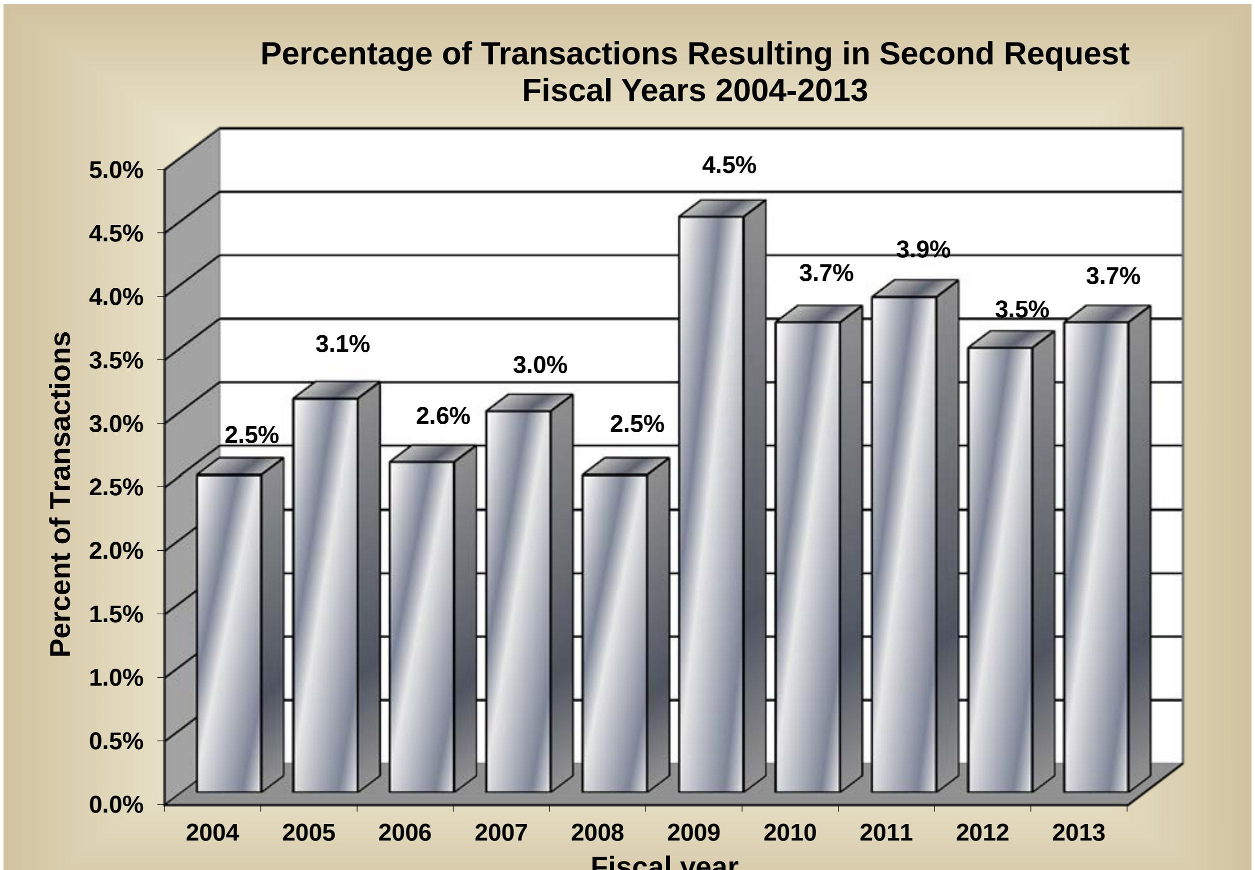
transactions in which requests for early termination of the waiting period were received, granted, and not granted.[6] Appendix A also shows the number of transactions in which Second Requests could have been issued, as well as the percentage of transactions in which Second Requests were issued. Appendix B provides a month-by-month comparison of the number of transactions reported and the number of filings received for fiscal years 2004 through 2013.

The statistics set out in these appendices show that the number of transactions reported in fiscal year 2013 decreased 7.2% from the number of transactions reported in fiscal year 2012. In fiscal year 2013, 1,326 transactions were reported, while 1,429 were reported in fiscal year 2012.[7] The statistics in Appendix A also show that the number of merger investigations in which Second Requests were issued in fiscal year 2013 decreased 4.1% from the number of merger investigations in which Second Requests were issued in fiscal year 2012. Second Requests were issued in 47 merger investigations in fiscal year 2013 (25 issued by the FTC and 22 issued by the Antitrust Division), while Second Requests were issued in 49 merger investigations in fiscal year 2012 (20 issued by the FTC and 29 issued by the Antitrust Division). The percentage of transactions in which a Second Request was issued increased from 3.5% in fiscal year 2012 to 3.7% in fiscal year 2013. (*See* Figure 2 below)

---

[6] The term "transaction," as used in Appendices A and B and Exhibit A to this Report, does not refer only to individual mergers or acquisitions. A particular merger, joint venture, or acquisition may be structured such that it involves more than one filing that must be made under the HSR Act.

[7] This Report, like previous Reports, also includes annual data on "adjusted transactions in which a Second Request could have been issued" ("adjusted transactions"). *See* Appendix A and n.2 of Appendix A (explaining calculation of that data). There were 1,286 adjusted transactions in fiscal year 2013, and the data presented in the Tables and the percentages discussed in the text of this Report (*e.g.*, percentage of transactions resulting in Second Requests) are based on this figure.



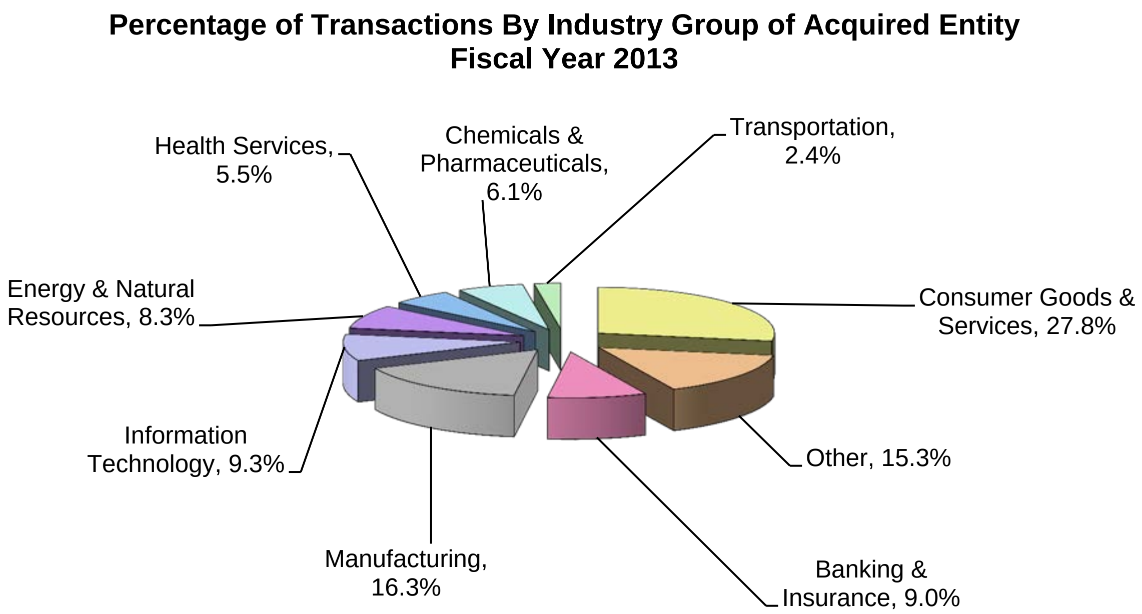
(Figure 2)

The statistics in Appendix A also show that early termination of the waiting period was requested in the majority of transactions. In fiscal year 2013, early termination was requested in 77% (990) of the transactions reported. In fiscal year 2012, early termination was requested in 78% (1,094) of the transactions reported. The percentage of requests granted out of the total requested decreased from 82% in fiscal year 2012 to 80.5% in fiscal year 2013.

The tables (Tables I through XI) in Exhibit A contain information regarding the agencies' enforcement activities for transactions reported in fiscal year 2013. The tables provide, for example, various categories of transactions, the number and percentage of transactions in which clearance to investigate was granted by one antitrust agency to the other, and the number of merger investigations in which Second Requests were issued. Table III of Exhibit A shows that, in fiscal year 2013, clearance was granted to either of the agencies to conduct an initial investigation in 16.9% of the total number of transactions reported. The tables also provide the number of transactions based on the dollar value of transactions reported and the reporting threshold indicated in the notification report. In fiscal year 2013, the dollar value of reported transactions was $815 billion.[8]

[8] The information on the value of reported adjusted transactions for fiscal year 2013 is drawn from a database maintained by the Premerger Notification Office.

Tables X and XI provide the number of transactions by industry group in which the acquiring person or the acquired entity derived the most revenue. Figure 3 illustrates the percentage of reportable transactions within industry groups for fiscal year 2013 based on the acquired entity's operations.[9]



(Figure 3)

DEVELOPMENTS WITHIN THE PREMERGER PROGRAM

1. *Amendments to the Premerger Notification Rules*

The Commission, with the concurrence of the Antitrust Division, amended the premerger notification rules (effective August 9, 2013) to provide a framework for the withdrawal of a premerger notification filing under the HSR Act.[10] These amendments set forth the procedures for voluntarily withdrawing an HSR filing; establish when a premerger notification filing will be automatically withdrawn if a filing publicly announcing the termination of the transaction is made with the U.S. Securities and Exchange Commission under the Securities Exchange Act of 1934 and the rules promulgated under that Act; and set forth the procedure for resubmitting a filing after a withdrawal without incurring an additional filing fee.

---

[9] The category designated as "Other" consists of industry segments that include construction, educational services, performing arts, recreation, and other non-classifiable businesses.

[10] Press Release, FTC Finalizes Amendments to the Premerger Notification Rules Related to the Withdrawal of HSR Filings (June 28, 2013), *available at* http://www.ftc.gov/news-events/press-releases/2013/06/ftc-finalizes-amendments-premerger-notification-rules-related; 78 Fed. Reg. 41293 (July 10, 2013) (codified at 16 C.F.R. pt. 803).

In another rule change (effective December 16, 2013), the Commission, with the concurrence of the Antitrust Division, amended the premerger notification rules regarding acquisitions of exclusive patent rights in the pharmaceutical industry.[11] The amended rules provide a framework for determining when a transaction involving the transfer of rights to a patent or part of a patent in the pharmaceutical and medicine manufacturing industry constitutes an asset acquisition that may be reportable under the HSR Act.

2. *Compliance*

The Commission and the Antitrust Division continued to monitor compliance with the premerger notification program's filing and waiting period requirements, and initiated a number of compliance investigations in fiscal year 2013. The agencies monitor compliance through a number of methods, including a review of newspapers and industry publications for announcements of transactions that may not have been reported in accordance with the HSR Act's requirements. In addition, industry sources, such as competitors, customers, and suppliers, interested members of the public, and, in certain cases, the parties themselves, often provide the agencies with information about transactions and possible violations of the Act's requirements.

Under Section 7A(g)(1) of the Act, any person that fails to comply with the Act's notification and waiting period requirements is liable for a civil penalty of up to $16,000 for each day the violation continues.[12] The antitrust agencies examine the circumstances of each violation to determine whether penalties should be sought.[13] During fiscal year 2013, 39 post-consummation "corrective" filings were received, and the agencies brought two enforcement actions, resulting in $1.2 million in civil penalties.

In *United States v. Barry Diller*,[14] the complaint alleged that Barry Diller, a member of the board of directors of The Coca Cola Company ("Coke"), failed to comply with the HSR Act's premerger notification requirements before acquiring Coke voting securities. Although this was the first time that Diller was charged with an HSR Act violation, he had previously made a corrective filing for what he claimed was an inadvertent failure to file before acquiring voting securities of a different company. Under the terms of a consent decree filed simultaneously with the complaint and entered by the court on July 3, 2013, Diller agreed to pay a $480,000 civil penalty to settle the charges.

---

[11] Press Release, FTC Finalizes Amendments to the Premerger Notification Rules Related to the Transfer of Exclusive Patent Rights in the Pharmaceutical Industry (Nov. 6, 2013), *available at* http://www.ftc.gov/news-events/press-releases/2013/11/ftc-finalizes-amendments-premerger-notification-rules-related; 78 Fed. Reg. 68705 (Nov. 15, 2013) (codified at 16 C.F.R. pt. 801).

[12] Dollar amounts specified in civil monetary penalty provisions within the Commission's jurisdiction are adjusted for inflation in accordance with the Debt Collection Improvement Act of 1996, Pub. L. No. 104-134 (Apr. 26, 1996). The adjustments have included an increase in the maximum civil penalty from $10,000 to $11,000 for each day during which a person is in violation of Section 7A(g)(1) (61 Fed. Reg. 54548 (Oct. 21, 1996), corrected at 61 Fed. Reg. 55840 (Oct. 29, 1996)) and to $16,000 effective February 10, 2009 (74 Fed. Reg. 857 (Jan. 9, 2009)).

[13] If parties inadvertently fail to file, the agencies generally will not seek penalties so long as the parties promptly submit corrective filings after discovering the failure to file, submit an acceptable explanation of their failure to file, and have not previously violated the Act.

[14] *United States v. Barry Diller*, No. 1:13-CV-01002 (D.D.C.) (final judgment issued July 3, 2013), *available at* http://www.ftc.gov/sites/default/files/documents/cases/2013/07/130703dillerjdmt.pdf.

In *United States v. MacAndrews & Forbes Holdings*,[15] the complaint alleged that investment firm MacAndrews & Forbes Holdings Inc. failed to comply with premerger notification requirements before acquiring voting securities of Scientific Games Corporation in June 2012. Although this was the first time that MacAndrews & Forbes had been charged with an HSR Act violation, the firm had previously made a corrective filing in May 2011 for what it asserted was an inadvertent failure to file before acquiring voting securities of a different company. Under the terms of a consent decree filed simultaneously with the complaint and entered by the court on July 1, 2013, MacAndrews & Forbes agreed to pay a civil penalty of $720,000 to settle the charges.

3. *Threshold Adjustments*

The 2000 amendments to the HSR Act require the Commission to publish adjustments to the Act's jurisdictional and filing fee thresholds annually, based on the change in the gross national product, in accordance with Section 8(a)(5) of the Clayton Act for each fiscal year beginning after September 30, 2004. The Commission amended the rules in 2005 to provide a method for future adjustments as required by the 2000 amendments, and to reflect the revised thresholds contained in the rules. The revised thresholds are published annually in January and become effective 30 days after publication.

On January 11, 2013, the Commission published a notice[16] to reflect adjustment of the reporting thresholds as required by the 2000 amendments[17] to Section 7A of the Clayton Act, 15 U.S.C. § 18a. The revised thresholds, including an increase in the size of transaction threshold from $68.2 million to $70.9 million, became effective February 11, 2013.

MERGER ENFORCEMENT ACTIVITY[18]

1. *The Department of Justice*

During fiscal year 2013, the Antitrust Division challenged 15 merger transactions that it concluded might have substantially lessened competition if allowed to proceed as proposed. In seven of these challenges, the Antitrust Division filed a complaint in U.S. district court. One of these seven court challenges was litigated, and the district court ruled in favor of the government on January 8, 2014. In another court challenge, trial is pending. In three, the parties filed settlement papers simultaneously with the complaint, and in two other court challenges, settlement papers were filed post-complaint. In the eight fiscal year 2013 challenges where the Division did not file a complaint, in three instances the parties abandoned the proposed transaction, in three other instances the parties restructured the proposed transaction, and in two

[15] *United States v. MacAndrews & Forbes Holdings Inc.*, No. 1:13-CV-0926 (D.D.C.) (final judgment issued July 1, 2013), *available at* http://www.ftc.gov/sites/default/files/documents/cases/2013/07/130701macandrewsforbesjdmt.pdf.
[16] 78 Fed. Reg. 2406 (Jan. 11, 2013).
[17] 15 U.S.C. §18a(a). *See* Pub. L. No. 106-553, 114 Stat. 2762.
[18] The cases listed in this section were not necessarily reportable under the premerger notification program. Given the confidentiality of information obtained pursuant to the Act, it would be inappropriate to identify the cases initiated under the program except in those instances in which that information has already been disclosed.

instances the parties changed their conduct to avoid competitive problems, thus resolving the Division's concerns.[19]

In *United States v. Star Atlantic Waste Holdings, L.P., Veolia Environnement S.A., and Veolia ES Solid Waste, Inc.*,[20] the Division challenged the proposed acquisition of Veolia Environnement S.A. by Star Atlantic Waste Holdings, L.P. The complaint alleged that the transaction, as originally proposed, would have resulted in higher prices for the collection of commercial waste and the disposal of municipal solid waste in northern New Jersey, central Georgia, and Macon, Georgia. In each of these areas, Star Atlantic and Veolia were two of only a few significant firms providing commercial waste collection and municipal solid waste disposal. The Division filed a proposed consent decree simultaneously with the complaint, requiring Star Atlantic and Veolia to divest three transfer stations in northern New Jersey, a landfill and transfer station in central Georgia, and three commercial waste collection routes in the Macon metropolitan area. On March 1, 2013, the court entered the decree.

In *United States and State of New York v. Twin America, LLC, Coach USA, Inc., International Bus Services, Inc., CitySights, LLC, and City Sights Twin, LLC*,[21] the Division and the State of New York challenged the formation of Twin America, a joint venture formed in 2009 between the two largest double-decker hop-on, hop-off sightseeing bus companies operating in New York City. In addition to the joint venture itself, the complaint also names as defendants Coach USA Inc. and CitySights, LLC and the subsidiaries through which they entered into the Twin America joint venture, International Bus Services Inc. and City Sights Twin, LLC. The complaint alleges that the joint venture, which did not require notification under the HSR Act, had the effect of eliminating head-to-head competition between Coach and CitySights in the market for hop-on, hop-off bus tours in New York City and gave the parties an effective monopoly that enabled them to raise prices to consumers. The lawsuit seeks to dissolve the joint venture and impose other relief to restore competition and redress the anticompetitive effects of the parties' conduct. The suit is pending litigation.

In *United States v. Bazaarvoice, Inc.*,[22] the Division challenged the June 2012 acquisition of PowerReviews, Inc. by Bazaarvoice, Inc. The complaint alleged that the transaction, which was not reportable under the HSR Act, significantly lessened competition in the market for product ratings and reviews (PRR) platforms in the United States by combining Bazaarvoice's

---

[19] WellPoint Inc.'s proposed acquisition of Amerigroup Corp. (Medicaid managed care plans); proposed acquisition of certain branches from Bank of America by Camden National Bank, N.A. (banks); EnviroSolutions Holdings, Inc.'s acquisition of Environmental Alternatives, Inc. (solid waste collection; solid waste landfill); Entergy's acquisition of Acadia Energy Center Block II from Acadia Power Partners (wholesale electricity); Aetna, Inc.'s proposed acquisition of Coventry Health Care, Inc. (direct health and medical insurance carriers and third party administration of insurance and pension funds); Partners Healthcare System Inc.'s proposed acquisition of Cooley Dickinson Hospital (hospital services); Midcontinent Communications' proposed acquisition of the Knology business centered in Sioux Falls, South Dakota from WideOpenWest (WOW!) (cable, ISP, television broadcasting and sale of advertising); BAE Systems Inc.'s proposed acquisition of MHI Ship Repair & Services from American Maritime Holdings Inc. (ship building and repair).
[20] *United States v. Star Atlantic Waste Holdings, L.P., Veolia Environnement S.A., and Veolia ES Solid Waste, Inc.*, No. 1:12-CV-01847 (D.D.C. filed November 15, 2012).
[21] *United States and State of New York v. Twin America, LLC, Coach USA, Inc., International Bus Services, Inc., CitySights, LLC and City Sights Twin, LLC*, No. 12-CV-8989 (S.D.N.Y. filed December 11, 2012).
[22] *United States v. Bazaarvoice, Inc.*, No. C-13-0133 (N.D. Cal. filed January 10, 2013).

market-leading PRR platform with PowerReviews, its most significant U.S. rival. Consumer-generated product ratings and reviews are displayed on retailers' and manufacturers' websites to enhance the online shopping experience. The feature allows consumers to read feedback from authentic product owners prior to making a purchase. According to the complaint, before the transaction PowerReviews was an aggressive price competitor and Bazaarvoice routinely responded to competitive pressure from PowerReviews. The lawsuit sought to restore the competition lost as a result of the acquisition by, among other things, having Bazaarvoice divest assets sufficient to create a separate and viable competing business to replace PowerReviews' competitive significance in the marketplace. After a three week trial, on January 8, 2014, the district court issued a Memorandum Opinion concluding that Bazaarvoice's acquisition violated the antitrust laws. The court's Memorandum Opinion can be found at http://www.justice.gov/atr/cases/bazaarvoice.html. A proposed consent decree was filed April 24, 2014, requiring Bazaarvoice to sell all of the PowerReviews assets to a divestiture buyer and containing other provisions to compensate for the deterioration of PowerReviews' competitive position that occurred as a result of the transaction. Under the proposed consent decree, Bazaarvoice is required to provide syndication services to the divestiture buyer for four years, allowing the divestiture buyer to build its customer base and develop its own syndication network. Bazaarvoice is required to waive breach of contract claims against its customers, allowing them to switch to the divestiture buyer without penalty. Bazaarvoice is also required to waive trade-secret restrictions for any of its employees who are hired by the divestiture buyer, enabling the buyer to leverage Bazaarvoice's post-merger research and development efforts.

In *United States v. Anheuser-Busch InBev SA/NV and Grupo Modelo S.A.B de C.V.*,[23] the Division challenged Anheuser-Busch InBev's (ABI) proposed acquisition of the remaining interest in Grupo Modelo that ABI did not already own. According to the complaint filed on January 31, 2013, as originally proposed, the $20.1 billion transaction would have substantially lessened competition in the market for beer in the United States as a whole and in 26 metropolitan areas across the United States, resulting in consumers paying more for beer and diminished innovation. ABI's Bud Light is the best selling beer in the United States, and Modelo's Corona Extra is the best selling import. On April 19, 2013, a consent decree was filed settling the suit and requiring Modelo and ABI to make divestitures that would fully replace Modelo as a competitor in the United States. The decree called for the divestiture of Modelo's entire U.S. business including perpetual and exclusive licenses of Modelo brand beers for distribution and sale in the United States, its most advanced brewery, Piedras Negras, and its interest in Crown Imports, LLC (Crown) to Constellation Brands, Inc. (Constellation) or an alternative purchaser. Crown was the joint venture established by Modelo and Constellation to import, market, and sell certain Modelo beers into the United States. The decree was entered by the court on October 24, 2013.

In *United States. v. Ecolab Inc. and Permian Mud Service, Inc.*,[24] the Division challenged Ecolab Inc.'s proposed acquisition of Permian Mud Services, Inc. The complaint alleged that the transaction, as originally proposed, would combine two of the three leading providers of production chemical management services ("PCMS") for deepwater wells in the U.S. Gulf of

[23] *United States v. Anheuser-Busch InBev SA/NV and Grupo Modelo S.A.B de C.V.*, No 1:13-CV-00127 (D.D.C. filed January 31, 2013).
[24] *United States v. Ecolab Inc. and Permian Mud Service, Inc.*, No 1:13-CV-00444 (D.D.C. filed April 8, 2013).

Mexico ("Gulf") and eliminate significant competition in the highly concentrated market, leading to higher prices, reduced service quality, and diminished innovation. PCMS involves the application of specially formulated chemical solutions to oil and gas wells to facilitate hydrocarbon production and protect well infrastructure. These critical services are administered by experienced personnel including scientists, engineers, and other lab technicians who customize the chemical blends and application methodology for specific well formations. Permian's wholly-owned subsidiary, Champion Technologies, Inc. ("Champion"), and Ecolab's wholly-owned subsidiary, Nalco Company ("Nalco"), were the two largest suppliers of deepwater PCMS in the Gulf, and the companies vigorously competed head-to-head to win the business of oil and gas exploration and production companies. A proposed consent decree settling the suit filed simultaneously with the complaint requires the companies to divest to Clariant Corporation and its affiliate, Clariant International Ltd., assets Champion had been using to provide deepwater production chemical management services in the Gulf, including the patent for Champion's best-selling production chemical in the deepwater Gulf. The settlement also provides Clariant with the exclusive right to hire the merged firm's relevant personnel, who possess essential expertise and know-how. The court entered the consent decree on September 18, 2013.

In *United States and State of Texas v. Cinemark Holdings, Inc., Rave Holdings, LLC and Alder Wood Partners, L.P.*,[25] the Division and the State of Texas challenged the proposed acquisition by Cinemark of Rave Cinemas. According to the complaint, the transaction, as originally proposed, would lessen competition in the market for first-run, commercial movies in specified portions of Kentucky, New Jersey and Texas. Under the terms of the proposed consent decree filed along with the complaint, Cinemark must divest movie theaters in Kentucky, New Jersey and Texas. In addition, Cinemark's chairman must divest Movie Tavern, Inc., a company that he controlled that operated in Fort Worth and Denton, Texas that competed with Rave Cinemas. Without the divestitures, moviegoers in the relevant areas would likely have faced higher prices, and Cinemark, Rave Cinemas, and Movie Tavern would have had less incentive to maintain, upgrade, and renovate their theaters and to license the most popular movies, reducing the quality of the viewing experience for the moviegoer. On August 15, 2013, the court entered the consent decree.

In *United States, et al. v. US Airways Group, Inc. and AMR Corporation*,[26] the Division and the states of Texas, Arizona, Pennsylvania, Florida, Tennessee, Virginia, and the District of Columbia challenged the proposed $11 billion merger between US Airways Group, Inc. and American Airlines' parent company, AMR Corporation. The complaint alleged that the transaction, as originally proposed, would substantially lessen competition for commercial air travel and result in passengers paying higher airfares and receiving reduced service. In addition, the transaction would reduce competition in the market for slots at National Airport where the merged carrier would control almost 70% of the slots. A proposed consent decree settling the suit was filed November 12, 2013, requiring US Airways and American to divest slots and gates in key constrained airports across the country to low cost carriers in order to enhance system-

[25] *United States and State of Texas v. Cinemark Holdings, Inc., Rave Holdings, LLC, and Alder Wood Partners, L.P.*, No. 1:13-CV-00727 (D.D.C. filed May 20, 2013).
[26] *United States et al. v. US Airways Group, Inc. and AMR Corporation*, No. 1:13-CV-01236 (D.D.C. filed August 13, 2013).

wide competition in the airline industry and address the competitive harm that would result from the proposed transaction. Specifically, the companies are required to divest or transfer: (i) 104 air carrier slots and related gates and facilities at Washington Reagan National Airport; (ii) 34 slots at New York LaGuardia Airport and related gates and facilities; and (iii) two gates and related facilities at each of five airports: Boston Logan, Chicago O'Hare, Dallas Love Field, Los Angeles International, and Miami International. These divestitures are the largest ever in an airline merger and will allow low cost carriers to fly more direct and connecting flights throughout the country in competition with the legacy carriers. This will result in more choices and more competitive airfares for consumers. The court entered the consent decree on April 25, 2014.

Additionally, during fiscal year 2013, the Division initiated one civil contempt proceeding. On November 14, 2012, the Division filed a petition in the U.S. District Court for the District of Columbia asking the court to find Exelon Corporation in civil contempt for violating the consent decree and related order entered by the court in *United States v. Exelon Corporation and Constellation Energy Group, Inc.*[27] Under the decree, Exelon was required to sell three electricity plants in Maryland Brandon Shores and H.A. Wagner in Anne Arundel County, MD and C.P. Crane in Baltimore County, MD. Exelon was also required to abide by a hold separate stipulation and order that placed restrictions on Exelon's conduct between the time Exelon closed its $7.9 billion acquisition of Constellation and the time it completed the plant divestitures required by the consent decree. The hold separate required Exelon, during this period, to bid certain of its electricity generating plants at or below cost to ensure that Exelon would not be able to raise market prices for electricity. In consenting to entry of the consent decree and hold separate, Exelon specifically agreed to take all steps necessary to comply with its legal obligations. The petition charged that Exelon failed to fulfill its obligations under the decree and related order. In a settlement agreement filed simultaneously with the petition, and approved by the court on November 26, 2012, Exelon agreed to pay $400,000 to settle the alleged violation.

2. *The Federal Trade Commission*

During fiscal year 2013, the Commission brought 23 merger enforcement actions. Those 23 actions include: 16 in which the Commission accepted consent orders for public comment, with all 16 resulting in final orders; one in which the transaction was abandoned and one in which the transaction was restructured as a result of antitrust concerns raised during the investigation; one in which the Commission initiated proceedings to obtain a permanent injunction in federal district court; and four in which the Commission initiated administrative litigation. In one of the four administrative litigation matters, the Commission also sought a preliminary injunction in federal district court to enjoin the acquisition pending resolution of the Commission's administrative litigation.

Described below are the four matters in which the Commission initiated administrative litigation, and the single matter in which the Commission sought to enjoin permanently a consummated acquisition in federal district court.

[27] *See* the HSR Annual Report, Fiscal Year 2012 for a description of this case.

In *Reading Health System/Surgical Institute of Reading*,[28] the Commission issued an administrative complaint challenging, and authorized staff to seek a preliminary injunction in federal district court enjoining, Reading Health Systems' ("RHS'") proposed acquisition of rival surgical services provider Surgical Institute of Reading, L.P. The Commission alleged that the acquisition would have substantially reduced quality and price competition for orthopedic and other surgical services in the Reading, Pennsylvania area, and increased RHS's ability to demand higher reimbursement rates from commercial health plans, causing significant harm to area employers and residents. Shortly after the Commission filed its administrative complaint, the parties abandoned the transaction.

In *Integrated Device Technology/PLX Technology*,[29] the Commission challenged Integrated Device Technology's ("IDT's") proposed acquisition of PLX Technology ("PLX"), IDT's primary competitor. The Commission alleged that the transaction would have created a near-monopoly in the market for PCIe switches, a type of integrated computer circuit, which performs critical connectivity functions in computers and other electronic devices. The Commission also alleged that the acquisition would have eliminated substantial price, quality, and customer service competition between the two firms, leading to higher prices, less innovation, reduced customer service, and lower-quality products for consumers. The Commission issued an administrative complaint challenging, and authorized staff to seek a preliminary injunction in federal district court enjoining, the transaction. Shortly after the Commission filed its administrative complaint, IDT and PLX abandoned the transaction.

In *Pinnacle Entertainment/Ameristar Casinos*,[30] the Commission issued an administrative complaint to challenge, and authorized staff to seek a preliminary injunction in federal district court to enjoin, Pinnacle Entertainment's $2.8 billion acquisition of rival casino operator, Ameristar Casinos. The Commission charged that the proposed transaction would substantially reduce the combined entity's incentive to offer better prices and higher quality amenities and casino services to customers in two geographic markets: the St. Louis, Missouri metropolitan area, and the Lake Charles, Louisiana area. The Commission alleged that in St. Louis, the proposed acquisition would eliminate direct price and non-price competition between Pinnacle's two casinos—Lumière and River City—and Ameristar's St. Charles casino, enabling the merged firm to reduce its promotions and discounts to customers, reduce its investments in amenities, and offer a lower-quality experience without losing a substantial number of customers. In Lake Charles, Ameristar was building Mojito Pointe, a casino and hotel property located adjacent to Pinnacle's existing casino resort, L'Auberge Lake Charles. Ameristar expected to open Mojito Pointe in 2014. The Commission alleged that in Lake Charles, the proposed acquisition would eliminate the significant competitive impact of Ameristar's entry and close competition with Pinnacle, and thus eliminate the merging parties' incentive to offer

---

[28] *In the Matter of Reading Health Sys.*, FTC Dkt. No. 9353 (compl. filed Nov. 16, 2012), *available at* http://www.ftc.gov/enforcement/cases-proceedings/121-0155/reading-health-system-surgical-institute-reading-matter.
[29] *In the Matter of Integrated Device Tech.*, FTC Dkt. No. 9354 (compl. filed Dec. 18, 2012), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/01/matter-integrated-device-technology-inc-corporation.
[30] *In the Matter of Pinnacle Entm't*, FTC Dkt. No. 9355 (compl. filed May 28, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/12/pinnacle-entertainment-inc-ameristar-casinos-inc.

promotions, discounts, and better amenities to keep L'Auberge and Mojito Pointe customers from switching to the other's casino. To resolve the litigation and ensure that casino patrons would continue to benefit from competitive pricing and amenities in the St. Louis and Lake Charles areas, the Commission issued a consent order that required Pinnacle to divest its St. Louis-based Lumiére casino and all related assets, as well as all of the assets associated with Ameristar's development and construction of Mojito Pointe casino in Lake Charles.

In *Ardagh Group S.A./Saint-Gobain Containers*,[31] the Commission issued an administrative complaint challenging Ardagh Group's proposed $1.7 billion acquisition of rival glass manufacturer Saint-Gobain Containers. The Commission's complaint alleged that the acquisition would combine two of the three largest U.S. manufacturers of glass beer and spirits containers and result in an effective duopoly, increasing the ease and likelihood of coordination between the two remaining major glass container manufacturers. The Commission also alleged that the acquisition would harm competition by eliminating the head-to-head price and innovation competition that previously existed between Ardagh and Saint-Gobain. In addition to the administrative litigation, FTC staff filed a separate complaint in federal district court, seeking a preliminary injunction to halt the acquisition until the conclusion of the Commission's administrative proceeding and any subsequent appeals. To resolve the litigation, Ardagh agreed to sell six of its nine glass container manufacturing plants in the United States to a Commission-approved buyer.

In *St. Luke's Health System/Saltzer Medical Group*,[32] the Commission and the Idaho Attorney General filed a joint complaint in federal district court challenging Idaho-based St. Luke's Health System's consummated acquisition of Saltzer Medical Group. The Complaint alleged that the acquisition combined the two largest providers of adult primary care physician services in the Nampa, Idaho area, and increased St. Luke's ability and incentive to demand higher reimbursement rates from commercial health plans, thereby leading to higher health care costs for Idaho employers and area consumers. In March 2013, the U.S. District Court for the District of Idaho consolidated the Commission and Idaho Attorney General's joint action with a private action filed by two of St. Luke's rivals who similarly sought to block the acquisition. The 18-day proceeding commenced in September 2013 and ended in November. On January 24, 2014, the federal district court permanently enjoined the acquisition, finding that the combination would likely substantially increase St. Luke's market power over primary care physicians in the Nampa area and thus allow St. Luke's to demand higher rates for health care services, ultimately leading to higher costs for both employers and consumers.

As previously stated, in fiscal year 2013, the Commission also accepted consent agreements and issued proposed orders for public comment in 16 merger matters. The Commission has finalized all 16 of them.

---

[31] *In the Matter of Ardagh Group*, FTC Dkt. No. 9356 (compl. filed June 28, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/131-0087/ardagh-group-sa-public-limited-liability-company; *FTC v. Ardagh Group*, Case No. 1:13-cv-01021 (RMC) (D.D.C.), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/11/ardagh-group-sa-compagnie-de-saint-gobain-saint.

[32] *FTC v. St. Luke's Health Sys.*, Case No. 01:12-cv-00560-BLW-REB (D. Idaho) (compl. filed Mar. 12, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/03/st-lukes-health-system-ltd-and-saltzer-medical-group.

In *Universal Health Services/Ascend Health Services*,[33] the Commission challenged Universal Health Services' acquisition of Ascend Health Services. As proposed, the transaction allegedly would have led to a virtual monopoly and harmed competition for the provision of acute inpatient psychiatric services to commercially insured patients in the El Paso, Texas/Santa Theresa, New Mexico area. To resolve these charges, the Commission issued a consent order that required Universal Health to sell an acute inpatient psychiatric facility in the El Paso/Santa Theresa area, thus restoring competition in the local market for acute inpatient psychiatric services.

In *Magnesium Elektron North America*,[34] the Commission challenged Magnesium Elektron North America, Inc.'s 2007 acquisition of rival Revere Graphics Worldwide, Inc. Magnesium Elektron specialized in the manufacture of magnesium products, including photoengraving magnesium plates. Revere also manufactured magnesium photoengraving plates, in addition to zinc, copper, and brass plates. The Commission's complaint alleged that the transaction was an unlawful merger-to-monopoly in the worldwide market for photoengraving magnesium plates, and increased Magnesium Elektron's ability to exercise market power unilaterally in the relevant market. To remedy these competitive concerns and replace the competition lost as a result of the Revere acquisition, the Commission issued a consent order requiring Magnesium Elektron to sell to Universal Engraving, Inc., a manufacturer in an adjacent market, the intellectual property and know-how used to roll and coat magnesium plates for photoengraving applications. The consent order also required Magnesium Elektron to supply Universal with finished magnesium plates and the chemicals used in the photoengraving process, thereby enabling Universal to enter the market immediately and compete while getting its production up and running.

In *Watson Pharmaceuticals/Actavis*,[35] the Commission challenged Watson Pharmaceuticals' $5.9 billion acquisition of rival Actavis. The Commission charged that the acquisition would reduce competition in the markets for 21 current and future generic drugs used to treat a wide range of conditions, including hypertension, diabetes, attention deficit hyperactivity disorder, and certain heart rhythm disorders. These markets were, or were expected to be, concentrated, and Watson and Actavis were, or were expected to be, two of only a few competitors. The consent order required the companies to divest the rights and assets pertaining to 18 drugs, and relinquish the manufacturing and marketing rights to three others, thus restoring competition that would otherwise be lost as a result of the acquisition and resolving the Commission's concerns about the acquisition's likely impact on competition.

In *Corning Incorporated*,[36] the Commission charged that Corning's acquisition of Becton, Dickinson and Company's Discovery Labware Division would have had an

[36] *In the Matter of Corning Inc.*, FTC Dkt. No. C-4380 (final order issued Dec. 20, 2012), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2012/12/corning-incorporated.

anticompetitive impact in the markets for tissue culture treated dishes, multi-well plates, and flasks (together, "TCT cell culture vessels"). TCT culture cell vessels are used by researchers at pharmaceutical and biotechnology companies and at universities in their cell culture research. According to the Commission, the acquisition would have increased Corning's share in each market, and increased its incentive and ability unilaterally to charge higher prices for TCT cell culture vessels. To resolve these concerns and restore competition in the TCT cell culture markets, the Commission issued a consent order that required Corning to provide assets and assistance to enable another life sciences company to manufacture TCT cell culture vessels.

In *Hertz Global Holdings/Dollar Thrifty*,[37] the Commission challenged Hertz Global Holdings' $2.3 billion acquisition of Dollar Thrifty Automotive Group. Both Hertz and Dollar Thrifty provided car rentals to consumers in most major airports in the United States, and were two of four major competitors in the market for airport car rentals. The Commission charged that the acquisition would harm competition for airport car rentals in 72 individual airport locations by enabling the combined Hertz/Dollar Thrifty to increase prices, slow the pace of innovation, and decrease service levels. The Commission further charged that the acquisition would reduce the number of firms that own all of the most competitively significant car rental brands from four to three, increasing the likelihood of coordination among the remaining competitors. To resolve the Commission's concerns and restore competition that would otherwise have been lost as a result of the acquisition, the Commission issued a consent order requiring Hertz to divest its entire Advantage Rent-A-Car business as well as 16 additional on-airport locations to Franchise Services of North America, Inc. ("FSNA") and Macquarie Capital USA Inc. ("Macquarie"). The Commission's consent order also required Hertz to divest 13 additional Dollar Thrifty airport concession agreements and related assets to FSNA/Macquarie. FSNA, through its direct subsidiary Simply Wheelz, operated these assets under the Advantage name. On November 15, 2013, Simply Wheelz filed for Chapter 11 bankruptcy protection and sought to sell Advantage, which it had continued to operate during this process. Following a bankruptcy auction held in December 2013, Catalyst was declared the winning bidder for the Advantage assets. The bankruptcy court approved Catalyst's acquisition of Advantage, subject to Commission approval. Following a public comment period, the Commission approved FSNA's application to sell the Advantage assets to Catalyst on January 30, 2014.

In *Robert Bosch GmbH/SPX Service Solutions*,[38] the Commission accepted a consent order to resolve charges that Bosch's $1.15 billion acquisition of SPX Services Solutions would have been anticompetitive. The Commission alleged that the acquisition, as originally proposed, would have given Bosch a virtual monopoly in the U.S. market for equipment used to recharge automobile air conditioning systems. Under the terms of the consent order, Bosch must divest its air conditioning recycling, recovery, and recharge ("ACRRR") devices business, including all relevant intellectual property and contracts, to automotive manufacturer Mahle Clevite Inc. to restore competition that would otherwise have been lost if the acquisition had proceeded as initially proposed. In addition, the consent order resolves allegations that SPX harmed competition when it reneged on its agreement to license certain standard-essential patents on fair,

[37] *In the Matter of Hertz Global Holdings*, FTC Dkt. No. C-4376 (final order issued July 10, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/07/hertz-global-holdings-inc-matter.
[38] *In the Matter of Robert Bosch GmBH*, FTC Dkt. No. C-4377 (final order issued Apr. 23, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/04/bosch-robert-bosch-gmbh.

reasonable, and nondiscriminatory terms. To that end, Bosch must offer a royalty-free license to those patents to any third-party that wishes to use the patents to make ACRRR devices in the U.S.

In *Tesoro Corporation*,[39] the Commission challenged Tesoro's $335 million acquisition of Chevron Corporation's Northwest Products Pipeline system and associated terminals. The Commission alleged that the acquisition as proposed would have given Tesoro ownership of two of the three refined light petroleum products terminals in the Boise, Idaho area, leading to substantially reduced competition for local terminaling services and increased terminal costs, which likely would have been passed on to consumers. Refined light petroleum products include gasoline, diesel fuel, and jet fuel. To resolve these concerns and preserve competition, the Commission issued a consent order requiring Tesoro to sell a refined light petroleum products terminal in Boise to a Commission-approved acquirer. The consent order also includes a separate order to maintain assets to preserve the Tesoro Boise terminal as a viable, competitive, and ongoing business until the terminal is divested.

In *Oltrin Solutions/JCI Jones Chemicals*,[40] the Commission challenged a non-compete agreement between two producers of bulk sodium hydrochloride bleach, a disinfectant used by municipalities and other entities to treat water. According to the Commission, in March 2010, Oltrin Solutions, LLC agreed to pay JCI Jones Chemicals $5.5 million over four years in exchange for JCI's list of North Carolina bleach customers and an agreement that JCI would not sell bulk bleach in North Carolina or South Carolina for six years. The Commission alleged that the agreement eliminated substantial competition between Oltrin and JCI in the southern Virginia, North Carolina, and South Carolina bulk bleach market; substantially increased market concentration for bulk bleach sales in those areas; and increased Oltrin's ability to raise bulk bleach prices. To facilitate JCI's re-entry into the bulk bleach market and restore the competition lost as a result of the 2010 agreement, the Commission issued a consent order that required Oltrin to, among other things, transfer to JCI customer contracts totaling approximately two million gallons worth of bleach volume; enter into a six-month backup bleach supply agreement with JCI, so that JCI can continue to supply its bleach customers if JCI encounters any unexpected production interruptions; and notify any customers that requested a bid after execution of the non-competition agreement that JCI will be supplying bleach in the relevant area, and ask those customers to add JCI's contact information to any future solicitation bids.

In *Charlotte Pipe/Star Pipe Products*,[41] the Commission accepted a consent order settling charges that Charlotte Pipe and Foundry Company's 2010 acquisition of the cast iron soil pipe ("CISP") business from Star Pipe Products, Ltd. was anticompetitive. In 2010, only two firms—Charlotte Pipe and McWane Inc.—sold 90% of the CISP products in the U.S. CISP products are used to transport wastewater from buildings to municipal sewage systems, to vent plumbing systems, and to transport rainwater to storm drains. According to the Commission, the third-

[39] *In the Matter of Tesoro Corp.*, FTC Dkt. No. C-4405 (final order issued Aug. 5, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/04/bosch-robert-bosch-gmbh.
[40] *In the Matter of Oltrin Solutions*, FTC Dkt. No. C-4388 (final order issued Mar. 7, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/03/oltrin-solutions-llc-company-jci-jones-chemicals-inc.
[41] *In the Matter of Charlotte Pipe and Foundry*, FTC Dkt. No. C-4403 (final order issued May 9, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/05/charlotte-pipe-and-foundry-company-et-al.

largest CISP seller, Star Products, had entered the U.S. market in 2007 and by 2010, had become a disruptive force or "maverick," competing on price and service to customers' benefit. In July 2010, Charlotte Pipe acquired Star Pipe's CISP business for $19 million. As part of the transaction, the parties allegedly executed a "Confidentiality and Non-Competition Agreement" that prohibited Star Pipe and certain of its employees from competing with Charlotte Pipe in the U.S., Canada, and Mexico for six years. Star Pipe also allegedly agreed to keep the acquisition confidential and inform its customers that it had decided to exit—rather than sell—the CISP business. After the acquisition, Charlotte Pipe destroyed the CISP production equipment that it acquired from Star Pipe. The Commission charged that the transaction, in conjunction with the non-competition agreement, eliminated actual and direct competition between Charlotte Pipe and Star Pipe, substantially increased market concentration, eliminated a maverick firm, and increased Charlotte Pipe's ability to unilaterally exercise market power. The Commission's consent order requires Charlotte Pipe to provide prior notification to the Commission of any acquisition of any entity engaged in the manufacture and sale of CISP products in the U.S., even if the acquisition is not otherwise reportable under the HSR Act, and wait 30 days before closing the transaction. In addition, the consent order prohibits Charlotte Pipe from enforcing the 2010 non-competition agreement against Star Pipe, and requires Charlotte Pipe to inform its customers of the Commission's consent order, the voided confidentiality and non-competition agreement against Star Pipe, and Charlotte Pipe's prior acquisitions of CISP manufacturers.

In *Graco Inc.*,[42] the Commission charged that Graco violated the antitrust laws by acquiring Gusmer Corp. in 2005 and GlasCraft, Inc. in 2008. At the time, Gusmer and GlasCraft were Graco's two closest competitors in the North American market for fast set equipment ("FSE"), which is used by contractors to apply polyurethane and polyuria coatings. FSE manufacturers sell their products almost exclusively through a network of specialized, third-party distributors, which, in turn, sell to end-users. Prior to the acquisitions, distributors had historically carried multiple FSE manufacturers' brands, and Gusmer and GlasCraft competed with Graco as full-line FSE manufacturers. The Commission alleged that Graco's Gusmer and GlasCraft acquisitions virtually eliminated all of Graco's competition and increased Graco's market share to between 90 and 95%, enabling Graco to raise prices and reduce product options and innovation. Additionally, Graco allegedly engaged in certain post-acquisition conduct that heightened barriers to entry and expansion in the North American FSE market. For example, the Commission charged that Graco increased the discount and inventory thresholds it required of distributors, and threatened distributors with retaliation if they agreed to carry rivals' products. According to the Commission's complaint, Graco also sued prospective entrants, such as Polyurethane Machinery Corp. ("PME"), alleging, among other things, breach of contract. Allegedly, the lawsuits effectively prevented some distributors from purchasing PME's FSE due to uncertainty as to the litigation's outcome and how supply might be affected as a result. To resolve these competitive concerns and restore competition lost in the acquisition, the Commission order required Graco to settle the PME litigation and grant PME an irrevocable license to certain Graco patents and intellectual property. The Commission order also prohibited Graco from imposing exclusivity conditions on FSE distributors, and discriminating against distributors that carry or service any rival's FSE.

---

[42] *In the Matter of Graco, Inc.*, FTC Dkt. No. C-4399 (final order issued Apr. 17, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/04/graco-inc.

In *Nielsen Holdings/Arbitron Inc.*,[43] the Commission challenged Nielsen's proposed acquisition of Arbitron Inc., alleging that the merger would eliminate future competition between the two firms in the market for national syndicated cross-platform audience measurement services and tend to create a monopoly. Nielsen is a global media measurement and research firm, and the dominant provider of U.S. television audience measurement services. Arbitron also is a media measurement and research firm, and provides audience ratings for radio that are similar to Nielsen's television ratings. Both firms are developing national syndicated cross-platform audience measurement services, which allow audiences to be measured accurately across multiple platforms, such as television and online. The Commission alleged that the elimination of future competition between Nielsen and Arbitron in this market would increase the likelihood that Nielson would exercise market power and cause U.S. advertisers, advertisement agencies, and media programmers to pay higher prices for national syndicated cross-platform audience measurement services. To resolve these concerns, the Commission issued a consent order that required Nielsen to divest assets related to Arbitron's cross-platform audience measurement business to a Commission-approved acquirer and enter related licensing agreements. The Commission approved an application by Nielsen to sell these assets to comScore, Inc. and to enter other arrangements supporting the divestiture.

In *General Electric Company*,[44] the Commission challenged General Electric Company's $4.3 billion acquisition of the aviation business of Avio S.p.A., alleging that the acquisition would substantially lessen competition and give GE the ability and incentive to disrupt the design and certification of an engine component designed by Avio for rival aircraft manufacturer Pratt & Whitney. GE, through its joint venture CFM International, and Pratt & Whitney are the only engine manufacturers for Airbus's A320neo aircraft, and compete head-to-head for A320neo sales. Avio is the sole designer for the accessory gearbox ("AGB") on the Pratt & Whitney PW1100G engine for the Airbus A320neo aircraft. The Commission alleged that GE's acquisition of the Avio aviation business likely would diminish competition in the sale of engines for the A320neo, resulting in higher prices, reduced quality, and engine delivery delays for A320neo customers. To resolve these concerns, the Commission's consent order prohibits GE from interfering with Avio's design and development work on the AGB for the Pratt & Whitney PW1100G engine, and from accessing Pratt & Whitney's proprietary information about the AGB that is shared with Avio. Commission staff worked closely with a variety of international antitrust agencies, including the European Commission, throughout the investigation, and investigated in parallel how the acquisition would change GE's relationships with rival aircraft engine manufacturers.

In *Solera Holdings, Inc.*,[45] the Commission challenged Solera Holdings' 2012 acquisition of rival automotive recycling yard management systems ("YMS") software provider Actual Systems of America, Inc. The Commission charged that the acquisition eliminated direct and substantial competition between Solera and Actual Systems, two of the three leading providers of

[43] *In the Matter of Nielsen Holdings*, FTC File No. 131-0058 (final order issued Feb. 24, 2014), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/09/nielsen-holdings-nv-arbitron-inc-matter.
[44] *In the Matter of General Elec. Co.*, FTC Dkt. No. C-4411 (final order issued Aug. 27, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/08/general-electric-company-matter.
[45] *In the Matter of Solera Holdings*, FTC Dkt. No. C-4415 (final order issued Oct. 22, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/10/solera-holdings-inc.

YMS to the automotive recycling industry. To resolve these concerns and restore competition that was lost as a result of the acquisition, the Commission issued a consent order that required Solera to divest assets related to Actual Systems' U.S. and Canadian YMS business to ASA Holdings, an entity formed by former Actual Systems managers.

In *Actavis/Warner Chilcott*,[46] the Commission challenged Actavis Inc.'s proposed $8.5 billion acquisition of Warner Chilcott plc. The Commission alleged that the acquisition would substantially reduce competition in the U.S. markets for four current and future pharmaceutical products. The four products, which consist of three oral contraceptives and an osteoporosis treatment, are generic Femcon FE; Lo Loestrin 24 FE and its generic equivalents; Lo Loestrin FE and its generic equivalents; and Atelvia and its generic equivalents. According to the Commission, Actavis and Warner Chilcott are the only significant manufacturers of generic Femcon FE, and the proposed acquisition would eliminate current competition between them in the market for this drug. For pharmaceutical products, price generally decreases as the number of competitors increases; thus, the reduction in the number of suppliers likely would have a direct and substantial effect on pricing. In the other three markets, Warner Chilcott sells the branded drugs, but no company sells a generic version of Loestrin 24 FE, Loestrin FE, or Atelvia. The Commission alleged that Actavis was likely to be the first generic supplier to compete with Warner Chilcott's branded versions of these drugs. As a result, the proposed acquisition would likely lead to higher prices for U.S. consumers, because the merged firm would have the ability to delay the entry of Actavis's generic product in each of the three markets. To resolve these concerns, the Commission issued a consent order that required Actavis to sell all rights and assets to the four drugs at issue to Amneal Pharmaceuticals L.L.C. The order also required Actavis to enter into an agreement to supply generic versions of Femcon FE and Lo Loestrin 24 FE to Amneal for two years, after which Amneal may extend the agreement to two more years. Finally, Actavis must relinquish its claim to first-filer marketing exclusivity for generic Lo Loestrin FE and Atelvia to preserve the incentive of the firms currently leading patent litigation against Warner Chilcott related to those products. By relinquishing its first-filer status, the merged firm cannot act to delay the introduction of a generic version of these two products.

In *Honeywell/Intermec*,[47] the Commission challenged Honeywell International, Inc.'s proposed $600 million acquisition of Intermec Inc. Both Honeywell and Intermec designed, manufactured, and sold two-dimensional scan engines, which are hardware components that include a two-dimensional image sensor and translate a barcode into a digital format that computer processors can interpret and analyze. The Commission alleged that Honeywell's acquisition of Intermec would combine two of the three most significant participants in the highly concentrated U.S. two-dimensional scan engine market, and result in an effective duopoly. To remedy these concerns and replace the competition that otherwise would be eliminated by the acquisition, the Commission issued a consent order that required Honeywell to license the Honeywell and Intermec U.S. patents necessary to manufacture two-dimensional scan engines and related devices to Datalogic IPTECH s.r.l., a subsidiary of Datalogic S.p.A.

[46] *In the Matter of Actavis*, FTC Dkt. No. C-4414 (final order issued Dec. 4, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/12/actavis-inc-warner-chilcott-plc-matter.
[47] *In the Matter of Honeywell Int'l*, FTC Dkt. No. C-4418 (final order issued Nov. 22, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/11/honeywell-international-inc-matter.

In *Mylan/Agila*,[48] the Commission challenged Mylan, Inc.'s proposed $1.85 billion acquisition of Agila Specialties Global Pte. Limited and Agila Specialties Private Limited (collectively, "Agila") from Strides Arcolab Limited, alleging that the acquisition would cause significant anticompetitive harm to U.S. consumers in eleven generic injectable pharmaceutical product markets either by eliminating current or potential competition in concentrated existing markets, or by eliminating potential competition among a limited number of likely competitors in a future market. The eleven injectable products at issue treat a variety of medical concerns, including several types of pediatric cancers, certain autoimmune diseases, severe hypertension, and urinary tract damage caused by a particular chemotherapy drug. According to the Commission, in each of the eleven product markets, Mylan and Agila were two of only a limited number of current or likely future suppliers of the drugs in the U.S., and their combination likely would have caused U.S. consumers to pay significantly higher prices for these products. To remedy these concerns, the Commission issued a consent order that required the divestiture of the following Mylan and Agila/Strides products: (1) Mylan's fluorouracil injection and methotrexate sodium preservative-free injection to Intas Pharmaceuticals Ltd.; (2) Mylan's etomidate injection, ganciclovir injection, meropenem injection, and mycophenolate mofetil injection, as well as Agila/Strides' amiodarone hydrochloride injection and fomepizole injection to JHP Pharmaceuticals, LLC; and (3) Agila/Strides' acetylcysteine injection and mensa injection to Sagent Pharmaceuticals, Inc. Also under the order, Mylan must release all of its rights relating to labetalol hydrochloride injection to Gland Pharma Ltd. The order included several supply and technology provisions to ensure that the approved acquirers can immediately and effectively compete in the marketplace, and thus maintain the competitive environment that existed prior to the acquisition.

In addition to these new merger enforcement actions, the FTC also concluded litigation initiated in prior fiscal years, including cases against Polypore International/Daramic LLC[49] and Phoebe Putney Health System/Palmyra Park Hospital,[50] and continued to pursue litigation initiated in fiscal year 2011 (ProMedica Health System/St. Luke's Hospital).[51] In December 2013, the Commission approved Polypore's application to divest Microporous Products, L.P., a competitor it acquired five years earlier. The case began in February 2008 when Polypore acquired rival battery separator manufacturer Microporous Products, L.P. The Commission issued an administrative complaint challenging the transaction and alleging that the merger led to decreased competition and higher prices in several North American markets for battery separators. After a trial on the merits, the FTC's administrative law judge ruled in February

[49] *In the Matter of Polypore Int'l*, FTC Dkt. No. 9327 (final order issued Nov. 5, 2010; divestiture application approved Dec. 18, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/12/polypore-international-inc-corporation-matter.

[50] *In the Matter of Phoebe Palmyra Health Sys.*, FTC Dkt. No. 9348 (proposed order announced Aug. 22, 2013), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/08/matter-phoebe-putney-health-system-inc-phoebe-putney.

[51] *In the Matter of ProMedica Health Sys.*, FTC Dkt. No. 9346 (compl. issued Jan. 6, 2011), *available at* http://www.ftc.gov/enforcement/cases-and-proceedings/cases/2012/06/matter-promedica-health-system-inc-corporation.

2010 that the acquisition was illegal and ordered divestiture of the acquired assets. The Commission unanimously upheld the administrative law judge's decision in November 2010, and in July 2012, the U.S. Court of Appeals for the Eleventh Circuit upheld the Commission's final decision and order, thus leading to the divestiture of Microporous.[52] In the Phoebe Putney/Palyra Park Hospital matter, on February 19, 2013, the U.S. Supreme Court ruled in a unanimous opinion that the state action doctrine did not immunize Phoebe Putney's acquisition of its sole rival in Albany, Georgia, Palmyra Park Hospital, from the federal antitrust laws, and remanded the case for further proceedings.[53] In August 2013, the Commission accepted for public comment a consent order that has not been finalized. In April 2014, the U.S. Court of Appeals for the Sixth Circuit upheld the Commission's March 2012 ruling that the ProMedica Health System, Inc.'s consummated acquisition of rival St. Luke's Hospital in Lucas County, Ohio, was anticompetitive and would allow ProMedica to raise the prices of general acute care inpatient hospital services.[54]

ONGOING REASSESSMENT OF THE EFFECTS OF THE PREMERGER NOTIFICATION PROGRAM

The Commission and the Antitrust Division continually review the impact of the premerger notification program on the business community and antitrust enforcement. As indicated in previous annual reports, the HSR program ensures that the antitrust agencies review virtually every relatively large merger and acquisition that affects U.S. consumers prior to consummation. The agencies generally have the opportunity to challenge unlawful transactions before they occur, thus avoiding the problem of constructing effective post-acquisition relief. As a result, the HSR Act is doing what Congress intended—giving the government the opportunity to investigate and challenge those relatively large mergers that are likely to harm consumers *before* injury can arise. Prior to the premerger notification program, businesses could, and often did, consummate transactions that raised significant antitrust concerns before the agencies had an opportunity to consider adequately their competitive effects. This practice forced the agencies to engage in lengthy post-acquisition litigation, during the course of which the transaction's anticompetitive effects continued to harm consumers (and afterwards as well, where the achievement of effective post-acquisition relief was not practicable). Because the premerger notification program requires reporting before consummation, the agencies' ability to obtain timely, effective relief to prevent anticompetitive effects has vastly improved.

The antitrust enforcement agencies regularly examine the premerger notification program's effectiveness and impact, and continually seek ways to speed up and improve the review process and minimize regulatory burdens. Thus, as they have in the past, the agencies will continue their ongoing assessment of the HSR program to increase accessibility, promote transparency, and reduce the burden on the filing parties without compromising the agencies'

---

[52] In June 2013, the U.S. Supreme Court denied Polypore's petition for a writ of certiorari.

Note: The data for FY 2004 and FY 2005 "Transactions Reported" and for FY 2004 – FY 2007 "Filings Received" reflect corrections to some prior Annual reports to account for a coding error. Additionally, the data for FY 2010 and FY 2011 reflect corrections to some prior annual reports and the DOJ number of investigations in which second requests were issued and the percentage of transactions in which second requests were issued by DOJ.

---

1 Usually, two filings are received, one from the acquiring person and one from the acquired person when a transaction is reported. Only one application is received when an acquiring party files for an exemption under Section 7A (c)(6) or (c)(8) of the Clayton Act.

2 These figures omit from the total number of transactions reported all transactions for which the agencies were not authorized to request additional information. These include (1) incomplete transactions (only one party filed a complete notification); (2) transactions reported pursuant to the exemption provisions of Sections 7A (c)(6) and 7A(c)(8) of the Act; (3) transactions which were found to be non-reportable; and (4) transactions withdrawn before the waiting period began. In addition, where a party filed more than one notification in the same year to acquire voting securities of the same corporation, e.g., filing one threshold and later filing for a higher threshold, only a single consolidated transaction has been counted because as a practical matter the agencies do not issue more than one Second Request in such a case. These statistics also omit from the total number the transactions reported secondary acquisitions filed pursuant to §801.4 of the Premerger Notification rules. Secondary acquisitions have been deducted in order to be consistent with the statistics presented in most of the prior annual reports.

3 These statistics are based on the date the Second Request was issued and not the date the investigation was opened.

4 Second Request investigations are a percentage of the total number of adjusted transactions. The total percentage reflected in Figure 2 may not equal the sum of reported component values due to rounding.

5 These statistics are based on the date of the HSR filing and not the date action was taken on the request.

1 Fiscal year 2013 figures include transactions reported between October 1, 2012 and September 30, 2013.

2 The size of transaction is based on the aggregate total amount of voting securities, non-corporate interests and/or assets held by the acquiring person as a result of the transaction and are taken from the response to Item 2(d)(iii), 2(d)(vii), and 2(d)(ix) of the Notification and Report Form.

3 These statistics are based on the date the Second Request was issued.

4 During fiscal year 2013, 1326 transactions were reported under the HSR Premerger Notification program. The smaller number, 1286, reflects the adjustments to eliminate the following types of transactions: (1) transactions reported under Section 7A(c)(6) and (c)(8) (transactions involving certain regulated industries and financial businesses); (2) transactions deemed non-reportable; (3) incomplete transactions (only one party in each transaction filed a compliant notification); and (4) transactions withdrawn before the waiting period began. The table does not, however, exclude competing offers or multiple HSR transactions resulting from a single business transaction (where there are multiple acquiring persons or acquired persons).

5 The total number of filings under $50M submitted in Fiscal Year 2013 reflects corrective filings.

6 In February 2001, legislation raised the size of transaction from $15 million to $50 million with annual adjustments beginning in February 2005.

7 The category labeled “Sales Not Available” includes newly-formed acquiring persons, foreign acquiring person with no United States revenues, and acquiring persons who had not derived any revenues from their investments at the time of filing.

8 Assets of an acquired entity are not available when the acquired entity’s financial data is consolidated within its ultimate parent.

9 Sales of an acquired entity are taken from responses to Item 4(a) and (b) (SEC documents and annual reports) or item 5 (dollar revenues) of the Premerger Notification and Report Form.

10 This category includes acquisition of newly-formed entities from which no sales were generated, and acquisitions of assets which produced no sales revenues during the prior year to filing the Notification and Report Form.

11 The 3-digit codes are part of the North American Industrial Classification System (NAICS) established by the United States Government North American Industrial Classification System 1997, Executive Office of the President, Office of Management and Budget. The NAICS groups used in this table were determined from responses submitted by the parties to Item 5 of the Premerger Notification and Report Form.

12 This represents the deviation from the fiscal year 2012 percentage.

13 This category includes transactions by newly-formed entities.

14 The intra-industry transactions column identifies the number of acquisitions in which both the acquiring and acquired person derived revenues from the same 3-digit NAICS code.

Fiscal Year 2021

October 1, 2020 through September 30, 2021

Section 7A of the Clayton Act
Hart-Scott-Rodino Antitrust Improvements Act of 1976
(Forty-Fourth Annual Report)

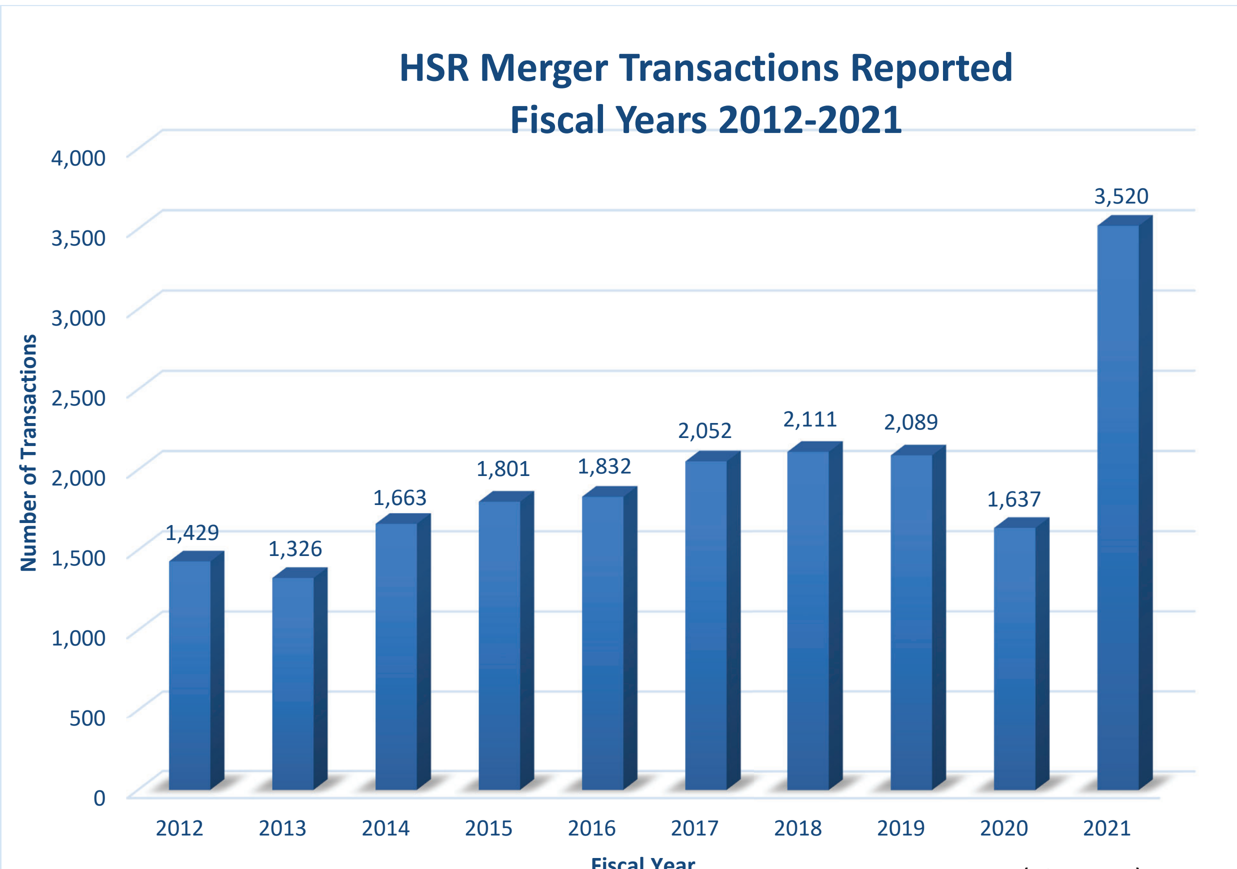
Lina Khan
Chair
Federal Trade Commission

Jonathan Kanter
Assistant Attorney General
Antitrust Division

INTRODUCTION

The Hart-Scott-Rodino Antitrust Improvements Act of 1976, Pub. L. No. 94-435 (HSR Act or the Act), together with Section 13(b) of the Federal Trade Commission Act and Section 15 of the Clayton Act, enables the Federal Trade Commission (FTC or Commission) and the Antitrust Division of the Department of Justice (Antitrust Division or Division) to prevent anticompetitive mergers, acquisitions, and other types of transactions and to prevent interim harm to competition associated with those transactions. The premerger notification program was instrumental in alerting the Commission and the Division to transactions that became the subjects of numerous enforcement actions brought in fiscal year 2021.[1]

The Commission and the Antitrust Division continue their efforts to identify and investigate those mergers, acquisitions, and other types of transactions that raise competition concerns. In fiscal year 2021, a record-breaking 3,520 transactions were reported under the HSR Act, representing about a 115 percent increase from the 1,637 transactions reported in fiscal year 2020. *See* Figure 1 below.



(Figure 1)

[1] Fiscal year 2021 covered the period from October 1, 2020 through September 30, 2021.

During fiscal year 2021, the Commission brought 18 merger enforcement challenges:[2] 5 in which it issued final consent orders after a public comment period; 7 in which the transaction was abandoned or restructured as a result of antitrust concerns raised during the investigation; and 6 in which the Commission initiated administrative or federal court litigation. These enforcement actions addressed competition in numerous sectors of the economy, including consumer goods and services, pharmaceuticals, healthcare, high tech and industrial goods, and energy.

In November 2020, the FTC issued an administrative complaint and authorized staff to seek a preliminary injunction to prevent the proposed acquisition of two Tenet-owned Memphis-area hospitals by Methodist Healthcare. The complaint alleged that the acquisition would have likely eliminated competition for a broad range of inpatient hospital services requiring an overnight stay. Shortly after the Commission filed its complaint, the parties abandoned the transaction.

In December 2020, the FTC filed an administrative complaint and authorized staff to seek a preliminary injunction to prevent the merger of Procter & Gamble and Billie. The complaint alleged that the proposed merger would have eliminated the head-to-head competition between Procter & Gamble and Billie for the sale of women's razors. In addition, the proposed merger would likely have eliminated Billie's growing threat to Procter & Gamble's dominant market share as it planned on entering the retail channel. Shortly after the Commission filed its complaint, the parties abandoned the transaction.

Also in December, the Commission filed an administrative complaint and authorized staff to seek a preliminary injunction to block Hackensack Meridian Health's acquisition of a community hospital operated by Englewood Healthcare Foundation in Bergen County, New Jersey. The complaint alleged that the proposed acquisition would substantially lessen competition for inpatient general acute care services in Bergen County. After an evidentiary hearing on the preliminary injunction motion, the district court granted the injunction and the defendant hospitals appealed. In March 2022, the Third Circuit affirmed, finding that the FTC had established the merger was presumptively unlawful and the defendants had failed to rebut the FTC's "strong prima facie case."[3]

The Antitrust Division addressed anticompetitive mergers in a variety of industries, including agriculture, health care, financial services, technology, food, manufacturing, and waste management. During fiscal year 2021, the Division challenged 14 merger transactions: two in which it filed lawsuits in federal court to block the transactions; nine in which it filed a consent decree (i.e. filed a complaint and proposed settlement simultaneously in federal district court); and three in which the transaction was restructured in the face of the Division's competition concerns.

---

[2] To avoid double-counting, this Report includes only those merger enforcement actions in which the Commission or the Antitrust Division took its first public action during fiscal year 2021.

[3] *FTC v. Hackensack Meridian Health, Inc. v. Englewood Healthcare Foundation*, No. 21-2603 (3d Cir. Mar. 22, 2022).

In November 2020, the Division challenged Visa Inc.'s proposed acquisition of Plaid Inc., alleging that the proposed acquisition would have violated Section 2 of the Sherman Act as well as Section 7 of the Clayton Act. While Plaid did not compete with Visa at the time, Plaid planned to leverage its existing technology—including connections to 200 million consumer bank accounts in the U.S.—to launch an online debit product that would compete with Visa at a lower cost to merchants. The complaint alleged that Visa sought to unlawfully maintain its monopoly in the market for online debit services by acquiring Plaid to eliminate it as a nascent competitive threat. The parties abandoned their transaction after the complaint was filed.

In June 2021, the Division sued to block Aon plc's proposed acquisition of Willis Towers Watson plc. The complaint alleged that the merger would have combined two of the "Big Three" global insurance broking and consulting firms, threatening to increase prices and reduce quality for businesses seeking to manage their risks and provide their employees with competitive health and retirement benefits. The parties abandoned the transaction before the trial commenced.

The Commission's Premerger Notification Office (PNO) website[4] includes instructions for completing the HSR form, information on the HSR rules, current filing thresholds, filing fee instructions, and procedures for submitting post-consummation filings. The website also provides frequently asked questions regarding HSR filing requirements, the number of HSR transactions submitted each month, and contact information for PNO staff.[5]

BACKGROUND OF THE HSR ACT

Section 201 of the HSR Act amended the Clayton Act by adding a new Section 7A, 15 U.S.C. § 18a. In general, the HSR Act requires that certain proposed acquisitions of voting securities, non-corporate interests, or assets be reported to the Commission and the Antitrust Division prior to consummation. The parties must then wait a specified period, usually 30 days (15 days in the case of a cash tender offer or bankruptcy sale), before they may complete the transaction. Whether a particular acquisition is subject to these requirements depends on the value of the acquisition and, in certain acquisitions, the size of the parties as measured by their sales and assets. Acquisitions valued below a certain threshold, acquisitions involving parties with assets and sales below a certain threshold, and certain classes of acquisitions that are less likely to raise antitrust concerns are excluded from the Act's coverage.

The Commission, with the concurrence of the Assistant Attorney General for the Antitrust Division, promulgated final rules implementing the premerger notification program on July 31, 1978. At that time, a comprehensive Statement of Basis and Purpose was published, containing a section-by-section analysis of the rules and an item-by-item analysis of the filing

[4] *See* https://www.ftc.gov/enforcement/premerger-notification-program.

[5] Resource materials are available on the PNO website; in addition, PNO staff is always available to help HSR practitioners comply with HSR notification requirements.

form.[6] The program became effective on September 5, 1978. The Commission, with the concurrence of the Assistant Attorney General, has amended the rules and the filing form on many occasions over the years to improve the program's effectiveness and to lessen the burden of complying with the rules, while ensuring that the agencies get all the information they need to analyze the underlying transaction.[7]

The primary purpose of the statutory scheme, as the legislative history makes clear, is to provide the antitrust enforcement agencies with the opportunity to identify and review potentially anticompetitive mergers and acquisitions before they are consummated. The premerger notification program, with its filing and waiting period requirements, facilitates this goal.

If either reviewing agency determines during the waiting period that further inquiry is necessary, the reviewing agency is authorized by Section 7A(e) of the Clayton Act to issue a request for additional information and documentary material (Second Request).[8] The Second Request extends the waiting period for a specified period of time (usually 30 days, but 10 days in the case of a cash tender offer or bankruptcy sale) after all parties have complied with the Second Request (or, in the case of a tender offer or bankruptcy sale, after the acquiring person complies). This additional time provides the reviewing agency with the opportunity to analyze the information and to take appropriate action before the transaction is consummated. If the reviewing agency believes that a proposed transaction may substantially lessen competition, the agency may seek an injunction in federal district court to prohibit consummation of the transaction. The Commission also may challenge the transaction in administrative litigation.

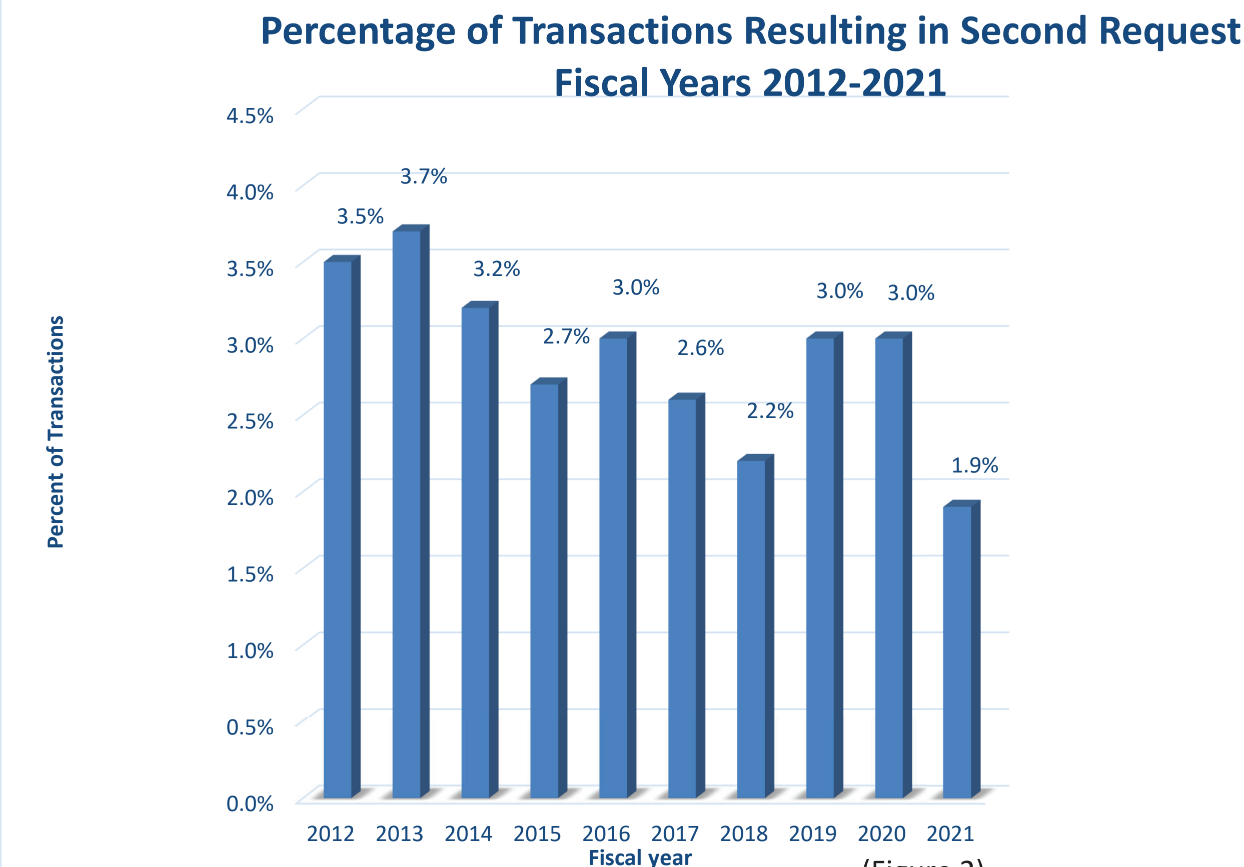
A STATISTICAL PROFILE OF THE PREMERGER NOTIFICATION PROGRAM

The appendices to this Report provide a statistical summary of the operation of the premerger notification program. Appendix A shows, for the ten-year period covering fiscal years 2012-2021, the number of transactions reported; the number of filings received; the number of merger investigations in which Second Requests were issued; and the number of transactions in which requests for early termination of the waiting period were received, granted, and not granted.[9] Appendix A also shows the number of transactions in which Second Requests could have been issued, as well as the percentage of transactions in which Second Requests were issued. Appendix B provides a month-by-month comparison of the number of transactions reported and the number of filings received for fiscal years 2012 through 2021.

---

[6] 43 Fed. Reg. 33450 (July 31, 1978).
[7] *See* https://www.ftc.gov/enforcement/premerger-notification-program/statute-rules-and-formal-interpretations/statements-basis-purpose.
[8] 15 U.S.C. §18a(e)(1)(a) ("The Federal Trade Commission or the Assistant Attorney General may, prior to the expiration of the 30-day waiting period (or in the case of a cash tender offer, the 15-day waiting period)…require the submission of additional information or documentary material relevant to the proposed acquisition").
[9] The term "transaction," as used in Appendices A and B and Exhibit A to this Report, does not refer only to individual mergers or acquisitions. A particular merger, joint venture, or acquisition may be structured such that it involves more than one filing that must be made under the HSR Act.

The statistics set out in these appendices show that the number of transactions reported in fiscal year 2021 increased 115 percent from the number of transactions reported in fiscal year 2020. In fiscal year 2021, 3,520 transactions were reported, while 1,637 were reported in fiscal year 2020.[10] Of the 3,520 reported transactions, Second Requests could have been issued in 3,413 of them. The statistics in Appendix A also show that the number of merger investigations in which Second Requests were issued in fiscal year 2021 increased from the previous year. Second Requests were issued in 65 merger investigations in fiscal year 2021 (42 issued by the FTC and 23 issued by the Antitrust Division), while Second Requests were issued in 48 merger investigations in fiscal year 2020 (23 issued by the FTC and 25 issued by the Antitrust Division). This is the largest number of Second Requests issued by the Agencies in twenty years. *See* Figure 2 below. With additional resources, the FTC and Antitrust Division likely would have issued a much greater number of second requests, given the historic increase in the absolute number of transactions.



(Figure 2)

---

[10] This Report, like previous Reports, also includes annual data on "adjusted transactions in which a Second Request could have been issued" (adjusted transactions). *See* Appendix A & Appendix A n.2 (explaining calculation of that data). There were 3,413 adjusted transactions in fiscal year 2021, and the data presented in the Tables and the percentages discussed in the text of this Report (*e.g.*, percentage of transactions resulting in Second Requests) are based on this figure.

The statistics in Appendix A show that early termination of the waiting period is requested in the majority of transactions. In fiscal year 2021, early termination was requested in 62.2 percent (2,124) of the adjusted transactions reported. In fiscal year 2020, early termination was requested in 71.7 percent (1,133) of the transactions reported. The percentage of requests granted out of the total requested decreased from 76.0 percent in fiscal year 2020 to 19.6 percent in fiscal year 2021, due to a suspension of the granting of early termination in February 2021, except in situations where merging parties entered into a consent order or the parties resolved the investigating agency's concerns prior to fully complying with a Second Request.[11]

The tables (Tables I through XI) in Exhibit A contain information regarding the agencies' enforcement activities for transactions reported in fiscal year 2021. The tables provide, for example, various characteristics of transactions, the number and percentage of transactions in which one antitrust agency granted the other clearance to commence an investigation, and the number of merger investigations in which either agency issued Second Requests. Table III of Exhibit A shows that in fiscal year 2021, the agencies received clearance to conduct an initial investigation in 7.9 percent of the total number of transactions reported. The tables also provide the number of transactions based on the dollar value of transactions reported and the reporting threshold indicated in the notification report. In fiscal year 2021, the aggregate dollar value of reported transactions was $3.04 trillion.[12]

Tables X and XI provide the number of transactions by industry group in which the acquiring person or the acquired entity derived the most revenue. Figure 3 illustrates the percentage of adjusted transactions within industry groups for fiscal year 2021 based on the acquired entity's operations.[13]

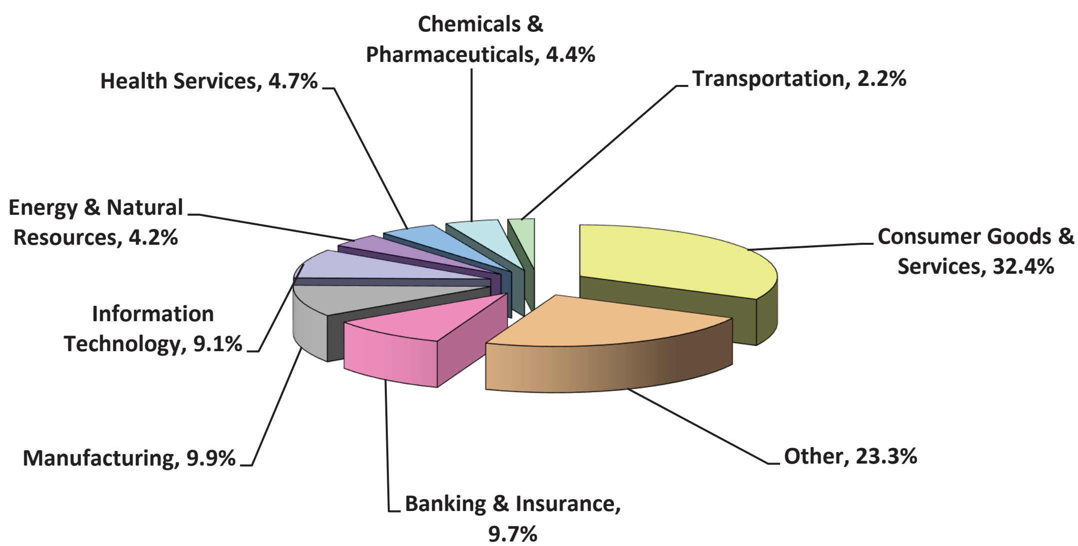
---

[11] *See* https://www.ftc.gov/enforcement/competition-matters/2021/03/hsr-early-termination-after-second-request-issues.

[12] The information on the value of reported adjusted transactions for fiscal year 2021 is drawn from a database maintained by the Premerger Notification Office.

[13] The category designated as "Other" consists of industry segments that include construction, educational services, performing arts, recreation, and other non-classifiable businesses.

Percentage of Transactions By Industry Group of Acquired Entity



(Figure 3)

DEVELOPMENTS WITHIN THE PREMERGER PROGRAM

1. Threshold Adjustments

The 2000 amendments to the HSR Act require the Commission to publish adjustments to the Act's jurisdictional and filing fee thresholds in the Federal Register annually, for each fiscal year beginning on September 30, 2004, based on the change in the gross national product, in accordance with Section 8(a)(5) of the Clayton Act. The Commission amended the rules in 2005 to provide a method for future adjustments as required by the 2000 amendments, and to reflect the revised thresholds contained in the rules. The Commission usually publishes the revised thresholds annually in January, and they become effective 30 days after publication.

On February 2, 2021, the Commission published a notice[14] to reflect adjustment of the reporting thresholds as required by the 2000 amendments[15] to Section 7A of the Clayton Act, 15 U.S.C. § 18a. The revised thresholds, including a decrease in the size of transaction threshold from $94 million to $92 million, became effective March 4, 2021. The thresholds are calculated based on the prior year's GNP. This decrease in 2021 reflected the economic slowdown due to the pandemic. A reduction in the thresholds is unusual. The last time the reporting thresholds dropped was in 2009 due to the recession of 2008.

2. Compliance

The Commission and the Antitrust Division continued to monitor compliance with the premerger notification program's filing and waiting period requirements and initiated a number of investigations in fiscal year 2021. The agencies use several methods to oversee compliance, including monitoring news outlets and industry publications for transactions that may not have been reported in accordance with the HSR Act's requirements. Industry sources, such as competitors, customers, and suppliers, interested members of the public, and, in certain cases, the parties themselves, also provide the agencies with information about transactions and possible violations of the Act's requirements.

Under Section 7A(g)(1) of the Act, any person that fails to comply with the Act's notification and waiting period requirements is liable for a civil penalty of up to $46,517 for each day the violation continues.[16] The antitrust agencies examine the circumstances of each

[14] 86 Fed. Reg. 7870 (Feb. 2, 2021).

[15] 15 U.S.C. §18a(a). *See* Pub. L. No. 106-553, 114 Stat. 2762.

[16] Dollar amounts specified in civil monetary penalty provisions within the Commission's jurisdiction are adjusted for inflation in accordance with the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015, Pub. L. No. 114-7 (Nov. 2, 2015). The adjustments have included an increase in the maximum civil penalty from $10,000 to $11,000 for each day during which a person is in violation of Section 7A(g)(1) (61 Fed. Reg. 54548 (Oct. 21, 1996), corrected at 61 Fed. Reg. 55840 (Oct. 29, 1996)), to $16,000 effective February 10, 2009 (74 Fed. Reg. 857 (Jan. 9, 2009)), to $40,000 effective August 1, 2016 (81 Fed. Reg. 42476 (June 30, 2016)), to $43,792 effective Jan. 13, 2021 (86 Fed. Reg. 2880 (Jan. 13, 2021)) and to $46,517 effective January 10, 2022, (87 Fed. Reg. 1070 (Jan. 10, 2022).

violation to determine whether to seek penalties. During fiscal year 2021, 41 post-consummation "corrective" filings were received, and the agencies brought one enforcement action, resulting in more than $600,000 in civil penalties.

In *United States v. Richard D. Fairbank*,[17] the complaint alleged that Mr. Fairbank, the CEO of Capital One Financial Corporation, violated the HSR Act by failing to file for an acquisition of additional voting securities of Capital One Financial when his holdings crossed the relevant threshold. Mr. Fairbank had previously failed to file HSR Forms for acquisitions of Capital One Financial voting securities as part of his compensation package. Under the terms of a negotiated settlement, Mr. Fairbank will pay a $637,950 civil penalty. On December 15, 2021, the court entered the final judgment.

MERGER ENFORCEMENT ACTIVITY[18]

The Department of Justice

During fiscal year 2021, the Antitrust Division challenged 14 merger transactions that it concluded may have substantially lessened competition or tended to create a monopoly if allowed to proceed as proposed. In two of these challenges, the Antitrust Division filed a complaint in the U.S. district court and the parties abandoned the proposed transactions. Three challenges were resolved after the parties restructured the proposed transactions in the face of the Division's competitive concerns. The Division also accepted consent decrees to resolve nine other matters.

In *United States v. Visa Inc. and Plaid Inc.*,[19] the Division filed suit to block Visa Inc.'s $5.3 billion proposed acquisition of Plaid Inc. The complaint alleged that Visa is a monopolist in online debit services and sought to protect its monopoly by acquiring Plaid, a nascent competitor developing a disruptive and innovative, lower-cost option for online debit payments. The complaint also alleged that the acquisition, if allowed to proceed, likely would have enabled Visa to raise prices, increase barriers to entry, and reduce quality, service, choice and innovation in the online debit market. On January 12, 2021, Visa and Plaid terminated their merger agreement and abandoned the proposed acquisition.

In *United States v. Aon plc and Willis Towers Watson plc*,[20] the Division filed a lawsuit to enjoin Aon plc (Aon) from acquiring Willis Towers Watson plc. (Willis). The complaint alleged that the proposed acquisition would have combined two of the three largest insurance brokers in the world. The complaint further alleged that combination would have eliminated

---

[17] *United States v. Richard D. Fairbank,* No. 1:21-cv-02325 (D.D.C. filed on Sept. 2, 2021), https://www.ftc.gov/enforcement/cases-proceedings/2010065/richard-d-fairbank-us-v.

[18] The cases listed in this section were not necessarily reportable under the premerger notification program. Given the confidentiality of information obtained pursuant to the Act, it would be inappropriate to identify the cases initiated under the program except in those instances in which that information has already been disclosed.

[19] *United States v. Visa Inc. and Plaid Inc.*, 3:20-cv-07810 (N.D. Cal. filed Nov. 5, 2020).

[20] *United States v. Aon plc and Willis Towers Watson plc*, No. 1:21-cv-01633 (D.D.C. filed June 16, 2021).

substantial head-to-head competition between Aon and Willis resulting in higher prices and less innovation in five relevant product markets (1) property, casualty, and financial risk broking for large customers; (2) health benefits broking for large customers; (3) actuarial services for large single-employer defined benefit pension plans; (4) the operation of private multicarrier retiree exchanges; and (5) reinsurance broking. On July 26, 2021, Aon and Willis abandoned the proposed acquisition.

The Division accepted for public comment and finalized consent decrees in the following nine merger matters.

In *United States v. Liberty Latin America Ltd., Liberty Communications of Puerto Rico LLC, and AT&T Inc.*,[21] the Division challenged the proposed acquisition of AT&T Inc.'s (AT&T) wireless and wireline telecommunications operations in Puerto Rico and U.S. Virgin Islands by Liberty Latin America Ltd. (Liberty). A proposed final judgment, filed concurrently with the complaint on October 23, 2020, required Liberty to divest fiber network assets and customer accounts in Puerto Rico. The court entered the final judgment on February 3, 2021.

In *United States, State of Florida, State of Illinois, State of Minnesota, Commonwealth of Pennsylvania and State of Wisconsin v. Waste Management, Inc. and Advanced Disposal Services, Inc.*,[22] the Division along with the attorneys general of Florida, Illinois, Minnesota, Pennsylvania, and Wisconsin, challenged the proposed acquisition of Advanced Disposal Services, Inc. (ADI) by Waste Management, Inc. (WMI). Under the terms of a proposed final judgment filed simultaneously with the complaint on October 23, 2020, the parties agreed to divest specified commercial waste collection and municipal solid waste disposal assets in ten different states to GFL Environmental Inc., or an alternative acquirer acceptable to the United States. The court entered the final judgment on May 3, 2021.

In *United States v. Intuit Inc. and Credit Karma, Inc.*,[23] the Division challenged Intuit Inc.'s proposed acquisition of Credit Karma, Inc. The Division filed a complaint and proposed final judgment on November 25, 2020. The decree required Intuit to divest its CKT business to Square, Inc. or an alternative acquirer acceptable to the United States. The court entered the final judgment on August 2, 2021.

In *United States and State of New Hampshire v. Harvard Pilgrim Health Care, Inc. and Health Plan Holdings, Inc.*,[24] the Division and the State of New Hampshire challenged the proposed merger of Harvard Pilgrim Health Care and Health Plan Holdings (f/k/a Tuffs Health Plan). On December 14, 2020, a proposed final judgment was filed simultaneously with the

---

[21] *United States v. Liberty Latin America Ltd., Liberty Commc'ns of Puerto Rico LLC, and AT&T Inc.*, No. 1:20-cv-03064 (D.D.C. filed Oct. 23, 2020).
[22] *United States, State of Florida, State of Illinois, State of Minnesota, Commonwealth of Pennsylvania and State of Wisconsin v. Waste Mgmt., Inc. and Advanced Disposal Servs., Inc.*, No. 1:20-cv-03063 (D.D.C. filed Oct. 23, 2020).
[23] *United States v. Intuit Inc. and Credit Karma, Inc.*, No. 1:20-cv-03441 (D.D.C filed Nov. 25, 2020).
[24] *United States and State of New Hampshire v. Harvard Pilgrim Health Care, Inc. and Health Plan Holdings, Inc.*, No. 1:20-cv-01183 (D. N.H. filed Dec. 14, 2020).

complaint. The terms of the settlement required the parties to divest Health Plan Holdings' New Hampshire subsidiary, Tufts Health Freedom Plans, Inc. to UnitedHealth Group, Inc. or an alternative acquirer acceptable to the United States. The court entered the final judgment on March 22, 2021.

In *United States and State of Alabama v. Republic Services, Inc. and Santek Waste Services, LLC*,[25] the Division along with the State of Alabama challenged the proposed acquisition of Santek Waste Services, LLC (Santek) by Republic Services, Inc. (Republic). A proposed final judgment, filed simultaneously with the complaint on March 31, 2021, required the parties to divest specified commercial waste collection and municipal solid waste disposal assets in five different states. The court entered the final judgment on July 1, 2021.

In *United States v. Stone Canyon Indus. Holdings LLC, SCIH Salt Holdings Inc., K+S Aktiengesellschaft and Morton Salt, Inc.*,[26] the Division challenged the acquisition of K+S Aktiengesellschaft (K+S) Operating Unit Salt Americas business, a bundle of several subsidiaries, including Morton Salt, Inc. (Morton), by Stone Canyon Industry Holdings LLC (Stone Canyon) and its portfolio company SCIH Salt Holdings Inc. (SCIH). On April 19, 2021, the Division filed a complaint and proposed final judgement requiring Stone Canyon and SCIH to divest US Salt, which comprised their entire evaporated salt business. The court entered the final judgment on August 10, 2021.

In *United States v. Zen-Noh Grain Corp. and Bunge North America, Inc.*,[27] the Division challenged the proposed acquisition of 35 operating and 13 idled U.S. grain elevators in nine states from Bunge North America, Inc. (Bunge) by Zen-Noh Grain Corp. (Zen-Noh). A proposed final judgment was filed simultaneously with the complaint on June 1, 2021. Pursuant to the terms of the settlement, Zen-Noh agreed to divest nine grain elevators in nine geographic areas located in five states along the Mississippi River and its tributaries.

In *United States v. Eaton Corp. plc and Danfoss A/S*,[28] the Division challenged the proposed acquisition of Eaton Corporation plc's (Eaton) hydraulics business by Danfoss A/S (Danfoss). A proposed final judgment, filed concurrently with the complaint on July 14, 2021, required the parties to divest assets from both Danfoss's and Eaton's orbital motor and hydraulic steering unit manufacturing businesses. The court entered the final judgment on October 26, 2021.

In *United States v. Gray Television, Inc. and Quincy Media, Inc.*,[29] the Division challenged Gray Television, Inc.'s proposed acquisition of Quincy Media, Inc. A proposed final judgment

---

[25] *United States and State of Alabama v. Republic Servs., Inc. and Santek Waste Servs., LLC*, No. 1:21-cv-00883 (D.D.C. filed Mar. 31, 2021).
[26] *United States v. Stone Canyon Indus. Holdings LLC, SCIH Salt Holdings Inc., K+S Aktiengesellschaft and Morton Salt, Inc.*, No. 1:21-cv-01067 (filed Apr. 19, 2021).
[27] *United States v. Zen-Noh Grain Corp. and Bunge North America, Inc.*, No. 1:21-cv-01482 (filed June 1, 2021).
[28] *United States v. Eaton Corp. plc and Danfoss A/S*, No. 1:21-cv-01880 (D.D.C. July 14, 2021).
[29] *United States v. Gray Television, Inc. and Quincy Media, Inc.*, No. 1:21-cv-02041 (July 28, 2021).

was filed simultaneously with the complaint on July 28, 2021. The terms of the final judgment required the parties to divest certain broadcast television stations and related assets to acquirers approved by the United States. The court entered the final judgment on October 25, 2021.

The Federal Trade Commission

During fiscal year 2021, the Commission challenged 18 mergers that may have substantially lessened competition or tended to create a monopoly if allowed to proceed as proposed. In six cases, the Commission initiated administrative or federal court litigation, and seven mergers were abandoned after the Commission raised concerns about their potential for eliminating beneficial competition. The Commission also accepted consent orders that require divestitures and other strong relief in five merger cases.

In *Methodist/Tenet St. Francis*,[30] the Commission filed an administrative complaint challenging Methodist Le Bonheur's $350 million proposed acquisition of two Memphis-area hospitals, known as St. Francis, owned by Tenet Healthcare. The Commission also authorized staff to seek a preliminary injunction in federal court to maintain the status quo pending the outcome of the administrative trial. The complaint alleged that the proposed merger would likely harm competition in the Memphis area for a broad range of inpatient medical and surgical services that require an overnight hospital stay. The proposed merger would have eliminated the competitive pressure that has driven quality improvements and lowered hospital rates in Memphis. Only one other major hospital system, Baptist Memorial, would meaningfully constrain the combined health system. Shortly after the Commission filed its complaint, the parties abandoned the transaction.

In *CoStar/RentPath*,[31] the Commission filed an administrative complaint challenging CoStar's $587.5 million proposed acquisition of RentPath. The Commission also authorized staff to seek a preliminary injunction in federal court to maintain the status quo pending the outcome of the administrative trial. CoStar and RentPath operate websites that match prospective renters with available apartments. The complaint alleged that the proposed merger would likely increase concentration in the already concentrated markets for internet listing services for apartments in 49 metropolitan areas across the United States. The proposed merger would have eliminated the aggressive head-to-head competition that has kept advertising rates low while offering consumers a convenient tool for finding apartments. Shortly after the Commission filed its complaint, the parties abandoned the transaction.

---

[30] *In the Matter of Methodist Le Bonheur Healthcare and Tenet Healthcare Corporation*, FTC Dkt. C-9396 (complaint filed on Nov. 12, 2020), https://www.ftc.gov/enforcement/cases-proceedings/191-0189/methodist-le-bonheur-healthcare-matter.

[31] *In the Matter of CoStar Group, Inc. and RentPath Holdings, Inc.,* FTC Dkt. C-9398 (complaint filed on Nov. 30, 2020), https://www.ftc.gov/enforcement/cases-proceedings/201-0061/costar-group-rentpath-holdings-matter.

In *Hackensack/Englewood*,[32] the Commission filed an administrative complaint challenging Hackensack Meridian Health's proposed acquisition of Englewood Healthcare Foundation, two leading providers of inpatient general acute care hospital services in Bergen County, New Jersey. The Commission also authorized staff to seek a preliminary injunction in federal court. The complaint alleged that the proposed merger would likely harm competition because Hackensack and Englewood had a history of competing against each other to improve quality and services. The combination would eliminate this competition and leave insurers with few alternatives for inpatient general acute care services. On June 2, 2021, the United States District Court for the District of New Jersey granted the preliminary injunction. The parties appealed this decision to the Third Circuit Court of Appeals. On March 22, 2022, the Third Circuit affirmed the District Court's decision, and shortly afterwards the parties abandoned the transaction.

In *Procter & Gamble/Billie*,[33] the Commission filed an administrative complaint challenging P&G's proposed acquisition of Billie, a direct-to-consumer company that began selling women's razors and body care products in November 2017. The Commission also authorized staff to seek a preliminary injunction in federal court. The complaint alleged that the proposed merger would allow P&G, the market-leading supplier of both women's and men's wet shave razors, to buy Billie, a newer but expanding maker of women's razors, to eliminate a growing competitive threat that would result in more choices and better pricing for consumers. The proposed merger would have also halted Billie's anticipated expansion into brick-and-mortar retail stores. Shortly after the Commission filed its complaint, the parties abandoned the transaction.

In *Illumina/Grail*,[34] the Commission filed an administrative complaint and authorized staff to seek a preliminary injunction challenging Illumina's $7.1 billion proposed acquisition of Grail, a maker of non-invasive, early detection liquid biopsy that screens for multiple types of cancer using DNA sequencing. Illumina was the only provider of DNA sequencing that is a viable option for these multi-cancer early detection (MCED) tests. The complaint alleged that the proposed merger would likely harm innovation in the market for MCED tests. The federal district court entered a stipulated TRO and protective order on April 1, 2021. Defendants filed a motion to transfer the matter to the Southern District of California, which the court granted on April 20, 2021. The same day, the EC announced that it had accepted requests from member states that the parties could not implement the transaction before notifying and obtaining clearance from the Commission. As a result, staff withdrew the TRO and PI court complaint. The administrative trial began on August 24, 2021, and concluded on September 24, 2021. Closing arguments took place on June 8, 2022.

---

[32] *In the Matter of Hackensack Meridian Health, Inc. and Englewood Healthcare Foundation,* FTC Dkt. C-9399 (complaint filed on Dec. 3, 2020), https://www.ftc.gov/enforcement/cases-proceedings/2010044/hackensack-meridian-health-inc-englewood-healthcare-foundation.

[33] *In the Matter of The Procter & Gamble Company and Billie, Inc.*, FTC Dkt. C-9400 (complaint filed on Dec. 8, 2020), https://www.ftc.gov/enforcement/cases-proceedings/2010042/procter-gamble-co-billie-inc-matter.

[34] *In the Matter of Illumina, Inc. and Grail, Inc.,* FTC Dkt. C-9401 (complaint filed on March 30, 2021), https://www.ftc.gov/enforcement/cases-proceedings/201-0144/illumina-inc-grail-inc-matter.

In *Heidelberg/Keystone*,[35] the Commission challenged Heidelberg's Lehigh Cement Company's $151 million acquisition of Keystone Cement Company. The Commission also authorized staff to seek a preliminary injunction in federal court. The complaint alleged the proposed merger would likely harm competition in the market for the key ingredient used to make concrete. Cement is an essential ingredient of concrete and there are no reasonable substitutes. Lehigh owned and operated multiple facilities that sold concrete in direct competition with Keystone, including two plants located within 40 miles of Keystone's Bath, Pennsylvania plant. The combined firm would have controlled more than 50 percent of cement sales with two other competitors accounting for most of the other sales. Shortly after the Commission filed its complaint, the parties abandoned the transaction.

The Commission also accepted for public comment and finalized consent orders in the following five merger matters.

In *Stryker/Wright*,[36] the Commission challenged Stryker's $4 billion proposed acquisition of Wright. The Commission's complaint alleged the proposed merger would likely harm competition for the sale of total ankle replacements and finger joint implants. According to the complaint, Stryker and Wright were close competitors and this competition led to improved products, better service, and lower prices for these products. The proposed merger would have eliminated this competition and would have allowed the combined company to exercise market power unilaterally. To remedy these concerns, the Commission issued a consent order requiring the parties to divest all the assets associated with Stryker's total ankle replacements and finger joint implants to DJO Global. Following a public comment period, the Commission approved the final order on December 11, 2020.

In *Pfizer/Mylan*,[37] the Commission challenged Pfizer's $900 million proposed combination with Mylan. The transaction contemplated that Pfizer would spin off its Upjohn division (Pfizer's generic business) and combine it with Mylan to form a new company called Viatris. According to the complaint, the proposed transaction would likely harm competition in seven generic drug markets and future competition in three generic drug markets. To remedy these concerns, the Commission issued a consent order requiring the parties to divest rights and assets in these seven generic drug markets and requires prior Commission approval before Upjohn, Mylan, or Viatris may gain an interest in or exercise control over any third party's rights in the three future generic drug markets. Following a public comment period, the Commission approved the final order on January 25, 2021.

[37] *In the Matter of Pfizer, Inc. et. al.,* FTC Dkt. C-4727 (final order issued on Jan. 25, 2021), https://www.ftc.gov/enforcement/cases-proceedings/191-0182/pfizermylan-matter.

In *E. & J. Gallo/Constellation Brands*,[38] the Commission challenged Gallo's $1.4 billion proposed acquisition of certain assets of Constellation Brands. According to the complaint, the proposed transaction would have eliminated head-to-head competition for six types of wine and spirits products. To remedy these concerns, the Commission issued a consent order requiring Gallo to divest several product lines and remove others from its asset purchase agreement with Constellation. Following a public comment period, the Commission approved the final order on April 4, 2021.

In *Casey's/Bucky's*,[39] the Commission challenged Casey's $580 million proposed acquisition of Bucky's. According to the complaint, the proposed merger would likely harm competition for the retail sale of gasoline in seven local markets in Nebraska and Iowa. The merger would have also eliminated the retail sale of diesel fuel in four of these markets. To remedy these concerns, the Commission required the parties to divest six retail fuel outlets, three Casey's locations and three Bucky's outlets, to Western Oil. Following a public comment period, the Commission approved the final order on June 8, 2021.

In *Seven & i/Marathon*,[40] the Commission challenged 7-Eleven's $21 billion proposed acquisition of Marathon's Speedway Markets. According to the complaint, the proposed merger would likely harm competition for the retail sale of fuel in 292 local markets across twenty states. To remedy these concerns, the Commission issued a consent order requiring that 7-Eleven and Marathon divest 124 retail fuel outlets to Anabi Oil, 106 outlets to CrossAmerica, and 62 outlets to Jackson Food Stores. The order also prohibits 7-Eleven from enforcing any non-compete agreements to any franchisees or employees working at or doing business with the divested assets. Following a public comment period, the Commission approved the final order on November 8, 2021.

* * *

Prior to the HSR Act, businesses could, and often did, consummate transactions that raised significant antitrust concerns before the agencies had an opportunity to review them. This practice forced the agencies to engage in lengthy post-acquisition litigation, during the course of which the transaction's anticompetitive effects continued to harm competition; furthermore, if effective post-acquisition relief was not practicable, the harm continued indefinitely.

---

38 *In the Matter of E. & J. Gallo Winery and Constellation Brands, Inc.,* FTC Dkt. C-4730 (final order issued on April 4, 2021), https://www.ftc.gov/enforcement/cases-proceedings/191-0110/e-j-gallo-wineryconstellation-brands-matter.

39 *In the Matter of Casey's General Stores, Inc. and Buck's Intermediate Holdings, LLC,* FTC Dkt. C-4742 (final order issued on June 8, 2021), https://www.ftc.gov/system/files/documents/cases/2110028c4742caseyscomplaint.pdf.

40 *In the Matter of Seven & I Holdings and Marathon Petroleum Corporation*, FTC Dkt. C-4748 (final order issued on Nov. 8, 2021), https://www.ftc.gov/enforcement/cases-proceedings/201-0108/seven-i-holdings-co-ltd-matter.

In the face of an unprecedented merger wave this past year and incredible resource constraints, all staff of the Commission and the Department of Justice, including the FTC's Premerger Notification Office, are to be commended for their diligent and dedicated efforts to identify and investigate mergers and acquisitions that may substantially lessen competition and to pursue law enforcement before injury can arise. The Commission and the Antitrust Division salute the tireless work of their excellent staffs in protecting the American public from unlawful mergers and acquisitions.

The Commission and the Antitrust Division regularly examine the premerger notification program's effectiveness and continually seek ways to increase accessibility, promote transparency, and improve the review process to reduce the burden on the filing parties without compromising each agency's ability to investigate and challenge proposed transactions that may substantially lessen competition or tend to create a monopoly.

SUMMARY OF TRANSACTIONS

FISCAL YEARS 2012 – 2021

APPENDIX A
SUMMARY OF TRANSACTIONS BY FISCAL YEAR

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021
Transactions Reported	**1,429**	**1,326**	**1,663**	**1,801**	**1,832**	**2,052**	**2,111**	**2,089**	**1,637**	**3,520**
Filings Received[1]	**2,829**	**2,628**	**3,307**	**3,585**	**3,674**	**4,083**	**4,188**	**4,142**	**3,249**	**7,002**
Adjusted Transactions In Which A Second Request Could Have Been Issued[2]	1,400	1,286	1,618	1,754	1,772	1,992	2,028	2,030	1,580	3,413
Investigations in Which Second Requests Were Issued	**49**	**47**	**51**	**47**	**54**	**51**	**45**	**61**	**48**	**65**
FTC[3]	20	25	30	20	25	33	26	30	23	42
Percent[4]	1.4%	1.9%	1.9%	1.1%	1.4%	1.7%	1.3%	1.5%	1.5%	1.2%
DOJ[3]	29	22	21	27	29	18	19	31	25	23
Percent[4]	2.1%	1.7%	1.3%	1.5%	1.6%	0.9%	0.9%	1.5%	1.6%	0.7%
Transactions Involving a Request For Early Termination[5]	**1,094**	**990**	**1,274**	**1,366**	**1,374**	**1,552**	**1,500**	**1,507**	**1,133**	**2,124**
Granted[5]	902	797	1,020	1,086	1,102	1,220	1,170	1,107	861	417
Not Granted[5]	192	193	254	280	272	332	330	400	272	1707

[1] Usually, two filings are received, one from the acquiring person and one from the acquired person when a transaction is reported. Only one application is received when an acquiring party files for an exemption under Section 7A (c)(6) or (c)(8) of the Clayton Act.

[2] These figures omit from the total number of transactions reported all transactions for which the agencies were not authorized to request additional information. These include (1) incomplete transactions (only one party filed a complete notification); (2) transactions reported pursuant to the exemption provisions of Sections 7A (c)(6) and 7A(c)(8) of the Act; (3) transactions which were found to be non-reportable; and (4) transactions withdrawn before the waiting period began. In addition, where a party filed more than one notification in the same year to acquire voting securities of the same corporation, e.g., filing one threshold and later filing for a higher threshold, only a single consolidated transaction has been counted because as a practical matter the agencies do not issue more than one Second Request in such a case. These statistics also omit from the total number the transactions reported secondary acquisitions filed pursuant to §801.4 of the Premerger Notification rules. Secondary acquisitions have been deducted in order to be consistent with the statistics presented in most of the prior annual reports.

[3] These statistics are based on the date the Second Request was issued and not the date the investigation was opened.

[4] Second Request investigations are a percentage of the total number of adjusted transactions. The total percentage reflected in Figure 2 may not equal the sum of reported component values due to rounding.

[5] These statistics are based on the date of the HSR filing and not the date action was taken on the request.

TABLE XI
FISCAL YEAR 2021[1]
INDUSTRY GROUP OF ACQUIRED ENTITIES

3 DIGIT NAICS CODE[11]	INDUSTRY DESCRIPTION	NUMBER[4]	PERCENT OF TOTAL	% POINTS CHANGE FROM FY 2020[12]	CLEARANCE GRANTED TO FTC OR DOJ			SECOND REQUEST INVESTIGATIONS[3]			NUMBER OF 3 DIGIT INTRA-INDUSTRY TRANSAC-TIONS[14]
					FTC	DOJ	TOTAL	FTC	DOJ	TOTAL	
928	National Security and International Affairs	1	0.0%	0.0%	0	0	0	0	0	0	0
999	Nonclassificable Establishments	1	0.0%	0.0%	0	0	0	0	0	0	0
		3,413	100.0%		164	106	270	42	23	65	137

1 Fiscal year 2021 figures include transactions reported between October 1, 2020 and September 30, 2021.

2 The size of transaction is based on the aggregate total amount of voting securities, non-corporate interests and/or assets held by the acquiring person as a result of the transaction and are taken from the response to Item 2(d)(iii), 2(d)(vii), and 2(d)(ix) of the Notification and Report Form.

3 These statistics are based on the date the Second Request was issued.

4 During fiscal year 2021, 3,520 transactions were reported under the HSR Premerger Notification program. The smaller number, 3,413, reflects the adjustments to eliminate the following types of transactions: (1) transactions reported under Section 7A(c)(6) and (c)(8) (transactions involving certain regulated industries and financial businesses); (2) transactions deemed non-reportable; (3) incomplete transactions (only one party in each transaction filed a compliant notification); and (4) transactions withdrawn before the waiting period began. The table does not, however, exclude competing offers or multiple HSR transactions resulting from a single business transaction (where there are multiple acquiring persons or acquired persons).

5 The total number of filings under $50M submitted in Fiscal Year 2021 reflects corrective filings.

6 In February 2001, legislation raised the size of transaction from $15 million to $50 million with annual adjustments beginning in February 2005. As of FY 2017, the threshold categories include non-corporate interests (NCI), encompassing transactions in which the acquiring entity acquires 50% of more of the non-corporate interests of the acquired entity.

7 The category labeled “Sales Not Available” includes newly-formed acquiring persons, foreign acquiring person with no United States revenues, and acquiring persons who had not derived any revenues from their investments at the time of filing.

8 Assets of an acquired entity are not available when the acquired entity’s financial data is consolidated within its ultimate parent.

9 Sales of an acquired entity are taken from responses to Item 4(a) and (b) (SEC documents and annual reports) or item 5 (dollar revenues) of the Premerger Notification and Report Form.

10 This category includes acquisition of newly-formed entities from which no sales were generated, and acquisitions of assets which produced no sales revenues during the prior year to filing the Notification and Report Form.

11 The 3-digit codes are part of the North American Industrial Classification System (NAICS) established by the United States Government North American Industrial Classification System 1997, Executive Office of the President, Office of Management and Budget. The NAICS groups used in this table were determined from responses submitted by the parties to Item 5 of the Premerger Notification and Report Form.

12 This represents the deviation from the fiscal year 2020 percentage.

13 This category includes transactions by newly-formed entities.

14 The intra-industry transactions column identifies the number of acquisitions in which both the acquiring and acquired person derived revenues from the same 3-digit NAICS code.

Federal Trade Commission

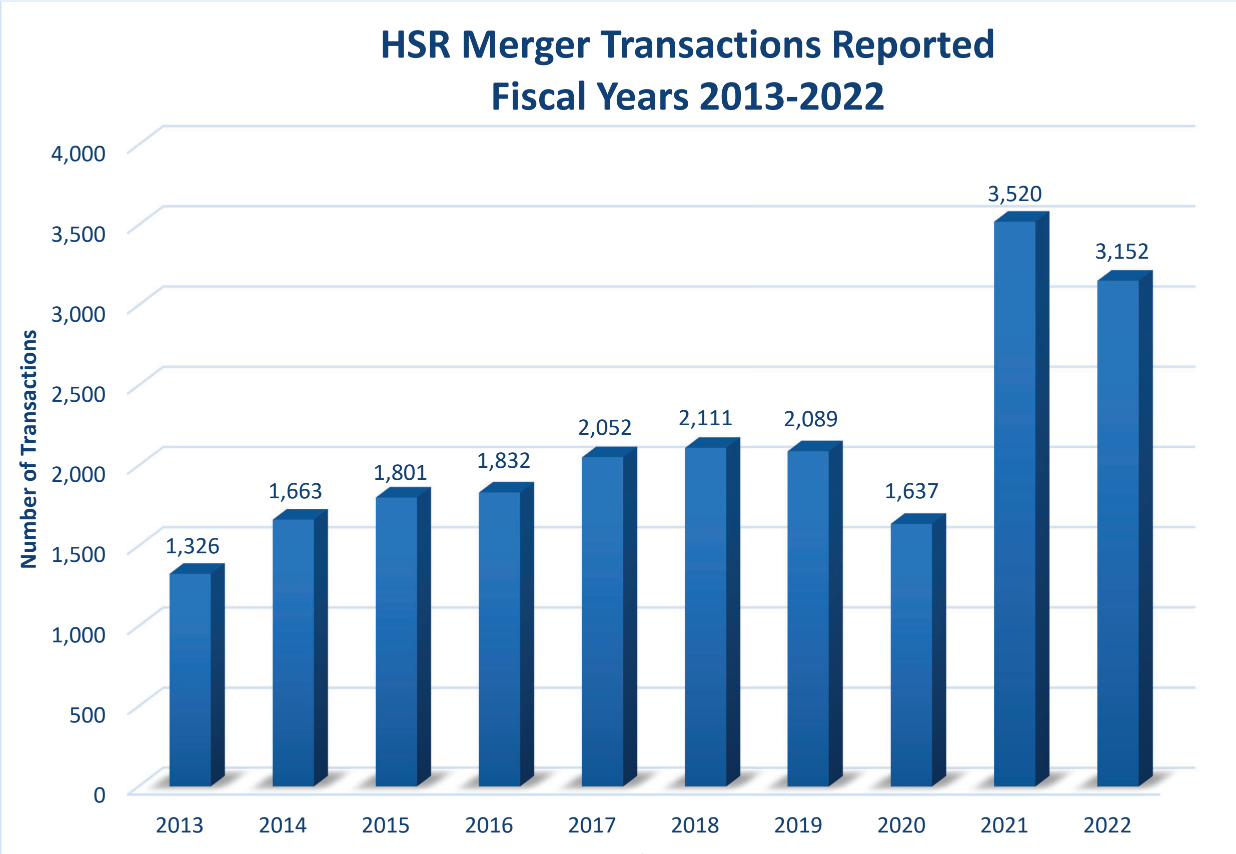
Jonathan Kanter
Assistant Attorney General
Antitrust Division

INTRODUCTION

The Hart-Scott-Rodino Antitrust Improvements Act of 1976, Pub. L. No. 94-435 (HSR Act or the Act), together with Section 13(b) of the Federal Trade Commission Act and Section 15 of the Clayton Act, enables the Federal Trade Commission (FTC or Commission) and the Antitrust Division of the Department of Justice (Antitrust Division or Division) to prevent unlawful mergers, acquisitions, and other types of transactions and to prevent interim harm to competition associated with those transactions. The premerger notification program was instrumental in alerting the Commission and the Division to transactions that became the subjects of the numerous enforcement actions brought in fiscal year 2022.[1]

The Commission and the Antitrust Division continue their efforts to protect competition by identifying and investigating those mergers and acquisitions that may violate the antitrust laws. Together, the FTC and the Division represent the American people's front-line defense against unlawful industry consolidation, and stopping illegal mergers is central to that mission. In fiscal year 2022, 3,152 transactions were reported under the HSR Act, which is the second-highest number of reported transactions over the past ten years. Overall, the number of transactions reported in fiscal year 2022 is still about 50% higher than the prior fiscal year high between 2013 and 2020. *See* Figure 1 below.

[1] Fiscal year 2022 covered the period from October 1, 2021 through September 30, 2022.



(Figure 1)

During fiscal year 2022, the Commission brought 23 merger enforcement challenges:[2] twelve in which it issued final consent orders after a public comment period; five in which the transaction was abandoned or restructured as a result of antitrust concerns raised during the investigation; and six in which the Commission initiated administrative or federal court litigation. The 23 merger enforcement challenges the Commission brought in fiscal year 2022 is the second-highest figure in the last ten years.[3] These enforcement actions prevented unlawful mergers in numerous sectors of the economy, including consumer goods and services, pharmaceuticals, healthcare, high tech and industrial goods, and energy.

In December 2021, the Commission sued to stop United States chip supplier Nvidia's proposed $40 billion acquisition of U.K. chip design provider Arm. More than two months into its litigation with the FTC, Nvidia abandoned its acquisition of Arm—representing the first abandonment of a litigated vertical merger in many years.

In January 2022, the Commission issued an administrative complaint and authorized staff to seek a preliminary injunction to prevent Lockheed Martin's proposed acquisition of

---

[2] To avoid double-counting, this Report includes only those merger enforcement actions in which the Commission or the Antitrust Division took its first public action during fiscal year 2022.
[3] In 2020 the Commission brought 28 enforcement challenges.

Aerojet. The complaint alleged that this proposed vertical merger would likely allow Lockheed to harm rival defense contractors by cutting them off from Aerojet's critical components needed to build competing missiles. Shortly after the Commission filed its complaint, the parties abandoned the transaction. This lawsuit represented the first time in decades that the Commission had sought to outright block a defense industry transaction.

In February 2022, the two largest healthcare systems in Rhode Island, Lifespan and Care New England Health System, called off their merger after the FTC, in conjunction with the Rhode Island Attorney General, sought to block the merger. On the same day in June 2022, the Commission voted to block two proposed hospital mergers: HCA's acquisition of Steward Health Care System and RWJBarnabas's acquisition of Saint Peter's Healthcare System. Both of these acquisitions were later abandoned. The Commission will continue to identify and aggressively challenge hospital mergers that threaten access to critical healthcare services.

In July 2022, the Commission issued an administrative complaint and authorized staff to seek a preliminary injunction to prevent Meta's proposed acquisition of virtual reality giant Within Unlimited. The Commission's complaint alleged that Meta's proposed acquisition would have harmed competition and dampened innovation in the markets for fitness and dedicated-fitness virtual reality apps. Although the U.S. District Court denied the preliminary injunction and the Commission dismissed the administrative complaint, this enforcement action illustrates the Commission's commitment to challenge acquisitions that eliminate potential competition.

The Antitrust Division worked to block anticompetitive mergers in critical industries, including agriculture, healthcare, financial services, publishing, manufacturing, transportation, and national security. The Division's enforcement efforts directly impacted 26 merger transactions. In six cases, the Division filed lawsuits in federal court to block the transactions; in four others the Division filed a complaint and settlement simultaneously. In ten proposed transactions the parties abandoned the transaction in the face of questions from the Division, and in six others the parties changed the structure of their transaction such that the Division chose not to bring an enforcement action at that time.

One of the Division's most notable successes was its efforts to block Penguin Random House's proposed purchase of a major publishing rival, Simon & Schuster. The merger, if completed, would have eliminated competition that had led to higher advances, better services, and more favorable contract terms for authors trying to sell their work. The merger also jeopardized the breadth, depth, and diversity of written work by authors. The Division filed suit to block the merger in November 2021; after a thirteen-day trial in August 2022, the U.S. District Court for the District of Columbia found that the proposed acquisition violated Section 7 of the Clayton Act based on the harm it would cause to a specific class of workers—in this case, authors.

Two other enforcement efforts illustrate the Division's commitment to protecting competition in key areas of the supply chain. In 2021, Cargotec Corporation and Konecranes Plc announced their plans to merge. This merger, if completed, would have diminished competition in the manufacture and supply of four types of container-handling equipment. This equipment, which included straddle carriers, rubber-tired gantry cranes, automated stacking cranes, and rail-mounted gantry trains, is a crucial part of modern ocean freight services. The proposed merger threatened to harm port and terminal operators in the United States that used these machines to move consumer goods, medicines, and other important products throughout the global supply change. In March 2022, Cargotec and Konecranes announced that they abandoned this merger in the face of a potential enforcement action by the Antitrust Division and the United Kingdom's Competition and Markets Authority.

The Antitrust Division's enforcement efforts protected competition for other important parts of the supply chain as well. In August 2022, in the face of a potential enforcement action, China International Marine Containers Group Co. Ltd. announced that it had abandoned its intended plan to purchase Maersk Container Industry A/S and Maersk Container Industry Qingdao Ltd. The proposed acquisition would have combined two of the world's four suppliers of insulated container boxes and refrigerated shipping containers and consolidated control of more than 90 percent of insulated container box and refrigerated container production worldwide in Chinese state-owned or state-controlled enterprises. This would likely have led to higher prices, lower quality, and less resiliency within the global supply chain.

The Commission's Premerger Notification Office (PNO) website[4] includes instructions for completing the HSR form, information on the HSR rules, current filing thresholds, filing fee instructions, and procedures for submitting post-consummation filings. The website also provides frequently asked questions regarding HSR filing requirements, the number of HSR transactions submitted each month, and contact information for PNO staff.[5]

BACKGROUND OF THE HSR ACT

Section 201 of the HSR Act amended the Clayton Act by adding a new Section 7A, 15 U.S.C. § 18a. In general, the HSR Act requires that certain proposed acquisitions of voting securities, non-corporate interests, or assets be reported to the Commission and the Antitrust Division prior to consummation. The parties must then wait a specified period, usually 30 days (15 days in the case of a cash tender offer or bankruptcy sale), before they may complete the transaction. Whether a particular acquisition is subject to these requirements depends on the value of the acquisition and, in certain acquisitions, the size of the parties as measured by their sales and assets. Acquisitions valued below a certain threshold, acquisitions involving parties with assets and sales below a certain threshold, and certain classes of acquisitions that are less likely to raise antitrust concerns are excluded from the Act's coverage.

[4] *See* https://www.ftc.gov/enforcement/premerger-notification-program.

[5] Resource materials are available on the PNO website; in addition, PNO staff is always available to help HSR practitioners comply with HSR notification requirements.

The Commission, with the concurrence of the Assistant Attorney General for the Antitrust Division, promulgated final rules implementing the premerger notification program on July 31, 1978. At that time, a comprehensive Statement of Basis and Purpose was published, containing a section-by-section analysis of the rules and an item-by-item analysis of the filing form.[6] The program became effective on September 5, 1978. The Commission, with the concurrence of the Assistant Attorney General, has amended the rules and the filing form on many occasions over the years to improve the program's effectiveness and to lessen the burden of complying with the rules, while ensuring that the agencies get all the information they need to analyze the underlying transaction.[7]

The primary purpose of the statutory scheme, as the legislative history makes clear, is to provide the antitrust enforcement agencies with the opportunity to identify and review potentially anticompetitive mergers and acquisitions before they are consummated. The premerger notification program, with its filing and waiting period requirements, facilitates this goal.

If either reviewing agency determines during the waiting period that further inquiry is necessary, the reviewing agency is authorized by Section 7A(e) of the Clayton Act to issue a request for additional information and documentary material (Second Request).[8] The Second Request extends the waiting period for a specified period of time (usually 30 days, but 10 days in the case of a cash tender offer or bankruptcy sale) after all parties have complied with the Second Request (or, in the case of a tender offer or bankruptcy sale, after the acquiring person complies). This additional time provides the reviewing agency with the opportunity to analyze the information and to take appropriate action before the transaction is consummated. If the reviewing agency believes that a proposed transaction may substantially lessen competition, the agency may seek an injunction in federal district court to prohibit consummation of the transaction. The Commission also may challenge the transaction in administrative litigation.

A STATISTICAL PROFILE OF THE PREMERGER NOTIFICATION PROGRAM

The appendices to this Report provide a statistical summary of the operation of the premerger notification program. Appendix A shows, for the ten-year period covering fiscal years 2013-2022: the number of transactions reported; the number of filings received; the number of merger investigations in which Second Requests were issued; and the number of transactions in which requests for early termination of the waiting period were received,

---

[6] 43 Fed. Reg. 33450 (July 31, 1978).

[7] *See* https://www.ftc.gov/enforcement/premerger-notification-program/statute-rules-and-formal-interpretations/statements-basis-purpose.

[8] 15 U.S.C. §18a(e)(1)(a) ("The Federal Trade Commission or the Assistant Attorney General may, prior to the expiration of the 30-day waiting period (or in the case of a cash tender offer, the 15-day waiting period)…require the submission of additional information or documentary material relevant to the proposed acquisition").

granted, and not granted.[9] Appendix A also shows the number of transactions in which Second Requests could have been issued. Appendix B provides a month-by-month comparison of the number of transactions reported and the number of filings received for fiscal years 2013 through 2022.

The statistics set out in these appendices show that the number of transactions reported in fiscal year 2022 decreased 10.5 percent from the number of transactions reported in fiscal year 2021. In fiscal year 2022, 3,152 transactions were reported, while 3,520 were reported in fiscal year 2021, but the number of reported transactions remained significantly above the ten-year median.[10] Of the 3,152 reported transactions, Second Requests could have been issued in 3,029 of them. The absolute number of Second Requests has remained fairly consistent across the last decade, including 48 Second Requests in 2020, 65 in 2021, and 47 in 2022.[11]

The statistics in Appendix A show that in fiscal year 2022, early termination was requested in 44.4 percent (1,345) of the adjusted transactions reported. In fiscal year 2021, early termination was requested in 62.2 percent (2,124) of the transactions reported. The percentage of requests granted out of the total requested decreased from 19.6 percent in fiscal year 2021 to 0.4 percent in fiscal year 2022, due to a suspension of the granting of early termination in February 2021, except in situations where merging parties entered into a consent order or the parties resolved the investigating agency's concerns prior to fully complying with a Second Request.[12]

The tables (Tables I through XI) in Exhibit A contain information regarding the agencies' enforcement activities for transactions reported in fiscal year 2022. The tables provide, for example, various characteristics of transactions, the number and percentage of transactions in which one antitrust agency granted the other clearance to commence an investigation, and the number of merger investigations in which either agency issued Second Requests. Table III of Exhibit A shows that in fiscal year 2022, the agencies received clearance to conduct an initial investigation in 9.2 percent of the total number of transactions reported. The tables also provide the number of transactions based on the dollar value of transactions reported and the

---

[9] The term "transaction," as used in Appendices A and B and Exhibit A to this Report, does not refer only to individual mergers or acquisitions. A particular merger, joint venture, or acquisition may be structured such that it involves more than one filing that must be made under the HSR Act.

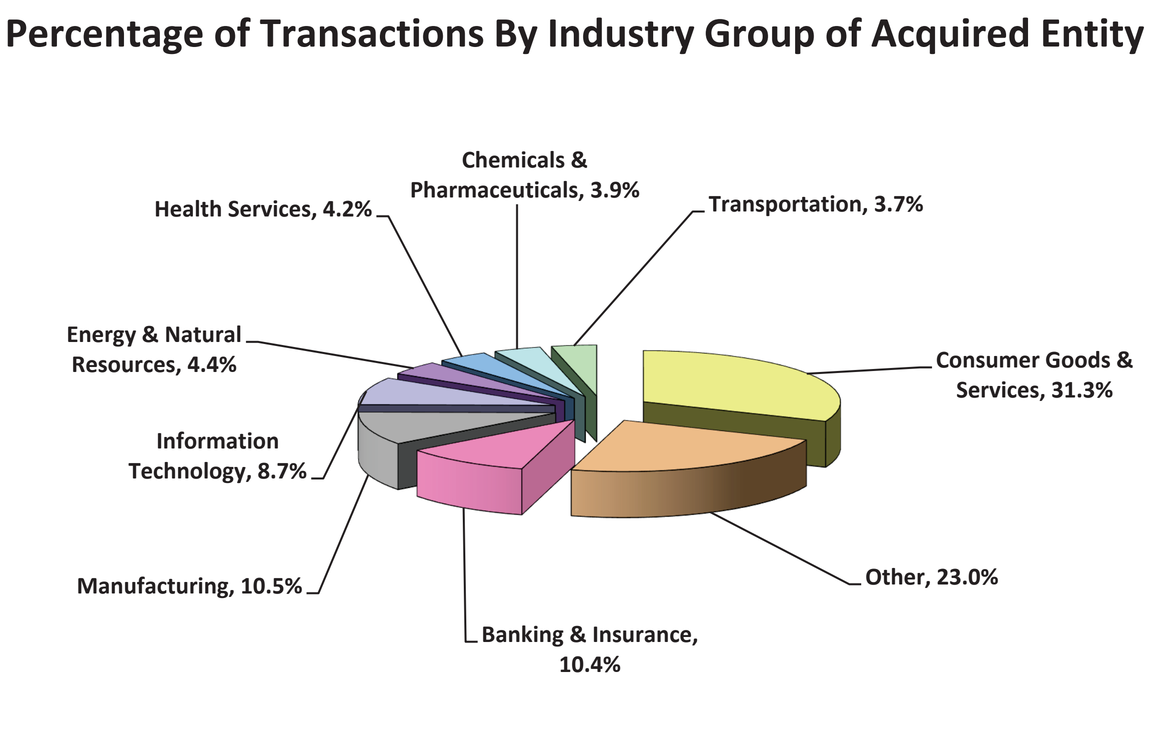
[10] This Report, like previous Reports, also includes annual data on "adjusted transactions in which a Second Request could have been issued" (adjusted transactions). *See* Appendix A & Appendix A n.2 (explaining calculation of that data). There were 3,029 adjusted transactions in fiscal year 2022, and the data presented in the Tables and the percentages discussed in the text of this Report are based on this figure. The number of transactions in fiscal year 2021 was an all-time high and 2022's figures still represent the second-highest total in at least a decade.

[11] As noted in prior reports, and described in Appendix A, the total number of Second Requests has remained fairly consistent over the last decade – 47 in 2013, 51 in 2014, 47 in 2015, 54 in 2016, 51 in 2017, 45 in 2018, 61 in 2019, 48 in 2020, 65 in 2021, and 47 in 2022.

[12] https://www.ftc.gov/enforcement/competition-matters/2021/03/hsr-early-termination-after-second-request-issues.

reporting threshold indicated in the notification report. In fiscal year 2022, the aggregate dollar value of reported transactions was $2.5 trillion.[13]

Tables X and XI provide the number of transactions by industry group in which the acquiring person or the acquired entity derived the most revenue. Figure 2 illustrates the percentage of adjusted transactions within industry groups for fiscal year 2022 based on the acquired entity's operations.[14]



(Figure 2)

[13] The information on the value of reported adjusted transactions for fiscal year 2022 is drawn from a database maintained by the Premerger Notification Office.

[14] The category designated as "Other" consists of industry segments that include construction, educational services, performing arts, recreation, and other non-classifiable businesses.

DEVELOPMENTS WITHIN THE PREMERGER PROGRAM

1. Threshold Adjustments

The 2000 amendments to the HSR Act require the Commission to publish adjustments to the Act's jurisdictional and filing fee thresholds in the Federal Register annually, for each fiscal year beginning on September 30, 2004, based on the change in the gross national product, in accordance with Section 8(a)(5) of the Clayton Act. The Commission amended the rules in 2005 to provide a method for future adjustments as required by the 2000 amendments, and to reflect the revised thresholds contained in the rules. The Commission usually publishes the revised thresholds annually in January, and they become effective 30 days after publication.

On January 24, 2022, the Commission published a notice[15] to reflect adjustment of the reporting thresholds as required by the 2000 amendments[16] to Section 7A of the Clayton Act, 15 U.S.C. § 18a. The revised thresholds, including an increase in the size of transaction threshold from $92 million to $101 million, became effective February 23, 2022. The thresholds are calculated based on the prior year's GNP.

2. Compliance

The Commission and the Antitrust Division continued to monitor compliance with the premerger notification program's filing and waiting period requirements and initiated a number of investigations in fiscal year 2022. The agencies use several methods to oversee compliance, including monitoring news outlets and industry publications for transactions that may not have been reported in accordance with the HSR Act's requirements. Industry sources, such as competitors, customers, and suppliers, interested members of the public, and, in certain cases, the parties themselves, also provide the agencies with information about transactions and possible violations of the Act's requirements.

Under Section 7A(g)(1) of the Act, any person that fails to comply with the Act's notification and waiting period requirements is liable for a civil penalty of up to $46,517 for each day the violation continues.[17] The antitrust agencies examine the circumstances of each

---

[15] 87 Fed. Reg. 3541 (Jan. 23, 2022).
[16] 15 U.S.C. §18a(a). *See* Pub. L. No. 106-553, 114 Stat. 2762.
[17] Dollar amounts specified in civil monetary penalty provisions within the Commission's jurisdiction are adjusted for inflation in accordance with the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015, Pub. L. No. 114-7 (Nov. 2, 2015). The adjustments have included an increase in the maximum civil penalty from $10,000 to $11,000 for each day during which a person is in violation of Section 7A(g)(1) (61 Fed. Reg. 54548 (Oct. 21, 1996), corrected at 61 Fed. Reg. 55840 (Oct. 29, 1996)), to $16,000 effective February 10, 2009 (74 Fed. Reg. 857 (Jan. 9, 2009)), to $40,000 effective August 1, 2016 (81 Fed. Reg. 42476 (June 30, 2016)), to $43,792 effective Jan. 13, 2021 (86 Fed. Reg. 2880 (Jan. 13, 2021)) and to $46,517 effective January 10, 2022, (87 Fed. Reg. 1070 (Jan. 10, 2022).

violation to determine whether to seek penalties.[18] During fiscal year 2022, 74 post-consummation "corrective" filings were received, and the agencies brought two civil penalty actions, resulting in approximately $1.89 million in civil penalties.

In *United States v. Clarence L. Werner*,[19] the complaint alleged that Mr. Werner, the founder of the Omaha, Nebraska-based truckload carrier Werner Enterprises, Inc., violated the HSR Act by failing to file for an acquisition of additional voting securities of Werner Inc. when his holdings crossed the relevant threshold. Mr. Werner had previously failed to file HSR Forms for acquisitions of Werner Inc. voting securities as part of his compensation package. Under the terms of a negotiated settlement, Mr. Werner agreed to pay a $486,900 civil penalty. On April 20, 2022, the U.S. District Court for the District of Columbia entered the final judgment.

In *United States v. Biglari Holdings*,[20] the complaint alleged that restaurant chain owner and investment fund operator Biglari violated the HSR Act by failing to file for an acquisition of additional voting securities of Cracker Barrel Old Country Store, Inc. Under the terms of a negotiated settlement, Biglari agreed to pay a $1.4 million civil penalty. On May 9, 2022, the U.S. District Court for the District of Columbia entered the final judgment.

MERGER ENFORCEMENT ACTIVITY[21]

The Department of Justice

During fiscal year 2022, the Antitrust Division worked to block anticompetitive mergers where it concluded the effect may be substantially to lessen competition or tend to create a monopoly if allowed to proceed as proposed. The Division's enforcement efforts directly impacted 26 merger transactions. In six cases, the Division filed lawsuits in federal court to block the transactions; in four others the Division filed a complaint and settlement simultaneously. In ten proposed transactions the parties abandoned the transaction in the face of questions from the Division, and in six others the parties changed the structure of their transaction such that the Division chose not to bring an enforcement action at that time.

The Division filed the following six cases that resulted in active litigation.

---

[18] If parties inadvertently fail to file, the agencies generally will not seek penalties so long as the parties promptly submit corrective filings after discovering the failure to file, submit an acceptable explanation of their failure to file, and have not previously violated the Act.

[19] *United States v. Clarence L. Werner,* No. 1:21-cv-03332 (D.D.C. filed on Dec. 22, 2021), https://www.ftc.gov/legal-library-browse/cases-proceedings/211-0004-clarence-l-werner-us-v.

[20] *United States v. Biglari Holdings, Inc.,* No. 1:21-cv-0331 (D.D.C. filed on Dec. 22, 2021), https://www.ftc.gov/legal-library/browse/cases-proceedings/2110040-biglari-holdings-inc.

[21] The cases listed in this section were not necessarily reportable under the premerger notification program. Given the confidentiality of information obtained pursuant to the Act, it would be inappropriate to identify the cases initiated under the program except in those instances in which that information has already been disclosed.

In *United States v. Bertelsmann SE & Co. KGaA, Penguin Random House, LLC, ViacomCBS, Inc., and Simon & Schuster, Inc.*,[22] the Division filed a lawsuit to block Penguin Random House's proposed acquisition of Simon & Schuster. As alleged in the complaint, the proposed acquisition would have enabled Penguin Random House, the largest book publisher in the world, to exert outsized influence over which books would be published in the United States and how much authors would be paid for their work. The proposed acquisition would have put the combined firm in control of nearly half of the market for acquiring publishing rights to anticipated top-selling books, leaving hundreds of individual authors with fewer options and less leverage. On November 7, 2022, after a thirteen-day trial on the merits, the U.S. District Court for the District of Columbia enjoined the merger.

In *United States v. United States Sugar Corp., United Sugars Corp., Imperial Sugar Co., and Louis Dreyfus Co. LLC*,[23] the Division filed a challenge to United States Sugar Corporation's proposed acquisition of Imperial Sugar Company. The complaint alleged that the proposed acquisition would further consolidate an already consolidated industry, resulting in a duopoly—United States Sugars and American Sugar Refining (also known as "Domino") —controlling the vast majority of refined sugar sold in the Southeast. As a result, the complaint alleged that the acquisition would eliminate a significant competitor leading to higher prices and increase the likelihood of, or enable, successful anticompetitive coordination in the production and sale of refined sugar to customers in the Southeast, as well as in Georgia and its bordering states. On September 28, 2022, the U.S. District Court for the District of Delaware ruled in favor of the Defendants. The U.S. Court of Appeals for the Third Circuit affirmed the district court's decision on July 13, 2023.

In *United States, State of Minnesota and State of New York v. UnitedHealth Group Inc., and Change Healthcare Inc.*,[24] the Division, together with the Attorneys General of Minnesota and New York, filed suit to block the $13 billion proposed acquisition of Change Healthcare Inc. by UnitedHealth Group Inc. The complaint alleged that the proposed merger would give UnitedHealth Group, which owns the largest health insurer in the United States, control over Change Healthcare's electronic data interchange clearinghouse, a critical data highway through which about half of all Americans' health insurance claims pass each year. As a result, the acquisition would allow UnitedHealthcare to use its rivals' competitively sensitive information to gain an unfair advantage and harm competition in health insurance markets. Additionally, the complaint alleged that the proposed transaction would eliminate UnitedHealth Group's only major rival for first-pass claims editing technology, a critical product used to efficiently process health insurance claims, and give it a monopoly share in the market. On September 19, 2022, the U.S. District Court for the District of Columbia, while acknowledging the validity of the

[22] *United States v. Bertelsmann SE & Co. KGaA, Penguin Random House, LLC, ViacomCBS, Inc., and Simon & Schuster, Inc.*, 1:21-cv-02886 (D.D.C. filed Nov. 02, 2021).
[23] *In United States v. United States Sugar Corp., United Sugars Corp., Imperial Sugar Co., and Louis Dreyfus Co. LLC*, 1:21-cv-01644-UNA (D. Del. Filed Nov. 23, 2021).
[24] *United States, State of Minnesota and State of New York v. UnitedHealth Group Inc., and Change Healthcare Inc.*, 1:22-cv-00481 (D.D.C. filed Feb 24, 2022).

plaintiffs' data-use theory, ruled in favor of the Defendants, declined to enjoin the transaction, and ordered the divestiture of Change Healthcare's first-pass claims editing business.

In *United States v. Grupo Verzatec S.A. de C.V., Stabilit America, Inc, Crane Co., and Crane Composites, Inc.*,[25] the Division filed suit to enjoin Grupo Verzatec S.A. de C.V. from buying its closest competitor, Crane Composites, Inc. The complaint alleged that the transaction would have created a monopoly in the market for the production and sale of pebbled fiberglass reinforced plastic wall panels, whose product and performance characteristics make it the wall covering of choice for many restaurants, grocery stores, hospitals, and convenience stores across the United States. On May 26, 2022, the parties abandoned the proposed acquisition.

In *United States v. Booz Allen Hamilton Holding Corp., Booz Allen Hamilton Inc., Everwatch Corp., EC Defense Holdings, LLC, and Analysis, Computing & Engineering Solutions, Inc.*,[26] the Division filed suit to block Booz Allen Hamilton Holding Corporation's proposed acquisition of Everwatch Corporation. The complaint alleged that the companies' merger agreement harmed competition for an imminent government request for proposals to provide signals intelligence modeling and simulation services to the National Security Agency. The complaint alleged that Booz Allen and Everwatch, were the only competitors for this project, and that the companies were competing vigorously to win the contract before agreeing to merge. Once the companies agreed to merge, according to the complaint, they no longer had an incentive to bid aggressively against each other because no matter which company NSA selected, the merged firm would ultimately own the contract and reap the rewards. Although recognizing that the litigation may have accomplished some of the Division's goals, on October 11, 2022, the U.S. District Court for the District of Maryland denied the Division's Motion for a Preliminary Injunction.

In *United States v. ASSA ABLOY AB and Spectrum Brands Holdings, Inc.*,[27] the Division filed suit to enjoin ASSA ABLOY from acquiring its residential door hardware rival, a division of Spectrum Brands Holding. The complaint alleged that acquisition would combine two of the three largest producers of residential door hardware in the concentrated $2.4 billion industry. As a result, the acquisition likely would have resulted in higher price, lower quality, reduced innovation, and poorer service in the sale of at least two types of residential door hardware: premium mechanical door hardware and smart locks. On May 5, 2023, following more than seven months of litigation and several days of trial, the Division filed a proposed final judgment requiring ASSA ABLOY, among other things, to divest assets to Fortune Brands Innovation, Inc. and to submit to five years of oversight by a monitoring trustee. The proposed final judgment provided greater relief than earlier offers by the Defendants, although the Division did not

[25] *United States v. Grupo Verzatec S.A. de C.V., Stabilit America, Inc, Crane Co., and Crane Composites, Inc.*, 1:22-cv-01401 (N.D. Ill. Filed Mar. 17, 2022).

[26] *United States v. Booz Allen Hamilton Holding Corp., Booz Allen Hamilton Inc., Everwatch Corp., EC Defense Holdings, LLC, and Analysis, Computing & Engineering Solutions, Inc.*, 1:22-cv-01603-CCB (D. MD. Filed June 29, 2022).

[27] *United States v. ASSA ABLOY AB and Spectrum Brands Holdings, Inc.*, 1:22-cv-02791-ABJ (D.D.C. Nov. 03, 2022).

contend that the relief obtained would fully eliminate the risks to competition alleged in the complaint. The proposed final judgment is designed to try to preserve competitive intensity in the markets for premium mechanical door hardware and smart locks. The Court entered final judgment on September 13, 2023.

The Division filed complaints and proposed settlements in the following four matters.

In *United States v. Wienerberger AG, General Shale Brick, Inc., LSF9 Stardust Super Holdings, L.P., Boral Limited, and Meridian Brick LLC*,[28] the Division challenged General Shale Inc.'s proposed acquisition of Meridian Brick LLC. A proposed final judgment, filed concurrently with the complaint on October 1, 2021, required the parties to divest specified residential brick manufacturing and sales assets located within seven states. The U.S. District Court for the District of Columbia entered the final judgment on January 31, 2022.

In *United States v. Neenah Enterprises, Inc., U.S. Holdings, Inc., and U.S. Foundry and Manufacturing Corp.*,[29] the Division challenged Neenah Enterprises Inc.'s proposed acquisition of substantially all of the assets of U.S. Holdings, Inc.'s subsidiary, U.S. Foundry and Manufacturing Corporation. On October 14, 2021, the Division filed a complaint and proposed final judgment requiring the parties divest assets designed to establish an independent and economically viable competitor in the market for the design, product, and sale of gray iron municipal castings. The U.S. District Court for the District of Columbia entered the final judgment on January 31, 2022.

In *United States v. B.S.A. S.A., LAG Holding, Inc., and The Kraft Heinz Co.*,[30] the Division challenged B.S.A. S.A.'s (Lactalis) proposed acquisition of The Kraft Heinz Company's natural cheese business in the United States. A proposed final judgment, filed concurrently with the complaint on November 10, 2021, required the parties to divest Kraft Heinz's Athenos business and Polly-O business. The U.S. District Court for the District of Columbia entered the final judgment on March 15, 2022.

In *United States v. S&P Global Inc. and IHS Markit Ltd.*,[31] the Division challenged the proposed merger of S&P and IHS Markit. On November 12, 2021, the Division filed a complaint and proposed final judgment requiring the divest IHS Markit's price reporting agency businesses. The U.S. District Court for the District of Columbia entered the final judgment on March 21, 2022.

[28] *United States v. Wienerberger AG, General Shale Brick, Inc., LSF9 Stardust Super Holdings, L.P., Boral Limited, and Meridian Brick LLC*, 1:21-cv-02555 (D.D.C. Oct. 01, 2021).
[29] *United States v. Neenah Enterprises, Inc., U.S. Holdings, Inc., and U.S. Foundry and Manufacturing Corp.*, 1:21-cv-02701 (D.D.C. Oct. 14, 2021).
[30] *United States v. B.S.A. S.A., LAG Holding, Inc., and The Kraft Heinz Co.*, 1:21-cv-02976 (D.D.C. Nov. 10, 2021).
[31] *United States v. S&P Global Inc. and IHS Markit Ltd.*, 1;21-cv-03003 (D.D.C. Nov. 12, 2021).

The Federal Trade Commission

During fiscal year 2022, the Commission challenged 23 mergers as violations of the Clayton Act. In six cases, the Commission initiated administrative or federal court litigation. In at least five instances, firms abandoned their mergers after the Commission raised concerns. The Commission also accepted consent orders that required divestitures and other relief in twelve merger cases.

In *Nvidia/Arm*,[32] the Commission filed an administrative complaint challenging Nvidia's $40 billion proposed acquisition of U.K. semiconductor provider Arm. The complaint alleged that the proposed vertical merger would give Nvidia, one of the largest chip companies in the world, control over Arm's computing technology that rival firms rely on to develop their own competing chips. If consummated, the combined company would have had the means and incentive to stifle innovative next-generation technologies, including driver-assistance systems in cars. Shortly after the Commission filed its complaint, the parties abandoned the transaction.

In *Lockheed/Aerojet*,[33] the Commission filed an administrative complaint challenging Lockheed's $4.4 billion proposed vertical acquisition of Aerojet. The Commission also authorized staff to seek a preliminary injunction in the U.S. District Court for the District of Columbia to maintain the status quo pending the outcome of the administrative trial. Aerojet is the last independent U.S. supplier of missile propulsion systems and supplies advanced power, propulsion, and armament systems to Lockheed and other defense contractors. The complaint alleged that the proposed merger would allow Lockheed to harm rival defense contractors by cutting them off from Aerojet's critical components needed to build competing missiles or otherwise disadvantaging its rivals' ability to compete effectively. Shortly after the Commission filed its complaint, the parties abandoned the transaction.

In *Lifespan/Care New England*,[34] the Commission filed an administrative complaint challenging the proposed merger of Rhode Island's two largest healthcare providers. The Commission also authorized staff to seek a preliminary injunction in the U.S. District Court for the District of Rhode Island to maintain the status quo pending the outcome of the administrative trial. The complaint alleged that the proposed merger would eliminate the head-to-head competition between Lifespan and Care New England and create a dominant healthcare system for most inpatient general acute care services and inpatient behavioral health services in Rhode Island. The parties had a history of competing against each other to improve quality and services in the state of Rhode Island and 19 nearby Massachusetts

[32] *In the Matter of Nvidia Corporation, Softbank Group, and Arm, Ltd.*, FTC Dkt. C-9404 (complaint filed on Dec. 2, 2021), https://www.ftc.gov/legal-library/browse/cases-proceedings/2110015-nvidiaarm-matter.
[33] *In the Matter of Lockheed Martin Corporation and Aerojet Rocketdyne Holdings, Inc.,* FTC Dkt. C-9405 (complaint filed on Jan. 25, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/211-0052-lockheedaerojet-matter.
[34] *In the Matter of Lifespan Corporation and Care New England Health System,* FTC Dkt. C-9406 (complaint filed on Feb. 17, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/211-0031-lifespancne-matter.

communities. The combination would have eliminated competition for a range of essential medical and surgical services and left insurers with few alternatives for inpatient general acute care services. The complaint further alleged the combined healthcare system would have reduced the hospitals' incentives to invest in vital non-price dimensions of competition, such as quality of care, access to services, and technology. Shortly after the Commission filed its complaint, the parties abandoned the transaction.

In *HCA/Steward*,[35] the Commission filed an administrative complaint challenging HCA's proposed acquisition of Steward Health. The Commission also authorized staff to seek a preliminary injunction in the U.S. District Court for the District of Utah to maintain the status quo pending the outcome of the administrative trial. The complaint alleged that the proposed merger would eliminate the head-to-head competition between the parties for a broad range of essential medical and surgical diagnostic and treatment services that require an overnight hospital stay, known as inpatient general acute care services. HCA and Steward are the second and fourth largest healthcare systems in the Wasatch Front region of Utah, and the competition between them helps keep healthcare costs down. Shortly after the Commission filed its complaint, the parties abandoned the transaction.

In *Barnabas Health/Saint Peter's*,[36] the Commission filed an administrative complaint challenging Barnabas Health's proposed acquisition of Saint Peter's. The Commission also authorized staff to seek a preliminary injunction in the U.S. District Court for the District of New Jersey to halt the transaction pending an administrative trial. The complaint alleged that the proposed merger would eliminate the head-to-head competition for general acute care services in Middlesex County, New Jersey. The combination would have given the combined system a market share of more than 50% in Middlesex County, leaving insurers with fewer and less attractive alternatives, and allowing the combined health system to demand higher reimbursement rates and more onerous contract terms. Shortly after the Commission filed its complaint, the parties abandoned the transaction.

In *Meta/Within*,[37] the Commission filed an administrative complaint challenging Meta's proposed acquisition of Within. The Commission also authorized staff to seek a preliminary injunction in the U.S. District Court of Northern California pending the outcome of the administrative trial. The Commission's complaint alleged that Meta is a potential entrant in the virtual reality dedicated fitness market with the required resources of building its own virtual reality fitness app to compete in the space. Meta, as a potential entrant with the resources available to build its own dedicated-fitness virtual reality app, instead chose to acquire a

[35] *In the Matter of HCA Healthcare, Inc. and Steward Health Care System, LLC*, FTC Dkt. C-9410 (complaint filed on June 2, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/2210003-hca-healthcaresteward-health-care-system-matter.

[36] *In the Matter of RWJ Barnabas Health and Saint Peter's Healthcare System,* FTC Dkt. C-9409 (complaint filed on June 2, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/2010145-rwj-barnabas-healthsaint-peters-healthcare-system-matter.

[37] *In the Matter of Meta Platforms, Inc. and Within Unlimited, Inc.,* FTC Dkt. C-9411 (complaint filed on Aug. 11, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/221-0040-metazuckerbergwithin-matter.

primary competitor. The Commission's complaint alleged that Meta's acquisition would likely eliminate the prospect of entry and dampen future innovation. In December 2022, the U.S. District Court denied the preliminary injunction and the Commission dismissed the administrative complaint.

The Commission also accepted for public comment and finalized consent orders in the following twelve merger matters.

In *DaVita/Total Renal Care*,[38] the Commission challenged DaVita's subsidiary, Total Renal Care's, proposed acquisition of 18 dialysis clinics from the University of Utah in a non-HSR reportable transaction. The Commission's complaint alleged the proposed merger would eliminate competition between the parties in outpatient dialysis services in the Provo, Utah market. To remedy these concerns, the Commission issued a consent order requiring DaVita to divest three dialysis clinics to Sanderling Renal Services. In addition, DaVita is prohibited from entering or enforcing non-compete agreements and must seek Commission approval before acquiring new clinics anywhere in Utah for a period of ten years. Following a public comment period, the Commission approved the final order on January 12, 2022.

In *Price Chopper/Tops*,[39] the Commission challenged Golub's Price Chopper chain's proposed acquisition of the Tops Market chain. According to the complaint, the proposed merger would reduce competition and result in highly concentrated markets for the sale of grocery products in several Upstate New York communities, including Cooperstown, Cortland, Oneida, Owego, Norwich, Warrensburg, Lake Placid, Rome, Watertown, Pittsburgh, and Rutland, Vermont. To remedy these concerns, the Commission issued a consent order requiring the parties to divest one supermarket in each market, except for Watertown, where they will divest two. Following a public comment period, the Commission approved the final order on January 20, 2022.

In *ANI/Novitium*,[40] the Commission challenged ANI's $210 million proposed acquisition of Novitium. According to the complaint, the proposed transaction would eliminate future competition in the U.S. market for generic SMX-TMP oral suspension, an antibiotic used to treat infections, and generic dexamethasone tablets, an oral steroid product. To remedy these concerns, the Commission issued a consent order requiring ANI to divest ANI's rights and assets to generic SMX-TMP and generic dexamethasone to Prasco. In addition, the final order contains a prior approval provision giving the Commission notice and approval rights for future related acquisitions in these two markets. Following a public comment period, the Commission approved the final order on January 12, 2022.

[38] *In the Matter of DaVita, Inc. and Total Renal Care, Inc.,* FTC Dkt. C- (complaint filed on Oct. 25, 2021), https://www.ftc.gov/legal-library/browse/cases-proceedings/2110013-davita-inc-total-renal-care-inc-matter.
[39] *In the Matter of The Golub Corporation, Tops Markets Corporation, and Project P Newco,* FTC Dkt. C-4753 (final order issued on Jan. 20, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/211-0002-price-choppertops-markets-matter.
[40] *In the Matter of ANI Pharmaceuticals, Inc. and Novitium Pharma LLC,* FTC Dkt. C-4754 (final order issued on Jan. 12, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/211-0101-aninovitium-matter.

In *Global Partners/Fuel Assets*,[41] the Commission challenged Global's $151 million proposed acquisition of 27 retail gasoline and diesel outlets owned by Richard Wiehl. According to the complaint, the proposed merger would have significantly increased concentration for the retail sale of gasoline and diesel in the Connecticut towns of Fairfield, Bethel, Milford, Wilton, and Shelton. To remedy these concerns, the Commission required the parties to divest six Global retail fuel outlets and one Wheels retail fuel outlet to Petroleum Marketing Investment Group. Following a public comment period, the Commission approved the final order on March 2, 2022.

In *EnCap/EP Energy*,[42] the Commission challenged EnCap's $1.4 billion proposed acquisition of EP Energy. According to the complaint, the proposed merger would eliminate substantial head-to-head competition for the sale of Uinta Basin waxy crude oil to Salt Lake City refiners. The complaint alleged that EnCap and EP Energy were two of only four significant producers of Uinta waxy crude oil and that the proposed merger would have increased the likelihood of collusion or coordination among the remaining competitors in the Uinta Basin. To remedy these concerns, the Commission issued a consent order requiring EnCap divest EP's business and assets in Utah to Crescent Energy Company. Following a public comment period, the Commission approved the final order on September 13, 2022.

In *Hikma/Custopharm*,[43] the Commission challenged Hikma's $375 million proposed acquisition of Custopharm. According to the complaint, the proposed merger would eliminate future competition in the market for the corticosteroid drug triamcinolone acetonide (TCA). The complaint alleged that only Custopharm and a few other companies were making this drug and Hikma would stop developing its own TCA following its acquisition of Custopharm, threatening competition in the TCA market. To remedy this concern, the Commission issued a consent order requiring Custopharm's parent company to retain and transfer its TCA assets to another one of its subsidiaries, Long Grove Pharmaceuticals. The consent order also requires Long Grove to maintain the competitive viability of these assets and requires Hikma to seek Commission approval for future TCA-related acquisitions. Following a public comment period, the Commission approved the final order on July 13, 2022.

In *American Securities/Ferro*,[44] the Commission challenged Prince International's parent company, American Securities', $2.1 billion proposed acquisition of Ferro. According to the complaint, the proposed merger would increase the likelihood of the merged firm to

---

[42] *In the Matter of EnCap Investments L.P.,* FTC Dkt. C-4760 (final order issued on Sept. 13, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/2110158-encapep-energy-matter.
[43] *In the Matter of Hikma Pharmaceuticals PLC and Custopharm, Inc.,* FTC Dkt. C-4771 (final order issued on July 13, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/2210001-hikma-pharmaceuticalscustopharm.
[44] *In the Matter of American Securities Partners VII, L.P., Prince International Corp. and Ferro Corporation*, FTC Dkt.C-4762 (final order issued on June 13, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/2110131-american-securities-partnersferro-matter.

unilaterally raise prices in the North American market for porcelain enamel frit and the world market for forehearth colorants. In addition, the acquisition would have eliminated Prince as an independent competitor in the world market for glass enamel, increasing the likelihood of coordination between the merged firm and its largest competitor, Fenzi. To remedy these concerns, the Commission issued a consent order requiring Prince and Ferro to divest three facilities used to make porcelain enamel frit, glass enamel, and forehearth colorants to KPS Capital. It also requires American Securities to obtain prior approval from the Commission for ten years before buying assets to manufacture and sell porcelain enamel frit, glass enamel, or forehearth colorants. Following a public comment period, the Commission approved the final order on June 13, 2022.

In *Medtronic/Intersect*,[45] the Commission challenged Medtronic's $1.1 billion proposed acquisition of Intersect ENT. According to the complaint, the merger would eliminate actual, direct, and future competition between Medtronic and Intersect, and result in higher prices and reduced innovation in the markets for ENT navigation systems and balloon sinus dilation products. To remedy these concerns, the Commission issued a consent order requiring Medtronic to divest Intersect's subsidiary Fiagon—which makes ear, nose, and throat navigation systems and balloon sinus products—to Hemostasis. Following a public comment period, the Commission approved the final order on June 27, 2022.

In *Buckeye/Magellan*,[46] the Commission challenged pipeline and storage company Buckeye's $435 million proposed acquisition of Magellan. According to the complaint, the proposed merger may have substantially lessened competition for petroleum products terminaling services in North Augusta, South Carolina; Spartanburg, South Carolina; and Montgomery, Alabama. The complaint alleged that in all three geographic markets, the proposed merger would eliminate close competition between Buckeye and Magellan, increasing the likelihood of coordinated interaction between the remaining competitors, reducing the number of options for third-party customers, and increasing the price for terminaling services. To remedy these concerns, the Commission issued a consent order requiring Buckeye to divest assets to U.S. Venture no later than ten days after the acquisition is consummated. Following a public comment period, the Commission approved the final order on August 8, 2022.

In *JAB/SAGE*,[47] the Commission challenged private equity firm JAB's subsidiaries Compassion-First Pet Hospitals' and National Veterinary Associates' $1.1 billion proposed acquisition of SAGE Veterinary Partners. The complaint alleged that the proposed merger

---

[45] *In the Matter of Medtronic plc and Intersect ENT, Inc.,* FTC Dkt. C-4763 (final order issued on June 27, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/2110184-medtronicintersect-matter.
[46] *In the Matter of IFM Global Infrastructure Fund, Buckeye Partners, and Magellan Midstream Partners, L.P.*, FTC Dkt. C-4765 (final order issued on Aug. 8, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/2110144-buckeyemagellan-matter.
[47] *In the Matter of JAB Consumer Partners SCA, National Veterinary Associates, Inc., and SAGE Veterinary Partners, LLC,* FTC Dkt. C-4766 (final order issued on Aug. 2, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/2110140-jab-consumer-partnersnational-veterinary-associatessage-veterinary-partners-matter.

would reduce the number of providers for various types of veterinary care, including emergency services, in three geographic markets in Texas and California. In addition, a monopoly would result for the provision of neurology and ophthalmology veterinary specialty service in and around San Francisco. To remedy these concerns, the Commission issued a consent order requiring JAB to divest clinics in Texas and California. In addition, the Commission imposed robust prior approval and prior notice requirements on any future JAB acquisitions of specialty and emergency veterinary clinics. Following a public comment period, the Commission approved the final order on August 2, 2022.

In *Arko/GPM*,[48] the Commission required ARKO Corp. and its subsidiary GPM to divest assets and roll back anticompetitive provisions contained in their acquisition agreement with Corrigan Oil. As part of their $94 million acquisition of Corrigan's 60 Express Stop retail fuel outlets, ARKO and GPM imposed a broad agreement not to compete covering more than 190 GPM locations in Michigan and Ohio. The acquisition also eliminated retail fuel competition in five local markets where they both operated outlets prior to the acquisition. The Commission ordered ARKO to release back to Corrigan retail assets in the five local markets, to seek prior approval from the Commission before acquiring retail fuel assets within a 3-mile drive of any of these returned locations, and to amend their acquisition agreement to limit the effects of their overly broad noncompete restrictions. The Commission issued the Final Order on August 9, 2022.

In *JAB/VIPW*,[49] the Commission challenged JAB's $1.65 billion proposed acquisition of VIPW's Ethos, a specialty and emergency veterinary clinic operator with locations in nine states. This deal is part of a growing trend towards consolidation in the emergency and specialty veterinary services markets across the U.S. by large chains, including JAB. The complaint alleged that transaction would eliminate the close competition among the parties for a number of veterinary services and substantially increase competition in already highly concentrated markets. The Commission issued a consent order requiring JAB to divest clinics in Richmond, Virginia, Denver, San Francisco, and Washington, D.C. and imposing extensive prior approval and prior notice requirements on JAB and any divestiture buyers of specialty and emergency veterinary services. Following a public comment period, the Commission approved the final order on October 10, 2022.

***

Prior to the HSR Act, businesses could, and often did, consummate transactions that raised significant antitrust concerns and in some cases violated the antitrust laws before the agencies had an opportunity to investigate and block them. This practice forced the agencies to

engage in lengthy post-acquisition litigation, during the course of which the transaction's anticompetitive effects continued to harm competition and the public; furthermore, if effective post-acquisition relief was not practicable, the harm continued indefinitely.

All staff of the Commission and the Department of Justice, including the FTC's Premerger Notification Office, are to be commended for their diligent and dedicated efforts to identify and investigate mergers and acquisitions that may substantially lessen competition or tend to create a monopoly and to vigorously enforce the law. The Commission and the Antitrust Division salute the tireless work of their excellent staffs in protecting the American public from unlawful mergers and acquisitions.

[1] Usually, two filings are received, one from the acquiring person and one from the acquired person when a transaction is reported. Only one application is received when an acquiring party files for an exemption under Section 7A (c)(6) or (c)(8) of the Clayton Act.

[2] These figures omit from the total number of transactions reported all transactions for which the agencies were not authorized to request additional information. These include (1) incomplete transactions (only one party filed a complete notification); (2) transactions reported pursuant to the exemption provisions of Sections 7A (c)(6) and 7A(c)(8) of the Act; (3) transactions which were found to be non-reportable; and (4) transactions withdrawn before the waiting period began. In addition, where a party filed more than one notification in the same year to acquire voting securities of the same corporation, e.g., filing one threshold and later filing for a higher threshold, only a single consolidated transaction has been counted because as a practical matter the agencies do not issue more than one Second Request in such a case. These statistics also omit from the total number the transactions reported secondary acquisitions filed pursuant to §801.4 of the Premerger Notification rules. Secondary acquisitions have been deducted in order to be consistent with the statistics presented in most of the prior annual reports.

[3] These statistics are based on the date the Second Request was issued and not the date the investigation was opened.

[4] Second Request investigations are a percentage of the total number of adjusted transactions. The total percentage reflected in Figure 2 may not equal the sum of reported component values due to rounding.

[5] These statistics are based on the date of the HSR filing and not the date action was taken on the request.

1 Fiscal year 2022 figures include transactions reported between October 1, 2021 and September 30, 2022.

2 The size of transaction is based on the aggregate total amount of voting securities, non-corporate interests and/or assets held by the acquiring person as a result of the transaction and are taken from the response to Item 2(d)(iii), 2(d)(vii), and 2(d)(ix) of the Notification and Report Form.

3 These statistics are based on the date the Second Request was issued.

4 During fiscal year 2022, 3,152 transactions were reported under the HSR Premerger Notification program. The smaller number, 3,029, reflects the adjustments to eliminate the following types of transactions: (1) transactions reported under Section 7A(c)(6) and (c)(8) (transactions involving certain regulated industries and financial businesses); (2) transactions deemed non-reportable; (3) incomplete transactions (only one party in each transaction filed a compliant notification); and (4) transactions withdrawn before the waiting period began. The table does not, however, exclude competing offers or multiple HSR transactions resulting from a single business transaction (where there are multiple acquiring persons or acquired persons).

5 The total number of filings under $50M submitted in Fiscal Year 2025 reflects corrective filings.

6 In February 2001, legislation raised the size of transaction from $15 million to $50 million with annual adjustments beginning in February 2005. As of FY 2017, the threshold categories include non-corporate interests (NCI), encompassing transactions in which the acquiring entity acquires 50% of more of the non-corporate interests of the acquired entity.

7 The category labeled "Sales Not Available" includes newly-formed acquiring persons, foreign acquiring person with no United States revenues, and acquiring persons who had not derived any revenues from their investments at the time of filing.

8 Assets of an acquired entity are not available when the acquired entity's financial data is consolidated within its ultimate parent.

9 Sales of an acquired entity are taken from responses to Item 4(a) and (b) (SEC documents and annual reports) or item 5 (dollar revenues) of the Premerger Notification and Report Form.

10 This category includes acquisition of newly-formed entities from which no sales were generated, and acquisitions of assets which produced no sales revenues during the prior year to filing the Notification and Report Form.

11 The 3-digit codes are part of the North American Industrial Classification System (NAICS) established by the United States Government North American Industrial Classification System 1997, Executive Office of the President, Office of Management and Budget. The NAICS groups used in this table were determined from responses submitted by the parties to Item 5 of the Premerger Notification and Report Form.

12 This represents the deviation from the fiscal year 2021 percentage.

13 This category includes transactions by newly-formed entities.

14 The intra-industry transactions column identifies the number of acquisitions in which both the acquiring and acquired person derived revenues from the same 3-digit NAICS code.

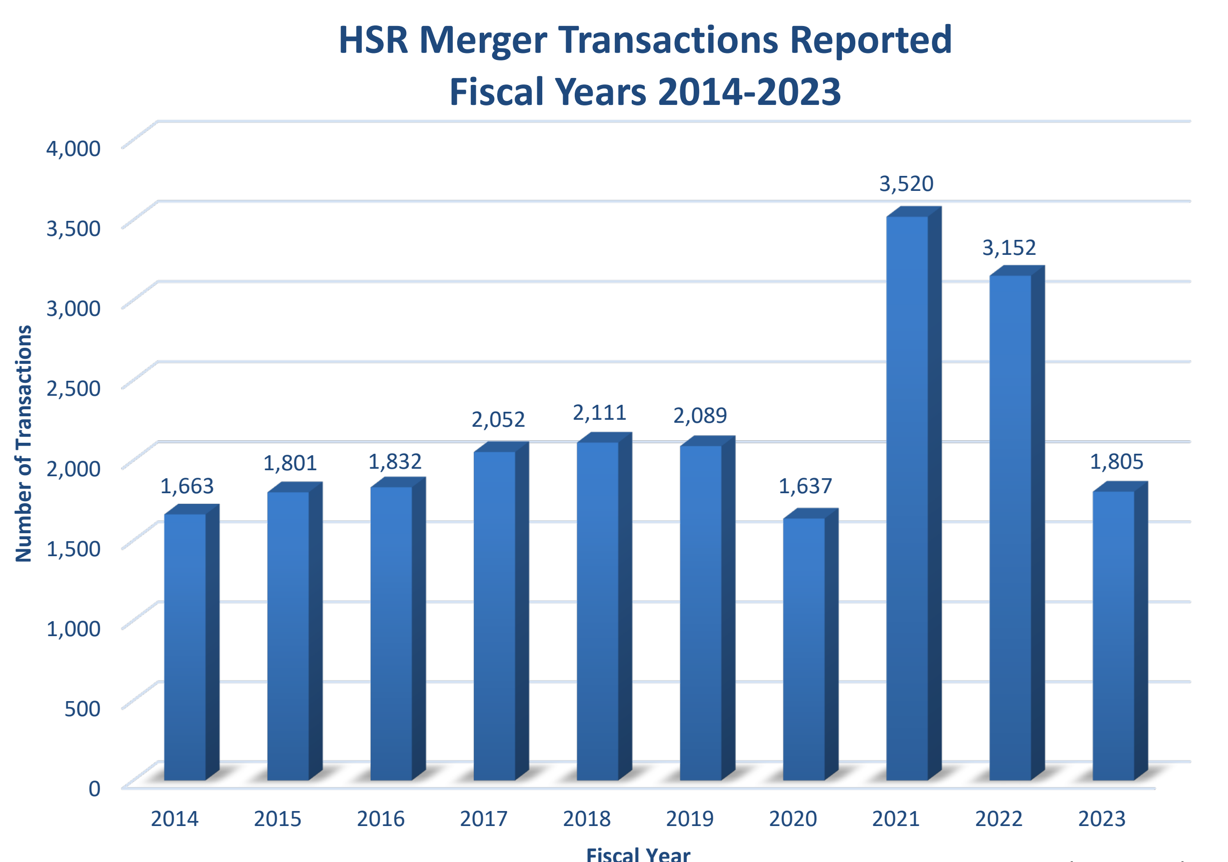
INTRODUCTION

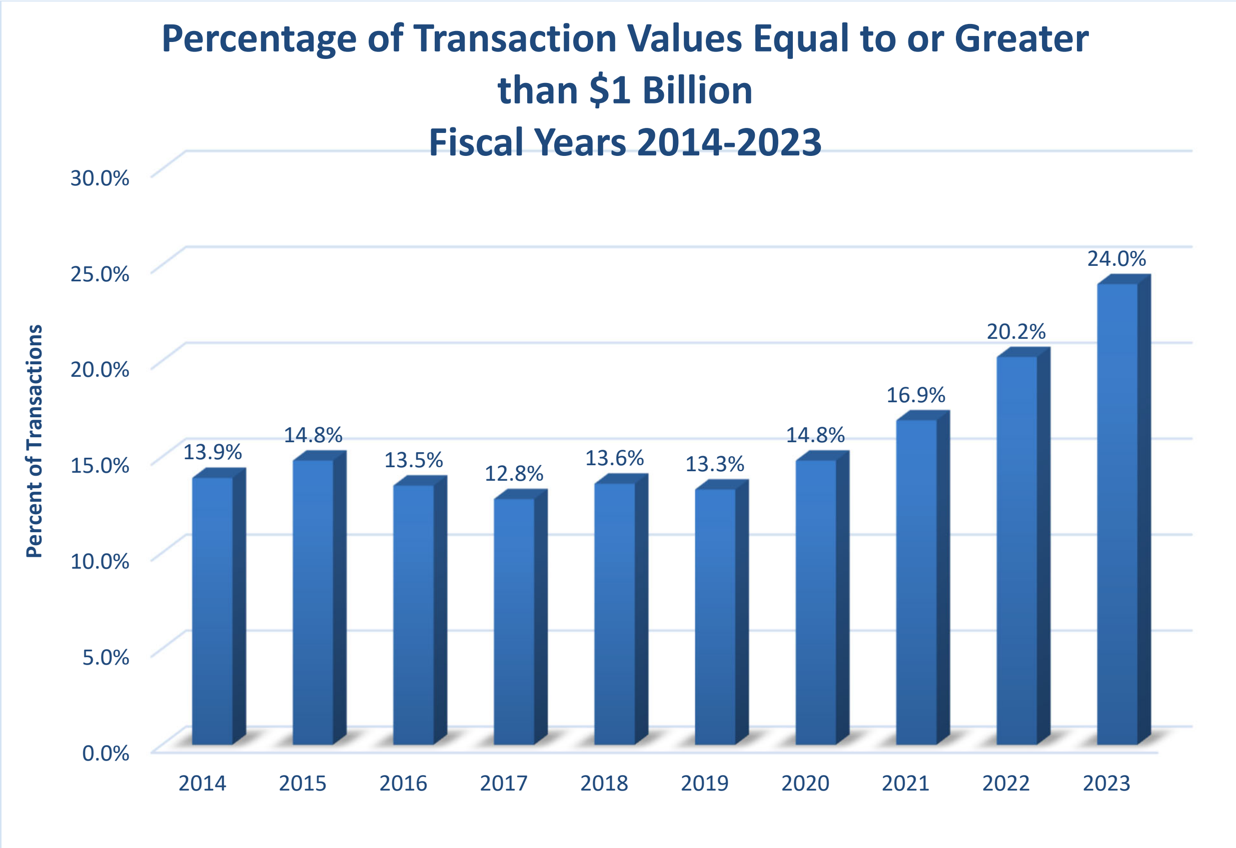
The Hart-Scott-Rodino Antitrust Improvements Act of 1976, Pub. L. No. 94-435 (HSR Act or the Act), together with Section 13(b) of the Federal Trade Commission Act and Section 15 of the Clayton Act, enables the Federal Trade Commission (FTC or Commission) and the Antitrust Division of the Department of Justice (Antitrust Division or Division) to prevent anticompetitive mergers, acquisitions, and other types of transactions and to prevent interim harm to competition associated with those transactions. The premerger notification program was instrumental in alerting the Commission and the Division to transactions that became the subjects of the numerous enforcement actions brought in fiscal year 2023.[1]

The Commission and the Antitrust Division continue their efforts to protect competition by identifying and investigating those mergers and acquisitions that raise potentially significant competitive concerns. Together, the FTC and the Division represent the American people's front-line defense against unlawful industry consolidation, and stopping illegal mergers is central to that mission. In fiscal year 2023, 1,805 transactions were reported under the HSR Act. *See* Figure 1 below. Nearly one-fourth of the transactions reviewed by the agencies were valued over $1 billion (see Table I), continuing a trend in recent years towards larger and more complex transactions. *See* Figure 2 below.



(Figure 1)

[1] Fiscal year 2023 covered the period from October 1, 2022 through September 30, 2023.



(Figure 2)

During fiscal year 2023, the Federal Trade Commission and the Antitrust Division worked to block unlawful mergers across a range of industries, including pharmaceuticals, transportation, hospitals, agriculture, mortgage lending, financial services, cement, construction, healthcare advertising, broadcasting, medical devices, electricity, and reproductive health services. The Commission took action against 16 deals: two in which it issued consent orders for public comment; ten in which the transaction was abandoned or restructured as a result of antitrust concerns raised during the investigation; and four in which the Commission initiated administrative or federal court litigation.[2] The Division took action against 12 merger transactions: two that were blocked through lawsuits in U.S. district courts and ten in which the transaction was abandoned or restructured after the Division raised concerns about the threat it posed to competition. In some cases, the parties abandoned their merger plans prior to a complaint, avoiding the expense of extended litigation for both the

[2] To avoid double-counting, this Report includes only those merger enforcement actions in which the Commission or the Antitrust Division took its first public action during fiscal year 2023 and does not fully reflect all the merger enforcement activities of the agencies, including litigation resulting in consent orders and/or divestitures during FY 2023 or on-going investigations and litigation.

parties and the agency.[3] Collectively, the agencies' enforcement actions preserved competition across the American economy.

The Federal Trade Commission

A major area of focus of the FTC was protecting competition in healthcare markets. The FTC challenged Amgen's $27.8 billion proposed acquisition of Horizon Therapeutics, alleging that the transaction—one of the largest pharmaceutical deals in recent memory—would

[3] *See, e.g.,* Press Release, Fed. Trade Comm'n*, Statement of Elizabeth Wilkins, Director of the FTC's Office of Policy Planning, on the Decision of SUNY Upstate Medical University and Crouse Health System, Inc. to Drop Their Proposed Merger* (Feb. 16, 2023), https://www.ftc.gov/news-events/news/press-releases/2023/02/statement-elizabeth-wilkins-director-ftcs-office-policy-planning-decision-suny-upstate-medical; Press Release, Fed. [4] Transaction values represent only those Commission actions for which the value of the transaction has been publicly disclosed.

[5] In addition to the Complaints filed in FY2023, the FTC's litigation wins in the fiscal year included *Illumina/Grail*. In March 2023, the Commission found that DNA sequencing provider Illumina's $7.1 billion vertical acquisition of GRAIL, Inc., which makes a multi-cancer early detection (MCED) test, was likely to substantially reduce competition in U.S. market for research, development, and commercialization of cancer tests and ordered Illumina to divest Grail. https://www.ftc.gov/system/files/ftc_gov/pdf/d09401commissionfinalopinion.pdf.

[6] Matters where the Commission successfully reached a resolution even after federal court litigation had been initiated are listed under "Consent Orders" but not under "Litigated Wins." "Litigated Wins" here lists only those matters where an evidentiary hearing was completed and a decision was issued by the court.

substantially lessen competition in the market for FDA-approved drugs and would enable Amgen to pressure insurance companies and pharmacy benefit managers into favoring Horizon's two monopoly products, Tepezza and Krystexxa. After the complaint was filed, the parties agreed to a consent order, prohibiting the bundling of any Amgen product with Horizon's medications used to treat thyroid eye disease and chronic refractory gout—and protecting Americans who rely on these treatments.

The Commission also filed an administrative complaint and sought a preliminary injunction challenging the $700 million proposed acquisition of Propel Media, Inc. by IQVIA, the world's largest provider of health care data, alleging that the deal would unlawfully reduce competition and raise health care prices for Americans. After a two-week hearing, the U.S. District Court for the Southern District of New York granted the Commission's preliminary injunction, prompting the parties to abandon their merger plans.[7]

The Commission's merger enforcement work also prompted firms to abandon deals involving reproductive fertility treatments, medical stents, and the combination of two major healthcare systems—protecting patients across the country.

The Commission's work also protected homebuyers from higher costs. The Commission filed an administrative complaint and sought a preliminary injunction challenging Intercontinental Exchange's (ICE) $13.1 billion proposed acquisition of Black Knight, which would have combined the two largest providers of home mortgage loan origination systems. After the complaint was filed, the parties agreed to a consent order to divest Black Knight's Optimal Blue and Empower business platforms to Constellation Web Solutions and prohibiting the parties from enforcing any noncompete or non-solicit provisions against employees.[8] The structural relief obtained by the FTC helped protect competition in key areas of the mortgage origination process, protecting homebuyers and lenders from higher costs. The FTC's merger enforcement work also led to the abandonment of an acquisition involving major cement producers that would have further concentrated the market and risked raising costs for construction and infrastructure projects.

Lastly, the FTC challenged Microsoft's $69 billion acquisition of Activision, alleging that Microsoft would have both the means and motive to harm competition by degrading Activision's game quality or player experience on rival gaming platforms, or limiting or withholding Activision's content—creating a walled garden rather than maintaining an open market. After the district court denied a preliminary injunction, the Commission appealed and the case is moving forward in the Commission's administrative proceedings.[9]

Two of the Division's most noteworthy achievements helped protect competition that benefits airline passengers. In one case, the United States and a group of state Attorneys General successfully persuaded a district court to unwind a joint venture between American Airlines and JetBlue Airways. In a second, related case, the United States and its state Attorneys General partners persuaded another judge to block JetBlue's proposed acquisition of Spirit Airlines. As the court observed in *JetBlue-Spirit,* that acquisition "does violence to the core principle of antitrust law: to protect the United States' markets – and its market participants – from anticompetitive harm."[14] These enforcement efforts protected millions of travelers—especially the most price-sensitive ones—flying on hundreds of routes across the country.

Two other enforcement efforts highlight the Division's commitment to protecting competition across key industries. Tenaris, S.A. sought to acquire Benteler Steel & Tube

[10] This reflects the trial victory in *United States v. American Airlines Group Inc*., No. CV 21-11558-LTS, 2023 WL 4766220 (D. Mass. July 26, 2023). As described further below, *see infra* note 33, the Division previously had categorized this enforcement effort as a non-merger matter for purposes of its annual reporting, but reports it here as a merger matter, in part because of the court's findings after trial.

[11] The complaint filed in FY 23 was *United States v. JetBlue Airways Corp. and Spirit Airlines*, 1:23-cv-10511 (D. Mass. filed March 7, 2023). Because the "Litigated Win" and "Consent Entered" rows reflect cases filed before FY 23, the sum of the "Litigated Win" and "Consent Entered" rows is greater than the "Complaints Filed" row.

[12] This includes *United States v. Bertelsmann SE & Co. KGaA, Penguin Random House, LLC, ViacomCBS, Inc., and Simon & Schuster, Inc*., 1:21-cv-02886 (D.D.C. filed Nov. 2, 2021), which was discussed in the 2022 annual report because it was initiated in fiscal year 2022, but reached resolution in fiscal year 2023, and also includes the Antitrust Division's trial victory against American Airlines Group Inc. and JetBlue Airways Corp. *See infra* notes 31-33.

[13] In *United States v. ASSA ABLOY AB and Spectrum Brands Holdings, Inc.*, 1:22-cv-02791-ABJ (D.D.C. filed Sept. 15, 2022), the U.S. District Court for the District of Columbia entered final judgment on September 13, 2023, requiring ASSA ABLOY to divest assets and abide by other remedies. Like *U.S. v. Bertelsmann*, this case was discussed in the 2022 annual report because it was initiated in fiscal year 2022, but reached resolution in fiscal year 2023.

[14] *United States v. JetBlue Airways Corp.*, 712 F. Supp. 3d 109 (D. Mass. 2024).

Manufacturing Corp. The proposed acquisition, if completed, would have diminished competition in the domestic supply of seamless tubing and production casing, important types of steel pipe used in the extraction of oil and gas. In February 2023, Tenaris and Benteler abandoned this transaction in the face of potential enforcement action by the Antitrust Division.

In March 2023, Vistra Corporation announced its plan to acquire Energy Harbor Corporation's nuclear plants in PJM Interconnection (PJM), the regional transmission organization that manages the electricity grid for more than 65 million consumers in all or parts of 13 states and the District of Columbia. The Antitrust Division and the Federal Energy Regulatory Commission (FERC) share jurisdiction to review acquisitions of electric power plants. In accordance with President Biden's Executive Order[15] mandating that executive branch agencies take a whole-of government approach to protecting competition, the Antitrust Division submitted a comment to assist FERC's review of the announced merger. The Division explained that the proposed acquisition could increase Vistra's ability or incentive to withhold electricity from a plant located in Ohio in order to raise wholesale electricity prices in part of the PJM region, specifically Ohio and Pennsylvania. In response to the Division's concerns and further action from FERC, Vistra offered to restructure its proposed acquisition by divesting that power plant in Ohio. FERC issued an Order on February 16, 2024, mandating the divestiture.[16]

The Commission's Premerger Notification Office (PNO) website[17] includes instructions for completing the HSR form, information on the HSR rules, current filing thresholds, filing fee instructions, and procedures for submitting post-consummation filings. The website also provides frequently asked questions regarding HSR filing requirements, the number of HSR transactions submitted each month, and contact information for PNO staff.[18]

BACKGROUND OF THE HSR ACT

Section 201 of the HSR Act amended the Clayton Act by adding a new Section 7A, 15 U.S.C. § 18a. In general, the HSR Act requires that certain proposed acquisitions of voting securities, non-corporate interests, or assets be reported to the Commission and the Antitrust Division prior to consummation. The parties must then wait a specified period, usually 30 days (15 days in the case of a cash tender offer or bankruptcy sale), before they may complete the transaction. Whether a particular acquisition is subject to these requirements depends on the value of the acquisition and, in certain acquisitions, the size of the parties as measured by their sales and assets. Acquisitions valued below a certain threshold, acquisitions involving parties with assets and sales below a certain threshold, and certain classes of acquisitions that have been viewed as less likely to raise antitrust concerns are excluded from the Act's coverage.

[18] Resource materials are available on the PNO website; in addition, PNO staff is always available to help HSR practitioners comply with HSR notification requirements.

The Commission, with the concurrence of the Assistant Attorney General for the Antitrust Division, promulgated final rules implementing the premerger notification program on July 31, 1978. At that time, a comprehensive Statement of Basis and Purpose was published, containing a section-by-section analysis of the rules and an item-by-item analysis of the filing form.[19] The program became effective on September 5, 1978. The Commission, with the concurrence of the Assistant Attorney General, has amended the rules and the filing form on many occasions over the years to improve the program's effectiveness and to lessen the burden of complying with the rules, while ensuring that the agencies receive sufficient information to analyze the underlying transaction.[20]

The primary purpose of the statutory scheme, as the legislative history makes clear, is to provide the antitrust enforcement agencies with the opportunity to identify and review potentially anticompetitive mergers and acquisitions before they are consummated. The premerger notification program, with its filing and waiting period requirements, facilitates this goal.

If either reviewing agency determines during the waiting period that further inquiry is necessary, the reviewing agency is authorized by Section 7A(e) of the Clayton Act to issue a request for additional information and documentary material (Second Request).[21] The Second Request extends the waiting period for a specified period of time (usually 30 days, but 10 days in the case of a cash tender offer or bankruptcy sale) after all parties have complied with the Second Request (or, in the case of a tender offer or bankruptcy sale, after the acquiring person complies). This additional time provides the reviewing agency with the opportunity to analyze the information and to take appropriate action before the transaction is consummated. If the reviewing agency believes that a proposed transaction may substantially lessen competition or tend to create a monopoly, the agency may challenge the transaction.

A STATISTICAL PROFILE OF THE PREMERGER NOTIFICATION PROGRAM

The appendices to this Report provide a statistical summary of the operation of the premerger notification program. Appendix A shows, for the ten-year period covering fiscal years 2014-2023, the number of transactions reported; the number of filings received; the number of merger investigations in which Second Requests were issued; and the number of transactions in which requests for early termination of the waiting period were received,

---

[19] 43 Fed. Reg. 33450 (July 31, 1978).

[20] *See* Fed. Trade Comm'n *Legal Library: Statements of Basis and Purpose* (June 29, 2023), https://www.ftc.gov/enforcement/premerger-notification-program/statute-rules-and-formal-interpretations/statements-basis-purpose.

[21] 15 U.S.C. §18a(e)(1)(A) ("The Federal Trade Commission or the Assistant Attorney General may, prior to the expiration of the 30-day waiting period (or in the case of a cash tender offer, the 15-day waiting period) . . . . require the submission of additional information or documentary material relevant to the proposed acquisition.").

granted, and not granted.[22] Appendix A also shows the number of transactions in which Second Requests could have been issued, as well as the percentage of transactions in which Second Requests were issued. Appendix B provides a month-by-month comparison of the number of transactions reported and the number of filings received for fiscal years 2014 through 2023.

The statistics set out in these appendices show that the number of transactions reported in fiscal year 2023 decreased from the record high number of transactions reported in fiscal years 2021 and 2022 but were generally in line with the number of reported transactions over the past decade.[23] Of the 1,805 reported transactions in fiscal year 2023, Second Requests could have been issued in 1,735 of them. The FTC issued 26 Second Requests in FY 2023. In FY 2023, the Division issued 11 Second Requests. *See* Table I.

The tables (Tables I through XI) in Exhibit A contain information regarding the agencies' enforcement activities for transactions reported in fiscal year 2023. The tables provide, for example, various characteristics of transactions, the number and percentage of transactions in which one antitrust agency granted the other clearance to commence an investigation, and the number of merger investigations in which either agency issued Second Requests. Table III of Exhibit A shows that in fiscal year 2023, the agencies received clearance to conduct an initial investigation in 10.2 percent of the total number of transactions reported. The tables also provide the number of transactions based on the dollar value of transactions reported and the reporting threshold indicated in the notification report. In fiscal year 2023, the aggregate dollar value of reported transactions was $1.6 trillion.[24]

Tables X and XI provide the number of transactions, by broad industry group, in which the acquiring person and the acquired entity, respectively, derived the most revenue. Figure 3 illustrates the percentage of adjusted transactions within industry groups for fiscal year 2023 based on the acquired entity's operations, reflecting the breadth of the agencies' experience in reviewing transactions that impact every sector of the U.S. economy[25]

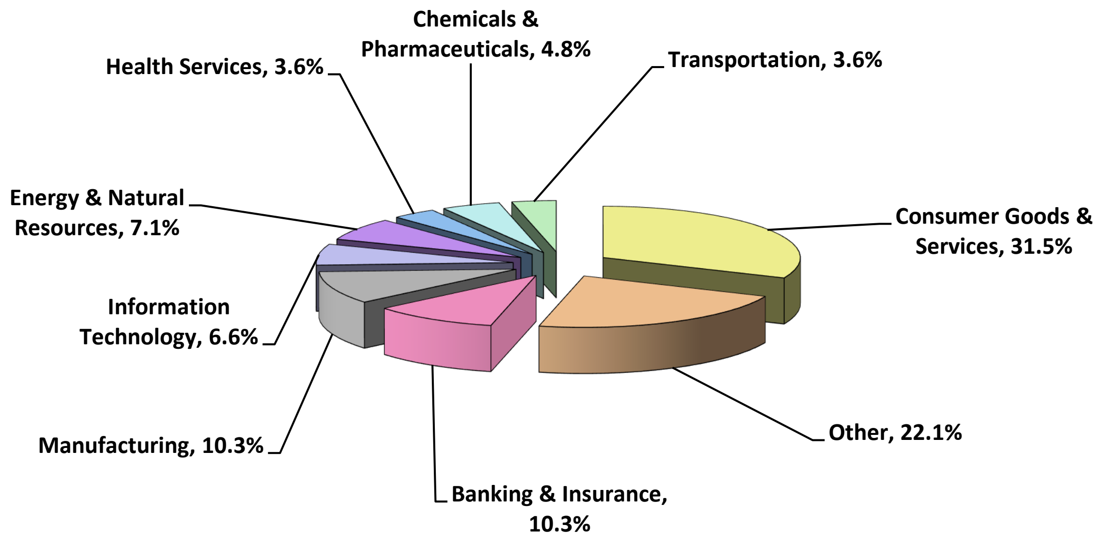
[22] The term "transaction," as used in Appendices A and B and Exhibit A to this Report, does not refer only to individual mergers or acquisitions. A particular merger, joint venture, or acquisition may be structured such that it involves more than one filing that must be made under the HSR Act.

[23] This Report, like previous Reports, also includes annual data on "adjusted transactions in which a Second Request could have been issued" (adjusted transactions). *See* Appendix A & Appendix A n.2 (explaining calculation of that data). There were 1,735 adjusted transactions in fiscal year 2023, and the data presented in the Tables and the percentages discussed in the text of this Report (*e.g.*, percentage of transactions resulting in Second Requests) are based on this figure.

[24] The information on the value of reported adjusted transactions for fiscal year 2023 is drawn from a database maintained by the Premerger Notification Office.

[25] The category designated as "Other" consists of industry segments that include construction, educational services, performing arts, recreation, and other non-classifiable businesses.

Percentage of Transactions By Industry Group of Acquired Entity
Fiscal Year 2023



(Figure 3)

DEVELOPMENTS WITHIN THE PREMERGER PROGRAM

1. *Threshold Adjustments*

The 2000 amendments to the HSR Act require the Commission to publish adjustments to the Act's jurisdictional and filing fee thresholds in the Federal Register annually, for each fiscal year beginning on September 30, 2004, based on the change in the gross national product, in accordance with Section 8(a)(5) of the Clayton Act. The Commission amended the rules in 2005 to provide a method for future adjustments as required by the 2000 amendments, and to reflect the revised thresholds contained in the rules. The Commission usually publishes the revised thresholds annually in January, and they become effective 30 days after publication.

On January 26, 2023, the Commission published a notice[26] to reflect adjustment of the reporting thresholds as required by the 2000 amendments[27] to Section 7A of the Clayton Act, 15 U.S.C. § 18a. The revised thresholds, including an increase in the size of transaction threshold from $101 million to $111.4 million, became effective February 27, 2023. The thresholds are calculated based on the prior year's GNP. In addition to the adjustment of the reporting thresholds, the Commission announced new merger filing fees based on the size of the proposed transaction. The 2023 Consolidated Appropriations Act now requires the FTC to

[26] 88 Fed. Reg. 5006 (Jan. 26, 2022).
[27] 15 U.S.C. §18a(a). *See* Pub. L. No. 106-553, 114 Stat. 2762.

revise the HSR filing fee thresholds on an annual basis based on an amount equal to the percentage increase, if any, in the consumer price index.

2. *HSR Compliance*

The Commission and the Antitrust Division continued to monitor compliance with the premerger notification program's filing and waiting period requirements and initiated a number of compliance investigations in fiscal year 2023. The agencies use several methods to oversee compliance, including monitoring news outlets and industry publications for transactions that may not have been reported in accordance with the HSR Act's requirements. Industry sources, such as competitors, customers, and suppliers, interested members of the public, and, in certain cases, the parties themselves, also provide the agencies with information about transactions and possible violations of the Act's requirements.

Under Section 7A(g)(1) of the Act, any person that fails to comply with the Act's notification and waiting period requirements is liable for a civil penalty of up to $50,120 for each day the violation continues.[28] The antitrust agencies examine the circumstances of each violation to determine whether to seek penalties.[29] During fiscal year 2023, 22 post-consummation "corrective" filings were received.

3. *HSR Form Change Rulemaking*

In June 2023, the Commission, with the concurrence of the Antitrust Division, voted out a notice of proposed rulemaking to change the premerger notification form and associated instructions, as well as the premerger notification rules implementing the HSR Act. On September 27, 2024, the Commission, again with the concurrence of the Antitrust Division, voted out a Final Rule that incorporates updates and revisions to the premerger notification form, instructions, and rules. The changes to the form and associated instructions will enable the agencies to more effectively and efficiently screen transactions for potential competition issues within the initial waiting period.

[28] Dollar amounts specified in civil monetary penalty provisions within the Commission's jurisdiction are adjusted for inflation in accordance with the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015, Pub. L. No. 114-7 (Nov. 2, 2015). The adjustments have included an increase in the maximum civil penalty from $10,000 to $11,000 for each day during which a person is in violation of Section 7A(g)(1) (61 Fed. Reg. 54548 (Oct. 21, 1996), corrected at 61 Fed. Reg. 55840 (Oct. 29, 1996)), to $16,000 effective February 10, 2009 (74 Fed. Reg. 857 (Jan. 9, 2009)), to $40,000 effective August 1, 2016 (81 Fed. Reg. 42476 (June 30, 2016)), to $46,517 effective Jan. 10, 2022 (87 Fed. Reg. 1070 (Jan. 10, 2021)) and to $50,120 effective January 11, 2022, (88 Fed. Reg. 1499 (Jan. 11, 2022).

[29] If parties inadvertently fail to file, the agencies generally will not seek penalties so long as the parties promptly submit corrective filings after discovering the failure to file, submit an acceptable explanation of their failure to file, and have not previously violated the Act.

MERGER ENFORCEMENT ACTIVITY[30]

The Department of Justice

In addition to litigating and investigating several significant non-merger antitrust enforcement matters, during fiscal year 2023 the Antitrust Division took steps to protect competition that resulted in mergers that were either blocked, abandoned, or restructured in light of the Division's concerns.[31]

The two proposed transactions that the Division successfully blocked in active litigation included the following:

In *United States v. American Airlines Group Inc.*,[32] the Division, joined by the Attorney Generals of the Commonwealths of Massachusetts, Pennsylvania, and Virginia, the States of Arizona, California, and Florida, and the District of Columbia, filed a civil antitrust action to unwind an unprecedented series of agreements between American Airlines and JetBlue designed to consolidate the two airlines' operations in Boston and New York City with effects resembling a merger.[33] At trial in October 2022, the Division proved that this extensive combination, which the companies called the "Northeast Alliance," eliminated competition between American and JetBlue on scores of routes to and from Boston and New York City. And the Division proved that the Northeast Alliance had harmed air travelers across the country by significantly diminishing JetBlue's ability and incentive to act as a disruptive maverick competitor, further consolidating the already highly concentrated airline industry. In July 2023, the U.S. District Court for the District of Massachusetts entered a permanent injunction dissolving the Northeast Alliance. American Airlines is appealing the District Court's ruling.

---

[30] The cases listed in this section were not necessarily reportable under the premerger notification program. Given the confidentiality of information obtained pursuant to the Act, it would be inappropriate to identify the cases initiated under the program except in those instances in which that information has already been disclosed.

[31] Two merger enforcement matters, which were discussed in the 2022 annual report because they were initiated in fiscal year 2022, continued into fiscal year 2023. Those two matters, *United States v. ASSA ABLOY AB and Spectrum Brands Holdings, Inc.*, 1:22-cv-02791-ABJ (D.D.C. filed Sept. 15, 2022) and *United States v. Bertelsmann SE & Co. KGaA, Penguin Random House, LLC, ViacomCBS, Inc., and Simon & Schuster, Inc.*, 1:21-cv-02886 (D.D.C. filed Nov. 2, 2021) are not included in the fiscal year 2023 enforcement matters discussed in this section but are being mentioned for completeness. In the former, the U.S. District Court for the District of Columbia entered final judgment on September 13, 2023, requiring ASSA ABLOY, among other things, to divest assets and abide by other remedies. In the latter, the U.S. District Court for the District of Columbia's enjoined the proposed merger on October 31, 2022, and Penguin Random House and Simon & Schuster thereafter abandoned the proposed transaction.

[32] *United States v. Am. Airlines Grp. Inc.*, No. CV 21-11558-LTS, 2023 WL 4766220 (D. Mass. July 26, 2023).

[33] The Division previously had categorized this enforcement effort as a non-merger matter for purposes of its annual reporting, but reports it here as a merger matter, in part because of the court's finding: "The NEA [Northeast Alliance], of course, is not a merger. American and JetBlue remain separate entities. Both have operations that fall beyond the NEA's reach, and the agreement does not formally embody a complete combination of the partners' operations even within the NEA region. Nevertheless, as implemented by the parties, its effects resemble those of a merger of the parties' operations within the northeast in ways the Court will describe next." *United States v. Am. Airlines Grp. Inc.,* 675 F.Supp.3d 65, 89 (D. Mass. May 19, 2023) (on appeal to the First Circuit).

In *United States v. JetBlue Airways Corp.*,[34] the Division filed a civil antitrust lawsuit to block JetBlue Airways Corporation's proposed $3.8 billion acquisition of its largest and fastest-growing ultra-low-cost rival, Spirit Airlines, Inc. The Division's complaint was joined by the Attorneys General of the Commonwealth of Massachusetts, the States of New York, California, Maryland, New Jersey, and North Carolina, and the District of Columbia. The complaint alleged that Spirit's low-cost, no-frills flying option has brought lower fares and more options to routes across the country, making it possible for more Americans – particularly price sensitive consumers who pay their own fares – to travel. JetBlue's acquisition of Spirit would have eliminated the "Spirit Effect," where Spirit's presence flying on a route forces other air carriers, including JetBlue, to lower their fares. The deal also would have eliminated half of the ultra-low-cost capacity in the United States, ultimately leading to higher fares and fewer seats, harming millions of consumers on hundreds of routes. In January 2024, the U.S. District Court for the District of Massachusetts blocked the proposed takeover because it "does violence to the core principle of antitrust law: to protect the United States' markets – and market participants – from anticompetitive harm." Subsequently, in March 2024, JetBlue announced that it had abandoned the deal and would not pursue an appeal.

The Division's merger enforcement work also resulted in the abandonment or restructuring of several transactions after the Division raised antitrust concerns.

For example, in February 2023, Tenaris, S.A. and Benteler Steel & Tube Manufacturing Corp. abandoned Tenaris's proposed $460 million acquisition of Benteler after the Division raised concerns about the impact of the deal on competition. Both companies operate domestic steel mills that supply seamless tubing and production casing, important types of steel pipe used in the extraction of oil and gas. The deal would have increased concentration in an already concentrated industry, cementing Tenaris as the undisputed dominant player in the market.

In March 2023, the Division worked with the Federal Energy Regulatory Commission (FERC) to challenge Vistra Corporation's proposed acquisition of nuclear plants owned by Energy Harbor Corporation. The Division summitted a comment to FERC explaining that the proposed acquisition could substantially lessen competition and increase wholesale electricity prices. After the Division raised these concerns and FERC took further action, Vistra proposed a divestiture to address the Division's competitive concerns. The company offered to restructure its proposed acquisition by divesting that power plant in Ohio. In February 2024, FERC issued an Order mandating that divestiture.

In October and November 2022, the Division helped secure divestitures for two proposed transactions in the banking industry.[35] In October, US Bancorp and MUFG Union Bank

[34] *United States v. JetBlue Airways Corp.*, No. 23-10511-WGY, 2024 U.S. Dist. LEXIS 7509 (D. Mass. Jan. 16, 2024).

[35] Based on these divestiture commitments, the transactions were approved pursuant to orders of the Federal Reserve Board. Order Approving the Acquisition of a Bank, FRB Order No. 2022-22 (Oct. 14, 2022); Order Approving the Merger of Bank Holding Companies and Determination on a Financial Holding Company Election, FRB Order No. 2022-20 (Oct. 25, 2022).

("Union Bank") agreed to a divestiture of three of Union Bank's full-service branches after the Division raised concerns that the proposed merger was likely to substantially lessen competition in retail and/or small business banking products and services. Then in November, Columbia Bank and Umpqua Bank agreed to divestitures to remedy the Division's concerns that the proposed merger was likely to substantially lessen competition in retail and/or small business banking products and services in local markets in California, Oregon, and Washington.

The Federal Trade Commission

During fiscal year 2023, the Commission challenged 16 mergers that, as proposed, would violate the federal antitrust laws, including several blockbuster multi-billion dollar deals. In four cases, the Commission initiated administrative or federal court litigation, and ten mergers were abandoned after the Commission raised concerns about their potential for eliminating beneficial competition. The Commission also accepted consent orders that require divestitures and other strong relief in two merger cases.[36] As discussed below, two of these litigated matters were also settled by Commission order during FY 2023. In Intercontinental Exchange/Black Knight, the Commission ordered divestitures and in Amgen/Horizon Therapeutics, the Commission imposed strong prohibitions to prevent the merger from causing harm.

In *Microsoft/Activision*,[37] the Commission filed an administrative complaint challenging Microsoft's $69 billion proposed acquisition of Activision. The Commission also authorized staff to seek a preliminary injunction in federal court to maintain the status quo pending the outcome of the administrative trial. The complaint alleged that with control over Activision's blockbuster gaming franchises, Microsoft would have both the means and motive to harm competition by degrading Activision's game quality or player experience on rival platforms, limiting access to Activision's content, or withholding content from competitors entirely—resulting in a walled garden rather than an open market. On July 10, 2023, the U.S. District Court for the Northern District of California denied the Commission's request for a preliminary

[36] Other merger cases discussed in prior annual reports also required significant Commission resources during FY 2023. They are not included in the numbers referenced in this report but are being mentioned for completeness and because of their programmatic significance. For example, in December 2023, the Fifth Circuit affirmed the Commission's findings that Illumina's acquisition of Grail lessened competition through the potential foreclosure of a key input by the sole supplier, which would lead to chilled investment by firms reliant on those inputs for their own competitive success. *Illumina, Inc. v. FTC*, 88 F.4th 1036, 1055 (5th Cir. 2023). After the ruling, Illumina determined to divest its interest in Grail. In January 2023, a district court denied the Commission's motion to enjoin the proposed merger between virtual reality giant Meta and Within Unlimited, the VR studio that marketed the leading VR fitness app and in February the Commission dismissed its related administrative complaint. In July 2023, the Commission issued an order vacating the ALJ's initial decision in the administrative litigation challenging an alleged unlawful agreement between Altria Group, Inc. and Juul Labs, Inc., ending the matter. After the Supreme Court's April 2023 decision in *Axon Enterprise, Inc. v. Fed. Trade Comm'n.*, et al., 598 U.S. ----, 143 S. Ct. 890 (2023), that remanded the petitioners' constitutional challenges back to district court for further proceedings, Commission withdrew its administrative complaint challenging the consummated merger of Axon and its rival VieVu, makers of body-worn camera systems used by police departments.

[37] *In the Matter of Microsoft Corporation and Activision Blizzard, Inc.,* FTC Dkt. C-9412 (complaint filed on Dec. 8, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/2210077-microsoftactivision-blizzard-matter.

injunction. That decision is on appeal to the U.S. Court of Appeals for the Ninth Circuit. The Commission's administrative proceeding concerning these claims is scheduled to begin three weeks after the Ninth Circuit issues its opinion.

In *Intercontinental Exchange/Black Knight*,[38] the Commission filed an administrative complaint challenging Intercontinental Exchange's (ICE) $13.1 billion proposed acquisition of Black Knight and heading off potential price increases for homebuyers. The Commission also authorized staff to seek a preliminary injunction in federal court to maintain the status quo pending the outcome of the administrative trial. The complaint alleged that the proposed merger would give ICE, the largest provider of home mortgage loan origination systems (LOS), control over its top competitor, Black Knight. Because Black Knight is also a vertically integrated business with its own LOS, the complaint also alleged that the merger would have allowed ICE to raise costs to lenders, which would then be passed to homebuyers. If consummated, the combined company would have had the means and incentive to drive up costs, reduce innovation, and reduce lenders' choices for tools necessary to generate and service mortgages. After the Commission filed its complaint, the Commission secured a consent order requiring Black Knight to divest its Optimal Blue and Empower businesses to Constellation Web Solutions, a provider of mortgage-related tools. The order also prohibits the parties from enforcing any noncompete or non-solicit provisions against employees. Following a public comment period, the Commission approved the final order on November 3, 2023.

In *Amgen/Horizon Therapeutics*,[39] the Commission filed an administrative complaint challenging Amgen's $27.8 billion proposed acquisition of Horizon. The Commission also authorized staff to seek a preliminary injunction in federal court to maintain the status quo pending the outcome of the administrative trial. The complaint alleged that the proposed merger would enable Amgen to leverage its large portfolio of drugs to pressure insurance companies and pharmacy benefit managers into favoring Horizon's two monopoly products – Tepezza and Krystexxa, used to treat thyroid eye disease and refractory gout, respectively, thereby harming patients who rely on these treatments for their health and quality of life. After the complaint was filed, the Commission secured a consent order prohibiting Amgen from bundling any Amgen product with either of Horizon's Tepezza or Krystexxa products. In addition, Amgen may not condition any product rebate or contract term related to an Amgen product on the sale or positioning of either Tepezza or Krystexxa. Following a public comment period, the Commission approved the final order on December 13, 2023.

In *IQVIA/Propel,*[40] the Commission filed an administrative complaint challenging the world's largest provider of health care data, IQVIA's, $700 million proposed acquisition of

[38] *In the Matter of Intercontinental Exchange and Black Knight, Inc.*, FTC Dkt. C-9413 (complaint filed on March 9, 2023), https://www.ftc.gov/legal-library/browse/cases-proceedings/221-0142-intercontinental-exchange-incblack-knight-inc-matter.
[39] *In the Matter of Amgen Inc. and Horizon Therapeutics PLC,* FTC Dkt. C-914 (complaint filed on June 22, 2023), https://www.ftc.gov/legal-library/browse/cases-proceedings/231-0037-amgen-inc-horizon-therapeutics-plc-matter.
[40] *In the Matter of IQVIA Holdings Inc. and Propel Media, Inc.,* FTC Dkt. C-9416 (complaint filed on July 17, 2023), https://www.ftc.gov/legal-library/browse/cases-proceedings/2210196-iqvia-holdingspropel-media-matter.

Propel Media, alleging that the proposed merger would lead to increased healthcare prices. The Commission also authorized staff to seek a preliminary injunction in the U.S. District Court for the Southern District of New York. The complaint alleged that the proposed merger would give IQVIA a market-leading position in programmatic advertising targeted to doctors and other healthcare professionals. IQVIA and Propel are both vertically integrated companies with large healthcare datasets. According to the complaint, post-merger, IQVIA's ownership of both datasets would have raised the incentive to withhold key information to prevent rival companies and potential entrants from effectively competing. After a two-week evidentiary hearing and closing arguments, the District Court granted the Commission's preliminary injunction. Shortly afterwards, the parties abandoned the transaction.

The Commission's merger enforcement work also resulted in the abandonment of various transactions in light of antitrust concerns.

The proposed merger of the State University of New York Upstate Medical University and Crouse Health System, Inc. presented substantial risk of serious competitive and consumer harm in the form of higher healthcare costs, lower quality of care, reduced innovation and access to care, and lower wages for hospital workers. FTC staff had an active investigation into the effects of the proposed merger and had voiced opposition to a request by the parties for a certificate of public advantage, also known as a COPA, which could have shielded the merger from antitrust laws.[41]

CalPortland Company's proposed acquisition of rival cement producer Martin Marietta Materials, Inc. was presumptively illegal under the Merger Guidelines and would have reduced the number of cement suppliers in Southern California from five to four, further concentrating an already concentrated market.[42]

Boston Scientific and M.I. Tech abandoned their proposed transaction in response to investigations by FTC staff and international antitrust enforcers. The proposed merger raised competitive concerns that could have affected doctors and patients.[43]

(Apr. 28, 2023), https://www.ftc.gov/news-events/news/press-releases/2023/04/statement-regarding-termination-calportland-companys-attempted-acquisition-assets-owned-rival-cement.

[43] Press Release, Fed. Trade Comm'n, *Statement Regarding the Termination of Boston Scientific Corporation's Attempted Acquisition of a Majority Stake in M.I. Tech Co., Ltd.* (May 24, 2023), https://www.ftc.gov/news-events/news/press-releases/2023/05/statement-regarding-termination-boston-scientificcorporations-attempted-acquisition-mi-tech.

CooperCompanies' decision to abandon its proposed acquisition of Cook Medical Holdings, LLC's reproductive health business following a full-phase investigation by FTC staff helped ensure continued competition in critical reproductive health markets.[44]

The Commission also accepted for public comment and finalized consent orders in the following two merger matters.

In *Tractor Supply/Orschein*,[45] the Commission challenged Tractor Supply's $320 million proposed acquisition of Orschein. According to the complaint, the proposed merger would have harmed competition among farm stores in the Midwest and South that sell products for small farmers, ranchers, and landowners. To remedy this concern, the Commission issued a consent order requiring Tractor Supply to divest some Orschein stores and Orschein's corporate offices and its Missouri distribution center to Bomgaars, an Iowa-based farm store chain, and some other stores to Buchheit, another chain with farm stores in Missouri and Illinois. Following a public comment period, the Commission approved the final order on December 2, 2022.

In *EQT/Quantum*,[46] the Commission challenged EQT's $5.2 billion proposed acquisition of Quantum. According to the complaint, Quantum and EQT are direct competitors in the production and sale of natural gas in the Appalachian Basin, the largest natural gas-producing region in the United States. The proposed merger would make Quantum one of EQT's largest shareholders and give Quantum a seat on EQT's board of directors, which the Commission alleged would violate the antitrust laws and harm competition in this industry. The complaint also alleged that, by making Quantum one of EQT's largest shareholders, the deal would give Quantum the ability to sway EQT's competitive decision-making and access EQT's confidential and competitively sensitive information. According to the complaint, by enabling Quantum to communicate directly with EQT, access and exchange confidential business information, and influence or direct EQT's competitive actions or strategies, this arrangement would create an unfair method of competition in violation of the FTC Act. In addition to the proposed transaction, the complaint addresses a pre-existing joint venture between EQT and Quantum called The Mineral Company (TMC), which is involved in purchasing mineral rights in the Appalachian Basin. According to the complaint, this joint venture relationship raises additional concerns regarding anticompetitive information exchange and harms competition in the acquisition of mineral rights. To remedy these concerns, the Commission issued a consent order prohibiting Quantum from occupying an EQT board seat to prevent an interlocking directorate.

---

[44] Press Release, Fed. Trade Comm'n, *Statement Regarding Termination of CooperCompanies' Attempted Acquisition of Cook Medical's Reproductive Health Business* (Aug. 1, 2023), https://www.ftc.gov/news-Pevents/news/press-releases/2023/08/statement-regarding-termination-coopercompanies-attemptedacquisition-cook-medicals-reproductive.

[45] *In the Matter of Tractor Supply Company and Orschein Farm and Home LLC,* FTC Dkt. C-4776 (final order issued on Dec. 2, 2022), https://www.ftc.gov/legal-library/browse/cases-proceedings/211-0083-tractor-supply-companyorscheln-farm-home-llc-matter.

[46] *In the Matter of QEP Partners, LP, Quantum Energy Partners VI, LP, Q-TH Appalachia (VI) Investment Partners, LLC, and EQT Corporation,* FTC Dkt. C-4799 (final order issued on Oct. 10, 2023), https://www.ftc.gov/legal-library/browse/cases-proceedings/2210212-qep-partnerseqt-corporation-matter.

The consent order also requires Quantum to divest its EQT shares. This order marks the FTC's first case in 40 years that enforces Section 8 of the Clayton Act, which prohibits interlocking directorates, an arrangement that occurs when an officer or director of one firm simultaneously serves as an officer or director of a competing firm. In addition, the consent order imposes other provisions to prevent anticompetitive information exchanges, immediately unwind the problematic TMC joint venture, protect competition, and ensure the effectiveness of the consent order. Following a public comment period, the Commission approved the final order on October 10, 2023.

***

Prior to the HSR Act, businesses could, and often did, consummate transactions that raised significant antitrust concerns before the agencies had an opportunity to review them. This practice forced the agencies to engage in lengthy post-acquisition litigation, during the course of which the transaction's anticompetitive effects continued to harm competition; furthermore, if effective post-acquisition relief was not practicable, the harm continued indefinitely.

Leadership at both agencies commend staff of the Commission and the Department of Justice, including the FTC's Premerger Notification Office, for their diligent and dedicated efforts to identify and investigate mergers and acquisitions that may substantially lessen competition or tend to create a monopoly and to pursue law enforcement before injury can arise. The Commission and the Antitrust Division salute the tireless work of their excellent staffs in protecting the American public from unlawful mergers and acquisitions.

Summary of Transactions by Fiscal Year

	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
Transactions Reported	**1,663**	**1,801**	**1,832**	**2,052**	**2,111**	**2,089**	**1,637**	**3,520**	**3,152**	**1,805**
Filings Received[1]	**3,307**	**3,585**	**3,674**	**4,083**	**4,188**	**4,142**	**3,249**	**7,002**	**6,288**	**3,515**
Adjusted Transactions In Which A Second Request Could Have Been Issued[2]	1,618	1,754	1,772	1,992	2,028	2,030	1,580	3,413	3,029	1,735
Investigations in Which Second Requests Were Issued	**51**	**47**	**54**	**51**	**45**	**61**	**48**	**65**	**47**	**37**
FTC[3]	30	20	25	33	26	30	23	42	25	26
Percent[4]	1.9%	1.1%	1.4%	1.7%	1.3%	1.5%	1.5%	1.2%	0.8%	1.4%
DOJ[3]	21	27	29	18	19	31	25	23	22	11
Percent[4]	1.3%	1.5%	1.6%	0.9%	0.9%	1.5%	1.6%	0.7%	0.7%	0.6%
Transactions Involving a Request For Early Termination[5]	**1,274**	**1,366**	**1,374**	**1,552**	**1,500**	**1,507**	**1,133**	**2,124**	**1,345**	**780**
Granted[5]	1,020	1,086	1,102	1,220	1,170	1,107	861	417	5	0
Not Granted[5]	254	280	272	332	330	400	272	1,707	1,340	780

[1] Usually, two filings are received, one from the acquiring person and one from the acquired person when a transaction is reported. Only one application is received when an acquiring party files for an exemption under Section 7A (c)(6) or (c)(8) of the Clayton Act.

[2] These figures omit from the total number of transactions reported all transactions for which the agencies were not authorized to request additional information. These include (1) incomplete transactions (only one party filed a complete notification); (2) transactions reported pursuant to the exemption provisions of Sections 7A (c)(6) and 7A(c)(8) of the Act; (3) transactions which were found to be non-reportable; and (4) transactions withdrawn before the waiting period began. In addition, where a party filed more than one notification in the same year to acquire voting securities of the same corporation, e.g., filing one threshold and later filing for a higher threshold, only a single consolidated transaction has been counted because as a practical matter the agencies do not issue more than one Second Request in such a case. These statistics also omit from the total number the transactions reported secondary acquisitions filed pursuant to §801.4 of the Premerger Notification rules. Secondary acquisitions have been deducted in order to be consistent with the statistics presented in most of the prior annual reports.

[3] These statistics are based on the date the Second Request was issued and not the date the investigation was opened.

[4] Second Request investigations are a percentage of the total number of adjusted transactions. The total percentage reflected in Figure 2 may not equal the sum of reported component values due to rounding.

[5] These statistics are based on the date of the HSR filing and not the date action was taken on the request.

[1] Fiscal year 2023 figures include transactions reported between October 1, 2022 and September 30, 2023.

[2] The size of transaction is based on the aggregate total amount of voting securities, non-corporate interests and/or assets held by the acquiring person as a result of the transaction and are taken from the response to Item 2(d)(iii), 2(d)(vii), and 2(d)(ix) of the Notification and Report Form.

[3] These statistics are based on the date the Second Request was issued.

[4] During fiscal year 2023, 1,805 transactions were reported under the HSR Premerger Notification program. The smaller number, 1,735, reflects the adjustments to eliminate the following types of transactions: (1) transactions reported under Section 7A(c)(6) and (c)(8) (transactions involving certain regulated industries and financial businesses); (2) transactions deemed non-reportable; (3) incomplete transactions (only one party in each transaction filed a compliant notification); and (4) transactions withdrawn before the waiting period began. The table does not, however, exclude competing offers or multiple HSR transactions resulting from a single business transaction (where there are multiple acquiring persons or acquired persons).

[5] The total number of filings under $50M submitted in Fiscal Year 2023 reflects corrective filings.

[6] In February 2001, legislation raised the size of transaction from $15 million to $50 million with annual adjustments beginning in February 2005. As of FY 2017, the threshold categories include non-corporate interests (NCI), encompassing transactions in which the acquiring entity acquires 50% of more of the non-corporate interests of the acquired entity. In addition, the 2023 Merger Filing Fee Modernization Act introduced additional filing fee tiers and new filing fees. Both the filing fee tiers and the filing fees are adjusted annually along with the jurisdictional thresholds.

[7] The category labeled “Sales Not Available” includes newly-formed acquiring persons, foreign acquiring person with no United States revenues, and acquiring persons who had not derived any revenues from their investments at the time of filing.

[8] Assets of an acquired entity are not available when the acquired entity’s financial data is consolidated within its ultimate parent.

[9] Sales of an acquired entity are taken from responses to Item 4(a) and (b) (SEC documents and annual reports) or item 5 (dollar revenues) of the Premerger Notification and Report Form.

[10] This category includes acquisition of newly-formed entities from which no sales were generated, and acquisitions of assets which produced no sales revenues during the prior year to filing the Notification and Report Form.

[11] The 3-digit codes are part of the North American Industrial Classification System (NAICS) established by the United States Government North American Industrial Classification System 1997, Executive Office of the President, Office of Management and Budget. The NAICS groups used in this table were determined from responses submitted by the parties to Item 5 of the Premerger Notification and Report Form.

[12] This represents the deviation from the fiscal year 2022 percentage.

[13] This category includes transactions by newly-formed entities.

[14] The intra-industry transactions column identifies the number of acquisitions in which both the acquiring and acquired person derived revenues from the same 3-digit NAICS code.

EXHIBIT B

Summary letters required by Section 102(c) of the Merger Fee Modernization Act of 2022, including the information required under Sections 102(a) and (b) of the MMA.

Chairman, Subcommittee on the Administrative State, Regulatory Reform, and Antitrust
U.S. House of Representatives
Washington, D.C. 20515

The Honorable Lou Correa
Ranking Member, Subcommittee on the Administrative State, Regulatory Reform, and Antitrust
U.S. House of Representatives
Washington, D.C. 20515

Dear Chairman Jordan, Ranking Member Nadler, Chairman Massie, and Ranking Member Correa:

On behalf of the Federal Trade Commission and the Justice Department's Antitrust Division (collectively, the Agencies), please find below the summary required by Section 102(c) of the Merger Fee Modernization Act of 2022 ("MMA"), including the information required under Sections 102(a) and (b) of the MMA.

Summary of the FY2023 HSR Annual Report

In fiscal year 2023, 1,805 transactions were reported under the Hart-Scott-Rodino Antitrust Improvements (HSR) Act, which is in line with the number of transactions reported over the past 10 years, excluding the record high number of transactions reported in fiscal years 2021 and 2022. Nearly one-fourth of the transactions reviewed by the Agencies were valued over $1 billion, continuing a trend in recent years towards larger and more complex transactions.

During fiscal year 2023, the Federal Trade Commission took enforcement actions against 16 deals: four in which the Commission initiated administrative or federal court litigation; ten in which the transaction was abandoned or restructured after the Commission raised concerns about the threat they posed to competition; and two in which it issued consent orders for public comment. The Antitrust Division took enforcement actions against 12 deals: two that were blocked through lawsuits in U.S. district court; ten in which the transaction was abandoned or restructured after the Antitrust Division raised concerns about the threat they posed to competition.

Section 102

(a)(1) The amount of funds made available to the Federal Trade Commission and the Department of Justice, respectively, from the premerger notification filing fees under this section, as adjusted by the Merger Filing Fee Modernization Act of 2022, as compared to the funds made available to the Federal Trade Commission and the Department of Justice, respectively, from premerger notification filing fees as the fees were determined in fiscal year 2022.

FY23 Total Fee Estimate (Oct – Feb) – prior fee structure

October –	$21,337,500
November –	$24,665,275
December –	$17,167,600
January –	$18,577,550
February (adjusted) –	$19,775,010

Total (Oct – Feb): $101,522,935

FY23 Total Fee Estimate (Mar – Sept) – applying prior fee structure

210 Tier 1 Transactions @ $45,000 =	$9,450,000
482 Tier 2 Transactions @ $125,000 =	$60,250,000
231 Tier 3 Transactions @ $280,000 =	$64,680,000

Total (Mar – Sep): $134,380,000

If the MMA did not apply, total collections for FY23 would have been **$235,902,935**, with **$117,951,467.50** made available to the FTC and **$117,951,467.50** made available to the Department of Justice.

Actual Filing Fee Revenue for FY23 was **$343,628,165.01**, with **$171,814,082.51** made available to the FTC and **$171,814,082.50** made available to the Department of Justice.

Difference due to MMA: +$107,725,230.01

(a)(2) The total revenue derived from premerger notification filing fees, by tier, by the Federal Trade Commission and the Department of Justice, respectively.

RESPONSE: See Appendix A, attached.

(a)(3) The gross cost of operations of the Federal Trade Commission, by Budget Activity, and the Antitrust Division of the Department of Justice, respectively.

RESPONSE:

Gross Cost of Operations		
FTC		
(Dollars in Millions)	FY 2022	FY 2023
Consumer Protection	193	218
Antitrust	166	200
TOTAL	359	418
DOJ, Antitrust Division		
(Dollars in Millions)	FY 2022	FY 2023
Antitrust	208	220

(b) (1) for actions with respect to which the record of the vote of each member of the Federal Trade Commission is on the public record of the Federal Trade Commission, a list of each action with respect to which the Federal Trade Commission took or declined to take action on a 3 to 2 vote; and

RESPONSE: There were no such actions during FY23.

(b)(2) for all actions for which the Federal Trade Commission took a vote, the percentage of such actions that were decided on a 3 to 2 vote.

RESPONSE: Zero percent during FY23.

If you or your staff have additional questions or comments, please do not hesitate to contact Jeanne Bumpus, FTC Director of the Office of Congressional Relations, at (202) 326-2946 or Slade Bond, DOJ Deputy Assistant Attorney General, Office of Legislative Affairs, at 202-616-8795.

Sincerely,

Lina Khan

Lina M. Khan
Chair, Federal Trade Commission

Net Fee Income	11,430,000	49,500,000	37,380,000	5,475,000	43,200,000	40,875,000	37,200,000	41,600,000	72,000,000	4,968,165	**343,628,165.01**

FY 2023 Fee Distribution:	Year-to-Date
DOJ	171,814,082.50
FTC	171,814,082.51
Total Distributed Fees	343,628,165.01

The first three tiers cover October through February and the last six tiers cover February through September.

During fiscal year 2023, 1,805 transactions were reported under the HSR Premerger Notification program. The smaller number here, 1,738.50, reflects filing fees received (including partial fees), and adjustments to eliminate the following types of transactions, for which no transaction fee was received: (1) transactions reported under Section 7A(c)(6) and (c)(8) (transactions involving certain regulated industries and financial businesses); (2) transactions deemed non-reportable; (3) incomplete transactions (only one party in each transaction filed a compliant notification); and (4) transactions withdrawn before the waiting period began. The table does not, however, exclude competing offers or multiple HSR transactions resulting from a single business transaction (where there are multiple acquiring persons or acquired persons).

Merger Guidelines

U.S. Department of Justice and the Federal Trade Commission

Issued: December 18, 2023

1. Overview

These Merger Guidelines identify the procedures and enforcement practices the Department of Justice and the Federal Trade Commission (the "Agencies") most often use to investigate whether mergers violate the antitrust laws. The Agencies enforce the federal antitrust laws, specifically Sections 1 and 2 of the Sherman Act, 15 U.S.C. §§ 1, 2; Section 5 of the Federal Trade Commission Act, 15 U.S.C. § 45; and Sections 3, 7, and 8 of the Clayton Act,[1] 15 U.S.C. §§ 14, 18, 19.[2] Congress has charged the Agencies with administering these statutes as part of a national policy to promote open and fair competition, including by preventing mergers and acquisitions that would violate these laws. "Federal antitrust law is a central safeguard for the Nation's free market structures" that ensures "the preservation of economic freedom and our free-enterprise system."[3] It rests on the premise that "[t]he unrestrained interaction of competitive forces will yield the best allocation of our economic resources, the lowest prices, the highest quality and the greatest material progress, while at the same time providing an environment conducive to the preservation of our democratic political and social institutions."[4]

Section 7 of the Clayton Act ("Section 7") prohibits mergers and acquisitions where "in any line of commerce or in any activity affecting commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly." Competition is a process of rivalry that incentivizes businesses to offer lower prices, improve wages and working conditions, enhance quality and resiliency, innovate, and expand choice, among many other benefits. Mergers that substantially lessen competition or tend to create a monopoly increase, extend, or entrench market power and deprive the public of these benefits. Mergers can lessen competition when they diminish competitive constraints, reduce the number or attractiveness of alternatives available to trading partners, or reduce the intensity with which market participants compete.

Section 7 was designed to arrest anticompetitive tendencies in their incipiency.[5] The Clayton Act therefore requires the Agencies to assess whether mergers present risk to competition. The Supreme Court has explained that "Section 7 itself creates a relatively expansive definition of antitrust liability: To show that a merger is unlawful, a plaintiff need only prove that its effect '*may be* substantially to lessen competition'" or to tend to create a monopoly.[6] Accordingly, the Agencies do not attempt to

[1] As amended under the Celler-Kefauver Antimerger Act of 1950, Pub. L. No. 81-899, 64 Stat. 1125 (1950), and the Hart-Scott-Rodino Antitrust Improvements Act of 1976, 15 U.S.C. § 18a.

[2] Although these Guidelines focus primarily on Section 7 of the Clayton Act, the Agencies consider whether any of these statutes may be violated by a merger. The various provisions of the Sherman, Clayton, and FTC Acts each have separate standards, and one may be violated when the others are not.

predict the future or calculate precise effects of a merger with certainty. Rather, the Agencies examine the totality of the evidence available to assess the risk the merger presents.

Competition presents itself in myriad ways. To assess the risk of harm to competition in a dynamic and complex economy, the Agencies begin the analysis of a proposed merger by asking: how do firms in this industry compete, and does the merger threaten to substantially lessen competition or to tend to create a monopoly?

The Merger Guidelines set forth several different analytical frameworks (referred to herein as "Guidelines") to assist the Agencies in assessing whether a merger presents sufficient risk to warrant an enforcement action. These frameworks account for industry-specific market realities and use a variety of indicators and tools, ranging from market structure to direct evidence of the effect on competition, to examine whether the proposed merger may harm competition.

How to Use These Guidelines: When companies propose a merger that raises concerns under one or more Guidelines, the Agencies closely examine the evidence to determine if the facts are sufficient to infer that the effect of the merger may be to substantially lessen competition or to tend to create a monopoly (sometimes referred to as a "prima facie case").[7] **Section 2** describes how the Agencies apply these Guidelines. Specifically, Guidelines 1-6 describe distinct frameworks the Agencies use to identify that a merger raises prima facie concerns, and Guidelines 7-11 explain how to apply those frameworks in several specific settings. In all of these situations, the Agencies will also examine relevant evidence to determine if it disproves or rebuts the prima facie case and shows that the merger does not in fact threaten to substantially lessen competition or tend to create a monopoly. **Section 3** identifies rebuttal evidence that the Agencies consider, and that merging parties can present, to rebut an inference of potential harm under these frameworks.[8] **Section 4** sets forth a non-exhaustive discussion of analytical, economic, and evidentiary tools the Agencies use to evaluate facts, understand the risk of harm to competition, and define relevant markets.

These Guidelines are not mutually exclusive, as a single transaction can have multiple effects or raise concerns in multiple ways. To promote efficient review, for any given transaction the Agencies may limit their analysis to any one Guideline or subset of Guidelines that most readily demonstrates the risks to competition from the transaction.

Guideline 1: Mergers Raise a Presumption of Illegality When They Significantly Increase Concentration in a Highly Concentrated Market. Market concentration is often a useful indicator of a merger's likely effects on competition. The Agencies therefore presume, unless sufficiently disproved or rebutted, that a merger between competitors that significantly increases concentration and creates or further consolidates a highly concentrated market may substantially lessen competition.

Guideline 2: Mergers Can Violate the Law When They Eliminate Substantial Competition Between Firms. The Agencies examine whether competition between the merging parties is substantial since their merger will necessarily eliminate any competition between them.

---

[7] *See, e.g.*, *United States v. AT&T, Inc.*, 916 F.3d at 1032 (explaining that a *prima facie* case can demonstrate a "reasonable probability" of harm to competition either through "statistics about the change in market concentration" or a "fact-specific" showing (quoting *Brown Shoe*, 370 U.S. at 323 n.39)); *United States v. Baker Hughes*, 908 F.2d 981, 982-83 (D.C. Cir. 1990).

[8] These Guidelines pertain only to the Agencies' consideration of whether a merger or acquisition may substantially lessen competition or tend to create a monopoly. The consideration of remedies appropriate for mergers that pose that risk is beyond the Merger Guidelines' scope. The Agencies review proposals to revise a merger in order to alleviate competitive concerns consistent with applicable law regarding remedies.

Guideline 3: Mergers Can Violate the Law When They Increase the Risk of Coordination. The Agencies examine whether a merger increases the risk of anticompetitive coordination. A market that is highly concentrated or has seen prior anticompetitive coordination is inherently vulnerable and the Agencies will infer, subject to rebuttal evidence, that the merger may substantially lessen competition. In a market that is not highly concentrated, the Agencies investigate whether facts suggest a greater risk of coordination than market structure alone would suggest.

Guideline 4: Mergers Can Violate the Law When They Eliminate a Potential Entrant in a Concentrated Market. The Agencies examine whether, in a concentrated market, a merger would (a) eliminate a potential entrant or (b) eliminate current competitive pressure from a perceived potential entrant.

Guideline 5: Mergers Can Violate the Law When They Create a Firm That May Limit Access to Products or Services That Its Rivals Use to Compete. When a merger creates a firm that can limit access to products or services that its rivals use to compete, the Agencies examine the extent to which the merger creates a risk that the merged firm will limit rivals' access, gain or increase access to competitively sensitive information, or deter rivals from investing in the market.

Guideline 6: Mergers Can Violate the Law When They Entrench or Extend a Dominant Position. The Agencies examine whether one of the merging firms already has a dominant position that the merger may reinforce, thereby tending to create a monopoly. They also examine whether the merger may extend that dominant position to substantially lessen competition or tend to create a monopoly in another market.

Guideline 7: When an Industry Undergoes a Trend Toward Consolidation, the Agencies Consider Whether It Increases the Risk a Merger May Substantially Lessen Competition or Tend to Create a Monopoly. A trend toward consolidation can be an important factor in understanding the risks to competition presented by a merger. The Agencies consider this evidence carefully when applying the frameworks in Guidelines 1-6.

Guideline 8: When a Merger is Part of a Series of Multiple Acquisitions, the Agencies May Examine the Whole Series. If an individual transaction is part of a firm's pattern or strategy of multiple acquisitions, the Agencies consider the cumulative effect of the pattern or strategy when applying the frameworks in Guidelines 1-6.

Guideline 9: When a Merger Involves a Multi-Sided Platform, the Agencies Examine Competition Between Platforms, on a Platform, or to Displace a Platform. Multi-sided platforms have characteristics that can exacerbate or accelerate competition problems. The Agencies consider the distinctive characteristics of multi-sided platforms when applying the frameworks in Guidelines 1-6.

Guideline 10: When a Merger Involves Competing Buyers, the Agencies Examine Whether It May Substantially Lessen Competition for Workers, Creators, Suppliers, or Other Providers. The Agencies apply the frameworks in Guidelines 1-6 to assess whether a merger between buyers, including employers, may substantially lessen competition or tend to create a monopoly.

Guideline 11: When an Acquisition Involves Partial Ownership or Minority Interests, the Agencies Examine Its Impact on Competition. The Agencies apply the frameworks in Guidelines 1-6 to assess if an acquisition of partial control or common ownership may substantially lessen competition.

* * *

This edition of the Merger Guidelines consolidates, revises, and replaces the various versions of Merger Guidelines previously issued by the Agencies. The revision builds on the learning and experience reflected in those prior Guidelines and successive revisions. These Guidelines reflect the collected experience of the Agencies over many years of merger review in a changing economy and have been refined through an extensive public consultation process.

As a statement of the Agencies' law enforcement procedures and practices, the Merger Guidelines create no independent rights or obligations, do not affect the rights or obligations of private parties, and do not limit the discretion of the Agencies, including their staff, in any way. Although the Merger Guidelines identify the factors and frameworks the Agencies consider when investigating mergers, the Agencies' enforcement decisions will necessarily continue to require prosecutorial discretion and judgment. Because the specific standards set forth in these Merger Guidelines will be applied to a broad range of factual circumstances, the Agencies will apply them reasonably and flexibly to the specific facts and circumstances of each merger.

Similarly, the factors contemplated in these Merger Guidelines neither dictate nor exhaust the range of theories or evidence that the Agencies may introduce in merger litigation. Instead, they set forth various methods of analysis that may be applicable depending on the availability and/or reliability of information related to a given market or transaction. Given the variety of industries, market participants, and acquisitions that the Agencies encounter, merger analysis does not consist of uniform application of a single methodology. The Agencies assess any relevant and meaningful evidence to evaluate whether the effect of a merger may be substantially to lessen competition or to tend to create a monopoly. Merger review is ultimately a fact-specific exercise. The Agencies follow the facts and the law in analyzing mergers as they do in other areas of law enforcement.

These Merger Guidelines include references to applicable legal precedent. References to court decisions do not necessarily suggest that the Agencies would analyze the facts in those cases identically today. While the Agencies adapt their analytical tools as they evolve and advance, legal holdings reflecting the Supreme Court's interpretation of a statute apply unless subsequently modified. These Merger Guidelines therefore reference applicable propositions of law to explain core principles that the Agencies apply in a manner consistent with modern analytical tools and market realities. References herein do not constrain the Agencies' interpretation of the law in particular cases, as the Agencies will apply their discretion with respect to the applicable law in each case in light of the full range of precedent pertinent to the issues raised by each enforcement action.

2. Applying the Merger Guidelines

This section discusses the frameworks the Agencies use to assess whether a merger may substantially lessen competition or tend to create a monopoly.

2.1. Guideline 1: Mergers Raise a Presumption of Illegality When They Significantly Increase Concentration in a Highly Concentrated Market.

Market concentration and the change in concentration due to the merger are often useful indicators of a merger's risk of substantially lessening competition. In highly concentrated markets, a merger that eliminates a significant competitor creates significant risk that the merger may substantially lessen competition or tend to create a monopoly. As a result, a significant increase in concentration in a highly concentrated market can indicate that a merger may substantially lessen competition, depriving the public of the benefits of competition.

The Supreme Court has endorsed this view and held that "a merger which produces a firm controlling an undue percentage share of the relevant market, and results in a significant increase in the concentration of firms in that market[,] is so inherently likely to lessen competition substantially that it must be enjoined in the absence of [rebuttal] evidence."[9] In the Agencies' experience, this legal presumption provides a highly administrable and useful tool for identifying mergers that may substantially lessen competition.

An analysis of concentration involves calculating pre-merger market shares of products[10] within a relevant market (see Section 4.3 for a discussion of market definition and Section 4.4 for more details on computing market shares). The Agencies assess whether the merger creates or further consolidates a highly concentrated market and whether the increase in concentration is sufficient to indicate that the merger may substantially lessen competition or tend to create a monopoly.[11]

The Agencies generally measure concentration levels using the Herfindahl-Hirschman Index ("HHI").[12] The HHI is defined as the sum of the squares of the market shares; it is small when there are many small firms and grows larger as the market becomes more concentrated, reaching 10,000 in a market with a single firm. Markets with an HHI greater than 1,800 are highly concentrated, and a change of more than 100 points is a significant increase.[13] A merger that creates or further consolidates a highly

[9] *United States v. Phila. Nat'l Bank*, 374 U.S. 321, 363 (1963); *see, e.g.*, *FTC v. v. Hackensack Meridian Health, Inc.*, 30 F.4th 160, 172-73 (3d Cir. 2022); *United States v. AT&T, Inc.*, 916 F.3d at 1032.

[10] These Guidelines use the term "products" to encompass anything that is traded between firms and their suppliers, customers, or business partners, including physical goods, services, or access to assets. Products can be as narrow as an individual brand, a specific version of a product, or a product that includes specific ancillary services such as the right to return it without cause or delivery to the customer's location.

[11] Typically, a merger eliminates a competitor by bringing two market participants under common control. Similar concerns arise if the merger threatens to cause the exit of a current market participant, such as a leveraged buyout that puts the target firm at significant risk of failure.

[12] The Agencies may instead measure market concentration using the number of significant competitors in the market. This measure is most useful when there is a gap in market share between significant competitors and smaller rivals or when it is difficult to measure shares in the relevant market.

[13] For illustration, the HHI for a market of five equal firms is 2,000 ($5 \times 20^2 = 2{,}000$) and for six equal firms is 1,667 ($6 \times 16.67^2 = 1667$).

concentrated market that involves an increase in the HHI of more than 100 points[14] is presumed to substantially lessen competition or tend to create a monopoly.[15] The Agencies also may examine the market share of the merged firm: a merger that creates a firm with a share over thirty percent is also presumed to substantially lessen competition or tend to create a monopoly if it also involves an increase in HHI of more than 100 points.[16]

Indicator	Threshold for Structural Presumption
Post-merger HHI	Market HHI greater than 1,800 AND Change in HHI greater than 100
Merged Firm's Market Share	Share greater than 30% AND Change in HHI greater than 100

When exceeded, these concentration metrics indicate that a merger's effect may be to eliminate substantial competition between the merging parties and may be to increase coordination among the remaining competitors after the merger. This presumption of illegality can be rebutted or disproved. The higher the concentration metrics over these thresholds, the greater the risk to competition suggested by this market structure analysis and the stronger the evidence needed to rebut or disprove it.

2.2. Guideline 2: Mergers Can Violate the Law When They Eliminate Substantial Competition Between Firms.

A merger eliminates competition between the merging firms by bringing them under joint control.[17] If evidence demonstrates substantial competition between the merging parties prior to the

---

[14] The change in HHI from a merger of firms with shares *a* and *b* is equal to 2*ab*. For example, in a merger between a firm with 20% market share and a firm with 5% market share, the change in HHI is 2 x 20 x 5 = 200.

[15] The first merger guidelines to reference an HHI threshold were the merger guidelines issued in 1982. These guidelines referred to mergers with HHI above 1,000 as concentrated markets, with HHI between 1,000 and 1,800 as "moderately concentrated" and above 1,800 as "highly concentrated," while they referred to an increase in HHI of 100 as a "significant increase." Each subsequent iteration until 2010 maintained those thresholds. *See* Fed. Trade Comm'n & U.S. Dep't of Justice, Horizontal Merger Guidelines § 1.51 (1997); Fed. Trade Comm'n & U.S. Dep't of Justice, Horizontal Merger Guidelines § 1.51 (1992); U.S. Dep't of Justice, Merger Guidelines § 3(A) (1982). During this time, courts routinely cited to the guidelines and these HHI thresholds in decisions. *See, e.g.*, *Chicago Bridge & Iron Co. N.V. v. FTC*, 534 F.3d 410, 431 (5th Cir. 2008); *FTC v. H.J. Heinz Co.*, 246 F.3d 708, 716 (D.C. Cir. 2001); *FTC v. Univ. Health, Inc.*, 938 F.2d 1206, 1211 (11th Cir. 1991). Although the Agencies raised the thresholds for the 2010 guidelines, based on experience and evidence developed since, the Agencies consider the original HHI thresholds to better reflect both the law and the risks of competitive harm suggested by market structure and have therefore returned to those thresholds.

[16] *Phila. Nat'l Bank*, 374 U.S. at 364-65 ("Without attempting to specify the smallest market share which would still be considered to threaten undue concentration, we are clear that 30% presents that threat.").

[17] The competitive harm from the elimination of competition between the merging firms, without considering the risk of coordination, is sometimes referred to as unilateral effects. The elimination of competition between the merging firms can also lessen competition with and among other competitors. When the elimination of competition between the merging firms

merger, that ordinarily suggests that the merger may substantially lessen competition.[18]Although a change in market structure can also indicate risk of competitive harm (see Guideline 1), an analysis of the existing competition between the merging firms can demonstrate that a merger threatens competitive harm independent from an analysis of market shares.

Competition often involves firms trying to win business by offering lower prices, new or better products and services, more attractive features, higher wages, improved benefits, or better terms relating to various additional dimensions of competition. This can include competition to research and develop products or services, and the elimination of such competition may result in harm even if such products or services are not yet commercially available. The more the merging parties have shaped one another's behavior, or have affected one another's sales, profits, valuation, or other drivers of behavior, the more significant the competition between them.

The Agencies examine a variety of indicators to identify substantial competition. For example:

Strategic Deliberations or Decisions. The Agencies may analyze the extent of competition between the merging firms by examining evidence relating to strategic deliberations or decisions in the regular course of business. For example, in some markets, the firms may monitor each other's pricing, marketing campaigns, facility locations, improvements, products, capacity, output, input costs, and/or innovation plans. This can provide evidence of competition between the merging firms, especially when they react by taking steps to preserve or enhance the competitiveness or profitability of their own products or services.

Prior Merger, Entry, and Exit Events. The Agencies may look to historical events to assess the presence and substantiality of direct competition between the merging firms. For example, the Agencies may examine the competitive impact of recent relevant mergers, entry, expansion, or exit events.

Customer Substitution. Customers' willingness to switch between different firms' products is an important part of the competitive process. Firms are closer competitors the more that customers are willing to switch between their products. The Agencies use a variety of tools, detailed in Section 4.2, to assess customer substitution.

Impact of Competitive Actions on Rivals. When one firm takes competitive actions to attract customers, this can benefit the firm at the expense of its rivals. The Agencies may gauge the extent of competition between the merging firms by considering the impact that competitive actions by one of the merging firms has on the other merging firm. The impact of a firm's competitive actions on a rival is generally greater when customers consider the firm's products and the rival's products to be closer substitutes, so that a firm's competitive action results in greater lost sales for the rival, and when the profitability of the rival's lost sales is greater.

Impact of Eliminating Competition Between the Firms. In some instances, evidence may be available to assess the impact of competition from one firm on the other's actions, such as firm choices

---

leads them to compete less aggressively with one another, other firms in the market can in turn compete less aggressively, decreasing the overall intensity of competition.

[18] *See also United States v. First Nat'l Bank & Trust Co. of Lexington*, 376 U.S. 665, 669-70 (1964) (per curiam) ("[I]t [is] clear that the elimination of significant competition between [merging parties] constitutes an unreasonable restraint of trade in violation of § 1 of the Sherman Act. . . . It [can be] enough that the two . . . compete[], that their competition [is] not insubstantial and that the combination [would] put an end to it."); *ProMedica Health Sys., Inc. v. FTC*, 749 F.3d 559, 568-70 (6th Cir. 2014), *cert. denied*, 575 U.S. 996 (2015).

about price, quality, wages, or another dimension of competition. Section 4.2 describes a variety of approaches to measuring such impacts.

***Additional Evidence, Tools, and Metrics*.** The Agencies may use additional evidence, tools, and metrics to assess the loss of competition between the firms. Depending on the realities of the market, different evidence, tools, or metrics may be appropriate.

Section 4.2 provides additional detail about the approaches that the Agencies use to assess competition between or among firms.

2.3. Guideline 3: Mergers Can Violate the Law When They Increase the Risk of Coordination.

The Agencies determine that a merger may substantially lessen competition when it meaningfully increases the risk of coordination among the remaining firms in a relevant market or makes existing coordination more stable or effective.[19] Firms can coordinate across any or all dimensions of competition, such as price, product features, customers, wages, benefits, or geography. Coordination among rivals lessens competition whether it occurs explicitly—through collusive agreements between competitors not to compete or to compete less—or tacitly, through observation and response to rivals. Because tacit coordination often cannot be addressed under Section 1 of the Sherman Act, the Agencies vigorously enforce Section 7 of the Clayton Act to prevent market structures conducive to such coordination.

Tacit coordination can lessen competition even when it does not rise to the level of an agreement and would not itself violate the law. For example, in a concentrated market a firm may forego or soften an aggressive competitive action because it anticipates rivals responding in kind. This harmful behavior is more common the more concentrated markets become, as it is easier to predict the reactions of rivals when there are fewer of them.

To assess the extent to which a merger may increase the likelihood, stability, or effectiveness of coordination, the Agencies often consider three primary factors and several secondary factors. The Agencies may consider additional factors depending on the market.

2.3.A. Primary Factors

The Agencies may conclude that post-merger market conditions are susceptible to coordinated interaction and that the merger materially increases the risk of coordination if any of the three primary factors are present.

Highly Concentrated Market. By reducing the number of firms in a market, a merger increases the risk of coordination. The fewer the number of competitively meaningful rivals prior to the merger, the greater the likelihood that merging two competitors will facilitate coordination. Markets that are highly concentrated after a merger that significantly increases concentration (see Guideline 1) are presumptively susceptible to coordination. If merging parties assert that a highly concentrated market is not susceptible to coordination, the Agencies will assess this rebuttal evidence using the framework

---

[19] *See Brooke Grp. Ltd. v. Brown & Williamson Tobacco Corp.,* 509 U.S. 209, 229-30 (1993) ("In the § 7 context, it has long been settled that excessive concentration, and the oligopolistic price coordination it portends, may be the injury to competition the Act prohibits.").

described below. Where a market is not highly concentrated, the Agencies may still consider other risk factors.

Prior Actual or Attempted Attempts to Coordinate. Evidence that firms representing a substantial share in the relevant market appear to have previously engaged in express or tacit coordination to lessen competition is highly informative as to the market's susceptibility to coordination. Evidence of failed attempts at coordination in the relevant market suggest that successful coordination was not so difficult as to deter attempts, and a merger reducing the number of rivals may tend to make success more likely.

Elimination of a Maverick. A maverick is a firm with a disruptive presence in a market. The presence of a maverick, however, only reduces the risk of coordination so long as the maverick retains the disruptive incentives that drive its behavior. A merger that eliminates a maverick or significantly changes its incentives increases the susceptibility to coordination.

2.3.B. Secondary Factors

The Agencies also examine whether secondary factors demonstrate that a merger may meaningfully increase the risk of coordination, even absent the primary risk factors. Not all secondary factors must be present for a market to be susceptible to coordination.

Market Concentration. Even in markets that are not highly concentrated, coordination becomes more likely as concentration increases. The more concentrated a market, the more likely the Agencies are to conclude that the market structure suggests susceptibility to coordination.

Market Observability. A market is more susceptible to coordination if a firm's behavior can be promptly and easily observed by its rivals. Rivals' behavior is more easily observed when the terms offered to customers are readily discernible and relatively observable (that is, known to rivals). Observability can refer to the ability to observe prices, terms, the identities of the firms serving particular customers, or any other competitive actions of other firms. Information exchange arrangements among market participants, such as public exchange of information through announcements or private exchanges through trade associations or publications, increase market observability. Regular monitoring of one another's prices or customers can indicate that the terms offered to customers are relatively observable. Pricing algorithms, programmatic pricing software or services, and other analytical or surveillance tools that track or predict competitor prices or actions likewise can increase the observability of the market.

Competitive Responses. A market is more susceptible to coordination if a firm's prospective competitive reward from attracting customers away from its rivals will be significantly diminished by its rivals' likely responses. This is more likely to be the case the stronger and faster the responses from its rivals because such responses reduce the benefits of competing more aggressively. Some factors that increase the likelihood of strong or rapid responses by rivals include: (1) the market has few significant competitors, (2) products in the relevant market are relatively homogeneous, (3) customers find it relatively easy to switch between suppliers, (4) suppliers use algorithmic pricing, or (5) suppliers use meeting-competition clauses. The more predictable are rivals' responses to strategic actions or changing competitive conditions, and the more interactions firms have across multiple markets, the greater the susceptibility to coordination.

Aligned Incentives. Removing a firm that has different incentives from most other firms in a market can increase the risk of coordination. For example, a firm with a small market share may have less incentive to coordinate because it has more to gain from winning new business than other firms. The same issue can arise when a merger more closely aligns one or both merging firms' incentives with the other firms in the market. In some cases, incentives might be aligned or strengthened when firms compete with one another in multiple markets ("multi-market contact"). For example, firms might compete less aggressively in some markets in anticipation of reciprocity by rivals in other markets. The Agencies examine these and any other market realities that suggest aligned incentives increase susceptibility to coordination.

Profitability or Other Advantages of Coordination for Rivals. The Agencies regard coordinated interaction as more likely to occur when participants in the market stand to gain more from successful coordination. Coordination generally is more profitable or otherwise advantageous for the coordinating firms the less often customers substitute outside the market when firms offer worse terms.

Rebuttal Based on Structural Barriers to Coordination Unique to the Industry. When market structure evidence suggests that a merger may substantially lessen competition through coordination, the merging parties sometimes argue that anticompetitive coordination is nonetheless impossible due to structural market barriers to coordinating. The Agencies consider this rebuttal evidence using the framework in Section 3. In so doing, the Agencies consider whether structural market barriers to coordination are "so much greater in the [relevant] industry than in other industries that they rebut the normal presumption" of coordinated effects.[20] In the Agencies' experience, structural conditions that prevent coordination are exceedingly rare in the modern economy. For example, coordination is more difficult when firms are unable to observe rivals' competitive offerings, but technological change has made this situation less common than in the past and reduced many traditional barriers or obstacles to observing the behavior of rivals in a market. The greater the level of concentration in the relevant market, the greater must be the structural barriers to coordination in order to show that no substantial lessening of competition is threatened.

2.4. Guideline 4: Mergers Can Violate the Law When They Eliminate a Potential Entrant in a Concentrated Market.

Mergers can substantially lessen competition by eliminating a potential entrant. For instance, a merger can eliminate the possibility that entry or expansion by one or both firms would have resulted in new or increased competition in the market in the future. A merger can also eliminate current competitive pressure exerted on other market participants by the mere perception that one of the firms might enter. Both of these risks can be present simultaneously.

A merger that eliminates a potential entrant into a concentrated market can substantially lessen competition or tend to create a monopoly.[21] The more concentrated the market, the greater the magnitude of harm to competition from any lost potential entry and the greater the tendency to create a monopoly. Accordingly, for mergers involving one or more potential entrants, the higher the market concentration, the lower the probability of entry that gives rise to concern.

[20] *See H.J. Heinz Co.*, 246 F.3d at 724.

[21] *United States v. Marine Bancorp.*, 418 U.S. 602, 630 (1974). A concentrated market is one with an HHI greater than 1,000 (See Guideline 1, n.15).

2.4.A. Actual Potential Competition: Eliminating Reasonably Probable Future Entry

In general, expansion into a concentrated market via internal growth rather than via acquisition benefits competition.[22] Merging a current and a potential market participant eliminates the possibility that the potential entrant would have entered on its own—entry that, had it occurred, would have provided a new source of competition in a concentrated market.

To determine whether an acquisition that eliminates a potential entrant into a concentrated market may substantially lessen competition,[23] the Agencies examine (1) whether one or both[24] of the merging firms had a reasonable probability of entering the relevant market other than through an anticompetitive merger, and (2) whether such entry offered a substantial likelihood of ultimately producing deconcentration of the market or other significant procompetitive effects.[25]

Reasonable Probability of Entry. The Agencies' starting point for assessment of a reasonable probability of entry is objective evidence regarding the firm's available feasible means of entry, including its capabilities and incentives. Relevant objective evidence can include, for example, evidence that the firm has sufficient size and resources to enter; evidence of any advantages that would make the firm well-situated to enter; evidence that the firm has successfully expanded into similarly situated markets in the past or already participates in adjacent or related markets; evidence that the firm has an incentive to enter; or evidence that industry participants recognize the company as a potential entrant. This analysis is not limited to whether the company could enter with its pre-merger production facilities, but also considers overall capability, which can include the ability to expand or add to its capabilities on its own or in collaboration with someone other than the acquisition target.

Subjective evidence that the company considered entering absent the merger can also indicate a reasonable probability that the company would have entered without the merger. Subjective evidence that the company considered organic entry as an alternative to merging generally suggests that, absent the merger, entry would be reasonably probable.

Likelihood of Deconcentration or Other Significant Procompetitive Effects. New entry can yield a variety of procompetitive effects, including increased output or investment, higher wages or improved working conditions, greater innovation, higher quality, and lower prices. If the merging firm had a reasonable probability of entering a highly concentrated relevant market, this suggests benefits that would have resulted from its entry would be competitively significant, unless there is substantial direct evidence that the competitive effect would be *de minimis*. To supplement the suggestion that new entry yields procompetitive effects, the Agencies will consider projections of the potential entrant's

---

[22] *See Ford Motor Co. v. United States*, 405 U.S. 562, 587 (1972) (referring to the "typical[]" competitive concern when "a potential entrant enters an oligopolistic market by acquisition rather than internal expansion" as being "that such a move has deprived the market of the pro-competitive effect of an increase in the number of competitors").

[23] Harm from the elimination of a potential entrant can occur in markets that do not yet consist of commercial products, even if the market concentration of the future market cannot be measured using traditional means. Where there are few equivalent potential entrants, including one or both of the merging firms, that indicates that the future market, once commercialized, will be concentrated. The Agencies will consider other potential entrants' capabilities and incentives in comparison to the merging potential entrant to assess equivalence.

[24] *United States v. Penn-Olin Chemical Co.*, 378 U.S. 158 (1964) (holding that a merger between two firms, each or both of which might have entered the relevant market, could violate Section 7).

[25] *See id.* at 175-76; *Marine Bancorp.*, 418 U.S. at 622, 633 ("[T]he proscription expressed in § 7 against mergers 'when a "tendency" toward monopoly or [a] "reasonable likelihood" of a substantial lessening of competition in the relevant market is shown' applies alike to actual- and potential-competition cases." (quoting *Penn-Olin*, 378 U.S. at 171)); *see also Yamaha Motor Co. v. FTC*, 657 F.2d 971, 980-981 (8th Cir. 1981) (acquisition of potential entrant violated Section 7).

competitive significance, such as market share, its business strategy, the anticipated response of competitors, or customer preferences or interest.

A merger of two potential entrants can also result in a substantial lessening of competition. The merger need not involve a firm that has a commercialized product in the market or an existing presence in the same geographic market. The Agencies analyze similarly mergers between two potential entrants and those involving a current market participant and a potential entrant.

2.4.B. Perceived Potential Competition: Lessening of Current Competitive Pressure

A perceived potential entrant can stimulate competition among incumbents. That pressure can prompt current market participants to make investments, expand output, raise wages, increase product quality, lower product prices, or take other procompetitive actions. The acquisition of a firm that is perceived by market participants as a potential entrant can substantially lessen competition by eliminating or relieving competitive pressure.

To assess whether the acquisition of a perceived potential entrant may substantially lessen competition, the Agencies consider whether a current market participant could reasonably consider one of the merging companies to be a potential entrant and whether that potential entrant has a likely influence on existing competition.[26]

Market Participant Could Reasonably Consider a Firm to Be a Potential Entrant. The starting point for this analysis is evidence regarding the company's capability of entering or applying competitive pressure. Objective evidence is highly probative and includes evidence of feasible means of entry or communications by the company indicating plans to expand or reallocate resources in a way that could increase competition in the relevant market. Objective evidence can be sufficient to find that the firm is a potential entrant; it need not be accompanied by any subjective evidence of current market participants' internal perceptions or direct evidence of strategic reactions to the potential entrant. If such evidence is available, it can weigh in favor of finding that a current market participant could reasonably consider the firm to be a potential entrant.

Likely Influence on Existing Rivals. Direct evidence that the firm's presence or behavior has affected or is affecting current market participants' strategic decisions is not necessary but can establish a showing of a likely influence. Even without such direct evidence, circumstantial evidence that the firm's presence or behavior had an effect on the competitive reactions of firms in the market may also show likely influence. Objective evidence establishing that a current market participant could reasonably consider one of the merging firms to be a potential entrant can also establish that the firm has a likely influence on existing market participants. Subjective evidence indicating that current market participants—including, for example, customers, suppliers, or distributors—internally perceive the merging firm to be a potential entrant can also establish a likely influence.

2.4.C. Distinguishing Potential Entry from Entry as Rebuttal

When evaluating a potentially unlawful merger of current competitors, the Agencies will assess whether entry by other firms would be timely, likely, and sufficient to replace the lost competition using the standards discussed in Section 3.2. The existence of a perceived or actual potential entrant may not meet that standard when considering a merger between firms that already participate in the relevant market. The competitive impact of perceived and actual potential entrants is typically attenuated

---

[26] *See United States v. Falstaff Brewing Corp.*, 410 U.S. 526, 533-36 (1973); *Marine Bancorp.*, 418 U.S. at 624-25.

compared to competition between two current market participants. However, because concentrated markets often lack robust competition, the loss of even an attenuated source of competition such as a potential entrant may substantially lessen competition in such markets. Moreover, because the Agencies seek to prevent threats to competition in their incipiency, the likelihood of potential entry that could establish that a merger's effect "may be" to substantially lessen competition will generally not equal the likelihood of entry that would rebut a demonstrated risk that competition may be substantially lessened.

2.5. Guideline 5: Mergers Can Violate the Law When They Create a Firm that May Limit Access to Products or Services That Its Rivals Use to Compete.

The Agencies evaluate whether a merger may substantially lessen competition when the merged firm can limit access to a product, service, or route to market[27] that its rivals may use to compete. Mergers involving products or services rivals may use to compete can threaten competition in several ways, for example: (A) the merged firm could limit rivals' access to the products or services, thereby weakening or excluding them, lessening competition; (B) the merged firm may gain or increase access to rivals' competitively sensitive information, thereby facilitating coordination or undermining their incentives to compete; or (C) the threat of limited access can deter rivals and potential rivals from investing.

These problems can arise from mergers involving access to any products, services, or routes to market that rivals use to compete, and that are competitively significant to those rivals, whether or not they involve a traditional vertical relationship such as a supplier and distributor relationship. Many types of related products can implicate these concerns, including products rivals currently or may in the future use as inputs, products that provide distribution services for rivals or otherwise influence customers' purchase decisions, products that provide or increase the merged firm's access to competitively sensitive information about its rivals, or complements that increase the value of rivals' products. Even if the related product is not currently being used by rivals, it might be competitively significant because, for example, its availability enables rivals to obtain better terms from other providers in negotiations. The Agencies refer to any product, service, or route to market that rivals use to compete in that market as a "related product."

The Agencies analyze competitive effects in the relevant market in which the merged firm competes with rivals that use the related product. The Agencies do not always define a market around the related product, although they may do so (see Section 2.5.A.2).

2.5.A. The Risk that the Merged Firm May Limit Access

A merger involving products, services, or routes to market that rivals use to compete may substantially lessen competition when the merged firm has both the ability and incentive to limit access to the related product so as to weaken or exclude some of its rivals (the "dependent" rivals) in the relevant market.

The merged firm could limit access to the related product in different ways. It could deny rivals access altogether, deny access to some features, degrade its quality, worsen the terms on which rivals

[27] A "route to market" refers to any way a firm accesses its trading partners, such as distribution channels, marketplaces, or customers.

can access the related product, limit interoperability, degrade the quality of complements, provide less reliable access, tie up or obstruct routes to market, or delay access to product features, improvements, or information relevant to making efficient use of the product. All these ways of limiting access are sometimes referred to as "foreclosure."[28]

Dependent rivals can be weakened if limiting their access to the related product would make it harder or more costly for them to compete; for example, if it would lead them to charge higher prices or offer worse terms in the relevant market, reduce the quality of their products so that they were less attractive to trading partners, or interfere with distribution so that those products were less readily available. Competition can also be weakened if the merger facilitates coordination among the merged firm and its rivals, for example by giving the merged firm the ability to threaten to limit access to uncooperative rivals.

Rivals or potential rivals may be excluded from the relevant market if limiting their access to the related product could lead them to exit the market or could deter them from entering. For example, potential rivals may not enter if the merged firm ties up or obstructs so many routes to market that the remaining addressable market is too small. Exclusion can arise when a new entrant would need to invest not only in entering the relevant market, but also in supplying its own substitute for the related product, sometimes referred to as two-stage entry or multi-level entry.

Because the merged firm could use its ability to limit access to the related product in a range of ways, the Agencies focus on the overall risk that the merged firm will do so, and do not necessarily identify which precise actions the merged firm would take to lessen competition.

2.5.A.1. Ability and Incentive to Foreclose Rivals

The Agencies assess the merged firm's ability and incentive to substantially lessen competition by limiting access to the related product for a group of dependent rivals in the relevant market by examining four factors.

1. Availability of Substitutes. The Agencies assess the availability of substitutes for the related product. The merged firm is more able to limit access when there are few alternative options to the merged firm's related product, if these alternatives are differentiated in quality, price, or other characteristics, or if competition to supply them is limited.

2. Competitive Significance of the Related Product. The Agencies consider how important the related product is for the dependent firms and the extent to which they would be weakened or excluded from the relevant market if their access was limited.

3. Effect on Competition in the Relevant Market. The Agencies assess the importance of the dependent firms for competition in the relevant market. Competition can be particularly affected when the dependent firms would be excluded from the market altogether.

4. Competition Between the Merged Firm and the Dependent Firms. The merged firm's incentive to limit the dependent firms' access depends on how strongly it competes with them. If the dependent firms are close competitors, the merged firm may benefit from higher sales or prices in the relevant market when it limits their access. The Agencies may also assess the potential for the merged

[28] *See Illumina, Inc. v. FTC*, No. 23-60167, slip op. at 17 (5th Cir. Dec. 15, 2023) ("[T]here are myriad ways in which [the merged firm] could engage in foreclosing behavior . . . such as by making late deliveries or subtly reducing the level of support services.").

firm to benefit from facilitating coordination by threatening to limit dependent rivals' access to the related product. These benefits can make it profitable to limit access to the related product and thereby substantially lessen competition, even though it would not have been profitable for the firm that controlled the related product prior to the merger.

The Agencies assess the extent of competition with rivals and the risk of coordination using analogous methods to the ones described in Guidelines 2 and 3, and Section 4.2.

*   *   *

In addition to the evidentiary, analytical, and economic tools in Section 4, the following additional considerations and evidence may be important to this assessment:

Barriers to Entry and Exclusion of Rivals. The merged firm may benefit more from limiting access to dependent rivals or potential rivals when doing so excludes them from the market, for example by creating a need for the firm to enter at multiple levels and to do so with sufficient scale and scope (multi-level entry).

Prior Transactions or Prior Actions. If firms used prior acquisitions or engaged in prior actions to limit rivals' access to the related product, or other products its rivals use to compete, that suggests that the merged firm has the ability and incentive to do so. However, lack of past action does not necessarily indicate a lack of incentive in the present transaction because the merger can increase the incentive to foreclose.

Internal Documents. Information from business planning and merger analysis documents prepared by the merging firms might identify instances where the firms believe they have the ability and incentive to limit rivals' access. Such documents, where available, are highly probative. The lack of such documents, however, is less informative.

Market Structure. Evidence of market structure can be informative about the availability of substitutes for the related product and the competition in the market for the related product or the relevant market. (See Section 2.5.A.2)

2.5.A.2. Analysis of Industry Factors and Market Structure

The Agencies also sometimes determine, based on an analysis of factors related to market structure, that a merger may substantially lessen competition by allowing the merged firm to limit access to a related product.[29] The Agencies' assessment can include evidence about the structure, history, and probable future of the market.

Structure of the Related Market. In some cases, the market structure of the related product market can give an indication of the merged firm's ability to limit access to the related product. In these cases, the Agencies define a market (termed the "related market") around the related product (see Section 4.3). The Agencies then define the "foreclosure share" as the share of the related market to which the merged firm could limit access. If the share or other evidence show that the merged firm is

---

[29] *See Brown Shoe*, 370 U.S. at 328-34; *Illumina*, slip op. at 20-22 ("There is no precise formula when it comes to applying these factors. Indeed, the Supreme Court has found a vertical merger unlawful by examining only three of the *Brown Shoe* factors." (cleaned up)); *Fruehauf Corp. v. FTC*, 603 F.2d 345, 353 (2d Cir. 1979); *U.S. Steel Corp. v. FTC*, 426 F.2d 592, 599 (6th Cir. 1970).

approaching or has monopoly power over the related product, and the related product is competitively significant, those factors alone are a sufficient basis to demonstrate that the dependent firms do not have adequate substitutes and the merged firm has the ability to weaken or exclude them by limiting their access to the related product. (See Considerations 1 and 2 in Section 2.5.A.1).[30]

Structure of the Relevant Market. Limiting rivals' access to the related product will generally have a greater effect on competition in the relevant market if the merged firm and the dependent rivals face less competition from other firms. In addition, the merged firm has a greater incentive to limit access to the dependent firms when it competes more closely with them. Market share and concentration measures for the merged firm, the dependent rivals, and the other firms, can sometimes provide evidence about both issues.

Nature and Purpose of the Merger. When the nature and purpose of the merger is to foreclose rivals, including by raising their costs, that suggests the merged firm is likely to foreclose rivals.

Trend Toward Vertical Integration. The Agencies will generally consider evidence about the degree of integration between firms in the relevant and related markets, as well as whether there is a trend toward further vertical integration and how that trend or the factors driving it may affect competition. A trend toward vertical integration may be shown through, for example: a pattern of vertical integration following mergers by one or both of the merging companies; or evidence that a merger was motivated by a desire to avoid having its access limited due to similar transactions among other companies that occurred or may occur in the future.

* * *

If the parties offer rebuttal evidence, the Agencies will assess it under the approach laid out in Section 3.[31] When assessing rebuttal evidence focused on the reduced profits of the merged firm from limiting access from rivals, the Agencies examine whether the reduction in profits would prevent the full range of reasonably probable strategies to limit access. When evaluating whether this rebuttal evidence is sufficient to conclude that no substantial lessening of competition is threatened by the merger, the Agencies will give little weight to claims that are not supported by an objective analysis, including, for example, speculative claims about reputational harms. Moreover, the Agencies are unlikely to credit claims or commitments to protect or otherwise avoid weakening the merged firm's rivals that do not align with the firm's incentives. The Agencies' assessment will be consistent with the principle that firms act to maximize their overall profits and valuation rather than the profits of any particular business

---

[30] *See Brown Shoe*, 370 U.S. at 328 ("If the share of the market foreclosed is so large that it approaches monopoly proportions, the Clayton Act will, of course, have been violated . . . ."). The Agencies will generally infer, in the absence of countervailing evidence, that the merging firm has or is approaching monopoly power in the related product if it has a share greater than 50% of the related product market. A merger involving a related product with share of less than 50% may still substantially lessen competition, particularly when that related product is important to its trading partners.

[31] A common rebuttal argument is that the merger would lead to vertical integration of complementary products and as a result, "eliminate double marginalization," since in specific circumstances such a merger can confer on the merged firm an incentive to decrease prices to purchasers. The Agencies examine whether elimination of double marginalization satisfies the approach to evaluating procompetitive efficiencies in Section 3.3, including examining: (a) whether the merged firm will be more vertically integrated as a result of the merger, for example because it increases the extent to which it uses internal production of an input when producing output for the relevant market; (b) whether contracts short of a merger have eliminated or could eliminate double marginalization such that it would not be merger-specific, and (c) whether the merged firm has the incentive to reduce price in the relevant market given that such a reduction would reduce sales by the merged firm's rivals in the relevant market, which would in turn lead to reduced revenue and margin on sales of the related product to the dependent rivals.

unit. A merger may substantially lessen competition or tend to create a monopoly regardless of the claimed intent of the merging companies or their executives. (See Section 4.1)

If the merged firm has the ability and incentive to limit access to the related product and lessen competition in the relevant market, there are many ways it could act on those incentives. The merging parties may put forward evidence that there are no reasonably probable ways in which they could profitably limit access to the related product and thereby make it harder for rivals to compete, or that the merged firm will be more competitive because of the merger.

2.5.B. Mergers Involving Visibility into Rivals' Competitively Sensitive Information

If rivals would continue to access or purchase a related product controlled by the merged firm post-merger, the merger can substantially lessen competition if the merged firm would gain or increase visibility into rivals' competitively sensitive information. This situation could arise in many settings, including, for example, if the merged firm learns about rivals' sales volumes or projections from supplying an input or a complementary product; if it learns about promotion plans and anticipated product improvements or innovations from its role as a distributor; or if it learns about entry plans from discussions with potential rivals about compatibility or interoperability with a complementary product it controls. A merger that gives the merged firm increased visibility into competitively sensitive information could undermine rivals' ability or incentive to compete aggressively or could facilitate coordination.

Undermining Competition. The merged firm might use visibility into a rival's competitively sensitive information to undermine competition from the rival. For example, the merged firm's ability to preempt, appropriate, or otherwise undermine the rival's procompetitive actions can discourage the rival from fully pursuing competitive opportunities. Relatedly, rivals might refrain from doing business with the merged firm rather than risk that the merged firm would use their competitively sensitive business information to undercut them. Those rivals might become less-effective competitors if they must rely on less-preferred trading partners or accept less favorable trading terms because their outside options have worsened or are more limited.

Facilitating Coordination. A merger that provides access to rivals' competitively sensitive information might facilitate coordinated interaction among firms in the relevant market by allowing the merged firm to observe its rivals' competitive strategies faster and more confidently. (See Guideline 3.)

2.5.C. Mergers that Threaten to Limit Rivals' Access and Thereby Create Barriers to Entry and Competition

When a merger gives a firm the ability and incentive to limit rivals' access, or where it gives the merged firm increased visibility into its rivals' competitively sensitive information, the merger may create entry barriers as described above. In addition, the merged firm's rivals might change their behavior because of the risk that the merged firm could limit their access. That is, the risk that the merger will give a firm the ability and incentive to limit rivals' access or will give the merged firm increased visibility into sensitive information can dissuade rivals from entering the market or expanding their operations.

Rivals or potential rivals that face the threat of foreclosure, or the risk of sharing sensitive information with rivals, may reduce investment or adjust their business strategies in ways that lessen competition. Firms may be reluctant to invest in a market if their success is dependent on continued supply from a rival, particularly because the merged firm may become more likely to foreclose its competitor as that competitor becomes more successful. Firms may use expensive strategies to try to reduce their dependence on the merged firm, weakening the competitiveness of their products and services. Even if the merged firm does not deliberately seek to weaken rivals, rivals or potential rivals may fear that their access will be limited if the merged firm decides to use its own products exclusively. These effects may occur irrespective of the merged firm's incentive to limit access and are greater as the merged firm gains greater control over more important inputs that those rivals use to compete.

2.6. Guideline 6: Mergers Can Violate the Law When They Entrench or Extend a Dominant Position.

The Agencies consider whether a merger may entrench or extend an already dominant position. The effect of such mergers "may be substantially to lessen competition" or "may be . . . to tend to create a monopoly" in violation of Section 7 of the Clayton Act. Indeed, the Supreme Court has explained that a merger involving an "already dominant[] firm may substantially reduce the competitive structure of the industry by raising entry barriers."[32] The Agencies also evaluate whether the merger may extend that dominant position into new markets.[33] Mergers that entrench or extend a dominant position can also violate Section 2 of the Sherman Act.[34] At the same time, the Agencies distinguish anticompetitive entrenchment from growth or development as a consequence of increased competitive capabilities or incentives.[35] The Agencies therefore seek to prevent those mergers that would entrench or extend a dominant position through exclusionary conduct, weakening competitive constraints, or otherwise harming the competitive process.

To undertake this analysis, the Agencies first assess whether one of the merging firms has a dominant position based on direct evidence or market shares showing durable market power. For example, the persistence of market power can indicate that entry barriers exist, that further entrenchment may tend to create a monopoly, and that there would be substantial benefits from the emergence of new competitive constraints or disruptions. The Agencies consider mergers involving dominant firms in the context of evidence about the sources of that dominance, focusing on the extent to which the merger relates to, reinforces, or supplements these sources.

Creating or preserving dominance and the profits it brings can be an important motivation for a firm to undertake an acquisition as well as a driver of the merged firm's behavior after the acquisition. In particular, a firm may be willing to undertake costly short-term strategies in order to increase the chance that it can enjoy the longer-term benefits of dominance. A merger that creates or preserves dominance may also reduce the merged firm's longer-term incentives to improve its products and services.

A merger can result in durable market power and long-term harm to competition even when it initially provides short-term benefits to some market participants. Thus, the Agencies will consider not just the impact of the merger holding fixed factors like product quality and the behavior of other industry participants, but they may also consider the (often longer term) impact of the merger on market

---

[32] *FTC v. Procter & Gamble Co.*, 386 U.S. 568, 577-578 (1967); *see, e.g.*, *Fruehauf*, 603 F.2d at 353 (the "entrenchment of a large supplier or purchaser" can be an "essential" showing of a Section 7 violation).
[33] *Ford*, 405 U.S. at 571 (condemning acquisition by dominant firm to obtain a foothold in another market when coupled with incentive to create and maintain barriers to entry into that market).
[34] *See, e.g.*, *United States v. Grinnell Corp.*, 384 U.S. 563 (1966) (acquisitions are among the types of conduct that may violate the Sherman Act).
[35] *See*, *e.g.*, *id.* at 570-71.

power and industry dynamics. Important dynamic competitive effects can arise through the entry, investment, innovation, and terms offered by the merged firm and other industry participants, even when the Agencies cannot predict specific reactions and responses with precision. If the ultimate result of the merger is to protect or preserve dominance by limiting opportunities for rivals, reducing competitive constraints, or preventing competitive disruption, then the Agencies will approach the merger with a heightened degree of scrutiny. The degree of scrutiny and concern will increase in proportion to the strength and durability of the dominant firm's market power.

2.6.A. Entrenching a Dominant Position

Raising Barriers to Entry or Competition. A merger may create or enhance barriers to entry or expansion by rivals that limit the capabilities or competitive incentives of other firms. Barriers to entry can entrench a dominant position even if the nature of future entry is uncertain, if the identities of future entrants are unknown, or if there is more than one mechanism through which the merged firm might create entry barriers. Some examples of ways in which a merger may raise barriers to entry or competition include:

- *Increasing Switching Costs.* The costs associated with changing suppliers (often referred to as switching costs) can be an important barrier to competition. A merger may increase switching costs if it makes it more difficult for customers to switch away from the dominant firm's product or service, or when it gives the dominant firm control of something customers use to switch providers or of something that lowers the overall cost to customers of switching providers. For example, if a dominant firm merges with a complementary product that interoperates with the dominant firm's competitors, it could reduce interoperability, harming competition for customers who value the complement.

- *Interfering With the Use of Competitive Alternatives.* A dominant position may be threatened by a service that customers use to work with multiple providers of similar or overlapping bundles of products and services. If a dominant firm acquires a service that supports the use of multiple providers, it could degrade its utility or availability or could modify the service to steer customers to its own products, entrenching its dominant position. For example, a closed messaging communication service might acquire a product that allowed users to send and receive messages over several competing services through a single user interface, which facilitates competition. The Agencies would examine whether the acquisition would entrench the messaging service's market power by leading the merged firm to degrade the product or otherwise reduce its effectiveness as a cross-service tool, thus reducing competition.

- *Depriving Rivals of Scale Economies or Network Effects.* Scale economies and network effects can serve as a barrier to entry and competition. Depriving rivals of access to scale economies and network effects can therefore entrench a dominant position. If a merger enables a dominant firm to reduce would-be rivals' access to additional scale or customers by acquiring a product that affects access such as a customer acquisition channel, the merged firm can limit the ability of rivals to improve their own products and compete more effectively.[36] Limiting access by rivals to customers in the short run can lead to long run entrenchment of a dominant position and tend to create monopoly power.

---

[36] The Agencies' focus here is on the artificial acquisition of network participants that occurs directly as a result of the merger, as opposed to future network growth that may occur through competition on the merits.

> For example, if two firms operate in a market in which network effects are significant but in which rivals voluntarily interconnect, their merger can create an entity with a large enough user base that it may have the incentive to end voluntary interconnection. Such a strategy can lessen competition and harm trading partners by creating or entrenching dominance in this market. This can be the case even if the merging firms did not appear to have a dominant position prior to the merger because their interoperability practices strengthened rivals.

Eliminating a Nascent Competitive Threat. A merger may involve a dominant firm acquiring a nascent competitive threat—namely, a firm that could grow into a significant rival, facilitate other rivals' growth, or otherwise lead to a reduction in its power.[37] In some cases, the nascent threat may be a firm that provides a product or service similar to the acquiring firm that does not substantially constrain the acquiring firm at the time of the merger but has the potential to grow into a more significant rival in the future. In other cases, factors such as network effects, scale economies, or switching costs may make it extremely difficult for a new entrant to offer all of the product features or services at comparable quality and terms that an incumbent offers. The most likely successful threats in these situations can be firms that initially avoid directly entering the dominant firm's market, instead specializing in (a) serving a narrow customer segment, (b) offering services that only partially overlap with those of the incumbent, or (c) serving an overlapping customer segment with distinct products or services.

Firms with niche or only partially overlapping products or customers can grow into longer-term threats to a dominant firm. Once established in its niche, a nascent threat may be able to add features or serve additional customer segments, growing into greater overlap of customer segments or features over time, thereby intensifying competition with the dominant firm. A nascent threat may also facilitate customers aggregating additional products and services from multiple providers that serve as a partial alternative to the incumbent's offering. Thus, the success and independence of the nascent threat may both provide for a direct threat of competition by the niche or nascent firm and may facilitate competition or encourage entry by other, potentially complementary providers that may provide a partial competitive constraint. In this way, the nascent threat supports what may be referred to as "ecosystem" competition. In this context, ecosystem competition refers to a situation where an incumbent firm that offers a wide array of products and services may be partially constrained by other combinations of products and services from one or more providers, even if the business model of those competing services is different.

Nascent threats may be particularly likely to emerge during technological transitions. Technological transitions can render existing entry barriers less relevant, temporarily making incumbents susceptible to competitive threats. For example, technological transitions can create temporary opportunities for entrants to differentiate or expand their offerings based on their alignment with new technologies, enabling them to capture network effects that otherwise insulate incumbents from competition. A merger in this context may lessen competition by preventing or delaying any such beneficial shift or by shaping it so that the incumbent retains its dominant position. For example, a dominant firm might seek to acquire firms to help it reinforce or recreate entry barriers so that its dominance endures past the technological transition. Or it might seek to acquire nascent threats that might otherwise gain sufficient customers to overcome entry barriers. In evaluating the potential for entrenching dominance, the Agencies take particular care to preserve opportunities for more competitive markets to emerge during such technological shifts.

---

[37] The Agencies assess acquisitions of nascent competitive threats by non-dominant firms under the other Guidelines.

Separate from and in addition to its Section 7 analysis, the Agencies will consider whether the merger violates Section 2 of the Sherman Act. For example, under Section 2 of the Sherman Act, a firm that may challenge a monopolist may be characterized as a "nascent threat" even if the impending threat is uncertain and may take several years to materialize.[38] The Agencies assess whether the merger is reasonably capable of contributing significantly to the preservation of monopoly power in violation of Section 2, which turns on whether the acquired firm is a nascent competitive threat.[39]

2.6.B. Extending a Dominant Position into Another Market

The Agencies also examine the risk that a merger could enable the merged firm to extend a dominant position from one market into a related market, thereby substantially lessening competition or tending to create a monopoly in the related market. For example, the merger might lead the merged firm to leverage its position by tying, bundling, conditioning, or otherwise linking sales of two products. A merger may also raise barriers to entry or competition in the related market, or eliminate a nascent competitive threat, as described above. For example, prior to a merger, a related market may be characterized by scale economies but still experience moderate levels of competition. If the merged firm takes actions to induce customers of the dominant firm's product to also buy the related product from the merged firm, the merged firm may be able to gain dominance in the related market, which may be supported by increased barriers to entry or competition that result from the merger.

These concerns can arise notwithstanding that the acquiring firm already enjoys the benefits associated with its dominant position. The prospect of market power in the related market may strongly affect the merged firm's incentives in a way that does not align with the interests of its trading partners, both in terms of strategies that create dominance for the related product and in the form of reduced incentives to invest in its products or provide attractive terms for them after dominance is attained. In some cases, the merger may also further entrench the firm's original dominant position, for example if future competition requires the provision of both products.

* * *

If the merger raises concerns that its effect may be to entrench or extend a dominant position, then any claim that the merger also provides competitive benefits will be evaluated under the rebuttal framework in Section 3. For example, the framework of Section 3 would be used to evaluate claims that a merger would generate cost savings or quality improvements that would be passed through to make their products more competitive or would otherwise create incentives for the merged firm to offer better terms. The Agencies' analysis will consider the fact that the incentives to pass through benefits to customers or offer attractive terms are affected by competition and the extent to which entry barriers insulate the merged firm from effective competition. It will also consider whether any claimed benefits are specific to the merger, or whether they could be instead achieved through contracting or other means.

[39] *See id*. at 79 ("[I]t would be inimical to the purpose of the Sherman Act to allow monopolists free reign to squash nascent, albeit unproven, competitors at will. . . .").

2.7. Guideline 7: When an Industry Undergoes a Trend Toward Consolidation, the Agencies Consider Whether It Increases the Risk a Merger May Substantially Lessen Competition or Tend to Create a Monopoly.

The recent history and likely trajectory of an industry can be an important consideration when assessing whether a merger presents a threat to competition. The Supreme Court has explained that "a trend toward concentration in an industry, whatever its causes, is a highly relevant factor in deciding how substantial the anticompetitive effect of a merger may be."[40] It has also underscored that "Congress intended Section 7 to arrest anticompetitive tendencies in their incipiency.[41] The Agencies therefore examine whether a trend toward consolidation in an industry would heighten the competition concerns identified in Guidelines 1-6.

The Agencies therefore closely examine industry consolidation trends in applying the frameworks above. For example:

Trend Toward Concentration. If an industry has gone from having many competitors to becoming concentrated, it may suggest greater risk of harm, for example, because new entry may be less likely to replace or offset the lessening of competition the merger may cause. Among other implications, in the context of a trend toward concentration, the Agencies identify a stronger presumption of harm from undue concentration (see Guideline 1), and a greater risk of substantially lessening competition when a merger eliminates competition between the merging parties (see Guideline 2) or increases the risk of coordination (see Guideline 3).

Trend Toward Vertical Integration. The Agencies will generally consider evidence about the degree of integration between firms in the relevant and related markets and whether there is a trend toward further vertical integration. If a merger occurs amidst or furthers a trend toward vertical integration, the Agencies consider the implications for the competitive dynamics of the industry moving forward. For example, a trend toward vertical integration could magnify the concerns discussed in Guideline 5 by making entry at a single level more difficult and thereby preventing the emergence of new competitive threats over time.

Arms Race for Bargaining Leverage. The Agencies sometimes encounter mergers through which the merging parties would, by consolidating, gain bargaining leverage over other firms that they transact with. This can encourage those other firms to consolidate to obtain countervailing leverage, encouraging a cascade of further consolidation. This can ultimately lead to an industry where a few powerful firms have leverage against one another and market power over would-be entrants or over trading partners in various parts of the value chain. For example, distributors might merge to gain leverage against suppliers, who then merge to gain leverage against distributors, spurring a wave of mergers that lessen competition by increasing the market power of both. This can exacerbate the problems discussed in Guidelines 1-6, including by increasing barriers to single-level entry, encouraging coordination, and discouraging disruptive innovation.

---

[40] *United States v. Pabst Brewing*, 384 U.S. 546, 552-53 (1966).
[41] *Phila. Nat'l Bank*, 374 U.S. at 362 (quoting *Brown Shoe*, 370 U.S. at 317).

***Multiple Mergers*.** The Agencies sometimes see multiple mergers at once or in succession by different players in the same industry. In such cases, the Agencies may examine multiple deals in light of the combined trend toward concentration.

2.8. Guideline 8: When a Merger is Part of a Series of Multiple Acquisitions, the Agencies May Examine the Whole Series.

A firm that engages in an anticompetitive pattern or strategy of multiple acquisitions in the same or related business lines may violate Section 7.[42] In these situations, the Agencies may evaluate the series of acquisitions as part of an industry trend (see Guideline 7) or evaluate the overall pattern or strategy of serial acquisitions by the acquiring firm collectively under Guidelines 1-6.

In expanding antitrust law beyond the Sherman Act through passage of the Clayton Act, Congress intended "to permit intervention in a cumulative process when the effect of an acquisition may be a significant reduction in the vigor of competition, even though this effect may not be so far-reaching as to amount to a combination in restraint of trade, create a monopoly, or constitute an attempt to monopolize."[43] As the Supreme Court has recognized, a cumulative series of mergers can "convert an industry from one of intense competition among many enterprises to one in which three or four large [companies] produce the entire supply."[44] Accordingly, the Agencies will consider individual acquisitions in light of the cumulative effect of related patterns or business strategies.

The Agencies may examine a pattern or strategy of growth through acquisition by examining both the firm's history and current or future strategic incentives. Historical evidence focuses on the strategic approach taken by the firm to acquisitions (consummated or not), both in the markets at issue and in other markets, to reveal any overall strategic approach to serial acquisitions. Evidence of the firm's current incentives includes documents and testimony reflecting its plans and strategic incentives both for the individual acquisition and for its position in the industry more broadly. Where one or both of the merging parties has engaged in a pattern or strategy of pursuing consolidation through acquisition, the Agencies will examine the impact of the cumulative strategy under any of the other Guidelines to determine if that strategy may substantially lessen competition or tend to create a monopoly.

2.9. Guideline 9: When a Merger Involves a Multi-Sided Platform, the Agencies Examine Competition Between Platforms, on a Platform, or to Displace a Platform.

Platforms provide different products or services to two or more different groups or "sides" who may benefit from each other's participation. Mergers involving platforms can threaten competition, even when a platform merges with a firm that is neither a direct competitor nor in a traditional vertical relationship with the platform. When evaluating a merger involving a platform, the Agencies apply Guidelines 1-6 while accounting for market realities associated with platform competition. Specifically,

---

[42] Such strategies may also violate Section 2 of the Sherman Act and Section 5 of the FTC Act. Fed. Trade Comm'n, *Policy Statement Regarding the Scope of Unfair Methods of Competition Under Section 5 of the Federal Trade Commission Act*, at 12-14 & nn.73 & 82 (Nov. 10, 2022) (noting that "a series of . . . acquisitions . . . that tend to bring about the harms that the antitrust laws were designed to prevent" has been subject to liability under Section 5).
[43] H.R. Rep. No. 81-1191, at 8 (1949).
[44] *See Brown Shoe*, 370 U.S. at 334 (citing S. Rep. No. 81-1775, at 5 (1950); H.R. Rep. No. 81-1191, at 8 (1949)).

the Agencies consider competition *between* platforms, competition *on* a platform, and competition to *displace* the platform.

Multi-sided platforms generally have several attributes in common, though they can also vary in important ways. Some of these attributes include:

- Platforms have multiple sides. On each side of a platform, platform participants provide or use distinct products and services.[45] Participants can provide or use different types of products or services on each side.

- A platform operator provides the core services that enable the platform to connect participant groups across multiple sides. The platform operator controls other participants' access to the platform and can influence how interactions among platform participants play out.

- Each side of a platform includes platform participants. Their participation might be as simple as using the platform to find other participants, or as involved as building platform services that enable other participants to connect in new ways and allow new participants to join the platform.

- Network effects occur when platform participants contribute to the value of the platform for other participants and the operator. The value for groups of participants on one side may depend on the number of participants either on the same side (direct network effects) or on the other side(s) (indirect network effects).[46] Network effects can create a tendency toward concentration in platform industries. Indirect network effects can be asymmetric and heterogeneous; for example, one side of the market or segment of participants may place relatively greater value on the other side(s).

- A conflict of interest can arise when a platform operator is also a platform participant. The Agencies refer to a "conflict of interest" as the divergence that can arise between the operator's incentives to operate the platform as a forum for competition and its incentive to operate as a competitor on the platform itself. As discussed below, a conflict of interest sometimes exacerbates competitive concerns from mergers.

Consistent with the Clayton Act's protection of competition "in any line of commerce," the Agencies will seek to prohibit a merger that harms competition within a relevant market for any product or service offered on a platform to any group of participants—i.e., around one side of the platform (see Section 4.3).[47]

---

[45] For example, on 1990s operating-system platforms for personal computer (PC) software, software developers were on one side, PC manufacturers on another, and software purchasers on another.

[46] For example, 1990s PC manufacturers, software developers, and consumers all contributed to the value of the operating system platform for one another.

[47] In the limited scenario of a "special type of two-sided platform known as a 'transaction' platform," under Section 1 of the Sherman Act, a relevant market encompassing both sides of a two-sided platform may be warranted. *Ohio v. American Express Co.*, 138 S. Ct. 2274, 2280 (2018). This approach to Section 1 of the Sherman Act is limited to platforms with the "key feature . . . that they cannot make a sale to one side of the platform without simultaneously making a sale to the other." *Id.* Because "they cannot sell transaction services to [either user group] individually . . . transaction platforms are better understood as supplying only one product—transactions." *Id.* at 2286. This characteristic is not present for many types of two-sided or multi-sided platforms; in addition, many platforms offer simultaneous transactions as well as other products and services, and further they may bundle these products with access to transact on the platform or offer quantity discounts.

The Agencies protect competition *between* platforms by preventing the acquisition or exclusion of other platform operators that may substantially lessen competition or tend to create a monopoly. This scenario can arise from various types of mergers:

A. Mergers involving two platform operators eliminate the competition between them. In a market with a platform, entry or growth by smaller competing platforms can be particularly challenging because of network effects. A common strategy for smaller platforms is to specialize, providing distinctive features. Thus, dominant platforms can lessen competition and entrench their position by systematically acquiring firms competing with one or more sides of a multi-sided platform while they are in their infancy. The Agencies seek to stop these trends in their incipiency.

B. A platform operator may acquire a platform participant, which can entrench the operator's position by depriving rivals of participants and, in turn, depriving them of network effects. For example, acquiring a major seller on a platform may make it harder for rival platforms to recruit buyers. The long-run benefits to a platform operator of denying network effects to rival platforms create a powerful incentive to withhold or degrade those rivals' access to platform participants that the operator acquires. The more powerful the platform operator, the greater the threat to competition presented by mergers that may weaken rival operators or increase barriers to entry and expansion.

C. Acquisitions of firms that provide services that facilitate participation on multiple platforms can deprive rivals of platform participants. Many services can facilitate such participation, such as tools that help shoppers compare prices across platforms, applications that help sellers manage listings on multiple platforms, or software that helps users switch among platforms.

D. Mergers that involve firms that provide other important inputs to platform services can enable the platform operator to deny rivals the benefits of those inputs. For example, acquiring data that helps facilitate matching, sorting, or prediction services may enable the platform to weaken rival platforms by denying them that data.

The Agencies protect competition *on* a platform in any markets that interact with the platform. When a merger involves a platform operator and platform participants, the Agencies carefully examine whether the merger would create conflicts of interest that would harm competition. A platform operator that is also a platform participant may have a conflict of interest whereby it has an incentive to give its own products and services an advantage over other participants competing on the platform. Platform operators must often choose between making it easy for users to access their preferred products and directing those users to products that instead provide greater benefit to the platform operator. Merging with a firm that makes a product offered on the platform may change how the platform operator balances these competing interests. For example, the platform operator may find it is more profitable to give its own product greater prominence even if that product is inferior or is offered on worse terms after the merger—and even if some participants leave the platform as a result.[48] This can harm competition in

[48] However, few participants will leave if, for example, the switching costs are relatively high or if the advantaged product is a small component of the overall set of services those participants access on the platform. Moreover, in the long run few participants will leave if scale economies, network effects, or entry barriers enable the advantaged product to eventually gain market power of its own, with rivals of the advantaged product exiting or becoming less attractive. After these dynamics play

the product market for the advantaged product, where the harm to competition may be experienced both on the platform and in other channels.

The Agencies protect competition to *displace* the platform or any of its services. For example, new technologies or services may create an important opportunity for firms to replace one or more services the incumbent platform operator provides, shifting some participants to partially or fully meet their needs in different ways or through different channels. Similarly, a non-platform service can lessen dependence on the platform by providing an alternative to one or more functions provided by the platform operators. When platform owners are dominant, the Agencies seek to prevent even relatively small accretions of power from inhibiting the prospects for displacing the platform or for decreasing dependency on the platform.

In addition, a platform operator that advantages its own products that compete *on* the platform can lessen competition *between* platforms and to *displace* the platform, as the operator may both advantage its own product or service, and also deprive rival platforms of access to it, limiting those rivals' network effects.

2.10. Guideline 10: When a Merger Involves Competing Buyers, the Agencies Examine Whether It May Substantially Lessen Competition for Workers, Creators, Suppliers, or Other Providers.

A merger between competing buyers may harm sellers just as a merger between competing sellers may harm buyers.[49] The same—or analogous—tools used to assess the effects of a merger of sellers can be used to analyze the effects of a merger of buyers, including employers as buyers of labor. Firms can compete to attract contributions from a wide variety of workers, creators, suppliers, and service providers. The Agencies protect this competition in all its forms.

A merger of competing buyers can substantially lessen competition by eliminating the competition between the merging buyers or by increasing coordination among the remaining buyers. It can likewise lead to undue concentration among buyers or entrench or extend the position of a dominant buyer. Competition among buyers can have a variety of beneficial effects analogous to competition among sellers. For example, buyers may compete by raising the payments offered to suppliers, by expanding supply networks, through transparent and predictable contracting, procurement, and payment practices, or by investing in technology that reduces frictions for suppliers. In contrast, a reduction in competition among buyers can lead to artificially suppressed input prices or purchase volume, which in turn reduces incentives for suppliers to invest in capacity or innovation. Labor markets are important buyer markets. The same general concerns as in other markets apply to labor markets where employers are the buyers of labor and workers are the sellers. The Agencies will consider whether workers face a risk that the merger may substantially lessen competition for their labor.[50] Where a merger between

---

out, the platform operator could advantage its own products without losing as many participants, as there would be fewer alternative products available through other channels.

[49] *See, e.g.*, *Mandeville Island Farms, Inc. v. Am. Crystal Sugar Co.*, 334 U.S. 219, 235-36 (1948) ("The [Sherman Act] does not confine its protection to consumers, or to purchasers, or to competitors, or to sellers. . . . The Act is comprehensive in its terms and coverage, protecting all who are made victims of the forbidden practices by whomever they may be perpetrated.").
[50] *See, e.g.*, *Alston*, 141 S. Ct. 2141 (applying the Sherman Act to protect workers from an employer-side agreement to limit compensation).

employers may substantially lessen competition for workers, that reduction in labor market competition may lower wages or slow wage growth, worsen benefits or working conditions, or result in other degradations of workplace quality.[51] When assessing the degree to which the merging firms compete for labor, evidence that a merger may have any one or more of these effects can demonstrate that substantial competition exists between the merging firms.

Labor markets frequently have characteristics that can exacerbate the competitive effects of a merger between competing employers. For example, labor markets often exhibit high switching costs and search frictions due to the process of finding, applying, interviewing for, and acclimating to a new job. Switching costs can also arise from investments specific to a type of job or a particular geographic location. Moreover, the individual needs of workers may limit the geographical and work scope of the jobs that are competitive substitutes.

In addition, finding a job requires the worker and the employer to agree to the match. Even within a given salary and skill range, employers often have specific demands for the experience, skills, availability, and other attributes they desire in their employees. At the same time, workers may seek not only a paycheck but also work that they value in a workplace that matches their own preferences, as different workers may value the same aspects of a job differently. This matching process often narrows the range of rivals competing for any given employee. The level of concentration at which competition concerns arise may be lower in labor markets than in product markets, given the unique features of certain labor markets. In light of their characteristics, labor markets can be relatively narrow.

The features of labor markets may in some cases put firms in dominant positions. To assess this dominance in labor markets (see Guideline 6), the Agencies often examine the merging firms' power to cut or freeze wages, slow wage growth, exercise increased leverage in negotiations with workers, or generally degrade benefits and working conditions without prompting workers to quit.

If the merger may substantially lessen competition or tend to create a monopoly in upstream markets, that loss of competition is not offset by purported benefits in a separate downstream product market. Because the Clayton Act prohibits mergers that may substantially lessen competition or tend to create a monopoly in *any* line of commerce and in *any* section of the country, a merger's harm to competition among buyers is not saved by benefits to competition among sellers. That is, a merger can substantially lessen competition in one or more buyer markets, seller markets, or both, and the Clayton Act protects competition in any one of them.[52] If the parties claim any benefits to competition in a relevant buyer market, the Agencies will assess those claims using the frameworks in Section 3.

Just as they do when analyzing competition in the markets for products and services, the Agencies will analyze labor market competition on a case-by-case basis.

[51] A decrease in wages is understood as relative to what would have occurred in the absence of the transaction; in many cases, a transaction will not reduce wage levels, but rather slow wage growth. Wages encompass all aspects of pecuniary compensation, including benefits. Job quality encompasses non-pecuniary aspects that workers value, such as working conditions and terms of employment.

[52] Often, mergers that harm competition among buyers also harm competition among sellers as a result. For example, when a monopsonist lowers purchase prices by decreasing input purchases, they will generally decrease sales in downstream markets as well. (See Section 4.2.D)

2.11. Guideline 11: When an Acquisition Involves Partial Ownership or Minority Interests, the Agencies Examine Its Impact on Competition.

In many acquisitions, two companies come under common control. In some situations, however, the acquisition of less-than-full control may still influence decision-making at the target firm or another firm in ways that may substantially lessen competition. Acquisitions of partial ownership or other minority interests may give the investor rights in the target firm, such as rights to appoint board members, observe board meetings, influence the firm's ability to raise capital, impact operational decisions, or access competitively sensitive information. The Agencies have concerns with both cross-ownership, which refers to holding a non-controlling interest in a competitor, as well as common ownership, which occurs when individual investors hold non-controlling interests in firms that have a competitive relationship that could be affected by those joint holdings.

Partial acquisitions that do not result in control may nevertheless present significant competitive concerns. The acquisition of a minority position may permit influence of the target firm, implicate strategic decisions of the acquirer with respect to its investment in other firms, or change incentives so as to otherwise dampen competition. The post-acquisition relationship between the parties and the independent incentives of the parties outside the acquisition may be important in determining whether the partial acquisition may substantially lessen competition. Such partial acquisitions are subject to the same legal standard as any other acquisition.[53]

The Agencies recognize that cross-ownership and common ownership can reduce competition by softening firms' incentives to compete, even absent any specific anticompetitive act or intent. While the Agencies will consider any way in which a partial acquisition may affect competition, they generally focus on three principal effects:

First, a partial acquisition can lessen competition by giving the partial owner the ability to influence the competitive conduct of the target firm.[54] For example, a voting interest in the target firm or specific governance rights, such as the right to appoint members to the board of directors, influence capital budgets, determine investment return thresholds, or select particular managers, can create such influence. Additionally, a nonvoting interest may, in some instances, provide opportunities to prevent, delay, or discourage important competitive initiatives, or otherwise impact competitive decision making. Such influence can lessen competition because the partial owner could use its influence to induce the target firm to compete less aggressively or to coordinate its conduct with that of the acquiring firm.

Second, a partial acquisition can lessen competition by reducing the incentive of the acquiring firm to compete.[55] Acquiring a minority position in a rival might blunt the incentive of the partial owner to compete aggressively because it may profit through dividend or other revenue share even when it loses business to the rival. For example, the partial owner may decide not to develop a new product feature to win market share from the firm in which it has acquired an interest, because doing so will

---

[53] *See United States v. E. I. du Pont de Nemours & Co.*, 353 U.S. 586, 592 (1957) ("[A]ny acquisition by one corporation of all or any part of the stock of another corporation, competitor or not, is within the reach of [Section 7 of the Clayton Act] whenever the reasonable likelihood appears that the acquisition will result in a restraint of commerce or in the creation of a monopoly of any line of commerce.").

[54] *See United States v. Dairy Farmers of Am., Inc.*, 426 F.3d 850, 860-61 (6th Cir. 2005).

[55] *See Denver & Rio Grande v. United States*, 387 U.S. 485, 504 (1967) (identifying Section 7 concerns with a 20% investment).

reduce the value of its investment in its rival. This reduction in the incentive of the acquiring firm to compete arises even when it cannot directly influence the conduct or decision making of the target firm.

Third, a partial acquisition can lessen competition by giving the acquiring firm access to non-public, competitively sensitive information from the target firm. Even absent any ability to influence the conduct of the target firm, access to competitively sensitive information can substantially lessen competition through other mechanisms. For example, it can enhance the ability of the target and the partial owner to coordinate their behavior and make other accommodating responses faster and more targeted. The risk of coordinated effects is greater if the transaction also facilitates the flow of competitively sensitive information from the investor to the target firm. Even if coordination does not occur, the partial owner may use that information to preempt or appropriate a rival's competitive business strategies for its own benefit. If rivals know their efforts to win trading partners can be immediately appropriated, they may see less value in taking competitive actions in the first place, resulting in a lessening of competition.

* * *

The analyses above address common scenarios that the Agencies use to assess the risk that a merger may substantially lessen competition or tend to create a monopoly. However, they are not exhaustive. The Agencies have in the past encountered mergers that lessen competition through mechanisms not covered above. For example:

A. A merger that would enable firms to avoid a regulatory constraint because that constraint was applicable to only one of the merging firms;

B. A merger that would enable firms to exploit a unique procurement process that favors the bids of a particular competitor who would be acquired in the merger; or

C. In a concentrated market, a merger that would dampen the acquired firm's incentive or ability to compete due to the structure of the acquisition or the acquirer.

As these scenarios and these Guidelines indicate, a wide range of evidence can show that a merger may lessen competition or tend to create a monopoly. Whatever the sources of evidence, the Agencies look to the facts and the law in each case.

Whatever frameworks the Agencies use to identify that a merger may substantially lessen competition or tend to create a monopoly, they also examine rebuttal evidence under the framework in Section 3.

3. Rebuttal Evidence Showing that No Substantial Lessening of Competition is Threatened by the Merger

The Agencies may assess whether a merger may substantially lessen competition or tend to create a monopoly based on a fact-specific analysis under any one or more of the Guidelines discussed above.[56] The Supreme Court has determined that analysis should consider "other pertinent factors" that may "mandate[] a conclusion that no substantial lessening of competition [is] threatened by the acquisition."[57] The factors pertinent to rebuttal depend on the nature of the threat to competition or tendency to create a monopoly resulting from the merger.

Several common types of rebuttal and defense evidence are subject to legal tests established by the courts. The Agencies apply those tests consistent with prevailing law, as described below.

3.1. Failing Firms

When merging parties suggest the weak or weakening financial position of one of the merging parties will prevent a lessening of competition, the Agencies examine that evidence under the "failing firm" defense established by the Supreme Court. This defense applies when the assets to be acquired would imminently cease playing a competitive role in the market even absent the merger.

As set forth by the Supreme Court, the failing firm defense has three requirements:

A. "[T]he evidence show[s] that the [failing firm] face[s] the grave probability of a business failure."[58] The Agencies typically look for evidence in support of this element that the allegedly failing firm would be unable to meet its financial obligations in the near future. Declining sales and/or net losses, standing alone, are insufficient to show this requirement.

B. "The prospects of reorganization of [the failing firm are] dim or nonexistent."[59] The Agencies typically look for evidence suggesting that the failing firm would be unable to reorganize successfully under Chapter 11 of the Bankruptcy Act, taking into account that "companies reorganized through receivership, or through [the Bankruptcy Act] often emerge[] as strong competitive companies."[60] Evidence of the firm's actual attempts to resolve its debt with creditors is important.

C. "[T]he company that acquires the failing [firm] or brings it under dominion is the only available purchaser."[61] The Agencies typically look for evidence that a company has made unsuccessful good-faith efforts to elicit reasonable alternative offers that pose a less severe danger to competition than does the proposed merger.[62]

---

[56] *See United States v. AT&T, Inc.*, 916 F.3d at 1032.
[57] *See United States v. Gen. Dynamics Corp.*, 415 U.S. 486, 498 (1974); *Baker Hughes*, 908 F.2d at 990 (quoting *General Dynamics* and describing its holding as permitting rebuttal based on a "finding that 'no substantial lessening of competition occurred or was threatened by the acquisition'").
[58] *Citizen Publ'g Co. v. United States*, 394 U.S. 131, 138 (1969).
[59] *Id.*
[60] *Id.*
[61] *Id.* at 136-39 (quoting *Int'l Shoe Co. v. FTC*, 280 U.S. 291, 302 (1930)).
[62] Any offer to purchase the assets of the failing firm for a price above the liquidation value of those assets will be regarded as a reasonable alternative offer. Parties must solicit reasonable alternative offers before claiming that the business is failing.

Although merging parties sometimes argue that a poor or weakening position should serve as a defense even when it does not meet these elements, the Supreme Court has "confine[d] the failing company doctrine to its present narrow scope."[63] The Agencies evaluate evidence of a failing firm consistent with this prevailing law.[64]

3.2. Entry and Repositioning

Merging parties sometimes raise a rebuttal argument that a reduction in competition resulting from the merger would induce entry or repositioning[65] into the relevant market, preventing the merger from substantially lessening competition or tending to create a monopoly in the first place. This argument posits that a merger may, by substantially lessening competition, make the market more profitable for the merged firm and any remaining competitors, and that this increased profitability may induce new entry. To evaluate this rebuttal evidence, the Agencies assess whether entry induced by the merger would be "timely, likely, and sufficient in its magnitude, character, and scope to deter or counteract the competitive effects of concern."[66]

Timeliness. To show that no substantial lessening of competition is threatened by a merger, entry must be rapid enough to replace lost competition before any effect from the loss of competition due to the merger may occur. Entry in most industries takes a significant amount of time and is therefore insufficient to counteract any substantial lessening of competition that is threatened by a merger. Moreover, the entry must be durable: an entrant that does not plan to sustain its investment or that may exit the market would not ensure long-term preservation of competition.

Likelihood. Entry induced by lost competition must be so likely that no substantial lessening of competition is threatened by the merger. Firms make entry decisions based on the market conditions they expect once they participate in the market. If the new entry is sufficient to counteract the merger's effect on competition, the Agencies analyze why the merger would induce entry that was not planned in pre-merger competitive conditions.

The Agencies also assess whether the merger may increase entry barriers. For example, the merging firms may have a greater ability to discourage or block new entry when combined than they would have as separate firms. Mergers may enable or incentivize unilateral or coordinated exclusionary

---

Liquidation value is the highest value the assets could command outside the market. If a reasonable alternative offer was rejected, the parties cannot claim that the business is failing.

[63] *Citizen Publ'g*, 394 U.S. at 139.

[64] The Agencies do not normally credit claims that the assets of a division would exit the relevant market in the near future unless: (1) applying cost allocation rules that reflect true economic costs, the division has a persistently negative cash flow on an operating basis, and such negative cash flow is not economically justified for the firm by benefits such as added sales in complementary markets or enhanced customer goodwill; and (2) the owner of the failing division has made unsuccessful good-faith efforts to elicit reasonable alternative offers that would keep its assets in the relevant market and pose a less severe danger to competition than does the proposed acquisition. Because firms can allocate costs, revenues, and intra-company transactions among their subsidiaries and divisions, the Agencies require evidence that is not solely based on management plans that could have been prepared for the purpose of demonstrating negative cash flow or the prospect of exit from the relevant market.

[65] Repositioning is a supply-side response that is evaluated like entry. If repositioning requires movement of assets from other markets, the Agencies will consider the costs and competitive effects of doing so. Repositioning that would reduce competition in the markets from which products or services are moved is not a cognizable rebuttal for a lessening of competition in the relevant market.

[66] *FTC v. Sanford Health*, 926 F.3d 959, 965 (8th Cir. 2019).

strategies that make entry more difficult. Entry can be particularly challenging when a firm must enter at multiple levels of the market at sufficient scale to compete effectively.

Sufficiency. Even where timely and likely, the prospect of entry may not effectively prevent a merger from threatening a substantial lessening of competition. Entry may be insufficient due to a wide variety of constraints that limit an entrant's effectiveness as a competitor. Entry must at least replicate the scale, strength, and durability of one of the merging parties to be considered sufficient. The Agencies typically do not credit entry that depends on lessening competition in other markets.

As part of their analysis, the Agencies will consider the economic realities at play. For example, lack of successful entry in the past will likely suggest that entry may be slow or difficult. Recent examples of entry, whether successful or unsuccessful, provide the starting point for identifying the elements of practical entry barriers and the features of the industry that facilitate or interfere with entry. The Agencies will also consider whether the parties' entry arguments are consistent with the rationale for the merger or imply that the merger itself would be unprofitable.

3.3. Procompetitive Efficiencies

The Supreme Court has held that "possible economies [from a merger] cannot be used as a defense to illegality."[67] Competition usually spurs firms to achieve efficiencies internally, and firms also often work together using contracts short of a merger to combine complementary assets without the full anticompetitive consequences of a merger.

Merging parties sometimes raise a rebuttal argument that, notwithstanding other evidence that competition may be lessened, evidence of procompetitive efficiencies shows that no substantial lessening of competition is in fact threatened by the merger. This argument asserts that the merger would not substantially lessen competition in any relevant market in the first place.[68] When assessing this argument, the Agencies will not credit vague or speculative claims, nor will they credit benefits outside the relevant market that would not prevent a lessening of competition in the relevant market. Rather, the Agencies examine whether the evidence[69] presented by the merging parties shows each of the following:

Merger Specificity. The merger will produce substantial competitive benefits that could not be achieved without the merger under review.[70] Alternative ways of achieving the claimed benefits are considered in making this determination. Alternative arrangements could include organic growth of one of the merging firms, contracts between them, mergers with others, or a partial merger involving only those assets that give rise to the procompetitive efficiencies.

---

[67] *Phila. Nat'l Bank*, 374 U.S. at 371; *Procter & Gamble Co.*, 386 U.S. at 580 ("Congress was aware that some mergers which lessen competition may also result in economies but it struck the balance in favor of protecting competition.").

[68] *United States v. Anthem*, 855 F.3d 345, 353-55 (D.C. Cir. 2017) (although efficiencies not a "defense" to antitrust liability, evidence sometimes used "to rebut a prima facie case"); *Saint Alphonsus Medical Center-Nampa*, 778 F.3d at 791 ("The Clayton Act focuses on competition, and the claimed efficiencies therefore must show that the prediction of anticompetitive effects from the prima facie case is inaccurate.").

[69] In general, evidence related to efficiencies developed prior to the merger challenge is much more probative than evidence developed during the Agencies' investigation or litigation.

[70] If inter-firm collaborations are achievable by contract, they are not merger specific. The Agencies will credit the merger specificity of efficiencies only in the presence of evidence that a contract to achieve the asserted efficiencies would not be practical. *See Anthem*, 855 F.3d at 357.

Verifiability. These benefits are verifiable, and have been verified, using reliable methodology and evidence not dependent on the subjective predictions of the merging parties or their agents. Procompetitive efficiencies are often speculative and difficult to verify and quantify, and efficiencies projected by the merging firms often are not realized. If reliable methodology for verifying efficiencies does not exist or is otherwise not presented by the merging parties, the Agencies are unable to credit those efficiencies.

Prevents a Reduction in Competition. To the extent efficiencies merely benefit the merging firms, they are not cognizable. The merging parties must demonstrate through credible evidence that, within a short period of time, the benefits will prevent the risk of a substantial lessening of competition in the relevant market.

Not Anticompetitive. Any benefits claimed by the merging parties are cognizable only if they do not result from the anticompetitive worsening of terms for the merged firm's trading partners.[71]

Procompetitive efficiencies that satisfy each of these criteria are called cognizable efficiencies. To successfully rebut evidence that a merger may substantially lessen competition, cognizable efficiencies must be of a nature, magnitude, and likelihood that no substantial lessening of competition is threatened by the merger in any relevant market. Cognizable efficiencies that would not prevent the creation of a monopoly cannot justify a merger that may tend to create a monopoly.

[71] The Agencies will not credit efficiencies if they reflect or require a decrease in competition in a separate market. For example, if input costs are expected to decrease, the cost savings will not be treated as an efficiency if they reflect an increase in monopsony power.

4. Analytical, Economic, and Evidentiary Tools

The analytical, economic, and evidentiary tools that follow can be applicable to many parts of the Agencies' evaluation of a merger as they apply the factors and frameworks discussed in Sections 2 and 3.

4.1. Sources of Evidence

This subsection describes the most common sources of evidence the Agencies draw on in a merger investigation. The evidence the Agencies rely upon to evaluate whether a merger *may* substantially lessen competition or tend to create a monopoly is weighed based on its probative value. In assessing the available evidence, the Agencies consider documents, testimony, available data, and analysis of those data, including credible econometric analysis and economic modeling.

Merging Parties. The Agencies often obtain substantial information from the merging parties, including documents, testimony, and data. Across all of these categories, evidence created in the normal course of business is more probative than evidence created after the company began anticipating a merger review. Similarly, the Agencies give less weight to predictions by the parties or their employees, whether in the ordinary course of business or in anticipation of litigation, offered to allay competition concerns. Where the testimony of outcome-interested merging party employees contradicts ordinary course business records, the Agencies typically give greater weight to the business records.

Evidence that the merging parties intend or expect the merger to lessen competition, such as plans to coordinate with other firms, raise prices, reduce output or capacity, reduce product quality or variety, lower wages, cut benefits, exit a market, cancel plans to enter a market without a merger, withdraw products or delay their introduction, or curtail research and development efforts after the merger, can be highly informative in evaluating the effects of a merger on competition. The Agencies give little weight, however, to the lack of such evidence or the expressed contrary intent of the merging parties.

Customers, Workers, Industry Participants, and Observers. Customers can provide a variety of information to the Agencies, ranging from information about their own purchasing behavior and choices to their views about the effects of the merger itself. The Agencies consider the relationship between customers and the merging parties in weighing customer evidence. The ongoing business relationship between a customer and a merging party may discourage the customer from providing evidence inconsistent with the interests of the merging parties.

Workers and representatives from labor organizations can provide information regarding, among other things, wages, non-wage compensation, working conditions, the individualized needs of workers in the market in question, the frictions involved in changing jobs, and the industry in which they work.

Similarly, other suppliers, indirect customers, distributors, consultants, and industry analysts can also provide information helpful to a merger inquiry. As with other interested parties, the Agencies give less weight to evidence created in anticipation of a merger investigation and more weight to evidence developed in the ordinary course of business.

Market Effects in Consummated Mergers. Evidence of observed post-merger price increases or worsened terms is given substantial weight. A consummated merger, however, may substantially lessen competition even if such effects have not yet been observed, perhaps because the merged firm may be aware of the possibility of post-merger antitrust review and is therefore moderating its conduct.

Consequently, in evaluating consummated mergers, the Agencies also consider the same types of evidence when evaluating proposed mergers.

Econometric Analysis and Economic Modeling. Econometric analysis of data and other types of economic modeling can be informative in evaluating the potential effects of a merger on competition. The Agencies give more weight to analysis using high quality data and adhering to rigorous standards. But the Agencies also take into account that in some cases, the availability or quality of data or reliable modeling techniques might limit the availability and relevance of econometric modeling. When data is available, the Agencies recognize that the goal of economic modeling is not to create a perfect representation of reality, but rather to inform an assessment of the likely change in firm incentives resulting from a merger.

Transaction Terms. The financial terms of the transaction may also be informative regarding a merger's impact on competition. For example, a purchase price that exceeds the acquired firm's stand-alone market value can sometimes indicate that the acquiring firm is paying a premium because it expects to be able to benefit from reduced competition.

4.2. Evaluating Competition Among Firms

This subsection discusses evidence and tools the Agencies look to when assessing competition among firms. The evidence and tools in this section can be relevant to a variety of settings, for example: to assess competition between rival firms (Guideline 2); the ability and incentive to limit access to a product rivals use to compete (Guideline 5); or for market definition (Section 4.3), for example when carrying out the Hypothetical Monopolist Test (Section 4.3.A).

For clarity, the discussion in this subsection often focuses on competition between two suppliers of substitute products that set prices. Analogous analytic tools may also be relevant in more general settings, for example when considering: competition among more than two suppliers; competition among buyers or employers to procure inputs and labor; competition that derives from customer willingness to buy in different locations; and competition that takes place in dimensions other than price or when terms are determined through, for example, negotiations or auctions.

Guideline 2 describes how different types of evidence can be used in assessing the potential harm to competition from a merger; some portions of Guideline 2 that are relevant in other settings are repeated below.

4.2.A. Generally Applicable Considerations

The Agencies may consider one or more of the following types of evidence, tools, and metrics when assessing the degree of competition among firms:

Strategic Deliberations or Decisions. The Agencies may analyze the extent of competition among firms, for example between the merging firms, by examining evidence of their strategic deliberations or decisions in the regular course of business. For example, in some markets, the firms may monitor each other's pricing, marketing campaigns, facility locations, improvements, products, capacity, output, input costs, and/or innovation plans. This can provide evidence of competition between the merging firms, especially when they react by taking steps to preserve or enhance the competitiveness or profitability of their own products or services.

Prior Merger, Entry, and Exit Events. The Agencies may look to historical events to assess the presence and substantiality of direct competition between the merging firms. For example, the Agencies may examine the impact of recent relevant mergers, entry, expansion, or exit events on the merging parties or their competitive behavior.

Customer Substitution. Customers' willingness to switch between different firms' products is an important part of the competitive process. Firms are closer competitors the more that customers are willing to switch between their products, for example because they are more similar in quality, price, or other characteristics.

Evidence commonly analyzed to show the extent of substitution among firms' products includes: how customers have shifted purchases in the past in response to relative changes in price or other terms and conditions; documentary and testimonial evidence such as win/loss reports, evidence from discount approval processes, switching data, customer surveys, as well as information from suppliers of complementary products and distributors; objective information about product characteristics; and market realities affecting the ability of customers to switch.

Impact of Competitive Actions on Rivals. When one firm takes competitive actions to attract customers, this can benefit the firm at the expense of its rivals. The Agencies may gauge the extent of competition among firms by considering the impact that competitive actions by one firm have on the others. The impact of a firm's competitive actions on a rival generally depends on how many sales a rival would lose as a result of the competitive actions, as well as the profitability of those lost sales. The Agencies may use margins to measure the profitability of the sale a rival would have made.[72]

Impact of Eliminating Competition Between the Firms. In some instances, evidence may be available to assess the impact of competition from one or more firms on the other firms' actions, such as firm choices about price, quality, wages, or another dimension of competition. This can be gauged by comparing the two firms' actions when they compete and make strategic choices independently against the actions the firms might choose if they acted jointly. Actual or predicted changes in these results of competition, when available, can indicate the degree of competition between the firms.

To make this type of comparison, the Agencies sometimes rely on economic models. Often, such models consider the firms' incentives to change their actions in one or more selected dimensions, such as price, in a somewhat simplified scenario. For example, a model might focus on the firms' short-run incentives to change price, while abstracting from a variety of additional competitive forces and dimensions of competition, such as the potential for firms to reposition their products or for the merging firms to coordinate with other firms. Such a model may incorporate data and evidence in order to produce quantitative estimates of the impact of the merger on firm incentives and corresponding choices. This type of exercise is sometimes referred to by economists as "merger simulation" despite the fact that the hypothetical setting considers only selected aspects of the loss of competition from a merger. The Agencies use such models to give an indication of the scale and importance of competition, not to precisely predict outcomes.

---

[72] The margin on incremental units is the difference between incremental revenue (often equal to price) and incremental cost on those units. The Agencies may use accounting data to measure incremental costs, but they do not necessarily rely on accounting margins recorded by firms in the ordinary course of business because such margins often do not align with the concept of incremental cost that is relevant in economic analysis of a merger.

4.2.B. Considerations When Terms Are Set by Firms

The Agencies may use various types of evidence and metrics to assess the strength of competition among firms that set terms to their customers. Firms might offer the same terms to different customers or different terms to different groups of customers.

Competition in this setting can lead firms to set lower prices or offer more attractive terms when they act independently than they would in a setting where that competition was eliminated by a merger. When considering the impact of competition on the incentives to set price, to the extent price increases on one firm's products would lead customers to switch to products from another firm, their merger will enable the merged firm to profit by unilaterally raising the price of one or both products above the pre-merger level. Some of the sales lost because of the price increase will be diverted to the products of the other firm, and capturing the value of these diverted sales can make the price increase profitable even though it would not have been profitable prior to the merger.

A measure of customer substitution between firms in this setting is the diversion ratio. The diversion ratio from one product to another is a metric of how customers likely would substitute between them. The diversion ratio is the fraction of unit sales lost by the first product due to a change in terms, such as an increase in its price, that would be diverted to the second product. The higher the diversion ratio between two products made by different firms, the stronger the competition between them.

A high diversion ratio between the products owned by two firms can indicate strong competition between them even if the diversion ratio to another firm is higher. The diversion ratio from one of the products of one firm to a group of products made by other firms, defined analogously, is sometimes referred to as the aggregate diversion ratio or the recapture rate.

A measure of the impact on rivals of competitive actions is the value of diverted sales from a price increase. The value of sales diverted from one firm to a second firm, when the first firm raises its price on one of its products, is equal to the number of units that would be diverted from the first firm to the second, multiplied by the difference between the second firm's price and the incremental cost of the diverted sales. To interpret the magnitude of the value of diverted sales, the Agencies may use as a basis of comparison either the incremental cost to the second firm of making the diverted sales, or the revenues lost by the first firm as a result of the price increase. The ratio of the value of diverted sales to the revenues lost by the first firm can be an indicator of the upward pricing pressure that would result from the loss of competition between the two firms. Analogous concepts can be applied to analyze the impact on rivals of worsening terms other than price.

4.2.C. Considerations When Terms Are Set Through Bargaining or Auctions

In some industries, buyers and sellers negotiate prices and other terms of trade. In bargaining, buyers commonly negotiate with more than one seller and may play competing sellers off against one another. In other industries, sellers might sell their products, or buyers might procure inputs, using an auction. Negotiations may involve aspects of an auction as well as aspects of one-on-one negotiation. Competition among sellers can significantly enhance the ability of a buyer to obtain a result more favorable to it, and less favorable to the sellers, compared to a situation where the elimination of competition through a merger prevents buyers from playing those sellers off against each other in negotiations.

Sellers may compete even when a customer does not directly play their offers against each other. The attractiveness of alternative options influences the importance of reaching an agreement to the negotiating parties and thus the terms of the agreement. A party that has many attractive alternative trading partners places less importance on reaching an agreement with any one particular trading partner than a party with few attractive alternatives. As alternatives for one party are eliminated (such as through a merger), the trading partner gains additional bargaining leverage reflecting that loss of competition. A merger between sellers may lessen competition even if the merged firm handles negotiations for the merging firms' products separately.

Thus, qualitative or quantitative evidence about the leverage provided to buyers by competing suppliers may be used to assess the extent of competition among firms in this setting. Analogous evidence may be used when analyzing a setting where terms are set using auctions, for example, procurement auctions where suppliers bid to serve a buyer. If, for some categories of procurements, certain suppliers are often among the most attractive to the buyer, competition among that group of suppliers is likely to be strong.

Firms sometimes keep records of the progress and outcome of individual sales efforts, and the Agencies may use these data to generate measures of the extent to which customers would likely substitute between the two firms. Examples of such measures might include a diversion ratio based on the rate at which customers would buy from one firm if the other one was not available, or the frequency with which the two firms bid on contracts with the same customer.

4.2.D. Considerations When Firms Determine Capacity and Output

In some markets, the choice of how much to produce (output decisions) or how much productive capacity to maintain (capacity decisions) are key strategic variables. When a firm decreases output, it may lose sales to rivals, but also drive up prices. Because a merged firm will account for the impact of higher prices across all of the merged firms' sales, it may have an incentive to decrease output as a result of the merger. The loss of competition through a merger of two firms may lead the merged firm to leave capacity idle, refrain from building or obtaining capacity that would have been obtained absent the merger, lay off or stop hiring workers, or eliminate pre-existing production capabilities. A firm may also divert the use of capacity away from one relevant market and into another market so as to raise the price in the former market. The analysis of the extent to which firms compete may differ depending on how a merger between them might create incentives to suppress output.

Competition between merging firms is greater when (1) the merging firms' market shares are relatively high; (2) the merging firms' products are relatively undifferentiated from each other; (3) the market elasticity of demand is relatively low; (4) the margin on the suppressed output is relatively low; and (5) the supply responses of non-merging rivals are relatively small. Qualitative or quantitative evidence may be used to evaluate and weigh each of these factors.

In some cases, competition between firms—including one firm with a substantial share of the sales in the market and another with significant excess capacity to serve that market—can prevent an output suppression strategy from being profitable. This can occur even if the firm with the excess capacity has a relatively small share of sales, as long as that firm's ability to expand, and thus keep prices from rising, makes an output suppression strategy unprofitable for the firm with the larger market share.

4.2.E. Considerations for Innovation and Product Variety Competition

Firms can compete for customers by offering varied and innovative products and features, which could range from minor improvements to the introduction of a new product category. Features can include new or different product attributes, services offered along with a product, or higher-quality services standing alone. Customers value the variety of products or services that competition generates, including having a variety of locations at which they can shop.

Offering the best mix of products and features is an important dimension of competition that may be harmed as a result of the elimination of competition between the merging parties.

When a firm introduces a new product or improves a product's features, some of the sales it gains may be at the expense of its rivals, including rivals that are competing to develop similar products and features. As a result, competition between firms may lead them to make greater efforts to offer a variety of products and features than would be the case if the firms were jointly owned, for example, if they merged. The merged firm may have a reduced incentive to continue or initiate development of new products that would have competed with the other merging party, but post-merger would "cannibalize" what would be its own sales.[73] A service provider may have a reduced incentive to continue valuable upgrades offered by the acquired firm. The merged firm may have a reduced incentive to engage in disruptive innovation that would threaten the business of one of the merging firms. Or it may have the incentive to change its product mix, such as by ceasing to offer one of the merging firms' products, leaving worse off the customers who previously chose the product that was eliminated. For example, competition may be harmed when customers with a preference for a low-price option lose access to it, even if remaining products have higher quality.

The incentives to compete aggressively on innovation and product variety depend on the capabilities of the firms and on customer reactions to the new offerings. Development of new features depends on having the appropriate expertise and resources. Where firms are two of a small number of companies with specialized employees, development facilities, intellectual property, or research projects in a particular area, competition between them will have a greater impact on their incentives to innovate.

Innovation may be directed at outcomes beyond product features; for example, innovation may be directed at reducing costs or adopting new technology for the distribution of products.

4.3. Market Definition

The Clayton Act protects competition "in any line of commerce in any section of the country."[74] The Agencies engage in a market definition inquiry in order to identify whether there is any line of commerce or section of the country in which the merger may substantially lessen competition or tend to create a monopoly. The Agencies identify the "area of effective competition" in which competition may be lessened "with reference to a product market (the 'line of commerce') and a geographic market (the 'section of the country.')."[75] The Agencies refer to the process of identifying market(s) protected by the Clayton Act as a "market definition" exercise and the markets so defined as "relevant antitrust markets,"

---

[73] Sales "cannibalization" refers to a situation where customers of a firm substitute away from one of the firm's products to another product offered by the same firm.
[74] 15 U.S.C. § 18.
[75] *Brown Shoe*, 370 U.S. at 324.

or simply "relevant markets." Market definition can also allow the Agencies to identify market participants and measure market shares and market concentration.

A relevant antitrust market is an area of effective competition, comprising both product (or service) and geographic elements. The outer boundaries of a relevant product market are determined by the "reasonable interchangeability of use or the cross-elasticity of demand between the product itself and substitutes for it."[76] Within a broad relevant market, however, effective competition often occurs in numerous narrower relevant markets.[77] Market definition ensures that relevant antitrust markets are sufficiently broad, but it does not always lead to a single relevant market. Section 7 of the Clayton Act prohibits any merger that may substantially lessen competition "in any line of commerce" and in "any section of the country," and the Agencies protect competition by challenging a merger that may lessen competition in any one or more relevant markets.

Market participants often encounter a range of possible substitutes for the products of the merging firms. However, a relevant market cannot meaningfully encompass that infinite range of substitutes.[78] There may be effective competition among a narrow group of products, and the loss of that competition may be harmful, making the narrow group a relevant market, even if competitive constraints from significant substitutes are outside the group. The loss of both the competition between the narrow group of products and the significant substitutes outside that group may be even more harmful, but that does not prevent the narrow group from being a market in its own right.

Relevant markets need not have precise metes and bounds. Some substitutes may be closer, and others more distant, and defining a market necessarily requires including some substitutes and excluding others. Defining a relevant market sometimes requires a line-drawing exercise around product features, such as size, quality, distances, customer segment, or prices. There can be many places to draw that line and properly define a relevant market. The Agencies recognize that such scenarios are common, and indeed "fuzziness would seem inherent in any attempt to delineate the relevant . . . market."[79] Market participants may use the term "market" colloquially to refer to a broader or different set of products than those that would be needed to constitute a valid relevant antitrust market.

The Agencies rely on several tools to demonstrate that a market is a relevant antitrust market. For example, the Agencies may rely on any one or more of the following to identify a relevant antitrust market.

A. Direct evidence of substantial competition between the merging parties can demonstrate that a relevant market exists in which the merger may substantially lessen competition and can be sufficient to identify the line of commerce and section of the country affected by a merger, even if the metes and bounds of the market are only broadly characterized.

---

[76] *Id.* at 325.

[77] *Id.* ("[W]ithin [a] broad market, well-defined submarkets may exist which, in themselves, constitute product markets for antitrust purposes."). Multiple overlapping markets can be appropriately defined relevant markets. For example, a merger to monopoly for food worldwide would lessen competition in well-defined relevant markets for, among others, food, baked goods, cookies, low-fat cookies, and premium low-fat chocolate chip cookies. Illegality in any of these in any city or town comprising a relevant geographic market would suffice to prohibit the merger, and the fact that one area comprises a relevant market does not mean a larger, smaller, or overlapping area could not as well.

[78] *United States v. Cont'l Can Co.*, 378 U.S. 441, 449 (1964); *see also FTC v. Advoc. Health Care Network*, 841 F.3d 460, 469 (7th Cir. 2016) ("A geographic market does not need to include all of the firm's competitors; it needs to include the competitors that would substantially constrain the firm's price-increasing ability." (cleaned up)).

[79] *Phila. Nat'l Bank*, 374 U.S. at 360 n.37.

B. Direct evidence of the exercise of market power can demonstrate the existence of a relevant market in which that power exists. This evidence can be valuable when assessing the risk that a dominant position may be entrenched, maintained, or extended, since the same evidence identifies market power and can be sufficient to identify the line of commerce and section of the country affected by a merger, even if the metes and bounds of the market are only broadly characterized.

C. A relevant market can be identified from evidence on observed market characteristics ("practical indicia"), such as industry or public recognition of the submarket as a separate economic entity, the product's peculiar characteristics and uses, unique production facilities, distinct customers, distinct prices, sensitivity to price changes, and specialized vendors.[80] Various practical indicia may identify a relevant market in different settings.

D. Another common method employed by courts and the Agencies is the hypothetical monopolist test.[81] This test examines whether a proposed market is too narrow by asking whether a hypothetical monopolist over this market could profitably worsen terms significantly, for example, by raising price. An analogous hypothetical monopsonist test applies when considering the impact of a merger on competition among buyers.

The Agencies use these tools to define relevant markets because they each leverage market realities to identify an area of effective competition.

Section 4.3.A below describes the Hypothetical Monopolist Test in greater detail. Section 4.3.B addresses issues that may arise when defining relevant markets in several specific scenarios.

4.3.A. The Hypothetical Monopolist Test

This Section describes the Hypothetical Monopolist Test, which is a method by which the Agencies often define relevant antitrust markets. As outlined above, a relevant antitrust market is an area of effective competition. The Hypothetical Monopolist/Monopsonist Test ("HMT") evaluates whether a group of products is sufficiently broad to constitute a relevant antitrust market. To do so, the HMT asks whether eliminating the competition among the group of products by combining them under the control of a hypothetical monopolist likely would lead to a worsening of terms for customers. The Agencies generally focus their assessment on the constraints from competition, rather than on constraints from regulation, entry, or other market changes. The Agencies are concerned with the impact on economic incentives and assume the hypothetical monopolist would seek to maximize profits.

When evaluating a merger of sellers, the HMT asks whether a hypothetical profit-maximizing firm, not prevented by regulation from worsening terms, that was the only present and future seller of a group of products ("hypothetical monopolist") likely would undertake at least a small but significant and non-transitory increase in price ("SSNIP") or other worsening of terms ("SSNIPT") for at least one

---

[80] *Brown Shoe*, 370 U.S. at 325, *quoted in United States v. U.S. Sugar Corp.*, 73 F.4th 197, 204-07 (3d Cir. 2023) (affirming district court's application of *Brown Shoe* practical indicia to evaluate relevant product market that included, based on the unique facts of the industry, those distributors who "could counteract monopolistic restrictions by releasing their own supplies").

[81] *See FTC v. Penn State Hershey Med. Center*, 838 F.3d 327, 338 (3d Cir. 2016). While these guidelines focus on applying the hypothetical monopolist test in analyzing mergers, the test can be adapted for similar purposes in cases involving alleged monopolization or other conduct. *See, e.g.*, *McWane, Inc. v. FTC*, 783 F.3d 814, 829-30 (11th Cir. 2015).

product in the group.[82] For the purpose of analyzing this issue, the terms of sale of products outside the candidate market are held constant. Analogously, when considering a merger of buyers, the Agencies ask the equivalent question for a hypothetical monopsonist. This Section often focuses on merging sellers to simplify exposition.

4.3.B. Implementing the Hypothetical Monopolist Test

The SSNIPT. A SSNIPT may entail worsening terms along any dimension of competition, including price (SSNIP), but also other terms (broadly defined) such as quality, service, capacity investment, choice of product variety or features, or innovative effort.

Input and Labor Markets. When the competition at issue involves firms buying inputs or employing labor, the HMT considers whether the hypothetical monopsonist would undertake at least a SSNIPT, such as a decrease in the offered price or a worsening of the terms of trade offered to suppliers, or a decrease in the wage offered to workers or a worsening of their working conditions or benefits.

The Geographic Dimension of the Market. The hypothetical monopolist test is generally applied to a group of products together with a geographic region to determine a relevant market, though for ease of exposition the two dimensions are discussed separately, with geographic market definition discussed in Section 4.3.D.2.

Negotiations or Auctions. The HMT is stated in terms of a hypothetical monopolist *undertaking* a SSNIPT. This covers settings where the hypothetical monopolist sets terms and makes them worse. It also covers settings where firms bargain, and the hypothetical monopolist would have a stronger bargaining position that would likely lead it to extract a SSNIPT during negotiations, or where firms sell their products in an auction, and the bids submitted by the hypothetical monopolist would result in the purchasers of its products experiencing a SSNIPT.

Benchmark for the SSNIPT. The HMT asks whether the hypothetical monopolist likely would worsen terms relative to those that likely would prevail absent the proposed merger. In some cases, the Agencies will use as a benchmark different outcomes than those prevailing prior to the merger. For example, if outcomes are likely to change absent the merger, e.g., because of innovation, entry, exit, or exogenous trends, the Agencies may use anticipated future outcomes as the benchmark. Or, if suppliers in the market are coordinating prior to the merger, the Agencies may use a benchmark that reflects conditions that would arise if coordination were to break down. When evaluating whether a merging firm is dominant (Guideline 6), the Agencies may use terms that likely would prevail in a more competitive market as a benchmark.[83]

---

[82] If the pricing incentives of the firms supplying the products in the group differ substantially from those of the hypothetical monopolist, for reasons other than the latter's control over a larger group of substitutes, the Agencies may instead employ the concept of a hypothetical profit-maximizing cartel comprised of the firms (with all their products) that sell the products in the candidate market. This approach is most likely to be appropriate if the merging firms sell products outside the candidate market that significantly affect their pricing incentives for products in the candidate market. This could occur, for example, if the candidate market is one for durable equipment and the firms selling that equipment derive substantial net revenues from selling spare parts and service for that equipment. Analogous considerations apply when considering a SSNIPT for terms other than price.

[83] In the entrenchment context, if the inquiry is being conducted after market or monopoly power has already been exercised, using prevailing prices can lead to defining markets too broadly and thus inferring that dominance does not exist when, in

Magnitude of the SSNIPT. What constitutes a "small but significant" worsening of terms depends upon the nature of the industry and the merging firms' positions in it, the ways that firms compete, and the dimension of competition at issue. When considering price, the Agencies will often use a SSNIP of five percent of the price charged by firms for the products or services to which the merging firms contribute value. The Agencies, however, may consider a different term or a price increase that is larger or smaller than five percent.[84]

The Agencies may base a SSNIP on explicit or implicit prices for the firms' specific contribution to the value of the product sold, or an upper bound on the firms' specific contribution, where these can be identified with reasonable clarity. For example, the Agencies may derive an implicit price for the service of transporting oil over a pipeline as the difference between the price the pipeline firm paid for oil at one end and the price it sold the oil for at the other and base the SSNIP on this implicit price.

4.3.C. Evidence and Tools for Carrying Out the Hypothetical Monopolist Test

Section 4.2 describes some of the qualitative and quantitative evidence and tools the Agencies can use to assess the extent of competition among firms. The Agencies can use similar evidence and analogous tools to apply the HMT, in particular to assess whether competition among a set of firms likely leads to better terms than a hypothetical monopolist would undertake.

To assess whether the hypothetical monopolist likely would undertake at least a SSNIP on one or more products in the candidate market, the Agencies sometimes interpret the qualitative and quantitative evidence using an economic model of the profitability to the hypothetical monopolist of undertaking price increases; the Agencies may adapt these tools to apply to other forms of SSNIPTs.

One approach utilizes the concept of a "recapture rate" (the percentage of sales lost by one product in the candidate market, when its price alone rises, that is recaptured by other products in the candidate market). A price increase is profitable when the recapture rate is high enough that the incremental profits from the increased price plus the incremental profits from the recaptured sales going to other products in the candidate market exceed the profits lost when sales are diverted outside the candidate market. It is possible that a price increase is profitable even if a majority of sales are diverted outside the candidate market, for example if the profits on the lost sales are relatively low or the profits on the recaptured sales are relatively high.

Sometimes evidence is presented in the form of "critical loss analysis," which can be used to assess whether undertaking at least a SSNIPT on one or more products in a candidate market would raise or lower the hypothetical monopolist's profits. Critical loss analysis compares the magnitude of the two offsetting effects resulting from the worsening of terms. The "critical loss" is defined as the number of lost unit sales that would leave profits unchanged. The "predicted loss" is defined as the number of unit sales that the hypothetical monopolist is predicted to lose due to the worsening of terms. The worsening of terms raises the hypothetical monopolist's profits if the predicted loss is less than the

---

fact, it does. The problem with using prevailing prices to define the market when a firm is already dominant is known as the "Cellophane Fallacy."

[84] The five percent price increase is not a threshold of competitive harm from the merger. Because the five percent SSNIP is a minimum expected effect of a hypothetical monopolist of an *entire* market, the actual predicted effect of a merger within that market may be significantly lower than five percent. A merger within a well-defined market that causes undue concentration can be illegal even if the predicted price increase is well below the SSNIP of five percent.

critical loss. While this "breakeven" analysis differs somewhat from the profit-maximizing analysis called for by the HMT, it can sometimes be informative.

The Agencies require that estimates of the predicted loss be consistent with other evidence, including the pre-merger margins of products in the candidate market used to calculate the critical loss. Unless the firms are engaging in coordinated interaction, high pre-merger margins normally indicate that each firm's product individually faces demand that is not highly sensitive to price. Higher pre-merger margins thus indicate a smaller predicted loss as well as a smaller critical loss. The higher the pre-merger margin, the smaller the recapture rate[85] necessary for the candidate market to satisfy the hypothetical monopolist test. Similar considerations inform other analyses of the profitability of a price increase.

4.3.D. Market Definition in Certain Specific Settings

This Section provides details on market definition in several specific common settings. In much of this section, concepts are presented for the scenario where the merger involves sellers. In some cases, clarifications are provided as to how the concepts apply to merging buyers; in general, the concepts apply in an analogous way.

4.3.D.1. Targeted Trading Partners

If the merged firm could profitably target a subset of customers for changes in prices or other terms, the Agencies may identify relevant markets defined around those targeted customers. The Agencies may do so even if firms are not currently targeting specific customer groups but could do so after the merger.

For targeting to be feasible, two conditions typically must be met. First, the suppliers engaging in targeting must be able to set different terms for targeted customers than other customers. This may involve identification of individual customers to which different terms are offered or offering different terms to different types of customers based on observable characteristics.[86] Markets for targeted customers need not have precise metes and bounds. In particular, defining a relevant market for targeted customers sometimes requires a line-drawing exercise on observable characteristics. There can be many places to draw that line and properly define a relevant market. Second, the targeted customers must not be likely to defeat a targeted worsening of terms by arbitrage (e.g., by purchasing indirectly from or through other customers). Arbitrage may be difficult if it would void warranties or make service more difficult or costly for customers, and it is inherently impossible for many services. Arbitrage on a modest scale may be possible but sufficiently costly or limited, for example due to transaction costs or search costs, that it would not deter or defeat a discriminatory pricing strategy.

If prices are negotiated or otherwise set individually, for example through a procurement auction, there may be relevant markets that are as narrow as an individual customer. Nonetheless, for analytic convenience, the Agencies may define cluster markets for groups of targeted customers for whom the

---

[85] The recapture rate is sometimes referred to as the aggregate diversion ratio, defined in Section 4.2.B.

[86] In some cases, firms offer one or more versions of products or services defined by their characteristics (where brand might be a characteristic). When customers can select among these products and terms do not vary by customer, the Agencies will typically define markets based on products rather than the targeted customers. In such cases, relevant antitrust markets may include only some of the differentiated products, for example products with only "basic" features, or products with "premium features." The tools described in Section 4.2 can be used to assess competition among differentiated products.

conditions of competition are reasonably similar. (See Section 4.3.D.4 for further discussion of cluster markets.)

Analogous considerations arise for a merger involving one or more buyers or employers. In this case, the analysis considers whether buyers target suppliers, for example by paying targeted suppliers or workers less, or by degrading the terms of supply contracts for targeted suppliers. Arbitrage would involve a targeted supplier selling to the buyer indirectly, through a different supplier who could obtain more favorable terms from the buyer.

If the HMT is applied in a setting where targeting of customers is feasible, it requires that a hypothetical profit-maximizing firm that was the only present or future seller of the relevant product(s) to customers in the targeted group would undertake at least a SSNIPT on some, though not necessarily all, customers in that group. The products sold to those customers form a relevant market if the hypothetical monopolist likely would undertake at least a SSNIPT despite the potential for customers to substitute away from the product or to take advantage of arbitrage. In this exercise, the terms of sale for products sold to all customers outside the region are held constant.

4.3.D.2. Geographic Markets

A relevant antitrust market is an area of effective competition, comprising both product (or service) and geographic elements. A market's geography depends on the limits that distance puts on some customers' willingness or ability to substitute to some products, or some suppliers' willingness or ability to serve some customers. Factors that may limit the geographic scope of the market include transportation costs, language, regulation, tariff and non-tariff trade barriers, custom and familiarity, reputation, and local service availability.

4.3.D.2.a. Geographic Markets Based on the Locations of Suppliers

The Agencies sometimes define geographic markets as regions encompassing a group of supplier locations. When they do, the geographic market's scope is determined by customers' willingness to switch between suppliers. Geographic markets of this type often apply when customers receive goods or services at suppliers' facilities, for example when customers buy in-person from retail stores. A single firm may offer the same product in a number of locations, both within a single geographic market or across geographic markets; customers' willingness to substitute between products may depend on the location of the supplier. When calculating market shares, sales made from supplier locations in the geographic market are included, regardless of whether the customer making the purchase travelled from outside the boundaries of the geographic market (see Section 4.4 for more detail about calculating market shares).

If the HMT is used to evaluate the geographic scope of the market, it requires that a hypothetical profit-maximizing firm that was the only present or future supplier of the relevant product(s) at supplier locations in the region likely would undertake at least a SSNIPT in at least one location. In this exercise, the terms of sale for products sold to all customers at facilities outside the region are typically held constant.[87]

---

[87] In some circumstances, as when the merging parties operate in multiple geographies, if applying the HMT, the Agencies may apply a "Hypothetical Cartel" framework for market definition, following the approach outlined in Section 4.3.A, n.81.

4.3.D.2.b. Geographic Markets Based on Targeting of Customers by Location

When targeting based on customer location is feasible (see Section 4.3.D.1), the Agencies may define geographic markets as a region encompassing a group of customers.[88] For example, geographic markets may sometimes be defined this way when suppliers deliver their products or services to customers' locations, or tailor terms of trade based on customers' locations. Competitors in the market are firms that sell to customers that are located in the specified region. Some suppliers may be located outside the boundaries of the geographic market, but their sales to customers located within the market are included when calculating market shares (see Section 4.4 for more detail about calculating market shares).

If prices are negotiated individually with customers that may be targeted, geographic markets may be as narrow as individual customers. Nonetheless, the Agencies often define a market for a cluster of customers located within a region if the conditions of competition are reasonably similar for these customers. (See Section 4.3.D.4 for further discussion of cluster markets.)

A firm's attempt to target customers in a particular area with worsened terms can sometimes be undermined if some customers in the region substitute by travelling outside it to purchase the product. Arbitrage by customers on a modest scale may be possible but sufficiently costly or limited that it would not deter or defeat a targeting strategy.[89]

If the HMT is used to evaluate market definition when customers may be targeted by location, it requires that a hypothetical profit-maximizing firm that was the only present or future seller of the relevant product(s) to customers in the region likely would undertake at least a SSNIPT on some, though not necessarily all, customers in that region. The products sold in that region form a relevant market if the hypothetical monopolist would undertake at least a SSNIPT despite the potential for customers to substitute away from the product or to locations outside the region. In this exercise, the terms of sale for products sold to all customers outside the region are held constant.[90]

4.3.D.3. Supplier Responses

Market definition focuses solely on demand substitution factors, that is, on customers' ability and willingness to substitute away from one product or location to another in response to a price increase or other worsening of terms. Supplier responses may be considered in the analysis of competition between firms (Guideline 2 and Section 4.2), entry and repositioning (Section 3.2), and in calculating market shares and concentration (Section 4.4).

4.3.D.4. Cluster Markets

A relevant antitrust market is generally a group of products that are substitutes for each other. However, when the competitive conditions for multiple relevant markets are reasonably similar, it may be appropriate to aggregate the products in these markets into a "cluster market" for analytic convenience, even though not all products in the cluster are substitutes for each other. For example, competing hospitals may each provide a wide range of acute health care services. Acute care for one health issue is not a substitute for acute care for a different health issue. Nevertheless, the Agencies may

---

[88] For customers operating in multiple locations, only those customer locations within the targeted region are included in the market.

[89] Arbitrage by suppliers is a type of supplier response and is thus not considered in market definition. (See Section 4.3.D.3)

[90] In some circumstances, as when the merging parties operate in multiple geographies, the Agencies may apply a "Hypothetical Cartel" framework for market definition, as described in Section 4.3.A, n.81.

aggregate them into a cluster market for acute care services if the conditions of competition are reasonably similar across the services in the cluster.

The Agencies need not separately analyze market definition for each product included in the cluster market, and market shares will typically be calculated for the cluster market as a whole.

Analogously, the Agencies sometimes define a market as a cluster of targeted customers (see Section 4.3.D.1) or a cluster of customers located in a region (see Section 4.3.D.2.b).

4.3.D.5. Bundled Product Markets

Firms may sell a combination of products as a bundle or a "package deal," rather than offering products "*a la carte*," that is, separately as standalone products. Different bundles offered by the same or different firms might package together different combinations of component products and therefore be differentiated according to the composition of the bundle. If the components of a bundled product are also available separately, the bundle may be offered at a price that represents a discount relative to the sum of the *a la carte* product prices.

The Agencies take a flexible approach based on the specific circumstances to determine whether a candidate market that includes one or more bundled products, standalone products, or both is a relevant antitrust market. In some cases, a relevant market may consist of only bundled products. A market composed of only bundled products might be a relevant antitrust market even if there is significant competition from the unbundled products. In other cases, a relevant market may include both bundled products and some unbundled component products.

Even in cases where firms commonly sell combinations of products or services as a bundle or a "package deal," relevant antitrust markets do not necessarily include product bundles. In some cases, a relevant market may be analyzed as a cluster market, as discussed in Section 4.3.D.4.

4.3.D.6. One-Stop Shop Markets

In some settings, the Agencies may consider a candidate market that includes one or more "one-stop shops," where customers can select a combination of products to purchase from a single seller, either in a single purchase instance or in a sequence of purchases. Products are commonly sold at a one-stop shop when customers value the convenience, which might arise because of transaction costs or search costs, savings of time, transportation costs, or familiarity with the store or web site.

A multi-product retailer such as a grocery store or online retailer is an example of a one-stop shop. Customers can select a particular basket of groceries from a range of available goods and different customers may select different baskets. Some customers may make multiple stops at specialty shops (e.g., butcher, baker, greengrocer), or they may do the bulk of their shopping at a one-stop shop (the grocery store) but also shop at specialty shops for particular product categories.

There are several ways in which markets may be defined in one-stop shop settings, depending on market realities, and the Agencies may further define more than one relevant antitrust market for a particular merger. For example, a relevant market may consist of only one-stop shops, even if there is significant competition from specialty shops; or it may include both one-stop shops and specialty shops. When a product category is sold by both one-stop shops and specialty suppliers (such as a type of produce sold in grocery stores and produce stands), the Agencies may define relevant antitrust markets for the product category sold by a particular type of supplier, or it may include multiple types of suppliers.

4.3.D.7. Market Definition When There is Harm to Innovation

When considering harm to competition in innovation, market definition may follow the same approaches that are used to analyze other dimensions of competition. In the case where a merger may substantially lessen competition by decreasing incentives to innovate, the Agencies may define relevant antitrust markets around the products that would result from that innovation if successful, even if those products do not yet exist.[91] In some cases, the Agencies may analyze different relevant markets when considering innovation than when considering other dimensions of competition.

4.3.D.8. Market Definition for Input Markets and Labor Markets

The same market definition tools and principles discussed above can be used for input markets and labor markets, where labor is a particular type of input. In input markets, firms compete with each other to attract suppliers, including workers. Therefore, input suppliers are analogous to customers in the discussions above about market definition. In defining relevant markets, the Agencies focus on the alternatives available to input suppliers. An antitrust input market consists of a group of products and a geographic area defined by the location of the buyers or input suppliers. Just as buyers of a product may consider products to be differentiated according to the brand or the identity of the seller, suppliers of a product or service may consider different buyers to be differentiated. For example, if the suppliers are contractors, they may have distinct preferences about who they provide services to, due to different working conditions, location, reliability of buyers in terms of paying invoices on time, or the propensity of the buyer to make unexpected changes to specifications.

The HMT considers whether a hypothetical monopsonist likely would undertake a SSNIPT, such as a reduction in price paid for inputs, or imposing less favorable terms on suppliers. (See Section 4.2.C for more discussion about competition in settings where terms are set through auctions and negotiations, as is common for input markets.)

When defining a market for labor the Agencies will consider the job opportunities available to workers who supply a relevant type of labor service, where worker choice among jobs or between geographic areas is the analog of consumer choices among products and regions when defining a product market. The Agencies may consider workers' willingness to switch in response to changes to wages or other aspects of working conditions, such as changes to benefits or other non-wage compensation, or adoption of less flexible scheduling. Depending on the occupation, alternative job opportunities might include the same occupation with alternative employers, or alternative occupations. Geographic market definition may involve considering workers' willingness or ability to commute, including the availability of public transportation. The product and geographic market definition may involve assessing whether workers may be targeted for less favorable wages or other terms of employment according to factors such as education, experience, certifications, or work locations. The Agencies may define cluster markets for different jobs when firms employ workers in a variety of jobs characterized by similar competitive conditions (see Section 4.3.D.4).

4.4. Calculating Market Shares and Concentration

This subsection further describes how the Agencies calculate market shares and concentration metrics.

[91] *See Illumina*, slip op. at 12 (affirming a relevant market defined around "what . . . developers reasonably sought to achieve, not what they currently had to offer").

As discussed above, the Agencies may use evidence about market shares and market concentration as part of their analysis. These structural measures can provide insight into the market power of firms as well as into the extent to which they compete. Although any market that is properly identified using the methods in Section 4.3 is valid, the extent to which structural measures calculated in that market are probative in any given context depends on a number of considerations. The following market considerations affect the extent to which structural measures are probative in any given context.[92]

First, structural measures may be probative if the market used to estimate them includes the products that are the focus of the competitive concern that the structural inquiry intends to address. For example, the concentration measures discussed in Guideline 1 will be most probative about whether the merger eliminates substantial competition between the merging parties when calculated on a market that includes at least one competing product from each merging firm.

Second, the market used to estimate shares should be broad enough that it contains sufficient additional products so that a loss of competition among all the suppliers of the products in the market would lead to significantly worse terms for at least some customers of at least one product. Markets identified using the various tools in Section 4.3 can satisfy this condition—for example, all markets that satisfy the HMT do so.

Third, the competitive significance of the parties may be understated by their share when calculated on a market that is broader than needed to satisfy the considerations above, particularly when the market includes products that are more distant substitutes, either in the product or geographic dimension, for those produced by the parties.

4.4.A. Market Participants

All firms that currently supply products (or consume products, when buyers merge) in a relevant market are considered participants in that market. Vertically integrated firms are also included to the extent that their inclusion accurately reflects their competitive significance. Firms not currently supplying products in the relevant market, but that have committed to entering the market in the near future, are also considered market participants.

Firms that are not currently active in a relevant market, but that very likely would rapidly enter with direct competitive impact in the event of a small but significant change in competitive conditions, without incurring significant sunk costs, are also considered market participants. These firms are termed "rapid entrants." Sunk costs are entry or exit costs that cannot be recovered outside a relevant market. Entry that would take place more slowly in response to a change in competitive conditions, or that requires firms to incur significant sunk costs, is considered in Section 3.2.

Firms that are active in the relevant product market but not in the relevant geographic market may be rapid entrants. Other things equal, such firms are most likely to be rapid entrants if they are already active in geographies that are close to the geographic market. Factors such as transportation

---

[92] For simplicity, the discussion in the text focuses on the case where concerns arise that involve competition among the suppliers of products; analogous considerations may also arise for suppliers of services, or when concerns arise about competition among buyers of a product or service, or when analyzing market shares in certain specific settings (see Section 4.3.D).

costs are important; or for services or digital goods, other factors may be important, such as language or regulation.

In markets for relatively homogeneous goods where a supplier's ability to compete depends predominantly on its costs and its capacity, and not on other factors such as experience or reputation in the relevant market, a supplier with efficient idle capacity, or readily available "swing" capacity currently used in adjacent markets that can easily and profitably be shifted to serve the relevant market, may be a rapid entrant. However, idle capacity may be inefficient, and capacity used in adjacent markets may not be available, so a firm's possession of idle or swing capacity alone does not make that firm a rapid entrant.

4.4.B. Market Shares

The Agencies normally calculate product market shares for all firms that currently supply products (or consume products, when buyers merge) in a relevant market, subject to the availability of data. The Agencies measure each firm's market share using metrics that are informative about the market realities of competition in the particular market and firms' future competitive significance. When interpreting shares based on historical data, the Agencies may consider whether significant recent or reasonably foreseeable changes to market conditions suggest that a firm's shares overstate or understate its future competitive significance.

How market shares are calculated may further depend on the characteristics of a particular market, and on the availability of data. Moreover, multiple metrics may be informative in any particular case. For example:

- Revenues in a relevant market often provide a readily available basis on which to compute shares and are often a good measure of attractiveness to customers.
- Unit sales may provide a useful measure of competitive significance in cases where one unit of a low-priced product can serve as a close substitute for one unit of a higher-priced product. For example, a new, much less expensive product may have great competitive significance if it substantially erodes the revenues earned by older, higher-priced products, even if it earns relatively low revenues.
- Revenues earned from recently acquired customers (or paid to recently acquired buyers, in the case of merging buyers) may provide a useful measure of competitive significance of firms in cases where trading partners sign long-term contracts, face switching costs, or tend to re-evaluate their relationships only occasionally.
- Measures based on capacities or reserves may be used to calculate market shares in markets for homogeneous products where a firm's competitive significance may derive principally from its ability and incentive to rapidly expand production in a relevant market in response to a price increase or output reduction by others in that market (or to rapidly expand its purchasing in the case of merging buyers).
- Non-price indicators, such as number of users or frequency of use, may be useful indicators in markets where price forms a relatively small or no part of the exchange of value.

1. Pre-merger notification regime

Are mergers that meet specific size and geographic nexus thresholds subject to mandatory notification provisions in your jurisdiction? If so, is there a mandatory period following the notification during which the parties are prohibited from consummating the merger? (Please note: detailed descriptions of merger notification provisions are not necessary for purposes of this roundtable, which focuses on the situations below.)

1. In the United States, the Department of Justice and the Federal Trade Commission (collectively, "the Agencies"), State Attorneys General, and private parties can challenge mergers and acquisitions under federal and state antitrust laws. The Hart-Scott-Rodino Act, 15 U.S.C. § 18a, Section 7A of the Clayton Act (the "Act" or "HSR Act"), requires that parties to certain mergers or acquisitions notify the Agencies before consummating the proposed acquisition. The parties must then wait a specified period, usually 30 days (15 days in the case of a cash tender offer or a bankruptcy sale), before they may complete the transaction. Whether a particular acquisition is subject to these requirements depends upon the value of the acquisition and, in certain acquisitions, the size of the parties as measured by their sales and assets. Acquisitions that lack sufficient nexus to U.S. commerce and certain classes of acquisitions that are not likely to raise antitrust concerns are exempted from the premerger notification statute's coverage.[1]

2. If either Agency determines during the waiting period that further inquiry is necessary, the Agency is authorized by the HSR Act to issue a request for additional information and documentary material ("second request"). The second request extends the waiting period for a specified period (usually 30 days, but 10 days in the case of a cash tender offer or bankruptcy sale) after all parties have complied with the request (or, in the case of a tender offer or a bankruptcy sale, after the acquiring person complies). If competitive concerns remain at the end of the second request waiting period, the Agency and the merging parties may enter into a settlement with remedies designed to address the competitive concerns or the Agency may go to court to seek an injunction prohibiting the transaction. Whereas the Department of Justice ("DOJ") seeks preliminary and permanent injunctions in court, the Federal Trade Commission ("FTC") typically seeks to preliminarily enjoin the transaction in court pending the outcome of an administrative challenge before the Commission, which may result in the Commission's entry of a cease and desist order barring the transaction.

2. Review of mergers falling below notification thresholds

For a merger that does not meet the notification thresholds or is otherwise exempt from the notification requirement, does your agency have authority under your merger review provisions to review the merger? If so, what remedies are available, and do they differ from remedies available in a notifiable transaction? Does your agency have authority to review such mergers under some other provision of your competition law, and if so, what remedies are available?

3. Although the U.S. premerger notification system subjects most mergers of significant size to premerger competitive review, a transaction does not have to be subject to such review for the Agencies to be able to challenge it under the antitrust laws. Under Section 7 of the Clayton Act, 15 U.S.C. § 18 – which was enacted many years before the HSR Act – the Agencies can challenge acquisitions of stock or assets, without regard to whether the acquisition requires a premerger notification under the HSR Act, and

---

1 *See* 16 CFR 802.50-51 (nexus) and generally 15 U.S.C. § 18a(c) and 16 CFR Part 802.

such challenges can be brought either before or after a transaction is consummated. Indeed, the Agencies have investigated and challenged a number of transactions that were not reportable under the HSR Act.[2] If a consummated merger violates the antitrust laws, the same types of remedies are available as in the case of reportable mergers.[3]

4. The number of challenges to consummated and non-notifiable mergers has increased since 2000, partly as a result of the annual increase in the notification thresholds mandated by amendments made that year to the HSR Act (the thresholds increase based on the change in the gross national product). Following are statistics showing the number of DOJ merger investigations and challenges by fiscal year:

	2009	**2010**	**2011**	**2012**	**2013**
Total Preliminary Inquiries Opened (HSR and non-HSR)	68	64	90	74	65
Non-HSR Preliminary Inquiries	19	9	18	12	15
Consummated Preliminary Inquiries Opened	6	3	4	4	4
Total Merger Challenges	12	19	20	19	15
Non-HSR Challenges	4	6	4	5	3
Challenges of Consummated Transactions	3	0	1	2	0

If your agency decides to challenge a consummated merger that was not subject to mandatory notification provisions, what remedies can your agency seek? Have you had success with remedies in these situations? Please provide examples.

5. As noted in the response to Question 2, in the case of a consummated merger, whether or not it was subject to mandatory notification, the Agencies can obtain the same types of remedies that are available in the case of reportable mergers. Depending on the extent of integration (sometimes called the "scrambling") of the firms' operations, degradation of assets, or other changes in the market – all of which depend to some extent on how quickly after consummation the Agencies become aware of the merger – simple structural remedies may not be available or effective.

2 The Agencies ordinarily do not make information as to the applicability of the HSR Act to any given transaction public. But it is worth noting that the Agencies have challenged numerous consummated mergers in the period following the enactment of the HSR Act. *See, e.g., FTC and State of Idaho v. St. Luke's Health Sys., Ltd.*, 1:12-cv-00560-BLW-REB (D. Id. filed March 13, 2013), *available at* www.ftc.gov/opa/2013/03/stluke.shtm; *U.S. v. Bazaarvoice, Inc.*, C13-0133 (N.D. Cal., filed Jan. 10, 2013), *available at* www.justice.gov/atr/public/press_releases/2013/291185.htm; *U.S. and State of New York v. Trade Comm'n, Statement of Federal Trade Commission's Bureau of Competition on Negotiating Merger Remedies (Apr. 2, 2003), *available at* www.ftc.gov/tips-advice/competition-guidance/merger-remedies.

6. Following are some examples of Agency challenges to consummated mergers that were not subject to HSR notification.

7. On January 10, 2013, DOJ filed a lawsuit in U.S. District Court for the Northern District of California challenging the June 2012 acquisition of PowerReviews, Inc. by Bazaarvoice Inc. The complaint alleged that Bazaarvoice's acquisition of PowerReviews eliminated the company's only significant rival in the market for product ratings and reviews platforms used by U.S. manufacturers and retailers to display product ratings and reviews on their websites. DOJ began investigating the transaction within days of its closing after it learned of the consummated deal. On January 8, 2014, following a three-week trial, the District Court found that the acquisition would likely have anticompetitive effects and therefore violated Section 7 of the Clayton Act. While Bazaarvoice argued that PowerReviews was a "weak and unworthy competitor," the Court found that portrayal "belied by the plethora of documents showing that, prior to the merger, Bazaarvoice considered PowerReviews its strongest and only credible competitor, that the two companies operated as a duopoly, and that Bazaarvoice's management believed that the purchase of PowerReviews would eliminate its only real competitor." The Court also rejected arguments by Bazaarvoice that any number of technology companies could enter the market, observing that: "The marketplace may be filled with many strong and able companies in adjacent spaces. But that does not mean that entry barriers become irrelevant or are somehow more easily overcome. To conclude otherwise would give eCommerce companies carte blanche to violate the antitrust laws with impunity with the excuse that Google, Amazon, Facebook, or any other successful technology company stands ready to restore competition to any highly concentrated market." Remedy proceedings are currently in progress.[4]

8. On January 2, 2014, DOJ filed a lawsuit and proposed settlement challenging the acquisition by Heraeus Electro-Nite LLC of certain assets of Midwest Instrument Company Inc. that substantially lessened competition in the market for sensors used in the steel manufacturing process. DOJ learned of the non-reportable transaction after it occurred in September 2012, and acquired assets already had been integrated into Heraeus's business, supply contracts had been terminated, and foreign production facilities had closed. To restore competition, the proposed consent decree requires Heraeus to divest certain acquired assets to a pre-approved buyer. Heraeus is required to waive non-compete provisions it had imposed on some former employees, and provide the new entrant with information about former personnel who might be available. Heraeus must also give advance notice of any future non-reportable acquisitions in the sensor market, and agree to provide training and technical support regarding the divested assets. Finally, to overcome a customer qualification process barrier to entry, Heraeus must allow customers of the new entrant to use Heraeus products for testing and qualification purposes.[5]

9. In October 2011, the FTC issued a consent order resolving charges that Cardinal Health, Inc.'s acquisition of three nuclear pharmacies from Biotech reduced competition for low-energy radiopharmaceuticals in Las Vegas, Nevada (radiopharmaceuticals are used in hospitals and cardiology clinics to diagnose and treat various diseases). The Commission's order required Cardinal Health to reconstitute and sell the acquired nuclear pharmacies to an FTC-approved buyer along with related intellectual property and permits. In addition, the order required Cardinal Health to provide the Commission with advance notice of future acquisitions in the relevant markets.[6]

10. In December 2010, the FTC, in an administrative proceeding, found that Polypore International, Inc.'s consummated acquisition of Microporous Products likely harmed competition in several markets for battery separators (which are key components of lead-acid batteries) and was therefore unlawful. The Commission ordered Polypore to divest Microporous to an FTC-approved buyer, and ordered a variety of ancillary relief provisions in support of the divestiture.[7]

11. In September 2009, Election Systems & Software, Inc. ("ES&S") acquired Premier Election Solutions, Inc., combining the two largest providers of voting equipment systems in the U.S. DOJ learned of the acquisition after consummation, and sued in March 2010, simultaneously filing an Asset Preservation Stipulation and Order, and a proposed Final Judgment. Given the diminution and dismantling of the Premier assets since ES&S acquired the company, relief that replicated the condition of Premier prior to the acquisition was not available. The final judgment required ES&S to divest (1) all the assets needed for an acquirer to compete in the voting equipment systems market, including intellectual property related to the Premier systems it had purchased; (2) tooling and fixed assets used to manufacture those systems; and (3) existing inventory and parts related to the Premier systems. ES&S was also required to divest a fully paid-up, non-exclusive, irrevocable license to certain products previously licensed to Premier. Other conditions intended to facilitate the acquirer's ability to compete included a waiver by ES&S of non-competition agreements for employees, and contractual terms that might otherwise prevent customers from selecting the acquirer for voting equipment services.[8]

12. In July 2008, Microsemi Corporation acquired most of the assets of Semicoa, Inc. DOJ learned of the transaction after consummation, and filed a complaint in December 2008 alleging that the transaction significantly lessened competition in the market for certain signal transistors and diodes used in aerospace and military applications. The court entered an order that month to preserve and maintain the relevant assets. A consent decree was entered in January 2010 that required the divestiture of essentially all the assets acquired in 2008. In addition, Microsemi was ordered to provide DOJ with advance notice of any future acquisitions in the relevant markets.[9]

Are there differences in practice or procedure for the investigation or challenge of a consummated or non-notifiable transaction?

13. One obvious difference between investigations of notifiable and non-notifiable mergers is the manner in which the Agencies learn of the transaction. In the absence of an HSR notification, the Agencies become aware of possibly anticompetitive mergers through news reports, complaints from competitors or customers, information from other investigations, or, in some cases, self-reporting by the parties.

14. The statutory waiting periods described above in the answer to Question 1 do not apply to a merger that is not subject to the HSR Act. Investigative procedures are largely the same for non-notifiable mergers as for notifiable ones, although there is no second request procedure. Compulsory process in the form of civil investigative demands is available to obtain the same information from the parties, but if they have already consummated the merger, they may not have the same incentives to cooperate with the Agencies in order to expedite Agency review.

7 *See In the Matter of Polypore International, Inc.*, Docket No. 9327 (Complaint issued Sept. 10, 2008), www.ftc.gov/enforcement/cases-and-proceedings/cases/2013/12/polypore-international-inc-corporation-matter.

8 *See* U.S. Dep't of Justice, Antitrust Case Filings, *U.S. v. Election Systems & Software, Inc.*, *available at* www.justice.gov/atr/cases/ess.html.

9 *See* U.S. Dep't of Justice, Antitrust Case Filings, *U.S. v. Microsemi Corporation, available at* www.justice.gov/atr/cases/microsemi.htm.

15. Timing issues are critical in the absence of the statutory waiting periods. If the transaction has just been consummated, the Agencies will proceed rapidly in order to avoid changes in the disposition of assets that would make it more difficult to restore competition in the event the transaction is deemed to violate the law, but the process is in practice no different than if the parties had not yet merged. The Agencies are likely to seek a timing agreement for the review process, and may seek an agreement from the parties to maintain the status quo; the Agencies can also seek a hold separate order from the court pending completion of the investigation.

16. If an Agency opens an investigation months after consummation, there may be evidence of actual anticompetitive effects that occur after the closing; in fact, those effects may be the reason why the Agency decided to investigate. Importantly, the legal standard does not change in the review of consummated mergers -- no proof of actual anticompetitive effects is required.[10] Although "post-merger evidence showing a lessening of competition may constitute an 'incipiency' on which to base a divestiture suit,"[11] the converse is not true. Indeed, the Supreme Court has stated that the probative value of post-acquisition evidence offered by a defendant has been "found to be extremely limited."[12] "The need for such a limitation is obvious. If a demonstration that no anticompetitive effects had occurred at the time of trial or of judgment constituted a permissible defense to a § 7 merger divestiture suit, violators could stave off such actions merely by refraining from aggressive or anticompetitive behaviour when such a suit was threatened or pending."[13]

3. Review of mergers that should have been notified but were not

If the parties fail to notify a merger that was subject to mandatory notification provisions, are they subject to penalties? In such a case, does your agency retain the power to review the merger under merger review or other competition law provisions? Is there a time limit on when the agency can bring an enforcement action?

17. Under Section 7A(g)(1) of the Act, 15 U.S.C. § 18a(g)(1), the United States can sue any person that fails to comply with the Act's notification and waiting period requirements for a civil penalty of up to $16,000 for each day the violation continues. The Agencies examine the circumstances of each violation to determine whether penalties should be sought and the appropriate amount.[14] All of the civil penalty cases brought by the United States have been settled by consent decrees. Civil penalties can be and have been sought even if the underlying transaction is not anticompetitive. In addition to seeking penalties for failure to comply with the HSR Act's notification and waiting period requirements, the Agencies have the

authority under Section 7 of the Clayton Act to review and challenge the underlying transaction and have done so in several instances. As noted in the answer to Question 7 below, Section 7 contains no time limit on challenging the underlying transaction.[15]

> ***If an anticompetitive merger should have been notified, but was not, and it has already been consummated, what remedies can your agency seek? Have you had success with remedies in these situations? Please provide examples.***

18. The Agencies have authority to investigate and challenge in court under Section 7 a transaction that parties have failed to properly report in accordance with the HSR Act. The remedy available in such circumstances is the same as for any Section 7 matter. The Agencies have obtained divestitures, partial or complete, to resolve competitive concerns in these situations. Over the years, there have been several examples of HSR civil penalties cases involving consummated transactions that have also resulted in successful divestitures after an investigation on the merits. For example, in a transaction involving Mahle GmbH, where the Agencies obtained the maximum civil penalty of more than $5.6 million for an intentional failure to file, the Agencies required the divestiture of the acquired company's U.S. piston business, including two factories and a research and development center, as well as technology outside the United States that supports that business.[16] In a transaction involving Sara Lee Corporation, where the Agencies obtained a $3.1 million civil penalty for failure to file, divestiture of several bands of shoe care products was required.[17]

19. Similarly, the Agencies have obtained substantive relief in addition to civil penalties in instances in which the parties consummated acquisitions after having filed incomplete HSR notifications (*e.g.*, failure to produce required business documents). For example, the Agencies obtained a $4 million civil penalty from Hearst Trust for filing an incomplete premerger notification and also required the company to divest the acquired business.[18] In another matter, the Agencies obtained a $2.97 million civil penalty from Automatic Data Processing for filing an incomplete premerger notification, and required the company to divest the acquired assets and offer a license to necessary data.[19]

4. Subsequent review of previously cleared and consummated mergers

If your agency decides after investigation not to challenge a merger, or has approved a merger with remedies, but later concludes that the merger in fact was anticompetitive, can the agency still challenge the merger, either (1) under your merger review law, either by reopening the original investigation or by starting a new one, or (2) under some other provision of your competition laws? What remedies are available then? Is there a time limit on when such a post-merger review can take place? Please provide examples.

20. In the U.S., the Agencies do not "clear" or "approve" mergers. Although they may issue a public statement upon closing certain investigations without taking enforcement action,[20] this is not in any legal sense an official "approval" and the statement creates no rights for the parties. If the Agencies later conclude that a merger may have anticompetitive consequences, they can file a complaint challenging the transaction.

21. In 1957, the Supreme Court upheld a 1949 DOJ suit challenging stock acquisitions that occurred in 1917-19,[21] although Clayton Act challenges so many years after a transaction are exceptional. The FTC's challenge to Chicago Bridge & Iron Company's (CB&I) acquisition of certain Pitt-Des Moines, Inc. (PDM) assets provides a useful example.[22] In September 2000, the parties notified the Agencies of the proposed acquisition pursuant to HSR. More than 30 days later, but before the parties executed the acquisition, the FTC notified CB&I "that it had significant antitrust concerns about the acquisition and was conducting an investigation."[23] Roughly four months after expiration of the 30-day statutory waiting period, CB&I consummated the acquisition. The FTC subsequently issued an administrative complaint challenging the completed acquisition, and following an administrative trial found that the acquisition substantially lessened competition in four relevant product markets in the U.S., in violation of the Clayton and FTC Acts. To restore competition, the FTC ordered CB&I to create two separate, stand-alone divisions capable of competing in the relevant markets, and to divest one of those divisions within six months. The FTC's decision and order were upheld on appeal.[24] In *Evanston*, too, the FTC subsequently challenged a previously cleared transaction.[25] The HSR Act explicitly provides that the Agencies' decision not to challenge following an HSR review is not a bar to a future Clayton Act case.[26] Remedies available are the same broad equitable remedies that would have been available at the time of the merger, although changes in the markets may make remedies that would have been appropriate at the earlier time no longer suitable.

26 15 U.S.C. § 18a(i)(1).

22. The Agencies or private parties can also sue a merged firm that later engages in anticompetitive unilateral conduct, if monopoly power has been unlawfully acquired or maintained, under Section 2 of the Sherman Act. In the case of a merger that has been consummated following an Agency challenge and settlement pursuant to a consent decree, the Agencies could in theory petition the court to modify the decree if it were still in effect and circumstances had changed to the point that the merger was later producing anticompetitive effects. The parties and court would have to agree to any changes to the decree. This is different from a failure by a party to comply with the terms of an existing consent decree; the Agencies can always bring such a violation to the court's attention and seek appropriate sanctions and relief.

United States

1. The Relevance and Investigation of Gun-Jumping

1.1. In the United States, Section 7A of the Clayton Act Requires Companies to Maintain Separate Operations Until the Expiration of a Waiting Period Following Merger Notification

1. In the United States, merging parties that meet certain threshold requirements[1] must file a notification and observe a waiting period to allow the federal antitrust agencies to investigate the competitive impact of proposed transactions, and if necessary, to seek an injunction to prevent the consummation of anticompetitive transactions. The notification and waiting period requirements apply to direct and indirect acquisitions when a size of person and commerce threshold contained in Section 7A of the Clayton Act ("Section 7A") [2] are met and if the acquiring person would hold a threshold amount of voting securities or assets after the acquisition.[3] The regulations adopted pursuant to Section 7A (the "Premerger Notification Rules") define "hold" to mean "beneficial ownership."[4] Although the term beneficial ownership is not defined, the agencies generally look to who bears the risk of loss or may realize potential gains, who makes decisions in the normal course of business, and who exercises control over assets or contracts.[5]

2. Gun-jumping is illegal under Section 7A, which prohibits the acquisition of beneficial ownership of certain assets or voting securities before the end of a statutory waiting period and provides for civil penalties. Firms that fail to observe the statutory waiting period—for example, by beginning to coordinate business activities prior to consummation of their merger—may be liable for gun-jumping. Therefore, although some communication and coordination is necessary in order for firms to plan for an upcoming

[1] For 2018, generally, if the transaction is valued between $84.4 million and $337.6 million, and one party has sales or assets of $168.8 million or greater and the other party has sales or assets of $16.9 million or greater, then the parties must file a notification with the Federal Trade Commission and the Antitrust Division of the Department of Justice. If the size of the transaction is more than $337.6 million, the parties must file notification with the agencies, no matter the size of the parties, unless an exemption applies. *See, e.g.*, https://www.ftc.gov/enforcement/premerger-notification-program/hsr-resources/steps-determining-whether-hsr-filing.

[2] 15 U.S.C. 18a. Section 7A also is referred to as the Hart-Scott-Rodino Antitrust Improvements Act of 1976 or the HSR Act.

[3] 15 U.S.C. 18a(a)-(b).

[4] 16 C.F.R. § 800 *et. seq.*

[5] The Statement of Basis and Purpose accompanying the Premerger Notification Rules states that the "existence of beneficial ownership is to be determined in the context of particular cases with reference to the person or persons that enjoy the indicia of beneficial ownership," which include "[1] the right to obtain the benefit of any increase in value or dividends, [2] the risk of loss of value, [3] the right to vote the stock or to determine who may vote the stock, [4] the investment discretion (including the power to dispose of the stock)." 43 Fed. Reg. 33,449, 33,458 (July 31, 1978).

proposed merger, each company should be careful to keep operating as a separate, independent entity during the waiting period.

1.2. The Purpose of the Statutory Waiting Period Specified in Section 7A of the Clayton Act is to Allow Time to Review Proposed Mergers before the Assets Become Too Difficult to Unscramble.

3. The U.S. antitrust agencies principally challenge anticompetitive acquisitions under Section 7 of the Clayton Act ("Section 7"), which allows prospective challenges to mergers before the harm to consumers actually occurs.[6] Prior to the enactment of Section 7A, the agencies did not receive advance notice through premerger notifications and merging firms did not observe a statutory waiting period. As a result, Section 7 proved difficult to enforce because the U.S. agencies could challenge mergers only after their consummation and the agencies' only recourse was to sue to unwind anticompetitive mergers after the fact.[7] If a court later found that a merger was illegal and ordered relief, the interim loss of competition during trial harmed consumers.[8] Additionally, once companies had merged, effective relief was difficult to fashion because the companies' operations and assets often were irrevocably changed and entwined.

4. The U.S. Congress enacted Section 7A in 1976, requiring firms to file a notice and observe a waiting period. The legislative history leading to the enactment of Section 7A demonstrates Congress's intent to create a more effective enforcement mechanism "to detect and prevent illegal mergers prior to consummation."[9] Congress believed a premerger injunction is "often the only effective and realistic remedy against large illegal mergers—before the assets, technology, and management of the merging firms are hopelessly and irreversibly scrambled together, and before competition is substantially and perhaps irremediably lessened. . . ."[10] This legislative history underscores Congress's desire that competition existing before the merger be maintained pending review by the antitrust enforcement agencies and a court.

5. The legislative history also underscores Congress' desire to maintain the integrity of the premerger investigation. The purpose is to give the "the government antitrust agencies a fair and reasonable opportunity to detect and investigate large mergers of

[6] "No person engaged in commerce or in any activity affecting commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no person subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another person engaged also in commerce or in any activity affecting commerce, where in any line of commerce or in any activity affecting commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly." 15 U.S.C. 18. Although agencies can challenge mergers under Sections 1 and 2 of the Sherman Act, they rarely do because the Sherman Act requires proof of actual harm to competition and the Section 7 requires proof that an acquisition "may" substantially lessen competition. *Id.*

[7] *See, e.g.*, Competitive Impact Statement at 11. *United States v. Gemstar-TV Guide International, Inc.*, No. 03CV000198 (D.D.C. 2003), https://www.justice.gov/atr/case-document/competitive-impact-statement-108 ("Gemstar CIS").

[10] H.R. Rep. No. 94-1373, at 5 (1976).

questionable legality before they are consummated."[11] In discussing waiting period requirements, Congressman Rodino explained: "[T]here may well be cases in which the merging companies act in bad faith, or conceal relevant data from the Government . . . . If they do so, they act at their peril, and would properly be subject to sanctions. . . ."[12] Congress left it to the agencies to determine the information that they need from the parties and provided equitable and civil relief in the event merging parties did not substantially comply with requests for information.

1.3. Gun-Jumping Also May be Illegal under Section 1 of the Sherman Act or Section 5 of the Federal Trade Commission Act

6. Section 1 of the Sherman Act ("Section 1") prohibits agreements between competitors that harm competition.[13] Thus, during the pre-consummation period, competing firms also may be liable for agreements that violate Section 1. Conduct illegal under Section 1 may include merging firms' jointly setting prices or contract terms, or entering market division or customer allocation agreements. In addition, if competing firms use the other party's competitively sensitive information during the pre-consummation period, their exchange and use of such information may constitute an agreement in violation of Section 1. These agreements harm consumers by eliminating competition at a time when firms should behave as separate and independent competitors. The agencies also may use conduct that violates Section 1, including exchanges and use of competitively sensitive information, as indicia of operational control to prove violations of Section 7A that provide for civil penalties.[14] As discussed below, several gun-jumping complaints have alleged violations of Section 1.

1.4. The Agencies May Discover Evidence of Gun-jumping During Merger Review From the Parties or Third Parties

7. Evidence of gun-jumping usually is discovered when the agencies investigate the proposed transaction. In the United States, agencies collect contemporaneous documents during merger review; these documents sometimes reveal communications between the parties about illegal gun-jumping activity. In other instances, third-party witnesses may provide information that suggests the parties have engaged in illegal gun-jumping activity. Both the Antitrust Division and the Federal Trade Commission have authority to subpoena documents or testimony or issue civil investigative demands requesting interrogatory

responses from the parties and from third-party witnesses. Based on initial findings, the agencies can determine whether they need additional information and can use their subpoena power to obtain this information to understand the conduct. Parties also often submit white papers and engage in discussions with the agencies to explain and defend the relevant conduct.

2. Legal Consequences and Remedies for Gun-Jumping

8. Under Section 7A(g)(1) of the Clayton Act, firms in violation of Section 7A are liable for civil penalties.[15] Only the Antitrust Division may obtain civil penalties; the Federal Trade Commission may refer its cases to the Antitrust Division to obtain civil penalties. Each party is liable to pay the applicable civil penalty. In 2018, the maximum penalty per company per day in violation of Section 7A is $41,484.[16] Thus, a 7A violation lasting ten days could lead to a penalty for each party of up to $414,840 or $829,680.[17] To date, the largest civil penalty obtained by either agency for a violation of Section 7A was $11,000,000.[18]

9. Defendants that violate Section 1 also may be liable for equitable remedies, including disgorgement. For example, the United States sought and obtained disgorgement of $1.15 million in illegally obtained profits during the six-month period leading up to its settlement with Flakeboard and SierraPine.[19] Additional equitable remedies have included rescission of contracts entered into during the pre-consummation period[20] and injunctive relief.[21]

10. Pre-merger conduct for mergers that do not meet the Section 7A thresholds or otherwise are not notifiable cannot technically violate Section 7A. However, parties that are not covered by Section 7A still may be liable for violations of Section 1 during the pre-consummation period of their merger.

[15] 15 U.S.C. § 18a(g)(1).

[16] *See* 16 C.F.R. § 1.98.

[17] Each party pays $41,484 multiplied by the ten days of the violation – i.e., 10-Day Penalty = 2*($41,484*10).

3. Interactions and Communications Indicating Gun-Jumping

11. As discussed above, gun-jumping occurs when parties to an acquisition prematurely transfer beneficial ownership prior to the end of the required waiting period. A common way in which parties prematurely transfer beneficial ownership is by allowing the buyer to take operational control over the assets that are the subject of the acquisition.[22]

3.1. Taking Control of Physical Assets Such as a Plant, Inventory, or Machinery

12. The agencies have challenged conduct as gun-jumping when one party to a merger took control of the other parties' plant, inventory, or machinery. For example, in 2014, the United States alleged Flakeboard America Ltd. and Sierra Pine entered an illegal premerger agreement to close a Sierra Pine mill and divert customers to Flakeboard. The agreement to close the mill and allocate customers constituted an illegal agreement between competitors to reduce output and allocate customers in violation of Section 1 of the Sherman Act. Additionally, the complaint alleged that by coordinating to close the mill, allocate customers, and exchange competitively sensitive information, Flakeboard exercised operational control (and thereby obtained beneficial ownership) of SierraPine's business prior to the end of the waiting period in violation of Section 7A. As a result of the agreement, Flakeboard successfully secured a substantial amount of business from SierraPine and harmed competition.

13. In this example, the parties abandoned their merger in response to competitive concerns raised by the United States. To remedy the Section 1 violation, the settlement agreement provides for disgorgement of $1.15 million, the approximate amount of profits that Flakeboard illegally obtained from closing the mill and allocating customers. Additionally, each party agreed to pay a civil penalty of $1.9 million ($3.8 million total) to remedy the Section 7A violation.

14. Other cases have alleged that assuming control over physical assets constituted a gun-jumping violation. For example, Titan Wheel took immediate possession and operations of a Pirelli Armstrong plant and used the plant to manufacture tires during a thirteen-day period in violation of Section 7A[23]; Titan Wheel agreed to pay the maximum civil penalty of $130,000 to settle the case. In another case, two competitors in the market for title plant services,[24] Commonwealth Land Title Insurance and First American, agreed to consolidate their title plants in the District of Columbia. Before relocating, Commonwealth terminated existing contracts with customers. After the relocation, the

[22] There are no litigated gun-jumping cases, but several consent decrees provide guidance about gun-jumping violations. Practitioners may look to litigated cases involving Section 1 violations for additional guidance.

[23] Complaint at 6-7. *United States v. Titan Wheel*, No. 1:96CV01040 (D.D.C. 1996), https://www.justice.gov/atr/case-document/file/628336/download ("Titan Wheel Complaint").

[24] Title plant services are used by abstractors, title insurers, title insurance agents, and others to determine ownership of and interests in real property in connection with the underwriting and issuance of title insurance policies and for other purposes. Complaint at 3. *In re Commonwealth Land Title Insurance Co.* No. C-3835 (F.T.C. 1998), https://www.ftc.gov/sites/default/files/documents/cases/1998/11/ftc.gov-9810127cmp.htm ("Commonwealth Complaint"). The FTC also alleged the combination violated Section 7.

parties jointly set prices and terms for plant title services. The Federal Trade Commission alleged this constituted an agreement to raise prices and fix output in violation of Section 5.[25] The settlement included injunctive relief.[26]

15. *United States v. Duke Energy* provides another example of parties taking control of assets.[27] In this case, Duke Energy entered into an agreement to acquire the Osprey Energy Center from Calpine Corp. In conjunction with the acquisition agreement, Duke also entered into a tolling agreement for the Osprey plant.[28] Under the tolling agreement, Duke immediately began exercising control over the Osprey plant, making decisions about its output. Duke began earning profits from and assuming risk for the day-to-day operations of the business. Duke admitted it entered the tolling agreement only as part of its acquisition of the Osprey plant.[29]

16. Management agreements, such as tolling agreements, may be permissible outside of the merger context. However, because management agreements "entered into in connection with an acquisition transfers operating control of the assets or business," they may violate Section 7A when entered in conjunction with a merger agreement.[30] In these instances, the buyer takes over the business and obtains operational control through the management agreement while the seller essentially exits prior to merger review.[31] In this case, the combination of the tolling agreement and the acquisition agreement allowed Duke Energy to acquire beneficial ownership of the Osprey plant by taking operational control of the plant. Through these intertwined agreements, Calpine ceased to be an independent competitor and the parties harmed competition. The parties agreed to pay a $600,000 civil penalty.[32]

3.2. Taking Control of Management Functions

17. Evidence that the acquiring company has taken control of management functions in some way is a common form of gun-jumping alleged in the agency complaints. This control takes many forms and includes *ad hoc* decision making and formalized agreements

---

[25] Commonwealth Complaint at 4. The allegations correspond to a violation of Section 1 of the Sherman Act.

[32] Duke Energy CIS at 6.

contained in the merger contracts. The conduct alleged includes joint decision-making, agreement on prices and contract terms, reorganizations, and even settlement of disputes on behalf of another party to the merger.

18. In its case against Gemstar-TV Guide International, Inc., the United States alleged that prior to their merger, the parties engaged gun-jumping by "effectively merg[ing] most of their decision-making processes."[33] They did so by developing standard contract prices and terms, exchanging and redlining draft contracts and using TV Guide to act as Gemstar's agent during customer contract negotiations in violation of Section 7A.[34] Additionally, Gemstar and TV Guide agreed on contract prices and terms, agreed to slow customer negotiations during the pre-consummation period to get better terms after the merger, and entered into a market and customer allocation agreement in violation of Section 1.[35] The United States alleged that this joint decision-making eliminated both companies as independent competitors during the pre-consummation period.[36] The agreements harmed competition through increased prices and more onerous contract terms.[37] Gemstar agreed to pay a $5,676,000 civil penalty under Section 7A violations and agreed to injunctive relief, including rescission of contracts entered into during the statutory waiting period.[38]

19. In another instance, Input/Output announced a reorganization of Digicourse, the business Input/Output planned to acquire. Pursuant to this reorganization, Input/Output assigned key Digicourse executives to new roles and titles, moved them into Input/Output facilities, and provided them with Input/Output business cards and email addresses. The United States alleged that these actions "constituted a transfer of beneficial ownership of DigiCourse to Input/Output prior to the expiration of the waiting period" in violation of Section 7A.[39] The parties agreed to pay $450,000 in civil penalties.[40]

3.3. Limitations of Day-to-Day Operations Through Merger Contract Provisions.

20. Often merging parties will include provisions in their merger agreements designed to maintain the value of the acquired firm during the pre-merger period. These "interim conduct of business" provisions require approval from the acquiring firm for certain decisions taken after the merger agreement is signed but before the merger has closed. These types of provisions often require approval for decisions such as undertaking large capital projects, selling significant assets, or incurring significant debt. Usually, merging

[39] Complaint at 4. *United States v. Input/Output, Inc.*, No. 1:99CV00912 (D.D.C. 1999), https://www.justice.gov/atr/case-document/complaint-civil-penalties-violation-premerger-reporting-requirements-hart-scott ("Input/Output Complaint").

[40] Final Judgment at 2. *United States v. Input/Output, Inc.*, No. 1:99CV00912 (D.D.C. 1999), https://www.justice.gov/atr/case-document/proposed-final-judgment-154.

parties have legitimate business reasons for including such provisions and they do not run afoul of gun-jumping laws. However, if the interim conduct of business provisions require approvals for decisions the acquired firm would make in the ordinary course of its business, the provisions may constitute gun-jumping. Three matters provide examples of overly restrictive conduct of business provisions.

21. In 2010, the United States entered into a consent decree to address gun-jumping that occurred between Smithfield Foods and Premium Standard Farms.[41] Smithfield entered into a merger agreement with Premium Standard Farms that contained provisions limiting Premium Standard's operations during the waiting period. These provisions also included a requirement that Premium Standard "carry on its business in the ordinary course consistent with past practice."[42] Because of this provision, Premium Standard submitted three ordinary course purchase contracts to Smithfield Foods for its approval.[43] Each time Premium Standard sought consent for the contracts, it provided Smithfield with proposed terms include price, quantity, and length of contract.[44] The United States alleged a violation of Section 7A and obtained a $900,000 civil penalty.[45]

22. *United States v. Computer Associates* provides a similar example. Computer Associates and Platinum Technology International were leading vendors of management software products and competed aggressively prior to their agreement to merge.[46] The merger agreement contained several provisions governing how Platinum would conduct its business prior to consummation of the merger, including requirements that it seek approval to change standard license terms or offer discounts greater than 20 percent.[47] Before entering into the merger agreement, Platinum routinely entered into contracts with discounts greater than 20 percent.[48] Platinum changed its customer contract approval procedures to ensure that the company met these limitations and Computer Associates executives made decisions about Platinum contracts during the HSR waiting period. Computer Associates executives had access to competitively sensitive information when making decisions about whether to approve or deny changes.[49] The merger agreement also limited Platinum's ability to offer certain services without Computer Associates' approval. Computer Associates also changed some of Platinum's accounting practices and cancelled

Platinum's participation in trade shows.[50] The United States alleged violations of both Section 7A and Section 1. Computer Associates and Platinum each agreed to pay a civil penalty of $638,000 as well as injunctive relief.[51]

23. *United States v. Qualcomm* provides a third example of an acquiring firm exercising control over the day-to-day operations of Flarion, the to-be-acquired firm.[52] The merger agreement required Flarion to support certain pre-existing technologies, but prohibited it from expanding the scope of the existing deployments of technologies or supporting new deployments of technologies.[53] Within days of the merger agreement, Flarion sought Qualcomm's consent before entering transactions with third parties even when the merger agreement did not oblige Flarion to do so.[54] The United States alleged a violation of Section 7A and obtained a $1.8 million civil penalty.[55]

24. In all of these examples, the acquired firm stopped exercising its own independent business judgment and deferred to the acquiring firm. The acquiring firm then exercised control over business operations and acquired beneficial ownership of the business prior to the expiration of the waiting period. In doing so, consumers were denied the benefits of competition prior to the end of the statutory waiting period and the agencies were denied the ability to review the merger while the parties remained independent during the waiting period.

3.4. Negotiating Contracts or Settlements on Behalf of the Other Party

25. The agencies have alleged Section 7A violations where executives from one of the merging companies attempted to negotiate contracts or seek settlements to lawsuits on behalf of the other party. In *United States v. Input/Output*, an executive from the acquired company traveled to the United Kingdom to resolve a commercial dispute between the acquiring company and one of its customers and eventually accepted settlement on behalf of the acquiring firm.[56] Ordinarily, we expect competitors to try to win business when customers become unhappy=, not try to improve their competitor's customer relationships.

26. In *United States v. Gemstar-TV Guide International, Inc.*, an executive from TV Guide led negotiations to settle a patent dispute between Gemstar and another market participant. The discussed terms were against TV Guide's interests because they would have made it more difficult for TV Guide to compete effectively.[57] In both instances, the

AR_002513

settlement discussions reflected the parties' failure to act as independent competitors. Instead, they demonstrated aligned economic interests prior to the expiration of the waiting period in violation of Section 7A.

3.5. Exchanges of Competitively Sensitive Information

27. Exchanges of competitively sensitive information between competitors could lead to violations of Section 1 of the Sherman Act or violations of Section 7A.[58] Additionally, the agencies have alleged exchanges of competitively sensitive information as indicia of operational control leading to beneficial ownership in violation of Section 7A.[59]

28. The *Insilco* case provides an example of an illegal information exchange in conjunction with a merger agreement. During the pre-consummation period for Insilco's acquisition of a close competitor in the allied tube industry, Insilco requested and received customer specific information that included prior negotiations, price quotes, and present and future pricing policies and strategies in alleged violation of Section 5.[60] In *Gemstar*, the United States alleged that an exchange and use of information was part of an agreement to fix prices and terms in violation of Section 1.[61]

29. Although merging firms need some information during the due diligence and pre-consummation planning periods, they need to be careful about what and to whom they transmit this information. A key question to ask is, if the merger does not go through, would the exchange of information between competitors facilitate collusion or harm competition in another way. If so, the parties should not freely exchange the information. If the information is necessary to the merger process, the merging parties should take care to employ a "clean team" or use other protections to prevent the information from reaching people responsible for the normal operation of the businesses during the waiting period.

[58] Exchanges of competitively sensitive information among competitors also could lead to violations of Section 1 of the Sherman Act outside of the pre-merger context. *See, e.g., United States v. Gypsum,* 438 U.S. 422 (1978); *United States v. Container Corp. of America,* 393 U.S. 333 (1969). Although cases outside the premerger context are illustrative, we limit the discussion to pre-merger cases.

United States

1. Introduction

1. In the United States, the Antitrust Division of the U.S. Department of Justice (DOJ) and the Federal Trade Commission (FTC) (together, the Agencies) recognize that competitive markets play an important role in promoting and incentivizing innovation that benefits consumers.[1]

2. New entry, as well as expansion by existing firms, can spur innovation that benefits consumers. Innovative firms are often attractive M&A targets. On one hand, incumbent firms seek to acquire pioneering firms and emerging technologies that can be further developed. On the other hand, incumbents may target such firms to eliminate a competitive threat.[2]

3. Section 7 of the Clayton Act prohibits mergers and acquisitions whose effect "may be substantially to lessen competition, or to tend to create a monopoly."[3] Acquisitions of innovative firms, mavericks, nascent competitors, and potential competitors are reviewable under Section 7. U.S. merger law is generally forward-looking, designed to stop threats to competition "in their incipiency;" but it can be used to challenge and unwind consummated mergers as well.[4] In addition, transactions may be reviewed under Section 1 of the Sherman Act, which prohibits contracts, combinations or conspiracies in restraint of trade; or Section 2 of the Sherman Act, which prohibits monopolization, attempted monopolization, and conspiracy to monopolize.[5]

[5] 15 U.S.C. § 1, 2. The DOJ enforces the Sherman Act. The FTC enforces Section 5 of the FTC Act, which prohibits "unfair methods of competition," including violations of the Sherman Act as well as some other types of conduct. *See* Federal Trade Commission, Statement of Enforcement Principles Regarding "Unfair Methods of Competition"

4. U.S. antitrust law recognizes that mergers among competitors, including nascent or potential competitors, may be anticompetitive, especially "when an industry leader seeks to acquire an up-and-coming competitor that is changing customer expectations and gaining sales."[6] This includes the acquisition of a company that is not yet present in a market, but which may have the ability and incentive to enter and compete in the incumbent's market.[7] The Agencies understand the importance of competition from firms that threaten to disrupt market conditions by repositioning or offering a new technology or business model, and appreciate that the elimination of such firms through M&A activity can result in a substantial lessening of competition.[8]

5. The Agencies also recognize that acquisitions of existing or potential competitors may result in efficiencies. As further described in the *Horizontal Merger Guidelines* (2010), the Agencies will consider whether the merger has the potential to generate significant efficiencies and thus enhance the merged firm's ability and incentive to compete, which may result in lower prices, improved quality, enhanced service, or new products. As in any merger analysis, however, cognizable efficiencies must be merger-specific, verifiable, and not result from an anticompetitive aspect of the merger. Ultimately, they must be shown to enhance competition and thus benefit consumers. For example, merger-generated efficiencies may enhance competition by permitting two ineffective competitors to form a more effective competitor, *e.g.*, by combining complementary assets.[9]

2. U.S. Law Addressing Acquisitions of Nascent and Potential Competitors

6. Section 7 of the Clayton Act provides a well-developed legal framework for preventing or undoing mergers that may substantially lessen competition. The *Horizontal Merger Guidelines* set out the framework used by the Agencies to analyze horizontal mergers, including those between an incumbent and a small and growing competitor or a potential entrant. The Agencies take a careful, fact-based approach to assessing the competitive effects of any merger or acquisition, focusing on the particular economic characteristics of the markets affected by the transaction. To that end, the Agencies conduct thorough factual investigations that include economic analysis, the review of relevant documents and information, the taking of testimony, and interviews with parties, customers, and competitors, and other market participants.[10]

7. In some industries, market conditions and industry structure are not always static and may change rapidly. Therefore, the Agencies bear in mind that current or past market shares may overstate – or perhaps understate – the current or future competitive significance of industry participants, particularly in industries where innovation and new

Under Section 5 of the Federal Trade Commission Act, 80 FR 57056 (Sept. 21, 2015), https://www.ftc.gov/system/files/documents/federal_register_notices/2015/09/150921commissionpolicyfrn.pdf;

[7] *Horizontal Merger Guidelines* § 9, Entry; Complaint ¶ 37, *United States v. Westinghouse Air Brake Technologies Corp.*, et al., No. 16-cv-02147 (D.D.C. Oct. 26, 2016).

[8] *Horizontal Merger Guidelines* § 2.1.5, Disruptive Role of a Merging Party..

[9] *Horizontal Merger Guidelines* §10, Efficiencies.

[10] *Horizontal Merger Guidelines* § 2, Evidence of Adverse Competitive Effects.

product development are key dimensions of competition.[11] The Agencies consider both price and non-price effects in their analyses, recognizing that firms often compete on the basis of quality and innovation, such as new product development, among other factors.[12]

8. The anticompetitive effects of a merger need not be certain to render a merger illegal under Section 7.[13] Predicting anticompetitive effects with precision can be particularly difficult where the parties do not currently operate in the same relevant market and the competitive effects are predicated on the reasonable likelihood of future competition between the merging parties. In analyzing the potential for competitive harm from a transaction, the Agencies rely on a broad range of evidence, including, but not limited to, strategic plans and other business documents, and public statements of the acquiring and to-be-acquired firm, and inquiry into the rationale for the proposed transaction. The Agencies also consider the acquirer's past successes or failures in bringing to market new or acquired products and the likelihood that the acquired firm would develop into a significant competitor without the merger. Moreover, the Agencies also seek and evaluate the views of competitors and customers of the merging parties, industry experts, and market analysts. Where future competition may depend on the willingness of investors to fund, or continue to fund, new or developing market participants, the Agencies may seek and evaluate the views and future plans of investors.

9. Section 2 of the Sherman Act provides an additional framework for evaluating exclusionary or predatory conduct, including acquisitions that may contribute to the acquisition or maintenance of monopoly power. For example, Section 2 may apply where a monopolist engages in exclusionary conduct (such as an acquisition) to eliminate the potential competitive threat posed by a technology, product, or service, even if it "is not presently a viable substitute" for the acquirer's own technologies, products, or services.[14] Section 2 liability requires proof of monopoly power in a relevant market, and anticompetitive conduct to acquire or maintain that power.[15] A successful monopoly maintenance claim does not require proof that a nascent or potential competitor would actually have developed into a viable substitute, but "whether as a general matter the

[13] *Horizontal Merger Guidelines* § 1, Innovation and Product Variety.

[14] *United States v. Microsoft Corp.*, 253 F.3d 34, 54 (D.C. Cir. 2001) ("Nothing in § 2 of the Sherman Act limits its prohibition to actions taken against threats that are already well-developed enough to serve as present substitutes.").

[15] *Verizon Communications Inc. v. Law Offices of Curtis V. Trinko, LLP*, 540 U.S. 398, 407 (2004)("[T]he

possession of monopoly power will not be found unlawful unless it is accompanied by an element of anticompetitive *conduct*.")(emphasis in original); *accord Retractable Techs., Inc. v. Becton Dickinson & Co.*, 842 F.3d 883, 891 (5th Cir. 2016)("Predatory or anticompetitive conduct, which excludes competitors from a market, is conduct, *other than competition on the merits or restraints reasonably necessary to competition on the merits*, that reasonably appear[s] capable of making a significant contribution to creating or maintaining monopoly power.")(citation and internal quotation marks omitted; emphasis added); *Broadcom Corp. v. Qualcomm Inc.*, 501 F.3d 297, 308 (3d Cir. 2007)("Anticompetitive conduct may take a variety of forms, but it is generally defined as conduct to obtain or maintain monopoly power as a result of *competition on some basis other than the merits*.")(emphasis added); *Monsanto Co. v. Scruggs*, 459 F.3d 1328, 1338–39 (Fed. Cir. 2006)("To establish a section 2 violation, one must prove that the party charged had monopoly power in a relevant market and acquired or maintained that power by anti-competitive practices *instead of by competition on the merits*.")(citation omitted; emphasis added).

exclusion of nascent threats is the type of conduct that is reasonably capable of contributing significantly to the defendant's continued market power."[16]

10. Section 2 analyses also include an evaluation of any procompetitive justifications. When parties come forward with sufficient evidence to review the claimed procompetitive benefits of an acquisition, the Agencies consider whether that acquisition would result in, among other things, new or improved products, increased speed to market of any acquired products, and any benefits in the form of improved innovation, including the ability of the merged firm to conduct research and development more effectively, to the extent those have likely effects on the relevant market.[17] For example, an incumbent digital platform might acquire, through merger, the technology of a nascent or potential competitor because the technology complements or enhances the incumbent's own technology. Additionally, an incumbent may have the financial resources, experience, and other business assets to more efficiently develop and commercialize a nascent or potential competitor's technology, thus making it available to more consumers.

2.1. Agency Experience

11. For years, the Agencies have challenged vertical and horizontal transactions that involve nascent competitors. In so doing, the Agencies have sought remedies to resolve their competition concerns. Where an adequate remedy was not available, the Agencies went to court to seek a decision declaring the merger illegal and enjoining it from closing. Challenges to nascent competitor acquisitions have included transactions where: (i) the merging firms were actual competitors, (ii) deals where, but for the merger, one firm would have faced competition from the target in the future, and (iii) mergers where both firms were working to develop products that would likely compete in the future. Examples of each of these types of cases are discussed below.

2.1.1. Cases Involving Actual Competitors

12. The Agencies have routinely challenged acquisitions by an incumbent firm of a smaller competitor that had, at the time of the acquisition, the potential to expand its market share and competitive significance absent the acquisition.

13. In September 2019, the DOJ sued to block Novelis Inc.'s proposed acquisition of Aleris Corporation in order to preserve competition in the North American market for rolled aluminum sheet for automotive applications, commonly referred to as aluminum auto body sheet.[18] As alleged in the complaint, Novelis had long been one of only a few aluminum body sheet suppliers in North America, while Aleris was a relatively new competitor that—in Novelis's own words—was "poised for transformational growth." The proposed transaction would concentrate more than half of the domestic production and sale of aluminum auto body sheet, 60 percent of projected total domestic capacity, and the majority of uncommitted domestic capacity under the control of one firm. Prior to filing

[16] *Microsoft*, 253 F.3d at 79 ("Given [the] rather edentulous test for causation, the question in this case is not whether Java or Navigator would actually have developed into viable platform substitutes, but (1) whether as a general matter the exclusion of nascent threats is the type of conduct that is reasonably capable of contributing significantly to a defendant's continued monopoly power and (2) whether Java and Navigator reasonably constituted nascent threats at the time Microsoft engaged in the anticompetitive conduct at issue.").

[17] *Horizontal Merger Guidelines* § 10, Efficiencies.

[18] *See* Complaint, *United States v. Novelis*, No. 1:19-cv-02033-CAB (N.D. Ohio Sept. 4, 2020), https://www.justice.gov/atr/case-document/file/1199461/download.

the complaint, the DOJ reached an agreement with defendants to refer the matter to binding arbitration on the issue of market definition if the parties were unable to resolve the competitive concerns with the transaction within a certain period of time. After a 10-day first-of-its-kind arbitration hearing, the arbitrator ruled for DOJ, holding that aluminum auto body sheet constitutes a relevant product market, as the United States had alleged. As a result, Novelis was required to divest Aleris's entire aluminum auto body sheet operations in North America to fully preserve competition.

14. In August 2019, the DOJ challenged Sabre Corporation's proposed acquisition of Farelogix under Section 7.[19] The DOJ alleged that the transaction would allow Sabre, the largest airline booking services provider in the United States, to eliminate a disruptive competitor that had introduced new technology to the travel industry and that was poised to grow significantly. According to the complaint, the transaction would result in higher prices, reduced quality, and less innovation. At trial, DOJ presented evidence that Sabre had a history of engaging in anticompetitive tactics designed to undermine and delay the adoption of Farelogix's technology. In April 2020, the U.S. federal district court issued its opinion, finding that Farelogix was a "disruptor" and a "successful" competitor of Sabre's. It further found that the "evidence suggests that Sabre will have the incentive to raise prices . . . and stifle innovation" following the acquisition.[20] Notwithstanding these factual findings, the court denied DOJ's request to block the merger, ruling that it was bound by the Supreme Court's decision in *Ohio v. American Express Co.*[21] to hold that Sabre and Farelogix do not compete in a relevant market. The DOJ filed a notice of appeal of the court's decision.[22] On May 1, 2020, Sabre and Farelogix terminated their merger agreement.[23] On May 12, 2020, the DOJ moved in the Third Circuit to vacate the district court's decision, pursuant to the doctrine from *United States v. Munsingwear*, Inc., 340 U.S. 36 (1950), because the merging parties' decision to abandon the merger rendered the case moot, precluding the possibility of challenging the decision on appeal.

15. In 2018, the FTC challenged the merger of CDK Global and Auto/Mate.[24] CDK was the market leader in specialized platform business software for franchise automotive dealers. Auto/Mate was a much smaller competitor with an innovative business model that was winning business from larger firms by offering lower prices, flexible contract terms, low fees for third-party apps participating on the platform, free software upgrades and training, and high-quality customer service. Although Auto/Mate was already competing in the market, the FTC was concerned that the acquisition would eliminate its future competitive significance. Auto/Mate's impact on existing platforms indicated that its pre-acquisition market share underrepresented its future market significance and the FTC concluded that the acquisition would have eliminated competition from a key emerging

AR_002520

rival. The parties terminated their acquisition agreement shortly after the FTC issued its complaint.

16. In December 2019, the FTC challenged the acquisition of an innovative biotech firm, Pacific Biosciences of California, by an established incumbent, Illumina, as a violation of both Section 7 of the Clayton Act and Section 2 of the Sherman Act. The FTC alleged that Illumina's proposed acquisition of PacBio would substantially lessen current and future competition in a market for next-generation DNA sequencing systems, a rapidly expanding technology used in genetic research and clinical testing, and that the acquisition would unlawfully maintain Illumina's monopoly power. Illumina's systems employed short-read sequencing technology and, at the time of the proposed acquisition, it had a market share of more than 90%. PacBio's platforms employed long-read sequencing technology, and, at the time of the proposed acquisition, it had a market share of approximately 2% to 3%. But despite the current differences between their respective systems, PacBio had made significant technological advancements in recent years, and absent the proposed acquisition, competition between Illumina and PacBio would increase substantially in the future. The FTC also alleged that the acquisition constituted unlawful maintenance of Illumina's monopoly in the U.S. market for next-generation DNA sequencing systems, by extinguishing PacBio as a nascent competitive threat. The FTC alleged that the parties could not verify or substantiate any merger-specific efficiencies, that their procompetitive justifications for the acquisition were pretextual, and that any procompetitive effects flowing from the acquisition could be accomplished through means other than the acquisition.[25] The parties abandoned their merger plans after the FTC filed its complaint.[26] The UK Competition and Markets Authority (CMA) was also reviewing the transaction, and had issued provisional findings that the merger was anticompetitive.

17. In January 2013, DOJ filed a lawsuit to challenge the consummated acquisition of PowerReviews by Bazaarvoice.[27] The complaint alleged that Bazaarvoice's acquisition of PowerReviews eliminated the company's only significant rival in the market for product ratings and reviews platforms used by U.S. manufacturers and retailers to display product ratings and reviews on their websites. Product ratings and review platform providers negotiated prices based on each customer's perceived willingness to pay for the offered product, and that willingness depended upon the alternatives available. The presence of PowerReviews benefited its customers and non-customers alike because its market presence often forced price competition, including substantial discounting, by incumbent Bazaarvoice. On January 8, 2014, following a three-week trial, the district court found that the acquisition would likely have anticompetitive effects and therefore violated Section 7 of the Clayton Act. Bazaarvoice was ordered to divest the PowerReviews business it had unlawfully acquired.

2.1.2. Cases Involving a Threat to an Incumbent from a Future Competitor

18. The Agencies also have challenged acquisitions where the transaction was likely to delay or thwart future competition against the incumbent. Identifying and proving a loss of potential competition can be a challenging predictive exercise. In some markets, such

as pharmaceutical, medical device, and agricultural technology markets, the regulatory approval process may make identification of products in development more transparent than in markets in which entry is not subject to such approval processes.

19. In 2015, the FTC challenged the proposed merger of Steris Corporation and Synergy Health, alleging that the merger would eliminate Synergy as an actual potential entrant into the market for contract radiation sterilization services, or into certain narrower markets for more specific sterilization services. Steris was one of only two companies providing sterilization services to medical device firms in the United States, and Synergy had advanced plans to expand into the United States with a new, and potentially superior, sterilization technology, including securing physical locations for its plant and contracting for the required equipment. After the trial, the court concluded that the Commission had failed to show that Synergy's entry into the U.S. was probable, and declined to grant the injunction.[28]

20. In 2009, the FTC filed a complaint challenging Thoratec Corporation's proposed acquisition of rival medical device maker HeartWare International, Inc.[29] The Commission charged that the transaction would eliminate current and future competition in the U.S. market for left ventricular assist devices (LVADs), a life-sustaining treatment for patients with advanced heart failure. HeartWare was engaged in clinical trials for a device that may have been superior to Thoratec's product. Although regulatory approval for these devices was uncertain, there was sufficient evidence for the Commission to allege that Heartware's LVAD still in development was positioned to be the next LVAD approved by the Food and Drug Administration for sale in the United States, and that Heartware's product represented a significant threat to Thoratec's LVAD monopoly. The few other companies developing LVADs were significantly behind HeartWare in their clinical trials and were unlikely to reach the market as soon as, or be as competitive as, HeartWare's device. The Commission's complaint alleged that no other firm could replace the current and future competition eliminated by the merger. The parties abandoned their proposed transaction after the Commission filed its complaint.

21. In 2007, the DOJ investigated certain vertical concerns in connection with Monsanto's merger with Delta & Pine Land (D&PL).[30] The DOJ investigation focused on whether the transaction would harm nascent competition in markets for transgenic cottonseed traits in the Southeast and South-Central United States. Monsanto was the first to develop successful traits. At time when the merger was announced, almost all cotton grown in these regions used Monsanto traits that (i) make cotton tolerant to glyphosate herbicide and (ii) make cotton plants resistant to many insects. The DOJ determined that the transaction would thwart or delay efforts by rival trait developers to bring competing traits to market by depriving those rivals' access to cottonseed material (germplasm) with a proven track record. Ultimately, the parties divested their main horizontal overlap. DOJ also sought and obtained rights and access to germplasm for the divestiture buyers, as well as modification to the terms of certain Monsanto's licenses with third-party seed companies that provided incentives to use only Monsanto traits to the exclusion of traits developed by others.

2.1.3. Cases Involving Emerging Markets

22. The Agencies have also challenged mergers where both firms had products in development for the same future market. A merger of this kind may reduce competition by bringing separate competitive efforts under common control.[31] In appropriate cases, the Agencies have required a divestiture of one of the products in development and/or the licensing of intellectual property rights of one or both parties to the merger, so as to support the continued development of future products.

23. In 2018, the DOJ challenged Bayer AG's acquisition of Monsanto, alleging both horizontal and vertical competition concerns. In its complaint, the DOJ emphasized that Bayer and Monsanto were leading competitors in the development of new products and services, and that the acquisition as proposed would have stifled innovation in agricultural technologies that has delivered significant benefits to farmers and consumers.[32] To alleviate these concerns, the DOJ negotiated a $9 billion divestiture of businesses and assets to BASF. Among the divested assets were certain intellectual property and research capabilities, including pipeline research and development projects, and complementary assets necessary to ensure that BASF continues to have the same innovation incentives, capabilities, and scale that Bayer would have as an independent competitor. Most notably, these assets included Bayer's nascent digital agriculture business.[33]

24. In 2013, two of the world's largest semiconductor manufacturing equipment makers, Applied Materials and Tokyo Electron, announced a merger that would combine the two leading firms that possessed the necessary knowhow, resources, and ability to develop and supply high-volume non-lithography semiconductor equipment. The DOJ conducted an extensive investigation and found that the existing competitive overlap between specific equipment offered by the two firms was emblematic of a broader competition to develop new equipment. Existing competition indicated that each firm had the "building blocks," the appropriate collection of assets and capabilities, necessary to be successful developers of new equipment.[34] As a result, the DOJ had substantial concerns that the merger would diminish competition to develop equipment for the manufacture of next-generation semiconductors. In 2015, Applied Materials and Tokyo Electron abandoned the merger after the DOJ informed them that their proposed remedy was inadequate.[35]

[31] Such a merger may also have procompetitive benefits: for example, it may make entry or development of a product more likely, or support more speedy entry, because the merger allows the firms to combine complementary assets. *See, e.g.*, Statement of FTC Chairman Timothy J. Muris, in the Matter of Genzyme Corporation / Novazyme Pharmaceuticals, Inc. (January 13, 2004), https://www.ftc.gov/system/files/attachments/press-releases/ftc-closes-its-investigation-genzyme-corporations-2001-acquisition-novazyme-pharmaceuticals-inc./murisgenzymestmt.pdf.

25. In 2013, the FTC challenged the merger of Nielsen and Arbitron. Both companies were developing national syndicated cross-platform audience measurement services, which would allow audiences to be measured accurately across multiple viewing platforms, such as TV and online.[36] At the time of the merger, no firm offered a commercially available service that could perform this function, but demand for such a service was increasing. Evidence showed that Nielsen and Arbitron were the two best positioned firms to develop this service. The FTC alleged that the elimination of future competition between Nielsen and Arbitron would increase the likelihood that Nielsen would exercise market power, and make it more likely that advertisers, advertising agencies, and programmers would pay more for national syndicated cross-platform audience measurement services. To address these concerns, as part of the settlement order, the Commission required Nielsen to divest assets related to Arbitron's cross-platform audience measurement business, including audience data, and to enter into other licensing arrangements supporting the divestiture.[37]

2.2. "Killer Acquisitions" and Agency Analysis

26. Commentators have noted that, in certain cases, a firm may acquire another firm merely to terminate or suspend innovative activity or the development of a product perceived to be a competitive threat to the acquiring firm. These transactions, when consummated, are sometimes referred to as "killer acquisitions" because they are said to result in a product or service being "killed" or terminated rather than brought to market. The Council of Economic Advisors articulates this concern as one factor that may motivate a particular acquisition:

> *[A]nother debate asks whether dominant platforms are harming competition by buying too many smaller firms, such as start-ups funded with venture capital. It is common for large platforms to acquire smaller firms. The digital economy relies heavily on innovation, and being acquired by an established firm can be an important exit path for initial investors. Acquisition can also be important for a start-up's success. The acquiring firm may bring marketing, financing, and other business assets that enable the start-up to grow. However, if a start-up is not acquired, it might instead grow into an independent, full-fledged competitor. Some acquisitions may occur precisely to prevent such competition.* [38]

27. The Agencies are attentive to acquisitions in which an incumbent acquires a firm that could develop into a future competitor, or assets necessary for a firm to develop products or services in competition with the incumbent.

28. For example, in 2017, the FTC charged Mallinckrodt (formerly known as Questcor) with unlawful monopolization by acquiring the rights to a drug that threatened its monopoly in the U.S. market for adrenocorticotropic hormone (ACTH) drugs. In its complaint, the FTC alleged that Questor enjoyed monopoly power as a result of its control of Acthar, the only U.S. ACTH drug, and that it had unlawfully maintained that monopoly power by acquiring the U.S. rights to develop a competing drug, Synacthen Depot. The FTC alleged that Questcor's acquisition of the U.S. rights for Synacthen had eliminated the possibility

AR_002524

that another firm would develop it and compete against Acthar. To resolve the FTC's concerns, Questor agreed to sublicense the Synacthen assets, including intellectual property rights, to another firm to commercialize Synacthen in the United States, and further to pay $100 million in redress of the Defendant's violations.[39]

29. In 2016, the DOJ challenged Westinghouse Air Brake Technology Corporation's ("Wabtec") acquisition of Faiveley Transport. The DOJ alleged that the transaction, as originally structured, would have substantially lessened competition for the development, manufacture, and sale of various freight railcar brake components. Prior to the acquisition, Faiveley had formed a joint venture with another rail equipment supplier that allowed it to bundle brake components and compete more effectively with the two large incumbents, one of which is Wabtec. In addition, Faiveley had been developing its own control valve, which is the most highly-engineered, technologically-sophisticated component in a freight car brake system, the market for which had been a duopoly for years. With a control valve, Faiveley could more directly compete with the incumbents—even though full commercialization and approval was likely years away. The transaction also would have eliminated future competition for control valves by preventing Faiveley's entry into this market, and would have thus maintained a century-old duopoly between Wabtec and its only other control valve rival. To remedy these concerns, the companies agreed to divest Faiveley's entire U.S. freight car brakes business to Amsted Rail Company, an employee-owned rail equipment company.[40]

30. In 2008, the FTC charged that Inverness Medical Innovations' acquisition of assets of ACON Laboratories, and its interference with that company's efforts to develop and supply consumer pregnancy tests, unlawfully maintained Inverness's monopoly power, and harmed or threatened to harm competition, in a market for consumer pregnancy tests.[41] Through its acquisition of ACON assets, Inverness imposed a covenant not to compete on ACON that limited the scope and duration of its joint venture to develop and market digital consumer pregnancy tests, required ACON to remit to Inverness any profits from that joint venture, and acquired rights to intellectual property developed by ACON and its joint venture partner. The FTC alleged that through these actions, Inverness interfered with ACON's ability and incentive to develop and manufacture digital consumer pregnancy tests, and hampered the joint venture partner's ability and incentive to develop and market competing digital consumer pregnancy tests. The FTC's complaint also identified that Inverness eliminated future competition from water-soluble dye lateral flow consumer pregnancy tests by purchasing ACON's water-soluble dye consumer pregnancy test assets, and by ceasing development and marketing efforts for test products associated with the assets.[42] To address the FTC's concerns, Inverness agreed to sell the water-soluble consumer pregnancy assets, disclaim any ownership rights for intellectual property

developed during the joint venture, refrain from interference with ACON's ability to transfer or license digital consumer pregnancy test technology to its joint venture partner, and refrain from interference with ACON's ability to manufacture digital consumer pregnancy test technology for its joint venture partner.

2.3. Jurisdiction to Review Mergers Involving Nascent Competition

31. The 2005 OECD Council Recommendation on Merger Review ("OECD Recommendation") and the International Competition Network's Recommended Practices for Merger Notification and Review Procedures ("ICN Recommended Practices") call for notification thresholds to be based on: (i) objectively quantifiable criteria, and (ii) information that is readily accessible to the merging parties. The OECD and ICN recommended practices also call for such thresholds to screen out transactions lacking a material nexus to the reviewing jurisdiction.[43]

32. In the United States, the Hart-Scott-Rodino Antitrust Improvements Act of 1976, 15 U.S.C. § 18a (§ 7A of the Clayton Act) requires that parties to certain mergers or acquisitions notify the Agencies before consummating the proposed transaction. Reportability under the Act depends on whether the value held as a result of the transaction and the size of the parties, as measured by their sales and assets, meet the statutory thresholds,[44] and, if so, whether an exemption applies.[45] The U.S. premerger notification program allows for efficient and expedient review of approximately two thousand proposed transactions annually by the Agencies.[46] Premerger notification has vastly improved the Agencies' ability to identify and prevent anticompetitive mergers, and to avoid the challenges of "unscrambling the eggs."[47]

33. Although the U.S. premerger notification system subjects most mergers of significant size to premerger review for competition concerns, a transaction does not have to be subject to such review for the Agencies to be able to challenge it under the antitrust laws. Under Section 7 of the Clayton Act – which was enacted many years before the HSR Act – the Agencies can challenge acquisitions of stock or assets, without regard to whether

[43] *See* OECD Recommendation on Merger Review (2005), http://www.oecd.org/daf/-competition/oecdrecommendationonmergerreview.htm; ICN Recommended Practices for Merger Notification and Review Procedures, https://www.internationalcompetitionnetwork.org/wp-content/uploads/2018/09/MWG_NPRecPractices2018.pdf.

[44] The Act generally requires transactions to be notified when: (1) the acquiring or acquired person is engaged in U.S. commerce or in any activity affecting U.S. commerce; (2) the amount of voting securities, or the non-corporate interests that yield control, or assets held as a result of the acquisition is over $94 million (the size of transaction test); and (3) if a transaction is valued at $376 million or less, one person has sales or assets of $188 million or more and the other has sales or assets of $18.8 million or more (the size of person test). If the size of the transaction is greater than $376 million, the size of person test does not apply. These notification thresholds are adjusted annually, and are available at: https://www.ftc.gov/enforcement/premerger-notification-program/current-thresholds.

[45] 16 CFR Part 802. *E.g.,* there is an exemption for the acquisition of foreign assets if sales in or into the United States attributable to those assets are $94 million or less, aimed at ensuring that only transactions with a material nexus to the U.S. are notifiable.

[46] For annual information on the number of notified transactions, as well as the number challenged or abandoned, see the FTC's Annual Reports to Congress Pursuant to the Hart-Scott-Rodino Antitrust Improvements Act of 1976, https://www.ftc.gov/policy/reports/policy-reports/annual-competition-reports.

[47] An e-filing system for submission of premerger notification filings has been established to handle filings during the COVID-19 coronavirus pandemic. *See* https://www.ftc.gov/enforcement/premerger-notification-program/guidance-filing-parties.

the acquisition requires a premerger notification under the HSR Act, and such challenges can be brought either before or after a transaction is consummated.

34. As a result, another important element of the U.S. merger review regime is the Agencies' ability to review, and if necessary, challenge non-notifiable transactions, including consummated transactions. For example, over the past five years, the FTC has conducted an in-depth review of 15 transactions that were not notifiable under the Act, in addition to the 117 notified transactions where the Commission conducted an in-depth review. Similarly, DOJ conducted in-depth reviews of 18 transactions that were not notified under the HSR rules during this period, in addition to 124 in-depth investigations of notified transactions.

35. Although most of the cases discussed above involved reportable transactions, some were not. For instance, Bazaarvoice/PowerReviews, discussed *infra*, was a non-reportable transaction. In 2013, when Mallinckrodt (then Questcor) acquired the U.S. rights to Synacthen, although it met the HSR size of transaction and person thresholds, the transaction was not reportable because it involved an exclusive license where the licensor retained manufacturing rights. Later that same year, the Agencies revised the HSR Rules to require premerger notification of exclusive license transactions where the licensee acquires all commercially significant rights from the licensor.[48]

36. For reportable transactions, DOJ and FTC staff rely on several sources to learn of the potentially anticompetitive transactions. Often, the Agencies' respective staff will learn about such transactions from their ongoing monitoring of the trade press or other media. For example, the FTC's retail and hospital mergers section subscribes to publications of the National Federation of Retailers and the American Hospital Association, which often report on transactions that do not meet the notification thresholds. DOJ similarly monitors trade press covering the industries subject to its oversight. For instance, DOJ opened its preliminary investigation into Bazaarvoice's consummated acquisition of PowerReviews based on information discovered through its media review.

37. Complaints are another source of information about potentially anticompetitive transactions. Complainants can range from industry participants, such as customers concerned about potential anticompetitive effects arising from a merger between suppliers, to individual citizens or labor unions. Complaints may come to the agencies directly, may be reported in the press, or may be communicated to the Agencies by state or federal government agencies.

38. The investigation of non-reportable transactions proceeds in a manner similar to an HSR investigation. The Agencies are able to obtain documents and information through a Civil Investigative Demand in place of a Second Request. Unlike an HSR investigation, however, the parties to a non-reportable transaction may be able to consummate their deal at any time if all other regulatory approvals have been received. In many cases, however, the parties enter into a timing agreement or hold separate agreement to preserve the viability of the relevant assets during the agency's investigation and any potential challenge.[49]

[49] *See, e.g., In re Otto Bock HealthCare North America, Inc.*, Dkt. 9378, Opinion (Nov. 6, 2019) (defendants agreed to Hold Separate Agreement three months after consummating acquisition of Freedom and prior to FTC complaint), https://www.ftc.gov/system/files/documents/cases/d09378commissionfinalopinion.pdf.

3. Policy Initiatives Related to Nascent Competition

39. The FTC recently conducted a series of hearings to examine whether adjustments to competition policy are necessary to address changes in the economy, evolving business practices, and new technologies.[50] In particular, hearings held on October 17, 2018, assessed the appropriate antitrust framework for evaluating *Acquisitions of Nascent and Potential Competitors in Digital Technology Markets*.[51] Participants discussed many of the issues raised by the OECD Competition Committee relating to nascent acquisitions, and the FTC received public comments on this topic.[52] The consensus view at the hearings was that the current antitrust laws are effective and adaptable to the digital platform environment. Additionally, participants agreed that the prospective loss of future competition is a viable theory of anticompetitive harm that the Agencies have used to challenge transactions in the past, and could continue to rely upon in the future.

40. On July 23, 2019, the DOJ announced that it was reviewing the practices of market-leading online platforms.[53] The review focuses on whether and how market-leading online platforms have achieved market power and are engaging in practices that have reduced competition, stifled innovation, or otherwise harmed consumers. The goal of the review is to assess the competitive conditions in the online marketplace to ensure that companies compete on the merits to provide services that users want. If violations of law are identified, the DOJ will proceed appropriately to seek redress.

41. On February 11, 2020, the FTC issued Special Orders pursuant to Section 6(b) of the FTC Act to five large technology firms: Alphabet (including Google), Apple, Amazon, Facebook, and Microsoft.[54] The FTC's Special Orders require these firms to provide information about prior acquisitions not notified to the Agencies under the HSR Act, including information and documents on the terms, scope, structure, and purpose of transactions that each company consummated between January 1, 2010 and December 31,

[54] *See* FTC Press Release, *FTC to Examine Past Acquisitions by Large Technology Companies* (Feb. 11, 2020), https://www.ftc.gov/news-events/press-releases/2020/02/ftc-examine-past-acquisitions-large-technology-companies. Section 6(b) of the Federal Trade Commission Act, 15 U.S.C. § 46(b), authorizes the FTC to solicit information from businesses for research or non-enforcement purposes.

2019.[55] This information will help the FTC evaluate whether the Agencies are getting adequate notice of transactions that might harm competition in the digital economy.

42. On February 12, 2020, the DOJ partnered with Stanford University to hold a workshop on Venture Capital and Antitrust. The workshop explored trends in venture capital investment from the 1990s through 2020, with a focus on what antitrust enforcers can learn from investors about how to identify nascent competitors in markets dominated by technology platforms. The workshop also addressed proposed solutions to concerns that competitive alternatives to the market-leading platforms are not attractive investment opportunities. The program brought together venture capitalists, academics in law and business, and other tech industry stakeholders to explore the practical considerations that early stage investors face when calculating the risks of investing in a startup and exit strategies.

4. Conclusion

43. For decades, the Agencies have made combatting anticompetitive conduct in the technology sector is a top priority. In 2019, the FTC created the Technology Enforcement Division (TED) in the Bureau of Competition, focused on investigating anticompetitive conduct and mergers in the digital economy, including by digital platforms.[56] In addition to allocating nearly two dozen full-time staff attorneys to TED and drawing on the expertise of PhD economists in the Bureau of Economics, the FTC has hired technologists to enhance its institutional expertise. Today, DOJ's Technology and Financial Services Section is tasked with enforcing the antitrust laws in high-tech industries and digital markets.[57] From 2002 until 2017, the section was known as the Networks & Technology Enforcement Section. Before that, it was known as the Computers and Finance Section.

44. The Agencies are cognizant of concerns regarding transactions that may substantially lessen competition, including killer acquisitions in digital and other markets, and are committed to ensuring that technology markets remain competitive. The Agencies will continue to evaluate their approach to identifying and investigating acquisitions of nascent and potential competitors that may lessen current or future competition. Existing statutory tools—including Section 7 of the Clayton Act and Section 2 of the Sherman Act—provide powerful tools to protect consumers from acquisitions and other conduct that threatens to harm nascent and potential competition. The Agencies will continue to make vigorous and effective use of those tools to protect competition.

[55] Under the HSR of 1976, businesses are required to file premerger notification for acquisitions above a certain monetary threshold. However, the lack of reporting requirements for smaller transactions has historically omitted small business acquisitions from federal antitrust review. Since 1976, premerger notification filings for transactions valued above $50 million were required in the United States pursuant to the HSR Act. In 2000, Congress amended the HSR Act to require the annual adjustment of these thresholds based on the change in gross national product. As of February 28, 2020, the premerger notification and report are required if the transaction is above $94 million. *See* https://www.ftc.gov/news-events/blogs/competition-matters/2020/01/hsr-threshold-adjustments-reportability-2020.

United States

1. Introduction

1. Several aspects of contemporary digital technologies have resulted in market dynamics and business strategies that merit particular attention for antitrust enforcers. For example, low marginal production costs have enabled digital firms to grow larger and more quickly than many conventional businesses. Network effects and high entry barriers in some markets may lead certain markets to "tip" towards a few powerful firms while also serving to protect incumbents. Meanwhile, network effects stemming from the collection and use of large amounts of data provide advantages to early movers, which incentivize firms to prioritize expanding and quickly securing a large user base. Further, the ability to digitally track and surveil users has enabled firms to offer zero-price services to consumers while monetizing their data. Those firms can then deploy surveillance techniques to detect and insulate themselves against competitive threats.

2. While digital markets have the potential to yield great benefits, they are also susceptible to anticompetitive practices by incumbents that lock-in dominance, block rivals, and harm competition. Thus, it is especially important for enforcers to be vigilant about potentially anticompetitive mergers or conduct in digital markets. Moreover, a loss of competition at an early stage in a market's development can both hamper and distort the path of future innovation. Thus, it is imperative that enforcers be prepared to act quickly to preserve open and fair competition *before* markets lose vitality due to harmful consolidation.

3. Mergers and acquisitions involving digital markets can lessen competition or tend to create, maintain, or entrench monopolies through a variety of mechanisms. Technology companies often operate across a variety of interrelated areas, and often maintain multi-sided platforms that provide different products or services to two or more different groups who benefit from each other's participation. Moreover, dominant technology firms can use strategic acquisitions as part of an interrelated course of monopolistic conduct. For example, technology firms have engaged in "buy-or-bury" strategies against actual or potential rivals; they have also attempted to buy or control adjacent products or services that might be used to steer customers to their other products or exclude competing platforms. While a clearer picture has begun to emerge, continued learning remains essential to fully understanding the many ways that digital firms may use mergers to maintain their position and insulate themselves from competitive challenges.

4. This submission describes the application of United States antitrust laws to digital mergers, how existing legal doctrines can be used to pursue more robust enforcement in digital markets, the issues that digital mergers are more likely to raise, the federal antitrust enforcement agencies' recent experiences with digital mergers, and how the agencies will address them going forward.

2. Application of United States Antitrust Laws to Digital Mergers

5. The longstanding principles of antitrust law remain applicable to mergers involving digital technologies. The United States Department of Justice ("DOJ") and the Federal Trade Commission ("FTC") (collectively, "the Agencies"), state and district attorneys general, and private parties can challenge mergers and acquisitions under the federal

antitrust laws. Most merger challenges are brought under Section 7 of the Clayton Act, which prohibits mergers and acquisitions where "the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly."[1] This Act, as amended by the Celler–Kefauver Anti-Merger Act of 1950, is designed to stop threats to competition or tendencies toward monopoly in their incipiency. The Agencies, state and district attorneys general, and private parties can also challenge monopolistic mergers under Section 2 of the Sherman Act.[2] These same enforcers can also challenge mergers under Section 1 of the Sherman Act as an unreasonable restraint of trade.[3] The FTC can also challenge mergers under Section 5 of the FTC Act as an unfair method of competition.[4]

3. The Agencies Rely on Existing Antitrust Principles to Pursue Robust Enforcement in Digital Markets

6. While digital technologies have ushered in new market dynamics and business strategies in the United States, the same federal antitrust laws apply to digital mergers as to any other type of merger. The Agencies seek to fully utilize existing statutes and case law to challenge digital mergers when appropriate. This effort entails the robust application of existing law, accounting for the particular facts raised by digital mergers.

7. Certain aspects of U.S. antitrust laws are especially relevant in the digital merger context. This includes, in particular, the recognition that Section 7 of the Clayton Act is meant to "arrest anticompetitive tendencies in their incipiency."[5] As Congress and later, the Supreme Court observed, markets can consolidate rapidly. Therefore, the antitrust agencies are statutorily mandated to break those trends at their outset, well before they gather great momentum.[6] The Celler–Kefauver amendments to Section 7 equipped the Agencies to block mergers where there is an incipient trend towards concentration or reduced competition.

8. The first prong of Section 7 prohibits acquisitions, "the effect of [which] may be substantially to lessen competition . . . ." in a relevant market.[7] The second prong of Section

[1] 15 U.S.C. § 18.

[2] 15 U.S.C. § 2.

[3] 15 U.S.C. § 1.

[4] 15 U.S.C. § 45. The Federal Trade Commission also enforces Section 5 of the FTC Act, which prohibits "unfair methods of competition in or affecting commerce." Section 5 is central to the agency's legislative mandate. *See generally* FTC, Policy Statement Regarding the Scope of Unfair Methods of Competition Under Section 5 of the Federal Trade Commission Act 13-14 (Nov. 10, 2022) (Commission File No. P221202), https://www.ftc.gov/system/files/ftc_gov/pdf/p221202sec5enforcementpolicystatement_002.pdf. *See also* Substitute Amended Complaint for Injunctive and Other Equitable Relief, *FTC v. Facebook, Inc.*, No. 1:20-cv-03590 79-80 (D.D.C. Sept. 8, 2021), https://www.ftc.gov/system/files/documents/cases/2021-09-08_redacted_substitute_amended_complaint_ecf_no._82.pdf and *Yamaha Motor Co. v. FTC*, 657 F.2d 971 (8th Cir. 1981), *cert. denied*, 456 U.S. 915 (1982).

[7] 15 U.S.C. § 18.

AR_002532

7 prohibits acquisitions, "the effect of [which] may be . . . to tend to create a monopoly."[8] Although case law on this second prong has not been as fully developed, it may be particularly important as a means of prohibiting certain mergers that otherwise may not be prohibited by the first prong of the Clayton Act. The second prong, in contrast to the first prong, lacks the limiting qualifier "substantially." Consequently, a less-than-substantial contribution to the creation of a monopoly can render a merger illegal based only on a tendency towards monopoly.[9] Thus, the second prong may be especially relevant to digital mergers involving a monopolist or near-monopolist acquiring a very small competitor, a nascent competitor, or potential competitor. Moreover, if a transaction is part of a pattern or strategy of multiple acquisitions, the cumulative effect of the pattern or strategy may need to be considered.

9. In order to ensure that the Agencies are best positioned to exercise their full authority in digital markets, including addressing competition concerns in their incipiency, they have been building their in-house capacity and expertise to keep pace with developments in those markets. The FTC recently launched a new Office of Technology to help contend with technological challenges in the digital marketplace and to support the agency's law enforcement and policy work.[10] The DOJ's Antitrust Division similarly has been building its in-house capabilities by expanding its Expert Analysis Group to include experts in digital markets and new technologies. The size of DOJ's civil litigation section dedicated to digital markets has doubled the number of attorneys in recent years. Importantly, these teams collaborate and share their expertise with relevant personnel throughout the Antitrust Division to ensure staff are equipped to analyze and identify problematic mergers and acquisitions involving digital markets.

4. Limitations of Premerger Reporting of Digital Mergers

10. One key to preventing harm from digital mergers is taking action as soon as evidence of the risk of competitive harm emerges. Learning about these mergers is crucial to that effort. The Hart-Scott-Rodino Act ("HSR Act") requires premerger notification to the Agencies and imposes a mandatory waiting period for certain acquisitions.[11] The HSR Act provides the Agencies with the opportunity to investigate the potential for harm and, in appropriate circumstances, bring a legal action to block a merger prior to consummation. Most of the Agencies' merger investigations and enforcement take place under our pre-merger enforcement authority, and these efforts address illegal mergers before physical assets, intellectual property, and human capital are combined and assets are allowed to deteriorate.

[8] *Id.*

[9] The Supreme Court has framed the standard as follows: any acquisition that would bring the acquirer "measurably closer" to a monopoly can violate this prong of § 7. *United States v. E. I. Du Pont de Nemours & Co.*, 353 U.S. 586, 592 (1957) ("Obviously, under Section 7 it was not necessary . . . to find that [the defendant] has actually achieved monopoly power but merely that the stock acquisitions under attack have brought it measurably closer to that end. For it is the purpose of the Clayton Act to nip monopoly in the bud.").

[10] *See* Press Release, FTC, FTC Launches New Office of Technology to Bolster Agency's Work (Feb. 17, 2023), https://www.ftc.gov/news-events/news/press-releases/2023/02/ftc-launches-new-office-technology-bolster-agencys-work.

[11] 15 U.S.C. § 18.

11. While the HSR Act facilitates the Agencies' ability to review and challenge unconsummated mergers, the Agencies can also challenge consummated mergers. Thus, the Agencies have full authority to investigate and challenge any acquisition of stock or assets, without regard to whether the transaction was notifiable or notified, unconsummated or consummated.[12]

12. Because not all mergers are reportable under the HSR Act, firms may engage in strategic avoidance of mandatory filing requirements to evade detection, especially in certain sectors.[13] This can present unique challenges in digital markets.

13. In 2019, the FTC conducted industry-wide studies to collect information about the unreported acquisitions of five large technology companies.[14] The study focused on 819 non-reported acquisitions made by Apple, Amazon, Facebook (now Meta), Google, and Microsoft over the course of 2010-2019, and provided a comprehensive overview of all the acquisitions these companies made during that time period. The studied acquisitions fell in several categories: acquisition of control; assets; hiring events, patents, minority stakes; licenses; or other economic interests. Importantly, a large portion (39.3%) of the acquisitions were of firms that were less than 5 years old, and most (65%) were valued at between $1 million and $25 million, well below the HSR filing threshold. From this study, the FTC gained insight into these companies' practices and acquisition strategies, including how they structured acquisitions, sectors of interest, and how these acquisitions figured into the companies' overall business strategies.[15]

14. It remains important for enforcement agencies to consider the acquisition strategies of digital companies to fully account for all the ways in which the companies grow through acquisitions—including those that are unreported. Enforcement agencies may also consider other ways to detect small but potentially competitively significant acquisitions, such as collecting more information about prior unreported acquisitions, or requiring prior approval or prior notice for future mergers that might otherwise go undetected.[16]

5. Digital Mergers, Particularly Those Involving Multi-Sided Platforms, May Raise Unique Facts

15. While digital mergers can raise the same concerns as mergers in more traditional industries, consolidation in digital markets is more likely to implicate innovation concerns, as well as factual issues relating to novel, complex, or evolving technologies.

16. In particular, digital markets might raise certain competition issues that include harm to innovation and other forms of non-price competition; the role of network effects and switching costs in raising entry barriers and potentially "tipping" a market; and the collection and use of data, including within zero-price markets.

17. Mergers may raise competitive issues when they involve multi-sided platforms and products or services, even when the acquired firm's relationship to the platform is not strictly horizontal or vertical. The Agencies consider the various attributes of multi-sided platforms when evaluating mergers that involve platform operators, and carefully scrutinize the risk those mergers will lessen competition between platforms, on the platform, or to disintermediate the platform. In addition to considering impacts on market structure and vertical supply chains, the Agencies examine whether digital mergers have the potential to entrench firms' dominant positions in violation of Section 7 of the Clayton Act.

18. Digital mergers may also implicate competitive concerns due to the potential that such mergers would substantially lessen competition by giving the firm control over a product or service that its rivals use to compete. When analyzing digital mergers, the Agencies will examine, for example, whether the merged firm may have the ability and incentive to weaken or exclude rivals, for example by foreclosing access to a competitively significant related product.

19. Additionally, the nature of digital platforms and ecosystems, and the associated business strategies that they reward, may require looking beyond concerns that typically characterize more conventional markets, such as foreclosure and exclusion, in order to identify the full range of potential harms from digital mergers. These issues may require a broader analytical lens to fully account for all aspects of competition, and a closer look at all types of mergers, including those in which the participants do not compete directly with one another, requiring the Agencies to focus on non-horizontal theories of harm.

20. Within digital ecosystems, it is important to be vigilant about the loss of potential competition. Acquisitions involving a potential competitor or a nascent threat warrant close scrutiny from the Agencies. These types of acquisitions include acquisitions that eliminate a potential entrant in a concentrated market; acquisitions that eliminate a potential entrant in a future market; acquisitions that eliminate or raise the costs of a nascent threat to a powerful incumbent; and acquisitions that eliminate current competitive pressure from a perceived potential entrant. These mergers can distort the entire developmental trajectory of the relevant technology and deprive the public of the full fruits of marketplace innovation. Strong and vigorous competition is a vital catalyst of rapid economic progress. Any lessening of competition is therefore even more harmful in a new industry since its inevitable effect is to slow down the growth rate of the industry.[17] Halting illegal mergers in emerging or nascent markets is critical because of the outsized beneficial effects that

[17] *See In re Union Carbide Corp.*, 59 F.T.C. 614, 1961 WL 65409 *35 (F.T.C. 1961); *see also United States v. Bazaarvoice*, Inc., 2014 WL 203966 *76 (N.D. Cal. 2014) ("[R]apid technological progress may provide a climate favorable to increased concentration of market power rather than the opposite." (quoting *Greyhound Computer Corp. v. IBM Corp.*, 559 F.2d 488, 497 (9th Cir. 1977)).

healthy competition in these markets can yield over the long-term. For example, competition will provide consumers with real choices about how and to what extent they are willing to hand over personal data in exchange for goods and services across industries that are becoming increasingly more digitized. A competitive marketplace can dilute the power of any monopolist or oligopoly of firms over the apps, connected devices, and digital tools that power American life and the economy today.

6. Recent Experiences with Digital Mergers

21. The Agencies recognize that our shared statutory mandate is to prevent digital markets from becoming concentrated in the first place. Otherwise, it may be necessary to address the harm from undue concentration later through post-consummation antitrust enforcement. The Agencies' recent experiences with digital mergers such as *Google/DoubleClick* and *Google/Admeld*, and *Facebook/WhatsApp* and *Facebook/Instagram* are examples of this. The Agencies are challenging these transactions post-consummation as part of broader strategies to achieve or maintain durable, industry-wide dominance.

22. In 2007, the FTC investigated but ultimately declined to challenge Google's acquisition of DoubleClick, which at the time offered the industry-leading publisher ad server.[18] In 2011, DOJ also declined to challenge Google's acquisition of Admeld, Inc., an online display advertising provider.[19] On January 24, 2023, DOJ and eight state Attorneys General filed a civil antitrust suit against Google for monopolizing multiple digital advertising technology products in violation of Sections 1 and 2 of the Sherman Act.[20] The complaint requests, among other things, divestment of DoubleClick, structural relief, and the restoration of competitive conditions in multiple relevant markets.[21] This request for relief is the logical conclusion to a complaint that puts into context, with the benefit of hindsight and a fuller picture of the ad tech market as it exists today, the competitive harm that resulted from Google's acquisitions and other course of exclusionary conduct.

23. Similarly in 2012, the FTC closed its investigation of Facebook's acquisition of Instagram without challenging the deal.[22] Nor did the FTC challenge Facebook's

[22] *See generally* Press Release, FTC, FTC Closes Its Investigation Into Facebook's Proposed Acquisition of Instagram Photo Sharing Program (Aug. 22, 2012), https://www.ftc.gov/news-events/news/press-releases/2012/08/ftc-closes-its-investigation-facebooks-proposed-acquisition-instagram-photo-sharing-program.

acquisition of WhatsApp in 2014.[23] The FTC subsequently filed a civil complaint in 2021 alleging that these acquisitions were part of a series of anticompetitive acts that constitute unlawful monopolization in violation of Section 2 of the Sherman Act and thus unfair methods of competition in violation of Section 5(a) of the FTC Act.[24] The complaint requests, among other things, divestment of Instagram and/or WhatsApp and any other necessary divestitures.[25] Forty-eight states and districts also previously filed a separate lawsuit alleging that these acquisitions were illegal.[26]

24. Ideally, an illegal merger would be blocked outright before consummation, to prevent harm *before* it occurs and also avoid the protracted litigation sometimes required to undo prior acquisitions and attempt to restore competition. This requires activating—and sometimes reactivating—the Agencies' entire statutory toolkit to account for all the ways in which digital mergers may lead to harmful concentration.

25. In *Meta/Within*, the FTC sought to enjoin Meta's acquisition of Within in order to prevent harm resulting from the loss of potential competition in the relevant market for virtual reality dedicated fitness applications.[27] The complaint alleged a violation of Section 7 of the Clayton Act and Section 5 of the FTC Act.[28] Although the district court's decision ultimately denied the FTC's request for a preliminary injunction, it agreed with the FTC on the legal issues in the case and denied the defendants' motion to dismiss the case, providing useful precedent on digital mergers.[29]

[28] Amended Complaint, *FTC v. Meta Platforms Inc.*, No. 5:22-cv-04325 2, 6, 8, 25 (N.D. Cal. Oct. 7, 2022), https://www.ftc.gov/system/files/ftc_gov/pdf/221_0040_amended_complaint_-_usdc_-_10.07.22.pdf.

[29] *FTC v. Meta Platforms Inc.*, No. 5:22-cv-04325 (N.D. Cal. 2023) (slip op.).

26. First, the district court accepted the FTC's market definition based on the practical indicia articulated in the Supreme Court's *Brown Shoe* decision.[30] The district court's endorsement of practical methods for defining a digital relevant market bolsters the Agencies' ability to challenge illegal digital mergers, including in instances where quantitative data might be less available, such as in nascent or rapidly evolving markets.[31] Second, the *Meta/Within* decision affirms the continuing vitality of actual potential competition (entry effects) and perceived potential competition ("edge" effects) theories as ways to block harmful mergers.[32]

27. The court's opinion also includes other useful holdings that could help support future merger challenges in digital markets. According to the opinion, concentrated markets are presumed not to be competitive—even when they are relatively new and even if they are experiencing some entry—unless the defendants can prove that the markets are exhibiting meaningful deconcentration.[33] The court confirmed that a transaction may be challenged based on very narrow relevant product markets.[34] The court also explained that the fact that many companies do not (yet) generate profits in a market does not necessarily change the analysis of potential harm to competition.[35]

28. The U.S. Agencies' recent challenges to digital mergers reflect their efforts to use existing, but not recently utilized, theories in order to prevent harm to competition or tendencies toward monopoly. For example, the DOJ's complaint filed against Google in January 2023 specifically alleges that Google monopolized the digital advertising market through, among other things, engaging in a pattern of acquisitions to obtain control over key digital advertising tools used by website publishers to sell advertising space.[36]

29. Even in instances where a court declines to enjoin a merger, the Agencies may obtain a decision that otherwise provides a beneficial interpretation of applicable law. Such decisions can serve as useful roadmaps on how to challenge potentially anticompetitive digital mergers in the future. This precedential guidance can enhance the Agencies' enforcement capabilities over the long-term, even when they do not prevail in the short-term.

30. The Agencies' efforts to prevent harm to competition as digital technologies evolve are illustrated by their challenges to Visa/Plaid, UnitedHealth Group/Change Healthcare, Microsoft/Activision, and ICE/Black Knight.

31. In 2020, DOJ successfully sued to stop Visa, a monopolist in online debit services, from acquiring Plaid, an innovative fintech firm developing an alternative online payments

[30] *Id.* at 16-32. *See also Brown Shoe Co. v. United States*, 370 U.S. 294, 325 (1962).

[31] The FTC has also obtained similar useful precedent on market definition for digital markets based on monopolization claims not involving a merger. *See FTC v. Surescripts, LLC*, 2023 WL 2707866 *2, 12, 17-19 (D.D.C. 2023) (Mem. Op.) (granting FTC partial summary judgment on market definition regarding two alleged violations of Section 2, and using *Brown Shoe* practical indicia to conclude the relevant markets are two-sided platforms for electronic prescription routing and electronic eligibility, which do not include analog methods of routing and eligibility).

[33] *Id*. at 37.

[34] *Id*. at 19-21.

[35] *Id*. at 36-37.

[36] *See* Complaint, *United States v. Google LLC*, No. 1:23-cv-00108 31-36 (E.D. Va. Jan. 24. 2023), https://www.justice.gov/opa/press-release/file/1563746/download.

platform that would allow users to pay online vendors directly from their bank accounts instead of using a debit card.[37] The complaint alleged that Visa viewed the proposed acquisition as a way to eliminate a nascent competitive threat in order to protect its debit business in the United States, and the transaction would therefore violate Section 2 of the Sherman Act and Section 7 of the Clayton Act.[38] Visa and Plaid abandoned the proposed transaction shortly after DOJ filed its complaint.

32. In 2022, DOJ and the Attorneys General of the states of New York and Minnesota sued to block UnitedHealth Group's acquisition of Change Healthcare under Section 7 of the Clayton Act.[39] The proposed transaction raised issues relating to healthcare claims data and the use of, and rights to use, such data, and harm to innovation in health insurance markets. In particular, the complaint applied both horizontal and vertical theories to allege that the acquisition would harm competition in the first-pass claims editing solutions market, a critical input for health insurers.[40] Despite declining to enjoin the acquisition, the district court considered the complaint's theories of harm, found that claims data can have competitive value and can be proprietary in nature, and concluded that United would have inherited both data and use rights post-merger.[41]

33. The FTC filed a complaint challenging Microsoft's $70 billion proposed acquisition of Activision using traditional vertical theories in an evolving gaming landscape.[42] According to the complaint, Microsoft is one of only two makers of high-performance video game consoles and Activision develops and publishes high-quality video games for multiple devices, including video game consoles, PCs, and mobile devices.[43] The complaint alleges that Microsoft's ownership of Activision would provide Microsoft with the ability to withhold or degrade Activision content through various means, including manipulating Activision's pricing, degrading game quality or player experience on rival offerings, changing the terms and timing of access to Activision's content, or withholding content from competitors entirely.[44] The complaint further alleges that resulting harm could occur not just in the high-performance console market, but also in

[44] *Id*.

multi-game content library subscription services and cloud gaming subscription services, which may represent the future of gaming.[45] The complaint asserts that respondents executed a merger agreement in violation of Section 5 of the FTC Act, which if consummated would violate Section 7 of the Clayton Act.[46]

34. The FTC's recent complaint challenging *ICE/Black Knight* alleges that the proposed combination of the nation's two largest providers of mortgage loan origination systems and other key lender software tools would increase costs, reduce innovation, and reduce lenders' choices for tools necessary to generate and service mortgages.[47] The complaint alleges violations of Section 5 of the FTC Act and Section 7 of the Clayton Act in multiple markets, including for loan origination system ("LOS") software, commercial LOS software, product pricing eligibility engines ("PPEs"), and PPEs for users of ICE's LOS.[48] Reflecting the complexity of digital markets, the complaint contains both horizontal and vertical theories of harm related to the proposed merger.

7. Looking Forward

35. The Agencies will remain vigilant to prevent harm to competition resulting from digital mergers by engaging in robust merger enforcement. The Agencies are especially concerned about mergers that could entrench a dominant firm or allow such a firm to extend its dominance.

36. The Agencies are also especially concerned with any potential labor market harms when evaluating digital mergers. One concerning aspect of labor markets in digital sectors is the high proportion of non-competes in non-reportable big tech acquisitions.[49] The Agencies will continue to evaluate technology companies' use of non-compete clauses in employment agreements that prevent many skilled workers from working at competing firms or starting their own businesses. In addition, given their often close proximity and overlapping workforce needs, technology companies may be prone to enter into collusive agreements with one another that pose a harm to labor market competition. For example, technology companies have run afoul of the antitrust laws by entering into agreements not to hire each other's workers.[50] The Agencies will continue to evaluate the effects of these

[50] *See, e.g.*, *United States v. Adobe Systems Inc.*, No. 1:10-cv-01629, 2010 WL 11417874 (D.D.C. Sept. 24, 2010).

types of restrictions on labor markets. Purported consumer benefits in digital product markets from a merger do not offset or neutralize harm to workers in labor markets.

37. The importance of preventing harm before it happens and the importance of preserving open and fair dynamic competition both underlie the Agencies' commitment to robust pre-consummation analysis—wherever possible—of digital mergers. But whether or not a digital merger is consummated, the Agencies are firmly committed to act swiftly and decisively to challenge illegal digital mergers. Enforcement action is essential to prevent critically important digital markets from becoming or remaining unduly concentrated or dominated by a monopolist.

United States

1. Introduction

1. The U.S. federal antitrust agencies (the Antitrust Division of the U.S. Department of Justice ("DOJ") and the Federal Trade Commission ("FTC") (together, "the Agencies")), have long recognized the vital role competition plays in driving innovation, and that protecting competition and innovation is critical for promoting growth in an economy.[1] When firms compete, they strive to gain an edge in the market by creating new or better products and services, introducing more attractive features, reducing costs, or adopting new technology for distribution of products. This leads to technological advancements, increased variety of goods or services, quality improvements, and increased productivity that benefit society as a whole.

2. The U.S. antitrust laws protect all dimensions of competition and the competitive process, including innovation. When conducting investigations, the Agencies start by determining how competition presents itself in the market. Recognizing that competition often plays out in the form of rivalry to innovate, the Agencies regularly consider and assess the potential impact on innovation in their enforcement programs. A "threat to innovation is anticompetitive in its own right,"[2] and the Agencies may bring an enforcement action based on adverse innovation effects.[3]

3. This paper focuses on innovation considerations in U.S. merger analysis. It first describes some of the ways mergers may raise innovation-related concerns, as reflected in the Agencies' joint Draft Merger Guidelines ("Draft Guidelines"), which were released for public comment in July 2023. It next discusses examples of proposed mergers where the Agencies have identified adverse competitive effects related to innovation. It then describes some recent additions to the toolkit the Agencies use to identify and address threats to innovation-based competition more broadly.

2. Innovation Considerations in Merger Review

4. As U.S. courts have acknowledged, "a merger can substantially lessen competition by diminishing innovation."[4] The Agencies' focus on this dimension of competition is

---

[1] *See, e.g.*, U.S. Dep't of Justice & Fed. Trade Comm'n, Horizontal Merger Guidelines (2010) at § 6.4 Innovation and Product Variety (noting that competition "often spurs firms to innovate."); The White House, Fact Sheet: Executive Order on Promoting Competition in the American Economy (July 9, 2021), https://www.whitehouse.gov/briefing-room/statements-releases/2021/07/09/fact-sheet-executive-order-on-promoting-competition-in-the-american-economy/ (noting that "Economists find that as competition declines, productivity growth slows, business investment and innovation decline, and income, wealth, and racial inequality widen.").

[3] Horizontal Merger Guidelines, § 6.4, Innovation and Product Variety (2010) https://www.justice.gov/atr/horizontal-merger-guidelines-08192010; U.S. Dep't of Justice and Fed. Trade Comm'n, Draft Merger Guidelines (2023), https://www.justice.gov/d9/2023-07/2023-draft-merger-guidelines_0.pdf.

[4] *United States v. Anthem, Inc.*, 236 F.Supp.3d 171, 229 (D.D.C.), aff'd 855 F.3d 345 (D.C. Cir. 2017).

reflected throughout the 2023 Draft Merger Guidelines, a document designed to inform the public, practitioners, firms, and courts about what the Agencies consider when reviewing or challenging a merger.[5] These guidelines update the analysis described in the 2010 Merger Guidelines, which also recognize the importance of innovation as a dimension of competition.[6] The 2023 Draft Guidelines build on the 2010 guidance but are modernized to better reflect the most recent economic scholarship and experience with dynamic markets.

2.1. Legal Standard

5. Section 7 of the Clayton Act, the U.S. competition law that most directly addresses mergers and acquisitions, prohibits transactions whose effect "may be substantially to lessen competition, or to tend to create a monopoly" in "any line of commerce . . . in any section of the country."[7] The Clayton Act is focused on stopping threats to competition "in their incipiency."[8] This forward-looking approach enables the Agencies to account for the realities of the particular market and to examine not only competition related to products and services that are currently sold, but also forward-looking competition, *e.g.*, competition to create new or improved products, services, or innovative features.

6. The anticompetitive effects of a merger need not be certain to render a merger illegal under Section 7. To show that a merger is unlawful, a plaintiff need only prove that its effect "*may be* substantially to lessen competition."[9] Accordingly, the Agencies assess the risk that the merger may lessen competition substantially or tend to create a monopoly based on the available evidence and do not seek to predict specific outcomes in the future with certainty.

2.2. Assessment of Innovation-Related Risks from a Proposed Merger

7. In making merger enforcement decisions, the Agencies assess whether the merger risks lessening competition substantially now or in the future. The Draft Guidelines describe several frameworks that the Agencies use to conduct this assessment, many of which highlight innovation-related concerns. A few examples are provided below, although innovation could be implicated under any of the frameworks.

8. As explained in the Draft Guidelines, the Agencies consider whether a merger would eliminate substantial competition between firms, including competition by firms trying to win business by offering new or better products and services or more attractive

---

[5] The Agencies invited the public to submit comments on the Draft Guidelines in July 2023. As of this submission, the Agencies are preparing final guidelines that will incorporate feedback from the public.

[6] Horizontal Merger Guidelines, § 6.4 Innovation and Product Variety (2010).

[7] 15 U.S.C. § 18.

[8] *Brown Shoe v. United States*, 370 U.S. 294, 323 (1962). Although this paper focuses on Section 7 analysis, mergers may also be reviewed under Section 1 of the Sherman Act, which prohibits contracts, combinations or conspiracies in restraint of trade; or Section 2 of the Sherman Act, which prohibits monopolization, attempted monopolization, and conspiracy to monopolize. 15 U.S.C. §§ 1, 2.

[9] *California v. Am. Stores Co.*, 495 U.S. 271, 284 (1990) (quoting 15 U.S.C. § 18 with emphasis) (citing *Brown Shoe*, 370 U.S. at 323).

features.[10] For example, competing firms might have tried to win revenues and share from one another by introducing new or better-quality products. A merger may reduce or eliminate the incentive to initiate or continue such projects if the sales of those new or improved products would "cannibalize" one of the merging parties' existing sales.[11] The more the merging parties have influenced one another's behavior, the more significant the competition between them. Where firms have research and development capabilities, competition between them can have a greater impact on their incentives to innovate.[12]

9. The Agencies also assess whether a merger may substantially lessen competition by eliminating a potential entrant.[13] The Agencies analyze acquisitions involving products in development to determine whether the firm's development efforts have, or are likely to have in the near future, a beneficial effect on competition. For example, a merger that eliminates one of only a few firms that has a reasonable probability of actually entering and deconcentrating a concentrated relevant market raises serious concerns. In certain cases, a firm may acquire another firm merely to terminate or suspend innovative activity or the development of a product perceived to be a competitive threat to the acquiring firm. Elimination of a perceived potential entrant may also raise concerns because the perceived entrant can incentivize current market participants to make investments or increase product quality, among other procompetitive responses.

10. The Agencies also consider the risk that the merger will give a firm control over products or services that are essential for competitors to effectively compete.[14] With respect to innovative efforts, development of new features or products depends on competitors having access to necessary inputs, tools, or platforms. If the merged firm obtains undue control over these inputs, it may enable the merged firm to weaken rivals or create barriers to entry or expansion for competitors.

11. The Agencies may also challenge mergers that entrench or extend a dominant firm's position.[15] For example, a dominant firm may acquire an innovative emerging rival in an effort to stifle future innovative competition. Such transactions may also violate Section 2 of the Sherman Act, which prohibits monopolization (and attempted monopolization and conspiracy to monopolize), separate from and in addition to the Clayton Act. The Agencies assess whether the acquired firm constitutes a nascent threat that, even if unproven, shows potential to disrupt the monopoly in the future. If so, eliminating that firm is conduct "reasonably capable of contributing significantly to the preservation of monopoly power in violation of Section 2" of the Sherman Act.[16] The Draft Guidelines explain the need for heightened caution against the extension of dominance during technological transitions:

> *At times, high entry barriers can become temporarily less effective in protecting a firm's dominance. For example, technological transitions can render existing entry*

barriers less relevant, and a dominant firm might seek to acquire firms to help it reinforce or recreate those entry barriers so that its dominance endures past the technological transition. Further, technological transitions can create temporary opportunities for entrants to differentiate based on their alignment with new technologies. A dominant firm might seek to acquire firms that might otherwise gain sufficient customers to overcome entry barriers. The Agencies take particular care to preserve opportunities for deconcentration during technological shifts.[17]

2.3. Market Definition Considerations

12. The Agencies define "relevant antitrust markets" in order to identify the "area of effective competition" in which competition may be lessened.[18] Consistent with other aspects of merger analysis, the Agencies' approach to market definition reflects the principle that competitive harm may stem from harm to innovation. The Agencies consider the full range of the firms' rivalrous activities as they identify the "area of effective competition" in which competition may be lessened. As the Draft Guidelines explain, where a merger may substantially lessen competition by decreasing incentives for innovation, "the Agencies may define relevant antitrust markets around the products that would result from that innovation, even if they do not yet exist."[19] In some cases, "the Agencies may analyze different relevant markets when considering innovation than when considering other dimensions of competition."[20] For example, if a transaction would bring rival research and development programs together under the control of a single firm, potentially lessening innovation competition, the Agencies may assess the effect of the transaction in a relevant market comprising research and development programs in a particular technological space or aimed at solving a common goal or meeting a particular need.

2.4. Rebuttal Evidence

13. Merging parties sometimes argue that their merger will result in procompetitive benefits. For example, particularly in technology markets, firms often assert that a merger will increase the incentive or ability of a firm to undertake innovation activity. In evaluating these claims, the burden rests on the parties to demonstrate that such procompetitive efficiencies show that no substantial lessening of competition is in fact threatened by the merger.[21] The Agencies do not credit efficiencies that are vague or speculative or would likely be achieved without the merger.[22] For example, firms can often work together using contracts short of a merger to collaborate on innovative efforts without undertaking a full merger with the likely anticompetitive consequences. Nor do the

Trade Comm'n, Horizontal Merger Guidelines § 10 (2010) ("Cognizable efficiencies are merger-specific efficiencies that have been verified and do not arise from anticompetitive reductions in output or service.").

Agencies credit benefits outside the relevant market. Moreover, the Agencies would not trade off innovation benefits against higher prices.[23]

3. Agency Experience with Innovation-Based Harm in Merger Cases

14. The Agencies have identified innovation concerns in numerous merger cases. A few examples follow.[24]

15. The DOJ's 2020 lawsuit to block Visa Inc.'s proposed acquisition of Plaid Inc. is an example of a case where a monopolist attempted to acquire an innovative nascent threat. The DOJ alleged that Visa was a monopolist in online debit, and its proposed acquisition would extinguish a nascent competitor that had the potential to disrupt online debit with a low-cost, innovative product and further entrench Visa's dominance in the online debit market. According to the complaint, Visa sought to buy Plaid for $5.3 billion as an "insurance policy" to neutralize a "threat to our important US debit business." The DOJ challenged the deal under both Section 7 of the Clayton Act and Section 2 of the Sherman Act, recognizing that both statutes are violated when a monopolist acquires a nascent competitor to eliminate a significant competitive threat and entrench its dominant position. On January 12, 2021, Visa and Plaid announced that the companies had terminated their merger agreement.

16. In 2016, the DOJ challenged a merger between Anthem and Cigna, the second and third largest health insurance companies in the United States.[25] The DOJ alleged that Anthem and Cigna competed vigorously against one another to sell commercial health

[23] For a more detailed discussion of efficiencies analysis, *see* the U.S. Submission for the OECD Competition Committee Roundtable on Out-of-Market Efficiencies (Dec. 2023).

[24] In addition to the cases discussed in this section, the Agencies have identified adverse innovation effects in numerous other cases, *e.g.*, *United States v. Bayer AG and Monsanto Company*, Civil Action No. 1:18-cv-01241 (D.D.C. 2018), https://www.justice.gov/atr/case-document/file/1066656/download; *United States v. Deere & Company, Precision Planting LLC, and Monsanto Company*, Civil Action No. 1:16-cv-08515 (N.D. Ill. 2016), https://www.justice.gov/media/862871/dl?inline; *Applied Materials/Tokyo Electron* (Press Release, Dep't of Justice, Applied Materials Inc. and Tokyo Electron Ltd. Abandon Merger Plans After Justice Department Rejected Their Proposed Remedy (April 27, 2015), https://www.justice.gov/opa/pr/applied-materials-inc-and-tokyo-electron-ltd-abandon-merger-plans-after-justice-department); *United States v. H&R Block, Inc.*, 833 F. Supp. 2d 36 (D.D.C. 2011); *Amgen/Horizon Therapeutics* (Press Release, Fed. Trade Comm'n, Biopharmaceutical Giant Amgen to Settle FTC and State Challenges to its Horizon Therapeutics Acquisition (Sept. 1, 2023), https://www.ftc.gov/news-events/news/press-releases/2023/09/biopharmaceutical-giant-amgen-settle-ftc-state-challenges-its-horizon-therapeutics-acquisition); *Edgewell Personal Care/Harry's* (Press Release, Fed. Trade Comm'n, FTC Files Suit to Block Edgewell Personal Care Company's Acquisition of Harry's, Inc. (Feb. 3, 2020), https://www.ftc.gov/news-events/news/press-releases/2020/02/ftc-files-suit-block-edgewell-personal-care-companys-acquisition-harrys-inc); *Thoratec/HeartWare* (Press Release, Fed. Trade Comm'n, FTC Challenges Thoratec's Proposed Acquisition of HeartWare International (July 30, 2009), https://www.ftc.gov/news-events/news/press-releases/2009/07/ftc-challenges-thoratecs-proposed-acquisition-heartware-international).

[25] Press Release, Dep't of Justice, Justice Department and State Attorneys General Sue to Block Anthem's Acquisition of Cigna, Aetna's Acquisition of Humana (July 21, 2016), https://www.justice.gov/opa/pr/justice-department-and-state-attorneys-general-sue-block-anthem-s-acquisition-cigna-aetna-s; Complaint, *United States et al. v. Anthem, Inc.*, , No. 1:16-cv-01493 (D.D.C. July 21, 2016), *available at* https://www.justice.gov/atr/file/903111/download.

insurance to national accounts. Although Cigna could not compete with Anthem solely on price, it could compete on price and non-price terms, which included finding innovative ways to lower its customers' medical costs by offering sophisticated wellness programs, providing highly regarded customer service, and working closely with doctors and hospitals to improve the quality and lower the cost of care. The DOJ alleged that because the merger would eliminate Cigna as a competitor against Anthem, it would reduce the incentive to continue innovating with respect to—and competing on—these non-price elements of its product offerings. The district court blocked the merger, finding that it likely would slow such innovation.[26] The court explained that with respect to "[t]he question to be decided as to whether the transaction would reduce the new firm's incentive to innovate in the relevant market, and in connection with that issue, it is important to note that national accounts in particular are considered to be the 'innovation incubators' for the entire industry. They push carriers to enhance plan design, customer service, technology, and data security, and the innovations they spur are often deployed to other customers and segments."[27] The district court's decision was upheld by the appellate court.[28]

17. Also in 2016, the DOJ challenged a merger between Halliburton and Baker Hughes that would have combined two of the three largest oilfield services companies in the United States and the world, eliminating important head-to-head competition in markets for more than twenty products or services used for on- and offshore oil exploration and production in the United States.[29] Halliburton, Baker Hughes, and Schlumberger comprised the "Big Three" in the industry, and they possessed unrivaled research and innovation capabilities. The DOJ alleged that because of plans to eliminate expenditures on overlapping research projects, the merger would end competition between Halliburton and Baker Hughes to develop and bring to market "game changing" or "disruptive" new technologies. The firms abandoned their merger soon after the DOJ filed suit.[30]

18. In 2022, the FTC challenged Meta Platform's (formerly Facebook) acquisition of Within Unlimited and its popular virtual reality dedicated fitness app, Supernatural.[31] While Meta did not offer its own virtual reality dedicated fitness app, through its status as a key player in the virtual reality sector with its own best-selling fitness app, capabilities, and resources, the FTC alleged that Meta's acquisition would reduce innovation in multiple ways. First, the acquisition would eliminate the prospect of Meta's independent entry into the virtual reality dedicated fitness market, depriving consumers of additional choice and increased innovation. Second, the acquisition would eliminate existing innovation by

Halliburton Co. and Baker Hughes, Inc.*, No. 1:16-cv-00233-UNA (D. Del. April 6, 2016), *available at* https://www.justice.gov/opa/file/838651/download.

[30] Press Release, Dep't of Justice, Halliburton and Baker Hughes Abandon Merger After Department of Justice Sued to Block Deal (May 1, 2016), https://www.justice.gov/opa/pr/halliburton-and-baker-hughes-abandon-merger-after-department-justice-sued-block-deal.

[31] Press Release, Fed. Trade Comm'n, FTC Seeks to Block Virtual Reality Giant Meta's Acquisition of Popular App Creator Within (July 27, 2022), https://www.ftc.gov/news-events/news/press-releases/2022/07/ftc-seeks-block-virtual-reality-giant-metas-acquisition-popular-app-creator-within.

Within that resulted from the mere possibility that Meta would enter the market. Third, the acquisition would eliminate rivalry between Meta and Within in a broader virtual reality fitness market where they each add features to attract users. Although the court ultimately denied the FTC's request for a preliminary injunction, the court's decision validated the FTC's core legal theories and provided a roadmap for challenging mergers that eliminate potential competitors and threaten innovation.

19. In 2021, the FTC sued to block Illumina's proposed acquisition of Grail.[32] Grail is engaged in an innovation race against other firms to develop Multi Cancer Early Detection ("MCED") tests, while Illumina supplies the DNA sequencing technology platforms that Grail and its rivals need to develop the tests. The complaint alleged harm in the relevant market for the "research, development, and commercialization of MCED tests." Following a multi-week administrative proceeding, the Commission reversed the Administrative Law Judge's Initial Decision and ordered Illumina to divest Grail, concluding that the acquisition would allow Illumina to favor Grail and foreclose other MCED developers' access to its critical sequencing technology, which would reduce innovation, decrease choice and quality, and increase prices.[33]

20. Also in 2021, the FTC challenged chip supplier Nvidia's proposed vertical acquisition of Arm, which creates and licenses chip designs to other chip suppliers.[34] As one of the largest chip suppliers, Nvidia is best known as the dominant supplier of graphics processing units for use in personal computers and datacenters. Nvidia also offers products for advanced networking, datacenter central processing units, and computer-assisted driving. In these areas, Nvidia competes with other firms that rely on Arm's technology to develop their own products. In addition to alleging that the acquisition would result in higher prices and lower quality, the FTC alleged that it would reduce innovation, contending the combined firm would have less incentive to develop new chip design features and innovations because they might harm Nvidia's chip supply business. Nvidia eventually abandoned the acquisition after the FTC challenged the deal.

21. It is important to recognize that considering a merger's impact on innovation is not limited to traditional high technology markets. For example, in 2020, the FTC challenged the proposed merger of Edgewell Personal Care and Harry's, two suppliers of shaving products.[35] The FTC alleged that Edgewell, Harry's, and market leader Procter & Gamble were among the few significant competitors in the U.S. market for the manufacture and

Trade Comm'n, FTC Orders Illumina to Divest Cancer Detection Test Maker GRAIL to Protect Competition in Life-Saving Technology Market (Apr. 3, 2023), https://www.ftc.gov/news-events/news/press-releases/2023/04/ftc-orders-illumina-divest-cancer-detection-test-maker-grail-protect-competition-life-saving. The matter is currently on appeal before the United States Court of Appeals for the Fifth Circuit.

[34] Press Release, Fed. Trade Comm'n, FTC Sues to Block $40 Billion Semiconductor Chip Merger (Dec. 2, 2021), https://www.ftc.gov/news-events/news/press-releases/2021/12/ftc-sues-block-40-billion-semiconductor-chip-merger.

[35] Press Release, Fed. Trade Comm'n, FTC Files Suit to Block Edgewell Personal Care Company's Acquisition of Harry's, Inc. (Feb. 10, 2020), https://www.ftc.gov/news-events/news/press-releases/2020/02/statement-daniel-francis-deputy-director-ftc-bureau-competition-regarding-announcement-edgewell.

sale of men's and women's wet shave razors. The complaint further alleged that Edgewell and Procter & Gamble operated their brands of men's and women's razors as a comfortable duopoly until Harry's disrupted the market by launching a direct-to-consumer wet shave brand and offering its products in brick-and-mortar retail stores. As a result of the new competitive threat, Procter & Gamble and Edgewell reduced prices and innovated by developing value-priced products. The FTC alleged that the proposed merger would eliminate price and innovation competition between suppliers of wet shave razors, inflicting significant harm on U.S. consumers. Shortly after the FTC sued, Edgewell terminated its merger agreement with Harry's.

4. Expanding the Toolkit for Assessing Innovation Issues

22. In the U.S., there is growing recognition of the importance of ensuring that businesses have the opportunity to compete across all dimensions in modern markets, including innovation. The Biden Administration has taken a number of steps to expand the tools available to address modern market realities and promote a forward-looking approach to competition analysis.

23. First, as discussed above, the Agencies are in the process of updating the Merger Guidelines. The Draft Guidelines have been updated to reflect modern marketplace realities and state-of-the-art economic analysis. In accordance with legal precedent and up-to-date economics, the Draft Guidelines focus on the effects on competition rather than just the effects on one type of beneficiary of competitive markets, or purely price or output effects. As has been articulated in prior Guidelines, the lessening of competition from a merger can lead to many non-price harms, such as reduced quality and less innovation.[36]

24. Second, the Agencies are expanding their expertise to ensure that they have a sophisticated understanding of how modern markets function. For example, both Agencies have hired data scientists, AI experts, and technologists to provide insights into these rapidly evolving markets and ensure that opportunities for competition and innovation flourish.[37]

25. Third, the FTC, with DOJ's concurrence, has issued a Notice of Proposed Rulemaking (NPRM) proposing changes to the premerger filings required under the Hart-

[36] Relatedly, the FTC has challenged overbroad non-compete restrictions in connection with merger enforcement actions. *See, e.g.*, Press Release, Fed. Trade Comm'n, FTC Imposes Strict Limits on DaVita, Inc.'s Future Mergers Following Proposed Acquisition of Utah Dialysis Clinics (Oct. 25, 2021), https://www.ftc.gov/news-events/news/press-releases/2021/10/ftc-imposes-strict-limits-davita-incs-future-mergers-following-proposed-acquisition-utah-dialysis ("Under the proposed order, DaVita is required to divest three Provo-area dialysis clinics . . . and prohibited from entering into or enforcing non-compete agreements and other employee restrictions."). Among other harms, non-compete agreements can decrease innovation by blocking former employees from starting new business; accordingly, the FTC has proposed a rule that would ban non-compete clauses. Press Release, Fed. Trade Comm'n, FTC Proposes Rule to Ban Noncompete Clauses, Which Hurt Workers and Harm Competition (Jan. 5, 2023), https://www.ftc.gov/news-events/news/press-releases/2023/01/ftc-proposes-rule-ban-noncompete-clauses-which-hurt-workers-harm-competition.

[37] *See, e.g.*, Press Release, Fed. Trade Comm'n, FTC Launches New Office of Technology to Bolster Agency's Work (Feb. 17, 2023), https://www.ftc.gov/news-events/news/press-releases/2023/02/ftc-launches-new-office-technology-bolster-agencys-work. For a more detailed discussion of recent developments, see U.S. Submission, OECD Competition Committee Working Party 3, The Optimal Design, Organisation and Powers of Competition Authorities (Dec. 2023).

Scott-Rodino (HSR) Act.[38] Currently, filers are not required to provide information about products or services that did not derive revenue in the last fiscal year. Under the proposal, filers would be required to identify pipeline or pre-revenue products and overlaps for such products anticipated to have annual revenue totaling more than $1 million within two years. This requirement will substantially improve the Agencies' ability to identify competition relating to these forthcoming products.

26. Finally, in July 2021, President Biden signed an "Executive Order on Promoting Competition in the American Economy."[39] The Executive Order calls for a "whole-of-government" approach to promoting procompetitive policies and markets across the United States. It has enhanced opportunities for the Agencies to partner with other federal agencies and collaborate across government both to address the need for more vigorous competition in the U.S. economy and to promote fair competition. As part of this process, agencies are encouraged to consider how their regulations impact competition, including whether regulations are entrenching incumbents, making it more difficult for innovative entrants to compete.

27. For example, the Executive Order requests that the U.S. Patent and Trademark Office (PTO) and U.S. Department of Agriculture (USDA) submit a report on concerns and strategies for ensuring "that the intellectual property (IP) system, while incentivizing innovation, does not also unnecessarily reduce competition in seed and other input markets beyond that reasonably contemplated by the Patent Act."[40] In March 2023, the USDA, in consultation with the PTO and other federal agencies, including the DOJ and FTC, submitted the requested report.[41] Among other initiatives, USDA announced the creation of a new Working Group on Competition and Intellectual Property to explore joint PTO-USDA opportunities to "ensure that our IP laws continue to incentivize innovation without unduly delaying competition and new market entrants," among other goals.[42]

5. Conclusion

28. The Agencies are committed to protecting all forms of competition and the competitive process, including innovation. This commitment is reflected in the 2023 Draft Merger Guidelines, which reflects the Agencies' appreciation of systemic changes occurring across the economy. The updates explain how the Agencies apply the law to modern market realities, explicitly connecting the Agencies' analyses to effects on competition, recognizing that competition plays out in different ways. The Agencies are also making use of expanded tools to protect competition and innovation in modern markets, including expanding Agency expertise to understand evolving markets, updating the merger notification form to reflect forward-looking competition, and collaborating with

United States

1. Introduction

1. In recent years, there has been growing concern in the United States about the effects of "roll-ups" and "stealth consolidation," primarily in the technology and healthcare industries.[1] Serial acquisitions involve a number of acquisitions by the same firm that consolidate a fragmented market, typically composed of many relatively small competitors. The U.S. Federal Trade Commission (FTC) and the Antitrust Division of the U.S. Department of Justice (DOJ) (together, the Agencies) recognize that serial acquisitions can result in harm to competition and are focused on identifying those situations and taking appropriate action.

2. This paper discusses concerns raised by serial acquisitions and the challenges of detection, relevant U.S. law, and the Agencies' enforcement experience. It concludes by looking at remedies presently available and suggesting additional solutions.

2. Serial acquisitions and industry roll-ups in the United States

3. Firms may find that a strategy of growth through acquisition is more profitable than organic growth. A pattern or strategy to buy up smaller competitors or firms in the same or related lines of business that pose a competitive threat can reduce competitive pressures in the market, leading to higher profits. Incumbents can be well-placed to identify industry developments and have the incentive to stave off emerging threats. Rolling up smaller competitors or killing off nascent threats before they emerge can lead to the same magnitude and type of harm as mergers of larger or established firms and are less likely to attract the attention of enforcers until the strategy is identified. Firms that already have a dominant position may preserve that market power through various "moat-building" tactics, including acquisitions, to create barriers that will protect their position from outside threats (see, e.g., Paragraphs 12 and 13).

4. Serial acquisition strategies have been undertaken in the United States economy since the latter half of the 19th century.[2] Competition reports to Congress in the late 1940s highlighted serial acquisitions in traditionally "small business" industries by large, often national, corporations fueled by wartime capital.[3] Congress sought to address these

[3] *See* Federal Trade Commission, The Merger Movement: A Summary Report 7 (1948) ("Where several large enterprises are extending their power by successive small acquisitions, the cumulative effect of their purchases may be to convert an industry from one of intense competition among many enterprises to one in which three or four large concerns produce the entire supply. This latter pattern

AR_002554

concerns in 1950 when it amended the Clayton Act, which the Supreme Court observed was specifically intended to address "the rising tide of economic concentration . . . in its incipiency to brake this force at its outset and before it gathered momentum."[4] The legislative history of the 1950 amendments makes clear that Congress intended U.S. merger law to address market power achieved through a series of acquisitions.[5]

5. Today, our experience indicates that serial acquisitions are most often favored by technology companies and private equity firms. Large technology companies with excess liquid capital often expand their dominion by entering related or adjacent markets or buying up competitors, both of which have raised concerns among policymakers in the United States and abroad.[6] Meanwhile, private equity firms execute "buy-and-build" strategies through a portfolio company that buys a firm, often the market leader, and "rolls-up" smaller competitors using the private equity firm's money and acquisition expertise.[7] Private equity has been particularly active in healthcare markets.[8]

6. To better understand the acquisition strategies of individual firms in the technology sector, the FTC collected information about unreported acquisitions of five large technology companies in 2019. The study focused on 819 non-reported acquisitions made by Apple, Amazon, Facebook (now Meta), Alphabet (including Google), and Microsoft over the course of 2010-2019, and analyzed the pace, size and types of acquisitions to provide a comprehensive overview of all the acquisitions these companies made during that time period. From this study, the FTC gained insight into these companies' practices

. . . is likely to be characterized by avoidance of price competition and by respect on the part of each concern for the vested interests of its rivals.").

[8] *See*, *e.g.*, Richard M. Scheffler, Laura M. Alexander & James R. Godwin, Soaring Private Equity Investment in the Healthcare Sector: Consolidation Accelerated, Competition Undermined, and Patients at Risk 8–16 (May 18, 2021), https://publichealth.berkeley.edu/wp-content/uploads/2021/05/Private-Equity-I-Healthcare-Report-FINAL.pdf.

and acquisition strategies, including how they structured acquisitions and how these acquisitions fit into the companies' overall business strategies.[9]

7. The Agencies are attuned to evolving business models and strategies in order to protect the public and the economy from the ill effects of serial acquisitions.[10] Given the increased concern posed by rollups, the Agencies will evaluate whether serial acquisitions have led to increased market power and leverage.

3. Competition risks with serial acquisitions

8. Empirical studies show that consolidation within an industry can lead to higher prices and reduced quality for consumers.[11] Such consolidation, and any resulting harm, can be the result of a single transaction or multiple transactions.[12]

9. Serial acquisition patterns or strategies can be hard to detect when some or all individual acquisitions are not notified to the Agencies or where the harm from the specific acquisition appears insignificant in isolation. Because serial acquisitions often involve relatively small acquired firms, the Agencies are less likely to be aware of them. The Agencies are notified of pending acquisitions under the Hart-Scott-Rodino (HSR) Act. For 2023, the transaction size-of-reporting threshold for agency notification under the HSR Act is $111.4 million, meaning generally only transactions of more than $111.4 million are notified to the Agencies.[13] Depending on the size of existing competitors, acquirors could significantly increase the concentration in a market through serial transactions without ever triggering the size-of-transaction threshold and thereby avoid HSR Act notification.

[9] *See* Federal Trade Commission, Non-HSR Reported Acquisitions by Select Technology Platforms, 2010-2019 (2021), https://www.ftc.gov/system/files/documents/reports/non-hsr-reported-acquisitions-select-technology-platforms-2010-2019-ftc-study/p201201technologyplatformstudy2021.pdf.

[10] *See* Executive Order No. 14036, 56 Fed. Reg. 36987, 36988 (July 9, 2021) ("It is also the policy of my Administration to enforce the antitrust laws to meet the challenges posed by new industries and technologies, including the rise of the dominant Internet platforms, especially as they stem from serial mergers, the acquisition of nascent competitors, the aggregation of data, unfair competition in attention markets, the surveillance of users, and the presence of network effects.").

[11] *See e.g.*, Loren Adler, Conrad Milhaupt & Samuel Valdez, *Measuring Private Equity Penetration and Consolidation in Emergency Medicine and Anesthesiology*, 1 Health Affairs Scholar (July 2023), https://doi.org/10.1093/haschl/qxad008; Thomas Wollmann, *How to Get Away with Merger: Stealth Consolidation and its Effects on U.S. Healthcare* (NBER Working Paper Series, Working Paper 27274, 2021) at 19–20, https://www.nber.org/papers/w27274; Carl Shapiro, *Protecting Competition in the American Economy: Merger Control, Tech Titans, Labor Markets*, 33 J. Econ. Persp. 69, 76–77 (Summer 2019), https://www.aeaweb.org/articles?id=10.1257/jep.33.3.69.

[12] *See, e.g.*, *In re Nat'l Tea Co.*, 69 F.T.C. 226, 1966 WL 88025, at *19–20, *29 (1966) ("[W]hile the acquisition of a single enterprise with annual sales of $250 million may appear more significant than a series of acquisitions involving 25 firms with sales of $10 million each, the ultimate effect is the same.").

[13] Premerger Notification Office Staff, *HSR Threshold Adjustments and Reportability for 2023* (Feb. 16, 2023), https://www.ftc.gov/enforcement/competition-matters/2023/02/hsr-threshold-adjustments-reportability-2023. HSR thresholds are adjusted annually with changes in gross national product. 15 U.S.C. § 18a(a)(2). Despite this relatively high reporting threshold, the Agencies have experienced a record number of filings. *See* Federal Trade Commission & Department of Justice, *Hart-Scott-Rodino Annual Report: Fiscal Year 2021*, at 1 fig. 1 (2023).

10. Even if the Agencies are aware of a pattern of serial acquisitions in a market, assessing each acquisition singly may result in underenforcement, especially when individual acquisitions result in very small changes in concentration as measured by the Herfindahl-Hirschman Index. But it is possible for a company to acquire, through serial acquisitions, over 50 percent of a market without any single transaction triggering close scrutiny of potential effects.[14] The Clayton Act condemns mergers whose effect may be substantially to lessen competition or tend to create a monopoly "whether the acquiring corporation accomplished these results by one immense gobble of another large [competitor] or . . . by nibbling away at small [competitors.]"[15] Therefore, to avoid underenforcement, it is important that the Agencies assess the cumulative effect of serial transactions in a given market.[16] The Agencies' 2023 Draft Merger Guidelines describe this approach in assessing whether one or all of the acquisitions may substantially lessen competition or tend to create a monopoly in violation of Section 7 of the Clayton Act.[17]

11. The cumulative impact of serial acquisitions can lead to several different types of competitive harm. For instance, serial acquisitions can eliminate important head-to-head competition between the acquiring firm and its target(s).[18] Serial acquisitions can also result in a market that is highly concentrated, where a merger that eliminates even a small competitor creates undue risk that the merger may cause harm.[19] Further, serial acquisitions can increase the risk of coordination among the remaining firms in the market, for example through the elimination of a maverick firm.[20]

12. Serial acquisitions also can lead to the creation of a dominant firm, raising concerns that further acquisitions would give the firm the ability and incentive to reduce competition by making it harder for its rivals to compete, or to deter entry of new firms into the market. For instance, the acquiring firm may gain control over access to a product, service, or customers that its rivals use to compete, enabling it to weaken its rivals and thereby substantially lessen competition.[21] If the acquiring firm already has a dominant position, additional acquisitions may allow it to preserve or entrench its market power.[22]

13. Serial acquisitions by a dominant player may address not only emerging threats within its core market but may also be directed at threats emerging in related or adjacent

markets, such as new component technologies, key intellectual property, or complementary assets. This is a particular concern in platform markets, where competition may not neatly follow horizontal or vertical lines. A merger may entrench the dominant position of the acquiring firm by, for instance, increasing barriers to entry or switching costs, interfering with customers' use of competitive alternatives, depriving rivals of scale economies or network effects, or eliminating a nascent threat.[23]

14. Serial acquirors may also acquire partial ownership stakes or preserve the acquired firms' corporate entities and branding. Such strategies maintain a façade of competition while common ownership, sponsorship, affiliation, board membership, or management dampens any incentive to compete and facilitates undue coordination.[24] Private equity firms can use serial partial acquisitions to obtain board representation in competing firms, which can violate Section 8 of the Clayton Act and harm competition.[25]

15. Serial acquisition strategies may also violate Section 2 of the Sherman Act when a firm with monopoly power relies on acquisitions, among other conduct, to acquire or maintain its monopoly.[26] Section 2 of the Sherman Act prohibits firms from acquiring, conspiring or attempting to acquire, or maintaining monopoly power. Interpreting Section 2, the Supreme Court defined unlawful monopolization as possession of monopoly power plus "the willful acquisition or maintenance of [monopoly] power as distinguished from growth or development as a consequence of a superior product, business acumen, or historic accident."[27] Monopoly power, defined as "the power to control price or exclude competition,"[28] can be shown directly by demonstrating the company at issue has the power to control price or exclude competition or indirectly, by showing "a predominant share of the relevant market."[29] Serial acquisition strategies which aim to achieve—or actually achieve—high market share, exclusion of competitors, suppression of wages, reduction in innovation, or pricing power may violate Section 2. The framework used to assess monopolization claims under Section 2 is well-equipped to address serial acquisitions because "merging viable competitors to create a monopoly is a clear § 2 offense,"[30] and the effects of the acquiror's anticompetitive course of conduct are considered "as a whole rather than considering each aspect in isolation."[31]

16. Finally, early cases before the FTC recognized that "[i]t may be appropriate to scrutinize a series of acquisitions over a long period of time from the standpoint . . . of whether the respondent's course of conduct viewed as a whole constitutes . . . an unfair method of competition" under Section 5 of the FTC Act.[32] "The series of acquisitions may justify relief beyond what might be appropriate in a Section 7 or Section 5 case challenging a particular one or number of the acquisitions in the series, and irrespective of whether every individual acquisition, viewed separately, is unlawful."[33] Reflecting this view, the FTC's policy statement on Section 5 explicitly identifies as a potential unfair method of competition "a series of mergers, acquisitions, or joint ventures that tend to bring about the harms that the antitrust laws were designed to prevent, but individually may not have violated the antitrust laws."[34]

4. Agency Experience with Serial Acquisitions

17. The Agencies are focused on enforcement against serial acquisition strategies.[35]

18. In June 2022, the FTC took action to protect competition in markets for specialty and emergency veterinary services. JAB Consumer Partners, a private equity firm, had previously acquired Compassion-First Pet Hospitals and National Veterinary Associates, large veterinary chains in United States.[36] Then it proposed to acquire Sage Veterinary Partners, LLC, which would have eliminated head-to-head competition in local markets in Texas and California, which the FTC prevented as part of a consent decree.[37] JAB also sought to acquire another veterinary chain, Ethos Veterinary Health, with significant competitive overlap in Richmond, Virginia, Washington, D.C., Denver, and San Francisco. Again, the FTC required divestiture to stem the growing trend towards consolidation in the emergency and specialty veterinary services markets.[38]

19. In September 2023, the FTC filed suit against U.S. Anesthesia Partners, Inc. and its private equity sponsor, Welsh, Carson, Anderson & Stowe. The complaint challenges their

multi-year anticompetitive scheme to consolidate anesthesia practices in Texas, drive up the price of anesthesia services, and increase their own profits. Together they acquired more than a dozen anesthesiology practices in Texas to eliminate competition and create a single dominant provider with the power to demand higher prices. As a result of the scheme, U.S. Anesthesia Partners, Inc. dwarfs its rivals both in terms of sheer size and cost to patients. Without relief, the complaint alleges, competition will remain stifled, and the defendants can continue to engage in similar conduct.[39]

20. In 2010, the Antitrust Division and several state attorneys general brought an action to unwind Dean Foods' acquisition of dairy processing businesses in Illinois, Wisconsin, and Michigan.[40] Dean Foods had become the largest fluid milk processor in the United States—partially by making unreportable acquisitions. The Division litigated and settled the action, securing a Final Judgment requiring Dean to divest a fluid milk processing plant. In order to guard against future serial acquisitions, the settlement also required Dean to give the Division notice before making any future acquisition of milk processing plants where the purchase price was more than $3 million. In 2020, Dairy Farmers of America ("DFA") —a dairy cooperative which also owned fluid milk processing facilities—agreed to acquire 44 fluid milk processing plants out of the Dean Foods bankruptcy auction. The Division brought an action requiring DFA to divest three fluid milk plants with which it overlapped, and, to prevent serial acquisitions, it also required DFA to give notice to the Division of fluid milk processing acquisitions in the future.[41]

21. In January 2023, the DOJ, along with a number of state attorneys general, filed a civil antitrust suit against Google for monopolizing multiple digital advertising technology products, in part based on a pattern of acquisitions aimed at neutralizing or eliminating ad tech competitors.[42] These acquisitions included Google's 2007 acquisition of DoubleClick, a dominant publisher ad server; its 2009 purchase of AdMob, a technology system that allowed publishers of mobile apps to sell ads as well; its 2010 acquisition of Invite Media, a demand side platform; and its 2011 purchase of AdMeld, which had developed technology to provide "yield management" functionality to publishers.[43] As alleged in the Complaint, "Google's acquisitions of DoubleClick, Invite Media, and AdMeld helped Google achieve dominant positions at each level of the open web ad tech stack and set the

stage for Google to control and manipulate the process by which publishers sell and advertisers buy open web display inventory."[44]

5. Remedies and solutions for serial acquisitions

5.1. Preventative Oversight

22. As discussed above, many transactions that are part of a serial acquisition strategy may not meet the HSR Act thresholds for required filing, and thus may remain undisclosed. In order to provide more relevant information to the Agencies, the FTC, with the concurrence of the Assistant Attorney General of the Antitrust Division of the U.S. Department of Justice, has proposed to expand information collected in the premerger notification form to require more robust information about prior acquisitions of each party to the transaction.[45] Other proposals would require the filing persons to identify each rationale for the transaction, and identify the documents included in the filing which support each rationale.[46] If adopted, these proposals would provide the information to better identify serial acquisition strategies at an early stage when meaningful intervention may prevent the accumulation of market power.

5.2. Terminating Conduct, Restoring Competition, and Preventing Recurrence

23. As discussed in prior papers, it is generally easier to both investigate and secure an effective remedy for pending transactions than it is for consummated transactions.[47] The objective of an ex-post remedy is to stop any ongoing violation; restore full, open, competition to the market; and to prevent future violations. If a consummated merger violates the antitrust laws, broad equitable remedies are available.[48] Structural relief forces a reorganization or divestiture of the offending company's assets, while behavioral relief requires the offending company to engage in or refrain from certain conduct. In addition, the Agencies frequently seek means of monitoring the acquiror's future conduct and the market more generally.

[44] Id. at 35.

[45] Premerger Notification; Reporting and Waiting Period Requirements, 88 Fed. Reg. 42203 (June 29, 2023) (to be codified at 16 CFR pts. 801, 803), https://www.federalregister.gov/documents/2023/06/29/2023-13511/premerger-notification-reporting-and-waiting-period-requirements. Proposals to improve reporting of prior acquisitions include requiring both parties to report such acquisitions (currently limited to the acquiring party); increasing the look-back period from five to ten years; eliminating the de minimis $10 million sales/assets threshold; and treating asset acquisitions the same as acquisitions involving voting securities.

[46] Premerger Notification; Reporting and Waiting Period Requirements, 88 Fed. Reg. 42191-92 (June 29, 2023) (to be codified at 16 CFR pts. 801, 803), https://www.federalregister.gov/documents/2023/06/29/2023-13511/premerger-notification-reporting-and-waiting-period-requirements.

[48] *See id.*

24. A series of acquisitions, whether challenged under the Clayton Act, Sherman Act, or FTC Act, "may justify relief beyond what might be appropriate in a Section 7 or Section 5 case challenging a particular one or number of the acquisitions in the series, and irrespective of whether every individual acquisition, viewed separately, is unlawful."[49]

25. When possible, the Agencies may seek to stop the series of acquisitions by obtaining an order barring any further acquisitions, thereby preventing any further degradation of competitive conditions. This remedy is particularly important if the Agencies catch the serial acquiror in early stages, but alone this remedy may be insufficient to return competitive conditions to their pre-acquisition status.

26. To fully restore competitive dynamism, the Agencies may seek structural relief in the form of divestitures. As the U.S. Supreme Court has explained, divestiture is the "most important of antitrust remedies," and it "should always be in the forefront of a court's mind when a violation of § 7 has been found."[50] Structural relief may require a complete unwinding of a series of mergers or a reorganization and spinoff of particular assets or divisions, including assets and divisions not directly involved in the illegal series of transactions. Divestiture can be relatively simple, administrable, and effective.[51]

27. The Agencies also may seek prior notice or prior approval of future acquisitions in the market.[52] Prior notice and prior approval are particularly important given that serial acquisitions often involve acquisitions below reporting thresholds. To ensure parent companies and private equity sponsors cannot evade these requirements through a new affiliate company, reporting requirements should attach to entities involved in the serial acquisition strategy above the direct acquiror.[53]

28. Ultimately, fashioning an effective remedy for a series of acquisitions should take into account marketplace realities, including degradation of assets, new entrants, and any other changes to the market that occurred during the consolidation scheme.

AR_002572

April 2, 2007

To the President and the Congress of the United States:

Three years ago, as authorized by statute, this Commission undertook a comprehensive review of U.S. antitrust law to determine whether it should be modernized. It is our pleasure to present the results of that effort, the enclosed Report and Recommendations of the Antitrust Modernization Commission ("Report").

This Report is the product of a truly bipartisan effort. The members of the Commission were appointed by the President and the respective majority and minority Leadership of the House of Representatives and Senate with the goal of ensuring "fair and equitable representation of various points of view in the Commission."[1] In fact, the Commissioners represented a diversity of viewpoints, which were fully and forcefully expressed during many hours of hearings and thoughtful deliberation. As one Commissioner has said, the Commission's recommendations were "fashioned on the anvil of rigorous discussion and debate." The Commission also endeavored at every turn to obtain a diversity of views from the public. In the end, the Commission was able to reach a remarkable degree of consensus on a number of important principles and recommendations.

First, the Report is fundamentally an endorsement of free-market principles. These principles have driven the success of the U.S. economy and will continue to fuel the investment and innovation that are essential to ensuring our continued welfare. They remain as applicable today as they ever have been. Free trade, unfettered by either private or governmental restraints, promotes the most efficient allocation of resources and greatest consumer welfare.

Second, the Report judges the state of the U.S. antitrust laws as "sound." Certainly, there are ways in which antitrust enforcement can be improved. The Report identifies several. A few Commissioners have greater concerns about aspects of current enforcement, as expressed in their separate statements. On balance, however, the Commission believes that

---

[1] Antitrust Modernization Commission Act of 2002, Pub. L. No. 107-273, § 11054(h), 116 Stat. 1856, 1857 (2002).

AR_002574

U.S. antitrust enforcement has achieved an appropriate focus on (1) fostering innovation, (2) promoting competition and consumer welfare, rather than protecting competitors, and (3) aggressively punishing criminal cartel activity, while more carefully assessing other conduct that may offer substantial benefits. The laws are sufficiently flexible as written, moreover, to allow for their continued "modernization" as the world continues to change and our understanding of how markets operate continues to evolve through decisions by the courts and enforcement agencies.

Third, the Commission does not believe that new or different rules are needed to address so-called "new economy" issues. Consistent application of the principles and focus noted above will ensure that the antitrust laws remain relevant in today's environment and tomorrow's as well. The same applies to different rules for different industries. The Commission respectfully submits that such differential treatment is unnecessary, whether in the form of immunities, exemptions, or special industry-specific standards.

That does not mean the Commission sees no room for improvement. To the contrary, the Commission makes several recommendations for change. A few of these recommendations call for bold action by Congress that likely will require considerable further debate. We look forward to that debate.

The following summarizes some of the more significant changes the Commission recommends.[2]

Substantive Antitrust Standards (Mergers and Monopoly)

The Commission does not recommend legislative change to the Sherman Act or to Section 7 of the Clayton Act. There is a general consensus that, while there may be disagreement about specific enforcement decisions, the basic legal standards that govern the conduct of firms under those laws are sound.

The Commission nevertheless makes several recommendations in the area of merger enforcement. The purpose of these recommendations is to ensure that policy is appropriately sensitive to the needs of companies to innovate and compete while continuing to protect the interests of U.S. consumers. In particular, the Commission urges that substantial weight be given to evidence demonstrating a merger will achieve efficiencies, including innovation-relat-

[2] Although many recommendations garnered unanimous or nearly unanimous support, not all Commissioners fully agreed with all recommendations. Differences are identified in the text of the Report and in some instances are discussed in separate Commissioner statements. Recommendations with the support of at least seven Commissioners are reported as recommendations of the Commission. With respect to 96 percent of the recommendations, at least nine Commissioners agreed in whole or in part with the recommendations. Approximately 57 percent of the recommendations were unanimous.

AR_002575

ed efficiencies. The Commission also recommends that the federal enforcement agencies continue to examine the basis for, and efficacy of, merger enforcement policy. We urge the agencies to further study the economic foundations for merger enforcement policy, including the relationship between market performance and market concentration and other factors. We also recommend increased retrospective study of the effects of decisions to challenge or not challenge specific transactions. Such empirical evidence, although difficult to gather, is critical to an informed and effective merger policy.

With respect to monopoly conduct, the Commission believes U.S. courts have appropriately recognized that vigorous competition, the aggressive pursuit of business objectives, and the realization of efficiencies are generally not improper, even for a "dominant" firm and even where competitors may lose. However, there is a need for greater clarity and improvement to standards in two areas: (1) the offering of bundled discounts or rebates, and (2) unilateral refusals to deal with rivals in the same market. Clarity will be best achieved in the courts, rather than through legislation. The Commission recommends a specific standard for the courts to apply in determining whether bundled discounts or rebates violate antitrust law.

Repeal of the Robinson-Patman Act

The Commission recommends that Congress finally repeal the Robinson-Patman Act (RPA). This law, enacted in 1936, appears antithetical to core antitrust principles. Its repeal or substantial overhaul has been recommended in three prior reports, in 1955, 1969, and 1977. That is because the RPA protects competitors over competition and punishes the very price discounting and innovation in distribution methods that the antitrust laws otherwise encourage. At the same time, it is not clear that the RPA actually effectively protects the small business constituents that it was meant to benefit. Continued existence of the RPA also makes it difficult for the United States to advocate against the adoption and use of similar laws against U.S. companies operating in other jurisdictions. Small business is adequately protected from truly anticompetitive behavior by application of the Sherman Act.

Patents and Antitrust

Patent protection and the antitrust laws are generally complementary. Both are designed to promote innovation that benefits consumer welfare. In addition, a patent does not necessarily confer market power. Nevertheless, problems in the application of either patent or antitrust law can actually deter innovation and unreasonably restrain trade. Many of the Commission's recommendations relating to the Sherman Act address the antitrust side of the balance. On the patent side, the Commission urges Congress to give serious consideration to recent recommendations by the Federal Trade Commission (FTC) and National

Academy of Sciences designed to improve the quality of the patent process and patents. The Commission also recommends that the joint negotiation of license terms within standard-setting bodies ordinarily should be treated under a rule of reason standard, which considers both potential benefits of such joint negotiation to avoid "hold up" and the possibility that such joint negotiation might suppress innovation.

Improving the Enforcement Process

To be effective, any enforcement regime must be clear, fairly administered, and not unreasonably burdensome. Several of the Commission's recommendations are designed to improve current processes to better meet these goals.

Eliminate Inefficiencies Resulting from Dual Federal Enforcement. Except in the area of criminal enforcement (which is the responsibility of the Justice Department), federal antitrust law is enforced by both the Justice Department (DOJ) and the FTC. Both agencies, for example, are equally authorized to review mergers under the Hart-Scott-Rodino Act (HSR Act), which essentially requires all mergers valued at above $59.7 million to be notified to the agencies and suspended until the expiration or termination of certain waiting periods. The Commission does not believe it would be feasible or wise to eliminate the antitrust enforcement role of either agency at this time. However, we make a number of recommendations designed to eliminate inconsistencies and problems that may result from dual enforcement.

Merger Clearance. The agencies have done a good job minimizing problems that can result from dual enforcement. But there is room for improvement that can only be achieved with the help of Congress. At the time of her confirmation, the current head of the FTC was asked to agree not to pursue a global merger clearance agreement between the agencies. The Commission calls on the appropriate congressional committees to revisit that position and authorize the DOJ and the FTC to implement a new merger clearance agreement based on the principles of the 2002 clearance agreement between the agencies. It is bad government for mergers to be delayed by turf battles between the agencies. Such battles undermine confidence in government, damage agency staff morale, and potentially delay the realization of significant merger efficiencies without good reason. The Commission recommends that Congress revise the HSR Act to require the DOJ and the FTC to resolve all clearance requests under the HSR Act within a short period of time after the parties report their transaction.

The Commission also recommends changes to ensure that mergers are treated the same no matter which agency reviews them. Specifically, the Commission recommends that Congress amend Section 13(b) of the FTC Act to prohibit the FTC from pursuing administrative litigation in HSR Act merger cases. The Commission further recommends that the FTC adopt a policy that when it seeks to block a merger in federal court, it will seek both preliminary and permanent relief in a combined proceeding where possible.

Improve the HSR Act Pre-Merger Review Process. The DOJ and FTC should continue to pursue reforms to their internal review processes that will reduce unnecessary burden and delay. The Commission also makes a number of specific recommendations designed to reduce the burden of HSR merger reviews and increase the transparency of government enforcement. For example, the Commission recommends that the agencies update their Merger Guidelines to explain how they evaluate non-horizontal mergers as well as a proposed merger's potential impact on innovation competition. The Commission also recommends that the agencies issue statements explaining why they have declined to take enforcement action with respect to transactions raising potentially significant competitive concerns.

Improve Coordination Between State and Federal Enforcement. State and federal enforcement can be strong complements in achieving optimal enforcement. But the existence of fifty independent state enforcers on top of two federal agencies can, at times, also result in uncertainty, conflict, and burden. The Commission encourages state and federal enforcers to coordinate their activities to seek to avoid subjecting businesses to multiple, and potentially conflicting, proceedings. We make a number of specific recommendations in this regard. In addition, the Commission believes States should continue to focus their efforts primarily on matters involving localized conduct or competitive effects. In addition, state and federal agencies should work to harmonize their substantive enforcement standards, particularly with respect to mergers.

De-link Agency Funding and HSR Act Filing Fees. HSR Act filing fees are used to fund DOJ and FTC antitrust enforcement activity. These fees are a tax on mergers, the vast majority of which are not anticompetitive. They do not accurately reflect costs to the government of reviewing a given filing, nor do they confer a benefit on notifying parties. But they set a precedent for other countries with merger control regimes. In the past, moreover, dips in merger activity (and filing fees) have threatened to affect the level of appropriations available for critical agency activities. The Commission recommends that Congress de-link agency funding from HSR Act filing fee revenues.

Private Litigation

Uniquely in the United States, private litigation has been a key part of antitrust enforcement. Under current rules, private plaintiffs are entitled to recover three times their actual damages, plus attorneys' fees. Defendants are jointly and severally liable for alleged conspiracies. There is no right of contribution among defendants. There is also only a limited right of claim reduction when one or more defendants settle. The combined effect of these rules is that one defendant can be liable for nearly all of the damages caused by an antitrust conspiracy. Defendants thus face significant pressure to settle antitrust claims of questionable merit simply to avoid the potential for excessive liability. While the rules can maximize deterrence and encourage the resolution of claims through quick settlement, they can also overdeter conduct that may not be anticompetitive.

The Commission recommends no change to the fundamental remedial scheme of the antitrust laws: the treble damage remedy and plaintiffs' ability to recover attorneys' fees. On balance, the current scheme appears to be effective in enabling plaintiffs to pursue litigation that enhances the deterrence of unlawful behavior and compensates victims. However, the Commission recommends that Congress enact legislation that would permit non-settling defendants to obtain a more equitable reduction of the judgment against them and allow for contribution among non-settling defendants.

Indirect and Direct Purchaser Litigation. There are different rules at the federal level and among the states as to whether both direct purchasers of price-fixed goods or services and indirect purchasers may sue to recover damages. Under federal law, only direct purchasers can sue (this is commonly known as the rule of *Illinois Brick*). Defendants cannot argue that direct purchasers have "passed on" any amount of the overcharge to indirect purchasers (this is commonly known as the rule of *Hanover Shoe*). In thirty-six states and the District of Columbia, however, indirect purchasers can sue under state law providing that *Illinois Brick* does not apply to state court actions.

As a result, there is typically a morass of litigation in various state and federal courts relating to a single alleged conspiracy. Injured parties are treated differently depending on where they reside and defendants are subject to suit in multiple jurisdictions. In addition, federal *Illinois Brick/Hanover Shoe* policy provides a "windfall" to purchasers who have passed on an overcharge, while depriving any recovery at all to purchasers who actually bear the overcharge. Such a system that compensates the uninjured and denies recovery to the injured seems fundamentally unfair. The Class Action Fairness Act may ameliorate some of the administrative issues caused by conflicting federal and state rules by facilitating the removal of state actions to a single federal court for pre-trial proceedings. However, that Act applies only to pre-trial proceedings and does nothing to address the fairness issues associated with current federal policy. The Commission believes it is time to enact comprehensive legislation reforming the law in this area.

The Commission recommends that Congress overrule the Supreme Court's decisions in *Illinois Brick* and *Hanover Shoe* to the extent necessary to allow both direct and indirect purchasers to recover for their injuries. Other aspects of the Commission's recommendation are designed to ensure that damages would not exceed the overcharges (trebled) paid by direct purchasers, that the full adjudication of such claims occurs in a single federal

AR_002579

forum, and that current class action standards would continue to apply to the certification of direct purchasers regardless of differences in the degree to which overcharges may have been passed on to indirect purchasers.

Criminal Penalties

There is a strong consensus worldwide favoring vigorous enforcement against cartels. Cartels offer no benefit to society and invariably harm consumers. Sentencing and fines under the Sherman Act are generally determined by the courts based on guidance in the Sentencing Guidelines issued by the U.S. Sentencing Commission. The Sentencing Guidelines employ a proxy of harm from cartels based on twenty percent of the volume of commerce affected. This twenty percent proxy is based on an assumed average overcharge of ten percent, which is doubled to account for dead-weight loss to society. The Commission recommends that the Sentencing Commission evaluate whether it remains reasonable to assume an overcharge of ten percent (*i.e.*, whether it should it be higher or lower) and the difficulty of proving actual gain or loss in lieu of using a proxy. It also recommends that the Sentencing Guidelines be amended to make explicit that the twenty percent proxy may be rebutted by proof by a preponderance of evidence that the actual amount of overcharge was higher or lower where a difference is material.

International Antitrust

The United States was once the only major country actively enforcing a comprehensive set of antitrust laws. Today, more than 100 countries have adopted competition laws. On the one hand, this development has helped the United States in its fight to stamp out international cartels. It has also benefited world trade by opening up markets to competition. On the other hand, the proliferation of competition authorities has increased the risk of burden, inconsistency, and even conflict. There is some concern about the potential effect on U.S.-based companies of differences in the way that other countries treat so-called dominant firm behavior and the exploitation of rights in intellectual property.

The Commission recommends a number of steps to address these concerns. First, "as a matter of priority" the DOJ and the FTC should study and report to Congress on the possibility of developing a centralized international pre-merger notification system that would ease the burden of companies engaged in cross-border transactions. Second, the DOJ and the FTC should seek procedural and substantive convergence around the world on sound principles of competition law. Third, the United States should pursue bilateral and multilateral cooperation agreements with more of its trading partners. These agreements should explicitly recognize that conflicting antitrust enforcement can impede global trade, investment, and

AR_002580

consumer welfare. They should also promote comity by providing for the exercise of deference where appropriate, the harmonization of remedies, consultation and cooperation, and benchmarking reviews. Fourth, the DOJ and the FTC should be provided with direct budgetary authority to provide antitrust technical assistance to other countries for the purpose of enhancing convergence and cooperation.

Cooperation from other countries can be essential to punishing international cartels that exact hundreds of millions of dollars from U.S. consumers. But the United States has had limited success in entering Antitrust Mutual Assistance Agreements (AMAAs) with other countries. Many believe this is because U.S. law appears to require that those nations agree to allow the United States to use confidential information obtained under such agreements for non-antitrust enforcement purposes. The Commission recommends that Congress amend the International Antitrust Enforcement Assistance Act to clarify that it does not require such a commitment as the cost of entering into an AMAA.

Finally, the Commission recommends that, as a general principle, purchases made outside the United States from sellers outside the United States should not give rise to a cause of action in U.S. courts. The Commission was split as to whether this principle should be codified through amendment to the Foreign Trade Antitrust Improvements Act.

Immunities and Exemptions

Free-market competition is the foundation of our economy, and the antitrust laws stand as a bulwark to protect free-market competition. Nevertheless, we have identified thirty statutory immunities from the antitrust laws. The Commission is skeptical about the value and basis for many, if not most or all, of these immunities. Many are vestiges of earlier antitrust enforcement policies that were deemed to be insufficiently sensitive to the benefits of certain types of conduct. Others are fairly characterized as special interest legislation that sacrifices general consumer welfare for the benefit of a few. Congress is currently considering the repeal of several immunities, including those covering the business of insurance and international shipping conferences. The Commission strongly encourages such review.

The Commission believes that statutory immunity from the antitrust laws should be disfavored. Immunities should rarely (if ever) be granted and then only on the basis of compelling evidence that either (1) competition cannot achieve important societal goals that trump consumer welfare, or (2) a market failure clearly requires government regulation in place of competition. The Commission recommends a framework for such a review and recommends that Congress consult with the DOJ and FTC about the likely competitive effects of existing and proposed immunities. In those rare instances in which Congress does grant an immunity, the Commission recommends (1) that the immunity be as limited in scope as possible to accomplish the intended objective, (2) that it include a sunset provision pursuant to which the immunity would terminate at the end of a specified period unless renewed, and (3) that the FTC, in consultation with the DOJ, report to Congress on the effects of the immunity before any vote on renewal.

The judicial state action doctrine immunizes private action undertaken pursuant to a clearly articulated state policy deliberately intended to displace competition. In addition, the state must provide sufficient "active supervision" to ensure that conduct is truly a manifestation of state policy rather than private interests. A recent report by the FTC staff raises concern that courts have been applying the doctrine without sufficient care to ensure that private anticompetitive conduct has actually been authorized by the state pursuant to a clear policy to displace competition. The Commission agrees that courts should adhere more closely to Supreme Court state action precedents. It recommends that the doctrine should *not* apply where the effects of conduct are not predominantly intrastate. In addition, the doctrine should equally apply to governmental entities when they act as participants in the marketplace.

Regulated Industries

During the early part of the 20th century, several industries—including electricity, natural gas, telecommunications, and transportation—were thought to be natural monopolies or at risk of "excessive competition." Since then, however, technological advancement and changed economic precepts have led to substantial deregulation. The unleashing of competition in these industries has greatly increased efficiency and provided substantial benefits to consumers. The Commission believes the trend toward deregulation should continue.

Antitrust enforcement is an important counterpart to deregulation. Where government regulation does exist, the antitrust laws should continue to apply to the maximum extent consistent with the regulatory regime. Ideally, statutes should clearly state whether, and to what extent, Congress intended to displace the antitrust laws, if at all. The courts, of course, should interpret antitrust "savings clauses" to give full effect to congressional intent that the antitrust laws continue to apply. Where there is no antitrust savings clause, the courts should imply immunity from the antitrust laws only where there is a clear repugnancy between those laws and the regulatory scheme.

The filed-rate doctrine prohibits private treble damage actions alleging that industry rates approved by a regulator resulted from unlawful collusion. Today, however, few filed rates are actually reviewed by regulators for their reasonableness. In 1986, the Supreme Court opined that a number of factors appeared to undermine the continued validity of the filed-rate doctrine,[3] but concluded that it was for Congress to make that determination. The Commission believes it is time for Congress to reevaluate the filed-rate doctrine and consider overruling it where a regulator no longer specifically reviews and approves proposed rates agreed to among an industry.

The DOJ and FTC review mergers pursuant to the HSR Act, applying the same standards across all industries. In several industries, however, the DOJ and the FTC share merger review authority with a regulatory agency that reviews the merger under a "public interest" standard. Review by two different government agencies can impose substantial and duplicative costs. It can also lead to conflict. The Commission recommends that the DOJ or the FTC should have full antitrust merger enforcement authority with respect to regulated industries. In addition, Congress should review whether separate review under a public interest standard is needed to protect particular interests that cannot be adequately protected under application of an antitrust standard.

* * *

The federal antitrust laws are more than 115 years old. Although the free-market principles on which they stand remain a rock-solid foundation, the world, our economy, and our understanding of how markets work have changed substantially. For that reason, we believe it was a wise decision to authorize this Commission to assess those laws and whether the policies developed to enforce them are serving the nation well.

The almost constitutional generality of the central provisions of the antitrust laws has provided the needed flexibility to adjust to new developments. In this sense, "antitrust modernization" has occurred continuously. But, even so, the interplay of statutes, enforcement activity, and court decisions has suggested a substantial number of areas that the Commission believes can be improved.

The issues the Commission examined are complex. Reasonable minds can, and likely will, differ on many of the Commission's findings and recommendations. But we hope this Report will prompt an important national conversation on those recommendations that will result in the adoption of many, if not all, of them.

ACKNOWLEDGMENTS

The Commission relied on the assistance and contributions of many people in preparing this Report. It thanks all of the many persons who provided comments, testimony, and other assistance to the Commission. In addition, the Commission especially acknowledges the contribution of the following persons and organizations.

The Commission thanks Federal Trade Commission (FTC) Chairman Deborah Platt Majoras and her colleagues at the FTC for the extraordinary support they provided to the Commission. In addition to providing testimony, comments, and data, the FTC made its facilities available to the Commission until the Commission established its own office and allowed the Commission to hold most of its hearings and meetings at the FTC. The FTC also detailed Andrew J. Heimert to the Commission for three years to serve as the Commission's Executive Director and General Counsel.

The Commission thanks the Department of Justice Antitrust Division, former Assistant Attorney General R. Hewitt Pate, and current Assistant Attorney General Thomas O. Barnett for their strong and continuous support of the Commission's work. In addition to testimony, comments, and data, the Antitrust Division detailed staff economist Michael W. Klass on a part-time basis to the Commission during its major study efforts from 2005 to 2006. In addition to contributing his economic insights, Michael brought Commission staff the benefit of his experience working with the "Shenefield Commission" in the late 1970s.

The Commission thanks the state attorneys general and the National Association of Attorneys General (NAAG). Several state attorneys general submitted comments to and testified before the Commission. In addition, NAAG collected and provided substantial data about the antitrust enforcement activities of the states. Emily Myers, Antitrust Counsel for NAAG, was particularly helpful in assisting the Commission staff in understanding the data. Patrick Cafferty, Daniel Gustafson, and Bernard Persky submitted extensive information about indirect purchaser litigation.

The Commission thanks the Directorate General of Competition for the European Union (DG-Comp) for its interest and contributions. In addition to providing comments and testimony to the Commission, DG-Comp staff conferred with Commissioners and Commission staff on a range of issues of mutual interest to the United States and the European Union.

Although the Commission greatly appreciates every organization that submitted comments or testified before it, the Antitrust Section of the American Bar Association (ABA) and the American Antitrust Institute (AAI) in particular expended extraordinary resources in support of the Commission's work. Each organization submitted several thoughtful comments to the Commission, which provided significant insights for the Commission's consideration. They assisted the Commission in identifying witnesses that would provide the Commission with

balanced and diverse viewpoints and helped to disseminate information about the Commission's activities. ABA Antitrust Section publications were a rich source of detailed information on many issues covered by the Report.

The Commission thanks Gregory Leonard, Prof. Darren Bush, and Prof. Stephen Ross for their contributions as consultants in independently developing a proposed analytical framework for policymakers to use in evaluating antitrust immunities and exemptions.

The Commission thanks Morgan Lewis LLP for graciously making its meeting facilities and support staff available on several occasions for Commission deliberations.

The Commissioners would like to acknowledge the Commission staff for its tireless labor and extraordinary service to the Commission. Andrew J. Heimert, Susan S. DeSanti, William F. Adkinson, Jr., Todd Anderson, Nadine Jones, Marni B. Karlin, Alan E. Meese, Michael W. Klass, George P. Slover, Hiram R. Andrews, Kristen M. Gorzelany, Christopher N. Bryan, Sylvia Boone, and James Abell, each performed outstandingly. Although they made the work look effortless, we appreciate that the tasks with which they were charged could easily have supported a staff twice the size. They can be very proud of their accomplishments.

Without in any way diminishing the strong contribution made by each and every staff member, we would like to especially acknowledge the contributions of Andrew Heimert and Susan DeSanti.

Andrew deserves special recognition for his unflagging, able, and good-humored shepherding of the Commission as Executive Director and General Counsel from its inception through to the completion of its work. There is no instruction manual for setting up and running a Commission such as this. But Andrew has shown how it successfully can be done, setting a very high bar for others. He created an operating commission out of whole cloth: Within the period of three years, he found office space, negotiated the lease, had the space built out, and furnished it; created a website; hired staff; managed appropriations; developed the Commission's procedures and processes; handled relations with the press, Executive Branch, and Congress; ran flawless meetings and hearings; managed the preparation of thousands of pages of staff memoranda, minutes, transcripts, notices and correspondence; advised the Commissioners on Federal Advisory Committee Act and other legal obligations; produced this 500+-page Report; was on time and under budget; and remained cool, calm, collected, and cheerful while dealing with twelve demanding Commissioners. It is impossible to underestimate the effort Andrew expended for the Commission, the difficulty of his job at times, or how essential he was to the Commission's successes.

Susan DeSanti came to the Commission in May 2006 specifically to assist in writing the Report. The Commission was extremely fortunate to persuade Susan to join us from the FTC. As she has done so many times before at the FTC during both Democratic and Republican Administrations, Susan helped guide the Commission staff in writing a Report that fairly and clearly communicates the complex issues it covers and the consensus views of twelve Commissioners. We are particularly grateful to her for jumping into the game during the third quarter, which no doubt added to the challenge of her task. The quality of the Report is in very large part a credit to Susan's skill and intellect.

Commissioners Garza and Yarowsky, who co-chaired the Commission, would like to thank their colleagues for their collegiality and commitment to producing a Report in which we could all join. At the beginning of this enterprise, it was quite clear that Commissioners differed in their view on a host of issues, sometimes significantly. But, as with all collective bodies, there came a moment when this assembly of diverse, strong-minded, well-versed individuals reached a critical juncture that would define themselves as a group: whether to fractionate into small or even individual units of position-taking, or to come together to seek convergence and concordance, whenever possible. This group unhesitatingly chose the latter path. That choice led to extensive public deliberations—rather than instant decision-making—over recommendations to the President and the Congress. These bipartisan deliberations continued right through to the tenth month of the third Commission year; but the result was indeed an unusual consensus fashioned in the heat of debate and in the light of common purpose.

Introduction and Recommendations

1. INTRODUCTION

Congress established the Antitrust Modernization Commission "to examine whether the need exists to modernize the antitrust laws and to identify and study related issues."[1] This Report sets forth the Commission's recommendations and findings on how antitrust law and enforcement can best serve consumer welfare in the global, high-tech economy that exists today.

The antitrust laws seek to deter or eliminate anticompetitive restraints that impede free-market competition. To do so properly, antitrust law must reflect an economically sound understanding of how competition operates. As Congress recognized, competition in the twenty-first century increasingly involves innovation, intellectual property, technological change, and global trade.

In many high-tech sectors of the economy, firms must constantly innovate to keep pace in markets in which product life cycles are counted in months, not years.[2] To protect their innovations, firms may rely on intellectual property. In some cases, intellectual property assets may be more important to businesses than specialized manufacturing facilities.

The digital revolution has produced new, general-purpose technologies that enable firms to create many new goods and services for consumers.[3] New information and communication technologies have revolutionized firms' production and distribution processes as well, allowing faster and easier access to suppliers and distributors. Technological advances have played an important role in facilitating global integration,[4] as newly available communication technologies have shrunk the time and distance that separate markets around the world.[5] New markets across the globe have opened for trade following the determination by policymakers in many developing countries that free-market competition yields productivity and other benefits far superior to the results produced by central planning.[6]

Antitrust analysis must reflect a proper understanding of how these forces affect competition. To be sure, many of these seemingly new phenomena raise competitive issues parallel to those that confronted antitrust in earlier decades.[7] So-called "general-purpose technologies," such as electricity, railroads, and the internal combustion engine, for example, also revolutionized production, made many new goods and services available to consumers, and created industries that produced analogous competitive issues.[8] Nonetheless, a present-day assessment of how well antitrust law is operating to address current issues is important to ensure that competitive markets continue to benefit consumer welfare. As the nature of competition evolves, so must antitrust law.

A. Antitrust Law Seeks to Protect Competition and Consumer Welfare

The Supreme Court has explained:

> The Sherman Act was designed to be a comprehensive charter of economic liberty aimed at preserving free and unfettered competition as the rule of trade. It rests on the premise that the unrestrained interaction of competitive forces will yield the best allocation of our economic resources, the lowest prices, the highest quality and the greatest material progress, while at the same time providing an environment conductive to the preservation of our democratic political and social institutions.[9]

As this language confirms, free-market competition is, and has long been, the fundamental economic policy of the United States.[10] Competition in free markets—that is, markets that operate without either private or governmental anticompetitive restraints—forces firms to lower prices, improve quality, and innovate.[11] Businesses in competitive markets develop and sell the kinds and quality of goods and services that consumers desire, and firms seek to do so as efficiently as possible, so they can offer those goods and services at competitive prices.[12]

In free markets, consumers determine which firms succeed. Consumers benefit as firms offer discounts, improve product reliability, or create new services, for example, to keep existing customers and attract new ones. The free-market mechanism generally provides greater success "to those firms that are more efficient and whose products are most closely adapted to the wishes of consumers."[13]

Competitive markets also drive an economy's resources toward their fullest and most efficient uses, thereby providing a fundamental basis for economic development.[14] Competition facilitates the process by which innovative, cutting-edge technologies replace less efficient productive capacity. Market forces continuously prod firms to innovate—that is, to develop new products, services, methods of doing business, and technologies—that will enable them to compete more successfully.[15] The ongoing churning of a flexible competitive economy leads to the creation of wealth, thus making possible improved living standards and greater prosperity.[16]

To be competitive, markets need not conform to the economic ideal in which many firms compete and no firm has control over price. In fact, the real world contains very few such markets.[17] Rather, competition generally "refers to a state of affairs in which prices are sufficient to cover a firm's costs, but not excessively higher, and firms are given the correct set of incentives to innovate."[18] Experience has shown that intense competition can take place in a wide variety of market circumstances.[19] Some factors—such as many sellers and buyers, small market shares, homogeneous products, and easy entry into a market—may suggest competitive behavior is likely.[20] The absence of those factors, however, "does not necessarily prevent a market from behaving competitively."[21] Economic learning in recent decades has afforded a greater appreciation of the variety of factors that can affect competitive forces at work in particular markets.

Antitrust law prohibits anticompetitive conduct that harms consumer welfare.[22] Antitrust law in the United States is not industrial policy; the law does not authorize the government (or any private party) to seek to "improve" competition. Instead, antitrust enforcement seeks to deter or eliminate anticompetitive restraints. Rather than create a regulatory scheme, antitrust laws establish a law enforcement framework that prohibits private (and, sometimes, governmental) restraints that frustrate the operation of free-market competition.

To determine whether and when particular forms of business conduct may harm competition requires an understanding of the market circumstances in which they are undertaken. Antitrust agencies and the courts have long looked to economic learning for assistance in understanding market circumstances and the likely competitive effects of particular business conduct.[23] Indeed, economics now provides the core foundation for much of antitrust law. Not surprisingly, as economic learning about competition has advanced over the decades, so have the contours of antitrust doctrine.

Antitrust law also must keep pace with developments in the business world. Business practices may change, especially as technological innovation and global economic integration alter the competitive forces at work in particular markets. To protect competition and consumer welfare, antitrust analysis must offer sufficient flexibility to take account of these changes, while maintaining clear and administrable rules of antitrust enforcement.

B. Periodic Assessments of the Antitrust Laws Are Advisable

The antitrust laws in the United States require ongoing evaluation and assessment to ensure they are keeping pace with both economic learning and the ever-changing economy.[24] In past decades, various entities have empowered six different commissions to assess how well antitrust law operates to serve consumers. The Antitrust Modernization Commission is the seventh such commission in almost seventy years.[25] Prior commissions have made recommendations about both the substance and procedure of antitrust law.

The tradition of assigning commissions to evaluate antitrust law began in 1938, when President Roosevelt recommended that Congress appropriate funds for the study of the antitrust laws.[26] Recommendations from that first commission, the Temporary National Economic Commission (TNEC), played a role in spurring Congress to strengthen the law against anticompetitive mergers.[27] In 1955 the Attorney General's National Committee to Study the Antitrust Laws recommended important changes to antitrust analysis, most notably to reduce the use of per se rules that deemed many types of conduct automatically illegal.[28] Twenty years later, these proposals combined with further economic learning to produce significant changes in antitrust law.[29]

Between 1969 and 1979, three commissions issued reports, each known by the names of those who led them—the Neal Report,[30] the Stigler Report,[31] and the Shenefield Report.[32] Among other things, these reports reflected ongoing debates about whether and when monopolies, or firms with large market shares in highly concentrated markets (oligopolies), should be subject to more stringent antitrust enforcement.[33] The recommendation of the Neal Report to reduce concentration in oligopolies by requiring firms to divest assets was opposed by the Stigler Report, which described the connection between concentration and competition as "weak."[34] The recommendation of the Shenefield Report to make it easier to prove monopolization also did not gain traction.[35]

Recommendations from these commissions for revised or new antitrust procedures and remedies were more successful. For example, the Neal Report recommended that, in certain circumstances, businesses be required to notify the antitrust agencies before consummating a merger;[36] in 1976 Congress enacted the Hart-Scott-Rodino Antitrust Improvements Act, which imposed pre-merger notification requirements.[37] The Stigler Report recommended substantial increases in government antitrust penalties, a recommendation adopted into law through The Antitrust Procedures and Penalties Act of 1974.[38] The Shenefield Report led directly to passage of the Antitrust Procedural Improvements Act of 1980[39] and "provided important encouragement to federal judges to manage trials—including the massive *AT&T* trial—effectively."[40] The Shenefield Report also issued twenty recommendations for further deregulation, providing significant support to the deregulation movement.[41]

Most recently, the increasing importance of global trade spurred the 1998 establishment of the International Competition Policy Advisory Committee (ICPAC)—chaired by former Assistant Attorney General James F. Rill and former International Trade Commission Chairwoman Paula Stern—to study international aspects of antitrust law.[42] The ICPAC Report provided the impetus for the International Competition Network, through which nearly one hundred nations now discuss antitrust procedures and policies.[43]

C. Major Changes in Antitrust Analysis over the Past Twenty-Five Years Make this a Timely Report

In the decades since the Neal, Stigler, and Shenefield Reports undertook their assessments, antitrust law has gone through what is arguably the most important period in its development. The antitrust landscape differs greatly from earlier decades in terms of antitrust analysis and the role of antitrust enforcement agencies, among other things.

Most important, antitrust case law has become grounded in the related principles that antitrust protects competition, not competitors, and that it does so to ensure consumer welfare. Substantial economic learning now undergirds and informs antitrust analysis. Time and again in recent decades, the Supreme Court has used economic reasoning to develop standards for antitrust analysis. Case-by-case decision-making has provided myriad opportunities for the integration of economics into antitrust analysis, and litigating parties and the courts have used them.

Economic learning has provided the foundation for updated antitrust analysis in part by revealing the potential procompetitive benefits of some business conduct previously assumed to be anticompetitive. The accommodation of such advances in economic learning has increased the flexibility of antitrust law, with courts and the antitrust agencies now considering a wide variety of economic factors in their analyses. Improved economic understanding and greater analytical flexibility have increased the potential for a sound competitive assessment of business conduct in all industries, including those characterized by innovation, intellectual property, and technological change.

The improvements in economic understanding and the increases in analytical flexibility have added further complexity to antitrust law, however. In response, courts have searched for standards that can make antitrust analysis more manageable. They also have given increased attention to whether businesses can understand and comply with, and courts can efficiently and competently administer, particular antitrust rules. Whether particular antitrust rules overdeter procompetitive conduct or underdeter anticompetitive conduct has received greater scrutiny as well.

D. The Commission's History and Process

The Antitrust Modernization Commission began the three years of work that culminated in this Report in April 2004. The Commission met for the first time on April 1 that year, shortly after all appointments to the Commission had been made. The Commission has over those three years engaged in a careful, deliberate course of study to fulfill its statutory mandate of examining "whether the need exists to modernize the antitrust laws" and soliciting the "views of all parties concerned with the operation of the antitrust laws."[44] Interested members of the public have participated substantially through the submission of comments and testimony and attendance at the Commission's many hearings and meetings.

1. Legislative History of the Commission

The Commission was created by an act of Congress in 2002. The original bill was introduced by F. James Sensenbrenner, Jr., then-Chairman of the House Judiciary Committee.[45] Although the bill did not limit the scope of the Commission's study, at the time of its introduction, Chairman Sensenbrenner highlighted three issues he believed the Commission should review in the course of its study: (1) "the role of intellectual property law in antitrust law"; (2) "how antitrust enforcement should change in the global economy"; and (3) "the role of state attorneys general in enforcing antitrust laws."[46]

The Act obliged the Commission to perform four tasks:

1. "to examine whether the need exists to modernize the antitrust laws and to identify and study related issues";
2. "to solicit views of all parties concerned with the operation of the antitrust laws";

3. "to evaluate the advisability of proposals and current arrangements with respect to any issues so identified"; and
4. "to prepare and submit to Congress and the President a report . . . ."[47]

The Act provided the Commission with three years to complete these tasks[48] and authorized $4 million to be appropriated for the Commission to perform its work.[49]

2. Organization of the Commission

The Antitrust Modernization Commission Act called for the appointment of twelve Commissioners, four by the House of Representatives, four by the Senate, and four by the President.[50] Appointments by both houses of Congress were split equally between the Democratic and Republican parties.[51] No more than two of the President's four appointments could be from the same political party.[52] The Chair was designated by the President; the Vice-Chair was designated jointly by the Democratic leadership of the House of Representatives and the Senate.[53]

The House of Representatives appointed as Commissioners Donald G. Kempf, Jr., John L. Warden,[54] John H. Shenefield, and Debra A. Valentine.[55] The Senate appointed W. Stephen Cannon, Makan Delrahim,[56] Jonathan M. Jacobson, and Jonathan R. Yarowsky.[57] The President appointed to the Commission Bobby R. Burchfield, Dennis W. Carlton, Deborah A. Garza, and Sanford M. Litvack.[58] The President designated Commissioner Garza as Chair; the Democratic leadership of the House of Representatives and the Senate designated Commissioner Yarowsky as Vice-Chair. Pursuant to the AMC Act, the Commission appointed Andrew J. Heimert to be the Executive Director and General Counsel.[59] The Commission subsequently hired additional staff and appointed advisors to assist it in its work.[60]

3. Transparency and Involvement of the Public

The Commission's work proceeded in three general phases: selection of issues for study, study of those issues, and deliberation upon the recommendations the Commission would make on the issues it studied. At each phase, the public was invited to participate through written comments and testimony and by observing the Commission's hearings and deliberations.

The Commission's principal mechanism for informing the public of its work was through its website, *www.amc.gov*. All materials that the Commission discussed at its meetings were posted on the website in advance of the meetings. The Commission placed its entire record on the website as it was developed. Comments from the public were posted as soon after receipt as possible. Witness statements for hearings were made available on the website as far in advance of the hearing as the witnesses provided them, and transcripts from the hearings were posted shortly after each hearing.

a. Issue Selection Through Public Comment and Outreach

The first phase of the Commission's work was to select issues for study. Consistent with its mandate to solicit the views of interested persons, the Commission requested that the public propose issues for study.[61] The Commission received comments from fifty-six entities proposing a variety of issues for study.[62] Commissioners also specifically solicited the views of a variety of persons and organizations, including consumer organizations, current and former state and federal antitrust enforcement officials, and federal judges. The Commission met in January 2005 to deliberate publicly on a list of approximately sixty possible issues synthesized by Commission staff from the comments and input received in the fall of 2004.[63] Ultimately, the Commission adopted twenty-five issues (broadly defined) for study.

b. Information Gathering Through Public Comment and Hearings

Having selected issues for study, the Commission began an extended study and evaluation of these issues and proposals regarding them.[64] The Commission compiled its record through two principal mechanisms: comments from the public and hearings.[65]

The Commission requested comment from the public on the issues it selected, including specific questions about the U.S. antitrust laws and whether change was advisable to any of them.[66] Although the majority of comments were provided to the Commission in 2005—during the Commission's major study period—members of the public continued to submit comments throughout the entire period of the Commission's work. Overall, the Commission received 192 comments from 126 persons or organizations.[67]

Between June 2005 and October 2006, the Commission held 18 hearings over 13 days, with testimony by 120 witnesses, generating almost 2500 pages of transcripts.[68] Witnesses were selected to provide a balance and diversity of views. The public was invited to, and did, comment on issues addressed in the hearings.[69] All hearings were open to the public.

c. Deliberations on Possible Recommendations and Report Drafting

Commission deliberations on the recommendations in this Report occurred between May 2006 and February 2007. Overall, the Commission met to deliberate on eleven days. All deliberations of the Commission were held in public. Documents prepared by staff to assist the Commissioners in their deliberations were made available to the public in advance of the meetings and at the meetings themselves. The Report was drafted to explain the recommendations agreed to by a majority of Commissioners, and reflects the views of the Commissioners supporting each recommendation.

2. RECOMMENDATIONS

The charge to this Commission has been to study, evaluate, and make recommendations for the antitrust landscape as it now exists, much changed from earlier years. The current antitrust panorama, of course, covers a broad array of issues; to study all of the possible issues would be neither efficient nor desirable. To use its resources most productively, the Commission chose to focus on four primary areas: substantive standards of antitrust law; enforcement institutions and processes; civil and criminal remedies; and statutory and other exceptions to competition (such as immunities and exemptions from the antitrust laws). The Chapters that address these issues are briefly described below.

Chapter I addresses certain aspects of substantive antitrust law. Chapter I.A reviews changes in antitrust law in recent decades and discusses antitrust analysis in industries in which innovation, intellectual property, and technological change are central features (the "new economy"). Chapters I.B and I.C assess two areas of antitrust analysis—mergers and exclusionary conduct—in greater depth. Finally, in light of the importance of intellectual property to competition in a high-technology economy, Chapter I.D briefly discusses how the operation of patent law can affect competition.

Chapter II discusses enforcement institutions and processes. Chapter II.A deals with the two federal antitrust agencies, the Antitrust Division of the Department of Justice and the Federal Trade Commission, and Chapter II.B addresses issues surrounding these agencies' implementation and enforcement of the Hart-Scott-Rodino Act's pre-merger notification process. Chapter II.C discusses antitrust enforcement at the state level, while Chapter II.D addresses international antitrust enforcement.

Chapter III addresses civil and criminal antitrust remedies. Chapter III.A discusses the monetary remedies available to private parties, such as treble damages, as well as liability rules. Issues related to indirect purchaser litigation are assessed in Chapter III.B. Chapter III.C examines civil remedies available to the federal government, and Chapter III.D discusses criminal remedies that the government may obtain.

Finally, Chapter IV evaluates statutes and particular doctrines that provide exceptions to free-market competition. Chapter IV.A addresses the Robinson-Patman Act. Chapter IV.B discusses statutory immunities and exemptions from antitrust law, regulated industries, and the state action doctrine.

The following are recommendations agreed to by a majority of the Commission. Dissenting votes are identified in the text of the Report and, in some instances, are discussed in separate statements of Commissioners.

Chapter I: Substantive Standards of Antitrust Law

A. Antitrust Law and the "New Economy"

1. There is no need to revise the antitrust laws to apply different rules to industries in which innovation, intellectual property, and technological change are central features.

2. In industries in which innovation, intellectual property, and technological change are central features, just as in other industries, antitrust enforcers should carefully consider market dynamics in assessing competitive effects and should ensure proper attention to economic and other characteristics of particular industries that may, depending on the facts at issue, have an important bearing on a valid antitrust analysis.

B. Substantive Merger Law

3. No statutory change is recommended with respect to Section 7 of the Clayton Act.

   3a. There is a general consensus that, while there may be disagreement over specific merger decisions, and U.S. merger policy would benefit from continued empirical research and examination, the basic framework for analyzing mergers followed by the U.S. enforcement agencies and courts is sound.

   3b. The Commission was not presented with substantial evidence that current U.S. merger policy is materially hampering the ability of companies to operate efficiently or to compete in global markets.

4. No substantial changes to merger enforcement policy are necessary to account for industries in which innovation, intellectual property, and technological change are central features.

   4a. Current law, including the Merger Guidelines, as well as merger policy developed by the agencies and courts, is sufficiently flexible to address features in such industries.

5. The Federal Trade Commission and the Antitrust Division of the Department of Justice should ensure that merger enforcement policy is appropriately sensitive to the needs of companies to innovate and obtain the scope and scale needed to compete effectively in domestic and global markets, while continuing to protect the interests of U.S. consumers.

6. The Federal Trade Commission and the Antitrust Division of the Department of Justice should give substantial weight to evidence demonstrating that a merger will enhance efficiency.

7. The Federal Trade Commission and the Antitrust Division of the Department of Justice should increase the weight they give to certain types of efficiencies. For example, the agencies and courts should give greater credit for certain fixed-cost efficiencies, such as research and development expenses, in dynamic, innovation-driven industries where marginal costs are low relative to typical prices.

8. The Federal Trade Commission and the Antitrust Division of the Department of Justice should give substantial weight to evidence demonstrating that a merger will enhance consumer welfare by enabling the companies to increase innovation.

9. The agencies should be flexible in adjusting the two-year time horizon for entry, where appropriate, to account for innovation that may change competitive conditions.

10. The Federal Trade Commission and the Antitrust Division of the Department of Justice should seek to heighten understanding of the basis for U.S. merger enforcement policy. U.S. merger enforcement policy would benefit from further study of the economic foundations of merger policy and agency enforcement activity.

    10a. The Federal Trade Commission and the Antitrust Division of the Department of Justice should conduct or commission further study of the relationship between concentration, as well as other market characteristics, and market performance to provide a better basis for assessing the efficacy of current merger policy.

    10b. The Federal Trade Commission and the Antitrust Division of the Department of Justice should increase their use of retrospective studies of merger enforcement decisions to assist in determining the efficacy of merger policy.

11. The Federal Trade Commission and the Antitrust Division of the Department of Justice should work toward increasing transparency through a variety of means.

11a. The agencies should issue "closing statements," when appropriate, to explain the reasons for taking no enforcement action, in order to enhance public understanding of the agencies' merger enforcement policy.

11b. The agencies should increase transparency by periodically reporting statistics on merger enforcement efforts, including such information as was reported by the Federal Trade Commission in its 2004 Horizontal Merger Investigation Data, as well as determinative factors in deciding not to challenge close transactions. These reports should emanate from more frequent, periodic internal reviews of data relating to the merger enforcement activity of the Federal Trade Commission and the Antitrust Division of the Department of Justice. To facilitate and ensure the high quality of such reviews and reports, the Federal Trade Commission and the Antitrust Division of the Department of Justice should undertake efforts to coordinate and harmonize their internal collection and maintenance of data.

11c. The agencies should update the Merger Guidelines to explain more extensively how they evaluate the potential impact of a merger on innovation.

11d. The agencies should update the Merger Guidelines to include an explanation of how the agencies evaluate non-horizontal mergers.

C. Exclusionary Conduct

12. In general, standards for applying Section 2 of the Sherman Act's broad proscription against anticompetitive conduct should be clear and predictable in application, administrable, and designed to minimize overdeterrence and underdeterrence, both of which impair consumer welfare.

13. Congress should not amend Section 2 of the Sherman Act. Standards currently employed by U.S. courts for determining whether single-firm conduct is unlawfully exclusionary are generally appropriate. Although it is possible to disagree with the decisions in particular cases, in general the courts have appropriately recognized that vigorous competition, the aggressive pursuit of business objectives, and the realization of efficiencies not available to competitors are generally not improper, even for a "dominant" firm and even where competitors might be disadvantaged.

14. Additional clarity and improvement are best achieved through the continued evolution of the law in the courts. Public discourse and continued research will also aid in the development of consensus in the courts regarding the proper legal standards to evaluate the likely competitive effects of bundling and unilateral refusals to deal with a rival in the same market.

15. Additional clarity and improvement in Sherman Act Section 2 legal standards are desirable, particularly with respect to areas where there is currently a lack of clear and consistent standards, such as bundling and whether and in what circumstances (if any) a monopolist has a duty to deal with rivals.

16. The lack of clear standards regarding bundling, as reflected in *LePage's v. 3M*, may discourage conduct that is procompetitive or competitively neutral and thus may actually harm consumer welfare.

17. Courts should adopt a three-part test to determine whether bundled discounts or rebates violate Section 2 of the Sherman Act. To prove a violation of Section 2, a plaintiff should be required to show each one of the following elements (as well as other elements of a Section 2 claim): (1) after allocating all discounts and rebates attributable to the entire bundle of products to the competitive product, the defendant sold the competitive product below its incremental cost for the competitive product; (2) the defendant is likely to recoup these short-term losses; and (3) the bundled discount or rebate program has had or is likely to have an adverse effect on competition.

18. In general, firms have no duty to deal with a rival in the same market.

19. Market power should not be presumed from a patent, copyright, or trademark in antitrust tying cases.

D. Antitrust and Patents

20. Joint negotiations with intellectual property owners by members of a standard-setting organization with respect to royalties prior to the establishment of the standard, without more, should be evaluated under the rule of reason.

21. Congress should seriously consider recommendations in the Federal Trade Commission and National Academy of Sciences reports with the goal of encouraging innovation and at the same time avoiding abuse of the patent system that, on balance, will likely deter innovation and unreasonably restrain competition. In particular:

    21a. Congress should seriously consider the Federal Trade Commission and National Academy of Sciences recommendations targeted at ensuring the quality of patents.

    21b. Congress should ensure that the Patent and Trademark Office is adequately equipped to handle the burden of reviewing patent applications with due care and attention within a reasonable time period.

    21c. The courts and the Patent and Trademark Office should avoid an overly lax application of the obviousness standard that allows patents on obvious subject matter and thus harms competition and innovation.

Chapter II: Enforcement Institutions and Processes

A. Dual Federal Enforcement

22. The Federal Trade Commission and the Antitrust Division of the Department of Justice should develop and implement a new merger clearance agreement based on the principles in the 2002 Clearance Agreement between the agencies, with the goal of clearing all proposed transactions to one agency or the other within a short period of time. To this end, the appropriate congressional committees should encourage both antitrust agencies to reach a new agreement, and the agencies should consult with these committees in developing the new agreement.

23. To ensure prompt clearance of all transactions reported under the Hart-Scott-Rodino Act, Congress should enact legislation to require the Federal Trade Commission and the Antitrust Division of the Department of Justice to clear all mergers reported under the Hart-Scott-Rodino Act (for which clearance is sought) to one of the agencies within a short period of time (for example, no more than nine calendar days) after the filing of the pre-merger notification.

24. The Federal Trade Commission should adopt a policy that when it seeks injunctive relief in Hart-Scott-Rodino Act merger cases in federal court, it will seek both preliminary and permanent injunctive relief, and will seek to consolidate those proceedings so long as it is able to reach agreement on an appropriate scheduling order with the merging parties.

25. Congress should amend Section 13(b) of the Federal Trade Commission Act to prohibit the Federal Trade Commission from pursuing administrative litigation in Hart-Scott-Rodino Act merger cases.

26. Congress should ensure that the same standard for the grant of a preliminary injunction applies to both the Federal Trade Commission and the Antitrust Division of the Department of Justice by amending Section 13(b) of the Federal Trade Commission Act to specify that, when the Federal Trade Commission seeks a preliminary injunction in a Hart-Scott-Rodino Act merger case, the Federal Trade Commission is subject to the same standard for the grant of a preliminary injunction as the Antitrust Division of the Department of Justice.

B. The Hart-Scott-Rodino Act Pre-Merger Review Process

27. No changes are recommended to the initial filing requirements under the Hart-Scott-Rodino Act.

28. Congress should de-link funding for the Federal Trade Commission and the Antitrust Division of the Department of Justice from Hart-Scott-Rodino Act filing fee revenues.

29. The Federal Trade Commission and the Antitrust Division of the Department of Justice should continue to pursue reforms of the Hart-Scott-Rodino Act merger review process to reduce the burdens imposed on merging parties by second requests.

30. The Federal Trade Commission and the Antitrust Division of the Department of Justice should systematically collect and record information regarding the costs and burdens imposed on merging parties by the Hart-Scott-Rodino Act process, to improve the ability of the agencies to identify ways to reduce those costs and burdens and enable Congress to perform appropriate oversight regarding enforcement of the Hart-Scott-Rodino Act.

31. The agencies should evaluate and consider implementing several specific reforms to the second request process.

    31a. The agencies should adopt tiered limits on the number of custodians whose files must be searched pursuant to a second request.

    31b. The agencies should in all cases inform the merging parties of the competitive concerns that led to a second request.

    31c. To enable merging companies to understand the bases for and respond to any agency concern, the agencies should inform the parties of the theoretical and empirical bases for the agencies' economic analysis and facilitate dialogue including the agency economists.

    31d. The agencies should reduce the burden of translating foreign-language documents.

    31e. The agencies should reduce the burden of requests for data not kept in the normal course of business by the parties.

C. State Enforcement of Antitrust Laws

32. No statutory change is recommended to the current role of the states in non-merger civil antitrust enforcement.

33. State non-merger enforcement should focus primarily on matters involving localized conduct or competitive effects.

34. No statutory change is recommended to the current roles of federal and state antitrust enforcement agencies with respect to reviewing mergers.

35. Federal and state antitrust enforcers are encouraged to coordinate their activities and to seek to avoid subjecting companies to multiple, and possibly inconsistent, proceedings.

36. Federal and state antitrust enforcers should consider the following actions to achieve further coordination and cooperation and thereby improve the consistency and predictability of outcomes in merger investigations.

    36a. The states and federal antitrust agencies should work to harmonize their application of substantive antitrust law, particularly with respect to mergers.

    36b. Through state and federal coordination efforts, data requests should be consistent across enforcers to the maximum extent possible.

    36c. The state antitrust agencies should work to adopt a model confidentiality statute with the goal of eliminating inconsistencies among state confidentiality agreements.

D. International Antitrust Enforcement

37. The Federal Trade Commission and the Antitrust Division of the Department of Justice should, to the extent possible, pursue procedural and substantive convergence on sound principles of competition law.

38. As a matter of priority, the Federal Trade Commission and the Antitrust Division of the Department of Justice should study and report to Congress promptly on the possibility of developing a centralized international pre-merger notification system that would ease the burden on companies engaged in cross-border transactions.

39. Congress should amend the International Antitrust Enforcement Assistance Act to clarify that it does not require that Antitrust Mutual Assistance Agreements include a provision allowing the non-antitrust use of information obtained pursuant to an AMAA.

40. Congress should provide budgetary authority, as well as appropriations, directly to the Federal Trade Commission and the Antitrust Division of the Department of Justice to provide international antitrust technical assistance.

41. The United States should pursue bilateral and multilateral antitrust cooperation agreements that incorporate comity principles with more of its trading partners and make greater use of the comity provisions in existing cooperation agreements.

    41a. Cooperation agreements should explicitly recognize the importance of promoting global trade, investment, and consumer welfare, and the impediment that inconsistent or conflicting antitrust enforcement poses. Existing agreements should be amended to add appropriate language.

    41b. Cooperation agreements should incorporate several principles of negative and positive comity relating to circumstances when deference is appropriate, the harmonization of remedies, consultation and cooperation, and "benchmarking reviews."

42. As a general principle, purchases made outside the United States from a seller outside the United States should not be deemed to give rise to the requisite effects under the Foreign Trade Antitrust Improvements Act.

Chapter III: Civil and Criminal Remedies

A. Private Monetary Remedies and Liability Rules

43. No change is recommended to the statute providing for treble damages in antitrust cases.

44. No change is recommended to the statute that provides for prejudgment interest in antitrust cases; prejudgment interest should be available only in the circumstances currently specified in the statute.

45. No change is recommended to the statute providing for attorneys' fees for successful antitrust plaintiffs. In considering an award of attorneys' fees, courts should consider whether, among other factors, the principal development of the underlying evidence was in a government investigation.

46. Congress should enact a statute applicable to all antitrust cases involving joint and several liability that would permit non-settling defendants to obtain reduction of the plaintiffs' claims by the amount of the settlement(s) or the allocated share(s) of liability of the settling defendant(s), whichever is greater. The recommended statute should also allow claims for contribution among non-settling defendants.

B. Indirect Purchaser Litigation

47. Direct and indirect purchaser litigation would be more efficient and more fair if it took place in one federal court for all purposes, including trial, and did not result in duplicative recoveries, denial of recoveries to persons who suffered injury, and windfall recoveries to persons who did not suffer injury. To facilitate this, Congress should enact a comprehensive statute with the following elements:

- Overrule *Illinois Brick* and *Hanover Shoe* to the extent necessary to allow both direct and indirect purchasers to sue to recover for actual damages from violations of federal antitrust law. Damages in such actions could not exceed the overcharges (trebled) incurred by direct purchasers. Damages should be apportioned among all purchaser plaintiffs—both direct and indirect—in full satisfaction of their claims in accordance with the evidence as to the extent of the actual damages they suffered.
- Allow removal of indirect purchaser actions brought under state antitrust law to federal court to the full extent permitted under Article III.
- Allow consolidation of all direct and indirect purchaser actions in a single federal forum for both pre-trial and trial proceedings.
- Allow for certification of classes of direct purchasers, consistent with current practice, without regard to whether the injury alleged was passed on to customers of the direct purchasers.

C. Government Civil Monetary Remedies

48. There is no need to give the antitrust agencies expanded authority to seek civil fines.

49. There is no need to clarify, expand, or limit the agencies' authority to seek monetary equitable relief. The Commission endorses the Federal Trade Commission's policy governing its use of monetary equitable remedies in competition cases.

D. Criminal Remedies

50. While no change to existing law is recommended, the Antitrust Divsion of the Department of Justice should continue to limit its criminal enforcement activity to "naked" price-fixing, bid-rigging, and market or customer allocation agreements among competitors, which inevitably harm consumers.

51. No change should be made to the current maximum Sherman Act fine of $100 million or the applicability of 18 U.S.C. § 3571(d), the alternative fines statute, to Sherman Act offenses. Questions regarding application of Section 3571(d) to Sherman Act prosecutions should be resolved by the courts.

52. Congress should encourage the Sentencing Commission to reevaluate and explain the rationale for using 20 percent of the volume of commerce affected as a proxy for actual harm, including both the assumption of an average overcharge of 10 percent of the amount of commerce affected and the difficulty of proving the actual gain or loss.

53. The Sentencing Commission should amend the Sentencing Guidelines to make explicit that the 20 percent harm proxy (or any revised proxy)—used to calculate the pecuniary gain or loss resulting from a violation—may be rebutted by proof by a preponderance of the evidence that the actual amount of overcharge was higher or lower, where the difference would materially change the base fine.

54. No change to the Sentencing Guidelines is needed to distinguish between different types of antitrust crimes because the Guidelines already apply only to "bid-rigging, price-fixing, or market allocation agreements among competitors," and the Antitrust Division of the Department of Justice limits criminal enforcement to such hard-core cartel activity as a matter of both historic and current enforcement policy.

Chapter IV: Government Exceptions to Free-Market Competition

A. The Robinson-Patman Act

55. Congress should repeal the Robinson-Patman Act in its entirety.

B. Immunities and Exemptions, Regulated Industries, and the State Action Doctrine

56. Congress should not displace free-market competition absent extensive, careful analysis and strong evidence that either (1) competition cannot achieve societal goals that outweigh consumer welfare, or (2) a market failure requires the regulation of prices, costs, and entry in place of competition.

Immunities and Exemptions

57. Statutory immunities from the antitrust laws should be disfavored. They should be granted rarely, and only where, and for so long as, a clear case has been made that the conduct in question would subject the actors to antitrust liability *and* is necessary to satisfy a specific societal goal that trumps the benefit of a free market to consumers and the U.S. economy in general.

58. In evaluating the need for existing or new immunities, Congress should consider the following:

    - Whether the conduct to which the immunity applies, or would apply, could subject actors to antitrust liability;
    - The likely adverse impact of the existing or proposed immunity on consumer welfare; and
    - Whether a particular societal goal trumps the goal of consumer welfare, which is achieved through competition.

59. The following steps are important to assist Congress in its consideration of those factors:

- Create a full public record on any existing or proposed immunity under consideration by Congress.
- Consult with the Federal Trade Commission and the Antitrust Division of the Department of Justice about whether the conduct at issue could subject the actors to antitrust liability and the likely competitive effects of the existing or proposed immunity.
- Require proponents of an immunity to submit evidence showing that consumer welfare, achieved through competition, has less value than the goal promoted by the immunity, and the immunity is the least restrictive means to achieve that goal.

60. If Congress determines that a particular societal goal may trump the benefit of a free market to consumers and the U.S. economy in general, Congress should take the following steps:

- Consider a limited form of immunity—for example, limiting the type of conduct to which the immunity applies and limiting the extent of the immunity (for example, a limit on damages to actual, rather than treble, damages).
- Adopt a sunset provision pursuant to which the immunity or exemption would terminate at the end of some period of time, unless specifically renewed.
- Adopt a requirement that the Federal Trade Commission, in consultation with the Antitrust Division of the Department of Justice, report to Congress, before any vote on renewal, on whether the conduct at issue could subject the actors to antitrust liability and the likely competitive effects of the immunity proposed for renewal.

61. Courts should construe all immunities and exemptions from the antitrust laws narrowly.

Regulated Industries

62. Public policy should favor free-market competition over industry-specific regulation of prices, costs, and entry. Such economic regulation should be reserved for the relatively rare cases of market failure, such as the existence of natural monopoly characteristics in certain segments of an industry, or where economic regulation can address an important societal interest that competition cannot address. In general, Congress should be skeptical of claims that economic regulation can achieve an important societal interest that competition cannot achieve.

63. When the government decides to adopt economic regulation, antitrust law should continue to apply to the maximum extent possible, consistent with that regulatory scheme. In particular, antitrust should apply wherever regulation relies on the presence of competition or the operation of market forces to achieve competitive goals.

64. Statutory regulatory regimes should clearly state whether and to what extent Congress intended to displace the antitrust laws, if at all.

65. Courts should interpret savings clauses to give deference to the antitrust laws, and ensure that congressional intent is advanced in such cases by giving the antitrust laws full effect.

66. Courts should continue to apply current legal standards in determining when an immunity from the antitrust laws should be implied, creating implied immunities only when there is a clear repugnancy between the antitrust law and the regulatory scheme at issue, as stated in cases such as *National Gerimedical Hospital and Gerontology Center v. Blue Cross of Kansas City*.

67. *Verizon Communications, Inc. v. Law Offices of Curtis V. Trinko LLP* is best understood only as a limit on refusal-to-deal claims under Section 2 of the Sherman Act; it does not displace the role of the antitrust laws in regulated industries.

68. Congress should evaluate whether the filed-rate doctrine should continue to apply in regulated industries and consider whether to overrule it legislatively where the regulatory agency no longer specifically reviews proposed rates.

69. Even in industries subject to economic regulation, the antitrust agencies generally should have full merger enforcement authority under the Clayton Act.

70. For mergers in regulated industries, the relevant antitrust agency should perform the competition analysis. The relevant regulatory authority should not re-do the competition analysis of the antitrust agency.

71. The federal antitrust agencies and other regulatory agencies should consult on the effects of regulation on competition.

72. The antitrust enforcement agencies and courts should take account of the competitive characteristics of regulated industries, including the effects of regulation.

73. Mergers in regulated industries should be subject to the requirements of the Hart-Scott-Rodino Act, if they meet the tests for its applicability, or to an equivalent pre-merger notification and investigation procedure, such as set forth in the banking statutes, so that the relevant antitrust agency can conduct a timely and well-informed review of the proposed merger.

74. Congress should periodically review all instances in which a regulatory agency reviews proposed mergers or acquisitions under the agency's "public interest" standard to determine whether in fact such regulatory review is necessary.

    - In its reevaluation, Congress should consider whether particular, identified interests exist that an antitrust agency's review of the proposed transaction's likely competitive effects under Section 7 of the Clayton Act would not adequately protect. Such "particular, identified interests" would be interests other than those consumers' interests—such as lower prices, higher quality, and desired product choices—served by maintaining competition.

The State Action Doctrine

75. Congress should not codify the state action doctrine. Rather, the courts should apply the state action doctrine more precisely and with greater attention to both Supreme Court precedents and possible consumer harm from immunized conduct.

76. **The courts should not grant antitrust immunity under the state action doctrine to entities that are not sovereign states unless (1) they are acting pursuant to a clearly articulated state policy deliberately intended to displace competition in the manner at issue, and (2) the state provides supervision sufficient to ensure that the conduct is not the result of private actors pursuing their private interests, rather than state policy.**

77. **As proposed in the FTC State Action Report, the courts should reaffirm a clear articulation standard that focuses on two questions: (1) whether the conduct at issue has been authorized by the state; and (2) whether the state has deliberately adopted a policy to displace competition in the manner at issue.**

78. **The courts should adopt a flexible approach to the active supervision prong, with different requirements based on the situation.**

79. **Where the effects of potentially immunized conduct are not predominantly intrastate, courts should not apply the state action doctrine.**

80. **When government entities act as market participants, the courts should apply the same test for application of the state action doctrine to them as the courts apply to private parties seeking immunity under the state action doctrine.**

[20] GELLHORN, ANTITRUST LAW AND ECONOMICS, at 72.

[21] *Id.* at 72–73.

[22] Debate continues about the precise definition of "consumer welfare." *See, e.g.*, Merger Enforcement Transcript at 112–195 (Nov. 17, 2005) (various witnesses debating the proper meaning). The Supreme Court has not ruled specifically on this issue. The Commission's use of the term "consumer welfare" does not imply a choice of a particular definition.

Judge Robert Bork argued that Congress's goal in passing the Sherman Act was to optimize efficiency, regardless of whether producers or consumers capture the gains. *See generally* ROBERT BORK, THE ANTITRUST PARADOX 61–66 (1978) [hereinafter BORK, ANTITRUST PARADOX]. This will achieve consumer welfare, proponents maintain, because *all* consumers in the economy benefit when fewer resources are needed to make a product and those freed-up resources can be put to a higher and better use. *See, e.g.*, Merger Enforcement Trans. at 171–72 (Rule). In certain limited cases—for example, if a merger to monopoly would significantly lower costs and lead to a more efficient allocation of resources, but would also raise consumer prices—Judge Bork's approach would permit the transaction to be consummated, despite an increase in consumer prices, because the merger would create efficiency gains that outweighed deadweight losses. *See* BORK, ANTITRUST PARADOX, at 91, 107–11.

Others, however, argue that Congress's main goal was to prevent price increases to consumers—that is, wealth transfers from consumers to producers. *See* Robert H. Lande, *Wealth Transfers as the Original and Primary Concerns of Antitrust: The Efficiency Interpretation Challenged*, 34 HASTINGS L.J. 65, 68 (1982) [hereinafter Lande, *Wealth Transfers*]. Proponents of this approach distinguish between the consumers of products in a relevant market (consumers) and the shareholders of the firms in that market (producers). *See, e.g.*, Merger Enforcement Trans. at 121, 161 (Baker). They maintain that antitrust law should not allow wealth transfers from consumers to producers, even if gains in overall efficiency must be sacrificed. *See* Lande, *Wealth Transfers*, at 69–70; Alan A. Fisher & Robert H. Lande, *Efficiency Considerations in Merger Enforcement*, 71 CAL. L. REV. 1580, 1592 (1983).

The use of one standard or the other can have various implications for antitrust analysis. *See, e.g.*, Merger Enforcement Trans. at 118–19, 137–38 (Cary) (discussing circumstances in which fixed-cost savings should, or should not, be considered in merger analysis). Nonetheless, the use of one standard versus the other often does not change the results of that analysis, and the cases in which the choice of standard would make a difference are relatively few. *See* Merger Enforcement Trans. at 166–67 (Cary) (standards often do not produce inconsistent results); *id.* at 122 (Baker) (stating that "possibilities for conflict are largely hypothetical," and that in his experience, "agency investigations rarely turn on the welfare standard"); *id.* at 172–73 (Rule) (difficulties in calculating with precision different types of efficiencies raises questions about how much difference using one standard rather than another makes).

Chapter I
Substantive Standards Of Antitrust Law

In this Chapter the Commission discusses aspects of the current substantive standards of antitrust law. Those standards should meet several criteria. The rules of antitrust must be economically sound and flexible enough to accommodate new economic learning and changes in the nature of competition. The rules also should be clear, predictable, and administrable, so that businesses can comply with them and courts can administer them.

Clarity, predictability, and administrability can be hard to maintain in a system that is flexible enough to adapt to new economic learning and changing business environments. For example, per se rules that deem specified conduct automatically illegal are clear, predictable, and administrable. Yet the courts, scholars, and antitrust practitioners have reached consensus that—although appropriate in particular limited circumstances—per se rules can all too often condemn business conduct that actually benefits, not harms, consumers. As antitrust law has more fully incorporated economic learning into the substantive rules of antitrust, the courts and the antitrust agencies have sought to develop revised rules that combine economically sound principles and flexible analysis with clarity, predictability, and administrability.

This Chapter first reviews these developments and then discusses their application in industries in which innovation, intellectual property, and technological change are central features. Chapter I.A discusses general antitrust standards in light of the competitive forces at work in the twenty-first century. Chapters I.B and I.C review two areas of antitrust analysis—mergers and exclusionary conduct—in greater depth. Finally, Chapter I.D, in light of the importance of intellectual property to competition in a high-technology economy, briefly discusses how the operation of patent law can affect competition as well.

Chapter I.A

Antitrust Law and the "New Economy"

1. INTRODUCTION

The term "new economy" can describe a diverse array of markets in which new information, communication, and other technologies have produced significant changes in recent decades. For purposes of this Report, the key question is whether antitrust analysis can properly account for the economic characteristics of these markets. Those economic characteristics include innovation, intellectual property, and technological change. As referenced in this Report, the new economy includes those industries in which innovation, intellectual property, and technological change are central features.

To assess how well antitrust law addresses competitive issues in such industries first requires an understanding of the major changes in antitrust analysis in recent decades. During this period a quiet transformation has strengthened the economic foundations of antitrust and increased its flexibility. These changes have improved the likelihood of an accurate assessment of competitive effects. In particular, the flexibility to account properly for the efficiencies associated with business conduct means that antitrust analysis has become less likely to condemn improperly business conduct that in fact benefits consumer welfare.

The Commission sought comment on and testimony about the application of antitrust analysis in industries in which innovation, intellectual property, and technological change are central features. Among other things, the Commission asked whether antitrust law encouraged a static analysis of dynamic industries or whether particular features of new economy industries posed distinctive problems for antitrust analysis. The Commission also asked whether antitrust law should use different benchmarks for market definition or market power assessments in new economy industries because innovation-driven firms may need to set prices above marginal costs to earn reasonable returns on their investments in innovation.

Commenters and witnesses largely agree that antitrust analysis has sufficient grounding in sound economic analysis, openness to new economic learning, and flexibility to enable the courts and the antitrust agencies properly to assess competitive issues in new economy industries. Most importantly, commenters noted, the economic principles on which antitrust is based do not require revision for application to those industries. As one economist noted, basic economic principles do not become "outdated" simply because industries become highly dynamic.[1]

AR_002620

The Commission agrees and makes the following recommendations.

1. There is no need to revise the antitrust laws to apply different rules to industries in which innovation, intellectual property, and technological change are central features.

2. In industries in which innovation, intellectual property, and technological change are central features, just as in other industries, antitrust enforcers should carefully consider market dynamics in assessing competitive effects and should ensure proper attention to economic and other characteristics of particular industries that may, depending on the facts at issue, have an important bearing on a valid antitrust analysis.

The economic principles that guide antitrust law remain relevant to and appropriate for the antitrust analysis of industries in which innovation, intellectual property, and technological change are central features. Antitrust analysis, as refined to incorporate new economic learning, is sufficiently flexible to provide a sound competitive assessment in such industries. This has improved the potential for a sound competitive assessment in all industries, including those characterized by innovation, intellectual property, and technological change.

To be sure, not all agree with the results in particular cases. That antitrust has the proper tools for an economically sound analysis of competitive effects does not mean that everyone agrees on how to use those tools in particular cases or interpret the results of their use. Nonetheless, the Commission concluded that current antitrust analysis is up to the task of properly assessing the competitive effects of business conduct in new economy industries.

Just as in other industries, of course, antitrust enforcers evaluating business conduct in new economy industries must ensure proper attention to particular market dynamics and economic characteristics that may play a role in determining likely competitive effects. Certain characteristics may arise more frequently in markets in which innovation, intellectual property, and technological change are key factors than in some other industries. These characteristics can include:

- very high rates of rapid innovation;
- falling average costs (on a product, not a firm-wide, basis) over a broad range of output;
- relatively modest capital requirements;
- quick and frequent entry and exit;
- demand-side economies of scale;

- switching costs; and
- first-mover advantages.

That one or more of these characteristics may be important in the context of a new economy industry, however, does not suggest that such characteristics never appear in other industries or that all of the listed characteristics always appear in new economy industries. Rather, the point is simply that proper antitrust analysis in *all* industries requires careful consideration of economic characteristics of the industry, and the listed characteristics are ones that may play important roles in industries in which innovation, intellectual property, and technological change are central features.

2. BACKGROUND

Antitrust law has gone through many changes. From the 1950s through the early 1970s, antitrust law was expansively interpreted and broadly enforced. Plaintiffs frequently won, and a wide variety of business practices were presumed to be illegal.[2] The bases for such expansive interpretations was sometimes questionable, however. Courts, for example, in some cases seemed more concerned about protecting competitors than consumers. Business practices might be quickly condemned, seemingly on the basis of courts' skepticism that businesses would try to maximize profits by becoming more efficient, rather than by obtaining greater market power.

These expansive interpretations of antitrust law precipitated a sea change, led by critics who questioned the basic premises of antitrust law as it was then enforced. "In the 1960s through the 1980s, [antitrust scholars generally associated with the University of Chicago] explained how many market structures and practices that antitrust treated with hostility could be beneficial."[3] Around the same time, antitrust scholars generally associated with Harvard advanced the concept that, in developing antitrust rules, courts and enforcers should keep in mind institutional limits, so that "antitrust rules [do] not outrun the capabilities of implementing institutions."[4] In the 1980s, developments in economics continued to influence antitrust thinking, with "'post-Chicago' economic literature argu[ing] that certain market structures and types of collaborative activity are more likely to be anticompetitive than Chicago School antitrust writers imagined."[5]

All of these schools of thought "emphasize[] reliance on economic theory in the formulation of antitrust rules."[6] The reassessment of antitrust doctrine based on economic learning has resulted in significant improvements to antitrust law over the past thirty years. This Section briefly reviews a few of the most important developments below. First, antitrust case law integrated the related principles that antitrust protects competition, not competitors, and it does so in order to ensure consumer welfare. Second, as new economic learning suggested possible procompetitive explanations for conduct previously assumed to be anticompetitive, the courts moved away from per se rules of automatic illegality toward a more flexible rule of reason analysis that would allow consideration of procompetitive explanations of challenged business conduct. Finally, antitrust enforcers have recognized the importance of intellectual property as a spur to innovation and have adopted policies that reflect a greater sensitivity to the need to protect incentives to innovate.

A. Antitrust Protects Competition, Not Competitors, and Should Ensure Consumer Welfare

During the 1960s and early 1970s antitrust decisions from the Supreme Court sometimes seemed more directed to protecting small businesses than to protecting competition that would benefit consumers through lower prices, improved quality, or innovation.[7] Indeed, in some instances the Court "condemned conduct precisely *because* it reduced costs or generated more desirable products [for consumers]."[8] For example, in *FTC v. Procter & Gamble* the Court affirmed that a merger was illegal because it created efficiencies its rivals could not match.[9] Decisions such as this were criticized as likely to deprive consumers of lower prices or other benefits from the increased competition that a more efficient merged firm could provide.[10]

Such decisions also were criticized for the absence of a coherent rule of law that could explain them.[11] On what basis should courts decide to disallow cost-saving, pro-consumer transactions so that smaller, less efficient firms could be kept afloat? The Court's premise seemed to be that all markets should be made up of many small firms, staying as close as possible to the economic ideal of "perfect competition."[12] "The Warren Court defined 'competitive' as a market containing many firms, the small ones having a 'right' to compete with the bigger ones."[13] The underlying economic assumption was that a "certain [industry] structure made certain types of conduct inevitable, so antitrust should be directed mainly toward anticompetitive industry structures."[14]

Developments in economic learning seriously undermined these premises and sent antitrust law in a new direction. Economic research found procompetitive reasons to explain highly concentrated markets—that is, that the most efficient firms were winning the competitive struggle and thereby achieving high market shares.[15] Some economists and lawyers further contended that effective competition did not require dozens of little firms, but instead could occur with relatively few firms in a market.[16] If effective competition could occur without many small firms in a market, then courts did not need to interpret antitrust law to protect small businesses at the expense of consumers.

In response to this and other advances in economic understanding, the Supreme Court in 1977 stated without caveat that the "antitrust laws . . . were enacted for 'the protection of *competition*, not *competitors*.'"[17] The adoption of this principle represented a marked change in the direction of antitrust law. There is now a better understanding that trade-offs exist between the goals of consumer welfare and protecting small firms. To protect small firms can mean a less efficient economy in which consumers must pay higher prices.

Conversely, to allow firms to achieve economies of scale may harm small firms. "For example, large scale production and distribution may reduce costs but also eliminate competitive opportunities for small firms."[18]

In 1979 the Supreme Court once again chose to interpret the antitrust law to protect consumers, not small businesses, describing the Sherman Act as a "consumer welfare prescription."[19] Other courts have adopted similar views.[20] For the last few decades courts, agencies, and antitrust practitioners have recognized consumer welfare as the unifying goal of antitrust law.[21] "Few people dispute that antitrust's core mission is protecting consumers' right to the low prices, innovation, and diverse production that competition promises."[22]

B. Procompetitive Explanations May Exist for Much Business Conduct, So Antitrust Law Should Avoid Per Se Rules of Automatic Illegality

Over time, new economic learning has brought to the fore procompetitive explanations for certain business practices previously condemned outright.[23] Some have argued that many practices reflect aggressive competition or innovation and "that nearly all vertical practices [*e.g.*, arrangements between manufacturers and distributors], price discrimination and most strategic pricing, many patent practices, and business torts were rarely or never anticompetitive."[24] New anticompetitive theories have also emerged.[25] Given the potential for either procompetitive or anticompetitive explanations for business conduct, antitrust analysis needed to move away from per se rules of automatic illegality.

In 1977 in *Continental T.V., Inc. v. GTE Sylvania Inc.*, the Supreme Court relied on economic reasoning to hold that territorial restraints on franchisees should be evaluated under the rule of reason, rather than viewed as per se illegal.[26] Territorial restraints forbid franchisee retailers from selling the manufacturer's products outside their agreed-upon locations, which typically do not overlap with those of other franchisees. Although such restrictions could reduce competition among franchisees of the same manufacturer ("intrabrand competition"), the Court explained that they also could increase competition among different manufacturers' franchisees ("interbrand competition").[27]

"Economists have identified a number of ways in which manufacturers can use such restrictions to compete more effectively against other manufacturers," the Court stated.[28] For example, such restrictions may be used to provide franchisees with sufficient incentives to engage in promotional activities or to provide service and repair facilities for the manufacturer's products. Franchisees might be reluctant to make such investments without territorial restraints because they would worry that other franchisees of the same manufacturer would "free ride" on their efforts to promote the manufacturer's brand, the Court pointed out.[29] In light of these potentially "redeeming virtues," the rule of reason, not a per se rule of automatic illegality, should be applied.[30] Moreover, the Court directed, "departure from the rule of reason standard must be based upon demonstrable economic effect rather than . . . upon formalistic line drawing."[31]

The Court's decision in *Sylvania* marked a major turning point in antitrust law. After this decision, "the Court systematically went about the task of dismantling many of the per se rules it had created in the prior fifty years, and increasingly turned to modern economic theory to inform its interpretation and application of the Sherman Act."[32] Indeed, only two years later, in *Broadcast Music, Inc. v. Columbia Broadcasting System, Inc.*, the Court refused to apply a per se rule to circumstances in which alleged price-fixing among competitors provided substantial efficiencies that could not be obtained through other means.[33] Defendants were the American Society of Composers, Authors and Publishers (ASCAP) and Broadcast Music, Inc. (BMI), both of which had thousands of composers as members. The composers granted nonexclusive licenses to their compositions to ASCAP or BMI, which then created blanket licenses authorizing the playing of millions of copyrighted musical compositions at agreed-upon fees. Plaintiff CBS objected that the blanket licenses issued to television networks were per se illegal price-fixing. The Court described the critical question as "whether the practice facially appears to be one that would always or almost always tend to restrict competition and decrease output, and in what portion of the market, or instead one designed to 'increase economic efficiency and render markets more, rather than less, competitive.'"[34] For several reasons, including a substantial lowering of costs through eliminating thousands of individual transactions, the Court held the blanket licenses should be "subjected to a more discriminating examination under the rule of reason."[35]

Since *Sylvania* and *BMI*, the Supreme Court and lower courts have often looked to economic learning to understand why firms may use particular business practices. Rule of reason analysis allows this examination of potential efficiency rationales for challenged conduct. Although there are exceptions, of course,[36] the use of per se rules of automatic illegality is now substantially reduced, replaced by a more discriminating analysis under the rule of reason.

C. Antitrust Analysis Has Incorporated a More Sophisticated Understanding of How Intellectual Property Can Benefit Competition and Consumer Welfare

During much of the twentieth century, the courts, antitrust enforcers, and antitrust practitioners viewed intellectual property with deep skepticism.[37] Most assumed that a patent or other intellectual property automatically created a monopoly,[38] and Supreme Court cases fostered that presumption.[39] Antitrust enforcers attempted to restrict the use of intellectual property so that competition would be protected.[40] Over-zealous antitrust rules for the use of patents reached a pinnacle when, in 1972, the Antitrust Division of the Department of Justice (DOJ) issued the so-called "Nine No-Nos," a list of nine patent licensing practices the DOJ generally viewed as per se illegal.[41]

The influence of economic learning about the competitive benefits of intellectual property and the potential efficiencies of intellectual property licensing and other conduct reversed this trend. In 1981 the Chief of the Intellectual Property Section of the Antitrust Division explained that because patents increase the reward for research and development, inventions are produced that otherwise would not have come about (or would not have come about as quickly); in those cases, "the availability of a patent [serves] only to benefit competition—to make additional or less expensive choices available to consumers."[42] In 1981 officials from the DOJ renounced the Nine No-Nos.[43] The 1995 Antitrust Guidelines for the Licensing of Intellectual Property (DOJ/FTC IP Guidelines), issued jointly by the DOJ and the Federal Trade Commission (FTC), take the view that "intellectual property licensing . . . is generally procompetitive"[44] and should be examined under the rule of reason.[45]

As part of this trend, Congress in 1988 amended the Patent Code to eliminate a presumption that a patent confers market power in the context of patent misuse.[46] The antitrust agencies expanded that concept to include copyrights and trade secrets, stating in the DOJ/FTC IP Guidelines that the antitrust agencies "will not presume that a patent, copyright, or trade secret necessarily confers market power upon its owner."[47] In 2006 the Supreme Court recognized that "Congress, the antitrust enforcement agencies, and most economists have all reached the conclusion that a patent does not necessarily confer market power upon the patentee."[48] In light of this consensus, the Court reversed its prior holdings and held that, in a tying case, "the mere fact that a tying product is patented does not support . . . a presumption [of market power.]"[49]

Over the course of recent decades, the courts and the antitrust agencies have thus moved away from a presumption that intellectual property automatically creates a monopoly and intellectual property arrangements are likely to harm competition. They now assess whether particular intellectual property in fact confers market power and consider how business arrangements involving intellectual property can benefit consumer welfare. This move has opened antitrust analysis to a more economically sophisticated approach to intellectual property issues, increasing the likelihood that antitrust will properly value the contribution of intellectual property rights to innovation and competition.

3. RECOMMENDATIONS AND FINDINGS

1. There is no need to revise the antitrust laws to apply different rules to industries in which innovation, intellectual property, and technological change are central features.

Current antitrust analysis has a sufficient grounding in economics and is sufficiently flexible to reach appropriate conclusions in matters involving industries in which innovation, intellectual property, and technological change are central features. Judge Richard A. Posner, for example, has concluded that "antitrust doctrine is sufficiently supple, and sufficiently informed by economic theory, to cope effectively with the distinctive-seeming antitrust problems that the new economy presents."[50] Others agree, finding, for example, that "[w]hile the new economy has a number of distinct characteristics, antitrust enforcement is sufficiently flexible to account for the distinguishing features of the new economy and to preserve competition when it benefits consumers."[51]

The fundamental economic principles that guide antitrust law remain relevant to and appropriate for the antitrust analysis of new economy industries. Over the years, antitrust analysis has been refined to incorporate useful aspects of new economic learning. This has improved the potential for a proper competitive assessment in all industries, including those characterized by innovation, intellectual property, and technological change.

Moreover, antitrust analysis, guided by valid economic principles, is sufficiently flexible to provide a sound competitive assessment in such industries. Rule of reason analysis, for example, can accommodate the assessment of a wide variety of factors, including likely procompetitive effects of challenged conduct. As discussed above, advances in economic learning have persuaded courts to replace many per se rules of automatic illegality with a more flexible analysis under the rule of reason.

Increased flexibility and improved economic understanding can be seen in the evaluation of both joint and unilateral conduct under the Sherman Act, where courts have largely turned away from the application of per se rules of automatic illegality and moved toward rule of reason analysis. Likewise, the analysis of mergers has moved away from structural presumptions that increased concentration will necessarily result in anticompetitive conduct, toward a more complex analysis that incorporates predictions of competitive effects using tools of modern economic analysis. Significantly, both rule of reason analysis and current merger analysis require an evaluation of procompetitive efficiencies that may result from firms' agreements, unilateral conduct, or proposed transactions. This is a significant positive change from the typical antitrust analysis of thirty years ago.

In addition, as discussed above, the courts and the antitrust agencies in recent decades have evidenced a greater appreciation of the importance of intellectual property in promoting innovation and, accordingly, the need to incorporate this recognition into a dynamic analysis of competitive effects. Witnesses and commenters remarked there is an improved understanding that antitrust law and patent law are complementary, with both seeking to encourage innovation and competition.[52]

Antitrust analysis can be properly applied in dynamic, innovation-driven industries.[53] Rapid technological progress and innovation are not new issues in antitrust law.[54] One witness pointed out "innovation has been the driver of American economic growth since at least the passage of the Sherman Act in 1890" and maintained "antitrust doctrine does not focus on static analysis."[55] Yet another stated that "[a]ntitrust law is sufficiently flexible to take innovation concerns into account, and today's theories, which may be replaced over time, need not be codified into the statute."[56]

Indeed, the evolution of antitrust law—both through case law and agency guidelines—has shown that new or improved economic learning can be incorporated into antitrust analysis as appropriate. Allowing the ongoing incorporation of economic learning into antitrust case law and agency guidelines is preferable to attempts at legislative change to specify different antitrust analyses for industries characterized by innovation, intellectual property, and technological change. Industries that fall into those categories will keep changing over time; attempts to define them would likely be difficult and impermanent at best. Furthermore, economic learning continues to evolve, and antitrust law needs to be able to incorporate this new learning as appropriate. It is important that antitrust develops through mechanisms, such as case law development in the courts and agency guidelines, that allow ongoing reassessments of existing law and economic principles relevant to antitrust analysis.

2. **In industries in which innovation, intellectual property, and technological change are central features, just as in other industries, antitrust enforcers should carefully consider market dynamics in assessing competitive effects and should ensure proper attention to economic and other characteristics of particular industries that may, depending on the facts at issue, have an important bearing on a valid antitrust analysis.**

Antitrust analysis in *all* industries requires careful assessments of each industry's market dynamics and economic characteristics. To take proper account of market dynamics, antitrust analysis should carefully consider the incentives and obstacles that firms seeking to develop and commercialize new technologies may face.[57] Antitrust enforcers should "explicitly recognize that market conditions, business strategies, and industry structure can be highly dynamic."[58]

Innovation provides a significant share of the consumer benefits associated with competition, particularly in the most dynamic industries.[59] New and improved products and services, as well as new business methods and production processes, are created through innovation.[60] To improve the application of antitrust in new economy industries, antitrust enforcers should give further consideration to efficiencies that lead to more rapid or enhanced innovation.[61] The potential benefits to consumer welfare from such efficiencies are great, thus warranting careful assessments of the potential for certain business conduct to create more rapid or enhanced innovation.

"[A] proper market-power inquiry in new economy industries must include a serious analysis of the vigor of dynamic competition" that looks beyond current sales figures.[62] To account properly for dynamic effects, antitrust enforcers must recognize that current market shares may overstate or understate likely future competitive significance. The Supreme Court identified this issue thirty years ago in *United States v. General Dynamics*, a merger case in which a coal company's share of uncommitted coal reserves was a better indicator of its likely ability to compete for future supply contracts than its historical market share.[63]

Analogous examples can be found in new economy industries, in which there may be "sequences of races to develop a new product or . . . to replace an existing product through drastic innovation."[64] For example, if a firm has failed recently to introduce new and improved products comparable to rivals' new offerings, and has no plans to do so, its likely future competitive significance may be far less than would be indicated by its historical market share.[65] A recent entrant with a promising new product, on the other hand, may have greater likely future competitive significance than its current low market share might suggest.[66]

Intellectual property may be critical to future innovation in an industry, so it is also important "to examine ownership of and investment in relevant intellectual property—which may involve technologies not currently in commercial use."[67] If, for example, the current leader "owns all intellectual property necessary for radical innovation, dynamic competition will not be effective."[68] If a firm with a low market share holds an intellectual property asset essential for future product development, that firm's likely future competitive significance may be far greater than that of a current market leader that has no promising new products or intellectual property assets in the pipeline.[69]

Antitrust analysis also must recognize that a price above marginal cost, by itself, does not necessarily suggest that a firm has market power that should be relevant in an antitrust matter or is operating anticompetitively in a relevant antitrust market.[70] Particularly in innovative industries, such as those in which intellectual property assets are key, firms may have large, up-front fixed costs for research and development, and relatively small marginal costs of production.[71] In pharmaceuticals, for example, a drug that costs millions of dollars to research, develop, and put through clinical testing may cost only a few cents per pill to produce.[72] Over the long run, the pharmaceutical company must set a competitive price that will cover its up-front fixed costs, including a risk-adjusted cost of capital.[73] Firms in innovative industries also must cover the costs of innovation failures, such as drug products that fail before or during clinical testing.[74]

For these reasons, firms with low marginal costs but large fixed costs, for research and development and other innovative activity, for instance, often need to price significantly above marginal costs simply to earn a competitive return in the long run. "This basic economic observation is not new, either in practice or in theory: it holds in any industry with large fixed costs, from railroads to microprocessors, from newspapers to computer software."[75]

A number of industries in which innovation, intellectual property, and technological change are central features also have one or more of the characteristics described briefly below. Depending on the facts at issue, such characteristics may have an important bearing on a proper antitrust analysis.

Very high rates of rapid innovation. One critical feature of new economy industries is innovation competition.[76] Competitive pressure to get new products or services to market ahead of one's competitors can lead to short product life cycles,[77] with new products replacing the old every few months instead of years. In addition, in some industries, "[s]uccessful incumbents . . . are constrained primarily . . . by the threat that another firm will come up with a drastic innovation that causes demand for the incumbent's product to collapse."[78] Threats of drastic innovations may "force new-economy firms to invest heavily in R&D and to bring out new versions of their products—including versions that lead to the demise of their old versions."[79]

Relatively modest capital requirements. Some new economy industries do not require entrants to incur substantial sunk costs. Depending on the circumstances, some software markets, for example, may require only modest capital investments for entry. Ease of entry is relevant to assessment of whether a firm has or could obtain market power.

Quick and frequent entry and exit. In industries with relatively modest capital requirements entry and exit may be quick and frequent. Start-up software enterprises, for instance, particularly during the 1990s, were frequently born only to die while very young.[80] The extent to which quick and frequent entry and exit characterize an industry also will be relevant to whether a firm in such an industry could possess durable market power.

Falling average costs (on a product, not a firm, basis) over a broad range of output. Economies of scale over a wide range of output are typical of industries with "large fixed costs (most of which are sunk R&D expenditures) and low marginal costs."[81] New entrants may not be able to duplicate these economies of scale and therefore may not be able to constrain incumbent firms.[82]

Demand-side economies of scale. "Economies of scale in consumption describe the situation in which the larger the firm's output is, up to some point, the more valuable that output is to its customers."[83] Examples include telephones and other interactive services, such as email and online auctions.[84] Computer programs also "tend to be more valuable the more people use them because training, support by information-technology personnel, and standardization of equipment and procedures are facilitated."[85] The presence of demand-side economies of scale can have a variety of implications for antitrust analysis, including that common standards typically are necessary to benefit from such economies.

Switching costs. In industries with demand-side economies of scale consumers may need to incur costs to switch from one competitor to another. Such switching costs may deter customers from moving from an incumbent to a new entrant and thus cause entrants to be an ineffective competitive constraint.[86]

First-mover advantages. "There is often a substantial advantage to being the first in a high-tech industry to develop and introduce a new product or the first to gain a significant market presence."[87] This advantage can arise, for instance, because the first to market can quickly take advantage of demand-side economies of scale or gain a head-start on moving down the learning curve for making the new product.[88] Whatever the source of a first-mover advantage in a particular industry, its effect is to encourage fierce competition by firms to be the first to market. Antitrust analysis should take into account such competitive incentives.

In sum, antitrust law has sufficient grounding in economic learning and flexibility to provide appropriate analyses of competitive issues in new economy industries. Developments in antitrust law in recent decades have made this possible. To tether antitrust law to the goal of consumer welfare, achieved through free-market competition, with an analysis based on economic learning, has benefited consumers and produced more consistency and predictability in antitrust doctrine.

Chapter I.B
Substantive Merger Law

1. INTRODUCTION

Section 7 of the Clayton Act, enacted in 1914 and amended in 1950, prohibits mergers or acquisitions where "the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly" in a relevant market.[1] Both the substance and the procedures of antitrust merger enforcement have changed significantly in recent decades. These changes are to some extent interrelated.

Before 1976, antitrust challenges typically occurred after a merger already had been consummated; such challenges sometimes took years to litigate. In cases where a court ultimately ruled the merger illegal and ordered the merged firm to divest the acquired assets, it was sometimes difficult to recreate a competitively viable firm—that is, to "unscramble the eggs"—and effectively restore lost competition.

Passage of the Hart-Scott-Rodino Antitrust Improvements Act in 1976 (HSR Act) changed this dynamic.[2] The HSR Act requires firms that propose mergers or acquisitions of a certain size to notify the antitrust agencies and to adhere to certain waiting periods before consummating the proposed transaction.[3] The HSR Act enables the agencies to obtain documents and other information to assess whether to challenge the proposed transaction. Either the agencies can sue to block the entire transaction, or they can seek the divestiture of assets in order to resolve competitive concerns while allowing the overall transaction to proceed. In practice, merging companies most often consent to relief sought by the agencies in order to avoid time-consuming litigation that would delay closing the transaction and the realization of related efficiencies.

As a result, there have been fewer litigated merger cases interpreting application of the antitrust laws to mergers and acquisitions and greater reliance on agency enforcement guidelines and other guidance explaining how the agencies assess mergers and exercise their prosecutorial discretion. This development has made merger enforcement more predictable, due to the issuance of agency guidelines and other guidance and the fact that the enforcement agencies systematically review a greater number of transactions than was the case prior to enactment of the HSR Act. Such expanded review has led to the development of substantial expertise within the agencies. Agency guidelines have served as both a source of guidance to business and a mechanism through which advances in economic learning have been integrated into substantive merger analysis. At the same time, the paucity of litigated court cases has made the merger review process much more administrative in nature.

Over time, the antitrust agencies and courts have moved away from the stringent enforcement standards that prevailed during the 1950s and 1960s, when mergers resulting in a merged firm's market share as small as 5 percent had sometimes been found unlawful.[4] The agencies' promulgation of guidelines for merger analysis played an important role in this process. In 1968 Assistant Attorney General Donald Turner "used the first merger guidelines to bring rigor and transparency to the merger review process."[5] In 1982, and again in 1984, Assistant Attorney General William Baxter further advanced merger analysis with new guidelines outlining specific issues that must be addressed to answer the critical question of whether a merger would tend to "create or enhance market power or . . . facilitate its exercise."[6] The antitrust agencies have jointly updated these guidelines two more times: first in 1992, when the agencies revised the guidelines to clarify their analysis of competitive effects, and most recently in 1997, when they added a section specifically addressing efficiencies. The courts have played significant roles in interpreting and applying these guidelines.[7]

The Commission's review and study of current merger enforcement standards revealed a general consensus that the framework for analyzing mergers used by the antitrust agencies and the courts is basically sound. Most agree that current law, including as interpreted and applied under the agencies' merger guidelines, is sufficiently grounded in economic learning and has sufficient flexibility to analyze properly the competitive issues that can arise in industries in which innovation, intellectual property, and technological change are central features.

Nonetheless, room for improvement exists. The Commission has agreed on recommendations that the agencies give substantial weight to certain factors in merger analysis, particularly with respect to efficiencies related to innovation; that the agencies further study the bases for merger enforcement policy; and that the agencies increase the transparency of merger review through a variety of means. The Commission makes the following recommendations.

3. No statutory change is recommended with respect to Section 7 of the Clayton Act.

3a. There is a general consensus that, while there may be disagreement over specific merger decisions, and U.S. merger policy would benefit from continued empirical research and examination, the basic framework for analyzing mergers followed by the U.S. enforcement agencies and courts is sound.*

3b. The Commission was not presented with substantial evidence that current U.S. merger policy is materially hampering the ability of companies to operate efficiently or to compete in global markets.†

Commissioner Garza joins this recommendation with qualifications.

AR_002637

4. No substantial changes to merger enforcement policy are necessary to account for industries in which innovation, intellectual property, and technological change are central features.*

    4a. Current law, including the Merger Guidelines, as well as merger policy developed by the agencies and courts, is sufficiently flexible to address features in such industries.†

5. The Federal Trade Commission and the Antitrust Division of the Department of Justice should ensure that merger enforcement policy is appropriately sensitive to the needs of companies to innovate and obtain the scope and scale needed to compete effectively in domestic and global markets, while continuing to protect the interests of U.S. consumers.

6. The Federal Trade Commission and the Antitrust Division of the Department of Justice should give substantial weight to evidence demonstrating that a merger will enhance efficiency.

7. The Federal Trade Commission and the Antitrust Division of the Department of Justice should increase the weight they give to certain types of efficiencies. For example, the agencies and courts should give greater credit for certain fixed-cost efficiencies, such as research and development expenses, in dynamic, innovation-driven industries where marginal costs are low relative to typical prices.

8. The Federal Trade Commission and the Antitrust Division of the Department of Justice should give substantial weight to evidence demonstrating that a merger will enhance consumer welfare by enabling the companies to increase innovation.

9. The agencies should be flexible in adjusting the two-year time horizon for entry, where appropriate, to account for innovation that may change competitive conditions.

* Commissioner Delrahim does not join this recommendation.

† Commissioner Kempf does not join this recommendation.
Commissioner Garza joins this recommendation with qualifications.

10. The Federal Trade Commission and the Antitrust Division of the Department of Justice should seek to heighten understanding of the basis for U.S. merger enforcement policy. U.S. merger enforcement policy would benefit from further study of the economic foundations of merger policy and agency enforcement activity.

10a. The Federal Trade Commission and the Antitrust Division of the Department of Justice should conduct or commission further study of the relationship between concentration, as well as other market characteristics, and market performance to provide a better basis for assessing the efficacy of current merger policy.

10b. The Federal Trade Commission and the Antitrust Division of the Department of Justice should increase their use of retrospective studies of merger enforcement decisions to assist in determining the efficacy of merger policy.

11. The Federal Trade Commission and the Antitrust Division of the Department of Justice should work toward increasing transparency through a variety of means.

11a. The agencies should issue "closing statements," when appropriate, to explain the reasons for taking no enforcement action, in order to enhance public understanding of the agencies' merger enforcement policy.

11b. The agencies should increase transparency by periodically reporting statistics on merger enforcement efforts, including such information as was reported by the Federal Trade Commission in its 2004 Horizontal Merger Investigation Data, as well as determinative factors in deciding not to challenge close transactions. These reports should emanate from more frequent, periodic internal reviews of data relating to the merger enforcement activity of the Federal Trade Commission and the Antitrust Division of the Department of Justice. To facilitate and ensure the high quality of such reviews and reports, the Federal Trade Commission and the Antitrust Division of the Department of Justice should undertake efforts to coordinate and harmonize their internal collection and maintenance of data.*

* Commissioner Kempf does not join this recommendation.

11c. **The agencies should update the Merger Guidelines to explain more extensively how they evaluate the potential impact of a merger on innovation.***

11d. **The agencies should update the Merger Guidelines to include an explanation of how the agencies evaluate non-horizontal mergers.†**

2. BACKGROUND

Federal antitrust merger enforcement has evolved significantly since enactment of the Clayton Act in 1914. It has shifted in emphasis from a litigation-based system focused on judicial review of consummated deals to an administrative regime in which two federal agencies, the Antitrust Division of the Department of Justice (DOJ) and the Federal Trade Commission (FTC), review mergers above a certain size prior to consummation.[8] In recent years, the DOJ/FTC Horizontal Merger Guidelines (Merger Guidelines or Guidelines) have described the analytical framework used by the agencies for merger enforcement and guided the agencies' enforcement approach.[9]

The Antitrust Division (under Assistant Attorney General Donald Turner) issued its first set of merger enforcement guidelines in 1968.[10] The DOJ explained that its purpose in publishing the 1968 Merger Guidelines was to inform business, counsel, and others of "the standards currently being applied by the Department of Justice in determining whether to challenge corporate acquisitions and mergers."[11] The 1968 Merger Guidelines used concentration within the relevant market as a guidepost for whether enforcement action should be taken, setting thresholds by which merger challenges became more likely as market concentration and the market shares of the merging firms increased.[12]

In 1982 the DOJ issued a revised set of merger guidelines, under the leadership of Assistant Attorney General William Baxter.[13] To measure market concentration, the 1982 Merger Guidelines introduced use of the Herfindahl-Hirschman Index (HHI) and established revised concentration thresholds, which are still in use today.[14] More important, the 1982 Merger Guidelines expanded merger analysis beyond concentration thresholds to explain how mergers may raise competitive concerns and to include an assessment of additional factors in the markets of relevance to the merger.[15]

The 1982 Merger Guidelines explained that antitrust law seeks to prevent mergers that could increase the likelihood of collusion, either tacit or explicit, in a post-merger market.[16]

---

† Commissioner Kempf does not join this recommendation.

Thus, merger enforcement is one of the ways in which antitrust enforcers attempt to prevent tacit coordination in oligopolistic markets.[17] Antitrust law also seeks to prevent mergers that would enhance market power by creating or strengthening a dominant firm, the 1982 Merger Guidelines explained.[18]

To ground the analytical framework of merger analysis more firmly, the 1982 Merger Guidelines set forth a methodology for assessing market definition based on the behavior that would be profitable post-merger for a hypothetical profit-maximizing monopolist.[19] Market definition requires an assessment of substitutes to which customers could turn if the merged firm attempted to raise price. The 1982 Merger Guidelines also introduced the concept that entry by other firms into the relevant market might deter or counteract attempts by a merged firm to raise prices post-merger, thus negating a merger's potential anticompetitive effects.[20]

Several factors, including ongoing economic research that questioned the extent to which market concentration was correlated with reduced competition, prompted these revisions to merger analysis.[21] In 1984 the DOJ made modest revisions to update the 1982 Merger Guidelines with recent thinking and "to correct any misperception that the Merger Guidelines are a set of rigid mathematical formulas that ignore market realities, and rely solely on a static view of the marketplace."[22]

In 1992 the DOJ and the FTC jointly issued merger guidelines, the first time both agencies set forth a unified approach to merger analysis.[23] For market definition, the 1992 Merger Guidelines continued to ask whether a hypothetical monopolist could successfully impose a small but significant non-transitory increase in price.[24] The 1992 Merger Guidelines further deemphasized the HHI thresholds. Although mergers that would increase concentration by a certain amount in a highly concentrated market remained subject to a presumption of anticompetitive effects, the 1992 Merger Guidelines explained that "market share and concentration data provide only the starting point for analyzing the competitive impact of a merger."[25]

Once past this starting point, the 1992 Merger Guidelines emphasized a need to explain how the proposed transaction could harm competition and which factors suggest the likelihood of such harm. The 1992 Merger Guidelines articulated more fully two mechanisms of anticompetitive effects: (1) coordinated effects, that is explicit or tacit collusion, and (2) unilateral effects resulting from the relaxation of competitive constraints on the combined firm due to the acquisition of a close competitor. For each mechanism, the Guidelines outlined how particular factors might be more or less conducive to a particular theory of anticompetitive effects.[26] In addition, the Guidelines refined the analysis of entry to focus on the potential entrants' need to sink costs in a relevant market as a key determinant of whether entry would be "timely, likely, and sufficient" to deter or counteract anticompetitive effects.[27]

In 1997 the FTC and the DOJ revised the 1992 Merger Guidelines to elaborate on the treatment of merger-related efficiencies. The revisions recognized that the main benefit of mergers to the economy is their potential to achieve efficiencies.[28] The Guidelines explained that merging parties must show that the efficiencies resulting from the merger "would be sufficient to reverse the merger's potential to harm consumers in the relevant market, e.g., by preventing price increases in the market."[29]

Although the Merger Guidelines have not been altered since 1997, the FTC and the DOJ issued a Commentary on the Horizontal Merger Guidelines in 2006.[30] The Commentary provides further explication of the Merger Guidelines, including examples of how the agencies have applied them in particular matters. The Commentary does not change the standards of the Merger Guidelines, however. Rather, the antitrust agencies issued the Commentary "to provide greater transparency and foster deeper understanding regarding antitrust law enforcement."[31]

3. RECOMMENDATIONS AND FINDINGS

A. Merger Policy in General

3. No statutory change is recommended with respect to Section 7 of the Clayton Act.

3a. There is a general consensus that, while there may be disagreement over specific merger decisions, and U.S. merger policy would benefit from continued empirical research and examination, the basic framework for analyzing mergers followed by the U.S. enforcement agencies and courts is sound.*

3b. The Commission was not presented with substantial evidence that current U.S. merger policy is materially hampering the ability of companies to operate efficiently or to compete in global markets.†

* Commissioner Kempf does not join this recommendation.

† Commissioner Kempf does not join this recommendation.

Commissioner Garza joins this recommendation but notes that the Commission was unable to assess evidence sufficient to opine on the actual efficacy or effects of merger enforcement policy.

4. No substantial changes to merger enforcement policy are necessary to account for industries in which innovation, intellectual property, and technological change are central features.*

4a. Current law, including the Merger Guidelines, as well as merger policy developed by the agencies and courts, is sufficiently flexible to address features in such industries.†

5. The Federal Trade Commission and the Antitrust Division of the Department of Justice should ensure that merger enforcement policy is appropriately sensitive to the needs of companies to innovate and obtain the scope and scale needed to compete effectively in domestic and global markets, while continuing to protect the interests of U.S. consumers.

1. U.S. Merger Policy is Fundamentally Sound

The current merger policy of the United States is fundamentally sound. The testimony of numerous antitrust practitioners and economists and comments from a variety of interested parties show general consensus on this point. Commentators agree that merger policy has significantly improved since the 1950s and 1960s and, as a general matter, is on the right course. Accordingly, the Commission does not recommend any statutory change to Section 7 of the Clayton Act or any wholesale changes to merger policy overall.

Merger policy has seen significant improvements over the past twenty-five years. One witness reported that, during that period, "merger enforcement has become increasingly predictable, transparent, and analytically sound."[32] He also explained that merger policy has become stable and bipartisan, affording "a sense of gravity that previously was lacking."[33] Changes since the early 1980s mark a significant improvement from the policies reflected in court cases of the 1950s and 1960s.[34] Several witnesses stated that U.S. merger enforcement policy is readily defensible[35] and that room for improvement exists only on the margins.[36]

Commenters agreed that merger policy in the United States has benefited significantly from the introduction of the Merger Guidelines, along with subsequent revisions and refinements to them.[37] There is general consensus that the Merger Guidelines have acted as the

Commissioner Garza joins this recommendation with the proviso that current enforcement can be improved in the ways suggested in the Commission's other recommendations.

AR_002643

"blueprint[] for the architecture" of merger analysis and, overall, provide a guide that "functions well."[38] The Guidelines have had a significant influence on judicial development of merger law, which is reflected in their widespread acceptance by the courts as the relevant framework for analyzing merger cases.[39] Conversely, the courts have occasionally influenced how the agencies have revised the Guidelines.[40] The Guidelines have also provided useful guidance and transparency to the business community and antitrust bar.[41] Finally, the Guidelines have helped to influence the development of merger policy by jurisdictions outside the United States.[42]

To be sure, some disagree with the outcomes of particular merger cases. Different antitrust enforcers may interpret evidence differently and therefore reach different conclusions as to the likelihood of anticompetitive effects. Nonetheless, there does not appear to be a systematic bias toward either overenforcement or underenforcement.[43] The ongoing debate over merger policy is an important one. Overall, however, the Commission found no need to recommend changes to Section 7 of the Clayton Act or wholesale changes to merger policy in the United States.

2. U.S. Merger Policy is Sufficiently Flexible to Address Industries in Which Innovation, Intellectual Property, and Technological Change are Central Features

As discussed in Chapter I.A, the common-law development of antitrust doctrine has permitted the courts and the agencies to adapt the contours of the antitrust laws to new economic learning, changes in markets, shifting consumer and business behavior, and numerous other factors. Innovation has driven the U.S. economy since before the passage of the Sherman Act.[44] In some respects, the challenges for antitrust analysis presented by dynamic, innovation-driven industries today are analogous to those presented in past years.[45] Current merger policy has met this challenge. It is well grounded in economics and is sufficiently flexible to provide a sound competitive assessment in matters involving industries in which innovation, intellectual property, and technological change are central features.[46]

As described above, merger analysis has moved away from structural presumptions, which presume increased concentration will likely lead to anticompetitive outcomes, toward a more complex analysis that predicts competitive effects using modern economic tools.[47] Furthermore, as explained below, current merger analysis requires an evaluation of procompetitive efficiencies that may result from transactions and an assessment of whether these efficiencies offset the potential anticompetitive effects of a merger. These changes have positioned U.S. merger policy so that it does not currently need substantial change to account for innovation, intellectual property, and technological change.

Merger law and policy—as it has developed through both agency guidelines and case law—has incorporated new or improved economic learning. Industries characterized by innovation, intellectual property, and technological change will continue to evolve, and economic learning will progress.[48] Guidelines and case law provide flexible vehicles through which antitrust analysis can continue to develop. In contrast, efforts to adjust antitrust analysis though statutory change would likely prove difficult, and would require continual amendment or pose the risk of codifying economic learning at only one point in time.[49] For these reasons as well, the Commission does not recommend any changes to Section 7 of the Clayton Act.

3. U.S. Merger Policy Must Continue to Protect U.S. Consumers While Allowing Companies to Innovate and Compete Effectively

U.S. merger policy has served U.S. consumers well in recent years. By and large, it has done so without preventing companies from competing effectively and continuing to innovate.[50] The agencies should remain mindful of the importance of both objectives going forward to ensure that U.S. merger policy remains the leading paradigm for competition policy throughout the world.

B. Efficiencies and Innovation

6. **The Federal Trade Commission and the Antitrust Division of the Department of Justice should give substantial weight to evidence demonstrating that a merger will enhance efficiency.**

7. **The Federal Trade Commission and the Antitrust Division of the Department of Justice should increase the weight they give to certain types of efficiencies. For example, the agencies and courts should give greater credit for certain fixed-cost efficiencies, such as research and development expenses, in dynamic, innovation-driven industries where marginal costs are low relative to typical prices.**

8. **The Federal Trade Commission and the Antitrust Division of the Department of Justice should give substantial weight to evidence demonstrating that a merger will enhance consumer welfare by enabling the companies to increase innovation.**

9. **The agencies should be flexible in adjusting the two-year time horizon for entry, where appropriate, to account for innovation that may change competitive conditions.**

1. The Importance of Efficiencies

Since the 1980s, the courts and the antitrust agencies have recognized that efficiencies resulting from a merger can improve consumer welfare and should be considered in the overall assessment of the merger's likely effects on competition.[51] A merger can allow firms to realize efficiencies from the combination of two complementary companies. Such efficiencies can benefit firms by lowering their costs and can benefit consumers through lower prices, higher quality prodcts, or entirely new products.

The DOJ and the FTC formally recognized the relevance of efficiencies to their evaluation of mergers in 1997, when they revised the Merger Guidelines to add a section describing the circumstances in which the agencies would consider the efficiencies that would result from a merger.[52] The Guidelines now explicitly recognize that "the primary benefit of mergers to the economy is their potential to generate . . . efficiencies."[53] As the agencies explain, "mergers have the potential to generate significant efficiencies by permitting a better utilization of existing assets, enabling the combined firm to achieve lower costs in producing a given quantity and quality than either firm could have achieved without the proposed transaction."[54] When a firm is able to lower its costs (or increase quality) consumers benefit from the merger.

The Guidelines generally require that the savings from efficiencies be "passed on" to consumers; that is, they must be "sufficient to reverse the merger's potential to harm consumers in the relevant market, e.g., by preventing price increases in that market."[55] This is because "[e]ven when efficiencies generated through merger enhance a firm's ability to compete . . . a merger may have other effects that may lessen competition and ultimately may make the merger anticompetitive."[56] Accordingly, the agencies take into account both the benefits that efficiencies would bring to consumers along with the anticompetitive effects a merger is predicted to have. Thus the FTC or the DOJ "will not challenge a merger . . . . if cognizable efficiencies likely would be sufficient to reverse the merger's potential to harm consumers in the relevant market, e.g., by preventing price increases in that market."[57]

Overall, the Commission was presented with little evidence the agencies were routinely failing to take efficiencies into account. A number of witnesses and commenters argued that the agencies' current approach to assessing efficiency claims works well and is appropriate.[58] The FTC and the DOJ readily acknowledge that they do and must, as part of any complete evaluation of a merger, take into account efficiencies that will result from the merger and the effect those efficiencies will have on a firm's incentives to reduce output or increase prices.[59]

In particular, there was little support for the argument that, as a general matter, the agencies impose too high a burden on the parties to demonstrate efficiencies offsetting competitive concerns raised by a merger. Witnesses and commenters generally agreed that the evidentiary burden imposed by the agencies on parties to demonstrate the likelihood and magnitude of asserted efficiencies is appropriate where other evidence indicates that the merger would likely have anticompetitive effects.[60] Requiring merging companies to demonstrate efficiencies is also appropriate because the companies have the best access to information regarding the value and likelihood of achieving the efficiencies they assert.[61]

The explicit acknowledgment in the Merger Guidelines of the importance of efficiencies underscores the important role efficiencies play in both driving mergers and bringing lower cost, higher quality products to consumers.[62] Of course, for a substantial majority of proposed mergers, efficiencies will not play a role in the agency's assessment, because market conditions will ensure that the merger will not have an anticompetitive effect. In such cases, any efficiencies can be fully realized by the companies. However, in cases where a merger may raise competitive concerns, a detailed assessment of the potential efficiencies the parties will realize may be necessary. The agencies should ensure that they give substantial weight to efficiencies in formulating merger enforcement policy and in evaluating specific transactions.

2. The Agencies Should Ensure that they Give Sufficient Credit to Certain Fixed-Cost Efficiencies

The agencies should account for the value of fixed-cost efficiencies in assessing the likely competitive effects of a merger.[63] As one commenter explained, "[s]ince all costs vary in the long run, reductions in capital expenses or other costs fixed in the short run should also be considered."[64] Failure to take account of and give proper weight to such fixed costs in evaluating a merger could deprive consumers and the U.S. economy of significant benefits from a procompetitive merger.

The agencies currently place the greatest weight on efficiencies that will reduce prices to consumers in the short run.[65] Efficiencies that do not lower prices in the short run are given less weight.[66] Thus, for example, a merger that allows a company to reduce the cost of producing each widget by 10 percent (for example, through improved production line technology or streamlining of distribution) can quickly benefit consumers in the form of lower prices. Such efficiencies are typically fully credited by the agency (if substantiated). By comparison, reductions in total costs (including fixed costs)—such as through the elimination of redundant facilities or by improvement upon the rate and quality of innovation—have less (if any) effect on pricing in the short run. In the longer run, however, some (if not all) such efficiencies are also likely to benefit consumers in the form of lower prices or improved quality.[67]

The Commission identified one type of fixed-cost efficiency in particular—those increasing innovation through research and development—to which the agencies may be giving insufficient credit. As one witness explained, "an increasing part of the economy is comprised of research-intensive products . . . such as computer chips, software, pharmaceuticals and media content [that] have very high fixed costs."[68] Mergers generally benefit consumers by making innovation more likely or less costly in such industries, rather than by reducing (the generally very low) marginal costs.[69] Indeed, such innovation efficiencies "often drive transactions in high-tech mergers."[70] More generally, there is "broad agreement . . . that research and development is a major source of economic growth."[71] It is important to make sure that merger policy does not unduly inhibit that basis for growth.

Innovation efficiencies can result in a variety of ways. For example, a merger may make it easier to "combine complementary assets and know-how."[72] Alternatively, a merged company may be better able to share risks associated with research and development.[73] In some industries, such as pharmaceuticals, a merger can "increase the odds of successful commercialization of the product."[74] In each of these instances, the efficiencies do not necessarily lower prices to consumers immediately, but have the potential to bring significant benefits to consumers through new, improved, or lower priced products in the longer run. If the agencies discount those benefits too greatly, they run the risk of preventing mergers that may have short-term anticompetitive effects but long-run procompetitive benefits to consumer welfare.[75]

The enforcement policy of the FTC and the DOJ may give insufficient recognition to innovation efficiencies in some mergers in which they believe anticompetitive effects may result in the short term. For example, although the Merger Guidelines recognize that R&D efficiencies should be considered, they appear to view them with particular skepticism: "Other efficiencies, such as those relating to research and development, are potentially substantial but are generally less susceptible to verification and may be the result of anticompetitive output reductions."[76] One witness testified that the FTC failed to give proper credit to innovation efficiencies in its evaluation of the merger his company was proposing.[77] More generally, the American Bar Association, Section of Antitrust Law observed that the agencies emphasize potential anticompetitive short-term price effects from a merger and pay insufficient attention to how a merger could increase the merged firm's ability to produce better products and to innovate.[78]

As the nation's economy moves toward an increasing role for goods and services involving intellectual property—such as computer software, electronics, and biotechnology—it becomes even more important for U.S. consumers that the value of efficiencies and innovation that can result from mergers in such industries be realized where possible.[79] A failure by the agencies to take into account fully the benefit of such efficiencies in evaluating whether a merger will harm or benefit consumers could deprive consumers of significant benefits and value.[80] In addition, it "may end up limiting some firms' ability to compete more effectively."[81] Although some witnesses stated that the agencies were not, in fact, hostile to innovation benefits cited by merging parties,[82] on balance, the agencies may in some cases give insufficient credit or weight to such efficiencies. The agencies should ensure that they give substantial weight in evaluating a merger to evidence presented by the merging parties that demonstrates a merger will enhance consumer welfare through innovation and similar efficiencies.

To be sure, such efficiencies are often not easy to measure.[83] Moreover, the agencies may need to balance the value of future benefits that potentially will result from innovation against any current costs to consumers.[84] While analytical methods to assess a merger's likely anticompetitive effects are relatively well developed, methods for analyzing whether a merger will encourage innovation are far less advanced.[85] Nonetheless, the agencies should endeavor to weigh more heavily the potential for welfare-enhancing innovation that a merger will create.

3. The Antitrust Agencies Should be Flexible in Considering the Time Horizon for Entry

Innovation can give rise to dynamic change in markets. Such change may occur over a short or long period of time. For example, although computer software programs may be outdated within six months, approval of a new drug may take years. Under the Merger Guidelines, the possibility of dynamic change over a longer period of time is not clearly taken into account by their treatment of entry. The Guidelines provide that a merger is unlikely to harm competition where entry is sufficiently easy that market participants cannot, collectively or unilaterally, raise prices from pre-merger levels.[86] To meet this requirement, entry must be "timely, likely, and sufficient in its magnitude, character and scope to deter or counteract the competitive effects of concern."[87] As a general matter, the FTC and the DOJ will consider timely "only those committed entry alternatives that can be achieved within two years from initial planning to significant market impact."[88]

The two-year time horizon may be inappropriately short in some cases. In particular, innovation may result in entry beyond the two-year horizon. The agencies should consider the potential for such entry in assessing the likely competitive effects of the merger.[89] Although it appears that the Guidelines provision represents an approximation, not a hard-and-fast rule,[90] the Commission recommends that the agencies increase their flexibility in this regard to ensure that innovation that will change competitive conditions more than two years in the future receives proper credit. This will help ensure that the agencies' analysis of competitive effects appropriately takes account of competitive dynamics in the markets at issue and that they will not seek to block mergers that, as a result of innovation, may not present a longer-term threat to competition and consumer welfare.

C. Further Study of Merger Policy

10. The Federal Trade Commission and the Antitrust Division of the Department of Justice should seek to heighten understanding of the basis for U.S. merger enforcement policy. U.S. merger enforcement policy would benefit from further study of the economic foundations of merger policy and agency enforcement activity.

10a. The Federal Trade Commission and the Antitrust Division of the Department of Justice should conduct or commission further study of the relationship between concentration, as well as other market characteristics, and market performance to provide a better basis for assessing the efficacy of current merger policy.

10b. The Federal Trade Commission and the Antitrust Division of the Department of Justice should increase their use of retrospective studies of merger enforcement decisions to assist in determining the efficacy of merger policy.

While there is general consensus that the basic framework for current U.S. merger enforcement policy has improved markedly over the past forty years and appears to be fundamentally sound, there is limited empirical support for these conclusions. This shortfall in support allows for reasonable criticism both that merger policy is too lenient or too strict. Indeed, one recent, prominent study questioned whether merger policy has benefited consumers at all,[91] while one commenter suggested that policy should be more aggressive.[92]

The agencies should undertake further study of merger policy and its effects. The potential benefits of such study are substantial; empirical studies and the development of the economics of antitrust law have played a central role in the transformation of merger policy over the past forty years. Further research in this area would improve the empirical basis for merger policy and could improve understanding of the overall costs and benefits of that policy.[93]

To be most useful, further study should focus on questions of particular importance to the evaluation and implementation of merger policy. While there are numerous potentially valuable avenues for research, the Commission identifies two areas in which further research would be especially desirable: (1) studies of the effects on competition of market concentration and other market characteristics; and (2) retrospective studies of the results of merger enforcement decisions.

1. Studies of the Effects of Concentration and Other Market Characteristics on Competition

Current U.S. merger enforcement policy is premised on assumptions about how concentration and other market characteristics (such as ease of entry) affect competition and market power. Empirical evidence gives only limited support for these assumptions, however.[94] In particular, one of the central assumptions of current merger policy is that increased concentration in a relevant market potentially (but not necessarily) leads to a reduction in competition. This basic assumption is reflected in the Merger Guidelines, which use concentration and market-share thresholds as screens that indicate the need for further analysis of the proposed transaction.[95] Nonetheless, several observers have pointed out that there is limited economic knowledge about the levels of concentration at which market power emerges, increases substantially, or becomes problematic for competition.[96] Indeed, although a variety of studies suggest a relationship between concentration and market power, none of these studies, either alone or together, provide a good sense as to the level of concentration at which "antitrust should bite."[97] Furthermore, understanding regarding the impact on competition of other market characteristics, such as the ease of entry, is also limited. Focused study to increase understanding of how these important characteristics of the competitive landscape affect a merger's impact could improve the enforcement agencies' understanding and ability to enforce the antitrust laws in a manner that maximizes benefits for U.S. consumers.

Increasing learning about the validity of the economic theories and assumptions that inform current merger policy, such as empirical study of the relationship between concentration and the probability of the exercise of market power, would be beneficial. To be sure, it can be difficult to obtain the necessary data, to differentiate the effects of concentration from other factors affecting operation of a market, or to draw conclusions about the effects of concentration that apply across diverse industries. For that reason, several witnesses advised that such studies would be unlikely to shed much light on merger policy.[98] However, greater understanding of these relationships is essential to the design and evaluation of merger policy, and similar advances in understanding have promoted substantial improvement in merger policy in the recent past.

2. Retrospective Studies of Merger Enforcement Decisions

The FTC and the DOJ should increase their use of retrospective studies of merger enforcement decisions to assist in determining the efficacy of merger policy. Such retrospective studies would review enforcement decisions in a particular merger or for several mergers in a given industry. Such studies—both in markets in which mergers were allowed to proceed and in those in which mergers were blocked—will help the agencies to evaluate whether their previous decisions have incorrectly blocked mergers that would not have been anticompetitive or permitted mergers that were ultimately anticompetitive.[99] Such studies may also be informative about such things as what levels of concentration or market shares give rise to competitive issues and the effectiveness of entry.[100] More important, such studies may shed light on why a particular decision was later shown to be erroneous, thereby allowing the agencies to modify the models and approaches they use in conducting merger analysis.

3. The Agencies Should Consider "Outsourcing" Studies of Both Types

The agencies should consider whether much of the work for the studies can be more effectively done by outsourcing it to economists and researchers outside the agency. Such studies can require extensive work, and conducting them internally may distract the agencies from their principal mission of detecting and preventing anticompetitive conduct. In addition, outsourcing will help avoid the perception (and possible reality) that the results of such studies are biased toward justifying agency practice. Placing responsibility for conducting the study with economists and other consultants who are not closely connected with the agency largely avoids this problem.

D. Increased Transparency

11. The Federal Trade Commission and the Antitrust Division of the Department of Justice should work toward increasing transparency through a variety of means.

"Transparency" can mean several things with respect to merger policy. The Commission uses it here to mean providing the public with information about both the decisions the agency makes and the methods or approaches that drive those decisions. Transparency promotes basic fairness to parties contemplating mergers by enabling them to predict the legal consequences of contemplated transactions. For example, a firm can determine whether a potential transaction will be likely to be cleared or blocked by the agencies. Moreover, when parties are able to predict in advance what types of transactions are likely to result in enforcement actions, they can eschew them in the first instance, thereby reducing the need for costly investigations and enforcement actions.[101] Transparency thereby economizes on the agencies' scarce merger enforcement resources, which can cover only a small number of transactions. Ultimately, the public's confidence in the ability of the antitrust laws to promote competition relies upon transparent decision-making that can be predicted with some confidence in advance.

Both agencies have taken numerous steps in recent years to provide antitrust practitioners and the general public with information about their enforcement activities. To provide the public with a clear statement of the basic principles of enforcement policy, the agencies have issued, and periodically revised, the Merger Guidelines. In 2006 the agencies issued an extensive "commentary" on those Guidelines that includes various examples illustrating the principles in the Guidelines by describing their application to particular merger matters. The agencies also use various other vehicles—such as speeches, testimony, and reports—to explain their merger policy priorities. In addition, the agencies have issued several other guidelines for conduct, including regarding the licensing of intellectual property and regarding joint conduct. Finally, the agencies provide information regarding their enforcement activity. The agencies routinely provide explanations of the enforcement actions they take, and, in a few instances, have provided some explanation of decisions not to take enforcement actions. Moreover, they also have recently begun to provide data on merger enforcement activities.

On the whole, agency policy statements, commentary, and data on enforcement activity supplement the current Merger Guidelines, and thereby provide informative guidance to merging parties and the public regarding current enforcement policy.* Nonetheless, the Commission believes that the agencies could further improve upon their efforts, including in four specific respects, described below: (1) increase the use of closing statements explaining decisions not to challenge transactions; (2) continue regular reporting of statistics regarding merger enforcement activity; (3) update the Merger Guidelines to explain how the agencies evaluate the potential impact of a merger on innovation; and (4) update the Merger Guidelines to include an explanation of how the agencies evaluate non-horizontal mergers. While the agencies have already taken some steps toward these recommendations, the Commission concludes that further efforts in these specific areas are of particular importance.

11a. The agencies should issue "closing statements," when appropriate, to explain the reasons for taking no enforcement action, in order to enhance public understanding of the agencies' merger enforcement policy.

Both the DOJ and the FTC generally provide a statement of reasons as to why they are taking an enforcement action against a merger. If either agency seeks a preliminary injunction to block an allegedly anticompetitive merger, the complaint and subsequent pleadings will spell out the agency's concerns with the proposed transaction. Similarly, when either the FTC or the DOJ enters into a consent decree with respect to a merger, it will provide a statement explaining the reasons why the agency sought relief and how the relief resolves its concerns that the merger would otherwise be anticompetitive.[102]

The agencies often decide, after a thorough review of a proposed merger, not to seek any relief and to allow the merger to be completed. In the vast majority of cases, when either agency decides to close a merger investigation, it provides no explanation as to why it did not seek relief. In many of those investigations, the decision not to seek relief is noncontroversial; over 95 percent of mergers that are notified to the FTC or the DOJ are determined not to pose competitive problems sufficient to warrant an extended investigation.[103] Nonetheless, in the instances when the FTC or the DOJ closes the investigation of a merg-

* Commissioner Kempf does not agree with this assessment.

er after an extended investigation, the public and antitrust bar may be left to speculate why the agency declined to seek relief.

Although the agencies are not required to explain why they decided not to challenge a merger, they have in recent years issued such explanations with respect to a limited number of transactions. For example, the FTC and the DOJ have issued explanations as to why they closed investigations without seeking relief in the cruise line, airline, media, and telecommunications industries.[104] This increased use of closing statements has benefited the merging parties, interested observers, and the agencies themselves, by reducing uncertainty, increasing predictability, and promoting voluntary business compliance.

Increased issuance of such statements would further benefit the public and businesses.[105] In particular, the agencies have tended to issue closing statements in higher-profile, "close" cases for which there is keen interest from the public in the outcome. The Commission recommends that the FTC and the DOJ expand issuance of closing statements to other matters in which they undertake significant reviews of a transaction (that is, issuance of a second request along with an extended, as opposed to "quick look," investigation). Such statements need not be lengthy, and will necessarily omit details containing confidential business information.

The Commission does not recommend imposition of a requirement that the FTC and the DOJ explain why they decided not to seek relief, as advocated by some.[106] The agencies have already issued explanatory statements in many matters, and can be expected to continue to do so. Requiring a statement in all cases, however, could place burdens on the agencies and might present problems with respect to the confidentiality that the HSR Act provides to the merging parties and third parties who provide information to the agencies.[107] Leaving the publication of such statements to the discretion of the agencies leaves them free not to issue statements where the burden of doing so might be substantial. Accordingly, the Commission believes that continued encouragement of expanded efforts to issue closing statements is sufficient to improve agency transparency in this regard.

11b. The agencies should increase transparency by periodically reporting statistics on merger enforcement efforts, including such information as was reported by the Federal Trade Commission in its 2004 Horizontal Merger Investigation Data, as well as determinative factors in deciding not to challenge close transactions. These reports should emanate from more frequent, periodic internal reviews of data relating to the merger enforcement activity of the Federal Trade Commission and the Antitrust Division of the Department of Justice. To facilitate and ensure the high quality of such reviews and reports, the Federal Trade Commission and the Antitrust Division of the Department of Justice should undertake efforts to coordinate and harmonize their internal collection and maintenance of data.*

The DOJ and the FTC have recently undertaken several efforts to complement their statements on merger enforcement policy with statistical information concerning their actual enforcement activity. In 2003 the FTC and the DOJ published a report summarizing data on market structure for the horizontal mergers in which they had sought relief during Fiscal Years (FY) 1999–2003.[108] During 2004 the Federal Trade Commission published a report containing similar (and some additional) data on nearly all of the mergers it had investigated through the issuance of a second request, covering FY1996–2003.[109] In January 2007 the FTC updated this report with data through the end of FY2005.[110]

The FTC and the DOJ should continue to conduct, and make available to the public, periodic reviews of data and other statistics regarding enforcement activity. While general statements of policy provide useful guidance to business, data on actual enforcement actions provide particularly valuable insights into how the agencies actually apply the relevant policies. In combination with statements about individual cases, systematically collected data about enforcement practices—released on a regular (for example, a biennial or triennial) basis—can provide additional valuable transparency regarding agency enforcement practices.[111] Such data collection and publication would be most useful if it focuses on the key considerations that govern whether the agency takes an enforcement action.[112] Among other things, it will help supplement the Guidelines' information on the concentration levels used as screens and information on the levels of concentration that actually draw challenges.

The Commission's recommendation contemplates that the agencies will regularly engage in careful internal reviews of data regarding enforcement activity. However, not all such reviews need be released publicly. Rather, more frequent internal reviews could form the basis

* Commissioner Kempf does not join this recommendation.

for less frequent, but regular public reports. Keeping the reviews internal in most cases will permit the agencies to focus resources on broadening their data analysis to determine whether there are new trends in their enforcement practices, rather than devoting energy to preparing frequent reports for public review. In addition, it will permit the agencies to focus their public releases on the data and analysis that are most likely to improve public understanding of the key variables driving agency enforcement practice.

Finally, the Commission is concerned that current efforts to develop such data may be hindered by differences in the data collection and retention policies followed by each agency. The ability of the agencies to discern trends and provide meaningful information to the public, particularly in a form that permits useful comparisons between the approach each agency takes, requires consistency in the data and other information retained. As part of undertaking studies of this type, the agencies will inevitably identify ways in which they retain data and other information differently. The Commission encourages the agencies to undertake efforts to adopt a common approach to and standards for retention of data and other information about their enforcement activities.[113]

11c. The agencies should update the Merger Guidelines to explain more extensively how they evaluate the potential impact of a merger on innovation.*

The ability to increase innovation is a significant reason for some mergers, as explained above. However, the current Merger Guidelines offer little explanation as to how the agencies will analyze the claims of parties that a merger will enhance their ability to innovate and how the agencies will balance a predicted increase in innovation with potential anticompetitive effects from the merger. Indeed, the only mention of innovation is in a passing reference in a footnote.[114] The agencies have provided limited guidance on these issues through actions in individual matters, albeit in large part because the issue is not presented squarely in many investigations.

The agencies should update the Merger Guidelines to provide more extensive discussion regarding how they evaluate the competitive effects of a merger on innovation. As explained above, innovation is extremely important to economic welfare, and it is important for the agencies to articulate clearly how they analyze the effects of a merger on innovation.[115] The Commission recognizes that there remains a need for additional learning regarding innovation.[116] However, it believes that the agencies have sufficiently considered the issues involved to produce useful guidelines in this area.

* Commissioners Carlton and Kempf do not join this recommendation.

11d. The agencies should update the Merger Guidelines to include an explanation of how the agencies evaluate non-horizontal mergers.*

Horizontal mergers involve a merger between two companies that generally compete with each other to sell products in the same markets. Vertical (or non-horizontal) mergers, in comparison, occur between two companies in a distribution chain, where one company sells an input to the second company's business in a "vertical" relationship. The analysis of each type of merger differs substantially (mergers may present both horizontal and vertical "issues"). ("Conglomerate" mergers, which are neither horizontal nor vertical, generally do not raise antitrust issues.)

The 1982 Merger Guidelines contained a section addressing non-horizontal mergers, including vertical mergers and mergers raising potential competition concerns.[117] These provisions were also included in the 1984 Merger Guidelines. However, subsequent Guidelines revisions in 1992 and 1997 did not include the non-horizontal mergers section, although the agencies did not formally abandon that part of the 1984 Guidelines.[118] Significant thinking regarding vertical mergers has taken place since then, but the Guidelines have not been updated or separate guidelines issued to address non-horizontal mergers.

The existing Merger Guidelines have brought significant transparency to the business community and antitrust bar as to how the agencies evaluate horizontal mergers. Businesses and antitrust practitioners would benefit greatly from a similar statement of how the agencies assess the competitive effects of vertical mergers.[119] While the issues are challenging, providing an explanation of how the agencies undertake analysis in non-horizontal mergers would supply beneficial transparency.

* Commissioner Kempf does not join this recommendation.

53 *Id.*

54 *Id.*

55 *Id.* The Guidelines provide that the agencies may also take into consideration efficiencies that do not have a "short-term, direct effect on prices in the relevant market." *Id.* § 4 n.37. The Guidelines call for giving such savings less weight because they are "less proximate and more difficult to predict." *Id.*

56 *Id.* § 4 n.37.

57 *Id.* § 4 (footnote omitted)

58 *See, e.g.*, Prof. Jonathan Baker, Statement at AMC Merger Enforcement Hearing, at 1 (Nov. 17, 2005); Merger Enforcement Trans. at 120 (Baker) ("[T]here's no serious problem involving efficiencies in merger analysis that would call for intervention by your Commission, and . . . in particular, there's no need to recommend any legislation to address anything concerning efficiencies."); George S. Cary, Statement at AMC Merger Enforcement Hearing, at 2 (Nov. 17, 2006) [hereinafter Cary Statement] ("The Agencies, by and large, have taken appropriate account of efficiencies in deciding whether to challenge mergers, and the courts have done quite well in evaluating efficiency arguments in litigation."); Merger Enforcement Trans. at 116 (Cary) ("[A]fter eight years of seeing the Guidelines in action . . . it's my view that the basic trade-offs made in the Guidelines were right. . . . the process of actually doing the efficiency analysis that is set forth in the Guidelines is more manageable and more administrable than one might have thought going into the process of creating the Guidelines' analysis in the first place."); Baer Statement, at 12 ("The 1997 amendments to the Merger Guidelines in my view handle efficiencies appropriately.") (footnote omitted); Rill Statement, at 14–16 (the Merger Guidelines provide a proper approach to analyzing efficiencies); *see also* Kolasky & Dick, *The Merger Guidelines and the Integration of Efficiencies*, at 207–10.

Others believe the agencies should give more credit to efficiencies. *See* Charles F. (Rick) Rule, Statement at AMC Merger Enforcement Hearing, at 13 (Nov. 17, 2005) [hereinafter Rule Statement re Merger Enforcement] ("To the extent that merger enforcement continues to focus exclusively on price effects (and reductions in consumer surplus) and ignores the way in which increases in productive efficiency benefit consumers as whole even when such increases generate producer surplus, the thresholds for identifying anticompetitive mergers are likely to be too low and the explicit *and* implicit treatment of productive efficiencies is likely to be too limited."); American Bar Association, Section of Antitrust Law, Public Comments Submitted to AMC Regarding Efficiencies, at 1 (Nov. 10, 2005) [hereinafter ABA Comments re Efficiencies] (stating that the 1997 revisions to the Merger Guidelines "clarified and improved the [agencies'] treatment of efficiencies in merger review," while suggesting improvements in the treatment of efficiencies that result in "substantial reductions in fixed costs" or "development of new products").

59 Kenneth Heyer, Statement at AMC Merger Enforcement Hearing, at 2–3 (Nov. 17, 2005) [hereinafter Heyer Statement] ("[T]he Merger Guidelines underscore the central role of efficiencies in the evaluation of the likely competitive effects of proposed mergers. . . . There is simply no way to evaluate whether a merger will give the merged firm the ability and incentive to raise prices, either unilaterally or in coordination with other firms, without examining the efficiencies a merger may produce."); *see* Michael A. Salinger, Statement at AMC Merger Enforcement Hearing, at 2 (Nov. 17, 2005) [hereinafter Salinger Statement] ("As the merger guidelines have developed through their various iterations, efficiencies have moved, in

part, from a possible 'defense' to part of an integrated analysis of competitive effects."); Scheffman Statement, at 10 (suggesting that standard of proof required by agencies in efficiency analysis is "sometimes unrealistic").

[60] *See, e.g.*, Rill Statement, at 14 ("The Merger Guidelines do not preclude recognition of longer-term cost savings that are demonstrable and merger specific."); *see also* Merger Enforcement Trans. at 107 (Heyer) ("We actually need some evidence to support the fact that there may be efficiencies from what might otherwise be a troublesome merger . . . ."); Salinger Statement, at 4 ("[W]e cannot conclude that a merger will generate efficiencies simply because the parties say it is so. Mere assertion is not proof or even, by itself, supporting evidence."). *But see* Merger Enforcement Trans. at 84–85 (Scheffman) (efficiencies claims are "speculative," but so are predictions of anticompetitive effects).

[61] Cary Statement, at 8–9 ("Requiring the party with greater access to information to come forward with evidence of a proposition that is helpful to its position is not at all unusual in antitrust cases generally or merger cases particularly."); *see* Heyer Statement, at 4 ("[T]he information needed to make an informed and reasoned judgment about such claims is almost always uniquely in the hands of the merging parties. We cannot verify efficiency claims without their cooperation.").

[62] Some assert that enforcement could be more aggressive without limiting merger-related efficiency gains. *See* AAI Comments re Merger Enforcement, at 3, 6–7 (citing economic literature suggesting many mergers do not increase market value or ultimately provide efficiency gains); *id.* at app. 19–20 (Statement of AAI on Horizontal Mergers and the Role of Concentration in the Merger Guidelines); F.M. Scherer, Public Comments Submitted to AMC, at 1–3 (Mar. 1, 2006); *see also* Economists' Roundtable Trans. at 72 (Rubinfeld) (opining that many mergers reviewed by the DOJ during his tenure as the Economics Deputy were bad for the company but pursued due to "the stupidity or the egos of the CEOs of the two companies"); Charles D. Weller, Public Comments Submitted to AMC Regarding Merger Enforcement, at 2–3 (July 16, 2005) (arguing that most mergers are not successful).

Others argue that enforcement could be less aggressive by pointing to economic literature suggesting few mergers are undertaken to enhance market power, and rather are generally driven by efficiencies. *See* Economists' Roundtable Trans. at 22–28 (Kaplan); Prof. Steven N. Kaplan, Statement at AMC Economists' Roundtable on Merger Enforcement, at 13–15 (Jan. 19, 2006) (economics literature, based on a number of stock-market "event" studies on mergers, suggests that mergers seldom increase market power and, on average, increase the total economic value of the parties).

[63] Rill Statement, at 14 ("'[A]n arbitrary exclusion of fixed costs from cognizable efficiencies is unwarranted because savings in fixed costs may affect competition and have an ultimate downward effect on price.'") (quoting FEDERAL TRADE COMM'N STAFF REPORT, ANTICIPATING THE 21ST CENTURY: COMPETITION POLICY IN THE NEW HIGH-TECH GLOBAL MARKETPLACE, ch. 2, at 34; Rule Statement re Merger Enforcement, at 13 ("Consumer welfare benefits from fixed cost savings just as much as variable savings."); Merger Enforcement Trans. at 86 (Scheffman) (courts should consider fixed-cost efficiencies and "things that fall into this pass-through trap"); IBA Comments re Merger Enforcement, at 47–48 ("For example, industries with significant R&D investments may have pricing unrelated to marginal cost, but rather geared towards recouping large investments in fixed costs. Large fixed cost efficiencies in such industries can directly affect price and should be given greater consideration where appropriate."); ABA Comments re Efficiencies, at 6 ("[W]here fixed cost savings in a merger have the potential to lead to lower prices or will lead to reduced allocations of direct, shared or common fixed costs that are incorporated in the economic justifications underlying such investment decisions, fixed cost savings should be accorded specific credit in evaluating the benefits of the proposed merger or acquisition.").

[64] AAI Comments re Merger Enforcement, at 8–9 (footnotes omitted). *But see* Merger Enforcement Trans. at 110 (Salinger) (claims of overhead savings are often properly rejected, not because they are fixed costs (which they are not), but because overhead costs tend to bear the same ratio to total expenses for both large and small companies, meaning a merger will not likely create savings in such costs); *see also id.* at 128 (Salinger) ("[O]n the pass-through, we make a distinction between fixed-cost savings and marginal-cost savings, because we operate under a consumer welfare standard.").

[65] DOJ/FTC Horizontal Merger Guidelines, § 4 & n.37.

[66] *Id.* § 4 n.37. The Guidelines do not rule out taking account of longer-run efficiencies; ordinarily, however, "the result of [the Agency's] analysis over the short term will determine the Agency's enforcement decision in most cases. The Agency also will consider the effects of cognizable efficiencies with no short-term, direct effect on prices in the relevant market." *Id.*

[67] Over the longer run, costs that are at one time fixed (or sunk) become variable. Thus, savings in such costs could lower prices. *See, e.g.*, William J. Kolasky, The Role of Economics in Merger Enforcement: Efficiencies and Market Definition under Conditions of Price Discrimination, Presented at Charles River Associates Conference: Current Topics in Merger & Antitrust Enforcement, at 10 (Dec. 11, 2002) ("[F]ixed cost savings matter. . . . First, which costs are variable depends in part on how long our time horizon is. With a longer horizon, costs that might otherwise appear fixed may indeed impact marginal pricing decisions."); Michael L. Katz & Howard A. Shelanski, *Mergers and Innovation*, 74 Antitrust L.J. 1, 55 (2007) [hereinafter Katz & Shelanski, *Mergers and Innovation*] ("[I]t is important to remember that, over a long enough time horizon, everything is variable.").

[68] Cary Statement, at 12; *see* Prof. Daniel L. Rubinfeld, Statement at AMC Economists' Roundtable on Merger Enforcement, at 4 (Jan. 19, 2006) [hereinafter Rubinfeld Statement] ("[M]any firms have relatively high price-cost margins, yet little or no market power in the antitrust sense. This is particularly true in high-fixed cost, low variable cost industries, including high technology, where incremental costs are low and profit margins are high (to cover the fixed costs).").

[69] Cary Statement, at 12 ("Competition takes the form of expenditures in R&D designed to differentiate the product from those of rivals and to increase the value of the product in terms of enhanced productivity for customers. In such a market, efficiencies that reduce already trivial marginal costs are irrelevant. . . . For example, even a small increase in the productivity of an oil refinery through better computer modeling can be worth hundreds of millions of dollars a year.").

[70] Morse Statement, at 4; *see also* New Economy Trans. at 22 (Morse) ("[I]t is just such efficiencies from the combination of complementary expertise, while not easily measured, that drive many transactions and have great potential consumer benefit.").

[71] *See* Richard Gilbert, *Looking for Mr. Schumpeter: Where Are We in the Competition-Innovation Debate?*, *in* 6 Innovation Policy and the Economy 159 (Adam B. Jaffe et al. eds., 2006) [hereinafter Gilbert, *Looking for Mr. Schumpeter*]; *see also* Katz & Shelanski, *Mergers and Innovation*, at 1 ("Policymakers and economists strongly agree that innovation is a critical component of a sustained healthy economy.").

[72] Gilbert Statement, at 14.

[73] Gilbert Statement, at 14; *cf.* Morse Statement, at 7 (emphasizing "notoriously expensive and risky" investments required in the pharmaceutical industry, including the high percentage of "dry wells"); John E. Osborn, Statement at AMC New Economy Hearing, at 4–5 (Nov. 8, 2005) [hereinafter Osborn Statement].

[74] New Economy Trans. at 18 (Osborn). Mr. Osborn explained that mergers enable "research-stage" firms with an innovative product to combine with commercial-stage firms that have critical expertise (for example, regulatory, clinical, marketing, sales, or medical) necessary to develop a product, gain FDA approval, and commercialize a product. New Economy Trans. at 16–17 (Osborn); *see also* Osborn Statement, at 4–6 (Nov. 8, 2005) (companies must deal with high development costs and high probabilities that products will ultimately not be developed or commercially successful). *But see* New Economy Trans. at 92 (Shapiro) (must consider alternative ways that the smaller firm might have commercialized the technology).

[75] *See* ABA Comments re Guidelines, at 4 ("[T]he costs of short-term anticompetitive pricing can quickly be overwhelmed by the benefits provided by even small efficiencies, as these benefits can be expected to be long-lived and potentially widely distributed.").

[76] DOJ/FTC Horizontal Merger Guidelines, § 4. Moreover, "delayed benefits from efficiencies (due to delay in the achievement of, or the realization of consumer benefits from, the efficiencies) will be given less

weight because they are less proximate and more difficult to predict." *Id.* § 4 n.37.

77 New Economy Trans. at 18, 44 (Osborn) (investigating staff tended "to resolve uncertainties against the proposed merger" without "putting a lot of value on the consumer benefits" from innovation); Osborn Statement, at 3–4.

78 ABA Comments re Guidelines, at 2.

79 *See* ABA Comments re Guidelines, at 4 ("[G]iven the importance of innovation to the economy's overall productivity . . . there might well be benefit in expanding the efficiencies that are recognized to include those that allow the combined firm to conduct R&D more efficiently . . . ."); *see also* Morse Statement, at 4–5; Osborn Statement, at 3.

80 *See* Daniel Cooperman Statement at AMC New Economy Hearing, at 1 (Nov. 8, 2005) (due to the rapid nature of innovation in the software industry, "a procompetitive transaction that is delayed [by merger review] may be derailed altogether").

Chapter I.C
Exclusionary Conduct

1. INTRODUCTION

Section 2 of the Sherman Act outlaws conduct, joint or by a single firm, to "monopolize, or attempt to monopolize . . . any part of the trade or commerce among the several States."[1] The law directs itself to improper conduct, not the possession of a monopoly. Section 2 does not prohibit firms from having monopoly power in a relevant market or from charging monopoly prices.[2] Rather, it prohibits conduct that improperly maintains or facilitates acquiring, or attempting to acquire, a monopoly.

How to evaluate single-firm conduct under Section 2 poses among the most difficult questions in antitrust law. Appropriate antitrust enforcement must distinguish aggressive competition that benefits consumers, such as most price discounting, from conduct that tends to destroy competition itself, and thus maintains, or facilitates acquiring, monopoly power. The Supreme Court has defined improper "exclusionary" conduct under Section 2 to "comprehend[] at the most behavior that not only (1) tends to impair the opportunities of rivals, but also (2) either does not further competition on the merits or does so in an unnecessarily restrictive way."[3] Thus, a crucial distinction in Section 2 enforcement entails whether a firm's conduct represents competition on the merits or improper "exclusionary" conduct.

To ask whether a firm's conduct is "exclusionary" is not sufficient to make this determination. After all, companies routinely attempt to "exclude" competitors from the market simply by producing the best quality product at the lowest price. Accordingly, an observation that a particular firm's conduct "excludes" its competitor does not answer whether the conduct is harmful to competition or just to the firm's competitor. Antitrust law is concerned with harm to competition, not particular competitors.

In addition, a firm may achieve monopoly power through competition on the merits. Judge Learned Hand long ago pointed out that a "single producer may be the survivor out of a group of active competitors, merely by virtue of his superior skill, foresight and industry. . . . The successful competitor, having been urged to compete, must not be turned upon when he wins."[4]

The Commission examined whether the substantive standards for evaluating alleged anticompetitive conduct under Section 2 should be revisited, and, if so, whether improvements could best be achieved through legislation or case law development. In recent decades the courts have adopted and applied sound general principles for Section 2 enforcement. These general principles emphasize that appropriate legal rules should identify unreasonably exclusionary conduct, without discouraging aggressive competition that benefits consumers or creating excessive litigation and compliance costs for businesses and problems of administrability for courts. The use of these principles has assisted courts in developing appropriate tests to identify when certain types of conduct, such as predatory pricing, are unreasonably exclusionary.

Section 2 standards are not fully developed with respect to all types of conduct, however. In particular, the Commission focused on two types of conduct that have been the subject of recent court decisions and ongoing debate. One type of conduct involves the sale of products bundled together at a discount from their prices when purchased separately. Widespread agreement exists that discounts offered for bundled products (for example, "meal deals" combining a hamburger and a soda) often benefit consumers. Economic theories suggest, however, that in certain circumstances a firm may be able to use discounts on bundled products to obtain or maintain a monopoly by excluding rivals, or otherwise harm consumers, on some basis other than competition on the merits. A recent decision by the United States Court of Appeals for the Third Circuit that upheld a finding of Section 2 liability for discounts on bundled products, *LePage's v. 3M*, has provoked criticism and argument about the circumstances in which bundled discounts could violate Section 2.[5]

The second type of conduct involves a firm's refusal to deal with its rival in the same market. In 1919 the Supreme Court confirmed the right of a firm to make its own decisions about the business entities with which it will deal, absent "any purpose to create or maintain a monopoly."[6] Whether—and, if so, when—a firm's refusal to deal with its rival may violate Section 2 has long troubled antitrust courts and commentators. The Commission studied this issue in light of the Supreme Court's recent decision in *Verizon Communications, Inc. v. Law Offices of Curtis V. Trinko LLP.*[7]

The Commission also examined the question of whether courts should apply a presumption of market power for patents in tying cases, a question that the Supreme Court has recently resolved, as well as whether such a market-power presumption should be applied to copyrights or trademarks in tying cases.

The Commission's study and analysis lead it to make the following recommendations.

12. In general, standards for applying Section 2 of the Sherman Act's broad proscription against anticompetitive conduct should be clear and predictable in application, administrable, and designed to minimize overdeterrence and underdeterrence, both of which impair consumer welfare.

13. Congress should not amend Section 2 of the Sherman Act. Standards currently employed by U.S. courts for determining whether single-firm conduct is unlawfully exclusionary are generally appropriate. Although it is possible to disagree with the decisions in particular cases, in general the courts have appropriately recognized that vigorous competition, the aggressive pursuit of business objectives, and the realization of efficiencies not available to competitors are generally not improper, even for a "dominant" firm and even where competitors might be disadvantaged.

14. Additional clarity and improvement are best achieved through the continued evolution of the law in the courts. Public discourse and continued research will also aid in the development of consensus in the courts regarding the proper legal standards to evaluate the likely competitive effects of bundling and unilateral refusals to deal with a rival in the same market.

15. Additional clarity and improvement in Sherman Act Section 2 legal standards are desirable, particularly with respect to areas where there is currently a lack of clear and consistent standards, such as bundling and whether and in what circumstances (if any) a monopolist has a duty to deal with rivals.

16. The lack of clear standards regarding bundling, as reflected in *LePage's v. 3M*, may discourage conduct that is procompetitive or competitively neutral and thus may actually harm consumer welfare.

17. Courts should adopt a three-part test to determine whether bundled discounts or rebates violate Section 2 of the Sherman Act. To prove a violation of Section 2, a plaintiff should be required to show each one of the following elements (as well as other elements of a Section 2 claim): (1) after allocating all discounts and rebates attributable to the entire bundle of products to the competitive product, the defendant sold the competitive product below its incremental cost for the competitive product; (2) the defendant is likely to recoup these short-term losses; and (3) the bundled discount or rebate program has had or is likely to have an adverse effect on competition.*

18. In general, firms have no duty to deal with a rival in the same market.†

19. Market power should not be presumed from a patent, copyright, or trademark in antitrust tying cases.

* Commissioners Carlton and Garza join this recommendation with qualifications.

† Commissioners Jacobson and Shenefield join this recommendation with qualifications.

2. BACKGROUND

A. General Standards

Section 2 of the Sherman Act forbids "monopolization" and "attempted monopolization" (as well as combinations and conspiracies to monopolize) of any part of the trade or commerce of the United States.[8] The classic statement of unlawful monopolization is found in *United States v. Grinnell Corp.*:

> The offense of monopoly under § 2 of the Sherman Act has two elements: (1) the possession of monopoly power in the relevant market; and (2) the willful acquisition or maintenance of that power as distinguished from growth or development as a consequence of a superior product, business acumen, or historic accident.[9]

The Supreme Court has defined "monopoly" power as the power to "control prices or exclude competition."[10] In general, "monopoly" power is treated as "substantial market power."[11] Modern economics generally defines "market power" as "the ability to raise prices above a competitive level *without suffering an immediate and unprofitably substantial loss of sales*,"[12] thus emphasizing that the power to control price or exclude competition must have some degree of durability to constitute market power of concern to antitrust law. A plaintiff may prove a defendant's possession of monopoly power through direct evidence of the defendant's actual control over price or exclusion of competition within a relevant market, or through indirect evidence, most typically a defendant's high market share and barriers to entry that make challenge to the defendant's market position unlikely.[13]

After establishing the defendant's monopoly power, a plaintiff must prove the monopolist has obtained or maintained its dominant position through unlawful exclusionary or predatory conduct.[14] As the Supreme Court stated in *Spectrum Sports, Inc. v. McQuillan*, the Sherman Act "directs itself not against conduct which is competitive, even severely so, but against conduct which unfairly tends to destroy competition itself."[15] Courts and commentators have often found it easier to identify conduct that is not or should not be unlawful under Section 2 than to identify conduct that Section 2 does prohibit. For example, two of the most commonly cited articulations explain that Section 2 is *not* violated by either "growth or development as a consequence of a superior product, business acumen, or historic accident"[16] or conduct attributable to "superior skill, foresight and industry."[17] Attempts to develop more definitive standards have evolved over time.

B. Definitions of "Exclusionary" Conduct

A variety of factors, including changing perspectives on the significance of monopoly power, have influenced courts' views on the scope of conduct that should be considered potentially exclusionary. In the mid-twentieth century, courts evidenced deep concern about the dangers of monopoly power. The opinion of Judge Learned Hand in *United States v. Aluminum Co. of America* provides the best-known expression of this attitude:

> Many people believe that possession of unchallenged economic power deadens initiative, discourages thrift and depresses energy; that immunity from competition is a narcotic, and rivalry is a stimulant, to industrial progress; that the spur of constant stress is necessary to counteract an inevitable disposition to let well enough alone.[18]

In *Alcoa* the Second Circuit held that a firm with 90 percent of the market for virgin ingot aluminum had violated Section 2 by repeatedly building new capacity to serve new demand in that market, thus discouraging its rivals from expanding their existing capacity or entering with new capacity.[19] In the court's view, "[i]t was *not inevitable* that [Alcoa] should always anticipate increases in the demand for ingot and be prepared to supply them."[20]

The Supreme Court quickly endorsed this expansive view of exclusionary conduct.[21] The question of whether the challenged conduct was "inevitable" appeared in other cases as well.[22] With such a broad scope of conduct that might be viewed as exclusionary, the government pursued and won several monopolization cases over the next few decades.[23] This aggressive view of the law reached its zenith in the 1970s, with proposals from well-regarded antitrust practitioners and scholars that proof of monopoly itself should be sufficient to establish a violation of Section 2.[24]

Questions about this approach arose with increasing frequency during the 1960s and 1970s, however, as developments in economic analysis spurred antitrust scholars to examine more closely what types of incentives encouraged vigorous competition and how certain business practices might benefit, rather than harm, consumers.[25] Commentators questioned the bases of many prior court decisions, including *Alcoa*, asking, for example, whether antitrust law should require a firm with a dominant position not to compete to serve new demand.[26] Courts and commentators began to reexamine whether the standards for exclusionary conduct were likely actually to discourage aggressive competition that could benefit consumers.[27]

One of the first court decisions to evidence this shifting attitude was *Berkey Photo, Inc. v. Eastman Kodak Co.*[28] The defendant, Eastman Kodak, sold cameras and held a monopoly in the film market; the plaintiff, Berkey Photo, sold cameras and also competed with Kodak in other photo-related services. When Kodak introduced a new kind of film compatible with only one of Kodak's cameras, Berkey alleged that Kodak had violated Section 2 by failing to give Berkey advance notice of the new product design so that Berkey could develop its own cameras to handle the new Kodak film. The Second Circuit reversed the jury verdict in Berkey's favor, holding that "a firm may normally keep its innovations secret from its rivals as long as it wishes, forcing them to catch up on the strength of their own efforts after the new product is introduced."[29] The court emphasized that firms' incentives to innovate rested on the prospect of market success:

> It is the possibility of success in the marketplace, attributable to superior performance, that provides the incentives on which the proper functioning of our competitive economy rests. If a firm that has engaged in the risks and expenses of research and development were required in all circumstances to share with its rivals the benefits of those endeavors, this incentive would very likely be vitiated.[30]

Unlike the Second Circuit's decision in *Alcoa*, which associated *existing* monopoly power with deadened initiative and competition, the Second Circuit's decision in *Berkey Photo* used a wider lens to see how *the prospect of market success* spurred competition and innovation. This perspective has been preeminent in recent decades.[31]

Most recently, the Supreme Court expressed the view in *Trinko* that the "prospect of market success" includes the prospect of obtaining monopoly power:

> The mere possession of monopoly power, and the concomitant charging of monopoly prices, is not only not unlawful; it is an important element of the free-market system. The opportunity to charge monopoly prices—at least for a short period—is what attracts 'business acumen' in the first place; it induces risk taking that produces innovation and economic growth.[32]

This view—that the prospect of gaining monopoly is an appropriate incentive for competition and innovation—implies that the application of overly stringent antitrust rules for monopolists' conduct could discourage competition and innovation. Some disagree, pointing to economic studies that either suggest monopoly affirmatively discourages innovation[33] or are ambiguous as to whether monopoly power encourages innovation.[34]

Courts have also increasingly scrutinized the potential for consumers to benefit from precisely the type of conduct once commonly condemned as exclusionary. The theory of predatory pricing, for example, involves a company selling its product at very low prices to force its competitors out of business, and then raising its prices to a supracompetitive level that enables it to recoup its losses and earn monopoly profits. Thus, the first step in a predatory pricing scheme is to sell at low prices—something that generally benefits consumers. As the Supreme Court has observed, if a court erroneously concludes that a firm has engaged in illegal predatory pricing, "the costs of [such] an erroneous finding of liability are high"[35] because firms may be reluctant to cut prices aggressively if they fear predatory pricing allegations. Overdeterrence could harm consumers.

In addition, courts have carefully examined the likelihood that an alleged exclusionary scheme could succeed. In *Matsushita Electric Industrial Co. v. Zenith Radio Corp.* the Supreme Court joined commentators who had concluded that "predatory pricing schemes are rarely tried, and even more rarely successful."[36] The reasons for this skepticism include the speculative nature of the scheme: it requires a firm to forgo definite profits in the short run, in hopes that competitors will leave the market and allow the firm, in the long run, to reap monopoly profits sufficient to make up for its prior losses and provide significant gains for the future.

The improbability of predatory pricing schemes, combined with the certainty that lower prices benefit consumers, persuaded the Supreme Court to select a test that may fail to capture all instances of predatory pricing, but will not incorrectly condemn price discounting.[37] This test excludes the possibility that above-cost pricing could constitute price predation. The Court cited the difficulty that courts would have determining just *how much* above cost a defendant's prices must be to avoid liability for predatory pricing, as well as the Court's concern that the possibility of such liability would chill aggressive price cutting.[38]

The adoption of a "safe harbor" in the area of predatory pricing also illustrates courts' desire to adopt bright-line legal rules that businesses can understand and follow with relatively little difficulty. This issue has become increasingly important as economic understandings of business conduct have become more sophisticated, and courts have struggled to take into account a wide variety of factors that may be relevant to judging the likely competitive effects of a particular business practice. Then-Judge (current Justice) Breyer explained the need for simplifying rules more than two decades ago:

> [W]hile technical economic discussion helps to inform the antitrust laws, those laws cannot precisely replicate the economists' (sometimes conflicting) views. For, unlike economics, law is an administrative system the effects of which depend upon the content of rules and precedents only as they are applied by judges and juries in courts and by lawyers advising their clients. Rules that seek to embody every economic complexity and qualification may well, through the vagaries of administration, prove counter-productive, undercutting the very economic ends they seek to serve.[39]

Particularly in the context of Section 2 predatory pricing enforcement—where overdeterrence may deprive consumers of the benefits of aggressive competition—courts have been increasingly willing to adopt potentially underinclusive, but simple and objective cost-based legal rules.

This is not to say, however, that developments in the understanding of monopolizing conduct have all tended to restrict potential liability for such conduct. There have been a number of recent Section 2 cases in which liability was found. *Microsoft*, for example, is the most prominent Section 2 case in the last decade. In that case the United States Court of Appeals for the District of Columbia Circuit upheld portions of the lower court's ruling that Microsoft had engaged in various forms of unreasonably exclusionary conduct in maintaining its operating system monopoly.[40] The court held that the evidence established that Microsoft had engaged in various forms of anticompetitive conduct to prevent its rival, Netscape, from attaining a market position from which Netscape could challenge Microsoft's monopoly of Intel-compatible PC operating systems.[41] The case ultimately was settled by consent decree.[42]

The Federal Trade Commission (FTC) recently investigated and filed complaints against two companies that allegedly achieved monopoly power through unreasonably exclusionary conduct. In *Unocal* the FTC alleged that Unocal falsely represented to a government panel that Unocal's technologies were nonproprietary, when it knew it held patents on these technologies,[43] and that Unocal thereby was able to obtain monopoly power over certain gasoline formulas dictated by government regulation.[44] The matter was ultimately settled by consent decree in connection with another firm's acquisition of Unocal.[45]

In *Rambus* the FTC recently held that Rambus illegally monopolized certain technologies required for computer memory. The FTC concluded that Rambus exploited its participation in a standard-setting organization to obtain patents that would cover technologies incorporated into the standards adopted by the organization, without revealing its patent position to other members of the standard-setting organization. As a result, the FTC stated, Rambus was able to "distort the standard-setting process" and unlawfully gain monopoly power in the computer memory industry.[46]

Some degree of controversy has surrounded each of these cases, illustrating the ongoing debate in the antitrust community about the proper role of, and legal standards for, Section 2 enforcement. The Commission discusses some of the issues in this debate below.

3. RECOMMENDATIONS AND FINDINGS

As discussed below, the Commission concludes that, compared to legal standards in the mid-twentieth century, the Supreme Court has now adopted and is applying legal standards and rules for Section 2 that are more sensitive to the possible efficiencies of business conduct and more attuned to the potential for consumer harm from overly stringent application of Section 2 standards in some cases. This represents progress.

This Part discusses the general principles underlying Section 2 enforcement below, as well as tests that have been proposed for general use in identifying exclusionary conduct. It then turns to specific observations about the need to develop improved legal standards to evaluate discounts for bundled products and refusals to deal with a rival in the same market.

A. General Principles for Section 2 Standards

12. In general, standards for applying Section 2 of the Sherman Act's broad proscription against anticompetitive conduct should be clear and predictable in application, administrable, and designed to minimize overdeterrence and underdeterrence, both of which impair consumer welfare.

13. Congress should not amend Section 2 of the Sherman Act. Standards currently employed by U.S. courts for determining whether single-firm conduct is unlawfully exclusionary are generally appropriate. Although it is possible to disagree with the decisions in particular cases, in general the courts have appropriately recognized that vigorous competition, the aggressive pursuit of business objectives, and the realization of efficiencies not available to competitors are generally not improper, even for a "dominant" firm and even where competitors might be disadvantaged.

In recent decades, more often than not, courts have used appropriate caution in assessing single-firm conduct. Courts have relied on general principles, including those that follow, to guide the development and application of rules for Section 2 enforcement. The use of these principles has benefited and encouraged appropriate antitrust enforcement.

Section 2 standards should be clear and predictable in application and administrable. The area of predatory pricing law provides the best example of success in achieving these goals. In *Brooke Group* the Supreme Court established an objective, cost-based test that first requires a predatory pricing plaintiff to prove that the alleged predatory prices are below an appropriate measure of the defendant's costs.[47] This rule is relatively clear, predictable, and administrable. The Court's test further requires predatory pricing plaintiffs to demonstrate that the defendant "had a reasonable prospect, or, under Section 2 of the Sherman Act, a dangerous probability, of recouping its investment in below-cost prices."[48] This part of the test not only ensures that a Section 2 violation is found only if consumer welfare can be harmed, but also enhances administrability for the courts by allowing summary disposition of claims where market circumstances—such as easy entry—preclude the possibility of recoupment.[49]

The Supreme Court has taken other steps as well to enhance the administrability of predatory pricing litigation. In *Matsushita* the Court affirmed summary judgment for the defendant, refusing to allow the case to go to trial based on ambiguous evidence, which included rebates and other price-cutting activities that the plaintiff alleged tended to prove a conspiracy to suppress prices.[50] The Court explained that "cutting prices in order to increase business often is the very essence of competition."[51] To avoid summary judgment, the Court required the plaintiffs to produce evidence that "tends to exclude the possibility" that the challenged conduct was permissible competition that did not involve a conspiracy.[52] This comparatively clear and administrable rule has enabled courts to avoid costly and extensive litigation based solely on evidence from which inferences of permissible competition and anticompetitive joint conduct were equally plausible.

Section 2 standards should be designed to minimize overdeterrence and underdeterrence, both of which impair long-run consumer welfare. At least two observations underlie this general principle. One is that business practices typically offer more efficiencies and, thus, benefits to consumer welfare, than recognized in the early-to-mid-twentieth century. A second observation is that aggressive competition on the merits may resemble unreasonably exclusionary conduct. As discussed earlier, for example, price discounting may appear the same as predatory pricing.

These observations have given courts a better understanding that, like underdeterrence, overdeterrence also can harm consumer welfare. Thus, it is important to consider whether proposed legal rules are likely to chill procompetitive conduct or create unintended consequences. For example, the Supreme Court has observed that "[i]t would be ironic indeed if the standards for predatory pricing liability were so low that antitrust suits themselves became a tool for keeping prices high."[53]

The recognition of potential consumer harm from overdeterrence has led courts to try to avoid "false positives"—that is, finding Section 2 liability for a firm that has not engaged in unreasonably exclusionary conduct, but instead was simply competing aggressively on the merits.[54] Nonetheless, it remains important to avoid underdeterrence that results in "false negatives"—that is, failing to condemn anticompetitive conduct—when the challenged conduct typically provides few or no benefits to consumer welfare and does not resemble competition on the merits.[55] In an ideal world, of course, legal rules would avoid both underdeterrence and overdeterrence. In practical reality, however, such precision is often difficult to achieve. Thus, courts may need to make a trade-off between accuracy and the risks of either chilling procompetitive, or encouraging anticompetitive, conduct.

B. Further Development of Section 2 Standards

1. Continued Case Law Development in the Courts

14. Additional clarity and improvement are best achieved through the continued evolution of the law in the courts. Public discourse and continued research will also aid in the development of consensus in the courts regarding the proper legal standards to evaluate the likely competitive effects of bundling and unilateral refusals to deal with a rival in the same market.

As noted earlier, the Supreme Court defined improper "exclusionary" conduct under Section 2 to "comprehend[] at the most behavior that not only (1) tends to impair the opportunities of rivals, but also (2) either does not further competition on the merits or does so in an unnecessarily restrictive way."[56] This articulation improves on earlier analysis asking whether the conduct at issue was "inevitable," but it begs the question of what specific types of conduct in what circumstances should be considered "competition on the merits." This issue has precipitated much debate and discussion.

The appropriate legal standards should continue to evolve in the courts, with continuing sensitivity to the need to avoid chilling procompetitive conduct and undue enforcement costs. The federal enforcement agencies should use appropriate opportunities to aid development of the law.[57] The FTC and the Antitrust Division of the Department of Justice (DOJ) are currently soliciting comments and holding hearings on Section 2 standards,[58] and the FTC is co-chairing the International Competition Network Unilateral Conduct Working Group, which plans to conduct an in-depth study of the issue over the next several years. The Commission is hopeful that those research efforts will prove useful.

2. Tests for Particular Types of Conduct or a Single Test for All Conduct

15. Additional clarity and improvement in Sherman Act Section 2 legal standards are desirable, particularly with respect to areas where there is currently a lack of clear and consistent standards, such as bundling and whether and in what circumstances (if any) a monopolist has a duty to deal with rivals.

Many commentators are skeptical that any one legal standard should be used to evaluate the wide variety of different types of conduct that may be challenged under Section 2.[59] Others, however, have urged the use of a single test. Two proposals—the "no economic sense" and "profit sacrifice" tests—have their genesis in the predatory pricing test, which implicitly defines "competition on the merits" as pricing that is above an appropriate measure of the defendant's costs. Those and other proposals are discussed below.

"No Economic Sense" Test. The DOJ has advocated the use of a "no economic sense" test,[60] which asks "whether, on the basis of information available to a firm at the time of the challenged conduct, the challenged conduct would have made economic sense even if it did not reduce or eliminate competition."[61] The test condemns conduct only when its anticompetitive objective is unambiguous because the conduct would not have been undertaken "but for" the prospect of obtaining or maintaining monopoly power.[62] Although the DOJ has advanced this test in several cases, including *Microsoft*,[63] *Dentsply*,[64] and *Trinko*,[65] no court has ever adopted it.

Proponents contend the test is consistent with existing case law and "can be administered effectively by courts and businesses alike"[66] because the test essentially focuses on the economic rationality or profitability of the defendant's conduct from the defendant's perspective at the time the defendant decides whether to undertake a particular course of conduct.[67] Although this test may not capture all anticompetitive single-firm conduct, pro-

AR_002680

ponents believe underinclusiveness is preferable to requirements for complex evidentiary judgments.[68]

Others counter that the test can fail to capture substantially anticompetitive conduct by focusing exclusively on the profitability of the conduct for the defendant. Thus, the test fails to examine the challenged conduct's effects on consumer welfare, critics assert.[69] The test exculpates conduct that offers some minimal efficiencies—that is, that makes *some* economic sense—even where the conduct may cause disproportionately great anticompetitive effects.[70] In addition, in exclusive dealing cases the application of the "no economic sense" test is arguably unintelligible because exclusive dealing "makes economic sense" for the defendant "precisely through the mechanism of exclusion."[71] "In most cases, there is no way to separate the economic benefit to the defendant from the exclusionary impact on rivals."[72] This criticism suggests the test may be overinclusive as well as underinclusive.

"Profit Sacrifice" Test. The "profit sacrifice" test is closely related to the "no economic sense" test. One variant asks whether the defendant has sacrificed immediate profits as part of a strategy whose profitability depends on the recoupment of those profits through the exclusion of rivals.[73] Although it has not specifically adopted this test, the Supreme Court has asked this question in refusal-to-deal cases, noting, for example, that the defendant in *Aspen* "was willing to sacrifice short-run benefits and goodwill in exchange for a perceived long-run impact on its smaller rival."[74] Another variant asks "whether the allegedly anticompetitive conduct would be profitable for the defendant and would make good business sense even if it did not exclude rivals and thereby create or preserve market power for the defendant."[75]

As with the "no economic sense" test, proponents maintain the "profit sacrifice" test is easy to administer and provides clear guidance to businesses, thereby increasing the likelihood that businesses will engage in procompetitive conduct that other legal tests might misconstrue as anticompetitive.[76] The test does not condemn all conduct that might reduce welfare overall, but proponents judge the test to be preferable to "market-wide balancing tests."[77]

Opponents apply basically the same criticisms to the "profit sacrifice" test as to the "no economic sense" test. In particular, one commentator argues the test is "both too broad and too narrow."[78] The test is too broad, this critic contends, because it could condemn a firm "invest[ing] heavily in designing a better mousetrap that, once marketed, will ruin rivals or significantly limit their sales."[79] The test is too narrow, he asserts, "because some exclusionary practices don't involve sacrifice at all."[80] He agrees the test is dispositive in predatory pricing cases, however, and also finds the test "quite helpful in cases involving unilateral refusals to deal."[81]

Less Efficient Competitor Test. Judge Richard A. Posner has proposed that an unreasonably exclusionary practice is one that is "likely in the circumstances to exclude from the defendant's market an equally or more efficient competitor."[82] Proponents see value in this test,[83] but caution that it, too, may be too narrow "where the dominant firm is able to keep the output of rivals inefficiently low by engaging in practices that confer no significant social benefits."[84] Others point out that exclusion of an inefficient rival may harm consumer welfare if the rival is excluded before it reaches minimum efficient scale, or if the less efficient rival has been keeping prices in the relevant market below the monopoly level.[85] Critics also raise concern that the test may be very difficult administratively.[86] Nonetheless, commentators and courts have found this test useful in evaluating bundled discounts or rebates.[87]

Balancing Test. In its *Microsoft* decision, the D.C. Circuit employed a balancing test, which examines both competitive effects and efficiencies, to assess claims under Section 2.[88] That test requires a plaintiff first to establish that the monopolist's conduct had an "'anticompetitive effect.' That is, it must harm the competitive *process* and thereby harm consumers."[89] Once the plaintiff establishes a prima facie case, to avoid liability the defendant must provide a procompetitive justification for its conduct, that is, "a nonpretextual claim that its conduct is indeed a form of competition on the merits because it involves, for example, greater efficiency or enhanced consumer appeal."[90] If the defendant makes this showing, then the plaintiff either must rebut the claim of procompetitive benefits or show that the anticompetitive harm nevertheless "outweighs" those benefits.[91] Proponents point out this is the basic rule of reason test that courts have applied for many years, and continue to apply, in Section 1 and Section 2 cases.[92] They contend that use of this test is necessary to answer the basic question of whether the challenged conduct, on balance, harmed consumer welfare.[93]

Opponents criticize this test as too complex and difficult to administer. They argue that, because businesses will be uncertain of how their course of conduct might be judged, they will be reluctant to undertake procompetitive conduct.[94] Proponents respond that other tests, including the "no economic sense" and "profit sacrifice" tests, are equally complex and less accurate.[95]

As this brief review of possible tests for evaluating conduct under Section 2 suggests, they each seek to identify conduct that harms consumer welfare.[96] Some tests place greater value on the avoidance of chilling procompetitive conduct and undue enforcement costs than on ensuring that the test captures all or most instances of anticompetitive conduct. Others emphasize the importance of focusing on consumer welfare effects and contend that accuracy can be achieved without perverse influences on firms' incentives or undue enforcement costs.

Thus far, no consensus exists that any one test can suffice to assess all types of conduct that may be challenged under Section 2. The current test for predatory pricing, for example, works well in that context, but problems have been identified with the application of its progeny—the "no economic sense" and "profit sacrifice" tests—in some other contexts. The more extensive inquiry mandated by the *Microsoft* balancing test may be appropriate in some circumstances, but, as exemplified by the case of predatory pricing, is not necessarily warranted or desirable for all types of conduct challenged under Section 2. Some contend that the best approach is to develop different tests for different types of conduct.[97]

As courts, antitrust agencies, and commentators continue to refine the antitrust standards for conduct challenged under Section 2, a focal point for their assessment should be whether a particular test is the one most likely to protect consumer welfare in the context of the type of conduct at issue. To answer this question will require, among other things, an evaluation of whether a particular test is likely to overdeter procompetitive, or underdeter anticompetitive, conduct. Particular attention should be given to long-run, as well as short-run, consumer interests. For example, any Section 2 test for refusals to deal with a rival should reflect proper consideration of consumers' long-run interests in maintaining firms' incentives to invest in valuable competitive assets—incentives that could be significantly diminished by forced sharing of assets with a rival in particular circumstances.

C. Specific Areas of Concern—Bundled Discounts and Refusals to Deal with a Rival in the Same Market

1. Discounts on Bundled Products

16. The lack of clear standards regarding bundling, as reflected in *LePage's v. 3M*, may discourage conduct that is procompetitive or competitively neutral and thus may actually harm consumer welfare.

"Bundling" entails the sale of two or more products as a package. Bundled products may be sold only in a package or as part of a package and separately as well.[98] When bundled products are also sold separately, manufacturers may provide a discount or rebate to buyers that purchase the entire bundle, instead of purchasing only certain products in the bundle. These are known as "bundled discounts" or "bundled rebates." Large and small firms, incumbents, and new entrants use bundled discounts and rebates in a wide variety of industries and market circumstances. Because they involve lower prices, bundled discounts and bundled rebates typically benefit consumers.

Despite the ubiquity of bundling, there is a paucity of case law addressing the practice.[99] One prominent and recent appellate decision is *LePage's v. 3M*, in which the Third Circuit, sitting en banc, condemned bundled rebates as a violation of Section 2.[100] Because the court failed to evaluate whether 3M's program of bundled rebates represented competition on the merits, its decision offers no clear standards by which firms can assess whether their bundled rebates are likely to pass antitrust muster. Therefore, the Third Circuit's decision is likely to discourage firms from offering procompetitive bundled discounts and rebates to consumers.

The proconsumer benefits and possible anticompetitive harms of bundled discounts, the *LePage's* decision, and various proposals for legal standards that will deter unfounded claims that bundled discounts violate Section 2 are discussed below. A test that compares incremental revenues with incremental costs, as described below, offers the most promising source of an economically sensible and administrable safe harbor for bundled rebates or discounts.

a. Consumer Benefits, and Theories of Harm, from Bundled Discounts

Product bundling and bundled discounts are widespread throughout the U.S. economy.[101] Fitness clubs may offer their sessions separately or as a package at a discount; a furniture retailer may offer a bed and two dressers separately or together as a bedroom set at a discount; retailers may bundle free parking with a purchase in their stores.[102] Other examples abound.[103]

Businesses may offer bundled products for a variety of reasons. Firms can use bundling to save costs in distribution and packaging, to reduce transaction costs for themselves and their customers, and to increase reliability for customers.[104] Selling products as a package may reduce a manufacturer's costs, and the manufacturer may pass these cost reductions on to purchasers as bundled discounts.[105] Instead of advertising, firms can use bundled discounts to increase demand.[106] When a retailer reduces the number of its suppliers to save costs, multiproduct manufacturers may offer multiproduct discounts to keep the retailer's business.[107] A firm selling a product in one market may employ a bundling strategy as a means of encouraging consumers in another market to try a new product.[108] In some cases, bundling can help a firm enter a new market and compete with established firms. As one witness explained:

> Cable companies attempt to compete with telecommunications companies by offering bundles of digital telephone service, high speed internet service, and digital cable. Telecommunications companies have responded by offering discounts if consumers bundle their phone service with DSL and with satellite television . . . . The resulting bundle versus bundle competition will likely continue to drive down prices, increasing consumer welfare.[109]

These types of bundling can result in bundled discounts or rebates that significantly lower prices to consumers. One witness noted that "virtually everyone who submitted a paper tends to agree that bundling is pro-consumer. It is a way of discounting; it's a way of waging competition."[110] Moreover, the fact that firms without market power often offer bundled discounts suggests that efficiencies, not schemes to acquire or maintain monopoly power, typically explain their use.[111]

Nonetheless, recent economic literature has suggested three theories by which, in certain circumstances, bundled discounts could be unreasonably exclusionary:[112] (1) as a form of predatory pricing; (2) as *de facto* tying; and (3) as exclusionary conduct that deters entry.[113] If bundled discounts were used as a form of predatory pricing, a dominant firm might eliminate competition by forcing its competitors to sell at unprofitably low prices.[114] Under standard predatory pricing law, for this strategy to be plausible, the predator must be able to recoup its investment in below-cost pricing by using its increased market power to capture monopoly profits in the long run.[115]

In the case of *de facto* tying, while consumers are free to buy components separately, the components are priced to make it more attractive to buy the bundled components together.[116] Under this theory, the prices of the components are actually increased, including the stand-alone price of the monopolized good.[117] Thus, instead of receiving a discount, consumers are actually paying more for the bundled products.[118]

Finally, a dominant firm selling multiple products might use bundled discounts to deter entry or otherwise foreclose competition by firms that do not sell multiple products. By providing bundled discounts that reduce the price (net of discounts) of the competing good, a competitor that sells only that good may not be able to compete effectively if it does not also sell the monopoly good.[119] Suppose, for example, each of two manufacturers produces product A at a cost of $10 per unit. The manufacturer that earns monopoly profits in related product B, which it produces at a cost of $10 per unit but sells for $20, can bundle A and B and sell the bundle for $28. The manufacturer that produces only A, however, cannot sell product A for $8 without losing money.

There was disagreement among witnesses before the Commission as to the plausibility of these strategies, the conditions necessary to make them plausible, and the optimal legal standards to assess such anticompetitive risks. All appeared to agree, however, that further empirical study would benefit enforcement and policymakers. In addition, whatever legal standards are adopted should be sufficiently clear to enable companies to conform their conduct to the law, be administrable by the courts, and avoid chilling procompetitive discounting.

b. The Third Circuit's LePage's *Decision*

In *LePage's* the Third Circuit, sitting en banc, upheld a jury verdict that 3M had violated Section 2 through its program of bundled rebates. Plaintiff LePage's and defendant 3M competed in sales of transparent tape. LePage's alleged that 3M used its monopoly in its Scotch-brand tape to gain a competitive advantage in private-label transparent tape by offering higher rebates—that is, lower prices—when purchasers, such as office superstores, bought certain amounts of products across a number of 3M's product lines (including Scotch tape)[120] or increased the amount of Scotch tape purchased in proportion to 3M's private-label tape.[121] If an eligible buyer met certain targets across all of the product lines, a rebate of up to 2 percent was applied to all of its purchases from 3M. Conversely, if the buyer failed to meet any one of the targets in each product line, the 2 percent rebate for all purchases

AR_002685

would be rescinded.[122] LePage's alleged that such rebates gave buyers the incentive to purchase either 3M's Scotch tape or 3M's private-label tape, instead of LePage's private-label tape.

3M responded that its pricing was above cost, no matter how cost was calculated, and that, following the Supreme Court's decision in *Brooke Group*, above-cost pricing could not give rise to antitrust liability.[123] The court specifically rejected 3M's argument, stating that "a monopolist will be found to violate Section 2 of the Sherman Act if it engages in exclusionary or predatory conduct without a valid business justification."[124] The court upheld the jury's finding that 3M had no legitimate business justification, in part because no evidence showed that the amount of 3M's savings from bundling its products equaled the amount that 3M had given its customers through bundled rebates.[125] In explaining why such bundled rebates harmed consumers, the court stated that the "principal anticompetitive effect of bundled rebates as offered by 3M is that when offered by a monopolist they may foreclose portions of the market to a potential competitor who does not manufacture an equally diverse group of products and who therefore cannot make a comparable offer."[126]

c. *Criticisms of* LePage's

The fundamental criticism of the Third Circuit's decision is that it did not assess whether 3M's bundled rebates constituted competition on the merits. The court focused on the claimed harm to LePage's, including its loss of market share in the market for transparent tape and its loss of efficiencies in manufacturing.[127] But, as one critic points out, that a monopolist's conduct weakens a rival is not sufficient to trigger liability under Section 2.[128] "Price cutting may result . . . in some competitors being driven out of business, a result that is tolerated as a natural product of legitimate competition when an exit is the product of an inability to compete efficiently on the merits."[129] Lower prices may harm a rival but benefit consumers.

The Third Circuit did not require LePage's to prove it could make tape as efficiently as 3M and therefore that 3M's conduct had excluded an equally efficient rival.[130] In fact, 3M and LePage's both agreed that 3M was a more efficient, lower-cost producer of transparent tape than LePage's.[131] Nor did the court require LePage's to prove that, regardless of LePage's ability to operate efficiently, 3M's conduct would have excluded a hypothetical competitor that was as efficient as 3M.[132] The court did not even consider 3M's assertion that its bundled pricing was above cost, no matter how cost was calculated—an assertion that LePage's did not dispute.[133] Thus, it is unclear what would have been sufficient to convince the court that 3M was competing on the merits, rather than on some basis other than efficiency, with its bundled rebates. The decision is too vague[134] and is therefore likely to chill welfare-enhancing bundled discounts or rebates.[135]

d. Possible "Safe Harbors" for Bundled Discounts

Given the likelihood that most bundled discounts or rebates benefit consumers, many have proposed a safe harbor for bundled discounts that clearly constitute competition on the merits. One proposal, relevant to the use of bundled discounts as *de facto* tying arrangements, would ask what proportion of buyers accepted the bundled discount. If all or almost all buyers accepted the bundled discount, then it should be evaluated under tying law; if a substantial proportion of buyers rejected the bundled discount, it should be deemed legal.[136]

Other proposals relate to the possible use of bundled discounts or rebates in a manner analogous to predatory pricing. One type of safe harbor would also operate as a screen, requiring plaintiffs pursuing a Section 2 challenge first to establish that the bundled prices at issue fell below an appropriate measure of the defendant's cost.[137] If a defendant's costs are properly defined, "below-cost pricing, unlike pricing at or above that level, carries with it the threat that the party so engaged will drive equally efficient competitors out of business, thus setting the stage for recoupment at the expense of consumers."[138] Prices below an appropriate measure of cost would be a necessary, but not sufficient, condition for liability.[139] In addition, plaintiffs would be required to establish that the defendant could recoup the profits it sacrificed through bundled discounts,[140] as well as establish actual or probable harm to competition.

Proposals differ on the appropriate measure of the defendant's costs, although most involve some type of comparison between the defendant's costs and revenues.[141] One approach, comparable to the approach adopted by a decision in the Southern District of New York,[142] would allocate all discounts attributable to the entire bundle of products to the competitive product, and then ask if, after reallocation of those discounts, the competitive product is sold at or above incremental cost.[143] If the competitive product is being sold at or above incremental cost after allocation to it of all bundled discounts, then the bundle would fall within the safe harbor. If not, then the plaintiff would need to demonstrate a likelihood that the defendant could recoup the short-term losses. Put another way, this test would find potential liability under Section 2 if the defendant's incremental price of the competitively supplied good is less than the defendant's incremental cost of producing it.[144]

By comparison, one witness proposed that bundled discounts be evaluated under a modified *Brooke Group* standard that would reject bundling claims whenever the defendant's total revenues derived from the entire bundle exceeded the total of the average variable costs to produce all of the products in the bundle—essentially, a total revenue versus total cost approach.[145] The witness argued this test was appropriate because it would allow a dominant firm to offer a bundled discount "that effectively lowers the price of a supracompetitively priced good."[146] Others see significant problems with the test. They contend the test ignores the effects of bundling insofar as it permits bundled discounts where a monopolist lowered its price in a competitive market below the monopolist's average variable cost for the competitively priced product.[147] Another witness suggested that courts should prorate the total discount and allocate an equal share to each of the products in the bundle, then ask whether any product was sold below incremental cost.[148] In deciding which test to apply, some would ask whether a firm has near monopoly power in a well-defined market, and whether any competing firm can match the defendant's discounts across all product lines.[149]

These and other proposed tests raise various issues, as the federal antitrust agencies recognized in recommending that the Supreme Court decline to grant certiorari in *LePage's* to allow further development in the case law and economic analysis.[150] One witness noted that competitors less efficient than a dominant firm might still constrain the dominant firm to price below a monopoly level.[151] Thus, a test asking whether a bundled discount could exclude a hypothetical equally efficient competitor would not capture instances in which a bundled discount enabled a dominant firm to exclude a less efficient rival that had in fact benefited consumers by constraining prices.[152] Others concede that, just as above-cost predatory pricing could occur, above-cost predatory bundled discounts could occur.[153] Nonetheless, they believe that a safe harbor for above-cost bundled discounts "provides valuable clarity to the business community and reduces the number of false positives, which would otherwise discourage procompetitive discounting."[154] Moreover, some courts have concluded that "only price cutting that threatens equally or more efficient firms is condemned under Section 2."[155] They explain that "[t]he antitrust laws were not intended, and may not be used, to require businesses to price their products at unreasonably high prices (which penalize the consumer) so that less efficient competitors can stay in business."[156]

e. Conclusion

17. Courts should adopt a three-part test to determine whether bundled discounts or rebates violate Section 2 of the Sherman Act. To prove a violation of Section 2, a plaintiff should be required to show each one of the following elements (as well as other elements of a Section 2 claim): (1) after allocating all discounts and rebates attributable to the entire bundle of products to the competitive product, the defendant sold the competitive product below its incremental cost for the competitive product; (2) the defendant is likely to recoup these short-term losses; and (3) the bundled discount or rebate program has had or is likely to have an adverse effect on competition.*

* Commissioners Carlton and Garza join this recommendation, but are concerned that the first screen in the three-part test would still require many pricing schemes where exclusion is not at issue to receive further scrutiny under the second and third parts of the test. Bundled discounts that do not pass the first screen in the Commission's proposed test can be used to price discriminate with no exclusionary effect on competition. Failure to recognize that price discrimination is a motive for mixed bundling implies that the incremental revenue is not correctly calculated by the Commission's proposal. Commissioner Carlton elaborates on these points in his separate statement.

The first screen in the recommended three-part test would establish that bundled discounts should be subject to scrutiny under Section 2 only if they could exclude a hypothetical equally efficient competitor. This standard would permit bundled discounts that could exclude a less efficient competitor, even if the less efficient competitor had provided some constraint on pricing of the competitive product. The difficulties of assessing such circumstances, the lack of predictability and administrability in any standard that would capture such instances, and the undesirability of a test that would protect less efficient competitors, however, counsel against the adoption of a screen that protects less efficient competitors.

Importantly, the first screen would provide sufficient clarity to enable businesses to determine whether a particular bundled discount would be "screened out" from further scrutiny under the second and third parts of the tests. In this sense, the first screen could operate as a "safe harbor" and thus ameliorate the chilling of procompetitive bundled discounts that now exists. The first screen is also sufficiently administrable for courts to apply, although the Commission acknowledges it could be difficult to apply in circumstances where the alleged competitive product is separate from the other products in the bundle. This issue arises with other proposed tests as well, however.

The first screen is not perfect; it could reserve for further scrutiny bundled discounts with no anticompetitive exclusionary effects. Thus, it is crucial to apply the second and third parts of the test. Under the second part of the test, a plaintiff would need to prove that the defendant was likely to recoup its losses from its use of the challenged bundled discount or rebate. This would typically require a plaintiff to show that entry into the relevant market is not easy and therefore is unlikely to undermine the defendant's ability to recoup its losses. Like the first screen, this portion of the test also might be considered a "safe harbor" for defendants in relevant markets where entry is easy. Under the third part of the test, a plaintiff would have to establish actual or probable harm to competition.[157] Use of the Commission's proposed three-part test would bring the case law on bundled discounts into line with the reasoning of *Brooke Group*.

The Commission also encourages additional empirical economic research in this area. The courts, the antitrust agencies, and antitrust practitioners generally would benefit from a more thorough and empirically based understanding of the likely competitive effects of bundled discounts in a variety of settings.

2. Refusals to Deal with a Rival in the Same Market.

18. In general, firms have no duty to deal with a rival in the same market.*

The Supreme Court has long held that, "[i]n the absence of any purpose to create or maintain a monopoly, the [Sherman Act] does not restrict the long recognized right of [a] trader or manufacturer engaged in an entirely private business, freely to exercise his own independent discretion as to parties with whom he will deal."[158] Recently, in *Trinko* the Supreme Court confirmed there is no general duty to aid rivals under Section 2 of the Sherman Act.[159] Rather, the Court characterized its earlier decisions, including *Aspen Skiing* and *Otter Tail*, as "limited exception[s]" in which the defendant was found liable under Section 2 for a failure to deal with a rival.[160]

Although the Court's decision in *Trinko* provided some guidance on the factors that might suggest liability for a refusal to deal with a rival, the decision is far from definitive. Businesses need better guidance from the courts on how to avoid antitrust scrutiny for a refusal to deal with a rival. The following briefly reviews the reasoning and guidance that can be gleaned from the *Trinko* decision, as well as proposals to the Commission on how courts should evaluate refusals to deal with a rival.

a. Refusals to Deal with Rivals Should Rarely, if Ever, Be Unlawful

Refusals to deal with horizontal rivals in the same market should rarely, if ever, be unlawful under antitrust law, even for a monopolist.[161] In *Trinko* the Supreme Court explained:

> Firms may acquire monopoly power by establishing an infrastructure that renders them uniquely suited to serve their customers. Compelling such firms to share the source of their advantage is in some tension with the underlying purpose of antitrust law, since it may lessen the incentive for the monopolist, the rival, or both to invest in those economically beneficial facilities.[162]

Thus, absent a right to refuse to deal with a rival, a firm that lawfully obtained a monopoly through superior acumen, skill, foresight, or industry would find itself forced to share the fruits of its investment with rivals, thereby undermining the value of its lawfully acquired

* Commissioners Jacobson and Shenefield join this recommendation with qualifications. They believe that, if the refusal to deal with a rival in the same market is likely to raise price or reduce output in that relevant market, and is insufficiently supported by legitimate procompetitive justifications, the conduct is appropriately prohibited. A refusal to deal with a customer in an adjacent market (or different level of distribution), unless the customer agrees not to do business with a rival, is analytically the same as exclusive dealing and should be treated under the same principles. A refusal to deal with a rival in an adjacent market may be harmful to consumers if the defendant is using its monopoly power in one market to attempt to monopolize a second market.

monopoly and discouraging others from making similar investments.[163] Because investments in new facilities and assets often enhance consumer welfare, antitrust rules that discourage such activity should be avoided.[164] Forced sharing stultifies the incentives of smaller firms to develop alternatives to the monopolist's product.[165] Moreover, forced sharing requires courts to determine the price at which such sharing must take place, thereby transforming antitrust courts into price regulators, a role to which they are ill suited.[166] Setting a price too low, for example, could dampen the incentives of monopolists and others to develop substitutes for the monopolist's product[167] and ultimately disserve the interests of consumers.[168]

In *Trinko*, the Court noted it has been cautious in finding exceptions to the general rule of no duty to aid a rival, precisely "because of the uncertain virtue of forced sharing and the difficulty of identifying and remedying anticompetitive conduct by a single firm."[169] The Court appeared to link its prior exceptions to two factors: (1) the defendant's unilateral termination of a voluntary, and thus presumably profitable, prior course of dealing with the plaintiff (*Aspen Skiing*), and (2) the defendant's refusal to provide to a customer rival the same service that it provided to other customers (retail sales of ski-lift tickets in *Aspen*, power transmission over its network in *Otter Tail*). Questions have been raised concerning the Court's use of these two factual circumstances as key indicators of a potentially anticompetitive refusal to deal with a rival in the same market.[170] The Court seemed to suggest that either type of conduct might be worthy of scrutiny to assess whether it reflected a willingness to forsake short-term profits to achieve an anticompetitive end.[171] The Court did not clarify that point, however, and it also did not explain what additional factors would be required to establish Section 2 liability in such circumstances.

b. Further Proposals for Evaluating Refusals to Deal

The principal approaches advanced at the Commission's hearings were: (1) a rule of reason test centered on a pricing benchmark; (2) a "no economic sense" or "profit sacrifice" test; and (3) an examination of whether the conduct or pricing at issue is coercive or provides incentives.

Rule of Reason/"Consumer Welfare Effect" Test. The purpose of this test is to determine whether the refusal to deal would enable the monopolist to charge supracompetitive prices in any market.[172] If the defendant possessed monopoly power in a relevant market for inputs used by the firm's rivals, the court would determine whether the defendant's refusal to sell such inputs—or its insistence on terms so unattractive as to constitute an effective refusal to deal (a "non-negotiable" refusal to deal)—would lead to supracompetitive prices in a market.[173] Because requiring a monopolist to share inputs or facilities with its rivals at any price could destroy a firm's incentive to develop the capacity to produce such inputs in the first place,[174] this test would require the plaintiff to demonstrate that the rival was willing to pay a *sufficient* price for the monopolized product. The fact finder would ask whether the rival was willing to pay a price high enough to support an inference that the refusal to sell at that price was exclusionary.[175] The monopolist could rebut a prima facie claim by showing that the refusal was necessary to create efficiencies, and that these efficiencies counteracted any harmful impact of the refusal.[176] The court would then balance the harmful effects of the refusal against the benefits proved by the defendant in a way analogous to the rule of reason analysis that courts employ in the merger and Section 1 contexts.[177]

Objections to this proposal centered on its complexity, the difficulty of determining the proper "non-exclusionary benchmark price," and questions whether the conduct the standard would condemn as unreasonably exclusionary actually would harm consumer welfare.[178] Some questioned whether there was sufficient evidence of durable monopoly power to support the use of such a complex test instead of a simpler test that could better avoid "false positives." Witnesses also argued that courts are not rate-making bodies and are ill equipped to determine the "non-exclusion benchmark price" as required by this test.[179] Finally, a determination of harm to consumer welfare would require a determination whether rivals would be able to obtain alternative, cost-effective sources of supply, and other factors that could increase the potential for error in application of the test.[180]

The "Profit Sacrifice" and "No Economic Sense" Tests. As discussed earlier, to establish liability for a refusal to deal with a rival, the "no economic sense" and "profit sacrifice" tests would require proof that the refusal makes "no economic sense" or is unprofitable but for the refusal's tendency to fortify preexisting market power or help the monopolist acquire new market power.[181] If the refusal does make economic sense absent such a contribution to market power (or the expectation of acquiring market power), the conduct survives Section 2 scrutiny, without additional analysis.

Although proof that a monopolist's refusal to deal makes no economic sense is a *necessary* condition for liability under this test, it is not sufficient, and thus the test acts only as a screen.[182] The second step of the inquiry requires a determination that the conduct harmed competition.[183] Thus, under the "no economic sense test," a plaintiff may prevail by proving four elements: (1) the defendant's possession of a monopoly over an input; (2) the refusal to sell the input or the sale of the input at a price that significantly disadvantages rivals; (3) the absence of any economic rationale for the refusal, apart from its tendency to maintain or acquire monopoly power; and (4) the maintenance or acquisition of market power as a result of such refusal.[184]

Some have found this test useful in the context of refusals to deal with rivals.[185] Nonetheless, some antitrust practitioners question whether the test can be applied sensibly in all circumstances, given the fine distinction between seeking to exclude competitors by increasing a firm's sales as opposed to seeking to obtain or maintain monopoly power.[186]

"Coercing" versus "Incentivizing" Conduct. A third proposal focuses on whether the challenged conduct is "coercing" or "incentivizing."[187] This question is the third, and most important part, of a three-part inquiry under this approach. The first part calls for courts to

determine whether conduct is “excluding” or “exploiting.”[188] Exploiting conduct is that which may be undertaken by a monopolist as a fruit of its monopoly, and should not give rise to an antitrust claim.[189] Excluding conduct is conduct that is designed to eliminate rivals, and potentially is actionable.[190] Second, this approach asks whether the challenged conduct is horizontal or vertical. If the conduct relates only to horizontal dealings among competitors, this approach concludes that antitrust law should rarely (if ever) be concerned with the conduct.[191] Vertical conduct, however, may be actionable.

If the conduct is excluding and vertical, then the analysis asks whether the challenged conduct is coercing or incentivizing. Coercing conduct occurs when a firm refuses to deal with a (potential) customer because that customer also deals with the firm’s rivals.[192] By comparison, a firm engages in incentivizing conduct when it continues to deal with a customer, despite that customer’s dealing with the rival, but not necessarily on the same favorable price terms.[193]

The proponent of this test argues that this proposed distinction is important for three reasons. First, a monopolist is uniquely capable of coercing because of its monopoly status; any firm is capable of engaging in incentivizing conduct (at least to the limits of its “checkbook”).[194] Second, coercing conduct hurts the customer by issuing a “take it or leave it” choice; incentivizing conduct provides a choice to the customer.[195] Third, a monopolist’s competitors can respond to incentivizing conduct by providing their own incentive offers.[196]

Under this test, coercing conduct would be presumptively unlawful, with the presumption overcome only if the defendant could show procompetitive justifications for the conduct.[197] By comparison, incentivizing conduct would be presumptively lawful.[198] The only exception would be for price incentives so great that they would constitute predatory pricing under the *Brooke Group* standard.[199] The test’s author contended it has several advantages because, among other things, it provides companies with clarity as to what conduct is permissible,[200] and it would harmonize refusal-to-deal analysis with tying law by making unlawful only that conduct that creates the type of coercion that an unlawful tie-in creates.[201]

c. Conclusion

The Commission endorses the longstanding principle that, in general, firms have no duty to deal with a rival in the same market. To the extent that circumstances exist in which firms may be liable for a refusal to deal with a rival in the same market, the courts should further clarify those circumstances.

3. Intellectual Property in Tying Cases

19. Market power should not be presumed from a patent, copyright, or trademark in antitrust tying cases.

In *Illinois Tool Works, Inc. v. Independent Ink, Inc.* the Supreme Court reversed a decision by the Court of Appeals for the Federal Circuit adhering to previous Supreme Court precedents that provided for a presumption of market power.[202] The Court unanimously held that "a patent does not necessarily confer market power upon the patentee" and that, "in all cases involving a tying arrangement, the plaintiff must prove that the defendant has market power in the tying product."[203]

In reaching this decision, the Court reviewed the history of tying law generally and its application in cases involving intellectual property in particular. It explained that the presumption originated in patent misuse cases involving tying of patented and unpatented goods, and that subsequent cases—particularly *International Salt Co. v. United States*[204]—"imported" this doctrine into tying law, in part on the ground that the policy considerations were the same.[205] As a result, the Court had characterized such patent ties as "illegal per se."[206]

The Court explained that its reconsideration of the "presumption of per se illegality of a tying arrangement involving a patented product" was appropriate in light of developments since those earlier rulings.[207] Most important, in 1988 Congress "amended the Patent Code to eliminate [the market power] presumption in the patent misuse context."[208] After considering "the congressional judgment reflected" in this amendment, the Court concluded that ties involving patented products should be treated like other ties, and not be condemned without a showing of market power.[209] The Court also observed that imposing this requirement was supported by "the vast majority of academic literature" addressing the question and by "a virtual consensus among economists" on this matter.[210] Furthermore, it noted, the antitrust enforcement agencies' Intellectual Property Guidelines provide that the agencies "will not presume that a patent, copyright or trade secret necessarily confers market power upon its owner."[211]

Consistent with the "virtual consensus" the Court identified in *Independent Ink*, witnesses at the Commission's hearing (which took place before *Independent Ink* was decided) were united in their opposition to the market-power presumption.[212] Similarly, a number of commenters argued that there should be no presumption of market power from patents or copyrights.[213] Thus this Commission's witnesses and commenters generally advocated what is now the state of the law.

The Supreme Court decision in *Independent Ink* is clearly correct. For similar reasons, courts should not presume market power from a copyright or trademark in tying cases.

Chapter I.D
Antitrust and Patents

1. INTRODUCTION

Patents have played an important role in the innovation that has enabled the United States to become "the world's preeminent technological and economic superpower."[1] Patents "are granted on the assumption that, although firms and individuals have many incentives to invent and create, some innovations are less likely to be forthcoming in the absence of a grant of exclusive rights providing an opportunity to recoup initial investments while excluding imitators."[2]

A number of issues relating to how antitrust law evaluates conduct and transactions involving patents were proposed to the Commission for study. Several issues were not ripe for resolution by this Commission due to recent congressional action or ongoing litigation about the issue.[3] Accordingly, the Commission did not undertake a comprehensive survey of the interaction between antitrust and patent law and policy.

The Commission studied some of these issues, however, which are discussed in other sections of this Report. For example, Chapter I.B proposes that, in merger analysis, the agencies take a flexible approach to the two-year time horizon generally used in assessing the likely competitive impact of new entry, and give greater weight to research-and-development-related efficiencies. These recommendations address how the effect of innovation should be assessed in a dynamic competitive analysis. Chapter I.C discusses the Commission's recommendation that market power should not be presumed from a patent, copyright, or trademark.

This Section of the Report discusses two additional issues involving competition and patents. The first addresses a situation in which members of a standard-setting organization (SSO) may need to pay higher royalties to license a patent *after* SSO members have chosen a standard covered by that patent than they would have *before* the standard was chosen. SSO members may take a range of approaches to mitigate this possibility, including possible joint negotiation of licensing terms before patented technology is adopted as a standard. Some SSOs apparently have avoided joint negotiations with patent holders out of concern that the conduct would be considered a per se unlawful violation of the Sherman Act.[4]

Joint negotiations between SSO members and patent holders, without more, may be reasonably necessary in the circumstances to ensure that SSO members obtain reasonable patent licensing terms. At the same time, joint negotiations carry a risk of anticompetitive conduct, so they should be subject to antitrust scrutiny. Accordingly, without intending to endorse any particular approach by SSOs, the Commission makes the following recommendation.

20. Joint negotiations with intellectual property owners by members of a standard-setting organization with respect to royalties prior to the establishment of the standard, without more, should be evaluated under the rule of reason.*

The second issue involves the relationship between the patent system and competition. Patents and patent law play an important role in the property rights regime essential to a well-functioning competitive economy. Properly applied, patent and antitrust laws are complementary, as both are aimed at encouraging innovation, industry, and competition. As discussed in Chapter I.A, the courts and antitrust agencies in recent decades have developed a more sophisticated understanding of how certain business arrangements involving patents can benefit innovation and competition and have taken such potential procompetitive effects into account.

Just as the proper application of antitrust law is important to holders of patents, how well the patent system operates matters for competition. Patents on obvious subject matter, for example, may impede competition without the offsetting benefits of rewarding innovation. Recent reports from the Federal Trade Commission (FTC)[5] and the National Academy of Sciences (NAS),[6] as well as recent cases in which the Supreme Court has granted certiorari,[7] have raised questions about whether the patent system is functioning as well as it should. Given the importance of proper operation of the patent system to free-market competition, the Commission makes the following recommendations.

* Commissioner Delrahim does not join this recommendation.
Commission Garza joins this recommendation with qualifications.

21. **Congress should seriously consider recommendations in the Federal Trade Commission and National Academy of Sciences reports with the goal of encouraging innovation and at the same time avoiding abuse of the patent system that, on balance, will likely deter innovation and unreasonably restrain competition.* In particular:**

21a. **Congress should seriously consider the Federal Trade Commission and National Academy of Sciences recommendations targeted at ensuring the quality of patents.†**

21b. **Congress should ensure that the Patent and Trademark Office is adequately equipped to handle the burden of reviewing patent applications with due care and attention within a reasonable time period.**

22. **The courts and the Patent and Trademark Office should avoid an overly lax application of the obviousness standard that allows patents on obvious subject matter and thus harms competition and innovation.**

2. NEGOTIATIONS OF PATENT ROYALTIES BY MEMBERS OF STANDARD-SETTING ORGANIZATIONS

A. Background

Collaborative standard setting can produce many procompetitive benefits. Particularly in high-technology industries, collaborative standard setting is ubiquitous as a means to achieve interoperability among a variety of products. Interoperability typically requires agreement on a technical standard that all manufacturers will use in producing their products. Agreement on a standard that achieves interoperability can increase competition, innovation, and output, as well as significantly reduce costs to manufacturers and consumers.

In many circumstances, particularly in technology-intensive industries, the implementation of a technical standard will require firms to obtain licenses to patents that cover the technology chosen as the standard. Before the standard is chosen, patent holders may compete to have a technology that their patents cover chosen as the standard. As part of that

* Commissioners Delrahim and Kempf do not join this recommendation.
Commissioner Garza joins this recommendation with qualifications.

† Commissioners Delrahim and Kempf do not join this recommendation.

competition, they may offer reasonable patent royalties and other licensing terms. Once the standard has been chosen, however, patent holders may believe they can obtain much higher royalty rates and more restrictive licensing terms. At that point, members of the SSO may already have begun designing, testing, and producing goods that conform to the standard. Competition may not operate as a significant constraint on patent holders' demands in such circumstances because the members of the SSO may find it much too expensive and time-consuming to develop a new standard around a different technology. The higher royalties paid by members of an SSO in such circumstances might be passed on to consumers of the ultimate product.[8]

Some SSOs have adopted various practices to reduce the risk of unexpectedly high licensing demands from a patent holder once a standard has been chosen. For example, some SSOs require members to disclose patents that would cover a technology under consideration as a standard and to promise to license any such patents on "reasonable and nondiscriminatory" terms.[9] Other organizations have pursued alternative approaches. For example, VITA, a non-profit standards development organization, recently sought review by the Antitrust Division of the Department of Justice (DOJ) of a proposed policy requiring participants in VITA's standard-setting process to "disclose patents that are essential to implement a new standard and declare the most restrictive licensing terms that will be required to license any such patents."[10] Under this proposed plan, the patent holder and each prospective licensee will negotiate separately, "subject only to the restrictions imposed by the patent holder's unilateral declaration of its most restrictive terms."[11] The DOJ concluded that "[i]mplementation of the proposed policy should preserve, not restrict, competition among patent holders."[12] Among other things, the DOJ noted that, "[u]nless the standard-setting process is used as a sham to cloak naked price-fixing or bid-rigging, the Department analyzes action during the standard-setting process under the rule of reason."[13]

B. Recommendation and Findings

20. Joint negotiations with intellectual property owners by members of a standard-setting organization with respect to royalties prior to the establishment of the standard, without more, should be evaluated under the rule of reason.*

Members of some SSOs may wish *jointly* to negotiate with patent holders about patent licensing terms before the members select a standard. Such joint negotiations would carry antitrust risk, of course. One antitrust concern would be that members of the SSO might cross the line from discussing royalty rates for licensing patents they need to discussing prices for products they will sell, a per se violation of Section 1 of the Sherman Act.[14] Another concern would arise if the members of an SSO jointly possess monopsony power[15] and can force patent holders to offer royalty rates below a reasonable level, leading innovators to respond by reducing new investments in research and development.[16]

Depending on the circumstances, joint negotiations can also offer sufficient potential pro-competitive benefits to merit examination under the rule of reason, however. Joint negotiations can allow members of an SSO to obtain reasonable licensing terms from patent holders, which can lead to lower marginal costs for the standardized product and lower consumer prices.[17] By eliminating a potential threat of demands for unreasonably high royalty rates from patent holders, joint royalty negotiations might also facilitate a more timely and efficient development of standards and reduce the need for litigation to resolve issues of patent royalties and other licensing terms.[18]

For these reasons, both the Chairman of the FTC and the Assistant Attorney General for Antitrust at the DOJ have stated the FTC and the DOJ likely would evaluate such joint negotiations under the rule of reason.[19] The Commission agrees.

* Commissioner Delrahim does not join this recommendation for the reasons set forth in his separate statement.

Commissioner Garza joins this recommendation insofar as it simply recommends general rule of reason treatment for the legitimate activities of standard-setting organizations, including the joint negotiation of licensing terms before a particular standard is selected. It is critical to note, however, that the Commission is not recommending that such joint negotiation is a preferred approach under the antitrust laws or a necessary one to avoid "hold up" issues. Issues relating to the adoption of an industry standard are complex. This recommendation should be taken as a starting point for analysis.

3. THE RELATIONSHIP BETWEEN COMPETITION AND PATENT LAW

The patent laws encourage invention by granting to those who develop new, useful, and nonobvious inventions the exclusive right to practice their inventions for a period of years. Patents and patent law play an important role in the property rights regime essential to a well-functioning competitive economy.

Just as the proper application of antitrust law is important to patent holders, so the proper application of patent law is important to maintaining effective free-market competition. The U.S. patent laws express "a careful balance between the need to promote innovation and the recognition that imitation and refinement through imitation are both necessary to invention itself and the very lifeblood of a competitive economy."[20] Patents on obvious subject matter, for example, may impede competition without the offsetting benefits of rewarding innovation. As the Supreme Court has explained, "[t]aken together, the novelty and nonobviousness requirements [to obtain a patent] express a congressional determination that the purposes behind the Patent Clause [of the U.S. Constitution] are best served by free competition and exploitation of either that which is already available to the public or that which may be readily discerned from publicly available material."[21]

Recent reports from the FTC and the NAS have raised questions about whether the patent system is functioning as well as it should.[22] In recent years, bills have been introduced in Congress to address some of the concerns that have been raised.[23] In addition, the Supreme Court has granted certiorari and heard oral arguments in *KSR International Co. v. Teleflex, Inc.*, a case that presents the issue whether the Federal Circuit's test for nonobviousness is sufficiently rigorous to screen out obvious patents.[24] In an amicus brief urging the Supreme Court to grant certiorari in that case, the Solicitor General stated that the Federal Circuit's approach to the non-obviousness inquiry "unnecessarily sustains patents that would otherwise be subject to invalidation as obvious."[25] The brief explained the "extension of patent rights to obvious combinations of familiar elements retards, rather than advances, new discoveries."[26]

The Director of the U.S. Patent and Trademark Office (PTO) and Under Secretary of Commerce for Intellectual Property, Jon Dudas, has reported that a record 440,000 patent applications were filed in 2006 and "the volume of patent applications continues to outpace our capacity to examine them."[27] Moreover, he noted that the PTO currently has "a pending application backlog of historic proportions."[28] To meet this challenge, the PTO has introduced new ways to improve the speed of its patent examinations, as well as the quality of its review of patent applications[29] and Congress has appropriated funds for the hiring of more examiners.[30] Nonetheless, the steadily increasing numbers of patent applications each year—in 2006 about 100,000 more patent applications were filed than in 2001—continue to raise concerns that the PTO receive the resources it needs to do its job properly.

Because the proper operation of the patent system is important to maintaining effective free-market competition, the Commission makes the following recommendations.

21. Congress should seriously consider recommendations in the Federal Trade Commission and National Academy of Sciences reports with the goal of encouraging innovation and at the same time avoiding abuse of the patent system that, on balance, will likely deter innovation and unreasonably restrain competition.* In particular:

21a. Congress should seriously consider the Federal Trade Commission and National Academy of Sciences recommendations targeted at ensuring the quality of patents.†

21b. Congress should ensure that the Patent and Trademark Office is adequately equipped to handle the burden of reviewing patent applications with due care and attention within a reasonable time period.

21c. The courts and the Patent and Trademark Office should avoid an overly lax application of the obviousness standard that allows patents on obvious subject matter and thus harms competition and innovation.

* Commissioners Delrahim and Kempf do not join this recommendation. While they join their fellow Commissioners in urging Congress to consider taking actions that would help ensure the quality of patents, they believe that some of the specific recommendations made by the FTC are not necessarily designed to accomplish that, do not do so, and may well not be helpful in advancing innovation incentives.

Commissioner Garza joins the recommendation to give serious consideration to the recommendations in the FTC and NAS Reports but does not necessarily endorse all of the recommendations.

† Commissioners Delrahim and Kempf do not join this recommendation for the reasons stated in the previous note.

Commissioner Garza joins this recommendation with the reservation expressed in the previous note.

Chapter II
Enforcement Institutions and Processes

In the United States, in addition to the Antitrust Division of the Department of Justice (DOJ) and the Federal Trade Commission (FTC), fifty states and the District of Columbia are authorized to enforce federal antitrust laws as *parens patriae*, including in instances where the federal enforcers might have chosen not to challenge a transaction or conduct. Each state also has its own antitrust laws, which generally parallel federal law. In addition, numerous international competition authorities have begun to pursue enforcement much more aggressively, sometimes at odds with U.S. enforcement policies.

Principles of federalism and sovereignty support the authority of these many enforcers. Their existence is not without costs, however. Multiple enforcers may investigate the same conduct or transaction, increasing the burdens on companies and, ultimately, costs to consumers. In addition, different authorities may have divergent views as to how antitrust law should apply to certain types of conduct or mergers. These differences potentially subject companies to a range of different legal obligations, thus either imposing substantial compliance costs or compelling companies to follow the rules of the most restrictive jurisdiction. Multiple enforcers also may seek different remedies with respect to the same conduct or transaction, whether because they view the merits of the conduct or merger differently, or because the applicable law compels a different outcome. All of these differences across antitrust authorities have the potential to impose costs and inefficiencies on companies that may be passed on to consumers.

Of course, antitrust compliance and enforcement will always impose some costs on companies, regardless of the number of enforcers. It is important, however, to ensure that those costs do not overwhelm the benefits of antitrust enforcement or undermine consensus about the value of a strong antitrust enforcement regime. Enforcers should strive to avoid the imposition of unreasonable costs—for example, costs not reasonably justified by legitimate needs to gather further evidence or that could be avoided by coordination with, or deference to, other antitrust enforcers.

The Commission was urged to examine the need for multiple enforcers and the costs that multiple enforcers impose. In particular, it was suggested that the Commission consider whether it is necessary to maintain two federal enforcement agencies—the DOJ and the FTC—to enforce the antitrust laws and whether it is necessary, or even appropriate, for states to enforce federal antitrust law as *parens patriae*. In addition, many commenters expressed concern about international enforcement, including the potential that other jurisdictions might apply their competition laws to discriminate against U.S.-based companies, that international trade might be adversely affected by the policies of other jurisdictions that may be more restrictive than those of the United States, or that other regimes might be more hostile to intellectual property rights.

These important and interrelated questions focus attention directly on the procedural mechanisms used to enforce the antitrust laws. Accordingly, the Commission undertook to study a range of issues relevant to enforcement institutions and processes. The recommendations set forth in this Chapter address: (A) the consequences and costs of having two principal federal antitrust enforcers; (B) the costs of the merger review process used by the FTC and the DOJ pursuant to the Hart-Scott-Rodino Act; (C) the authority of the states independently to enforce federal antitrust laws; and (D) the implementation of mechanisms to enhance international cooperation in antitrust matters and appropriate convergence toward similar procedural and substantive approaches under each nation's antitrust laws.

Chapter II.A
Dual Federal Enforcement

1. INTRODUCTION

The Antitrust Division of the Department of Justice (DOJ) and the Federal Trade Commission (FTC) have shared responsibility for government enforcement of the federal antitrust laws for decades. The position of Assistant Attorney General for Antitrust was created in 1903, and the Antitrust Division became a separate operating unit within the Department of Justice thirty years later.[1] Congress separately created the FTC in 1914, in part specifically to supplement the DOJ's enforcement of the antitrust laws.[2] Congress also believed that an administrative agency—conducting administrative adjudication of antitrust cases, and vested with broad information-gathering powers—would be a better vehicle for developing more flexible standards of antitrust law than were the courts.[3]

The antitrust enforcement authority of the DOJ and the FTC are similar. The DOJ enforces the Sherman Act and the Clayton Act through civil actions, and may also criminally prosecute certain "hard core" offenses under the Sherman Act. The FTC enforces the antitrust laws through Section 5 of the FTC Act, which prohibits "[u]nfair methods of competition," a term that is generally coextensive with the prohibitions of the Sherman and Clayton Acts.[4] In addition to actions in federal court, the FTC may enforce Section 5 through internal administrative litigation (known as Part III proceedings) before an administrative law judge, with review by the five FTC Commissioners and then a federal court of appeals.[5]

This system of "dual enforcement" has been the subject of periodic debate. Critics contend that having two agencies enforce the federal antitrust laws entails unnecessary duplication and can result in inconsistent antitrust policies, additional burdens on businesses, or other obstacles to efficient and fair federal antitrust enforcement. Some have suggested eliminating the FTC's antitrust authority; others propose reallocating nearly all antitrust enforcement authority to the FTC, with the DOJ prosecuting only criminal violations of the Sherman Act.

The Commission recommends no comprehensive change to the existing system in which both the FTC and the DOJ enforce the antitrust laws.* There appears to have been little, if any, duplication of effort between the two agencies, and they typically have worked together to develop similar, if not identical, approaches to substantive antitrust policy.[6] Although concentrating enforcement authority in a single agency generally would be a superior institutional structure,[7] the significant costs and disruption of moving to a single-agency system

* Commissioners Kempf, Litvack, and Shenefield would recommend eliminating the FTC's antitrust enforcement authority and vesting responsibility for all antitrust enforcement with the DOJ.

at this point in time would likely exceed the benefits.[8] Furthermore, there is no consensus as to which agency would preferably retain antitrust enforcement authority.

Because the Commission concluded that consolidation or reallocation of authority is not worth the costs (and any such efforts would likely be politically very difficult), the Commission focused its study and recommendations on the areas in which dual enforcement appears to have the most significant negative consequences. In particular, concerns regarding efficiency and fairness remain in the area of merger enforcement, where both agencies are responsible for enforcing the Clayton Act through the Hart-Scott-Rodino Act (HSR Act) premerger notification system. The Commission studied two particular ways in which having two agencies creates inefficiencies or unfairness to merging parties in certain situations.

First, the Commission reviewed the process through which the DOJ and the FTC decide which agency will investigate a proposed merger (known as the "clearance process"). In some instances—most frequently high-profile mergers between large companies—the agencies take a lengthy time, sometimes exceeding thirty days, to decide which agency will conduct the investigation of the merger. These delays impose significant burdens on companies with time-sensitive transactions that potentially provide great value to consumers and shareholders alike. The agencies attempted to address these concerns in 2002 by entering into an agreement regarding the clearance process that sought to ensure a decision would be made within ten days. However, the agencies abandoned this agreement after congressional opposition to its provisions allocating mergers based on industry area. The delays the agreement appeared to alleviate remain.

Second, the FTC and the DOJ take different approaches when seeking an injunction from a court to block a merger, in part because of the different statutes governing their authority in such instances. The DOJ generally seeks a permanent injunction (along with a preliminary injunction) against mergers it believes are anticompetitive, resolving the question fully and completely in a single proceeding before a judge. If the DOJ fails to obtain the permanent injunction it seeks, the parties can consummate the merger without further antitrust litigation (assuming the DOJ does not appeal). In contrast, the FTC seeks only preliminary injunctions—not permanent injunctions—in federal district court when challenging mergers it believes are anticompetitive. The FTC's approach permits it to seek permanent relief in administrative Part III proceedings if it fails to obtain a preliminary injunction. Thus, although the parties can consummate the proposed transaction (absent a stay), antitrust litigation may continue for the merged parties while the FTC pursues permanent relief via Part III proceedings. Such administrative litigation can be lengthy, leaving a completed transaction in the limbo of litigation for over a year. In addition, the statutory standard governing when the FTC is entitled to preliminary relief is arguably more favorable to the government than is the general standard governing motions by the DOJ for preliminary relief.

Some believe that these differences in DOJ and FTC practices and standards result in mergers' being treated differently depending on which agency is involved. The FTC's ability to continue a merger case in administrative litigation also may lead companies whose transactions are investigated by the FTC to feel greater pressure to settle a matter than if they had been investigated by the DOJ. Regardless of the degree of effect, these factors have led some knowledgeable practitioners to believe that companies whose mergers are investigated by the FTC are at a disadvantage as compared with those investigated by the DOJ. Any such differences—real or perceived—can undermine the public's confidence that the antitrust agencies are reviewing mergers efficiently and fairly and that it does not matter which agency reviews a given merger.

Based on its study of these issues, the Commission makes the following recommendations.

22. The Federal Trade Commission and the Antitrust Division of the Department of Justice should develop and implement a new merger clearance agreement based on the principles in the 2002 Clearance Agreement between the agencies, with the goal of clearing all proposed transactions to one agency or the other within a short period of time. To this end, the appropriate congressional committees should encourage both antitrust agencies to reach a new agreement, and the agencies should consult with these committees in developing the new agreement.

23. To ensure prompt clearance of all transactions reported under the Hart-Scott-Rodino Act, Congress should enact legislation to require the Federal Trade Commission and the Antitrust Division of the Department of Justice to clear all mergers reported under the Hart-Scott-Rodino Act (for which clearance is sought) to one of the agencies within a short period of time (for example, no more than nine calendar days) after the filing of the pre-merger notification.*

24. The Federal Trade Commission should adopt a policy that when it seeks injunctive relief in Hart-Scott-Rodino Act merger cases in federal court, it will seek both preliminary and permanent injunctive relief, and will seek to consolidate those proceedings so long as it is able to reach agreement on an appropriate scheduling order with the merging parties.†

25. Congress should amend Section 13(b) of the Federal Trade Commission Act to prohibit the Federal Trade Commission from pursuing administrative litigation in Hart-Scott-Rodino Act merger cases.**

* Commissioners Burchfield, Cannon, and Yarowsky do not join this recommendation.

† Commissioners Cannon and Yarowsky do not join this recommendation.

** Commissioners Burchfield, Garza, Jacobson, and Kempf do not join this recommendation.

26. Congress should ensure that the same standard for the grant of a preliminary injunction applies to both the Federal Trade Commission and the Antitrust Division of the Department of Justice by amending Section 13(b) of the Federal Trade Commission Act to specify that, when the Federal Trade Commission seeks a preliminary injunction in a Hart-Scott-Rodino Act merger case, the Federal Trade Commission is subject to the same standard for the grant of a preliminary injunction as the Antitrust Division of the Department of Justice.*

2. THE MERGER CLEARANCE PROCESS

A. Background

Merger enforcement at both the DOJ and the FTC consists primarily of the review of proposed mergers pursuant to the HSR Act.[9] Although the DOJ and the FTC have concurrent, overlapping authority to review nearly all HSR-reportable transactions,[10] in practice only one agency takes responsibility for investigation of a particular merger. To eliminate duplication in agency merger enforcement efforts, the agencies decide between themselves which agency will conduct a formal investigation of a particular transaction.[11] They accomplish this through the "clearance process"—one agency requests authority to investigate a transaction from the other agency, which "clears" the request. Neither agency will request non-public information from the merging parties (or third parties) until clearance has been received from the other agency.[12]

A large majority of mergers reported under the HSR Act do not raise competitive concerns and therefore do not result in clearance requests by either agency. Indeed, in over 80 percent of transactions over the past five years, neither agency sought clearance.[13] In most other cases, one agency requests clearance, which the other agency grants quickly. Usually, such matters involve industries in which one agency has a long record of expertise and experience, which is the traditional basis for assigning a merger to one agency or the other.[14]

In a limited number of cases, however, both agencies seek clearance to investigate a transaction, and the agencies must jointly determine which agency will conduct the investigation. In some matters in which clearance is "contested," the dispute is relatively quickly resolved because one agency concedes the other has greater relevant expertise in the products or industry at issue. In other matters, however, resolution of the dispute takes more

* Commissioners Burchfield, Cannon, and Yarowsky do not join this recommendation.

steps. First, the staff of each agency submits a "claims memo," explaining that agency's relevant experience regarding the product or industry involved in the merger.[15] Then the dispute is passed to increasingly senior staff until it is resolved, sometimes by the Chairman of the FTC and the Assistant Attorney General for Antitrust.[16] As detailed below, these disputes can cause significant delays in the review of a merger.

The FTC and the DOJ have long recognized concerns over clearance delays and have periodically implemented procedures that aim to reduce those delays.[17] Indeed, they have longstanding procedures regarding clearance for both merger and non-merger investigations.[18] Most recently, in August 2001, then-FTC Chairman Timothy Muris and then-Assistant Attorney General Charles James launched an effort to address increasingly serious delays in clearance. After an internal review, and after seeking recommendations from former antitrust officials, the FTC and the DOJ in early 2002 reached agreement on a new clearance framework.[19]

The 2002 Clearance Agreement explicitly identified which industries would be the primary responsibility of each agency.[20] These allocations of responsibility generally were consistent with the existing practices of assigning a merger to the agency with greater experience and expertise in the particular industry.[21] Under the agreement, each agency had a "right of first refusal" to review transactions in industries within its primary responsibility; both agencies retained authority to seek clearance for mergers in industries allocated to the other agency.[22] Thus, the agreement did not transfer or alter "jurisdiction" over mergers in particular industries. This allocation (and the 2002 Clearance Agreement itself) was subject to review every four years.[23] Finally, in the event a dispute arose regarding a particular transaction, the agreement created a dispute resolution mechanism, proceeding though increasing levels of seniority to the agency head, and then, if necessary, to binding arbitration, with a specified time—ten days—within which a clearance decision was to be made.[24]

The 2002 Clearance Agreement was in effect for only about two months, at which point the Antitrust Division withdrew from the agreement at the direction of the Attorney General. This withdrawal followed objections by Senator Ernest Hollings (at the time the Ranking Member on both the Senate Commerce Committee and the Senate Appropriations Subcommittee on Commerce, Justice, State, and the Judiciary) relating to certain of the industry allocations.[25] The FTC and the DOJ have not subsequently sought to implement a revised version of the 2002 Clearance Agreement, and have therefore continued to follow previous agreements regarding clearance.

B. Recommendations and Findings

22. The Federal Trade Commission and the Antitrust Division of the Department of Justice should develop and implement a new merger clearance agreement based on the principles in the 2002 Clearance Agreement between the agencies, with the goal of clearing all proposed transactions to one agency or the other within a short period of time. To this end, the appropriate congressional committees should encourage both antitrust agencies to reach a new agreement, and the agencies should consult with these committees in developing the new agreement.

Clearance disputes impose substantial costs in a small but meaningful number of mergers. Although clearance disputes are relatively infrequent, when they occur they can cause significant delays in the review of a proposed transaction, since neither agency can investigate until the dispute is resolved.[26] Because these disputes reduce the time for initial review, they impose costs on merging parties either by extending the wait before they may consummate the transaction or by leading to the unnecessary issuance of a costly and burdensome second request, and sometimes both.[27] These effects can be especially significant because the transactions that spark clearance disputes are often among the largest mergers with the most substantial implications (whether positive or negative) for the U.S. economy.[28] These disputes, and the costs they impose, ultimately undermine the effectiveness and efficiency of agency review of proposed transactions under the HSR Act, and their elimination is of particular importance.[29] Moreover, the disputes create tension in the normally cooperative relationship between the two agencies and undermine public confidence in the U.S. antitrust enforcement regime.[30]

In the most serious instances, a clearance dispute may consume so much time that the agency cannot conduct an initial competitive assessment within the statutory thirty-day waiting period. In this situation, the agency may issue a second request, thereby preventing the parties from completing the transaction until they have complied with the second request, and imposing upon the parties the burden of responding to that request.[31] More commonly, the agencies provide the parties with an option to withdraw their pre-merger notification and re-file it, which restarts the thirty-day waiting period and allows the parties to forestall issuance of a second request.[32] This approach, in essence, transforms the statutory thirty-day waiting period into a sixty-day waiting period, so that the parties must wait an additional thirty days before either consummating their transaction or receiving and responding to a second request.[33]

The average number of clearance disputes each year (including merger and non-merger) increased more than seven-fold, from an average of ten during FY1982–89 to an average of eighty-three during FY1990–2001.[34] By comparison, reported transactions rose only 74

AR_002723

percent.[35] The number of clearance disputes since 2002 has remained stable when adjusted for the number of HSR filings.[36] The reasons for the increase are not clear. Some commentators suggest that the increase in clearance disputes is, in part, the result of changes in the economy, such as increased convergence between industries that were formerly distinct, which has made the existing arrangements that relied on industry experience less effective at providing clear determinations.[37] Whatever the cause, it is clear that clearance disputes continue to affect a small but meaningful number of mergers notified under the HSR Act.

The delays from clearance disputes are significant, however measured. Data compiled in developing the 2002 Clearance Agreement show that clearance disputes delayed review of a transaction an average of 17.8 business days during a twenty-one-month period.[38] Even where only one agency sought clearance, there were numerous instances in which the other agency delayed granting clearance for more than one week; clearance in these matters took an average of 12.8 days to resolve.[39] Recent data provided to the Commission by the agencies show that clearance-related delays remain. The FTC and the DOJ calculate that, over the past seven years, the average time for clearing HSR Act merger matters when both agencies sought clearance was 10.7 business days after the HSR filing.[40] This figure likely understates the magnitude of the problem for two reasons. First, this average is based on 297 matters in which both agencies made a claim for clearance; it is not limited to those in which the dispute was sufficiently significant to warrant an exchange of claims memos, which occurred 92 times.[41] It is the latter type of matter in which clearance delays can be most pronounced. Second, the agency data provide only averages, and do not give any indication of the incidence of lengthy delays. The agencies were unable to provide to the Commission such detailed data, which, if available, could shed additional light on the problems posed by clearance delays.

A clearance system containing the central elements of the 2002 Clearance Agreement is the most effective way to address the problems besetting the clearance process. The 2002 Clearance Agreement received uniform praise for being a fair and effective solution to the clearance dispute problem, and would be a marked improvement over the existing clearance process.[42] Moreover, the current agency heads recognize that approach as superior to the current arrangement.[43] Experience with the 2002 Clearance Agreement, although it was in place for only a short time, confirmed its effectiveness in expediting the clearance process and decreasing the number of clearance disputes.[44]

Ultimately, of course, the agencies should have final responsibility for developing the details of an improved clearance system, given their greater familiarity with the issues involved.[45] Nevertheless, because the 2002 Clearance Agreement provides the best starting point for the development of an improved clearance system, the Commission wishes to highlight two significant features of that agreement that should be part of any new agreement.

The most significant feature of the 2002 Clearance Agreement was its allocation of areas of primary responsibility by industry area.[46] This minimized room for clearance disputes in the first place, permitting quick determinations in the sizable majority of cases. It also provided transparency and predictability to the business community with respect to which agency would review a particular transaction.[47] Furthermore, by making an express allocation by industry in advance, the 2002 Clearance Agreement made further acquisition of expertise irrelevant to clearance decisions. In doing so, the agreement eliminated the agencies' incentives to conduct unnecessary, or more extensive, investigations in ongoing cases to enhance claims of expertise for use in future disputes.[48] Similarly, the allocation eliminated the agencies' incentives to fight for clearance to review a particular merger in order to preserve its claims of expertise in future mergers in the same or similar industries.[49]

The Commission does not take a position on how industries should be allocated between the two agencies or the specific allocations in the 2002 Clearance Agreement. However, those allocations may provide a useful starting point for discussion, because they were based largely on the agencies' historical experience and resulted from extensive negotiation between the agencies.[50] Far more important than the specific allocations is finding a procedure that permits the agencies to reach clearance decisions quickly.[51]

A second feature of the 2002 Clearance Agreement that should be part of any new clearance system is a "tie-breaker" to govern in the event the agencies cannot quickly agree to a clearance decision.[52] The agreement used an arbitrator to break deadlocks so that a final decision was ensured within ten days of the initial clearance request.[53] The Commission does not take a position on what tie-breaker the agencies should use. Although arbitration can result in clearance to the agency with greater relative experience, it takes additional time.[54] By comparison, a random mechanism—such as a coin flip, a "possession arrow" that alternates which agency gets clearance in disputed matters, or allocation of disputed matters depending on whether the transaction is assigned an odd or even file number—provides a nearly instantaneous decision, but sacrifices allocating a merger to the agency with greater relevant expertise and may be subject to "gaming."[55] Regardless of how the agencies balance these competing concerns and which tie-breaker they decide is best, however, any clearance agreement they adopt should include some tie-breaking mechanism that ensures final resolution within a short period (no longer than nine days) from the initial filing.

Finally, the Commission urges Congress and the agencies to work together in developing a new clearance system. Congressional opposition led to the demise of the 2002 Clearance Agreement, and concern over the potential for renewed congressional opposition has prevented the FTC and the DOJ from seeking to implement a new clearance agreement since 2002.[56] To facilitate congressional support and guidance, the agencies should consult with the appropriate congressional committees in developing a new clearance agreement. Congress should encourage the agencies in this process and provide guidance to allow the agencies to implement a clearance agreement that is satisfactory to Congress.[57]

23. To ensure prompt clearance of all transactions reported under the Hart-Scott-Rodino Act, Congress should enact legislation to require the Federal Trade Commission and the Antitrust Division of the Department of Justice to clear all mergers reported under the Hart-Scott-Rodino Act (for which clearance is sought) to one of the agencies within a short period of time (for example, no more than nine calendar days) after the filing of the pre-merger notification.*

The Commission also recommends that Congress enact a statute that requires the agencies to resolve clearance promptly. A statute will impose additional discipline on the agencies to ensure that clearance is resolved expeditiously. Furthermore, it will enhance the ability of Congress to use its oversight authority to monitor the agencies' compliance with the clearance requirement. Indeed, whether or not Congress enacts legislation in this area, the Commission believes that the timeliness of clearance dispute resolutions should be a part of Congress' continuing oversight of the agencies.

The legislation should require the agencies to make clearance decisions within a short period (*e.g.*, nine days) after the merging parties submit their pre-merger notification under the HSR Act. A period of this length is appropriate; indeed, the agencies have previously committed to resolving clearance within nine days from the date of filing.[58] The statute should not include a penalty for the failure of the agencies to comply with its terms, however, and Congress should make clear that the statute does not create any implied penalties (or rights) that would prevent effective merger enforcement on the merits of the transaction. A penalty that, for example, allowed the parties to consummate the transaction if the agencies failed to provide timely notification could harm consumers and would not effectively penalize the agency.[59] Rather, congressional oversight, facilitated by agency recordkeeping regarding compliance, should provide sufficient opportunity to impose any needed corrective action against the agencies.

Possible legislation that would impose such a requirement appears in Annex A.

* Commissioners Burchfield and Cannon do not join this recommendation.

Commissioner Burchfield notes that precatory, or even mandatory, congressional deadlines on agencies have rarely been effective in other contexts, and sees no reason to believe one would be more so here.

Although Commissioner Carlton joins this recommendation, he would impose some financial penalty on the agencies for failing to resolve clearance within the appropriate period.

3. INJUNCTIONS AND ADMINISTRATIVE LITIGATION IN MERGER MATTERS

A. Background

Both the FTC and the DOJ have essentially identical authority to conduct investigations under the HSR Act.[60] Both agencies are also authorized to seek an injunction in federal court to prevent consummation of a merger they believe may substantially lessen competition.[61] If the court grants an injunction, the parties almost always abandon the transaction because of the cost and uncertainty of keeping the deal in place while seeking reversal on appeal.[62] When a court denies the injunction, the parties typically complete the transaction nearly immediately (absent a stay by a court of appeals). Once a merger is completed, the agency is unlikely to seek any further action.[63]

Although both agencies have similar authority, their practices with respect to seeking permanent injunctions differ. Generally, the DOJ agrees with the parties to combine (or consolidate) proceedings for both a preliminary injunction and a permanent injunction before a district court.[64] The FTC's practice, in contrast, is to seek only a preliminary injunction in court (despite statutory authorization to seek permanent relief in court as well).[65] This practice results from its statutory authority to secure permanent relief through administrative litigation, an avenue not available to the DOJ. The FTC has never consolidated proceedings for preliminary and permanent relief in federal court in a merger case,[66] and has in fact affirmatively sought to prevent such consolidation.[67] The FTC's practice thus prevents consolidation under the rules of civil procedure.[68]

This difference in approach has two consequences. First, the DOJ generally faces a higher burden of proof before the court. Obtaining a permanent injunction requires the DOJ to prove its case by a preponderance of the evidence.[69] By comparison, the FTC needs to meet only a lower burden applicable to preliminary injunctions in government merger enforcement litigation (and, as explained below, the FTC arguably faces a preliminary injunction burden that is lower than that the DOJ would face if it sought only preliminary relief).[70] Second, the FTC, by not seeking a permanent injunction, retains the option to seek permanent relief through its internal administrative litigation process. It thus may pursue administrative litigation even when the district court does not grant a preliminary injunction.[71] In 1995 the FTC adopted a policy setting forth the circumstances in which it will bring administrative litigation after the denial of a preliminary injunction in merger cases.[72]

B. Recommendations and Findings

Parties to a proposed merger should receive comparable treatment and face similar burdens regardless of whether the FTC or the DOJ reviews their merger.[73] A divergence undermines the public's trust that the antitrust agencies will review transactions efficiently and fairly. More important, it creates the impression that the ultimate decision as to whether a merger may proceed depends in substantial part on which agency reviews the transaction. In particular, the divergence may permit the FTC to exert greater leverage in obtaining the parties' assent to a consent decree.[74] So long as both agencies retain authority to enforce the antitrust laws, such divergence should be minimized or eliminated. To accomplish this objective, the Commission makes three interrelated recommendations for administrative action and legislative change that, together, will ensure that parties before either agency face comparable procedural approaches and burdens when an injunction is sought, regardless of which agency reviews their merger.

24. The Federal Trade Commission should adopt a policy that when it seeks injunctive relief in Hart-Scott-Rodino Act merger cases in federal court, it will seek both preliminary and permanent injunctive relief, and will seek to consolidate those proceedings so long as it is able to reach agreement on an appropriate scheduling order with the merging parties.*

The differences in the agencies' policies regarding consolidation of actions for preliminary and permanent relief impose significantly different burdens on the parties in two respects. The DOJ usually agrees with the merging parties to consolidate proceedings for preliminary and permanent injunctions; it therefore must establish that the proposed merger would violate Section 7 of the Clayton Act by a preponderance of the evidence.[75] By comparison, the FTC must meet the burden required for obtaining a preliminary injunction, which is generally regarded as lower.[76] Because the grant of any injunction (whether preliminary or permanent) almost always kills the deal, this difference could materially affect the parties' prospects for completing their transaction.[77] Second, the decision of the district court in a consolidated DOJ proceeding is final (barring an appeal); if the DOJ loses, the parties can be certain that the challenge is finished.[78] In contrast, if the FTC fails to obtain a preliminary injunction, it may pursue relief in a potentially lengthy and costly internal administrative proceeding.

The FTC has rarely sought administrative remedies after losing a preliminary injunction. This change in practice would eliminate that possibility altogether. The mere availability of such proceedings can harm parties by creating uncertainty as to the legal status of their transaction, a risk not faced when the DOJ brings a challenge to a merger. It thus can give the FTC greater leverage in seeking concessions in a consent decree. Although the FTC has not pursued a full administrative trial after denial of a preliminary injunction in at least fif-

* Commissioners Cannon and Yarowsky do not join this recommendation.

teen years,[79] its policy regarding the circumstances in which it would seek administrative litigation following the denial of a preliminary injunction does not rule out the possibility that it may pursue this course.[80] Indeed, in 2005 the FTC left an administrative complaint pending against Arch Coal for over eight months after it had failed to obtain a preliminary injunction, and has acted similarly in the recent past.[81]

This recommendation calls for the FTC to conform its practice to the DOJ's current practice regarding consolidation and thereby eliminate the difference in burden resulting from the agencies' divergent practices. There does not appear to be any obstacle to the FTC's adoption of the DOJ's approach: Section 13(b) of the FTC Act permits the FTC to seek permanent, as well as preliminary, injunctions in federal court.[82] This recommendation contemplates that the FTC may, as the DOJ does now, condition its consent to consolidation on the parties' agreement to a reasonable timetable for pre-hearing matters, in order to permit the FTC sufficient time to prepare its case on the merits.[83] The FTC should be able to agree to a reasonable schedule, just as the DOJ generally has been able to reach such agreements with merging parties.[84] In instances where the FTC cannot agree with the parties on timing and therefore seeks only a preliminary injunction, however, it should also seek any permanent relief in court, as the DOJ does, not in administrative litigation.

25. Congress should amend Section 13(b) of the Federal Trade Commission Act to prohibit the Federal Trade Commission from pursuing administrative litigation in Hart-Scott-Rodino Act merger cases.*

The FTC's ability to pursue administrative litigation even after losing a preliminary injunction proceeding can impose unreasonable costs and uncertainty on parties whose mergers are reviewed by the FTC, as compared to the DOJ.[85] If, as recommended above, the FTC seeks permanent relief in federal court it will not be able to bring administrative proceedings to challenge mergers. Statutory change, however, will ensure that even where the FTC does not seek permanent relief in court, it will not be able to resort to administrative liti-

* Commissioners Burchfield, Garza, Jacobson, and Kempf do not join this recommendation.

Commissioner Burchfield would preserve the option of subsequent administrative proceedings for situations in which, for whatever reason, the preliminary injunction and permanent injunction phases are not consolidated. He also notes that removing the authority of the FTC would be practically meaningless so long as the FTC retains the ability to reinstitute administrative proceedings against a consummated merger.

Commissioners Garza and Jacobson believe that follow-on administrative litigation following the denial of a preliminary injunction is inappropriate except in highly unusual contexts. Because the FTC has already acknowledged this point in its internal policy, Commissioners Garza and Jacobson believe that statutory change is both unnecessary and potentially harmful.

gation.[86] As a result, an amendment of the statute to bar administrative litigation in HSR cases will provide further reason for the FTC to seek permanent relief in district court, as recommended above.

Elimination of administrative litigation in HSR Act merger cases will not deprive the FTC of an important enforcement option. Although administrative litigation may provide a valuable avenue to develop antitrust law in general,[87] it appears unlikely to add significant value beyond that developed in federal court proceedings for injunctive relief in HSR Act merger cases.[88] Whatever the value, it is significantly outweighed by the costs it imposes on merging parties in uncertainty and in litigation costs. Indeed, the FTC's own conduct confirms holding administrative trials after losing an injunction rarely, if ever, adds significant value, as the FTC has not held an administrative trial regarding an HSR Act merger after losing a preliminary injunction motion in recent years.

The proposed statutory bar would not preclude the FTC from pursuing an administrative complaint after the consummation of a merger, based on evidence that the merger has had actual, as opposed to predicted, anticompetitive effects. In such circumstances, the merger is no longer in the time-sensitive stage of HSR Act review and should be subject to the FTC's usual administrative process.[89]

26. Congress should ensure that the same standard for the grant of a preliminary injunction applies to both the Federal Trade Commission and the Antitrust Division of the Department of Justice by amending Section 13(b) of the Federal Trade Commission Act to specify that, when the Federal Trade Commission seeks a preliminary injunction in a Hart-Scott-Rodino Act merger case, the Federal Trade Commission is subject to the same standard for the grant of a preliminary injunction as the Antitrust Division of the Department of Justice.*

There is at least a perception, if not a reality, that the FTC and the DOJ face different standards for obtaining a preliminary injunction.[90] Some antitrust practitioners contend that the

* Commissioners Burchfield, Cannon, and Yarowsky do not join this recommendation.

Commissioner Burchfield believes the case law has become clear that, unless Congress has articulated a different standard for injunctive relief, as it did for the Endangered Species Act, 16 U.S.C. §§ 1531-1544, *see* Tennessee Valley Authority v. Hill, 437 U.S. 153, 194 (1978), the traditional equitable test governs the grant or denial of injunctions, *see* Weinberger v. Romero-Barcelo, 456 U.S. 305 (1982), and eBay, Inc. v. MercExchange, LLC, 126 S. Ct. 1837 (2006). This evolving authority suggests that the DOJ and the FTC confront the same preliminary injunction standards. Further legislation on this issue is as likely to confuse as clarify.

Commissioners Garza, Jacobson, and Kempf join this recommendation but believe that the standard today is the same and that such legislation is not truly necessary. Nevertheless, clarification can do no harm and may be beneficial by removing possible doubts.

standard applicable to FTC actions, as applied by the courts, is less burdensome, or is generally perceived to be less burdensome, than the standard applicable to DOJ actions.[91] This difference (or even a perception of difference) can lead to adverse consequences for parties whose transaction is reviewed by the FTC. In particular, the FTC may have greater leverage in negotiating a consent decree with the merging parties.[92] In addition, just the perception that the applicable rules depend on the happenstance of which agency is reviewing the transaction can undermine confidence in the fairness of the dual merger enforcement regime.

The agencies face nominally different standards governing whether a federal district court will issue a preliminary injunction. The FTC must meet a public interest standard under Section 13(b) of the FTC Act, which calls for an injunction to be granted "[u]pon a proper showing that, weighing the equities and considering the Commission's likelihood of ultimate success, such action would be in the public interest."[93] Courts have employed a number of formulations in describing the required burden, such as whether the FTC raises questions that are "so serious, substantial, difficult and doubtful as to make them fair ground for thorough investigation."[94] By comparison, Section 15 of the Clayton Act, pursuant to which the DOJ seeks injunctions, does not specify a standard for obtaining preliminary relief. Accordingly, courts generally apply a version of the traditional equity test, which does not require the usual showing of irreparable injury.[95] Some courts describe the proper test as "whether the Government has shown a reasonable likelihood of success on the merits and whether the balance of equities tips in its favor."[96]

While the magnitude of the difference between the two standards is not clear, the Commission believes Congress should remove all doubt by ensuring that courts apply the same standard in ruling on a motion for a preliminary injunction, whether the injunction is sought by the FTC or the DOJ.[97] The Commission recommends that the statute omit any specific standard for granting a preliminary injunction, which should lead courts to employ the version of the traditional equity test that they use in merger cases brought by the DOJ. This change should not hamper the FTC's ability to obtain injunctive relief in appropriate cases;[98] on the contrary, its ability should be identical to that of the DOJ.

This statutory change should not extend beyond HSR Act merger cases. Section 13(b) gives the FTC general authority with respect both to competition and consumer protection cases. The Commission did not undertake to study whether this standard was inappropriate in other areas, particularly consumer protection. The legislation therefore should make clear that the existing statutory language of Section 13(b) would continue to apply to injunctions sought by the FTC in consumer protection and other non-HSR merger cases.

ANNEX A

Amend 15 U.S.C. § 18a to add subsection (e)(1)(B) as follows, and redesignate existing subsection (e)(1)(B) as subsection (e)(1)(C).

> No later than the end of the ninth day after the beginning of the waiting period as defined in subsection (b)(1)(A) of this section, the Federal Trade Commission or the Assistant Attorney General shall inform both persons (or in the case of a tender offer, the acquiring person) whether the Federal Trade Commission or the Assistant Attorney General will have the authority to issue a request for additional information (if any) pursuant to this subsection.

Chapter II.B
The Hart-Scott-Rodino Act Pre-Merger Review Process

1. INTRODUCTION

The passage of the Hart-Scott-Rodino Antitrust Improvements Act of 1976 (HSR Act) marked one of the most significant changes to federal merger enforcement since enactment of the Clayton Act in 1914.[1] Before enactment of the HSR Act, it was more difficult for the agencies to investigate and challenge mergers before they had been consummated. Even when these lawsuits were successful, it was difficult to fashion relief that was effective in eliminating the anticompetitive effects that resulted from the merger. Effective relief proved especially challenging in cases brought after the merger had been consummated, because in most instances it would require recreating a company, or significant parts of one, to replace the competitor that the merger had eliminated.

Under the HSR Act, parties to mergers subject to the Act must file a notification form with the Federal Trade Commission (FTC) and the Antitrust Division of the Department of Justice (DOJ). The parties may not complete their transaction until the expiration of a thirty-day waiting period, which permits the FTC or the DOJ to investigate whether the transaction may substantially lessen competition in violation of Section 7 of the Clayton Act.[2] The investigating agency may extend the waiting period in order to conduct a more detailed investigation by issuing a request for additional information, commonly called a "second request." The second request requires the parties to supply detailed information regarding the transaction and its possible competitive effects. The parties must also observe a second thirty-day waiting period after fulfilling this request, during which the agency must decide whether to challenge the transaction in court.[3]

Under this system, the agencies are able to challenge mergers before they are consummated, and seek injunctions blocking the merger, partial divestitures that would adequately address the competitive concerns, or other appropriate relief. Since Fiscal Year 2001 (FY2001), the FTC and the DOJ have blocked or obtained relief in nearly 165 mergers that they concluded would harm competition and consumers, or approximately 1.8 percent of all transactions notified pursuant to the HSR Act during that period.[4]

Although the HSR Act is widely recognized as having made merger enforcement far more effective, some concern has been expressed over costs it imposes. First, some believe that the second request process has become unduly expensive and burdensome, both in the cost of providing requested information and in the length of time for resolution. Second, some believe that the HSR reporting requirements cover a significant number of transactions that pose no competitive problems, imposing unnecessary costs, including preparing the filing, filing fees, and a thirty-day delay in completing the transaction.

Both the coverage and cost of complying with the HSR Act have grown beyond that originally expected by Congress. The reach of the Act was limited in recognition that, if its requirements "were imposed on every merger, the resulting added reporting burdens might more than offset" the enforcement benefits.[5] At the time the Act was passed, Congress expected that only about 150 very large transactions would be reported each year.[6] Instead, there have been nearly 1000 filings annually since the program began, reaching a high of 4749 in 2000.[7] Congress's recent changes to the filing thresholds, partially adjusting for inflation since 1976, reduced the number of notifications by approximately 50 percent.[8] Many of the transactions notified are quickly assessed as not likely to lessen competition substantially. For example, in FY2006, of the 1746 transactions notified, the government granted early terminations for 1098 (62.9 percent), extensively investigated only 45 (2.6 percent), and ultimately brought only 29 HSR Act enforcement actions (1.7 percent).[9] This broad coverage, however, ensures that the agencies are aware of nearly every transaction that has the potential to cause competitive harm.

Congress also assumed that the burden and cost of supplying documents and information in response to second requests would be modest and not time-consuming, as the responsive information would largely be contained in materials that the parties had already assembled.[10] Since 1976, however, merger analysis has become more complex, as the agencies have moved away from concentration thresholds in favor of a more flexible analysis that aims toward greater accuracy. As a result, today a second request can impose sizable burdens, including expenditures of several million dollars for attorneys' fees and production of tens of millions of pages of documents and tens of gigabytes of electronic data. One estimate places the current cost of responding to a second request investigation at between $5 million and $10 million.[11] The time needed for review of a transaction and receipt of approval from the agency now can be six months or longer.[12] The agencies maintain that they need this time and volume of information to accurately assess a merger's likely effects; others are skeptical.

Since 1990, acquiring parties must pay filing fees in connection with their notification. These fees, which range up to $280,000 for the largest transactions, supply a substantial part of the funding for the FTC and the Antitrust Division of the Department of Justice. Since 1996, at least 79 percent of the Antitrust Division's budget has been funded with filing fee revenue; for FY2000–FY2003, filing fee revenue fully funded the Antitrust Division's budget.[13] Between 32 and 59 percent of the FTC's appropriations, which also support its consumer protection mission, have come from filing fees each year since FY2001.[14]

The United States is one of approximately seventy jurisdictions, including the European Union and Canada, with a merger review system.[15] Most of these jurisdictions also require parties to notify transactions and observe waiting periods before closing to provide enforcers an opportunity to challenge the proposed merger before consummation.[16] Each jurisdiction that requires a filing imposes costs on a proposed transaction. Nonetheless, a recent broad survey concluded that the external costs to the merging parties subject to a second request investigation in the United States (including payments for attorneys, economists, and document production) were at least double that of any other jurisdiction.[17]

In light of the concerns about the burdens imposed by the HSR Act, the Commission studied the HSR Act pre-merger notification system as a whole, paying specific attention to pre-merger filing requirements, the second request process employed by the FTC and the DOJ, the costs the current system imposes, and the benefits of more effective merger enforcement that the HSR Act brings.

Based on its study of the issues, the Commission makes the following recommendations.

27. **No changes are recommended to the initial filing requirements under the Hart-Scott-Rodino Act.***

28. **Congress should de-link funding for the Federal Trade Commission and the Antitrust Division of the Department of Justice from Hart-Scott-Rodino Act filing fee revenues.†**

29. **The Federal Trade Commission and the Antitrust Division of the Department of Justice should continue to pursue reforms of the Hart-Scott-Rodino Act merger review process to reduce the burdens imposed on merging parties by second requests.**

30. **The Federal Trade Commission and the Antitrust Division of the Department of Justice should systematically collect and record information regarding the costs and burdens imposed on merging parties by the Hart-Scott-Rodino Act process, to improve the ability of the agencies to identify ways to reduce those costs and burdens and enable Congress to perform appropriate oversight regarding enforcement of the Hart-Scott-Rodino Act.**

* Commissioners Garza, Kempf, and Warden do not join this recommendation.

† Commissioners Carlton and Jacobson do not join this recommendation.

31. **The agencies should evaluate and consider implementing several specific reforms to the second request process.**

31a. **The agencies should adopt tiered limits on the number of custodians whose files must be searched pursuant to a second request.***

31b. **The agencies should in all cases inform the merging parties of the competitive concerns that led to a second request.†**

31c. **To enable merging companies to understand the bases for and respond to any agency concern, the agencies should inform the parties of the theoretical and empirical bases for the agencies' economic analysis and facilitate dialogue including the agency economists.**

31d. **The agencies should reduce the burden of translating foreign-language documents.**

31e. **The agencies should reduce the burden of requests for data not kept in the normal course of business by the parties.**

* Commissioners Burchfield, Carlton, and Garza do not join this recommendation.

† Commissioners Burchfield, Cannon, Carlton, Litvack, and Yarowsky do not join this recommendation.

2. BACKGROUND

A. The Purpose and Mechanics of the Hart-Scott-Rodino Act

Prior to enactment of the HSR Act, the U.S. government had limited ability to stop an anticompetitive merger. To the extent the government had notice of a transaction, it had limited practical ability to obtain sufficient information to challenge it prior to its consummation.[18] Post-merger challenges, moreover, could take years—five to six on average.[19] As a result, even where the government ultimately prevailed, it was often unable to obtain effective relief.[20] It could neither fully compensate society for the interim loss of competition, nor fully restore a competitive market structure, particularly if the companies had already integrated their productive assets, or "scrambled the eggs."[21]

Congress addressed these issues by enacting the HSR Act. The stated purpose of the Act was "to provide advance notification to the antitrust authorities of very large mergers prior to their consummation, and to improve procedures to facilitate enjoining illegal mergers before they [were] consummated."[22] Under the HSR Act, before consummating certain mergers and acquisitions, parties must file a notification with both the DOJ and the FTC.[23]

The HSR Act applies to transactions that exceed certain size-of-company and size-of-transaction thresholds and that have a significant nexus to U.S. commerce.[24] Currently, to be subject to the HSR Act, one of the acquired or acquiring persons must have at least $119.6 million in annual net sales or total assets, and the other must have at least $12 million in annual net sales or total assets.[25] The value of the transaction must be greater than $59.8 million.[26] The acquiring person must pay a filing fee, which depends on the value of the transaction and ranges from $45,000 to $280,000.[27] All filing thresholds are adjusted annually in accordance with changes in the Gross National Product (GNP).[28]

The HSR Act filing provides certain basic information about the transaction and the companies (for example, their affiliates, major shareholders, revenues, and the industries and geographic areas in which the operate, by North American Industry Classification System code (NAICS codes)), and includes documents prepared by or for directors or board-appointed officers of the companies in connection with the transaction that address competitive issues.[29] The parties are not required to provide any additional information about the extent to which they do or do not compete or the transaction's potential impact on competition.

After filing, the parties must observe a thirty-day waiting period (fifteen days for cash tender offers) to allow the government time to make an initial determination as to whether to allow the transaction to proceed or to conduct a more extensive investigation.[30] The initial thirty-day waiting period may be terminated early if the parties so request and the government determines there are no material competitive issues, or may simply be allowed to expire.[31] In either case, the parties may then close their transaction. Alternatively, the government can extend the waiting period by issuing a request for additional information, which has come to be called a "second request." [32] If a second request is issued, the parties may not close their transaction until thirty days (ten days for cash tender offers) after they both have "substantially complied" with the second request.[33] During that second thirty-day period the government must decide whether to allow the transaction to close, seek to block it in court, or negotiate to place conditions on it that resolve competitive concerns.

B. Actual Practice

For the vast majority of transactions, the agencies grant early termination of the initial thirty-day waiting period or simply permit the waiting period to expire without conducting any formal investigation. For example, of the 1746 transactions notified in FY2006, 62.9 percent received early termination.[34] Only 2.6 percent of these transaction received second requests.[35] As Table A shows, these figures have been consistent from year to year.

Table A: HSR Act Enforcement Activity

	2001	2002	2003	2004	2005	2006
Transactions Reported	2237	1142	968	1377	1610	1746
Clearance not Sought or Investigation Closed During Initial Waiting Period	2167	1093	933	1342	1560	1702
Early Termination Granted	1603	793	606	943	997	1098
Second Request Issued	70	49	35	35	50	45
HSR Act Merger Enforcement Actions	42	28	33	17	16	29
Non-HSR Act Merger Enforcement Actions	13	5	3	5	2	3

Notes: HSR Act Merger Enforcement Actions: Enforcement actions are reported by the fiscal year in which the action was brought, regardless of when the investigation that led to the action was opened. FTC enforcement actions include Part II consents made public for comment, FTC authorization to file motions for preliminary or permanent injunction, FTC issuance of Part III complaints, and transactions that were abandoned or withdrawn for antitrust concerns that arose during the course of investigations. DOJ enforcement actions include complaints filed (whether litigated or settled), transactions that were abandoned or subject to a fix-it-first remedy, and certain bank divestitures pursuant to regulatory orders. Figures do not include merger enforcement actions in which the court found in favor of defendants (1 in 2002; 2 in 2004).

Non-HSR Merger Enforcement Actions: Both the DOJ and the FTC also bring enforcement actions challenging mergers that are not reportable under the HSR Act. For example, the DOJ has brought enforcement actions in banking mergers that are not reportable. Both agencies have brought actions in mergers that were below the reporting thresholds.

Source: FTC/DOJ Data Submission, at chart D.[40]

If one of the agencies decides that the transaction may raise material competitive concerns, it seeks clearance from the other agency to investigate.[36] In that event, the agency may request that the parties voluntarily provide additional information. The only way under the HSR Act that the government can prevent the parties from closing their transaction after thirty days is to issue a "second request."[37] However, in order to provide the government with additional time for investigation without the issuance of a second request, an informal practice has developed by which parties voluntarily withdraw their HSR filing and re-file it to start another thirty-day waiting period.[38] (Withdrawing does not guarantee that a second request will not issue.) Although the Commission understands from anecdotal evidence that increasing use has been made of this "pull and re-file" strategy to extend the initial thirty-day waiting period,[39] neither the FTC nor the DOJ has systematically tracked the number of transactions for which this has been done.

Issuing a second request enables the government to conduct a further examination of the competitive effects of a proposed transaction based on information and documents provided by the merging parties, their competitors, and customers. In addition to seeking the voluntary provision of information by competitors and customers, the agencies have the ability to compel information through the use of a subpoena or civil investigative demand. The agencies also have the ability to compel testimony from the merging parties and others through depositions (in the case of the DOJ) or investigational hearings (in the case of the FTC).[41] In this sense, the second request process resembles discovery in civil litigation, although it is not supervised by a court or governed by the Federal Rules of Civil Procedure.

The parties may not close their transaction until they both have substantially complied with the second request.[42] An officer of each company is required to certify substantial compliance.[43] If the government disputes substantial compliance, it has the option to go to court to enjoin the transaction until substantial compliance has been achieved.[44] In the history of the HSR Act, there have been only three occasions on which the FTC voted to authorize the filing of a complaint and motion seeking such an injunction.[45] Otherwise, the parties and government generally informally resolve their differences. The 2000 HSR Amendments, discussed below, required the FTC and the DOJ to establish formal internal processes for resolving such disputes, which they have adopted.[46]

If the agency determines that the effect of the transaction may be substantially to lessen competition, the agency can challenge the transaction in court.[47] Before seeking an injunction in court, however, the investigating agency may negotiate with the merging parties to reach a consent decree that obligates the merging parties to divest assets or agree to other relief that resolves the agency's concerns about the merger's competitive effects.

C. Recent Reforms by Congress and the Agencies

In 2000 Congress enacted the 21st Century Acquisition Reform and Improvement Act (2000 HSR Amendments) to address concerns about the growing scope and burden of the HSR Act.[48] These amendments had two principal components.

First, the 2000 HSR Amendments substantially increased the size-of-transaction filing threshold, from $15 million to $50 million. This amendment had the effect of reducing the number of transactions for which filings were required by about half.[49] The amendments also provided that all thresholds would be adjusted annually for changes in Gross National Product (GNP) beginning in 2005.[50]

Second, the 2000 HSR Amendments made several changes regarding the second-request process. One significant change required the agencies to designate a senior official to hear appeals from merging parties regarding the burden of second requests.[51] The amendments also directed both agencies to conduct one-time internal reviews of the HSR Act process, "implement reforms . . . in order to eliminate unnecessary burden, remove costly duplication, and eliminate undue delay," and report back to Congress within 180 days.[52] Both the FTC and the DOJ reported to Congress in 2001, describing their reviews of the second request process and reforms they implemented.[53]

Both the FTC and the DOJ have continued to reform their pre-merger review processes. Each announced further reforms in 2006.[54]

3. RECOMMENDATIONS AND FINDINGS

Overall, the existing pre-merger review system under the HSR Act is achieving its intended objectives of providing a more effective means for challenging mergers raising competitive concerns before their consummation and protecting consumers from anticompetitive effects.[55] Although efforts must continue to reduce the cost and burden the system imposes on merging parties, there is no need for comprehensive reform.[56]

The costs the HSR Act imposes are not insignificant; while very small relative to the total value of the transactions reviewed, their magnitude remains of concern to many. First, the current notification system imposes costs—filing fees and a thirty-day waiting period—on a large number of merging parties whose transactions do not pose competitive problems. Second, the second-request process imposes very large, and in some cases unnecessary, burdens on parties to provide information to the agencies.

Effective prevention of anticompetitive mergers is an important policy objective. Nonetheless, mergers are often beneficial to consumers and businesses, offering procompetitive efficiencies that will benefit both.[57] Imposing unnecessary burdens on such transactions wastes resources and may, in the extreme case, inhibit beneficial conduct. The pre-merger review process should aim to strike a balance that enables effective merger enforcement while avoiding the imposition of excessive costs on the parties and the economy.

Based on its assessment of the operation of the HSR pre-merger review system, the Commission does not recommend systemic change or major modifications. Although the system is not perfect, alternative approaches do not appear to be more suitable and would impose their own sets of costs. For example, the Commission does not recommend adoption of a markedly different approach, such as that used in the European Union or Canada.[58] Indeed, there was minimal call for the Commission to recommend such alternatives.[59]

Rather, comments generally focused on reducing the burdens imposed by making modifications to the current process.

The Commission considered a variety of possible reforms to the current HSR system. First, the Commission considered changes to the initial filing process. As explained below, the Commission does not recommend any changes to the filing thresholds. The Commission does recommend that agency funding no longer be linked to filing fees. Second, the Commission considered numerous possible reforms to the second request process. Overall, it concludes that the second request process can impose sizable burdens on merging parties in terms of expense and delay that should be reduced wherever possible. It commends the agencies for the various reforms they have adopted to reduce second request burdens, and urges them to take steps to reduce those burdens further as well as implement mechanisms to measure burdens and track progress. The Commission recommends several specific reforms for the agencies to evaluate and, if appropriate, refine and implement.[60]

A. Pre-Merger Filing Requirements

27. No changes are recommended to the initial filing requirements under the Hart-Scott-Rodino Act.*

Although the number of transactions reviewed has increased over time (largely due to the fact that the dollar thresholds remained constant while the dollar value of merger activity increased markedly),[61] the increase in the filing thresholds in 2000 significantly reduced the number of covered transactions.[62] If the $50 million size-of-transaction threshold had been in place for FY2000 (the last full year under the original thresholds), only 2502 transactions would have been reported in that year, rather than the 4749 actually notified, representing a decrease of 47 percent.[63] The 2000 HSR Amendments thus significantly addressed concerns that the HSR Act thresholds were "too low and capture[d] too many lawful transactions."[64]

Even with this significant reduction in coverage, and annual adjustments to accommodate GNP growth, it is clear that the vast majority of transactions reported raise no competitive issues.[65] This is particularly true for smaller transactions, which are less likely to be subject to challenge, or even extensive review, than transactions with large dollar values. Over the past five years, as Table B shows, the FTC or the DOJ issued a second request in 1.3

* Commissioners Garza, Kempf, and Warden do not join this recommendation. They believe that the filing thresholds should be increased in light of the significant number of transactions at the lower end of the thresholds that receive early termination and the few such transactions that either receive a second request or are subject to an enforcement action by the agencies.

percent of transactions valued between $50 million and $100 million, as compared with 11.1 percent of transactions over $1 billion. Similarly, they brought enforcement actions in less than 1 percent of mergers valued below $100 million, but 7.7 percent of mergers worth over $1 billion. Nevertheless, small transactions regularly account for a fair percentage of investigative activity. Between FY2002 and FY2006, 31 of the 214 second requests issued by the agencies (14.5 percent) were related to mergers valued between $50 million and $100 million.[66]

Table B: Second Requests and Enforcement Actions by Size of Transaction FY2002–2006

	Second Requests		Enforcement Actions	
Transaction Size	Number	Percent	Number	Percent
$50M–$100M	31	1.3%	14	0.4%
$100M–$150M	20	1.9%	12	1.1%
$150M–$200M	19	2.9%	9	1.4%
$200M–$300M	19	2.4%	10	1.3%
$300M–$500M	18	2.4%	14	1.9%
$500M–$1000M	37	6.4%	22	3.8%
Over $1000M	70	11.1%	49	7.7%
Total	214	3.1%	130	1.9%

Notes: "Enforcement actions" are defined in same manner as described in Table A, and do not include enforcement actions brought against mergers that were not reportable under the HSR Act.

"Percent" is the percentage of all transactions notified within each size range that resulted in a second request or an enforcement action.

Source: FTC/DOJ Data Submission, charts E1–E3.

The FTC's and the DOJ's enforcement efforts suggest that relatively small transactions can pose competitive problems, and that the pre-merger filing requirements facilitate review of these transactions. The recent adjustments to the thresholds adopted by Congress in 2000 reduced the number of filings considerably, and the evidence has not persuaded the Commission that further increases are currently warranted.[67] The Commission believes that the provisions for regular adjustments to the thresholds for increases in GNP should remain in place.

Although no change to the thresholds is currently recommended, Congress should continue to monitor the operation of the system, and periodically reevaluate whether it should adjust the size-of-transaction threshold to ensure that the number of smaller transactions actually reviewed and challenged by the agencies justifies the filing burdens imposed on those transactions.

28. Congress should de-link funding for the Federal Trade Commission and the Antitrust Division of the Department of Justice from Hart-Scott-Rodino Act filing fee revenues.*

Revenues the antitrust agencies receive from HSR Act filing fees are evenly divided and credited to the appropriations for the Antitrust Division of the DOJ and the FTC.[68] As a result, filing fees significantly reduce the amounts that Congress appropriates from general revenues to fund the agencies' enforcement programs.[69] Indeed, in some recent years, the Antitrust Division has been funded entirely from filing-fee revenue.[70] Prior to FY 1990, there were no filing fees; Congress instituted a $20,000 filing fee in 1990 and began to fund both agencies' operations in part with the fee receipts. Congress increased the filing fees in the 2000 HSR Amendments, with fees ranging from $45,000 to $280,000, depending on the size of the transaction.[71] Congress enacted this increase largely to offset the reduction in fee receipts resulting from increasing the size-of-transaction threshold and thereby preserve agency funding.[72]

The agencies should be funded fully from general revenues, and should not have their funding linked to HSR filing fees.[73] The existing linkage has at least the potential to expose funding of other agency enforcement efforts—including criminal and civil non-merger efforts—to the risk that merger activity (and therefore filing fee revenues) will fall.[74] Furthermore, merging parties should not have to shoulder the burden of paying a large portion of the cost of antitrust enforcement generally.[75] Indeed, the fees Congress has imposed effectively tax mergers, the vast majority of which are procompetitive or competitively neutral.[76] Other countries may follow this example and use fees to finance various activities.[77] Moreover, because a large majority of filings impose negligible review costs on the agencies, filing fees do not accurately reflect the burden imposed on the government by a given filing.[78]

* Commissioners Carlton and Jacobson do not join this recommendation.

Commissioner Carlton believes that filing fees are equivalent to a user fee that is appropriately linked to agency funding.

Commissioner Jacobson believes that funding from HSR Act filing fees lessens the politics associated with funding the nation's antitrust function. Without the significant revenues from HSR filing fees, the agencies will be increasingly vulnerable to political pressures to appease various constituencies to ensure they get the funds they need.

This recommendation is not a call for reduced antitrust enforcement or reduced funding for the antitrust agencies. The Commission recognizes the importance of antitrust enforcement to promoting consumer welfare, efficiency, and innovation. It urges Congress to fund the antitrust agencies solely from general revenues.[79]

B. The Second Request Process

29. The Federal Trade Commission and the Antitrust Division of the Department of Justice should continue to pursue reforms of the Hart-Scott-Rodino Act merger review process to reduce the burdens imposed on merging parties by second requests.

A second request is the principal formal mechanism through which the agencies can obtain the information they need to perform a detailed assessment of a proposed merger's likely impact on competition. The second request process must provide the agencies with sufficient information in a timely fashion to enable them to determine whether to challenge an anticompetitive merger in court. The challenge facing the agencies is implementing an approach that strikes an appropriate balance between the likely benefit of requested information to their review and the cost it will impose on the merging parties. While additional information may potentially be helpful to an investigation, requests should be limited to avoid situations in which "the cost of supplying much of the information . . . is disproportionate to its probative value."[80]

The second request process can impose immense burdens on parties, both in terms of delaying transactions and forcing parties to expend significant resources to supply requested information. Indeed, commenters and witnesses uniformly expressed concern over the excessive cost and delay associated with the second request process.[81] The American Bar Association Section of Antitrust Law (ABA Antitrust Section) reported a "consensus in the private bar that second requests are unduly burdensome."[82] Furthermore, the 2000 Report of the International Competition Policy Advisory Committee (ICPAC) observed that "[m]any business groups and practitioners . . . perceive the second request process to be 'unduly burdensome.'"[83] Agency witnesses agreed as well that decreasing the burdens imposed by second requests is an important goal.[84] Indeed, reviewing a response to a second request imposes considerable burdens on the government;[85] FTC Chairman Deborah Platt Majoras has expressly stated that recent reforms at the FTC are intended to reduce the costs faced by parties *and* the agencies.[86]

The burdens of second requests are high and increasing.[87] The cost of responding to a typical second request includes outside counsel fees, payments for processing electronic documents and photocopying, and economists' fees.[88] Indirect costs, such as employee time and opportunity cost, are difficult to quantify but are nonetheless very significant.[89] The ABA Antitrust Section cited reports that compliance with a second request typically takes six months and costs $5 million, while the reviews in more complex investigations can take eighteen months and cost the merging parties up to $20 million.[90]

Most of the Commission's evidence on burden, however, is anecdotal. The primary empirical study available to the Commission at the outset of its work was performed by PricewaterhouseCoopers in June 2003 under the sponsorship of the American Bar Association and the International Bar Association.[91] PricewaterhouseCoopers collected information on sixty-two transactions requiring multijurisdictional filing and reviews.[92] The sample thus focused on large international transactions subject to review by multiple jurisdictions.[93] The study found a "relatively small, regressive tax on mergers" and "significant delays in the multi-jurisdictional merger review process."[94] The study also found that the U.S. second request process is by far the most costly in the world, imposing twice the external costs (including payments for attorneys, economists, and document productions) than do second-phase investigations in the European Union.[95]

To supplement this information, the Commission sought data on the burden imposed by second requests from the public. No individual firms or companies provided data on burdens they had experienced. Although companies did not provide information directly to the Commission about the burden imposed by second requests, the ABA Antitrust Section provided the Commission with the aggregated results of a survey it conducted on burdens.[96] The figures for the delays and burdens imposed by second requests obtained through the survey are generally consistent with other anecdotal evidence, as shown in Table C. For example, on average, second request investigations took seven months and resulted in median compliance costs of $3.3 million. In addition, the median values for these data illustrate some of the specific burdens involved in complying with second requests: electronic document production of 583,000 pages of email and 555,000 pages of other documents; 275 pages of interrogatory responses; 13 gigabytes of electronic data; $2.4 million in fees for attorneys; and $300,000 in fees for economists. However, the survey's value is limited by the fact that it is based on a non-scientific, self-selected sample of only twenty-three total responses, and only a subset of these included information on each specific question. Moreover, the median values of most measures of burden were much lower than the means, suggesting that the average (*i.e.*, mean) values may be influenced by a few very high observations.

Table C: Burdens Imposed by Second Requests

Measure of Burden *(number of responses providing numerical data)*	**Mean Value**	**Median Value**
Length of investigation, in months (from HSR Act filing to close or agency action) (22)	7	7
Number of custodians searched (23)	126	94
Pages of e-mail produced (7)	1,566,867	582,913
Pages of electronic documents produced (other than e-mail) (6)	5,411,437	554,870
Pages of documents produced in hard copy (20)	1,515,662	544,516
Pages of interrogatory responses produced (18)	872	275
Electronic data produced in response to the interrogatories (in gigabytes) (6)	20	13
Total costs of compliance with second request (18)	$5,194,196	$3,300,000
Cost of economists (fees) (9)	$1,116,349	$300,000
Cost of attorneys/paralegals (fees) (13)	$4,361,604	$2,424,803
Costs of duplication/reproduction of documents and information (13)	$714,047	$100,787

Source: Letter from Joseph Angland to the Antitrust Modernization Commission Re: Data Regarding the Burden Involved in Responding to HSR Second Request Investigations (Feb. 22, 2007).

The Commission also sought data on second request burden from the agencies. The agencies do not systematically track the number of documents or the amount of data produced by parties in response to second requests.[97] However, they do track the length of second request investigations. For both agencies, the length of second request investigations averaged about six months from the opening of the investigation in FY2005.[98] The length of investigations resulting in no enforcement action decreased significantly between FY2000 and FY2005, dropping from 312 days to 168 days for the FTC, and from 184 days to 163 days for the DOJ.[99] Investigations resulting in enforcement actions generally took longer—208 days for the FTC and 260 days for the DOJ in FY2005—and the length of these investigations decreased for the FTC but not the DOJ over the same period.[100]

It appears clear from the evidence available to the Commission that the second request process imposes significant costs on the merging parties in a substantial number of cases. However, the Commission is concerned that the lack of reliable quantitative information on the extent and nature of the problem may inhibit the ability of the agencies and Congress to identify and implement improvements, and recommends efforts to improve data collection below.

There are a number of reasons for the sizable costs imposed by second requests in some merger investigations. Merger investigations pose considerable challenges for the agencies. The issues are complex, and decisions must be made on a tight time frame. The second request must be issued early in the investigation and is the agencies' only opportunity to obtain documents and data, other than by consent of the parties, prior to challenging the merger in court.[101] Moreover, merging parties have no incentive voluntarily to provide the agencies with information that would suggest the transaction might be anticompetitive. Accordingly, the agencies cannot simply rely on the parties to provide all significant information and instead must actively seek the information they need. As a result, cooperation by the parties in meeting the agencies' needs is likely to be important to reducing the burdens imposed by second requests.[102]

The agencies' need for information to assess the impact of a merger has expanded as antitrust analysis has evolved over the past thirty years from a reliance on structural presumptions that mergers that increased concentration above certain thresholds were unlawful, to a more complex and fact- and data-intensive analysis.[103] The agencies must consider a variety of complex issues, including entry barriers and efficiencies. Moreover, the agencies increasingly rely on econometric assessments in evaluating mergers, and direct analysis of likely competitive impacts.[104]

The problem of increasingly extensive production requirements has been compounded by an "explosion" in the number of documents retained by companies in electronic format in recent years.[105] Some commentators have reported a ten-fold increase in the volume of documents collected per employee due to electronic documents.[106] As a result, the "search and production of electronic files has become the most expensive and burdensome part of most second request productions."[107] The agencies' need for increased production of data has also increased costs, especially because firms retain more data due to technological advances.[108] Data production costs are further increased by the need to re-process data for an agency—for example, to produce the information in a particular common format.[109] The agencies' review efforts are also negatively affected by these developments, because the production of massive amounts of data and documents also make it more difficult for staff to find and review relevant data.[110]

Unfortunately, agencies may face internal pressures that discourage staff from limiting the scope of second requests and may restrict the systematic reforms they adopt.[111] The agencies are generally reluctant to forgo the possibility of obtaining relevant information, even where it may not improve their ability to assess the competitive impact of the merger. As one witness observed, from the agency staff perspective, "[i]t is easy to take the view that more is better when it comes to obtaining information," since limitations "pose risks . . . without, from the government's perspective, much apparent downside."[112] For example, a large percentage of email that is responsive to a second request typically comes from lower-level employees, and arguably is not likely to produce insights regarding competitive effects beyond information also stored centrally or available in management files.[113] Moreover, such evidence may provide relatively little useful information on the market and economic characteristics most relevant to merger assessment. The agencies' use of the second request process to obtain evidence to support seeking a preliminary injunction can exacerbate this tendency towards over-inclusiveness.[114] This, however, is counter to the intended purpose of the HSR Act process, which aims to provide the agency only with the information they need to determine whether to bring a court challenge.[115] The agencies may later obtain further discovery—governed by a district court and the rules of civil procedure—if the agency brings a challenge in court.

There are limited formal constraints on the agencies' tendencies to seek more information, due to the largely regulatory nature of the HSR Act process.[116] The parties' need to obtain the fastest possible resolution makes it extremely unlikely that they will request that a court review agency decisions regarding second request breadth or compliance.[117] The delay, uncertainty, and potential bar that a challenge would cause leads the parties to meet almost any agency demand in order to avoid going to court. Although the agencies have created formal internal checks, as required by the 2000 HSR Amendments, some commenters and witnesses questioned the efficacy of these internal review mechanisms.[118] The limited set of overall constraints has led some critics to assert that the agencies may use the second request "to essentially create the automatic stay of a transaction" and to "create a whole new discovery mechanism, unconstrained by the Federal Rules."[119]

Over the last several years, the agencies have engaged in various initiatives to reduce the burdens imposed by HSR Act review.[120] Both agencies adopted a number of specific reforms during 2006 (including limitations on the number of employees whose files must be searched for a second request, discussed more fully below).[121] Some of these reforms appear to have had modest success in reducing the length of second request investigations—in investigations in which no enforcement action was brought the length has decreased markedly over the past five years.[122] The 2006 reforms occurred too recently to have yet had a measurable effect.

The Commission commends the agencies for undertaking reforms, and for their continuing efforts, in collaboration with the antitrust bar, business community, and public, to reduce the burdens resulting from HSR Act review and second requests. The Commission encourages both agencies to fulfill their commitment to conduct an "ongoing assessment of the HSR Act program to increase accessibility, promote transparency, and reduce the burden on the filing parties without compromising the agencies' ability to investigate and interdict transactions that may substantially lessen competition."[123] Overall, the Commission shares FTC Chairman Majoras's view that the FTC's most recent reforms should be "the start rather than the end."[124]

30. The Federal Trade Commission and the Antitrust Division of the Department of Justice should systematically collect and record information regarding the costs and burdens imposed on merging parties by the Hart-Scott-Rodino Act process, to improve the ability of the agencies to identify ways to reduce those costs and burdens and enable Congress to perform appropriate oversight regarding enforcement of the Hart-Scott-Rodino Act.

There is little question that second requests have the potential to impose significant costs on the merging parties. The evidence of those costs is largely anecdotal, however, with little systematic quantitative information on the burdens second requests impose. The agencies are in the best position to collect such information. For example, the agencies could compile information about the volume of data and documents (or electronic "bytes") the parties produce in each investigation.[125] Information about the overall length of investigations, and the number of investigational hearings or depositions taken,[126] are valuable but do not provide a complete pictures of the burden involved in an investigation.

The absence of reliable data about investigational burdens makes it difficult to evaluate accurately the actual burdens imposed by HSR Act investigations. Such data could be used to confirm the anecdotal evidence that costs are high, or might show that the limited evidence overstates the typical burden. Equally important, comprehensive data provide a baseline by which to measure improvements through process reforms introduced by the agencies or to help identify "best practices" in merger review.[127] (In addition, data relevant to other aspects of the HSR Act process, such as information regarding delays from clearance decisions, would also help identify areas where delays and costs could be most effectively reduced.[128]) Finally, systematic data collection would assist congressional committees in exercising their oversight responsibilities regarding merger enforcement under the HSR Act by the FTC and the DOJ.

The agencies should improve and increase their systematic collection of data relating to the length, costs, and burdens of their investigations under the HSR Act. The agencies should collaborate on developing consistent measures and definitions to ensure that the data applicable to each agency are comparable, so that data can be aggregated or compared to see whether one agency has developed a more effective approach for reducing burdens. The Commission believes the development of improved data collection systems will not unduly burden the FTC and the DOJ. On the contrary, once institutionalized, the collection of such information is likely to become a routine part of each investigation that takes minimal additional time to compile. The benefits it can bring, however, to improved understanding of the costs and burdens of the HSR Act and areas for further reform are likely to be substantial.

31. The agencies should evaluate and consider implementing several specific reforms to the second request process.

The Commission has identified several additional ways to streamline the second request process. The Commission recommends one specific reform to the second request process, and identifies four additional specific areas in which it recommends that the agencies evaluate current practices to determine whether further improvements can be made. These potential reforms recognize the need to maintain an appropriate balance between the burdens imposed by second requests and the need of the agencies to review a merger adequately. Overall, the reforms offered for the agencies' consideration could help reduce burdens on parties without materially impairing the ability of the agencies to determine whether a merger will cause anticompetitive effects. Other than with respect to the specific reform, the Commission has described the contours of these reforms in general terms, leaving it to the agencies to determine the best method of implementation in light of their substantial experience.[129] (To the extent these reforms require legislative change, the Commission recommends that Congress enact any legislation necessary for the agencies to implement these proposed reforms.)

The Commission's identification of these five possible reforms is not intended to be exhaustive. On the contrary, there are likely numerous other ways in which the agencies could reduce the costs and burdens of second requests. The Commission, however, leaves it to the agencies, and their collective expertise, to identify areas for further reducing costs and how best to implement appropriate reforms.

1. Recommended Specific Reform

31a. The agencies should adopt tiered limits on the number of custodians whose files must be searched pursuant to a second request.*

One of the principal sources of burden from a second request is the volume of electronic and paper documents that must be searched and produced. This burden is related to the number of custodians whose files must be searched for responsive information.[130] Several witnesses and commenters before the Commission suggested that custodian limits could

* Commissioners Burchfield, Carlton, and Garza to not join this recommendation.

Commissioner Carlton does not join this recommendation because he would not eliminate the provisions in the agencies' existing custodial limits that require the parties to enter into timing agreements or other scheduling conditions.

significantly reduce unnecessary burden in second requests without prejudice to the government's ability to obtain material information.[131] Indeed, limiting the number of persons subject to search in a second request is consistent with discovery limits imposed by procedural rules governing civil litigation.[132]

Recognizing these principles, the FTC and the DOJ recently adopted custodian search limits, capping the number of employees whose files must be searched for a second request to thirty to thirty-five for the DOJ and thirty-five for the FTC, subject to certain exceptions.[133] These limits do not vary depending on the size of the transaction,[134] and may be exceeded upon authorization by senior agency personnel.[135] Both agencies require that the parties provide documents and personnel to assist the agencies in determining which employees files should be searched, and do not extend the limits to company or "central" files.[136] Moreover, to obtain the benefit of these limits, the parties must agree to certain provisions extending the length of the investigation.[137] The FTC requires that the parties agree to delay certifying substantial compliance until thirty days after producing the required materials (or to a "rolling production"), and agree to a joint scheduling order containing at least a sixty-day discovery period in the event of a court challenge.[138] The DOJ requires that parties enter into a "Process and Timing Agreement" that, among other things, affords sufficient time for post-complaint discovery in the event of litigation, indicating that "four to six months is generally necessary."[139]

The Commission endorses the concept of custodian limits but recommends several modifications. Under the Commission's approach: (1) merging companies could opt into presumptive custodian-search limits at the time they file the HSR Act notification; (2) companies opting in would provide detailed organization charts with the HSR Act filing and commit to make company representatives immediately available to discuss them; (3) the limit on the number of custodians would vary based on the size of the transaction; and (4) the presumptive limit could be exceeded for cause with the agreement of the merging companies or with the approval of the Assistant Attorney General or FTC Chairman, as appropriate. (The complete description is set forth in Annex A.) The Commission's approach would not require the merging companies to commit to an extension of the statutory time periods of the HSR Act or any other timing agreements as a condition of limiting the number of custodians, as the current FTC and DOJ limits require.

Filing Option and Organizational Charts. The parties could choose to have the limits apply by checking a box on the HSR form, rather than when the second request issues, as under the existing agency approaches.[140] The parties would also be required to provide complete and accurate organizational charts at the time of the initial HSR filing, and to make a responsible officer available to explain the charts. This will allow the agency to begin its inquiry immediately. In addition, by making the election at the filing stage, the parties will provide the agencies with an indication that they believe the agencies may scrutinize the transaction.

Sliding Scale Limits. The agencies would establish limits on the number of custodians to be searched based on the size of the transaction, with the limits ranging between fifteen and thirty-five employees. A single limit has the potential to impose a proportionately larger burden on small transactions than on large transactions. Furthermore, the cost savings a sliding scale affords to smaller transactions should outweigh any increased complexity of such an approach.[141] Moreover, to the extent that lower limits would prevent thorough investigations, the agency could exceed the limits in appropriate cases.

Case-by-Case Increases in Limits. An agency may need to increase the number of custodians to search in some investigations to enable staff to conduct an adequate investigation (for example, when there are numerous product or geographic markets).[142] Accordingly, under the Commission's proposed approach, agency staff may seek to exceed the custodian limit where they deem it necessary to conduct an adequate investigation. They may do this either by obtaining the consent of the parties or by seeking certification from the Assistant Attorney General or Chairman of the FTC of his or her good-faith belief that the additional materials are needed. Because such exceptions should be granted sparingly, the Commission recommends that only the head of the investigating agency be permitted to make the formal certification of the need to expand the search.

No Agreement on Time Limits. The Commission's proposal does not include a provision requiring the parties to agree to a thirty-day extension of the second thirty-day waiting period after certifying substantial compliance, a stipulated period for post-complaint discovery, or other scheduling requirements, as both the current FTC and DOJ approaches do. Requiring the parties to agree to extensions of the waiting period is unnecessary and effectively amounts to an administrative amendment of the second thirty-day waiting period established by Congress. The thirty-day waiting period, in conjunction with the investigation period, should be adequate time for the agencies to decide whether to challenge a merger and to prepare a filing for a preliminary injunction; if it is not, the agencies should seek statutory change in Congress. Furthermore, parties should not be required to stipulate to a discovery schedule in order to avail themselves of the custodian limit. If the agencies challenge a transaction in court, the district court in its sound discretion can be relied upon to provide a sufficient period for any additional discovery the agencies need.

2. Additional Areas for Possible Reform

The Commission also identifies four specific areas in which further reform may be appropriate. The first two concern the transparency of the agencies' review process, particularly their economic and competitive analyses. The second two are areas in which the costs imposed by the second request may be particularly large relative to their benefits. The Commission recommends that the agencies examine how they could make further improvements in these areas, and take action as appropriate.

31b. The agencies should in all cases inform the merging parties of the competitive concerns that led to a second request.*

The Commission understands that the agencies' staffs frequently discuss their competitive concerns and possible second request modifications with the parties shortly after the second request.[143] Based on comments submitted to the Commission, it appears that this may not occur in all cases or such discussions may not always fully reflect an agency's competitive concerns.[144] Such explanations can facilitate substantive discussions between the parties and agencies, as well as enable the parties to make better assessments of the information that would be most useful to the agencies. Furthermore, a systematic requirement to provide such an explanation may impose discipline on the second request itself, by clarifying the areas in which information is needed. The Commission therefore recommends that the agencies institutionalize this practice by specifically committing to provide information to merging parties regarding the agencies' competitive concerns shortly after issuing a second request.

31c. To enable merging companies to understand the bases for and respond to any agency concern, the agencies should inform the parties of the theoretical and empirical bases for the agencies' economic analysis and facilitate dialogue including the agency economists.

The Commission understands that the agencies currently promote discussions between agency economists and the parties' economists as part of their efforts to ensure transparency and promote efficient merger review.[145] Several witnesses and commenters before the Commission advised that there should be greater transparency concerning the government's economic analysis. Merging companies are often limited in their ability to evaluate and critique the economic models being developed by agency economists, for example, because of concerns regarding the confidentiality of third-party information.[146] In addition, agency staff may be reluctant to reveal their preliminary analysis if the government may have to litigate with the parties.[147]

Current merger analysis relies heavily on econometric analysis and is highly sensitive to the assumptions, techniques, and data used. Specifying, testing, and refining econometric models to reflect actual industry circumstances are best served if the agencies' economists and the parties' economists can discuss alternative modeling approaches and economet-

* Commissioners Burchfield, Cannon, Carlton, Litvack, and Yarowsky do not join this recommendation.

ric testing.[148] Particularly given the reality that most merger challenges are not litigated, the search for the right resolution would be facilitated by open discussion. The Commission accordingly recommends that the agencies devise additional means through which the agency's economists can have frank and open discussions with the merging parties of the economic analysis being used.

31d. The agencies should reduce the burden of translating foreign-language documents.

The burden of translating into English foreign-language documents submitted in response to a second request can be particularly onerous in some transactions.[149] This burden should not be imposed on parties except where the documents are likely to be relevant to evaluating the competitive concerns, and even then only to the extent necessary to conduct an adequate investigation.[150] Although the agencies often limit translation requirements to certain key foreign-language documents, the standard second request contains no such limits and requires translation of all documents.[151] The Commission therefore recommends that the agencies consider institutionalizing reforms to limit the burden of translating documents. For example, it may be possible to require summaries of documents rather than full translations,[152] or to limit translation mandates to documents of "key corporate decision makers" and those relating to businesses or product lines most relevant to the competitive concern.[153]

31e. The agencies should reduce the burden of requests for data not kept in the normal course of business by the parties.

Requests for data that are not kept in the ordinary course of business can be extraordinarily burdensome, since supplying such data may require the parties to incur great expense in engaging experts and information technology personnel.[154] The Commission recognizes the agencies have taken steps to reduce the burden of data requests, including efforts to understand the types of data the parties keep and the formats in which it is kept.[155] The Commission recommends that the agencies give further attention to taking steps, including formalizing policies, to reduce the burden imposed by requests for data that is not kept in the normal course of business by the parties (or which is kept in a form different from that requested).

ANNEX A

HSR ACT CUSTODIAN SEARCH LIMIT

1. The HSR Act Report Form will be modified to include a box labeled "Optional custodian limitation for potential additional request for information." If the notifying party checks this box, the procedures set forth below will apply. If, however, the box is not checked, any additional request for information may proceed without the limitations set forth below, consistent with current practice.

2. A party electing the custodian limitation option must (1) provide or create, and submit with the form, complete and accurate organization charts (or equivalent materials that allow staff to identify the party's employees and their positions), and (2) provide the name, and make available for interview, a responsible officer to explain the organization charts, the roles of the listed personnel, and the location of company records. The officer designated should be the senior person within the organization most familiar with these issues. If necessary, more than one such person should be made available.

3. If the notifying party has complied with paragraph 2 above, then, depending on the dollar size of the transaction, the reviewing agency will be limited to requiring a search of documents in the files of fifteen employees (at the low end) to thirty-five employees (at the high end).

4. If the agency staff believe that the files of custodians in excess of the numbers set forth in paragraph 3 are required to pursue their investigation, staff should first notify the affected party of the total number custodians whose files it seeks and request the party's consent. If consent is not provided within two business days, staff may seek materials from additional custodians only upon the personal approval and certification of a good faith belief that the additional materials are needed by, as the case may be, the Chair (or Acting Chair) of the Federal Trade Commission or the Assistant Attorney General (or Acting Assistant Attorney General) in charge of the Antitrust Division of the Department of Justice.

Chapter II.C
State Enforcement of Antitrust Laws

1. INTRODUCTION

Today, each state, and the District of Columbia, has its own antitrust laws.[1] The language of most state antitrust laws is substantially identical to the language of the Sherman Act, and even where they are not identically worded, state antitrust statutes are generally "interpreted by the state court[s to be] consistent with federal law."[2] Courts generally have resolved constitutional challenges to state antitrust laws in favor of giving state antitrust laws full effect.[3] The Supreme Court has declined to find preemption of state antitrust laws on either Commerce Clause or Supremacy Clause grounds, holding that Congress intended there to be antitrust enforcement at both the state and federal levels.[4]

Each state, and the District of Columbia, also can sue under the federal antitrust laws. A state may sue on its own behalf (or on behalf of one of its political subdivisions) as an injured purchaser.[5] Alternatively, a state may sue as *parens patriae* seeking treble damages or restitution on behalf of state consumers—that is, "natural persons" (as opposed to corporations, partnerships, and other entities) residing in the state—who have suffered antitrust injuries under federal law.[6] Finally, a state may seek injunctive relief under Section 16 of the Clayton Act to forestall injury to the state's economy or its consumers.[7]

Much state antitrust enforcement has been consistent with federal enforcement. States nonetheless operate as independent decision-makers in enforcing federal antitrust laws.[8] As a result, state antitrust enforcers sometimes have challenged business conduct that federal enforcers declined to challenge, and have sought more stringent remedies than those sought by federal enforcers.[9]

Some have criticized such divergences as undermining a consistent, coherent federal antitrust policy and creating uncertainty and unjustified antitrust risks for businesses.[10] Among other things, opponents point to antitrust enforcement guidelines, adopted by the Multistate Antitrust Task Force of the National Association of Attorneys General (NAAG), which differ in some respects from the guidelines of the federal antitrust agencies.[11] Critics of states' enforcing federal antitrust laws further argue that, even when state antitrust enforcement is consistent with federal enforcement, state activities duplicate the efforts of federal agencies and unnecessarily burden businesses with additional costs.[12]

Proponents of states' enforcing federal antitrust laws, on the other hand, contend that antitrust enforcement by states can fill important gaps in federal antitrust enforcement. States can better identify and pursue local antitrust violations, they argue, and can bring their own enforcement actions if they believe federal agencies are enforcing the antitrust laws at a suboptimal level.[13] Proponents also value the states' authority to obtain treble damages for consumers injured by price-fixing or other antitrust violations that a federal agency has established in court—an authority the federal antitrust agencies do not have.[14]

To examine these issues, the Commission sought testimony and comments and reviewed data on state antitrust enforcement over the past fifteen years. The available evidence indicates that, in general, the types of antitrust cases brought by state antitrust enforcers have been consistent with those brought by federal antitrust enforcers. There also has been a substantial degree of cooperation and coordination among state and federal antitrust enforcers. On occasion, in significant, national cases, state antitrust enforcers have diverged from federal enforcers by, for example, seeking remedies beyond those sought by the federal government. Some see this as a problem requiring solution; others see it as a benefit of independent state antitrust authority. One definite cost of state merger enforcement is that it has sometimes overburdened businesses with duplicative document requests or the need to negotiate different document confidentiality agreements with different states.

In the Commission's view, such costs of state antitrust enforcement do not warrant eliminating the states' authority to enforce the federal antitrust laws. State antitrust enforcement can benefit consumers by obtaining treble damages for consumers and supplementing federal enforcement. The states have unique authority to recover antitrust damages for their consumers and local government purchasers. The vast majority of state enforcement activity over the past fifteen years has involved areas in which state enforcers may have a comparative advantage in terms of knowledge—that is, with respect to local markets, local competitive effects, and local government purchasers. During the same time period, the states' enforcement efforts have targeted most frequently those antitrust violations most likely to cause significant consumer harm, such as price-fixing, bid-rigging, and market allocation.

In addition, in recent years, state and federal antitrust enforcement have been largely consistent. State and federal authorities together have taken many steps to improve the coordination of their investigational and enforcement efforts. To the extent that differences occur, federalism suggests the states should continue to have the ability to make their own judgments on how best to seek to protect their consumers. Indeed, it would seem inappropriate to preclude the states from enforcing claims on behalf of themselves and their citizens while still allowing private parties to sue. Moreover, because the states, like the federal antitrust agencies, must go to court to pursue their cases, the courts can take steps to ensure the consistency of legal standards under federal law.

The Commission was not persuaded that the costs of state enforcement—such as companies' being required to deal with multiple enforcers—outweigh the benefits of state enforcement or could not be substantially mitigated by means short of eliminating the authority of the states to enforce the federal antitrust laws. Rather, to address the concerns that have been raised, state antitrust enforcers should continue to focus on their areas of comparative advantage, such as local markets, and should coordinate with the federal antitrust agencies and each other to find additional ways to reduce the costs to businesses of state merger review. Specifically, the Commission makes the following recommendations.

32. No statutory change is recommended to the current role of the states in non-merger civil antitrust enforcement.*

33. State non-merger enforcement should focus primarily on matters involving localized conduct or competitive effects.†

34. No statutory change is recommended to the current roles of federal and state antitrust enforcement agencies with respect to reviewing mergers.**

35. Federal and state antitrust enforcers are encouraged to coordinate their activities and to seek to avoid subjecting companies to multiple, and possibly inconsistent, proceedings.

36. Federal and state antitrust enforcers should consider the following actions to achieve further coordination and cooperation and thereby improve the consistency and predictability of outcomes in merger investigations:

36a. The states and federal antitrust agencies should work to harmonize their application of substantive antitrust law, particularly with respect to mergers.

36b. Through state and federal coordination efforts, data requests should be consistent across enforcers to the maximum extent possible.

36c. The state antitrust agencies should work to adopt a model confidentiality statute with the goal of eliminating inconsistencies among state confidentiality agreements.

* Commissioners Carlton, Delrahim, and Shenefield do not join this recommendation.

† Commissioners Cannon, Jacobson, and Yarowsky do not join this recommendation.

** Commissioners Carlton, Delrahim, Garza, Shenefield, and Warden do not join this recommendation.

2. BACKGROUND

A. The History of State Enforcement of Antitrust Laws

State antitrust enforcement has a long history. Twenty-one states had enacted their own antitrust laws before the passage of the first federal antitrust law, the Sherman Act, in 1890.[15] Senator Sherman stated the Sherman Act would supplement state antitrust enforcement: "Each State can deal with a combination within the State, but only the General Government can deal with combinations reaching not only the several States, but the commercial world."[16] Because the definition of interstate commerce was then narrower than it is today,[17] the enactment of a federal antitrust law did not imply any overlap with state antitrust enforcement efforts. State antitrust laws applied only to intrastate conduct, while federal antitrust enforcement applied only to interstate conduct, narrowly defined.[18]

At the beginning of the twentieth century, the states' antitrust enforcement—proceeding under state antitrust laws—was more robust than that of the federal government.[19] Federal antitrust enforcement institutions developed slowly.[20] After World War I, however, the Supreme Court began to interpret the Commerce Clause much more broadly,[21] and state involvement in antitrust enforcement decreased as federal antitrust enforcement grew. Once the courts interpreted the Commerce Clause to allow federal enforcement agencies to challenge anticompetitive conduct virtually anywhere in the country, "state antitrust took a decided back seat to federal law and policy."[22]

In 1976, however, the passage of two federal statutes reinvigorated the states' role in antitrust enforcement.[23] Title III of the Hart-Scott-Rodino Antitrust Improvements Act of 1976 (HSR Act) gave state attorneys general *parens patriae* authority to seek monetary relief (including treble damages) on behalf of state residents.[24] In addition, the Crime Control Act of 1976 led to the appropriation of new funds that enabled twenty-five states to establish antitrust enforcement units for the first time.[25]

For many decades, federal and state antitrust enforcers have had largely concurrent jurisdiction over interstate commerce.[26] This concurrent jurisdiction creates a potential for overlapping and inconsistent federal and state antitrust enforcement that did not exist when Congress passed the Sherman Act.[27] During the 1980s, for example, some state attorneys general, dissatisfied with what they perceived as insufficient levels of antitrust enforcement by the federal government, formed a Multistate Antitrust Task Force (Task Force) through NAAG.[28] The Task Force has coordinated a variety of state antitrust efforts, including the adoption of NAAG antitrust enforcement guidelines, which differ in some respects from those of the federal antitrust agencies.[29]

Important efforts to coordinate state and federal antitrust enforcement have taken place despite the differences.[30] These efforts include the 1989 formation of an Executive Working Group on Antitrust, which coordinates state and federal enforcement activities to avoid duplicative efforts.[31] Most states have joined the NAAG Voluntary Pre-Merger Disclosure

Compact, as revised in 1994 (NAAG Compact). That Compact encourages merging firms to submit pre-merger filings to the member states in return for an agreement by the states to forgo the issuance of individual state subpoenas and to obtain documents through the same process used by the relevant federal antitrust agency.[32] There also have been the joint state and federal adoption of two protocols—a Protocol for Increased State Prosecution of Criminal Antitrust Offenses in 1996[33] and a Protocol for Joint Federal/State Merger Investigations in 1998.[34]

In 2005 NAAG adopted certain Principles of State Antitrust Enforcement (NAAG Principles),[35] which articulate, among other things, NAAG's view of the relationship between state and federal antitrust enforcement.[36] The NAAG Principles state that Congress intended federal antitrust laws to "complement, rather than supplant state antitrust laws," and that the state attorneys general accordingly "oppose[] federal preemption of any state antitrust statutes . . . or other limitation of state antitrust authority."[37] The NAAG Principles note the states have merger enforcement jurisdiction and can obtain divestiture in merger cases.[38] They also claim that "in merger cases, the effects of consolidation in national mergers are more often felt locally than nationally," thus making state attorneys general at least as knowledgeable about those effects as the federal antitrust agencies.[39] The NAAG Principles assert that state attorneys general work closely with the Federal Trade Commission (FTC) and the Antitrust Division of the Department of Justice (DOJ), and they have done so efficiently and productively. Congress has mandated and continues to support (as do the state attorneys general) increased cooperation (including sharing information) among the federal agencies and the states.[40]

B. State Authority and Recent State Antitrust Enforcement

State authority to obtain damages on behalf of consumers is broader than that of the federal antitrust agencies. This section briefly reviews that authority and then discusses state antitrust enforcement from the 1990s through 2006.

1. States Are the Only Governmental Authorities that May Seek Treble Damages for Consumers to Remedy Violations of Federal Antitrust Law

The only governmental authorities that may recover treble damages on behalf of consumers injured by violations of federal antitrust law are state attorneys general.[41] The federal antitrust enforcers have no such authority; at most, they may seek disgorgement or restitution as monetary remedies.[42] This state remedial authority is most relevant in non-merger matters, such as price-fixing cases, where states may recover overcharges that consumers paid.[43]

Of course, consumers may also sue individually, or as participants in class actions, to recover treble damages. Many individual consumers, however, are unlikely to undertake what can be lengthy and expensive litigation.[44] In addition, states have certain advantages as litigants. States using *parens patriae* authority do not need to meet all of the requirements that apply to private class actions,[45] and states—unlike private plaintiffs—can use tools such as subpoenas to investigate potential violations prior to litigation.[46]

2. Recent State Antitrust Enforcement

Data on state antitrust enforcement activities are not comprehensive. Each of the available data sets is missing some information, such as different states' activities or cases during different time periods. The data sets vary in the level of detail they provide about challenged activities and how the cases were resolved.

Nonetheless, various efforts to collect and describe data on state antitrust enforcement generally outline a consistent picture. One scholar who analyzed state antitrust enforcement activity between 1993 and 2002 concluded that state antitrust enforcement "is based overwhelmingly on the states' comparative advantages," characterized as "familiarity with local markets, familiarity with and representation of state and local institutions, and ability to send money to injured individuals."[47] Another scholar, using a different data set, concluded that a relatively large number of state price-fixing and bid-rigging cases, coupled with a relatively small number of vertical cases, reflected state enforcement priorities that were consistent with the enforcement priorities suggested by prevalent, well-regarded economic analysis.[48]

A similar picture emerges from analysis of the data provided in the NAAG State Antitrust Litigation database (NAAG Database), the most comprehensive source of information about state antitrust enforcement actions.[49] NAAG sought data from its members on their antitrust enforcement actions, requesting (among other things) case names, the dates cases were initiated and settled or brought to final judgment, the types of claims, the industry, and whether there was "federal participation" in the case. NAAG defined "federal participation" to mean "there was a federal case related to the state case."[50] The database does not explain whether federal participation was "joint, parallel, or independent,"[51] nor does it indicate whether the federal agency and the relevant state(s) sought or received different remedies in court or in settlement agreements.

Although the database is less than complete,[52] it provides significant insights into recent state antitrust enforcement activity. The analysis below focuses on actions filed within the last seventeen years, from 1990 through 2006. The reporting states filed a total of 343 antitrust actions in that period, including cases the states brought on their own as well as cases in which there was federal participation.

The greatest percentage of all of the NAAG-reported cases—47 percent—involved claims of price-fixing, bid-rigging, or market allocation, as shown in Figure 1. Merger challenges followed, making up 34 percent of the total cases.[53] Finally, 19 percent of the cases involved "other" allegations, including group boycotts, monopolization, horizontal and vertical non-price restraints, joint ventures, resale price maintenance, refusals to deal, tying, monopsony, or violation of enforcement orders.

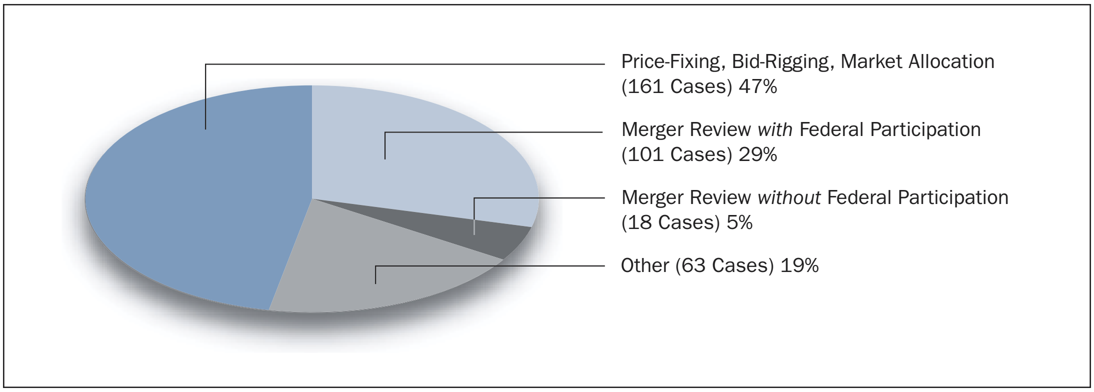

Figure 1: State Antitrust Enforcement by Type of Case

59 percent (201 of 343) of these actions represent joint enforcement with one of the federal agencies.[54] With respect to the remaining 142 cases, 56 percent involved allegations of price-fixing, bid-rigging, or market allocation, as shown in Figure 2. Only 13 percent involved merger challenges. Finally, 31 percent involved "other" allegations, as described above. 80 percent of the enforcement actions that states pursued on their own involved local or regional conduct.[55]

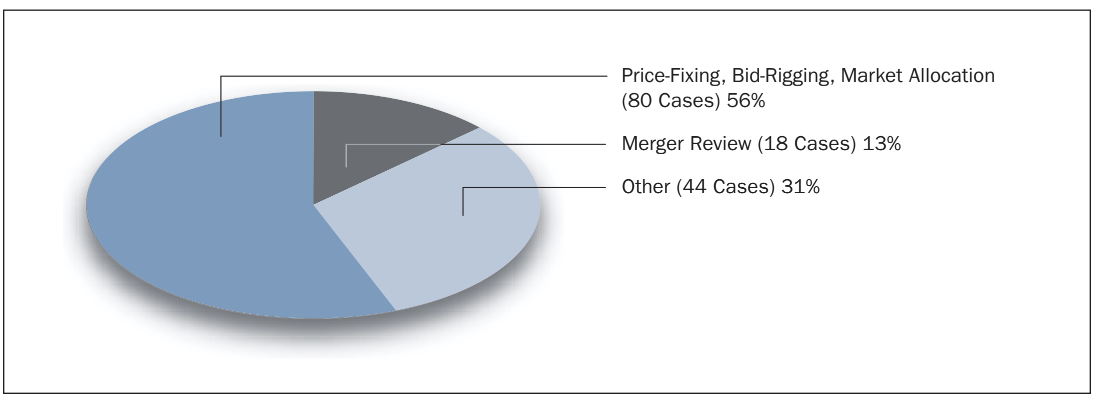

Figure 2: Types of State-Only Antitrust Enforcement

3. RECOMMENDATIONS AND FINDINGS

The available evidence does not suggest a need for Congress to change the states' authority to enforce the federal antitrust laws. The Commission does, however, make specific recommendations as to how the states and federal enforcement agencies can work together to respond to legitimate concerns that have been raised concerning multiple enforcement agencies. Because the issues differ somewhat for state non-merger and merger enforcement, recommendations for these areas are discussed separately below.

A. State Non-Merger Enforcement

32. No statutory change is recommended to the current role of the states in non-merger civil antitrust enforcement.*

33. State non-merger enforcement should focus primarily on matters involving localized conduct or competitive effects.†

Multiple enforcers with different enforcement approaches can lead to inconsistent results.[56] To avoid this, state and federal antitrust enforcement should be broadly consistent. In the non-merger area, antitrust enforcement over the past fifteen years has been generally consistent between state and federal antitrust enforcers. During that time, the states' enforcement efforts most frequently have targeted the types of antitrust violations—such as price-fixing, bid-rigging, and market allocation—that antitrust practitioners generally agree are most likely to cause significant consumer harm. In addition, the states have exercised their unique authority to recover antitrust damages for state residents and local government purchasers. Finally, the available evidence shows the states have concentrated their non-merger enforcement efforts in areas where they have a comparative advantage in terms of knowledge—that is, with respect to local markets, local competitive effects, and local government purchasers. Thus, the available evidence does not justify a recommendation for statutory change to the states' authority to bring non-merger cases based on federal antitrust law.

* Commissioners Carlton, Delrahim, and Shenefield do not join this recommendation.

Although Commissioners Garza and Warden join this recommendation, they believe that the Supreme Court would reject the authority of the states to sue for equitable relief as *parens patriae* under the federal antitrust laws for other than state-specific injury, making statutory change unnecessary. Commissioner Warden elaborates on these views in his separate statement, in which Commissioner Garza joins.

† Commissioners Cannon, Jacobson, and Yarowsky do not join this recommendation.

1. State Non-Merger Enforcement Has Been Broadly Consistent with Federal Non-Merger Enforcement

a. The States and the Federal Agencies Generally Appear to Have Brought the Same Types of Antitrust Cases

Consistent state and federal antitrust enforcement standards and policies are generally desirable for a variety of reasons. Firms need clear guidance on what is or is not permissible under both federal and state antitrust laws. Consistency in legal standards increases a firm's ability accurately to assess risk with a reasonable degree of certainty, while inconsistency increases businesses' risks.[57] Conflicting state and federal antitrust standards can obfuscate and undermine the predictable application of antitrust law, thus hampering antitrust compliance efforts by businesses.[58]

Businesses have valid concerns that "complaints filed in state-initiated lawsuits could seek to impose multiple punishments or to generate inconsistent obligations on national or international firms."[59] For example, states may seek injunctive relief or conduct remedies that differ from those sought by federal agencies.[60] Moreover, because each state joining a federal antitrust prosecution becomes a party to any settlement negotiations, state participation may reduce the probability of reaching a final resolution.[61] Finally, some observers have expressed concern that state enforcers rarely issue statements explaining their reasons for challenging, or not challenging, particular conduct, so businesses may lack a clear understanding of state enforcement policies and may be unable to address perceived errors in state enforcement.[62]

The recent *Microsoft* litigation exemplified, among other things, the difficulties that can arise when federal and state governments disagree about settlement terms. The DOJ and a number of states brought this case. Following settlement talks, nine states and the District of Columbia (the "litigating states") rejected a settlement that the DOJ and nine other states had accepted.[63] The litigating states pursued a remedies trial, but were awarded less relief than they sought.[64] Two states took further action: West Virginia appealed, then settled;[65] Massachusetts litigated and lost.[66] Judge Richard A. Posner, who tried but was unable to mediate a settlement in *Microsoft*, complained that "[s]tates do not have the resources to do more than free ride on federal antitrust litigation, complicating its resolution; in addition, they are too subject to influence by interest groups that may represent a potential antitrust defendant's competitors."[67] Other commentators also have been critical that relatively few states were able to lengthen and complicate federal antitrust enforcement proceedings of such significance.[68]

The issues raised in the context of the *Microsoft* litigation and the possibility of conflicting or inconsistent legal standards, remedies, or settlement approaches, however, must be viewed in the context of the federal system in the United States. The states currently have the right and responsibility to make their own judgments about how best to seek to enforce the antitrust laws to serve the interests of their citizens. Even if Congress revoked the states' authority to bring suit under federal antitrust law, the states would still have authority to make those judgments under state antitrust law, absent a further step by Congress to preempt state antitrust laws.

Moreover, some view the states' ability to make such independent judgments, about both possible remedies and whether to bring an antitrust case in the first instance, as important to ensure challenges to anticompetitive behavior.[69] Even skeptics of state enforcement of federal antitrust law concede that "states might well serve as watch dogs, pressuring Washington to act when it is lax, but deferring to federal prosecutors even if they chose to enter after the fact."[70] In addition, the states can identify and pursue local antitrust violations. Others argue further that the states may produce useful diversification in antitrust policy.[71]

Of course, what some consider useful policy diversification, others view as unfounded theories of anticompetitive harm. Such disagreements are not surprising. Given the ongoing evolution of economics and antitrust law—especially in important and difficult cases with novel fact patterns—some disagreements among antitrust practitioners, including antitrust enforcers, are virtually inevitable. For our purposes, the question is whether such disagreements between and among state and federal antitrust enforcers are sufficiently frequent and disruptive that they significantly undermine coherent and judicious federal antitrust enforcement and unreasonably burden businesses with excessive costs and uncertainty.

The available evidence suggests that, to the contrary, state and federal non-merger antitrust enforcement over the past seventeen years has been broadly consistent and not in conflict. In the non-merger area, the states have brought claims of price-fixing, bid-rigging, and market allocation much more frequently than any other types of antitrust claims. Antitrust enforcers are in general agreement that consumers are likely to suffer significant harm from price-fixing, bid-rigging, and market allocation agreements, so state enforcement efforts in these areas fall very much in the mainstream of antitrust.

Other non-merger antitrust enforcement efforts have the potential to generate controversy. Nevertheless, the data suggest that, once again, state and federal antitrust enforcement have not been significantly inconsistent. The category of "other" cases in the NAAG Database includes allegations—such as resale price maintenance, vertical non-price restraints, and tying—that federal antitrust enforcers have become more cautious about bringing, particularly in light of developments in economic thinking in recent decades. It appears that state enforcers also have become more cautious in these areas. There has been a gradual reduction over time in the number of NAAG-reported cases in the "other" category that the reporting states brought without any federal participation. From 1989 to 1994, the reporting states brought nineteen state-only cases in the "other" category; from 1995 to 2000, they brought sixteen state-only cases in the "other" category; and from 2001 to 2006, they brought only nine state-only cases in the "other" category.

Table A: "Other" State-Only Cases (excluding Mergers, Price-Fixing, Bid-Rigging, and Market Allocation)

1989–1994 (19 Cases)	
# of Cases	**Claims**
2	Boycott
2	Boycott, Horizontal Non-Price Restraint
2	Boycott, Monopolization
1	Horizontal Non-Price Restraint
1	Horizontal Non-Price Restraint, Refusal to Deal
2	Vertical Non-Price Restraint
4	Resale Price Maintenance
2	Tying
3	Other
1995–2000 (16 Cases)	
# of Cases	**Claims**
2	Boycott
1	Boycott, Horizontal Non-Price Restraint
1	Joint Venture
5	Monopolization
1	Monopolization, Tying
1	Monopolization, Vertical Non-Price Restraint
1	Monopsony
1	Refusal to Deal
1	Resale Price Maintenance
1	Tying
2001–2006 (9 Cases)	
# of Cases	**Claims**
1	Boycott
1	Boycott, Resale Price Maintenance
5	Monopolization (Three are related cases)
1	Resale Price Maintenance, Vertical Non Price-Restraint
1	Tying

Source: NAAG Database.

These data reveal that conflicts between state and federal enforcers in the cases they bring or remedies they seek are more the exception than the rule.[72] With a few notable exceptions, state non-merger and federal non-merger antitrust enforcement over the past fifteen years appear broadly consistent.

b. The Available Evidence Does Not Support Elimination of the States' Authority to Collect Damages on Behalf of Consumers

In 1976 Congress passed the HSR Act, Title III of which gave state attorneys general *parens patriae* authority to seek monetary relief (including treble damages) on behalf of state residents.[73] (As explained earlier, federal antitrust enforcers do not have a comparable authority to seek such relief on behalf of consumers.)[74] The question of whether the states should continue to have this authority has been raised.[75] Some view state *parens patriae* actions as adding little value to overall deterrence and enforcement.[76]

Several witnesses testified, however, that *parens patriae* recovery has been a success,[77] noting examples such as a recent multistate litigation, in which states obtained $80 million from defendant pharmaceutical companies to compensate consumers, state agencies, and insurance companies for overcharges due to federal and state antitrust violations.[78] The states have also developed innovative methods of distributing settlement proceeds,[79] using Web-based submissions, for example, to streamline the process.[80] Acknowledging the states' greater experience in this area, the FTC had the states distribute the FTC's portion of the recovery in a case in which it obtained disgorgement of profits by a defendant.[81] Thus, it appears that state *parens patriae* damages actions have played, and can continue to play, a useful role in non-merger antitrust enforcement.

In the Commission's view, the states and the federal antitrust agencies should consider on a continuing basis how best to avoid seeking or imposing inconsistent remedies. Nevertheless, evidence that state and federal enforcers occasionally impose inconsistent remedies does not justify a recommendation to eliminate the states' authority to bring *parens patriae* actions to recover damages for their citizens. The data suggest that state antitrust enforcement efforts have usefully fulfilled their mandate to recover damages for consumers.

2. State Non-Merger Antitrust Enforcement Should Focus on Local Markets and Local Government Purchasers

Knowledge of local markets and conditions can be helpful to proper antitrust enforcement.[82] Proponents of state enforcement assert that the states can better ensure expert coverage of smaller, more local enforcement matters.[83] Some suggest that state antitrust enforcers have greater familiarity with local government institutions that purchase goods, and therefore can better identify and pursue antitrust violations, such as price-fixing, that affect those purchasers.[84]

State enforcement of the federal antitrust laws is not the only way to ensure coverage of local antitrust violations, of course. Both the DOJ and the FTC have brought a significant number of complaints involving purely local or regional markets and have demonstrated their expertise in investigating and pursuing such matters.[85] Nonetheless, the states' non-merger antitrust enforcement efforts in recent decades appear to have had a largely local and regional focus, which may improve the likelihood of uncovering and prosecuting local antitrust violations. Indeed, even a proposed transaction that is national or international in scope may also have competitive effects in local markets.[86] The data suggest that states have focused their enforcement efforts on such localized competitive effects.

A review of all (not just non-merger) state antitrust enforcement matters from 1993 to 2002 published in one case-law reporter showed more than 80 percent of the cases had a local aspect, typically because the complaints alleged local markets.[87] The author found state antitrust enforcement activity to be "overwhelmingly local," with challenged conspiracies involving "travel agents and tour bus operators, health care providers, school bus companies, road builders, roofers, auto body shops, dairies, group homes repairers, bakers of Italian bread, individuals who gave carriage rides, towers, and trash haulers."[88]

The NAAG-reported data on "other" cases—involving claims such as group boycotts, horizontal and vertical non-price restraints, and violations of enforcement orders—also reveal a primary focus on local markets. Of the 44 state-only "other" cases brought by the reporting states, 33 cases appeared to involve local or regional conduct or markets, 6 involved national markets, and 5 cases did not provide enough detail to assess the scope of markets they involved.[89]

A state focus on local or regional matters in the non-merger area is desirable. Among other things, state antitrust enforcers typically are better positioned to discover and prevent or prosecute locally based activities such as price-fixing or bid-rigging. Government purchasers are sometimes among the first to experience the effects of a local price-fixing conspiracy; states can use their ties with those agencies to develop a case challenging the anticompetitive conduct.[90] In addition, a state focus on local or regional matters can avoid unnecessary overlaps in state and federal antitrust enforcement, thereby using limited enforcement resources most efficiently. Finally, for matters of national or international scope that also have local competitive effects, it seems most appropriate for states to investigate competitive conditions in their own local markets.

B. State Merger Enforcement

34. **No statutory change is recommended to the current roles of federal and state antitrust enforcement agencies with respect to reviewing mergers.***

35. **Federal and state antitrust enforcers are encouraged to coordinate their activities and to seek to avoid subjecting companies to multiple, and possibly inconsistent, proceedings.**

State merger enforcement takes place today in a world in which business operations are increasingly international. More than 100 countries have some form of antitrust enforcement,[91] and multinational firms proposing a merger or acquisition may need to obtain merger clearances from antitrust agencies in as many as seventy countries in addition to the United States.[92] The differing requirements of antitrust agencies all over the world can substantially increase a firm's costs of merger clearance.[93]

Adding the potential for fifty state merger enforcers also can significantly increase the time and money required to obtain clearance of a proposed transaction.[94] State merger reviews increase the likelihood that businesses will be subject to multiple and differing document production and data requests, differing competitive analyses, significant delays, and even inconsistent remedies. As discussed below, the Commission recommends specific areas of additional coordination and cooperation between state and federal enforcers to reduce such inefficiencies.

Some go further in their criticism of state merger enforcement, however. They view state merger enforcement as simply "free riding" on federal efforts.[95] Counsel for merging parties report that, in some instances, state antitrust enforcers have "contributed few resources, provided little expertise, and conducted little or no document review."[96] Commenters point out the tremendous disparity in resources between state and federal antitrust enforcers.[97] For example, in 2005 California, one of the most active states in antitrust enforcement, had an antitrust budget of $6 million; this was dwarfed, however, by the Antitrust Division's budget of $144 million that year.[98] Others note that states with limited resources and staff who may review only a few antitrust cases each year may find it difficult to match the degree of expertise at the federal antitrust agencies, where hundreds of lawyers and economists review many matters during any given year.[99] Commenters also express concern that merger investigations by state attorneys general may be influenced by non-antitrust-based concerns (such as job preservation).[100]

* Commissioners Carlton, Delrahim, Garza, Shenefield, and Warden do not join this recommendation.

FFrom the record before the Commission, it appears there have been instances in which state antitrust enforcers essentially "piggy-backed" on the investigational and enforcement efforts of a federal antitrust agency. Whether such instances are rare or frequent, however, remains subject to debate. But the available evidence also suggests that states have played useful roles in merger enforcement. In the merger area, as in the non-merger area, the vast majority of cases in which states have been involved (with or without federal participation) address competitive problems in local markets, in which states may have particular expertise. In one survey, the author reported that state merger challenges from 1993 to 2002 "involve[d] hospitals, movie theaters, waste disposal operations, grocery stores, Jewish funeral homes, dairies, radio stations, gasoline stations, ski resorts, de-icing salt production facilities, and a sardine processing plant."[101]

Another analysis, undertaken by the state attorneys general of Hawaii, Maine, and Oregon, found that 77 percent of NAAG-reported state merger cases from 1991 to 2005 involved commercial and industrial sectors characterized by "their localized market structure."[102] These sectors included "health care, retail gasoline, solid waste, supermarkets, movie theaters, banking, retail pharmacy, funeral homes, department stores, and asphalt."[103] Federal participation occurred in 97 of 120 state merger cases,[104] suggesting that many involved national markets as well as local or regional markets. As one comment explained, the "effects of the merger in national markets can be reviewed by the federal government, while the local markets can be investigated by the state attorneys general."[105] States also have sometimes pursued very small, local transactions that may not have come to the attention of federal enforcers. For example, the state of Maine challenged certain health care consolidations that may have escaped notice at the federal level because they did not require pre-merger notification.[106]

In addition, as in non-merger enforcement, the states can act if federal antitrust enforcers fail to do so.[107] States may challenge a merger that a federal antitrust agency has purposefully declined to challenge, and states may seek broader relief than that sought by the federal agency.[108] Supporters of active state merger enforcement believe that such actions can be important to protect consumer welfare, where the level of federal enforcement is suboptimal.[109]

With respect to the substantive merger analyses of the states, however, the 1993 NAAG Horizontal Merger Guidelines themselves raise concern that state merger enforcement may sometimes be driven by motivations other than a sound antitrust analysis focused on consumer welfare. Those guidelines state that social and political objectives *other than* consumer welfare may be taken into account in making judgments about whether to challenge a proposed transaction.[110] This language, and state actions in a handful of cases, has raised concerns that states could attempt to block mergers for reasons other than to preserve competition.[111] Commenters argue that the "political nature of the state attorney general's office makes constituent influence more likely than at the federal level,"[112] and suggest that state attorneys general may be tempted to block mergers to prevent job losses in their states,[113] even though a proposed transaction could result in cost savings and lower prices for consumers in other states.[114]

The available evidence suggests only two or three instances in which state merger enforcement could be criticized as responsive to concerns other than preserving competition.[115] Even the scholar who found alleged instances of such "antitrust parochialism" states that, "[w]hile parochialism and externality concerns are theoretically well grounded, they do not find much empirical support in the states' actions to date."[116] Nonetheless, significant concerns remain among the antitrust bar that state merger enforcement, on occasion, may seek to accomplish goals other than consumer welfare.[117]

36. Federal and state antitrust enforcers should consider the following actions to achieve further coordination and cooperation and thereby improve the consistency and predictability of outcomes in merger investigations.

While the Commission does not recommend changing state authority to enforce federal antitrust law, further efforts at coordination and cooperation between the state and federal agencies could reduce inefficiencies and other possible problems. Accordingly, the Commission proposes a number of specific methods to improve coordination, as described below.

36a. The states and federal antitrust agencies should work to harmonize their application of substantive antitrust law, particularly with respect to mergers.*

The federal and state antitrust agencies use two different sets of guidelines for the analysis of a proposed merger or acquisition between or among competitors. The federal antitrust enforcement agencies use the Horizontal Merger Guidelines issued by the DOJ and the FTC (DOJ/FTC Merger Guidelines).[118] Many states apply the 1993 NAAG Horizontal Merger Guidelines, which offer a common standard for merger reviews among the states.[119]

There are important differences between these two sets of guidelines. The NAAG Horizontal Merger Guidelines provide a different methodology for defining relevant product and geographic markets, using the market definition methodology of the DOJ/FTC Merger

* Commissioners Carlton, Garza, and Valentine believe such harmonization ideally should take the form of the states' adoption of the DOJ/FTC Merger Guidelines.

Guidelines as only an "alternative."[120] The federal and state merger guidelines also use two different requirements for how soon certain types of entry must occur in the relevant market to eliminate or reduce competitive concerns.[121] Finally, the federal and state merger guidelines apply different standards for the circumstances in which evidence of efficiencies may eliminate or ameliorate competitive concerns.[122]

Beyond the differences between federal and state merger analysis, differences among various states are possible as well. Some states do not necessarily use the NAAG Horizontal Merger Guidelines in their merger analyses. Businesses and antitrust practitioners report there can be, and often are, divergent enforcement policies among the different states.[123]

All of these differences between and among federal and state merger enforcement standards can produce inconsistencies in enforcement that add time, costs, and uncertainty to merger review. The federal antitrust agencies and the states may seek to review different documents or seek different relief, depending on their theories of competitive harm. There may be delays in the negotiation of consent decrees "where state attorneys general and the federal government have different enforcement or remedy philosophies (and [there is an] accompanying potential for opportunistic behavior, as each government party to the consent negotiations may have an incentive to be the last to agree)."[124] Some maintain that "federal agency and attorney general consent orders often require different relief even when the states are suing under federal law only."[125] Such divergence can lead firms to question the fairness and validity of antitrust merger enforcement.

The costs of dual merger review at the state and federal levels, and among multiple states, could be significantly reduced by the application of well-established, generally agreed-upon antitrust principles for merger analysis.[126] Agreement by federal and state enforcers on general principles for antitrust merger analysis would also reduce the risk of inconsistent results. That inconsistency can undermine and impair the value of guidance to businesses that merger guidelines are intended to offer.[127]

The federal antitrust agencies and the states should work together toward the substantive harmonization of the NAAG Horizontal Merger Guidelines and the DOJ/FTC Merger Guidelines based on sound economic principles. Such analytical convergence might be fostered through a variety of means, including joint training sessions, participation by state attorneys general and the federal antitrust agencies in workshops, and additional application of economic theory and resources to merger review.[128] Federal and state enforcers may not agree on the precise application of analytical principles in every merger case. Nonetheless, federal and state enforcers should reach agreement on the proper antitrust principles to apply in merger analysis. The substantive convergence of federal and state antitrust merger analysis around an agreed-upon sound analytical framework would reduce the costs, delays, and uncertainty caused by differences in enforcement perspectives.[129]

36b. Through state and federal coordination efforts, data requests should be consistent across enforcers to the maximum extent possible.

The HSR Act does not give the states any right to participate in the HSR Act pre-merger review process.[130] Except when the merging companies consent, the DOJ and the FTC cannot share any information obtained from the companies. States must subpoena documents from the parties. Merging companies accordingly can be subject to multiple, inconsistent document requests from federal and several different state enforcers.

State and federal enforcers have made progress in coordinating document requests. The Protocol for Coordination in Merger Investigations Between the Federal Enforcement Agencies and State Attorneys General (adopted in 1998) provides a general framework for sharing confidential documents. The protocol provides examples of waivers through which merging companies can authorize the FTC or the DOJ to share with state attorneys general documents the companies submitted, whether in response to a second request, a civil investigative demand, or voluntarily.[131] In addition, most states have joined the NAAG Compact, which encourages merging companies to submit a copy of their HSR Act pre-merger filings to the states.[132] In return, the NAAG Compact binds the signatory states to obtain documents only through this mechanism and forgo the issuance of individual state subpoenas.[133] State antitrust enforcers also have worked together to reduce the number of matters in which parties are required to respond to multiple document requests from multiple states.[134]

There is still significant room for improvement, however. Counsel for merging parties report "there are instances in which state and federal authorities issued different requests for information even though they appeared to be pursuing the same theory [of possible competitive harm]."[135] In such instances, counsel for merging parties generally had to negotiate with both federal and state enforcers to narrow the requests and make them consistent.[136] State governments, unlike the federal government, may require paper (instead of electronic) copies of documents, and the "cost of preparing multiple responses [to various states] can be significant."[137] Different states may request data in varying formats or for different time periods, depending on how individual states view their information needs in light of the interests they seek to protect.[138]

These types of problems are caused by both a lack of coordination between federal and state enforcers about document and data requests and the different analytical approaches that federal and state enforcers may apply to merger analysis. To avoid such circumstances, federal and state antitrust enforcers should work together before issuing document and data requests to achieve as much consistency in those requests as possible. In addition, the states should continue to work with each other to achieve consistency in data requests. Not all states have signed the NAAG Compact, and even the signatory states are not required to use it in every investigation.[139] Practitioners emphasize the need for even greater coordination.[140]

36c. The state antitrust agencies should work to adopt a model confidentiality statute with the goal of eliminating inconsistencies among state confidentiality agreements.

Under the HSR Act, confidential business documents that firms submit to a federal antitrust agency as part of a merger review are treated as confidential.[141] The ability of the federal antitrust agencies to ensure that confidential business documents are not publicly or otherwise disclosed is critical to the success of the HSR Act's pre-merger review program.[142] Firms often submit documents to an antitrust agency that provide critical insights into current competitive conditions, the firm's own future competitive strategies, and the like, in a relevant market in which the firm participates. To reveal the content of those documents could potentially cause significant competitive harm to the firm.

Because the HSR Act does not allow for state participation in the pre-merger review process, states must negotiate confidentiality agreements with firms to ensure that confidential business documents are properly protected from disclosure. Inconsistencies among the provisions of confidentiality agreements offered by different states are another cost of state merger reviews, however. Confidentiality protections for firms' proprietary information typically must be negotiated on a state-by-state basis, because confidentiality statutes vary from state to state.[143] Those costs could be reduced by the adoption of a model confidentiality statute by as many states as possible.[144]

Chapter II.D
International Antitrust Enforcement

1. INTRODUCTION

The United States adopted the Sherman Act over 100 years ago.[1] Although few countries adopted similar laws for many years,[2] today there are over 100 nations with competition laws.[3] An increasing number of countries implemented comprehensive competition laws and enforcement regimes as they recognized the "value of competition as a tool for spurring innovation, economic growth, and . . . economic well-being," and the advantages of moving away from government-managed economies.[4] Over this same period, global trade has increased markedly, and there has been a significant increase of economic integration and interdependence across national borders.[5] Advances in communication technology have "shrunk the time and distance that separate markets around the world."[6]

A. Convergence, Cooperation, and Comity

Notwithstanding the large number of antitrust regimes worldwide, multinational antitrust enforcement generally has not generated significant inconsistencies or conflict among nations.[7] Indeed, significant convergence based on sound principles of competition law has occurred and is continuing to occur on both procedures relating to multinational enforcement and the core substance (if not the details) of antitrust and competition law.[8] Consensus is being reached through a variety of means, including through multinational organizations such as the Organisation for Economic Co-operation and Development (OECD) and the International Competition Network (ICN).[9] The U.S. antitrust agencies in particular have played an important role in encouraging convergence and cooperation, through participation in the OECD and the ICN, as well as through the provision of technical assistance to nascent competition law regimes. And a U.S. advisory committee, the International Competition Policy Advisory Committee (ICPAC), issued an extensive report in 2000 that identified steps for cooperation and convergence and stimulated further efforts in this regard.[10]

Cooperation between and among different nations' antitrust enforcers has also limited conflict. Instead of resisting "extraterritorial" enforcement of the U.S. antitrust laws through blocking statutes and the like (as often occurred in the 1970s), many foreign jurisdictions now actively assist the United States in antitrust enforcement efforts, and vice versa.[11] For instance, a British magistrate court and a U.K. secretary of state recently authorized the extradition of a British citizen to the United States to face criminal antitrust charges[12]—rulings that likely would not have occurred as recently as five years ago.[13]

The United States and the European Union routinely coordinate their reviews of cross-border transactions.[14] Such cooperation has been advanced by formal bilateral and multilateral agreements between the United States and other countries. For example, the United States has entered into bilateral agreements with the European Union that both encourage cooperation on investigations and establish principles of comity to govern when each jurisdiction should defer to the other.[15] In 1994 Congress enacted the International Antitrust Enforcement Assistance Act (IAEAA),[16] authorizing the United States to enter into agreements enabling the exchange of confidential business information to facilitate the coordination of cross-border investigations.[17]

Although the United States and other countries have reached a substantial degree of convergence, improved by cooperation and coordination,[18] further steps are appropriate. Divergence can create problems of at least three types. First, companies may be subject to conflicting and inconsistent laws, creating uncertainty as to the legal standards applicable to their business arrangements.[19] Second, companies must comply with the procedural requirements of multiple jurisdictions, potentially increasing their costs significantly, particularly with respect to notification requirements for mergers.[20] Third, different countries may ultimately impose different, and inconsistent, remedies with respect to the same conduct or transaction.[21] U.S. companies that have been subject to differing remedies from different enforcers, which resulted from the lack of greater convergence, include some of the largest U.S. companies, such as Boeing, General Electric, and Microsoft.[22]

Based on its study, the Commission makes several recommendations intended to further convergence on appropriate standards, encourage cooperation, and minimize conflict in the future, as follows.

37. The Federal Trade Commission and the Antitrust Division of the Department of Justice should, to the extent possible, pursue procedural and substantive convergence on sound principles of competition law.

38. As a matter of priority, the Federal Trade Commission and the Antitrust Division of the Department of Justice should study and report to Congress promptly on the possibility of developing a centralized international pre-merger notification system that would ease the burden on companies engaged in cross-border transactions.

39. Congress should amend the International Antitrust Enforcement Assistance Act to clarify that it does not require that Antitrust Mutual Assistance Agreements include a provision allowing the non-antitrust use of information obtained pursuant to an AMAA.*

* Commissioners Shenefield and Valentine do not join this recommendation.

40. **Congress should provide budgetary authority, as well as appropriations, directly to the Federal Trade Commission and the Antitrust Division of the Department of Justice to provide international antitrust technical assistance.**

41. **The United States should pursue bilateral and multilateral antitrust cooperation agreements that incorporate comity principles with more of its trading partners and make greater use of the comity provisions in existing cooperation agreements.**

41a. **Cooperation agreements should explicitly recognize the importance of promoting global trade, investment, and consumer welfare, and the impediment that inconsistent or conflicting antitrust enforcement poses. Existing agreements should be amended to add appropriate language.**

41b. **Cooperation agreements should incorporate several principles of negative and positive comity relating to circumstances when deference is appropriate, the harmonization of remedies, consultation and cooperation, and "benchmarking reviews."**

B. The Foreign Trade Antitrust Improvements Act

Applying the U.S. antitrust laws to conduct occurring overseas has the potential to conflict with competition law and other policies in other nations. The Supreme Court first addressed U.S. antitrust jurisdiction over conduct occurring outside the United States in 1909.[23] After years of divergent court decisions, Congress attempted to resolve the issue by passing the Foreign Trade Antitrust Improvements Act (FTAIA) in 1982.[24]

The FTAIA, however, proved to be less than a model of clarity and resulted in continued split court decisions. In 2004 the Supreme Court addressed some of these issues regarding the law's extraterritorial scope in *F. Hoffmann-La Roche Ltd. v. Empagran S.A.*,[25] but the opportunity for continued divergence exists. The Commission's general principle on the antitrust laws' reach is intended to offer clear guidance in these unresolved areas.

Based on its study of the FTAIA, the Commission makes the following recommendation.

42. **As a general principle, purchases made outside the United States from a seller outside the United States should not be deemed to give rise to the requisite effects under the Foreign Trade Antitrust Improvements Act.***

* Commissioner Delrahim does not join this recommendation.

2. RECOMMENDATIONS AND FINDINGS

A. Cooperation and Convergence

37. The Federal Trade Commission and the Antitrust Division of the Department of Justice should, to the extent possible, pursue procedural and substantive convergence on sound principles of competition law.

The Antitrust Division of the Department of Justice (DOJ) and the Federal Trade Commission (FTC) have made extensive efforts to improve cooperation between the United States and other nations' antitrust enforcers.[26] Both U.S. antitrust agencies "enjoy [a] strong cooperative relationship[] with a large and increasing number of foreign enforcement agencies, enabling close cooperation on cases, coordination on international antitrust policy, and provision of technical assistance to new agencies around the world."[27] Whereas U.S. requests for cooperation previously took up to a year to be processed,[28] today antitrust agencies worldwide have a "pick up the phone" approach toward sharing information and assisting each other in their antitrust enforcement efforts.[29] This high degree of cooperation has facilitated convergence of both procedural and substantive aspects of antitrust law.

The efforts of the U.S. antitrust agencies have been advanced in part through their participation in two organizations, the OECD and the ICN.[30] The OECD was created in 1961 to expand free trade and improve development in member countries.[31] As part of these efforts, it created a Competition Law and Policy Committee that provides a variety of means for countries to share their best practices regarding antitrust and competition policy.[32] The ICN, in comparison, is relatively new, but has a more broad-based membership. It was created after ICPAC called for the creation of a "Global Competition Initiative" to address antitrust enforcement in a growing globalized economy.[33] Membership in the ICN has increased from fourteen jurisdictions when it began in 2001[34] to ninety-seven members from eighty-five jurisdictions in 2007.[35]

The ICN and OECD have promulgated "best practices" on merger reviews and cartel investigations and continue to work on convergence of substantive and procedural law.[36] For example, the ICN is currently undertaking a study of unilateral conduct standards with the goal of developing a consensus on the objectives and legal and economic bases of enforcement regarding unilateral conduct.[37] The ICN in the past has developed principles of best practices regarding merger notification regimes, with the objective of highlighting the importance of transparency and clarity in each jurisdiction's rules regarding filing requirements and review.[38] Overall, through their efforts, these institutions have had a meaningful influence in "promoting convergence in antitrust enforcement"[39] and have contributed to the "significant recent progress in reducing conflicts by increasing cooperation, information sharing, and networking."[40] Indeed, their successes are reflected at least in part by the fact that the vast majority of international investigations are conducted without incident.[41]

The DOJ and the FTC should continue to participate and take a leadership role in the ICN and OECD competition activities. Congress should be supportive of these efforts. The ICN and OECD mechanisms have proven extremely useful for encouraging the development of competition laws in other countries based on sound antitrust principles that are not in conflict with U.S. antitrust laws. Avoiding such conflict is of great benefit to U.S. consumers and businesses, because it allows companies to operate efficiently on a global scale, providing the benefits that global commerce can bring.

38. As a matter of priority, the Federal Trade Commission and the Antitrust Division of the Department of Justice should study and report to Congress promptly on the possibility of developing a centralized international pre-merger notification system that would ease the burden on companies engaged in cross-border transactions.

Approximately seventy jurisdictions now require notification of a merger.[42] The filing requirements and procedures can vary significantly from one country to the next. As a result, companies involved in cross-border mergers must comply with numerous different rules and processes.[43] The costs can be significant, including costs for determining where filings are required, preparing filings, and paying filing fees.[44] The 2003 PricewaterhouseCoopers survey on the time and costs involved in multijurisdictional merger reviews found that such reviews typically required "eight completed or considered filings" at a cost of $3.8 million for uncomplicated mergers, and $11.5 million for "more complex ones."[45]

The FTC and the DOJ should evaluate, in consultation with other jurisdictions, how to implement some kind of common premerger notification system across countries that would reduce the burden associated with multiple filings—for example, by providing an opportunity for companies to provide a single, simple initial submission for use by all affected jurisdictions.[46] Recent efforts to harmonize filing requirements have been a useful first step, but further progress is needed. For example, one Commission witness noted that Germany, France, and Britain attempted to implement a joint filing form, but that it is not frequently used because "it really didn't serve anybody's interest."[47] The Commission believes that further steps toward a common system would be valuable and should be feasible. The antitrust agencies should report to Congress promptly as to whether a more uniform and less burdensome notification system is feasible.

39. Congress should amend the International Antitrust Enforcement Assistance Act to clarify that it does not require that Antitrust Mutual Assistance Agreements include a provision allowing the non-antitrust use of information obtained pursuant to an AMAA.*

In 1994 Congress enacted the International Antitrust Enforcement Assistance Act (IAEEA) to authorize the United States to enter into agreements with other countries that allow the exchange of confidential business information.[48] Such agreements are known as Antitrust Mutual Assistance Agreements (AMAAs). In the absence of an AMAA, the United States (as well as other nations) is generally barred from sharing confidential information obtained from businesses in the course of antitrust investigations.[49] The IAEAA requires AMAAs to include safeguards to ensure that confidential, competitively sensitive information that is exchanged between enforcement agencies does not become public.[50] By allowing countries to share confidential information, an AMAA has the potential to permit countries to conduct joint investigations more efficiently and to reduce burdens on parties that might otherwise have to supply that information to both countries separately. Moreover, they can assist countries in conducting coordinated cartel prosecutions by allowing cooperation in the investigation of international cartels.[51]

Since passage of the IAEAA, the United States has entered into only one AMAA—with Australia.[52] Notably, the United States currently has no formal mechanism for exchanging cartel evidence with the European Union.[53] Two provisions in the IAEAA may discourage other jurisdictions from entering into AMAAs with the United States. First, the IAEAA provides that the United States may enter into an AMAA only on a "reciprocal basis"—that is, the agreements must provide both signatories with similar rights and obligations.[54] Second, the IAEAA requires that an AMAA must permit the foreign signatory to request from U.S. officials the authority to use confidential information obtained through the AMAA in non-antitrust matters.[55] Because of the reciprocity requirement, this second provision could mean that other jurisdictions must similarly provide a mechanism that would allow the United States to seek approval for the use of exchanged confidential information in non-antitrust matters.

The combination of these two provisions appears to have impeded other countries from entering into AMAAs because they are not willing to provide for the possibility of non-antitrust uses of information.[56] For instance, Canada's Competition Act expressly prevents the Competition Bureau from entering into an agreement where the information provided would be used for purposes other than "the purpose for which it was requested."[57] To be

* Commissioners Shenefield and Valentine do not join this recommendation. They believe that the current statute adequately accommodates authorities' potentially divergent interests in use of shared information.

sure, there may be other reasons as to why countries have not been more willing to enter into AMAAs with the United States,[58] and there may be other mechanisms through which confidential information can be shared.[59] The fact that there may be other reasons creating obstacles to the adoption of AMAAs, as well as possible work-arounds, does not mean that statutory change is not appropriate.

Congress should amend the IAEAA to make it clear that it does not require AMAAs to include a provision for non-antitrust uses of confidential information. Such an amendment would ensure that other countries are not prevented or dissuaded from entering into such agreements out of concern over non-antitrust use of information.[60]

40. Congress should provide budgetary authority, as well as appropriations, directly to the Federal Trade Commission and the Antitrust Division of the Department of Justice to provide international technical assistance.

The DOJ and the FTC provide extensive technical assistance to nascent competition law regimes.[61] The agencies use a variety of means—such as supplying on-site, long-term advisors and conducting workshops involving personnel from agencies in several countries—to provide assistance and training.[62] Such training assists other countries in the development of their enforcement institutions as well as in their understanding of the appropriate economic and legal underpinnings of sound competition policy.[63] It provides assistance in "the development of framework laws," and in the "training of personnel in the substantive legal principles, analytical framework, and investigative techniques . . . ."[64] Taken together, these services will foster greater cooperation and convergence on sound antitrust law principles.[65]

Neither the FTC nor the DOJ, however, has authority to fund such training itself. Funding is instead provided through the U.S. Agency for International Development (USAID),[66] whose mission is to foster democracy, economic growth, and human health in developing nations through a variety of means, including food aid, infrastructure construction, training, and technical assistance.[67] FTC and DOJ requests for limited USAID funding to support antitrust training efforts accordingly compete with others' demands for basic needs such as food and healthcare support. The Commission believes that providing funding for antitrust technical assistance directly to the antitrust agencies will help to ensure that the objectives and priorities of antitrust technical assistance are properly weighed by those with the relevant expertise, and that the monies are allocated as efficiently as possible.

B. Formal Agreements Incorporating Comity Principles

Convergence and cooperation are a significant, but not the sole, method of reducing conflicting approaches and outcomes that may result from having more than one country seek to apply its antitrust or competition laws to conduct. Regular application of principles of comity is a second critical component that calls for one enforcer to defer to another's decisions, and not take parallel, potentially inconsistent decisions. Comity has been described as "a concept of reciprocal deference . . . [that] holds that one nation should defer to the law and rules . . . of another because . . . the other has a greater interest."[68] Principles of comity in the antitrust arena encourage "competition agencies to presumptively defer their own enforcement authority to that of jurisdictions with the greatest interest or center of gravity."[69]

Comity principles can be applied in different ways. For example, courts may use comity principles in deciding whether U.S. law applies to conduct that takes place outside the United States. Indeed, comity has long been recognized as "a well-established part of U.S. case law in antitrust cases."[70] Similarly, comity principles may inform the adoption of agreements between countries regarding their respective responsibility and role in enforcing laws. The United States has entered into numerous bilateral and multilateral agreements that help to foster cooperation and coordination with other antitrust regimes, many of which include provisions calling for use of comity principles.

Most significantly, the United States entered into a bilateral agreement with the European Union in 1991 regarding antitrust enforcement, and a revised agreement in 1998.[71] These agreements set out certain principles of comity, both negative and positive.[72] Traditional or "negative" comity, contained in the 1991 agreement, is where one country restrains itself so as not to allow its laws and law enforcement actions to harm or impede another country's important interests.[73] The 1991 agreement calls for the United States or European Union to consider certain factors such as the significance of the anticompetitive activities involved "within the enforcing Party's territory as compared to conduct within the other Party's territory;" "the degree of conflict or consistency between the enforcement activities and the other Party's laws;" and "the existence or absence of reasonable expectations that would be furthered or defeated by the enforcement activities."[74] Accordingly, when "it appears that one Party's enforcement activities may adversely affect important interests of the other Party, the Parties will consider [the factors enumerated above] . . . in seeking an appropriate accommodation of the competing interests."[75] This type of comity is an exercise of prosecutorial or investigatorial restraint.

"Positive" comity, by comparison, is where one country asks another to "take appropriate actions regarding anticompetitive behavior occurring in its territory that affects the important interests of the requesting party, where that behavior violates the competition laws and regulations of the host [country]."[76] For example, under the 1998 Agreement the U.S. competition authorities may request the E.U. competition authorities to investigate and, if warranted, to remedy anticompetitive activities occurring largely in the European Union in accordance with its competition laws.[77] Under the agreement, the United States would also defer or suspend pending or contemplated enforcement activities while the European Union investigated.[78] Positive comity thus aims to place primary responsibility for enforcement "in the hands of the jurisdiction most closely associated with the alleged anticompetitive conduct."[79]

41. The United States should pursue bilateral and multilateral antitrust cooperation agreements that incorporate comity principles with more of its trading partners and make greater use of the comity provisions in existing cooperation agreements.

41a. Cooperation agreements should explicitly recognize the importance of promoting global trade, investment, and consumer welfare, and the impediment that inconsistent or conflicting antitrust enforcement poses. Existing agreements should be amended to add appropriate language.

Agreements incorporating principles of comity provide a useful mechanism to avoid duplicative enforcement and to reduce instances of potentially conflicting decisions, thereby making antitrust enforcement more efficient and lessening costs on businesses and consumers. The 1991 and 1998 U.S.-E.U. agreements have, in general, been used successfully,[80] and have served as a template for subsequent bilateral agreements with Brazil, Canada, Israel, Japan, and Mexico.[81] However, the potential of the agreements may not been fully realized because the parties have not regularly invoked their comity principles.[82] As one commenter stated, while U.S. bilateral agreements "have largely been a success[,] . . . the comity provisions . . . have been less successful."[83]

For example, some believe that the "limited impact of comity in the antitrust field" resulted in the inconsistent conclusions reached by the United States and the European Union in the investigations of the *GE/Honeywell* merger and of conduct by Microsoft.[84] They believe that when jurisdictions with longstanding and respected antitrust regimes such as the United States and the European Union fail to apply principles of comity when appropriate, it gives jurisdictions with less mature regimes a license similarly to disregard comity principles.[85] The United States therefore must lead by example in this critical area.[86] The FTC and the DOJ should actively seek opportunities to invoke the comity provisions in existing agreements and encourage other countries to do likewise. They should consider developing more informal and efficient uses for comity and extend comity principles to interactions with other nations with which agreements do not exist.

This is particularly important because global trade, investment, and welfare depend, in part, on the efficient and consistent resolution of antitrust investigations. Inconsistent remedies and resulting conduct obligations can impose high costs on businesses and the consumers of their products.[87] For example, commenters identified numerous costs, including: (1) "increased political tension that may reduce support for global trade and cooperative bilateral relations[;]"[88] (2) "uncertainty over the legal consequences of cross-border transactions or investments which hinders business planning and skews investment decisions by diminishing the anticipated competitive rewards of innovation[;]"[89] and (3) "conflicting or inconsistent remedies, which result[s] in uncertainty, impedes business planning, skews investment decisions, and promotes inefficiency."[90] Ultimately, such costs can deter investment and trade that generally benefits consumers and increases their welfare.[91]

Multinational agreements that incorporate comity principles, whether existing or new, should be more explicit in recognizing the importance to global trade, investment, and consumer welfare of avoiding conflicting or inconsistent antitrust enforcement.[92] At present, the United States' bilateral agreements do acknowledge that "effective enforcement of antitrust laws is important to the efficient operation of markets and to economic welfare."[93] However, such statements fail to convey fully the importance of cooperation agreements including comity principles to achieving robust trade and investment on a global scale and should, where possible, be strengthened to confirm these important points.

41b. Cooperation agreements should incorporate several principles of negative and positive comity relating to circumstances when deference is appropriate, the harmonization of remedies, consultation and coordination, and "benchmarking reviews."

The United States, as it pursues increasing numbers of agreements containing comity principles with other countries, should seek to enter into agreements that contain the following five principles. These principles, as explained below, aim to assign principal enforcement authority to the country with the greatest connection to the transaction or conduct at issue, but seek to ensure that other countries that have an interest in the merger or conduct also are assured that their interests will be taken into account.

- *Complete Deferral.* Any country as to which a cross-border transaction or conduct does not have a direct, substantial, and reasonably foreseeable anticompetitive effect should defer to the enforcement judgment of the country or countries where there is such an effect.

- *Presumptive Deferral.* When a competition authority in one country with a substantial nexus to a transaction or conduct has taken enforcement action, other countries with a lesser nexus should presumptively defer to that action. The first country should consult with other jurisdictions before taking action that will affect their significant interests.*
- *Harmonization of Remedies.* When more than one country pursues an enforcement action against the same transaction or conduct, those countries should seek to avoid imposing inconsistent or conflicting remedies through, for example, consultation or by fashioning remedies on a joint basis.
- *Coordination Mechanism.* A mechanism should be established whereby any private entity that is potentially subject to inconsistent or conflicting rules or remedies with respect to the same transaction or conduct can request consultation and/or coordination between or among jurisdictions to avoid inconsistency or conflict.
- *"Benchmarking" Reviews.* In any case where the United States and another jurisdiction nevertheless impose inconsistent or conflicting remedies, they should agree to conduct ongoing "benchmarking" reviews of the impact of the divergent remedies on the parties and competitive processes.

Complete Deferral. This first principle would ensure that where a transaction or conduct does not have a significant effect on a country's consumers, that country will not seek to take an enforcement action or seek to impose remedies on the conduct.[94] Incorporating this principle into bilateral agreements would help prevent countries with only minimal connection with a particular transaction or conduct from exercising jurisdiction where they have relatively minor interests and others are better positioned to do so.

This principle would take as its guiding standard the "direct, substantial, and reasonably foreseeable" test used in the Foreign Trade Antitrust Improvements Act (and comparable principles in other countries).[95] Thus, unless anticompetitive conduct has a direct, substantial, and reasonably foreseeable effect on a country that is party to such an agreement, it would defer to the enforcement efforts of other countries in which there was such an effect. When only a negligible effect exists, a country's consumers are unlikely to be meaningfully affected, and there is little reason for that country's antitrust enforcer to seek relief against the conduct or transaction.

Presumptive Deferral. The second principle seeks to ensure that even where conduct or a merger may affect consumers in a country, that country's antitrust enforcers will defer to the enforcers in other countries in which the effects are likely to be more significant. Thus, the country with a lesser "nexus" to the conduct or transaction should defer to the other

* Commissioner Carlton does not join in recommending the inclusion of this principle.

AR_002812

country with a greater nexus. The relative nexus to the transaction can be determined on the basis of generally accepted choice-of-law principles.[96] This presumptive deferral has two limitations. First, it is only a presumption, so that if there are other compelling reasons for taking action, a country may do so even where it otherwise might not. Second, although a country with a lesser nexus should defer on enforcement decisions, the country with the greater nexus should consult with it to ensure that the interests of the other country are taken into account.

The consultation obligation is of particular importance because it helps allay concerns that smaller jurisdictions will usually have a lesser nexus and thus would be obligated to defer in most instances to another jurisdiction's decisions.[97] Although global transactions and conduct have the potential to cause anticompetitive effects acutely in some nations, more typically any effects will be broadly spread throughout the world. As a result, in many instances, larger jurisdictions, such as the European Union and the United States, are likely to have the most substantial nexus to the conduct or transaction. However, "every harmed nation has a legitimate interest in applying its law to protect its citizen."[98] The consultation requirement will help to accommodate the interests of countries with less substantial connections, which would refrain from seeking remedies themselves under this principle.[99] It provides smaller nations with a "voice" and an opportunity to have their particular interests considered, while still allowing the jurisdiction with the greater nexus to the conduct to lead the investigation.[100]

Harmonization Mechanism. This principle calls for countries to seek to make remedies consistent wherever possible.[101] It helps to ensure that where comity principles do not result in one country's deferring to the enforcement responsibility of another cooperation will instead be used to avoid the costly effects of inconsistent remedies. To be sure, in the vast majority of multinational cases antitrust regimes have managed to avoid imposing inconsistent or conflicting remedies on multinational businesses.[102] Nonetheless, in a few cases the United States and other antitrust enforcement agencies have taken divergent paths in both their analysis and in the remedies imposed.[103]

The Commission does not recommend a principle by which the remedies imposed by the first jurisdiction to investigate should limit the authority of other jurisdictions to impose different (whether lesser or greater) remedies.[104] Such deference requires the countries involved in the agreement to have confidence that the jurisdiction that is the first to act will both be competent and free from political influence.[105] With time and further cooperation between the United States and other countries, the confidence such decisions will be competent and free from parochial bias are likely to increase. At that point, a different approach regarding remedies may become appropriate.

Coordination Mechanism. This principle helps to reinforce the previous principle by ensuring that where countries fail to cooperate in fashioning remedies, the entities subject to the conflicting remedies will have a mechanism through which to request that such cooperation and consultation take place.[106] While in the typical instance cooperation should occur as a result of the agreement, there may be circumstances in which it does not. The Commission does not propose any particular mechanism, but expects that any company that makes a credible showing that an investigation by more than one country could potentially subject it to inconsistent or conflicting remedies should be permitted to request a joint consultation between the antitrust agencies conducting the investigation.[107]

"Benchmarking" Reviews. This principle also helps to reinforce the previous two principles. In the few instances in which multinational cooperation and coordination cannot reach a harmonious result, the countries involved should undertake a retrospective evaluation as to why the usual cooperation mechanisms failed.[108] A benchmarking review after completion can identify why potentially avoidable conflict occurred and how to prevent it in the future. Even where the different remedies may be a result of different assessments of the relevant evidence, the investigating agencies are likely to benefit from a fuller understanding as to why each agency reached a different conclusion. Such consultations may foster further convergence that will avoid such outcomes in the future.

C. The Foreign Trade Antitrust Improvements Act

Almost since the Sherman Act's passage, courts have struggled to define the territorial limits of the Act in two interrelated respects. First, when does conduct overseas affect U.S. commerce? Second, if it does, who may sue for the harm suffered as a result of that conduct? Ultimately, the case law that developed did not provide clear answers to these questions. As U.S. businesses expanded their operations worldwide, they became concerned that their conduct overseas might be subject to the Sherman Act.[109] To provide greater clarity, Congress enacted the Foreign Trade Antitrust Improvements Act (FTAIA). The complex wording of this statute, however, has also resulted in ambiguities. The territorial scope of the Sherman Act and who may bring a claim under it thus remain unclear.

The importance of clarity in this area has grown in recent years. Improved methods of detection, as well as increased global awareness of the harms of anticompetitive conduct, have led enforcers to prosecute vigorously global price-fixing conspiracies that affect worldwide commerce. Consumers harmed by alleged anticompetitive conduct caused by such global conspiracies sometimes seek to recover under the Sherman Act. When those consumers sue for purchases they made in the United States, their right to seek recovery is not controversial. However, consumers who made purchases outside the United States from companies outside the United States also sometimes seek to take advantage of the Sherman Act's robust private remedies, including treble damages, which generally are not available under the laws of other nations.

Such lawsuits can affect both international comity and business certainty. First, interpreting the Sherman Act to extend to conduct that occurs wholly outside the United States has the potential to interfere with other countries' decisions regarding how best to regulate their own commercial affairs. Countries with less robust private remedies than those in the United States have chosen to balance the costs and benefits of such a remedial scheme differently. If remedies under the Sherman Act were extended to every purchaser world wide, that would undermine other countries' choices about the appropriate remedial scheme. Second, the lack of clarity regarding the application of the Sherman Act to conduct wholly outside the United States leaves U.S. businesses uncertain regarding the consequences of their conduct outside the United States and has the potential to increase their liability despite no additional harm to U.S. consumers.

The Supreme Court's decision in *F. Hoffmann-La Roche Ltd. v. Empagran S.A.* in 2004,[110] and a subsequent appellate court decision in that case,[111] have cleared up some of the uncertainty about the territorial limits of the Sherman Act, as articulated in the FTAIA. These judicial decisions, however, have not ended the issue. The FTAIA itself remains a source of confusion, and courts may still diverge on their approaches, given the limited guidance from the Supreme Court.

1. Background

The Sherman Act makes illegal anticompetitive restraints in, or monopolization of, any part of "trade or commerce among the several States, or with foreign nations."[112] By its terms, the Sherman Act thus protects U.S. consumers and U.S. markets against anticompetitive conduct, whether that conduct takes place within the United States or outside of it. It was always clear that when domestic conduct produces anticompetitive effects, consumers injured by these anticompetitive effects can sue for treble damages.[113] But, prior to passage of the FTAIA, courts had varied in their interpretations of when the Sherman Act applied to conduct outside the United States.[114] Some had held that the Sherman Act applied only when conduct had a direct or substantial effect on U.S. commerce.[115] Other courts had extended the Sherman Act to cover conduct that did not have a substantial effect on U.S. commerce.[116]

This lack of uniformity among courts led U.S. businesses to seek statutory clarification of the territorial reach of the Sherman Act. In 1982 Congress enacted the FTAIA to clarify the case law and establish well-defined limits on the reach of U.S. antitrust laws. The FTAIA provides that:

> Sections 1 to 7 of [the Sherman Act] shall not apply to conduct involving trade or commerce (other than import trade or import commerce) with foreign nations unless—
>
> (1) such conduct has a direct, substantial, and reasonably foreseeable effect—
>
> (A) on trade or commerce which is not trade or commerce with foreign nations, or on import trade or import commerce with foreign nations; or
>
> (B) on export trade or export commerce with foreign nations, of a person engaged in such trade or commerce in the United States; and

> (2) such effect gives rise to a claim under the provisions of sections 1 to 7 of [the Sherman Act], other than this section.
>
> If sections 1 to 7 of [the Sherman Act] apply to such conduct only because of the operation of paragraph (1)(B), then sections 1 to 7 of [the Sherman Act] shall apply to such conduct only for injury to export business in the United States.[117]

In short, the FTAIA places a limit on the geographic reach of the Sherman Act so that entirely foreign conduct is outside the reach of the Sherman Act. However, such conduct can be brought back within the Sherman Act's reach (and thus the FTAIA limit does not apply) if the foreign conduct causes a direct, substantial, and reasonably foreseeable effect on U.S. commerce.

Congress intended the statute to make plain that, unless foreign conduct had a direct, substantial, and reasonably foreseeable effect on U.S. commerce, such conduct would be outside the reach of U.S. antitrust laws. Congress believed that this test would serve as a "simple and straightforward clarification of existing American law" that would create "[a] clear benchmark . . . for businessmen, attorneys and judges."[118]

Despite Congress's efforts, the FTAIA had the unintended consequence of eliciting additional inconsistency in the case law. In particular, the FTAIA's proviso that the Sherman Act applies when the anticompetitive effect of foreign conduct "gives rise to a claim" under the Sherman Act produced inconsistent results in the courts. Some courts held this term to mean that the FTAIA does not limit application of the Sherman Act so long as the foreign conduct causing injury gave rise to "a" claim under the Sherman Act. Under this interpretation, a person harmed by anticompetitive conduct anywhere in the world could pursue a claim under the Sherman Act so long as at least one person was injured by that conduct's U.S. effect and thus had "a claim."[119] Other courts resolved the question differently, requiring that the plaintiff seeking relief under the Sherman Act show that it had a claim itself for relief.[120] Under this alternative interpretation, for a person to assert a Sherman Act claim, he must himself have been injured by the conduct's effect on U.S. commerce.

The Supreme Court granted certiorari in *F. Hoffmann-La Roche Ltd. v. Empagran* to resolve this split among circuit courts. *Empagran* involved a global vitamin price-fixing conspiracy that affected consumers in numerous countries, including the United States.[121] The plaintiffs were located outside the United States and conceded that they had suffered injury through purchases made outside the United States. They nevertheless sought recovery in U.S. courts on the ground that the global conspiracy produced anticompetitive effects in the United States that gave rise to "a" valid Sherman Act claim. It did not matter, they argued, that the Sherman Act claim was not their own.[122]

The Supreme Court held that a person may not assert a claim merely because another person has a claim arising from the same conduct's effect on U.S. commerce.[123] The Court further held that it could find no basis for extending the reach of U.S. antitrust laws to circumstances where the foreign injury was independent of any U.S. effects[124]—especially when the very purpose of the FTAIA was to "exclude[] from the Sherman Act's reach . . . anticompetitive conduct that causes only foreign injury."[125]

On remand, the Supreme Court directed the D.C. Circuit to consider the circumstances in which an overseas plaintiff could successfully show that it had been harmed because of the effects on U.S. commerce. The plaintiffs argued that the cartel could be successful only if it raised prices globally; had it not raised prices in the United States, resellers could have taken advantage of the lower prices in the United States to arbitrage the difference and undermine the cartel by reselling in the rest of the world.[126] Accordingly, "but for" the harm to U.S. commerce, plaintiffs argued, they would not have suffered harm, and this was sufficient to avoid the FTAIA's limitation on the Sherman Act.

The D.C. Circuit rejected the plaintiffs' "but for" causation theory, and held that the plaintiffs' harm must have a "direct causal relationship, that is, proximate causation" with the effect on U.S. commerce.[127] Subsequent courts confronting the same argument have also rejected the "but for" approach based on an arbitrage theory.[128] Nonetheless, only two of twelve circuit courts have addressed the issue. Moreover, no court of appeals has entirely foreclosed all alternative theories on which a foreign purchaser that purchases from a foreign seller might prove its harm was caused by effects within the United States.

2. Recommendation and Findings

42. As a general principle, purchases made outside the United States from a seller outside the United States should not be deemed to give rise to the requisite effects under the Foreign Trade Antitrust Improvements Act.*

The Commission agreed that this general principle fairly represents the intent of Congress in enacting the FTAIA, is consistent with the Supreme Court's holding in Empagran, and describes how court decisions should apply the FTAIA.† The Commission recommends this principle for the following reasons.

* Commissioner Delrahim does not join this recommendation.

† Commissioners Burchfield, Carlton, Jacobson, Kempf, Valentine, and Warden would support a statutory change to the FTAIA consistent with this principle.

a. U.S. Antitrust Laws Should Not Interfere with Other Nations' Decisions on How Best to Regulate Their Economies

Plaintiffs that have purchased goods or services in foreign markets from foreign sellers should have no right to seek redress under U.S. laws for injuries sustained in those foreign markets.[129] Such plaintiffs should seek redress in the jurisdiction in which they were a market participant.[130] Limiting who may seek redress under U.S. antitrust laws in this way prevents those laws from interfering with other nations' decisions as to how their antitrust laws should regulate conduct in their territory.[131]

As global awareness of the importance of competition and the need for laws to protect it grows, other countries will continue to implement mechanisms to ensure competition flourishes. These nations may adopt laws that permit consumers injured in those markets to seek redress.[132] Even if a foreign jurisdiction has not adopted such remedies, however, U.S. antitrust policy should not fill the gap.[133] Other countries may reasonably determine that a remedial scheme like that in the United States would interfere with their own competition policies or other values they have decided to advance. Similarly, other countries may have concluded that treble damages are "too much" or government civil fines are sufficient for deterrence.[134] Therefore, the Commission's principle confirms that the FTAIA does not "provide worldwide subject matter jurisdiction to any foreign suitor wishing to sue its own local supplier, but unhappy with its own sovereign's provisions for private antitrust enforcement."[135]

b. Allowing Foreign Purchasers to Sue in the United States for Foreign Injuries Could Undermine Global Deterrence of Anticompetitive Conduct

In *Empagran* the antitrust enforcement agencies of several nations, including the DOJ, filed *amicus* briefs cautioning that allowing foreign purchasers to sue in U.S. courts could potentially undermine deterrence by hindering the agencies' criminal enforcement programs.[136] Allowing such private suits could deter participation in antitrust leniency programs in the United States and in other countries because companies would be subjected to increased liability in the United States once they had acknowledged involvement in a cartel.[137] Reduced efficacy of such leniency programs, which help identify cartels in the first place, has the potential to reduce the ability of all nations to combat and prosecute cartel conduct effectively, and hamper deterrence as a result.

Proponents of a broader interpretation of the FTAIA believe that allowing persons who purchased and suffered injury abroad to sue more freely under U.S. antitrust laws would increase overall deterrence by subjecting companies to broader liability.[138] All else being equal, increasing the liability of companies will likely increase deterrence. But a broader interpretation of the FTAIA may well undermine deterrence, for the reasons discussed above. In addition, deterrence can be increased, if appropriate, through alternative mechanisms.[139]

c. The Proposed General Principle Does Not Limit the Availability of the Sherman Act Based on the Nationality of the Plaintiff

The Commission's recommended principle does not limit the availability of the Sherman Act on the basis of the nationality of the plaintiff. In enacting the FTAIA, Congress explained that:

> [F]oreign purchasers should enjoy the protection of [U.S.] antitrust laws in the domestic marketplace, just as our citizens do . . . . [The FTAIA] preserves antitrust protections in the domestic marketplace for all purchasers, regardless of nationality . . . .[140]

Courts likewise have explained that the plaintiff's nationality is irrelevant, and that it is the location of the transaction's effects that matters.[141] There is no need to inquire into the nationality of the plaintiff—especially when such an inquiry could fail to answer the critical question of whether the plaintiff purchased abroad from a seller abroad and thus could not have suffered the requisite injury as a result of any U.S. effects.[142] Moreover, using a claimant's nationality to decide whether he or she can gain access to U.S. courts could violate certain international treaties to which the United States is a party.[143] Thus, the "critical question is not the nationality of the plaintiff but the location of the marketplace in which he participated" and whether that market was affected.[144]

Notes

50 *See* International Bar Association, Public Comments Regarding International Antitrust, at 19–20 (Jan. 27, 2006) [hereinafter IBA Comments re International Antitrust]; Tritell Statement, at 5 (stating that Congress enacted the IAEAA to overcome the limitations in prior cooperative agreements that prevented parties from exchanging confidential information); ABA Comments re International Cooperation, at 3.

51 *See* Business Roundtable Comments, at 25–26 (stating that "international cooperation is necessary in order to assure effective and efficient antitrust enforcement").

52 ABA Comments re International Cooperation, at 3; Tritell Statement, at 5.

53 ABA Comments re International Cooperation, at 5.

54 15 U.S.C. § 6211(2); *see also* American Bar Association, Section of International Law, Public Comments Submitted to AMC (Sept. 1, 2005) [hereinafter ABA Int'l Section Comments] ("IAEAA provides that the United States may enter into AMAAs with foreign jurisdictions . . . on a reciprocal basis.") (internal quotations omitted).

55 15 U.S.C. § 6211(2)(E)(ii).

56 ABA Int'l Section Comments, at 8.

57 *Id.* at 9 (citing R.S.C. 1985, c. C-34, § 30.01(d)(ii), which provides that "[b]efore Canada enters into an agreement, the Minister of Justice must be satisfied that . . . the agreement contains the following undertakings by the foreign state, namely, . . . that any record or thing provided by Canada will be used only for the purpose for which it was requested").

58 Some foreign jurisdictions have laws that prevent them from entering into information-sharing agreements such as those contemplated by the IAEAA (irrespective of the issue raised by Section 6211(2)(E)(ii) of the IAEAA). ABA Comments re International Cooperation, at 6. In addition, foreign jurisdictions that have not criminalized antitrust violations might be concerned about the possible use of AMAA-obtained information in a U.S. criminal proceeding. IBA Comments re International Antitrust, at 22; ABA Comments re International Cooperation, at 6 (stating that jurisdictions might be reluctant or unable "to provide information that could be used in U.S. criminal prosecutions").

59 For example, in many investigations, particularly with respect to mergers, the parties are willing to waive the restrictions on the exchange of confidential information. *See* Tritell Statement, at 5; ABA Comments re International Cooperation, at 3. Some countries may find existing Mutual Legal Assistance Treaties (MLATs) sufficient for the exchange of information. IBA Comments re International Antitrust, at 22 (identifying Canada as one jurisdiction that prefers the use of MLATs over AMAAs). By comparison, Australia, which does not have criminal antitrust enforcement, likely entered into an AMAA because an MLAT (used only for criminal investigations) would provide it with no benefits. *Id.* at 20.

60 This amendment would specifically call for Congress to modify Section 6211(2)(E)(ii) to clarify that a provision for non-antitrust uses is not a mandatory component of an AMAA. *See* ABA Int'l Section Comments, at 2; IBA Comments re International Antitrust, at 4 (stating that it would be "advisable that Congress amend this provision to clarify that this provision to disclose antitrust evidence for non-antitrust purposes is not mandatory"); *see also id.* at 22 (Congress could amend Section 6211(2)(E)(ii) to limit information-sharing to antitrust matters only).

61 Tritell Statement, at 5–6.

62 ABA Comments re International Cooperation, at 4.

63 *Id.* (stating that the technical assistance provided by the U.S. agencies helps to "develop [the] investigational and analytical skills" of nascent foreign antitrust regimes).

Chapter III
Civil and Criminal Remedies

Congress has provided for both private and public enforcement of the antitrust laws. Anticompetitive conduct may be challenged by the Antitrust Division of the Department of Justice, the Federal Trade Commission, state attorneys general, and private parties who have been injured by the antitrust violation and have standing to sue.

When the federal government sues, it can seek a wide range of injunctive relief, including "positive" relief requiring the restructuring of a company or the implementation of certain practices, as well as recover its own damages as a purchaser. In addition, the Department of Justice is uniquely empowered to seek substantial criminal fines against both corporations and individuals and prison sentences against individuals. In more limited circumstances, the federal government may seek civil fines or equitable monetary remedies, including the disgorgement of ill-gotten gains and restitution.

State attorneys general can sue in a *parens patriae* capacity on behalf of injured citizens of their states. They also can recover for state entities where they have been directly injured.

Private parties injured by an alleged antitrust violation can sue to recover three times their actual damages, plus costs and attorneys' fees, and for equitable relief similar to what the government can obtain. Private antitrust enforcement has been more vigorous in the United States than anywhere else in the world. The vitality of private antitrust enforcement in the United States is largely attributed to two factors: (1) the availability of treble damages plus costs and attorneys' fees, and (2) the U.S. class action mechanism, which allows plaintiffs to sue on behalf of both themselves and similarly situated, absent plaintiffs. An aggressive and capable antitrust plaintiffs' bar has developed to pursue class actions following on to government criminal prosecutions and in situations where individual plaintiffs might not have the ability or incentive to sue. Congress, state legislatures, and the courts have developed rules governing who can recover for injuries that are "passed on" to various levels of consumers, the availability of attorneys' fees and prejudgment interest on damages, and how liability is allocated among alleged participants in an antitrust conspiracy.

Over the years, observers have debated the effectiveness of this public-private enforcement framework in achieving optimal levels of deterrence and compensation to victims. With respect to private civil actions, for example, the availability of treble damages has been both lauded as the key to an effective enforcement system and blamed for burdening business with litigation of questionable merit. Some observers contend that treble damages are insufficient to deter and compensate at optimal levels and should be increased to some higher multiplier; others take the opposite view. With respect to government civil and criminal enforcement, observers similarly have suggested both that the government has too great an enforcement arsenal at its disposal and that it has too little.

Because of the interrelated nature of the rules and procedures governing private and public enforcement, the Commission decided to study a range of issues together covering both private and public enforcement. The recommendations described in this chapter accordingly address (A) the availability of treble damages and the rules relating to prejudgment interest and attorneys' fees, as well as the liability of each defendant for the full harm caused by all participants in an antitrust conspiracy (known as "joint and several liability"); (B) which parties in a chain of distribution should be allowed to sue to recover antitrust damages; (C) whether new authorization should be provided for the Department of Justice or the Federal Trade Commission to obtain civil fines for substantive, non-criminal antitrust violations or to seek monetary equitable remedies on an expanded basis; and (D) whether any changes to current criminal antitrust enforcement and sentencing are needed.

Chapter III.A
Private Monetary Remedies and Liability Rules

1. INTRODUCTION

Private antitrust enforcement plays a critically important role in implementing the U.S. antitrust laws. From the outset, Congress contemplated that private parties would play a central role in enforcement of the Sherman Act. Indeed, Senator Sherman believed that individuals should act as "private attorneys general," and that the antitrust laws should encourage such enforcement.[1]

The central feature of private antitrust remedies is its provision for treble damages, which allows plaintiffs in all cases to recover "threefold the damages by him sustained."[2] Successful antitrust plaintiffs may, in addition, recover attorneys' fees and, in certain circumstances, prejudgment interest. The effect of these monetary remedies is reinforced by rules that make defendants jointly and severally liable for damages. That is, each defendant is liable for the full amount of damages even if several defendants jointly engage in the unlawful conduct.

The Commission studied several aspects of private remedies to determine whether they remain sensible and properly serve these goals in light of the development of antitrust law over more than 100 years. In particular, the rule of treble damages has long been questioned by some as potentially too punitive in at least some types of antitrust cases. Much conduct potentially subject to the antitrust laws can be procompetitive, or at least competitively neutral, and the rules on the lawfulness of such conduct are not always clear. As a result, treble damages arguably discourage some conduct that would benefit consumers because the damage exposure exceeds the benefits of the conduct for the company and its customers. Particularly where the law or facts are not clear, imposing treble damages may be considered unfairly punitive. Similarly, the availability of attorneys' fees for plaintiffs has led to criticism that awarding such fees, in addition to treble damages, encourages the filing of frivolous antitrust cases, particularly if successful defendants are not entitled to recover their fees. Finally, limitations on the availability of prejudgment interest have been criticized for failing to provide successful plaintiffs with full compensation, including compensation for the time from when they suffer harm to when they ultimately recover.

The Commission also reviewed the consequences of the current rule of joint and several liability that applies in antitrust cases. Joint and several liability makes all defendants fully liable for the damages caused by unlawful joint conduct, such that a plaintiff may recover the full amount of the judgment from any one of the defendants. A related rule applicable in antitrust cases bars claims for contribution among defendants. Contribution claims, if allowed, would permit one defendant to seek "contribution" from another defendant if it has paid more than a "fair" share of the judgment. A second, related rule substantially limits "claim reduction" in antitrust cases. Claim reduction in the antitrust context reduces the plaintiff's total remaining post-trebling claim to reflect settlement payments already made.

The existing rules of joint and several liability without a right of contribution and only limited claim reduction have given rise to substantial criticism regarding fairness. These rules permit plaintiffs to settle with some defendants at an early stage for a relatively small amount of damages, leaving remaining, non-settling defendants potentially liable for nearly the entire damages caused by the joint conduct, trebled. As a result, these rules can cause a "race" to settle, potentially leaving defendants that had a small or no role in the overall anticompetitive scheme with disproportionately large potential liability.

The Commission recommends the following.

43. No change is recommended to the statute providing for treble damages in antitrust cases.*

44. No change is recommended to the statute that provides for prejudgment interest in antitrust cases; prejudgment interest should be available only in the circumstances currently specified in the statute.†

45. No change is recommended to the statute providing for attorneys' fees for successful antitrust plaintiffs. In considering an award of attorneys' fees, courts should consider whether, among other factors, the principal development of the underlying evidence was in a government investigation.**

46. Congress should enact a statute applicable to all antitrust cases involving joint and several liability that would permit non-settling defendants to obtain reduction of the plaintiffs' claims by the amount of the settlement(s) or the allocated share(s) of liability of the settling defendant(s), whichever is greater. The recommended statute should also allow claims for contribution among non-settling defendants.††

* Commissioners Carlton, Garza, and Warden do not join this recommendation in full.

† Commissioners Carlton, Delrahim, Garza, Shenefield, and Warden do not join this recommendation.

** Commissioners Cannon, Litvack, and Warden do not join this recommendation in full.

†† Commissioners Carlton and Garza do not join this recommendation with respect to contribution among non-settling defendants.

2. TREBLE DAMAGES

A. Background

Section 4 of the Clayton Act allows "any person . . . injured in his business or property by reason of anything forbidden in the antitrust laws" to "recover threefold the damages by him sustained."[3] This provision directly descends from the original Sherman Act, passed in 1890, which included the same treble damages provision.[4] At the time of the Sherman Act's passage, congressional debate centered on whether to provide for double or treble damages; single damages were not seriously considered as an alternative.[5] Senator Sherman and others argued that multiple damages should be "commensurate with the difficulty of maintaining a private action," punitive, and provide incentives to plaintiffs to act as private attorneys general.[6]

Treble damages have remained the rule in antitrust cases, despite periodic efforts to eliminate or limit their availability.[7] There are a few instances in which treble damages are not available. For example, Congress has created a small number of statutory exemptions pursuant to which plaintiffs' damages are not automatically trebled.[8] Congress has also provided for the elimination of treble damages, in specified circumstances, for organizations that participate in the Department of Justice's (DOJ) corporate leniency program, which provides incentives to participants in cartel activity to provide evidence to the DOJ for use in criminal prosecutions.[9]

B. Recommendation and Findings

43. No change is recommended to the statute providing for treble damages in antitrust cases.*

* Commissioners Carlton, Garza, and Warden do not join this recommendation in full.

Commissioners Carlton and Garza believe further consideration should be given to increasing treble damages in international price-fixing conspiracies where certain victims of the conduct may not seek compensation in U.S. courts through operation of the Foreign Trade Antitrust Improvements Act. In addition, they believe it would be appropriate to reduce the multiplier in cases where conduct is overt because the likelihood of such conduct's evading detection and, if unlawful, being prosecuted is much lower than for covert conduct.

As set forth in his separate statement, Commissioner Warden (with whom Commissioner Garza joins) would permit the award of treble damages where there is proof by clear and convincing evidence of clearly unlawful conduct.

Treble damages serve five related and important goals:

(1) Deterring anticompetitive conduct;

(2) Punishing violators of the antitrust laws;

(3) Forcing disgorgement of the benefits of anticompetitive conduct from those violators;

(4) Providing full compensation to victims of anticompetitive conduct; and

(5) Providing an incentive to victims to act as "private attorneys general."[10]

Although it has been argued that, in certain circumstances, something more or less than treble damages would better advance one or more of these goals,[11] the Commission concludes that an insufficient case has been made for changing the treble damages rule, either universally or in specified instances.[12] The Commission concludes that, on balance, the treble damages rule well serves the defined goals.

Deterrence. The first broadly recognized purpose of treble damages is deterrence. To eliminate the incentive to engage in anticompetitive conduct, a violator must be exposed to forfeiture of potential gains from such conduct. Treble damages compensate for the reality that some anticompetitive conduct is likely to evade detection and challenge.[13] If a company realizes that its anticompetitive conduct has only a 50 percent chance of being detected, and if its liability were limited to single damages, it would be more likely to engage in that conduct because the reward exceeds the risk.[14]

Punishment of violators. The second recognized purpose of treble damages is to punish offenders, similar to punitive damages under the common law and other statutes.[15] This reason is closely related to the deterrence justification: providing a multiple of damages helps deter such conduct and highlights societal disapproval of such conduct. Furthermore, in addition to raising prices, anticompetitive conduct causes allocative inefficiency (for example, forgone purchases and substitution of less optimal alternatives) that, while reducing consumer welfare, is not reflected in damage calculations.[16] Treble damages help to ensure that the violator pays damages that more fully reflect the harm to society caused by the anticompetitive conduct.[17]

Disgorgement of gains. Treble damages also serve the purpose of requiring the disgorgement of unlawfully obtained gains (or profits) that result from anticompetitive conduct.[18] Preventing violators from profiting removes incentives to engage in such conduct and thereby enhances deterrence.[19]

Compensation to victims. A fourth purpose of treble damages is to ensure full compensation to the victims of anticompetitive conduct. Indeed, in light of the fact that some damages may not be recoverable (*e.g.*, compensation for interest prior to judgment, or because of the statute of limitations and the inability to recover "speculative" damages) treble damages help ensure that victims will receive at least their actual damages.[20]

Creating incentives for "private attorneys general." Finally, providing treble damages creates incentives for private enforcement of the antitrust laws. This is of particular importance in light of limited government resources to identify and prosecute all anticompetitive conduct.[21] Incentives for private enforcement reinforce the other objectives of treble damages by increasing the likelihood that claims will be brought against violators, thereby enhancing deterrence, appropriate disgorgement and punishment, and compensation to victims.[22]

The Commission was not presented with substantial evidence or empirical support that treble damages do not advance these goals. However, some have argued that treble damages, along with other remedies, can overdeter some conduct that may not be anticompetitive and result in duplicative recovery.[23] No actual cases or evidence of systematic overdeterrence were presented to the Commission, however.[24]

The Commission carefully considered a variety of circumstances in which it was proposed that the damages multiplier might be decreased (or increased). As described more fully below, the Commission considered the following (among others): (1) providing treble damages only in cases where the conduct is clearly unlawful and devoid of competitive benefit; (2) limiting damages to single damages when the conduct is overt; and, (3) placing the damages multiplier in the discretion of the trial judge. Ultimately, the Commission declined to recommend these approaches for the reasons set forth below.

There is broad consensus that treble damages are appropriate for hard-core cartel conduct. Even those who advocate eliminating treble damages in some circumstances agree that price-fixing and similar conduct should be subject to treble damages.[25] Moreover, some argue that the multiplier should be higher in these cases to compensate for the low likelihood of detection.[26] Nonetheless, because the Commission recommends retention of a single, uniform multiplier in all antitrust cases, and because hard-core cartel conduct is often subject to criminal prosecution,[27] the Commission does not recommend any increase to the multiplier for hard-core conduct.

The Commission also declines to recommend a change to provide for only single damages in rule of reason cases. Several fundamentally similar proposals were advanced to the Commission to limit treble damages to per se antitrust violations, where the conduct is clearly unlawful and bereft of procompetitive benefits.[28] These advocates argue that in cases other than those—where conduct may be procompetitive or is subject to unclear legal standards—treble damages may deter or "chill" potentially procompetitive behavior.[29] Although such concerns are reasonable, the Commission concluded that statutorily defining whether conduct was a per se violation or subject to the rule of reason would prove difficult.[30] Furthermore, there is anticompetitive conduct that is not per se unlawful can cause as much damage as per se violations such as price-fixing.[31] Indeed, eliminating treble damages for such cases could greatly hamper incentives to bring actions, and thus reduce deterrence too much.[32]

The Commission also evaluated, but declined to recommend, limiting treble damages to conduct that is covert.[33] For conduct that is publicly open (or "overt")—such as mergers, and most joint ventures, distribution contracts, and single-firm conduct—the probability of detection is close to 100 percent.[34] By comparison, much covert cartel activity likely goes undetected.[35] Given that a principal justification for treble damages is to account for the likelihood of detection, there may be no need for multiple damages where the public is aware of the conduct or it is otherwise overt.[36] The Commission declined to recommend the creation of such a distinction, however, because some overt conduct, such as aspects of a legitimate joint venture, may be a disguised cartel, or otherwise cause severe harm.[37] As with the proposed division between per se and rule of reason conduct, such a distinction might result in increased litigation over whether treble damages are available on the facts of the conduct.

In light of the concerns with these two proposals, as well as several other similar proposals, the Commission also considered, but rejected, a rule that would leave the decision whether to award treble damages to the discretion of a judge. A court may be best positioned to evaluate the severity of the violation, in light of a range of possible factors, and tailor the penalty accordingly.[38] This approach would allow a court to decline to award treble damages if, for example, the questions of fact are close or the legal standards unclear, the conduct was overt, or the conduct had sizable procompetitive benefits.[39] Allowing judges to award only single damages in such cases would therefore potentially reduce overdeterrence and the chilling of procompetitive conduct that may result from mandatory trebling.[40] It would also avoid the need for drafting a statute that defines types of conduct that are and are not subject to treble damages. The Commission concluded, however, that such an approach would increase the length and cost of trials as the parties contest factual issues relevant to the factors to be considered.[41] Moreover, judges would be required potentially to balance multiple, conflicting factors, leading to inconsistency across courts and forum shopping.[42]

3. PREJUDGMENT INTEREST

A. Background

Prior to 1980, prejudgment interest was not available for antitrust claims. In 1980, in response to a recommendation by the National Commission for the Review of Antitrust Law and Procedure, Congress amended Section 4 of the Clayton Act to permit courts to award prejudgment interest when it is "just in the circumstances."[43] The statute permits a court to award prejudgment interest when:

(1) A party filed motions or asserted claims "so lacking in merit" that they could only have been intended for delay, or "otherwise acted in bad faith";

(2) A party violated any applicable rule, statute, or court order providing for sanctions for dilatory behavior; or

(3) A party engaged in conduct primarily intended to delay litigation or raise its cost.[44]

In the twenty-six years since the amendment, there has been no reported decision awarding prejudgment interest in an antitrust case.[45]

B. Recommendation and Findings

44. No change is recommended to the statute that provides for prejudgment interest in antitrust cases; prejudgment interest should be available only in the circumstances currently specified in the statute.*

The purpose of the current provision regarding prejudgment interest is to compensate plaintiffs for dilatory tactics by defendants, which is appropriate. Prejudgment interest is not, however, more broadly available. When available, prejudgment interest helps to ensure that a plaintiff harmed by a defendant's unlawful conduct is fully compensated for its injury. Where a legal violation has caused harm many years before a plaintiff receives an award of damages, the plaintiff has not earned interest on the lost money for that period of time; conversely, the defendant may have earned returns on the unlawful gains until paying the judgment.[46] That is, some argue, "the time value of money works in [the] defendants' favor . . . [allowing] defendants to profit from their wrong."[47] Because antitrust cases can take several years to resolve, prejudgment interest is particularly appropriate.[48]

Treble damages, a rule to which the Commission recommends no change, adequately compensate for the general unavailability of prejudgment interest in antitrust cases.[49] Treble damages help ensure that injured parties are indirectly compensated for the loss of the time value of their money and that defendants are not able to profit from their wrongs. Antitrust damages are not easily calculated at the time of injury in most cases. The current rule making prejudgment interest unavailable in antitrust cases is thus consistent with the traditional rule in tort lawsuits, which makes prejudgment interest unavailable because damages are not readily quantifiable at the time of injury.[50] Finally, some courts have effectively compensated for the lack of prejudgment interest by including in the determination of damages elements such as inflation and interest paid on borrowed capital.[51] Changing the rule relating to prejudgment interest could deter courts from developing sounder rules regarding the treatment of opportunity and capital costs. These considerations, together with lim-

* Commissioners Carlton, Delrahim, Garza, Shenefield, and Warden do not join this recommendation.

Commissioners Carlton, Delrahim, Garza, and Shenefield would provide mandatory prejudgment interest from the time of injury in order to compensate injured parties fully for the time value of money.

Commissioner Warden would provide mandatory prejudgment interest from the time of injury in any case where damages are not trebled.

ited evidence and argument in support of greater availability of prejudgment interest in the Commission's record,[52] leads the Commission not to recommend any change to the current statute.

4. ATTORNEYS' FEES

A. Background

Section 4 of the Clayton Act, as the Sherman Act did before it, permits successful plaintiffs to recover reasonable attorneys' fees and costs.[53] A plaintiff is considered to be "successful," and an award of attorneys' fees is mandatory, whenever any damages are awarded.[54] In addition, a plaintiff seeking injunctive relief under Section 16 of the Clayton Act may, if it "substantially prevails," recover attorneys' fees.[55] The purpose of awarding attorneys' fees to prevailing plaintiffs is to help ensure that plaintiffs with meritorious claims will have access to counsel to redress antitrust violations.[56] They also provide additional incentives to private parties to bring lawsuits prosecuting anticompetitive conduct.[57] A successful defendant, however, is not entitled to recover attorneys' fees.[58]

Although the Clayton Act entitles a successful antitrust plaintiff to recover reasonable attorneys' fees, the courts still must determine whether the requested fees are in fact "reasonable."[59] Some courts consider factors such as the novelty of the issues in the case, the skill required to perform the legal services properly, the attorney's experience and reputation, the undesirability of the case, and numerous other factors.[60] Many courts start with a "lodestar" figure, which is the attorney's hourly rate multiplied by the attorney's hours worked.[61] The court then makes adjustments to that lodestar figure if appropriate.[62]

B. Recommendation and Findings

45. No change is recommended to the statute providing for attorneys' fees for successful antitrust plaintiffs. In considering an award of attorneys' fees, courts should consider whether, among other factors, the principal development of the underlying evidence was in a government investigation.*

* Commissioners Cannon, Litvack, and Warden do not join this recommendation in full.

Commissioner Cannon would not make any recommendation regarding the factors to be considered by courts in awarding attorneys' fees, but otherwise joins the recommendation.

Commissioner Litvack would make attorneys' fees available to prevailing defendants as well.

As set forth in his separate statement, Commissioner Warden would award attorneys' fees to prevailing defendants in cases brought by competitors.

By statute, successful antitrust plaintiffs are entitled to mandatory attorneys' fees. But it is within a court's discretion to determine when those fees are reasonable, and to make upward or downward adjustments when necessary. These fees are intended to compensate plaintiffs for undertaking risky, costly litigation.[63]

Because fees are intended to provide an incentive to discover and prosecute anticompetitive conduct, they are less necessary where much of that evidence has been developed as part of a government investigation. In such cases the plaintiff's case is often already made by the underlying criminal conviction.[64] Courts should therefore consider whether the plaintiffs were relying on such evidence, and reduce fees appropriately in such cases to reflect the relative lack of risk and burden.

5. CONTRIBUTION AND CLAIM REDUCTION

A. Background

Under the antitrust laws, liability is joint and several for all defendants, with no right of contribution among defendants.[65] Thus, a plaintiff may obtain treble the damages resulting from the entire conspiracy from a single participant of a price-fixing conspiracy or other anticompetitive agreement. An antitrust defendant may not seek contribution from any other co-conspirator, however. In addition, if one or more defendants settle an antitrust claim, under the rule governing claim reduction, the plaintiff's remaining claim is reduced, after trebling, by the amount of the settlement.[66] Under these combined rules, if an alleged co-conspirator settles for less than the full amount of damages fairly attributable to it, trebled, non-settling defendants arguably remain liable for more than their "fair" share of damages.[67]

The policy questions raised by these rules have been debated extensively over the past two decades, particularly preceding and in the immediate wake of the Supreme Court's 1981 decision in *Texas Industries, Inc. v. Radcliff Materials, Inc.*[68] That decision explained that any change to the traditional, existing rule was for Congress, not the courts, to make.[69] Up to now, however, Congress has declined to legislate in the area.[70] Indeed, Congress recently reconfirmed the general application of the rule of joint and several liability in antitrust cases when it passed the Antitrust Criminal Penalty Enhancement and Reform Act of 2004 (ACPERA) in June 2004.[71]

B. Recommendation and Findings

46. Congress should enact a statute applicable to all antitrust cases involving joint and several liability that would permit non-settling defendants to obtain reduction of the plaintiffs' claims by the amount of the settlement(s) or the allocated share(s) of liability of the settling defendant(s), whichever is greater. The recommended statute should also allow claims for contribution among non-settling defendants.*

The current rules concerning contribution and claim reduction are fundamentally unfair.[72] Antitrust defendants are jointly and severally liable, but defendants may seek reduction of plaintiffs' claims only of the amount paid by settling defendants, after total damages have been determined and trebled, and also may not seek contribution from non-settling defendants. The combination of a very limited right to claim reduction and no right of contribution means that one defendant may be responsible for nearly all of the damage caused by an antitrust conspiracy.[73] These rules create significant pressure on defendants to settle antitrust claims, even those claims of questionable merit, simply to avoid the potential for excessive liability.[74] This dynamic permits plaintiffs to engage in "whipsaw" settlement tactics, playing defendants off one another to race to settle early or be left potentially liable for nearly the full remaining amount of the claims.[75] As a result, less culpable defendants may pay an unfairly large share of total damages, while more culpable defendants escape significant (or any) liability.[76] Although the existing rules can maximize deterrence and encourage the resolution of antitrust claims through quick settlement,[77] they may also overdeter conduct that may not be anticompetitive by exposing individual defendants to potential liability for damages far in excess of the benefits they derived from their conduct.

Congress should enact legislation applicable to all antitrust cases involving joint and several liability that would address both concerns. The legislation should permit non-settling defendants to obtain reduction of the plaintiffs' remaining claims against the non-settling defendants by the ratable share of liability of the settling defendants or the amount of the settlement, whichever is greater. (As explained below, the ratable share of liability would be based in most cases on the defendants' market shares.) The contribution provision should permit non-settling defendants to seek contribution from other non-settling defendants to

* Commissioners Carlton and Garza do not join this recommendation with respect to a right of contribution among non-settling defendants. Commissioner Carlton believes that pursuit of claims for contribution among non-settling defendants would be a misuse of judicial resources. Commissioner Garza believes that current policy better furthers the goal of deterrence by destabilizing cartels and discouraging their formation and that the goals of deterrence and judicial efficiency outweigh any concern for "fairness" among defendants in cartel cases.

the extent a plaintiff has collected a disproportionate share of its judgment from one or more of the non-settling defendants. Together, these provisions would enhance fairness among both settling and non-settling defendants, while not undermining overall deterrence or the efficient resolution of antitrust litigation through settlement. Indeed, the combination of claim reduction and contribution results in defendants paying a properly allocated share of damages. It also helps ensure that all defendants face an appropriate level of deterrence.[78] The two principal components of the proposed legislation are more fully described below.

Illustration of Effect of Commission's Recommendation

Companies A, B, and C enter into an arrangement to fix prices. The violation is per se illegal. Plaintiff sues all three companies for a total of $100m (to be trebled). Plaintiff settles with A before trial for $80 million, and a court finds B and C liable as alleged.

Defendant	Market Share	***Liability Under Current Law***	***Liability Under Proposed Law***
A	50%	$80 million in settlement	$80 million in settlement
B	30%	$220 million (joint and several with C)	$150 million, with claim for contribution against C for up to $60 million
C	20%	$220 million (joint and several with B)	$150 million, with claim for contribution against B for up to $90 million
Plaintiff's Total Recovery		$300 million, with $220 million coming from B and/or C as Plaintiff sees fit to collect.	$230 million, with $150 million coming from B and/or C as Plaintiff sees fit to collect.

First, the claim reduction provision would reduce the remaining liability of the non-settling defendants by the amount of the settlement or the ratable share of liability of the settling defendant(s), whichever is greater. This ensures that non-settling defendants are not made worse off, in the form of liability potentially greatly disproportionate to their relative contribution to the anticompetitive conduct, as a result of settlements between the plaintiffs and other defendants.[79] Claim reduction can thus provide much greater fairness between settling and non-settling defendants.[80] Plaintiffs' total possible recovery will not be reduced by the availability of claim reduction, however. The only reduction in plaintiffs' recovery will come from its decision to settle a claim rather than pursue it through to judgment, thereby gaining a certain recovery in exchange for forgoing a chance at larger recovery while avoiding the risk of no recovery at all.

The Commission understands that allowing claim reduction will likely reduce incentives for settlement, at least to some extent.[81] Nonetheless, reducing "whipsaw" settlements is worth the reduction in the likelihood of settlements and deterrence that claim reduction may create.[82] To be sure, some plaintiffs may be deterred from settling out of fears that they will be doing so "too cheaply."[83] But incentives for settlement will remain, and claim reduction will have the salutary effect of encouraging plaintiffs to consider more carefully the proper amount of the settlement with each defendant.[84] Finally, claim reduction should not significantly hamper overall deterrence, because non-settling defendants will still face significant, joint and several treble damages liability for the remainder of the plaintiffs' claim.

Second, the recommended statute should allow claims for contribution, but only among non-settling antitrust violators. Contribution would not be available against settling defendants. By making contribution available only among non-settling defendants, defendants will not be deterred from settling by the threat that their liability may later be increased through a contribution action.[85] Accordingly, defendants can "buy peace" through settlement without concern over future claims for contribution. Furthermore, this rule should not reduce incentives to settle; on the contrary, it leaves the same incentives to settle as the current rule barring contribution altogether.[86] Finally, and perhaps most importantly, providing this limited right of contribution in no way reduces the total recovery of the plaintiff, as it serves solely to apportion liability among defendants after a plaintiff has recovered a judgment against them.

This limited right of contribution should not significantly reduce overall deterrence of antitrust violations. First, it helps ensure all defendants will be liable for a fair share of the damages caused; no guilty party can get off "free."[87] Second, companies do not appear to consider whether their conduct will give rise to joint and several liability, let alone whether they will have contribution rights, until they are in litigation.[88] Furthermore, the proposed statute will enhance fairness by ensuring that liability among non-settling defendants is more equitably allocated.[89] The rule thus also protects innocent parties, or those with a very minor role in an anticompetitive scheme, from having to settle claims due to the threat of liability for industry-wide damages in great disproportion to their role (if any) in the conduct.[90]

Adoption of a rule providing for claim reduction and for contribution requires a method of allocating shares of liability for purposes of determining the plaintiffs' claims remaining after a settlement. The Commission recommends that each defendant's allocated share of liability, for either claim reduction or contribution, be equal to each defendant's market share or gain from the antitrust violation. Allocation based on market share should be relatively easily accomplished in the substantial majority of multiple-defendant cases, such as price-fixing conspiracies, and should not significantly increase litigation costs. For those cases in which market share would not be an appropriate basis for allocating liability, use of relative gain makes for an appropriate substitute that is also reasonably straightforward to calculate. The Commission does not recommend that the statute contain more tailored calculation mechanisms for various types of violations,[91] because such approaches could potentially complicate the contribution proceeding and add to the burden on the courts.

The Commission has provided a possible statute in Annex A that would implement the Commission's recommendation. It is generally consistent with, although somewhat more comprehensive than, several other proposals considered by Congress that would implement either claim reduction or contribution, or both.[92] The model set out here is based largely on a substitute/alternative to S. 995, proposed by Assistant Attorney General William Baxter in 1981. The American Bar Association, Section of Antitrust Law proposed model legislation to the Commission that is also worthy of congressional consideration and would, in large part, implement the Commission's recommendations as well.[93]

ANNEX A

Proposed Statute

The Clayton Act (15 U.S.C. § 12 et seq.) is amended by inserting after Section 4H the following new section:

SEC. 4I. (a) In any action under Section 4, 4A, or 4C of this Act, the court shall reduce the claim of any person releasing any person from liability or potential liability for damages by the greatest of: (1) any amount stipulated for this purpose; (2) the amount of the consideration paid for the release; or (3) treble the actual allocated share of damages of the person released.

(b) Any person who is liable for damages in an action brought under Section 4, 4A, or 4C of this Act may claim contribution, in accordance with this Section, from any other person jointly liable for such damages.

(c) Contribution may not be claimed by or from a person who, pursuant to a settlement agreement entered into in good faith with a plaintiff in the action in respect of which contribution rights are claimed, has been released from liability or potential liability for the underlying claim.

(d) A claim for contribution may be asserted by cross-claim, counterclaim, or third-party claim in the same action as that in respect of which contribution rights are claimed, or in a separate action.

(e) Claim reduction and contribution rights shall, to the extent consistent with the fair and expeditious conduct of litigation, be determined in a proceeding following the trial of the action in respect of which claim reduction or contribution rights are claimed.

(f) A claim for contribution shall be forever barred unless filed within six months after the entry of the final judgment for which contribution is sought.

(g) For the purposes of claim reduction and contribution, the allocated share of damages of each defendant shall be determined on the basis of each defendant's market share, unless so doing would be impractical or unjust in light of the nature of the unlawful conduct. If use of market share is not practical or is unjust, the court shall, in its discretion, use the gain of each defendant from the violation or any other method that would be equitable.

(h) Claim reduction and contribution rights shall be determined by the court sitting without a jury.

(i) Nothing in this section shall affect the joint and several liability of any person.

Section-by-Section Analysis

Subsection (a) provides for claim reduction. Claim reduction would be available for all types of antitrust violations, as explained with respect to Subsection (b). The plaintiff's claim would be reduced by the greatest of the amount of the settlement, the amount stipulated to in the settlement agreement, or treble the allocated share of the settling defendant's damages, as calculated pursuant to Subsection (g).

Subsection (b) makes the right of contribution applicable to all actions brought under the relevant sections of the Clayton Act. Although the substantial majority of cases in which these rules would have significant application are likely to be horizontal price-fixing cases, there is no reason specifically to limit the applicability of the statute to those types of antitrust cases.

Subsection (c) limits contribution claims to non-settling defendants. This limitation ensures that settling defendants will be able to remove themselves completely from the litigation without worrying about subsequent claims of contribution from co-conspirators or other defendants (it also prevents settling defendants who paid "too much" from seeking to recover a portion of their overpayment from non-settling defendants).

Subsection (d) provides non-settling defendants with multiple procedural options for bringing a claim for contribution, and thus maximizes the flexibility of defendants in seeking contribution.

Subsection (e) provides that claim reduction and contribution issues should be adjudicated after the trial on the main action wherever possible. This provision achieves three objectives. (1) It ensures that contribution issues remain exclusively among defendants; (2) it prevents the main action from becoming unduly complicated; and (3) it eliminates unnecessary adjudication of issues relating to contribution if liability is not established. If, however, the court determined that some issues relating to contribution could be resolved more expeditiously during the main case, this provision would permit the court to allow for such issues to be addressed during the main proceeding.

Subsection (f) creates a statute of limitations of six months after the entry of final judgment for contribution claims to be brought.

Subsection (g) addresses the method of allocating liability among multiple antitrust defendants for purposes both of claim reduction and contribution. This provision makes market share the presumptive basis for allocating liability among defendants for purposes of contribution and for purposes of determining the proper claim reduction of plaintiff's claims. It calls for the use of gain from the conduct as a secondary method, or any other method equitable in the circumstances.

Subsection (h) provides that claim reduction and contribution issues are to be decided without the use of a jury.

Subsection (i) reaffirms that the joint and several liability of antitrust defendants is not affected by any of the provisions. This provision ensures that plaintiffs will not bear any risk of reduced recovery from insolvent defendants and thus will be able fully to recover their damages (so long as at least one defendant is sufficiently solvent to pay the entire claim).

Chapter III.B
Indirect Purchaser Litigation

1. INTRODUCTION

When an antitrust violation occurs, it may harm many firms and consumers in connected markets. To remedy such injuries, the Clayton Act allows parties to sue for treble damages if they suffer antitrust injury—"injury of the type the antitrust laws were intended to prevent"—as the result of an antitrust violation.[1] Not everyone claiming an antitrust injury may sue, however. The courts have used factors such as whether a plaintiff's injury is "too remote" from the antitrust violation to determine whether an injured private party is a "proper plaintiff" to bring suit under the Clayton Act.[2] In addition, even some parties that may sue to enjoin a defendant's antitrust violation are not permitted to sue for damages. The Supreme Court has limited the standing of parties to sue for antitrust damages, because "Congress did not intend the antitrust laws to provide a remedy in damages for *all* injuries that might conceivably be traced to an antitrust violation."[3]

One difficult question is whether all parties in a chain of distribution may sue to recover damages resulting from the same antitrust violation. As an illegal overcharge is passed through a distribution chain, each of the parties in that chain may suffer antitrust injury. For example, when a price-fixing manufacturer overcharges for the goods it sells, the party who purchases the goods directly from that manufacturer pays the overcharge in the first instance. This "direct purchaser" then may incorporate the price-fixed good into the products it sells and pass on to its distributors all or some portion of the manufacturer's overcharge. In turn, the distributors may be able to pass on all or part of that overcharge to consumers. Because neither the distributors nor the consumers have purchased directly from the price-fixing manufacturer, they are called "indirect purchasers." Thus, the damages from the original antitrust violation may flow from direct to indirect purchasers.

Such fact patterns raise a question for antitrust law: Should only direct purchasers, or both direct and indirect purchasers, be allowed to sue to recover damages stemming from the same antitrust violation? The Supreme Court first considered a related question in 1968. In *Hanover Shoe, Inc. v. United Shoe Machinery Corp.* the Court held that an antitrust defendant could not avoid liability to a direct purchaser by arguing that the plaintiff, a direct purchaser, had "passed on" to indirect purchasers the illegal overcharges initially paid by the plaintiff.[4] Almost ten years later, in 1977, the Court addressed specifically whether indirect, as well as direct, purchasers could sue for damages under federal antitrust law. In *Illinois Brick Co. v. Illinois* the Court held that only direct purchasers may sue under federal antitrust law to recover for damages from anticompetitive overcharges.[5]

State governments have largely refused to take the same approach under state antitrust laws. Through legislation or court decisions, many states have adopted policies that allow indirect, as well as direct, purchasers to sue under state antitrust law to recover damages. The result typically has been that direct purchasers sue in federal court, and indirect purchasers sue in state court, to recover damages resulting from the same antitrust violation.

Vigorous debate over whether to allow only direct, or both direct and indirect, purchasers to seek antitrust damages has continued for almost thirty years. During that time, the conflict between federal and state approaches has itself spawned problems. For example, because indirect purchasers typically cannot join direct purchasers in pursuing remedies in federal court under federal antitrust law, direct and indirect purchasers have often brought multiple, duplicative lawsuits in federal and state courts, where one proceeding might have sufficed to resolve all liability and damage issues in a single forum. During this time, the conflict also has increased the potential for duplicative and otherwise inconsistent recoveries, which then skews the incentives of plaintiffs and defendants to settle.

The Class Action Fairness Act (CAFA), which Congress passed in June 2005, may mitigate certain of these problems to some extent.[6] Among other things, CAFA allows defendants to remove certain indirect purchaser class actions from state to federal court, where they can be consolidated with direct purchaser actions filed in federal court. However, there are exceptions to removal under CAFA. In addition, CAFA does not permit the consolidation of cases in a single federal court for trial. These limitations have lead some to question whether CAFA provides a sufficient remedy.

The problems created by duplicative lawsuits in federal and state courts have led many observers to seek a way to eliminate the current conflict between federal and state indirect purchaser policies. Some advocate a federal statute to allow recovery by both direct and indirect purchasers. Others would prefer that Congress preempt the state statutes and case law that allow indirect purchasers to sue and recover damages. The Commission examined the problems that conflicting federal and state policies on indirect purchaser recovery create, and whether the benefits of changing either federal or state law would be worth the costs.

These are difficult and contentious issues. Half of the Commissioners believe that, if one could address this issue on a clean slate, the best policy would be to permit only direct purchaser claims.[*] Nonetheless, the Commission recognizes that the issue must be addressed

[*] Commissioners Carlton, Garza, Jacobson, Litvack, Valentine, and Warden would favor allowing only direct purchaser claims, if writing on a clean slate. They believe that allowing only direct purchasers to sue would provide the most effective deterrence mechanism, and would avoid duplicative recoveries, speculative inquiries about how damages may have been passed on through the chain of distribution, and complex litigation. (Commissioner Carlton would allow for minor exceptions to the rule allowing only direct purchasers to sue.) Three of those Commissioners—Carlton, Litvack, and Warden—would recommend preemption of state law to implement that rule because they believe that achievement of those goals overrides considerations of federalism and political pragmatism.

Commissioners Burchfield, Delrahim, Kempf, Shenefield, and Yarowsky would allow suits by both direct and indirect purchasers.

in light of the history of the past thirty years. Accordingly, despite disagreement about which policy would be best *a priori*, the Commission largely reached consensus on a practical approach to reduce the complexity and costs generated by the existing conflict between federal and state policies. The Commission makes the following recommendation.

47. Direct and indirect purchaser litigation would be more efficient and more fair if it took place in one federal court for all purposes, including trial, and did not result in duplicative recoveries, denial of recoveries to persons who suffered injury, and windfall recoveries to persons who did not suffer injury. To facilitate this, Congress should enact a comprehensive statute with the following elements:[*]

- **Overrule *Illinois Brick* and *Hanover Shoe* to the extent necessary to allow both direct and indirect purchasers to sue to recover for actual damages from violations of federal antitrust law. Damages in such actions could not exceed the overcharges (trebled) incurred by direct purchasers. Damages should be apportioned among all purchaser plaintiffs—both direct and indirect—in full satisfaction of their claims in accordance with the evidence as to the extent of the actual damages they suffered.**
- **Allow removal of indirect purchaser actions brought under state antitrust law to federal court to the full extent permitted under Article III.[†]**
- **Allow consolidation of all direct and indirect purchaser actions in a single federal forum for both pre-trial and trial proceedings.**
- **Allow for certification of classes of direct purchasers, consistent with current practice, without regard to whether the injury alleged was passed on to customers of the direct purchasers.**

[*] Commissioners Cannon, Carlton, and Garza do not join this recommendation.

[†] Commissioner Delrahim does not join this aspect of the recommendation.

2. BACKGROUND

The following explains the history of the controversy over direct and indirect purchaser litigation and discusses the problems that conflicting federal and state policies have created, as well as attempts so far to address those problems.

A. History

As noted above, the question of how to treat the "pass on" of antitrust damages from one purchaser to the next first arose in *Hanover Shoe, Inc. v. United Shoe Machinery*.[7] There, the Supreme Court held that an antitrust defendant could not assert the pass on of overcharges from one purchaser to the next as a defense in a suit brought by the direct purchaser.[8] The ruling thus enabled direct purchasers to recover all overcharges they suffered from an antitrust violation, even if the direct purchasers passed on some or all of the overcharge to their customers (that is, indirect purchasers). In 1977, nearly ten years later, the Supreme Court in *Illinois Brick Co. v. Illinois* applied what it saw as the logical corollary, holding that federal antitrust law allowed only direct purchasers, and not indirect purchasers, to sue to recover the overcharge they had paid.[9] The Court viewed this as applying the same rule to both plaintiffs and defendants: neither could rely on the pass on of overcharges to either bring, or defend against, a suit based on federal antitrust law.[10] The Court further reasoned that restricting suits solely to direct purchasers would promote more effective private enforcement and avoid multiple and inconsistent liability for defendants and the need to "trace the complex economic adjustments" to determine the impact on indirect purchasers.[11]

A vigorous dissent, however, argued that the holding "frustrates both the compensation and deterrence objectives of the treble-damages action."[12] The dissenters emphasized congressional intent that consumers recover for their antitrust injuries, as had been recently expressed in 1976, when Congress passed legislation to allow state attorneys general to use *parens patriae* authority to sue for Sherman Act violations on behalf of state citizens.[13] The dissenters were not persuaded that the complexity of assessing and allocating damages for both direct and indirect purchasers was any greater than the complexity of other antitrust issues.[14]

The Court's decision in *Illinois Brick* immediately sparked a heated controversy.[15] Critics, including leading Senators and Representatives, agreed with the dissent that the decision ignored the will of Congress by leaving consumers and other indirect purchasers without a remedy to redress serious antitrust injuries.[16] Bills to overrule the decision by federal statute were quickly introduced.[17] Despite intensive efforts, however, these bills failed, and the rule of *Illinois Brick* has continued to govern in federal courts.[18]

Attacks on *Illinois Brick* were not limited to efforts in Congress; opponents brought their case to state legislatures and courthouses as well. Starting with California in 1978, legislatures in many states began passing *Illinois Brick* "repealers"—that is, statutes that specifically authorized indirect purchasers to recover damages under state antitrust laws.[19] In some states, courts interpreted existing state laws to allow recoveries by indirect purchasers alleging antitrust violations.[20] In 1989 the Supreme Court confirmed the validity of state laws permitting indirect purchasers to sue for damages, holding that those laws were not impliedly preempted by federal antitrust law.[21] At the present, more than thirty-five states permit indirect, as well as direct, purchasers to sue for damages under state law.[22]

B. Problems and Attempts to Address Them

Indirect purchaser litigation under state law has become increasingly common, especially since the mid-1990s.[23] Such cases are frequently pursued separately rather than consolidated with other actions in a federal court proceeding. Litigation involving recoveries by direct and indirect purchasers for the same antitrust violation often has proceeded in at least two different courts, with direct purchasers filing under federal antitrust law in federal courts and indirect purchasers pursuing their state antitrust claims in state courts, resulting in wasteful, duplicative litigation.[24]

Some judges and parties have taken steps to reduce the duplication and wasted resources resulting from multiple federal and state proceedings concerning the same alleged antitrust violation. For example, on occasion, a federal judge presiding over a direct purchaser action has "contact[ed] the various state judges in an attempt to coordinate discovery, thus avoiding duplicative efforts; in most instances, those attempts were successful."[25] Some indirect purchasers have brought their state law damage claims in federal court under the federal court's supplemental jurisdiction.[26] In these cases, the indirect purchasers have asserted a federal antitrust claim seeking injunctive relief (which is not barred under *Illinois Brick*) and have requested that the federal court hear their state law claims for damages pursuant to the court's supplemental jurisdiction.[27] Although this procedure appears to have been used successfully with some frequency in recent years,[28] it can provide only a partial remedy to the problems of duplicative litigation. Plaintiffs may not use it when they cannot seek injunctive relief, for example, from a price-fixing cartel that has disbanded following criminal prosecution. In addition, defendants cannot use a federal court's supplemental jurisdiction to remove cases from state court to federal court, where they can be consolidated.

Under the new CAFA enacted by Congress in June 2005, however, defendants now can remove certain indirect purchaser class actions to federal court, where they may be consolidated with other actions, pursuant to the multidistrict litigation (MDL) process.[29] Under CAFA, "[f]ederal jurisdiction, with a few exceptions, now exists over class actions in which (1) minimal diversity exists (that is, where at least one plaintiff and one defendant are diverse), (2) the putative class contains at least 100 members, and (3) the amount in controversy is at least $5 million."[30] CAFA does create a number of exceptions to this broad grant; however, as discussed below, some predict that these will have limited application to state indirect purchaser class actions.[31] Even if removal is achieved, the Supreme Court's holding in *Lexecon Inc. v. Milberg Weiss Bershad Hynes & Lerach* limits the purposes for which cases may be consolidated through the MDL process to pretrial proceedings.[32] This means that even when CAFA has allowed direct and indirect purchaser cases to be consolidated, those cases must be split up and returned to the originating federal courts for trial.

3. RECOMMENDATION AND FINDINGS

47. Direct and indirect purchaser litigation would be more efficient and more fair if it took place in one federal court for all purposes, including trial, and did not result in duplicative recoveries, denial of recoveries to persons who suffered injury, and windfall recoveries to persons who did not suffer injury. To facilitate this, Congress should enact a comprehensive statute with the following elements:*

- **Overrule *Illinois Brick* and *Hanover Shoe* to the extent necessary to allow both direct and indirect purchasers to sue to recover for actual damages from violations of federal antitrust law. Damages in such actions could not exceed the overcharges (trebled) incurred by direct purchasers. Damages should be apportioned among all purchaser plaintiffs—both direct and indirect—in full satisfaction of their claims in accordance with the evidence as to the extent of the actual damages they suffered.**

* Commissioners Cannon, Carlton, and Garza do not join this recommendation.

Commissioner Cannon does not join this recommendation because he believes that the problems due to the conflict between federal and state policy in this area are likely to be ameliorated to a large extent by CAFA, which makes it easier for state antitrust claims to be combined with federal antitrust claims and litigated in one federal court proceeding.

Commissioner Carlton does not join this recommendation because he believes standing should be limited to direct purchasers except where federal courts currently recognize an exception to the rule, including where the direct purchaser is alleged to be participating in the conspiracy. He would also consider allowing, after some period, a class of indirect purchasers to sue in cases where an insufficient number of direct purchasers come forward to sue. Additional study would be needed to refine this exception and to determine how to precisely define "insufficient."

Although Commissioner Garza would not recommend preemption of those state laws allowing indirect purchasers to sue under state antitrust law, she would not abandon federal policy, which she considers to be the optimal policy for reasons explained in this Report. She concurs in the view of Commissioner Cannon that CAFA may substantially ameliorate much of the burden arising out of conflicting state and federal policies and is concerned that the benefits of legislation proposed by the Commission would not outweigh the detriment of abandoning federal policy. In addition, while she does not join in this recommendation as a whole, she supports legislation that would allow consolidation of all direct and indirect purchaser actions in a single forum for both pretrial and trial proceedings, and also supports legislation allowing removal of indirect purchaser actions brought under state antitrust law to federal court to the full extent permitted under Article III.

- **Allow removal of indirect purchaser actions brought under state antitrust law to federal court to the full extent permitted under Article III.***
- **Allow consolidation of all direct and indirect purchaser actions in a single federal forum for both pre-trial and trial proceedings.**
- **Allow for certification of classes of direct purchasers, consistent with current practice, without regard to whether the injury alleged was passed on to customers of the direct purchasers.**

A. Reasons for the Commission's Recommendation

1. *Duplicative federal direct purchaser and state indirect purchaser litigation imposes undue burdens on the judicial system and the parties, wastes resources, increases the risk of duplicative recoveries, skews the parties' incentives to settle, and hinders efficient global settlements*

The conflict between federal and state policies on indirect purchaser damage actions has created a variety of problems. Absent the consolidation of federal and state cases involving direct and indirect purchasers, defendants must respond to complaints about the same conduct in multiple courts.[33] Burdensome and uncoordinated discovery increases costs to defendants and disadvantages plaintiffs as well, because they do not have access to materials produced in other actions. Even when pretrial consolidation of federal direct and state indirect purchaser actions is possible under federal MDL rules, *Lexecon* requires that actions be returned to their originating courts for trial,[34] causing duplicative and wasteful trials. With trials proceeding in at least two, and maybe more, different courts, a defendant may be liable for duplicative damages—the amount of the overcharge to the direct purchaser in the first instance, plus whatever overcharges the direct purchaser was able to pass on to indirect purchasers.[35] Correspondingly, direct purchasers may receive "windfall" awards exceeding their actual damages. Furthermore, when all parties are not before a single court, it can be difficult to negotiate and implement a global settlement.[36] Defendants also may confront costs due to the asymmetric application of collateral estoppel: a finding by one court that the defendant did violate the antitrust law may be used by plaintiffs to establish

* Commissioner Delrahim does not join this aspect of the recommendation. He would not expand the availability of removal of state court actions to federal court.

Although Commissioners Litvack, Shenefield, and Warden join this aspect of the recommendation, they would prefer to preempt state laws to require that any claim for damages by an indirect purchaser must be brought in federal court under federal antitrust law.

liability in other suits, but a finding in one suit that the defendant did not violate the antitrust laws may not be used by the defendant to seek dismissal of other suits.[37]

2. Current efforts to ameliorate these problems cannot alone provide sufficient remedies

The Commission commends the voluntary coordination among courts overseeing multiple proceedings and the parties involved to reduce the burdens on the parties and the courts. Such efforts alone are insufficient to address these problems, however, and the need for such coordination reveals the types of burdens on courts that duplicative direct and indirect purchaser actions create. Increased use of supplemental jurisdiction promotes consolidation and is therefore commendable, but it cannot adequately address the problem of duplicative litigation. Indirect purchasers of goods from a disbanded cartel cannot seek injunctive relief and therefore do not have a basis on which to request that a court invoke its supplemental jurisdiction. A federal court's supplemental jurisdiction is also not available to defendants as a basis for removal.

CAFA is likely to promote removal of state court indirect purchaser class actions, thereby permitting their consolidation in federal court. It may also lead more plaintiffs to file initially in federal court, likewise permitting consolidation. Indeed, if predictions of some are correct that CAFA will facilitate the removal of a large majority of state indirect purchaser actions to federal court—because CAFA's requirements will generally be met and its exceptions will seldom apply[38]—that could greatly reduce the waste of resources associated with multiple indirect purchaser actions in state courts, at least at the pretrial phase.[39] The Commission is loath to rely on such predictions, however. Because CAFA has several exceptions that may apply to indirect purchaser actions, plaintiffs may seek to use CAFA's exceptions to avoid removal, and a significant number of actions may remain in state court.[40] In addition, CAFA applies only to class actions—not to claims brought by large indirect purchasers, who can afford to bring lawsuits individually rather than through a class action. Moreover, indirect purchasers may opt out of a class action and assert their claims directly in state court; such actions would be outside CAFA's reach.[41] CAFA also does not apply to *parens patriae* actions by state attorneys general.[42]

Perhaps most importantly, CAFA does not overrule the Supreme Court's ruling in *Lexecon*, which permits consolidation of class actions in one federal district court only for pretrial matters, such as discovery, class certification, and summary judgment motions. For trial, the Supreme Court's ruling in *Lexecon* requires consolidated cases to be split up again and returned to their originating courts.[43] This rule frustrates the goal of resolving interrelated direct and indirect purchaser claims in one forum to avoid duplicative proceedings and recoveries. Finally, CAFA does not address substantive and procedural issues unique to indirect purchaser litigation.

3. Federalism and political pragmatism require deference to many states' clearly expressed preferences that indirect purchasers be allowed to sue for antitrust damages, and these values outweigh arguments in favor of limiting both federal and state recoveries to direct purchasers only

One way to simplify direct and indirect purchaser litigation would be for Congress explicitly to preempt state laws allowing indirect purchaser actions. A majority of the Commission concluded, however, that principles of federalism and practical political concerns counsel in favor of deference to the clear preference expressed by more than thirty-five states that allow indirect purchasers to pursue relief.

In evaluating possible recommendations on direct and indirect purchaser litigation, the Commission considered a wide variety of relevant policy considerations. The most fundamental criticism of the *Illinois Brick* rule is that it leaves many of those actually injured by antitrust violations without compensation.[44] Indirect purchaser actions can "provide[] an effective vehicle for compensating certain victims . . . including individual consumers";[45] on occasion, indirect purchaser actions yield significant distributions to injured indirect purchasers.[46] The evidence does not point only in one direction, however. Class actions sometimes yield very little compensation to injured indirect purchasers, even when those suits produce large settlements,[47] because the settlements take the form of vouchers, coupons, or product that few class members even bother to collect, or *cy pres*, typically benefiting worthy causes, but not injured purchasers.[48]

The record before the Commission was mixed on whether the deterrence of antitrust violations is best achieved by limiting recoveries to direct purchasers or permitting indirect purchasers to sue as well. Direct purchasers usually can better perceive the violation and prove overcharges and thus may be more likely to bring an antitrust suit.[49] Some witnesses argued that direct purchasers are more likely than indirect purchasers to bring antitrust lawsuits and thus to contribute more to the deterrence of antitrust violations.[50] A sample of indirect purchaser settlements provided by attorneys for indirect purchasers shows that, in virtually all cases, direct purchasers or other private enforcers also challenged the conduct at issue.[51] Nonetheless, indirect purchasers can bring actions in circumstances in which direct purchasers choose not to sue, for example, to avoid injuring business relationships with suppliers.[52] Moreover, data presented to the Commission show that indirect purchaser suits can provide additional deterrence by increasing the liability faced by violators.[53] Taken together, this evidence suggests that direct purchaser litigation is more likely to provide effective deterrence, but indirect purchaser litigation may supplement that deterrence.

If deterrence were the sole objective, one would prohibit indirect purchaser actions if allowing them would reduce the likelihood of direct purchaser actions. Under the existing regime, state indirect purchaser recoveries do not diminish recoveries under federal antitrust law by direct purchasers. However, several witnesses expressed concerns that, if direct purchasers suing under federal antitrust law were required to share the right to recover with indirect purchasers, private enforcement would be significantly diminished.[54] Others disagreed.[55]

Another policy consideration involves the potential for duplicative recoveries. Proponents of the *Illinois Brick* rule worry that indirect purchaser litigation exposes defendants to duplicative recoveries—that is, direct purchasers recover for treble the entire overcharge, then indirect purchasers recover for treble the amount of the overcharge that the direct purchaser passed on to them, and so on. The American Bar Association, Section of Antitrust Law, among others, has highlighted such concerns.[56] Although no one identified an instance of unfair or multiple recovery,[57] that may simply reflect the difficulty of determining whether actual damage awards and settlements exceed total damages.[58]

Testimony revealed that a number of states expressly instruct courts to avoid duplicative damages; no state expressly affords duplicative damages.[59] Such state policies are important to reduce concerns about duplicative recovery. Nevertheless, the potential for duplicative recoveries remains a serious concern as long as direct and indirect purchaser actions proceed without coordination in separate courts.

The burden on courts to manage the complexity of estimating the damages incurred by indirect purchasers was emphasized by the *Illinois Brick* Court[60] and has remained an important concern.[61] In particular, courts have found that estimating pass on for a potential class can be a significant barrier to class certification, "confirm[ing], in a new context, the magnitude of the problems of proof the Court sought to avoid in *Illinois Brick*."[62] Witnesses argued that recent advances in econometrics and other methodologies have made such assessments somewhat more manageable,[63] and at least some indirect purchaser claims may be "non-speculative."[64] Nonetheless, managing the complexity of damage calculation for direct and indirect purchasers remains a non-trivial problem.

Outweighing all of these considerations, however, are the values of federalism, compensating injured parties, and practical feasibility. Most states have implemented their preferences to allow indirect, as well as direct, purchasers to sue.[65] The authority of states to establish antitrust standards that differ from federal law is well established, including specifically with respect to indirect purchaser remedies.[66] Numerous state attorneys general (and many others) oppose "federal preemption of any state antitrust statutes, including indirect purchaser statutes."[67] In particular, they oppose any federal preemption of the right of state attorneys general to bring actions on behalf of their citizens pursuant to the *parens patriae* authority that Congress gave the states in 1976.[68] The congressional intent underlying the grant of *parens patriae* authority provides additional reason to defer to the rights of the states to allow indirect purchaser damage actions. Therefore, the Commission decided *not* to recommend that Congress pass legislation expressly to preempt state laws permitting indirect purchaser litigation.

B. Specific Explanation of the Commission's Recommendation for the Management of Direct and Indirect Purchaser Litigation

In light of the Commission's recommendation that Congress not preempt state indirect purchaser laws, the question becomes how best to reach a solution that will enable courts to manage direct and indirect purchaser actions to achieve efficiency and fairness. Direct and indirect purchaser litigation would be more efficient and fairer if it took place in one federal court for all purposes, including trial, and did not result in duplicative liability, denial of recoveries to persons who suffered injury, and windfall recoveries to persons who did not suffer injury. These goals can be best achieved if all direct and indirect purchasers are entitled to recover their actual damages (trebled) under federal law, and if all claims arising out of the same alleged antitrust violation are heard in one federal court, to the maximum extent possible. The Commission's recommendation contains four interrelated components, which are explained below, to achieve these goals.

1. ***Overrule* Illinois Brick *and* Hanover Shoe *to the extent necessary to allow both direct and indirect purchasers to sue to recover for actual damages from violations of the federal antitrust laws. Damages in such actions could not exceed the overcharges (trebled) incurred by direct purchasers***

To the maximum extent possible, a single federal court should hear all proceedings relevant to actions by direct and indirect purchasers alleging the same antitrust violation. To accomplish this, federal law should permit direct and indirect purchasers to recover the actual damages they suffer as the result of antitrust violations. The first step toward these goals is to overrule *Illinois Brick* and *Hanover Shoe* legislatively to the extent necessary to allow both direct and indirect purchasers to sue under federal law to recover for actual damages they suffer from antitrust violations resulting in an overcharge. Overruling *Illinois Brick* would increase fairness by ensuring that all indirect purchasers, not just those in states permitting such actions, could recover treble their actual damages under federal law for injuries attributable to antitrust violations. Overruling *Hanover Shoe* would limit direct purchasers to recovering treble their actual damages, rather than the full overcharge regardless of pass on, and will thus promote fairness by preventing windfall damage recoveries.

Legislative overruling of *Illinois Brick* may encourage the resolution of direct and indirect purchaser litigation in a single forum, because indirect purchasers may choose to sue under federal antitrust laws rather than to bring state claims. In conjunction with the procedural components of the Commission's recommendation, this also should make resolution of all claims in a single forum easier. Federal recognition of indirect purchaser standing also will promote the development of a body of federal law governing the allocation of damages among direct and indirect purchasers.[69] (The allocation of damages, a second part of this component of the Commission's recommendation, is described below.)

2. *Allow removal of actions brought under state antitrust law by direct and indirect purchasers to federal court to the full extent permitted under Article III*

To ensure that direct and indirect purchaser litigation involving the same alleged antitrust violation will take place in a single court, Congress should include as an element of its comprehensive legislation a provision that allows removal of direct and indirect purchaser actions brought pursuant to state law to federal court to the full extent permitted under Article III. It is true that CAFA now permits consolidation of state indirect purchaser actions in one federal district court to a much greater extent than previously was possible. The potential susceptibility of CAFA's exceptions to plaintiff efforts to avoid removal, and other circumstances to which CAFA does not apply, however, generate concern that CAFA will not operate as well as would be desirable in consolidating direct and indirect purchaser actions. An antitrust-specific provision allowing removal of state indirect purchaser actions to federal court to the full extent permitted by Article III would afford a more comprehensive solution. In combination with other components of the Commission's recommendation, removal to the maximum extent permitted will also facilitate the transfer and consolidation of all direct and indirect purchaser actions in a single federal court.

3. *Allow consolidation of all purchaser actions in a single federal forum for both pretrial and trial proceedings*

In *Lexecon* the Supreme Court held that federal courts in which class actions are consolidated pursuant to the multidistrict litigation statute, 28 U.S.C. § 1407, may only conduct consolidated pretrial hearings on issues such as discovery, class certification, summary judgment, and other pretrial motions.[70] After that, the federal district court must remand the actions for trial in the courts in which they were originally brought.[71] Because *Lexecon* precludes consolidation for trial, the possibility of duplicative trial litigation and inconsistent results will remain.[72]

To avoid this result, Congress should legislatively overrule *Lexecon* for purposes of antitrust direct and indirect purchaser litigation only.[73] The benefits of consolidation, including reduced waste and enhanced coordination, will be far greater if the actions are consolidated for all purposes, including trial.[74] Moreover, such reform is especially necessary with respect to antitrust litigation involving claims by direct and indirect purchasers because, due to the problem of pass on, the amounts of injury suffered by different plaintiff groups are closely interrelated. Indeed, unless cases are consolidated for all purposes, it will be impractical to obtain a single determination of liability and damages and appropriately allocate damages awards among claimants, a critical element of the Commission's recommendation.

4. Damages should be apportioned among all purchaser plaintiffs—both direct and indirect—in full satisfaction of their claims in accordance with the evidence as to the extent of the actual damages they suffered

As explained above, one component of the Commission's recommendation calls for both direct and indirect purchasers to be able to recover their actual damages, trebled. Legislatively overruling *Illinois Brick* and *Hanover Shoe* will allow a limitation of the defendant's liability to treble the overcharges suffered by the direct purchasers as a result of the initial overcharge. These damages should be allocated among the different claimants, whether direct or indirect purchasers, according to the evidence regarding their actual damages.

To be sure, determinations of how to allocate damages among direct and indirect purchasers will often involve complex economic assessments of the extent to which each purchaser in the chain of distribution has suffered harm that can be traced to the overcharge. The federal courts have shown great ability to handle such complex economic issues, however, and they will develop rules and procedures to handle these issues. Consolidating all claims in a single proceeding will facilitate an appropriate allocation of relief among the claimants by the court. In addition, once all parties are before a single court, a global settlement becomes possible. Many of these disputes are likely to be settled; once liability and total damages are established, allocations of damages may often be determined by settlements among the claimants. Furthermore, limiting damages to the amount of the initial overcharge should streamline resolution of the litigation. Indeed, once the amount of overcharge has been determined, it may be possible to resolve the issues of how to allocate those damages among direct and indirect purchasers without the further involvement of the defendants.

Without a doubt, the management of a consolidated class action involving direct and indirect purchasers will be challenging. Such a proceeding will likely involve numerous claimants, the application of differing state laws, and difficult economic assessments of the extent to which overcharges flowed from direct to indirect purchasers and how best to apportion damages among claimants. Federal courts managing such proceedings should use their discretion to structure the proceedings as they see fit to achieve fairness and efficiency. Federal judges may wish to consider structuring the proceedings to make three distinct determinations: the liability of the defendants; the damages owed by the defendant (based on overcharges to the direct purchasers only); and the allocation of those damages among direct and indirect purchasers.* However, judges may choose from a variety of different mechanisms to best manage such cases. It is far preferable to have one federal judge oversee and manage the interrelationships among the claims and claimants than to have split proceedings in federal and state courts, as is now too frequently the case.

* Commissioner Burchfield is skeptical about the proposed use of such structured (or "trifurcated") proceedings.

5. Allow for certification of classes of direct purchasers, consistent with current practice, without regard to whether the injury alleged was passed on to customers of the direct purchasers

The Commission does not intend its recommended reforms to make class certification more difficult for direct and indirect purchasers to obtain than under current practice. In particular, the Commission recognizes the concerns of some that certification of direct purchaser actions may be rendered more difficult by the legislative overruling of *Hanover Shoe*.[75] *Hanover Shoe* simplifies the proof of the fact and extent of injury suffered by direct purchasers—the overcharge depends only on the price they actually paid and the price they would have paid absent the violation. If *Hanover Shoe* is overruled legislatively, however, the extent to which the direct purchasers may have passed on the overcharge may become an issue at trial. Defendants thus may seek to argue as well that the extent of pass on is not susceptible of common proof, which potentially provides a basis to deny class certification. Because the extent of pass on affects both direct purchasers' claims and the indirect purchasers' claims, it has the potential to prevent *any* class from being certified.

In order to ensure that the proposed reform does not make class certification of purchaser classes more difficult, the legislation should specify that courts should certify direct purchaser classes without regard to whether the injury alleged was passed on by direct purchasers. Thus, the degree of pass on will be an issue only at trial, not at the class certification stage of the proceedings. Because the purpose of this proposed reform is to ensure all injured parties are able to obtain appropriate recoveries, increasing obstacles by creating greater burdens to certify class actions would frustrate the objectives of the proposal.

Harris & Lawrence A. Sullivan, *Passing on the Monopoly Overcharge: A Comprehensive Policy Analysis*, 128 U. PA. L. REV. 269, 354 (1979) (stating that "there is simply no credible argument that courts cannot handle passing-on issues").

62 Page, *The Limits of State Indirect Purchaser Suits*, at 5; *see* Coutroulis & Allen, *The Pass-on Problem*, at 184–88. Some Commission witnesses argued that evaluating injury to indirect purchasers would make proceedings very difficult or even "totally unworkable." Indirect Purchaser Trans. at 91 (Montague); *see also* Tulchin Statement, at 3–8.

63 Bennett & Cooper Statement, at 6–7 (while difficulties remain, advances in "data capture, storage and manipulation, as well as in econometric modeling has made such allocation less problematic"). Professor Hovenkamp has also argued that the difficulty of computing pass on can largely be avoided by applying standard methods for damage estimation to each level in the chain of distribution. *See* HERBERT HOVENKAMP, THE ANTITRUST ENTERPRISE 74–76 (2005).

64 Bennett & Cooper Statement, at 13–14.

65 O'Connor, *Is the* Illinois Brick *Wall Crumbling?*, at 34–35 (reporting that "thirty-six states and the District of Columbia, representing over 70 percent of the nation's population, now provide for some sort of right of action on behalf of some or all indirect purchasers"); *see also generally* Comments of 46 State Attorneys General, at 4–7 (arguing that state laws permitting indirect purchasers to assert antitrust claims should not be preempted); Bennett & Cooper Statement, at 16–19.

66 *See ARC America*, 490 U.S. 93.

67 Bennett & Cooper Statement, at 16; *id.* app. at 2–3; *see also* Comments of 46 State Attorneys General, at 1. Others share these views. *See* American Antitrust Institute, Public Comments Submitted to AMC Regarding Indirect Purchaser Litigation, at 8 (July 10, 2006) [hereinafter AAI Comments re Indirect Purchaser Litigation] (opposing strongly "any changes to federal law that would result in preemption of state indirect purchaser remedies").

68 *See* Indirect Purchaser Trans. at 101–02, 159 (Cooper); Bennett & Cooper Statement, at 19.

69 Furthermore, direct and indirect purchasers will be encouraged to develop and present appropriate methods for estimating damages.

70 *Lexecon*, 523 U.S. at 34–37; Spiva & Tycko, *Indirect Purchaser Litigation*, at 16.

71 *Lexecon*, 523 U.S. at 34–37; Spiva & Tycko, *Indirect Purchaser Litigation*, at 16.

72 Indirect Purchaser Trans. at 134–35 (Denger).

73 The Commission does not take a position as to whether overruling *Lexecon* would be desirable in other circumstances as well.

74 Consolidation for all purposes would also avoid one arguably unfair aspect of defending multiple actions. If defendants lose one action, it will face collateral estoppel in subsequent actions against it on the same claim. However, a win in one of those actions may not be used against a different plaintiff in a subsequent action.

75 *See* AAI Comments re Indirect Purchaser Litigation, at 4–6 (repeal of *Hanover Shoe* "would fuel arguments that proof of impact is an individualized question" not susceptible of common proof).

Chapter III.C
Government Civil Monetary Remedies

1. INTRODUCTION

Congress has given the antitrust agencies authority to obtain certain remedies for antitrust violations. For criminal antitrust violations, the Antitrust Division of the Department of Justice (DOJ) may seek significant monetary fines and prison terms.[1] For substantive, non-criminal violations, the agencies can seek broad injunctive relief to prevent future violations. For certain procedural violations, such as Hart-Scott-Rodino Act (HSR Act) violations, and for breaches of consent decrees, both the DOJ and the Federal Trade Commission (FTC) may seek civil fines.

Some have argued that the authority of the U.S. antitrust agencies to seek civil fines should be expanded beyond procedural violations, so that the antitrust agencies could seek civil fines for substantive, non-criminal antitrust violations, just as antitrust enforcers in the European Union and certain countries do. Advocates of expanded monetary remedies for the antitrust agencies also suggest the federal antitrust agencies should increase use of their equitable powers to obtain disgorgement and restitution remedies. Others point out that the U.S. system of antitrust remedies differs from that in many other countries, because the U.S. system gives private plaintiffs the ability to seek treble damages for antitrust violations. Such "private attorneys general" play an important role in antitrust enforcement. Concern exists that allowing the government also to extract monetary remedies for substantive non-criminal antitrust violations—a role currently occupied by private plaintiffs seeking treble damages—could result in defendants making duplicative, excessive payments.

In light of these arguments, the Commission looked at two questions: (1) whether Congress should give the federal antitrust agencies expanded civil fine authority; and (2) whether the agencies' current authority to seek monetary equitable relief, such as disgorgement and restitution, should be clarified, expanded, or limited. The Commission makes the following recommendations.

48. There is no need to give the antitrust agencies expanded authority to seek civil fines.

49. There is no need to clarify, expand, or limit the agencies' authority to seek monetary equitable relief. The Commission endorses the Federal Trade Commission's policy governing its use of monetary equitable remedies in competition cases.

2. BACKGROUND

A. Civil Fines

Congress has authorized the antitrust agencies to seek civil fines, but only for the breach of an antitrust consent decree with the DOJ or the FTC,[2] or for procedural violations, such as a failure to file a pre-merger notification as required under the HSR Act.[3] The agencies' pursuit of civil fines in these cases presents no threat of duplicative recovery, because no private remedies exist for such matters.[4]

The DOJ's and the FTC's lack of authority to seek civil fines for substantive, non-criminal antitrust violations differs from the authority of many antitrust regimes around the world to impose civil fines for such violations.[5] In the European Union, for example, antitrust enforcers have used their authority to impose millions of dollars in civil fines for substantive antitrust violations.[6] European Union antitrust enforcement, however, does not include robust private remedies. In fact, E.U. officials currently are studying ways in which to facilitate private damages actions as a means to "complement public enforcement."[7]

B. Equitable Relief

For substantive, non-criminal antitrust violations, Congress has authorized the DOJ and the FTC to seek equitable relief, including injunctions, temporary restraining orders, and "cease and desist" orders.[8] Courts generally have interpreted Congress's express authorization to seek broad equitable remedies, such as injunctions and restraining orders, as implied congressional authorization to seek *all* equitable remedies—including restitution and disgorgement. In *Porter v. Warner Holding Co.* the Supreme Court explained that "[u]nless a statute in so many words, or by a necessary and inescapable inference, restricts the court's jurisdiction in equity, the full scope of that jurisdiction is to be recognized and applied."[9]

To date, only the FTC has exercised its implied authority to seek monetary equitable remedies, although the DOJ believes it has similar authority.[10] Courts have upheld the FTC's authority to obtain disgorgement and restitution.[11] In consumer protection cases, where consumers often have only minimal federal private rights of action,[12] the FTC has regularly obtained restitution and disgorgement.[13]

In only eleven antitrust cases in the past twenty-six years, however, has the FTC sought equitable monetary remedies.[14] Unlike consumer protection, antitrust law does provide private remedies in the form of treble damages.[15] These treble damages generally provide injured parties with recoveries for their antitrust injuries. Nonetheless, in certain circumstances, obstacles, such as statutes of limitations, prohibitions against suits by indirect purchasers, or standing requirements, may hinder the filing of a treble damages suit.[16] In such circumstances, the FTC may seek monetary remedies "because other remedies are likely to fail to accomplish fully the purposes of the antitrust laws."[17]

At the urging of former FTC Commissioner Thomas B. Leary, the FTC developed a Policy Statement to articulate the circumstances in which it might pursue restitution or disgorgement in competition cases.[18] The *Policy Statement on Monetary Equitable Remedies in Competition Cases* ("the Policy Statement") was intended to provide the public with guidance as to when, in its prosecutorial discretion, the FTC will seek such relief.[19] The Policy Statement identified three factors that will govern the FTC's use of monetary equitable remedies:

(1) whether the violation was "clear" (*i.e.*, a reasonable party should expect its conduct to be found illegal);

(2) whether there is a reasonable basis for calculating the amount of disgorgement or remedy, based on the gains or injury from the violation; and

(3) whether use of the remedy would add value because other remedies will either likely fail or provide incomplete relief.[20]

The Policy Statement further explained that the FTC did "not view monetary disgorgement or restitution as routine remedies for antitrust cases," and that the agency would "continue to rely primarily on more familiar, prospective remedies, and seek disgorgement and restitution in exceptional cases."[21]

3. RECOMMENDATIONS AND FINDINGS

A. Civil Fines

48. There is no need to give the antitrust agencies expanded authority to seek civil fines.

Neither the DOJ nor the FTC has requested expanded civil fine authority.[22] In fact, the head of the Antitrust Division expressed "reservations" about increased government civil fine authority, stating that such a change might "blur[] the distinction between a civil violation and a criminal violation"—a distinction that is important to the DOJ.[23]

In the United States, treble damage recoveries by private plaintiffs play a significant role in antitrust enforcement. If the Commission had recommended reducing or eliminating treble damage recoveries, or significantly limiting their availability, it might have been appropriate to consider whether civil fine authority should take their place. The Commission has not recommended any change to treble damage recovery, however.[24]

Thus, a need for civil fine authority could be shown only if there were significant gaps in the current level of enforcement provided by private plaintiffs seeking damages. The Commission did not receive evidence of significant gaps, however. The Commission has identified one gap: cases in which civil fine authority might address egregious conduct for which treble damages are not available because no antitrust injuries resulted.[25] Such cases are rare and do not, by themselves, provide sufficient reason to expand the agencies' civil fine authority. In addition, as discussed below, the agencies' equitable authority may be used in certain circumstances to obtain disgorgement and restitution where specific circumstances impair the ability of injured parties to recover damages. Thus, to the extent that any gaps remain, they are better addressed through the use of the agencies' equitable powers than through providing additional civil fine authority to the agencies.

B. Equitable Monetary Remedies

49. There is no need to clarify, expand, or limit the agencies' authority to seek monetary equitable relief. The Commission endorses the Federal Trade Commission's policy governing its use of monetary equitable remedies in competition cases.[*]

To the extent treble damage remedies may not be available, or are not sufficient to force disgorgement of defendant's unlawful gains or to redress injured parties' antitrust injuries, a federal antitrust agency may appropriately consider these facts (along with others) in deciding whether to seek equitable monetary remedies such as disgorgement and restitution. The FTC's limited use of this remedy in antitrust cases has been judicious and is commended.

The availability of disgorgement and restitution as government antitrust remedies, along with treble damages as private remedies, could cause defendants to make excessive and duplicative payments.[26] It is imperative to avoid duplicative recoveries. Nonetheless, the Commission's record is devoid of any example where government-sought disgorgement or restitution led to duplicative or excessive payments. Instead, the Commission heard testimony that in the thirty years since the FTC first exercised its equitable authority, there has never been a duplicative recovery.[27]

[*] Commissioners Valentine, Jacobson, Kempf, and Warden would further recommend that the DOJ adopt a policy similar to the FTC's Policy Statement to articulate the circumstances in which it would exercise its authority to seek equitable monetary remedies.

Notes

[1] 15 U.S.C. § 1 (authorizing criminal penalties up to $100 million for corporate offenders, and up to $1 million and/or up to 10 years in prison for individuals); 18 U.S.C. § 3571(d) (general statute authorizing criminal penalties up to twice the pecuniary gain, or twice the pecuniary loss caused by a violation).

[2] Courts can retain continuing jurisdiction over decrees filed by the DOJ pursuant to the Antitrust Procedures and Penalties Act (APPA or Tunney Act). A violation of those decrees "whether litigated or consent, is punishable as contempt of court for which severe penalties may be imposed." AMERICAN BAR ASSOCIATION, SECTION OF ANTITRUST LAW, ANTITRUST LAW DEVELOPMENTS 708 (6th ed. 2007) (courts have imposed monetary penalties up to $750,000). The FTC may pursue similar fines pursuant to 15 U.S.C. § 45(*l*). *See, e.g.*, United States v. Boston Scientific Corp., 253 F. Supp. 2d 85, 86 (D. Mass. 2003) (suit initiated by the DOJ on behalf of the FTC resulted in a $7 million fine against Boston Scientific for violation of a 1995 FTC Consent Decree).

[3] *See, e.g.*, 15 U.S.C. § 18a(g)(1) ("Any person . . . who fails to comply with [Hart-Scott-Rodino Act (HSR Act) filing requirements] . . . shall be liable to the United States for a civil penalty of not more than $10,000 for each day during which such person is in violation of this section."). Although 15 U.S.C. § 18a(g)(1) specifically refers to the DOJ's ability to seek civil fines for non-substantive antitrust violations, the FTC can obtain civil fines for similar violations by asking the DOJ to initiate a proceeding on its behalf. *See, e.g.*, United States v. Hearst Trust, Complaint for Civil Penalties For Failure to Comply with Premerger Reporting Requirements of the Hart-Scott-Rodino Act, No. 1:01CV02119 (Oct. 11, 2001) (complaint filed at the request of the FTC, which resulted in a $4 million civil fine against Hearst for its failure to comply fully with HSR Act requirements).

[4] Stephen Calkins, Statement at AMC Government Civil Remedies Hearing, at 24 (Dec. 1, 2005) [hereinafter Calkins Statement] ("[V]iolation of the Hart-Scott-Rodino Act . . . does not create a private cause of action.").

[21] *Id.* at 45,821.

[22] *See* Barnett/Majoras Transcript at 51–52 (Barnett) (March 21, 2006) (expressing reservations about extending civil fine authority to substantive antitrust violations); *id.* at 52 (Majoras) (stating that she "agree[s] with Assistant Attorney General Barnett's cautionary notes on civil fines," but also stating there may be circumstances where injunctive relief is not sufficient).

[23] *Id.* at 51–52 (Barnett) (describing the challenge the DOJ sometimes has to persuade courts that criminal prosecution of antitrust violations are is targeted at a narrow range of conduct, stating that "the sharper the distinction [between criminal and civil violations], the better off we are at the end of the day").

[24] *See* Chapter III.A of this Report regarding triple damages.

[25] Calkins Statement, at 8 (referring to time-limited injunctions as little more than a "slap on the wrist"); *see also* Pate Comments Proposing Issues, at 2 (noting that "injunctive relief alone may not be sufficient to deter or redress violations of the antitrust laws"); Government Civil Remedies Trans. at 14–17 (Calkins). For example, no antitrust injuries resulted in *United States v. American Airlines, Inc.*, when American Airlines's President, Robert Crandall, invited Braniff Airlines's President, Howard Putnam, to fix prices. United States v. American Airlines, Inc., 743 F.2d 1114, 1116 (5th Cir. 1984). Putnam refused and reported the conversation to the DOJ. If Putnam had accepted, the resulting conspiracy could have subjected both airline companies to millions of dollars in criminal fines and Crandall and Putnam to possible jail time. *American Airlines*, 743 F.2d at 1116; *see also* Calkins Statement, at 8 ("[T]he federal government remedy is likely to be limited to an injunction that can be described, often with some justification, as an order not to do it again. On the other hand, if the same conduct is successfully challenged criminally, it can be punished with prison time and massive individual and corporate fines. . . ."). In the absence of any agreement, however, the DOJ sought only injunctive relief—that is, a court order barring Crandall from engaging in similar conduct again. *American Airlines*, 743 F.2d at 1116.

[26] *See, e.g.*, Arquit Statement, at 1; Balto, *Reassessing the Approach to FTC Remedies*, at 1123 ("[T]here is no lack of private enforcement against the types of antitrust violations attacked by the FTC.").

[27] Government Civil Remedies Trans. at 11 (Graubert).

Chapter III.D
Criminal Remedies

1. INTRODUCTION

Criminal antitrust prosecution is a vital component of overall antitrust enforcement in the United States. Criminal penalties can include prison sentences for individuals and sizable monetary fines for individuals and corporations. Such criminal enforcement, and the associated sentences and fines, have generally been reserved for "hard-core" offenses. Those offenses typically are "naked" conspiracies between and among competitors to fix prices, rig bids, or allocate markets or customers. Such naked conspiracies lack any plausible relationship to enhancing output or providing other benefits to consumers; the participants usually conduct their activities in secret and know their activities are illegal. A consensus exists that such conspiracies almost invariably inflict harm on consumers and the economy.[1]

The Antitrust Division of the Department of Justice (DOJ) has made the detection, criminal prosecution, and deterrence of hard-core antitrust offenses its highest priority.[2] This priority, in combination with improved enforcement tools, cooperation from international antitrust enforcers, and a robust amnesty program, have led to the detection and prosecution of an ever-increasing number of cartels, often global in scope. These cartels can affect millions, if not billions, of dollars in commerce.[3] Congress has recognized the seriousness of these economic crimes, and has recently substantially increased maximum fines and jail sentences and authorized the DOJ to use wiretaps in the investigation of suspected criminal cartel conduct.[4]

Other enforcement authorities around the world have also increased their enforcement efforts against cartels.[5] Indeed, more than 100 jurisdictions around the world have enacted laws prohibiting cartels.[6] Moreover, at least fourteen nations make violations of their competition statutes criminal.[7] Although U.S. cartel enforcement against entities based in foreign countries has been controversial on some occasions in the past, today many nations have their own laws and policies against cartels, and they cooperate with the United States in cartel investigations, pursuant to various treaties and international agreements. Even in the past few years, the changes have been significant. In 2005 the British government commenced proceedings to extradite one of its citizens for prosecution in the United States for antitrust violations. By comparison, as recently as the late 1990s, requests by U.S. antitrust officials for international assistance routinely took a year to be processed, only to be denied ultimately in the majority of cases.[8]

Against this background of the increased role of criminal antitrust enforcement both in the United States and internationally, the Commission undertook to study three issues specific to U.S. criminal antitrust enforcement.

First, the Sherman Act nominally makes all violations of Section 1 and Section 2 subject to criminal prosecution. Some violations of those statutes, however, such as "naked" conspiracies to fix prices, rig bids, and allocate markets, are universally condemned as particularly harmful to consumer welfare and without procompetitive effects that might benefit consumers. By comparison, other violations, such as anticompetitive unilateral or joint conduct, can be more difficult to judge; unilateral or joint business conduct often requires more extensive factual inquiry to assess whether the conduct is likely to benefit or harm consumers. The DOJ has generally limited its criminal prosecutions to violations of the former type, and not the latter. The Commission examined whether the DOJ appropriately exercises its discretion by limiting criminal prosecutions to hard-core offenses.

Second, the Sherman Act establishes a maximum fine of $100 million for corporate violations, an amount that was increased from $10 million in 2004. This maximum may be increased through the application of a general criminal provision, 18 U.S.C. § 3571(d), the "alternative fines statute," if certain proof burdens are met by the government. The Commission reviewed whether continued use of the alternative fines statute to increase fines was appropriate in antitrust cases in light of the complexity of adducing the necessary proof in antitrust cases and recent Supreme Court decisions requiring that juries determine whether the facts have been proven to a sufficient degree to warrant increased sentences.

Third, sentences for criminal offenses of the Sherman Act are determined through application of the United States Sentencing Commission's Sentencing Guidelines (Sentencing Guidelines). For corporate antitrust violations, the Sentencing Guidelines set the sentence based on an estimate of the harm the violation caused. The estimate of harm is established through a "proxy," which is set in all cases at 20 percent of the amount of commerce affected by the antitrust violation. This "20 percent harm proxy" assumes the harm caused by the violation bears a direct relationship to the amount of commerce affected by the conduct. The 20 percent harm proxy is adjusted on the basis of a variety of factors, and then is used to set the final sentence. Some have argued that use of the 20 percent harm proxy fails adequately to distinguish between conduct of different severity and that more should be done to take into account a variety of economic factors that can make similar conduct have significantly different costs to consumers. The Commission therefore studied whether the use of the 20 percent harm proxy in the Sentencing Guidelines for antitrust crimes adequately distinguishes cartel activity of differing severity.

The Commission makes the following recommendations regarding these issues.

50. **While no change to existing law is recommended, the Antitrust Division of the Department of Justice should continue to limit its criminal enforcement activity to "naked" price-fixing, bid-rigging, and market or customer allocation agreements among competitors, which inevitably harm consumers.**

51. **No change should be made to the current maximum Sherman Act fine of $100 million or the applicability of 18 U.S.C. § 3571(d), the alternative fines statute, to Sherman Act offenses. Questions regarding application of Section 3571(d) to Sherman Act prosecutions should be resolved by the courts.***

52. **Congress should encourage the Sentencing Commission to reevaluate and explain the rationale for using 20 percent of the volume of commerce affected as a proxy for actual harm, including both the assumption of an average overcharge of 10 percent of the amount of commerce affected and the difficulty of proving the actual gain or loss.†**

53. **The Sentencing Commission should amend the Sentencing Guidelines to make explicit that the 20 percent harm proxy (or any revised proxy)—used to calculate the pecuniary gain or loss resulting from a violation—may be rebutted by proof by a preponderance of the evidence that the actual amount of overcharge was higher or lower, where the difference would materially change the base fine.****

54. **No change to the Sentencing Guidelines is needed to distinguish between different types of antitrust crimes because the Guidelines already apply only to "bid-rigging, price-fixing, or market allocation agreements among competitors," and the Antitrust Division of the Department of Justice limits criminal enforcement to such hard-core cartel activity as a matter of both historic and current enforcement policy.**

* Commissioners Jacobson and Warden do not join this recommendation.

† Commissioner Carlton does not join this recommendation in full.

** Commissioners Burchfield, Carlton, and Garza do not join this recommendation.

2. FOCUS OF ENFORCEMENT ON HARD-CORE CONDUCT

A. Background

Violations of the Sherman Act have been criminal offenses since the Act was passed in 1890. Criminal penalties (which are often supplemented by follow-on civil private damage suits) in general are intended to deter unlawful conduct, protect the public, and punish offenders. They are set at levels designed both to reflect the seriousness of the crime and to provide an optimal level of deterrence, considering all relevant factors.

Although Sherman Act violations originally were misdemeanors punishable by up to one year in prison and a maximum of $5000 in fines, they subsequently became felonies punishable by much larger fines and longer prison sentences. A series of amendments to the Sherman Act—the most recent in 2004—have increased the maximum prison sentence to ten years and increased the maximum fines to $1 million for individuals and $100 million for corporations.[9] The criminal fines obtained by the DOJ have also increased substantially, particularly in the last decade. Between 1997 and 2004, the total amount of annual fines obtained by DOJ ranged from $204 million to over $1 billion, in any given year.[10] In 2005, the average jail sentence for antitrust crimes was twenty-four months.[11]

The DOJ has continued to seek improved methods for finding and punishing cartels. For example, it has enhanced its enforcement efforts through an invigorated amnesty program that encourages cartel participants to assist the DOJ in discovering and prosecuting cartel activity,[12] obtained the authority to use such methods as wire tapping,[13] and entered into agreements with foreign jurisdictions to investigate international cartels cooperatively.[14] The focus of this enforcement has broadened over time from prosecutions of regional and local price-fixing, territory allocation, and bid-rigging prior to the 1990s,[15] to international cartels involving large, multinational companies and significant amounts of affected commerce.[16]

B. Recommendation and Findings

50. While no change to existing law is recommended, the Antitrust Division of the Department of Justice should continue to limit its criminal enforcement activity to "naked" price-fixing, bid-rigging, and market or customer allocation agreements among competitors, which inevitably harm consumers.

Although the DOJ has statutory authority to prosecute all violations of Section 1 and 2 of the Sherman Act criminally, over time the DOJ has narrowed the scope of its criminal enforcement of the Sherman Act to "hard-core" offenses such as price-fixing.[17] The DOJ has

AR_002885

in recent years forgone criminal prosecutions of unilateral conduct under Section 2 and joint conduct whose competitive effects are often ambiguous, and the DOJ has at various points in the last fifty years made policy statements narrowing the types of antitrust violations it will prosecute as criminal.[18] The last criminal prosecutions by the DOJ against conduct that did not involve price-fixing, bid-rigging, or market allocation were over twenty-five years ago.[19]

The DOJ has made quite clear that it does not currently prosecute anything other than hard-core cartel activity criminally, and it has no plans to change that policy in the future.[20] The DOJ's discretionary limitation of criminal prosecution to hard-core offenses allows it to focus its prosecutorial resources on that conduct about which there is general agreement that it harms consumers.[21] Indeed, the Supreme Court long ago made clear that any conspiracy formed for the purpose of "raising, depressing, fixing, pegging, or stabilizing . . . price . . . is illegal per se."[22] Similarly, it has long been recognized that agreements to allocate territories are unlawful without the need for an inquiry into their "business or economic justification, their impact in the marketplace, or their reasonableness."[23]

By comparison, other types of potentially anticompetitive conduct can have more ambiguous effects on consumers and consumer welfare, and the legal standards by which such conduct is determined to be anticompetitive are more complex and fact-intensive. Indeed, antitrust law evaluates a wide range of conduct under the "rule of reason," pursuant to which a court compares the anticompetitive harm from the activity with the procompetitive benefits that are likely to accrue to consumers. For example, companies often enter into a variety of joint ventures, whether for research and development, manufacturing, marketing, or distribution. Such joint ventures may "restrain" trade in some respect, but also offer efficiencies that are beneficial to both the companies and consumers.[24] Similarly, there is a wide range of unilateral conduct, such as pricing and distribution practices, that can be procompetitive in most instances, and anticompetitive only in very limited circumstances.[25] Criminal penalties, by contrast, are typically reserved for cases in which conduct is clearly unlawful. To impose them more broadly, on conduct that is potentially not anticompetitive, runs the risk of penalizing the very procompetitive, proconsumer conduct the antitrust laws are intended to encourage.

The DOJ has reasonably decided to focus its prosecutorial resources on the conduct most likely to harm consumers.[26] It likewise has reserved the most burdensome form of punishment—fines and incarceration—for such cases. The Commission therefore commends the DOJ's limitation of criminal prosecution to hard-core conduct and recommends its continuation.

3. THE ALTERNATIVE FINES STATUTE—18 U.S.C. § 3571(d)

A. Background

Section 3571(d) of Title 18 of the United States Code is a generally applicable statute that permits prosecutors to seek higher fines than those provided for in the statute laying out the offense.[27] Section 3571(d), or the "alternative fines statute," provides that:

> If any person derives pecuniary gain from the offense, or if the offense results in pecuniary loss to a person other than the defendant, the defendant may be fined not more than the greater of twice the gross gain or twice the gross loss, unless imposition of a fine under this subsection would unduly complicate or prolong the sentencing process.[28]

In antitrust cases, this statute permits the DOJ to seek fines in excess of the $100 million statutory maximum (or $1 million for individuals) if the Sentencing Guidelines (discussed below) would call for it.[29] When the DOJ seeks to invoke the alternative fines statute, fines are still calculated on the basis of the Sentencing Guidelines; the fine range is, however, no longer limited by the Sherman Act maximum.

B. Recommendation and Findings

51. No change should be made to the current maximum Sherman Act fine of $100 million or the applicability of 18 U.S.C. § 3571(d), the alternative fines statute, to Sherman Act offenses. Questions regarding application of Section 3571(d) to Sherman Act prosecutions should be resolved by the courts.*

Section 3571(d), the alternative fines statute, is generally applicable to all crimes for which there is a monetary penalty.[30] There is nothing unique about antitrust offenses that justifies their being carved out or otherwise exempted from this provision. On the contrary, the alternative fines statute provides a useful means to punish large cartels adequately without the need for Congress to pass frequent statutory increases to the maximum fine.[31] Indeed, the

* Commissioners Jacobson and Warden do not join this recommendation. They would make Section 3571(d) inapplicable to Sherman Act offenses and increase the maximum fine under the Sherman Act to $500 million. At a minimum, they would recommend that Congress revisit whether the alternative fines statute should be applicable to antitrust offenses. Because, in light of incentives to strike plea agreements with the DOJ, defendants have been unwilling to challenge the use of Section 3571(d), these Commissioners believe the issue is unlikely to be addressed and resolved by a court.

DOJ has obtained fines above $100 million in nine cases, and prior to the increase of the maximum fine in 2004, sought fines above the statutory maximum fifty-one times since 1997.[32] In the absence of the alternative fines statute, these high fines would have been barred. Congress increased the fines ten-fold in 2004; that increase, in conjunction with the use of the alternative fines statute, permits the DOJ to seek, and courts to impose, sufficiently high fines to continue to provide deterrence through criminal enforcement.

The Commission recommends that certain interpretive questions regarding the statute be left to courts to resolve in the context of actual cases. One such argument is that the term "gain or loss" in the statute refers to the gain or loss caused by the individual defendant, rather than the gain or loss caused by the entire conspiracy. A court is best suited to resolve any ambiguity in the statute and relevant legislative history.

A more substantial question that the Commission also recommends be addressed by courts is whether the alternative fines statute can continue to be used in light of *Apprendi v. New Jersey*, as well as subsequent Supreme Court decisions.[33] That case requires that any fact used to increase a sentence must be proved to a jury beyond a reasonable doubt.[34] The DOJ acknowledges that it must prove to a jury, beyond a reasonable doubt, the gain or loss used to establish a higher maximum fine under Section 3571(d).[35] Some observers argue that because proof of gain or loss is typically established through expert witnesses, opinion testimony, and econometric analysis in antitrust cases, it is inherently speculative and can never be sufficient for proof beyond a reasonable doubt.[36] Alternatively, they contend, because the litigation of gain or loss in any antitrust case is complicated and protracted, the alternative fines statute by its terms may not be applied.[37] Although antitrust sentences are typically imposed pursuant to a plea agreement,[38] the Commission believes these arguments are nonetheless best left to a court to consider in the first instance.

4. THE SENTENCING GUIDELINES

A. Background

Although the Sherman Act specifies a maximum fine for violations, actual sentences for antitrust crimes are established with reference to the Sentencing Guidelines issued by the United States Sentencing Commission (Sentencing Guidelines).[39] Fines for both corporations and individuals are set by a series of calculations, described more fully below, that establish a range of possible fines. A court may impose a fine anywhere within the calculated range. A recent Supreme Court decision, *United States v. Booker*, made the fine range calculated by the Sentencing Guidelines advisory, leaving the court with discretion to impose a fine higher or lower than the calculated range.[40]

The Sentencing Guidelines contain a specific section for the calculation of fines for organizations convicted of criminal antitrust conduct. The Sentencing Guidelines call for the calculation of a "base fine" that is then adjusted for culpability. The base fine is in most cases determined by the pecuniary loss caused by the organization's violation.[41] Pecuniary loss is calculated as 20 percent of the volume of commerce affected by the defendant's anticompetitive conduct (referred to herein as the "20 percent harm proxy").[42] The base fine is then multiplied by a minimum and maximum culpability multiplier, and the sentencing judge may impose a fine anywhere within the range calculated.[43] The culpability multiplier may range from 0.75 to 4.0,[44] which depends on various factors relevant to the defendant's culpability, such as the size of the organization and whether the defendant cooperated with the investigation or accepted responsibility.[45]

The Sentencing Commission established the 20 percent harm proxy in 1991 so that courts could "avoid the time and expense that would be required . . . to determine the actual gain or loss."[46] The Sentencing Commission retained the 20 percent harm proxy in its most recent revisions to this part of the Guidelines in 2005. This decision was, in large part, because Congress expressly stated when it increased the maximum Sherman Act fines in 2004 that "Congress does not intend for the [Sentencing] Commission to revisit the current presumption that twenty percent of the volume of commerce is an appropriate proxy for the pecuniary loss caused by a criminal antitrust conspiracy."[47]

B. Recommendations and Findings

52. Congress should encourage the Sentencing Commission to reevaluate and explain the rationale for using 20 percent of the volume of commerce affected as a proxy for actual harm, including both the assumption of an average overcharge of 10 percent of the amount of commerce affected and the difficulty of proving the actual gain or loss.*

The Sentencing Commission adopted its 20 percent harm proxy for antitrust crimes in 1991, concluding that it is difficult to calculate loss or gain with precision in antitrust cases.[48] Because general deterrence of antitrust violations does not require an exact correlation of expected harm and penalty, the Sentencing Commission determined that reliance on a proxy amount would be appropriate.[49] The empirical data available at the time showed that price-fixing overcharges tended to be about 10 percent of the volume of affected commerce.[50] The Sentencing Commission doubled this amount to 20 percent to reflect the fact

* Commissioner Carlton joins this recommendation only to the extent it would lead to an increase in (or no change to) the proxy.

that the cost of antitrust violations to society exceeds the amount of overcharge.[51] The Sentencing Commission therefore concluded that a 20 percent harm proxy was appropriate for use in calculating the base fine.

Some studies suggest that the average overcharge in recent cartel cases has been 40 percent and that the median overcharge is 25 percent.[52] If these studies are accurate, and confirmed by further research, the presumed 10 percent overcharge reflected in the existing 20 percent harm proxy is inappropriately low. Conversely, some observers argue that the existing presumption results in fines that are too high.[53] Furthermore, development of economic learning and estimation techniques over the past fifteen years may have made proving gain or loss in an antitrust case less difficult than it was when the Sentencing Commission created the proxy.[54] The degree of difficulty of proving gain or loss, and the burdens it would impose on the sentencing process, are worthy of renewed consideration by the Sentencing Commission.

The DOJ believes that no change to the existing 20 percent harm proxy is appropriate, because more precise calculations are unnecessary.[55] The DOJ argues that criminal fines are not intended to be substitutes for damages, and do not necessitate precise calculation, because their primary purpose is to punish and deter, and they already provide rough justice.[56] Furthermore, the DOJ contends, more precise calculations would result in damages-like litigation that Congress hoped the sentencing courts could avoid through continued use of a proxy.[57]

On balance, however, the Commission recommends that the Sentencing Commission study these questions, and that Congress should encourage such study. The Sentencing Commission should determine whether the existing proxy is empirically sound and accurately reflects the best estimate of typical harm in antitrust cases. It should also determine the costs that individualized calculations of harm would impose on the sentencing process—in light of the current ability of lawyers and economists to estimate harm caused by antitrust crimes—and should determine whether establishing more individually tailored base fines could justify those additional costs. Such study would be consistent with the Sentencing Commission's more general efforts to increase the correlation between the penalty and the underlying facts of the crime.[58] The Commission does not take a position on how the Sentencing Commission should weigh these considerations, or whether the proxy should be higher or lower; it recommends only that the Sentencing Commission revisit its fifteen-year-old decision to determine whether change is warranted.

53. The Sentencing Commission should amend the Sentencing Guidelines to make explicit that the 20 percent harm proxy (or any revised proxy)—used to calculate the pecuniary gain or loss resulting from a violation—may be rebutted by proof by a preponderance of the evidence that the actual amount of overcharge was higher or lower, where the difference would materially change the base fine.*

The Sentencing Guidelines' use of a proxy for harm (whether the existing 20 percent harm proxy, or another revised proxy amount) does not carefully distinguish between defendants who have caused differing degrees of actual harm. That is, the inflexible presumption that antitrust crimes cause harm equal to 20 percent of the volume of commerce affected can be "inequitable," and potentially "disproportionate."[59] Just as there is some debate as to whether the existing harm proxy is too high or too low as a general matter, as explained above, it may also be too high or too low in individual cases. Indeed, the use of a proxy runs counter to the Guidelines' approach in other, non-antitrust cases, where the Sentencing Guidelines call for actual calculation of harm.[60] Furthermore, recent Supreme Court cases have imposed a requirement that any fact that would increase a sentence be proven to a jury beyond a reasonable doubt.[61] Although the holdings of those Supreme Court cases likely do not invalidate the proxy itself, they do highlight the concern of basing sentences on facts other than those proven at trial (or admitted by a defendant).

The Commission recommends that the Sentencing Guidelines be modified to allow the 20 percent harm proxy to be rebutted in certain circumstances, because sentencing calculations should more closely reflect the harm caused by the crime committed where doing so is feasible. Accordingly, the Commission recommends an approach that would permit a defendant to show that the overcharge was well below the presumed 10 percent of commerce affected or that the harm caused by its conduct was well less than double the overcharge. Conversely, the government could seek to prove that the overcharge was more than 10 percent, or that the overall harm caused was more than double the calculated overcharge.[62] This process would thus allow the fine to be either increased or decreased, depending on the circumstances. To maintain the efficiency of the sentencing process, the

* Commissioners Burchfield, Carlton, and Garza do not join this recommendation.

Commissioners Burchfield and Garza believe the Sentencing Guidelines provide sufficient alternative mechanisms to take into account individual circumstances. First, the Guidelines calculation results in a range of fines, leaving the sentencing judge free to impose a higher or lower fine as appropriate to the circumstances. Second, the Guidelines are now discretionary, as a result of the Supreme Court's decision in *United States v. Booker*, 530 U.S. 220 (2005), and therefore a judge has even greater latitude to impose a fine above or below the range calculated by the Guidelines.

Commissioner Carlton believes that additional proceedings designed to create more individually tailored base fines are a waste of judicial and prosecutorial resources.

Commission's recommendation calls for allowing such proof only if it would materially change the base fine. This would limit the increases in duration and costs of the sentencing process to instances where the sentence would be most disproportionate (whether too low or too high) to the harm actually caused.

The Commission's recommended rebuttal procedure is not intended to reduce the government's burden of proof when it seeks to impose a fine above the statutory maximum of the Sherman Act. As the government acknowledges, in those instances it must prove gain or loss beyond a reasonable doubt to establish a higher maximum fine. Accordingly, if the government sought to use this procedure to increase the base fine, with a resulting sentence that exceeds the applicable Sherman Act maximum, it would remain obliged to make the proof of gain or loss beyond a reasonable doubt, pursuant to Section 3571(d), for the court to impose that fine, and the burden of proof would not shift. If the government failed to meet this burden, any higher sentence resulting from an increased base fine would remain limited by maximum fine amounts provided for in the Sherman Act.

54. No change to the Sentencing Guidelines is needed to distinguish between different types of antitrust crimes because the Guidelines already apply only to "bid-rigging, price-fixing, or market allocation agreements among competitors," and the Antitrust Division of the Department of Justice limits criminal enforcement to such hard-core cartel activity as a matter of both historic and current enforcement policy.

The antitrust section of the Sentencing Guidelines specifies that its calculation of penalties is applicable only to bid-rigging, price-fixing and market allocation offenses—that is "hardcore" Section 1 offenses.[63] The Sentencing Guidelines do not, as some suggest,[64] purport to apply to other types of anticompetitive conduct, such as that which might violate Section 2 of the Sherman Act. Indeed, the Sentencing Commission decided to limit these provisions to those offenses because of the DOJ's historical practice not to prosecute other types of antitrust offenses.[65] As explained above, the Commission endorses continuation of this discretionary limitation. Should the DOJ's prosecutorial policy change in the future, it would be appropriate for the Sentencing Commission to revisit this aspect of the Sentencing Guidelines.

Chapter IV

Government Exceptions to Free-Market Competition

Chapter IV.A
The Robinson-Patman Act

1. INTRODUCTION

Congress passed the Robinson-Patman Act in 1936 to respond to the concern of small businesses—such as "mom and pop" grocery stores—that they were losing share to larger supermarkets and chain stores and in some cases were being forced to leave the market. Small businesses complained that they could not obtain from suppliers the same price discounts that larger businesses demanded and received.

To address this concern, Congress passed the Robinson-Patman Act (RP Act or Act), which prohibits sellers from offering different prices to different purchasers of "commodities of like grade and quality" where the difference injures competition.[1] Different discount levels, or lower prices, can be offered only where: (1) the same discount is practically available to all purchasers; (2) a lower price is justified by a lower per-unit cost of selling to the "favored" buyer; (3) a lower price is offered in good faith to meet (but not beat) the price of a competitor; or (4) a lower price is justified by changing conditions affecting the market or marketability of the goods, such as where goods are perishable or seasonal or the business is closing or in bankruptcy. Other provisions of the Robinson-Patman Act ensure the goal of equal pricing by restricting the use of commissions and promotional expenses, for example. The Supreme Court has described the purpose of the Act:

> The legislative history of the Robinson-Patman Act makes it abundantly clear that Congress considered it to be an evil that a large buyer could secure a competitive advantage over a small buyer solely because of the large buyer's quantity purchasing ability. The Robinson-Patman Act was passed to deprive a large buyer of such advantages . . . .[2]

In its operation, however, the Act has had the unintended effect of limiting the extent of discounting generally and therefore has likely caused consumers to pay higher prices than they otherwise would. As one commentator has explained, the Robinson-Patman Act "was designed to protect small businesses from larger, more efficient businesses. A necessary result is higher consumer prices."[3] Moreover, the Act ironically appears increasingly to be ineffective even in protecting small businesses. Over time, many businesses have found ways to comply with the Act by, for example, differentiating products, so they can sell somewhat different products to different purchasers at different prices. Such methods are likely to increase the seller's costs—and thus increase costs to consumers—but do nothing to protect small businesses. The Act generally appears to have failed in achieving its main objective.

An act that *restricts* price and other forms of competition is fundamentally inconsistent with the antitrust laws, which *protect* price and other types of competition that benefit consumers. Less than twenty years after Congress enacted the Robinson-Patman Act, the 1955 Report of the Attorney General's National Committee to Study the Antitrust Laws expressed hope that courts would reconcile interpretations of the Robinson-Patman Act with "broader antitrust policies" and "[a]ccommodate all legal restrictions on the distribution process to dominant Sherman Act policies."[4] Fourteen years later, the Report of the White House Task Force on Antitrust Policy (Neal Report) concluded, "the Robinson-Patman Act requires a major overhaul to make it consistent with the purposes of the antitrust laws."[5] In 1977 the Department of Justice Report on the Robinson-Patman Act (1977 DOJ Report) similarly found that the evidence "raises serious questions whether the Act advances the competitive goals of other antitrust laws."[6] Both the Neal Report in 1969 and the 1977 DOJ Report recommended repeal or substantial modification of the Act due to the Act's high costs, limited or non-existent benefits, and inconsistency with other antitrust laws.[7] In particular, the 1977 DOJ Report concluded that "serious consideration" should be given to repeal of the Robinson-Patman Act,[8] and presented draft legislative options.[9]

In light of these longstanding issues, this Commission also examined the Robinson-Patman Act. The Commission makes the following recommendation.

55. Congress should repeal the Robinson-Patman Act in its entirety.*

The time has come to abandon piecemeal proposals for legislative changes to, or new court interpretations of, the Robinson-Patman Act. The Act is fundamentally inconsistent with the antitrust laws and harms consumer welfare. It is not possible to reconcile the provisions of the Act with the purpose of antitrust law; repeal of the entire Robinson-Patman Act is the best solution.

* Commissioner Shenefield does not join this recommendation in full.
Commissioner Yarowsky joins this recommendation with qualifications.

2. BACKGROUND

A. The Robinson-Patman Act and Its Case Law

1. History of the Act

The history of the Robinson-Patman Act began in 1914, when Congress first acted to prohibit certain forms of differential pricing through passage of Section 2 of the Clayton Act. At that time, Congress was primarily concerned with price predation through which the trusts might selectively reduce prices to below-cost levels to drive rivals from the market and hamper entry by would-be rivals to replace that lost competition.[10] The statutory language of Section 2 of the Clayton Act was not limited to those situations, however; it was broad enough also to prohibit price differences that disadvantaged one purchaser over another.[11]

By 1936, during the Great Depression, Congress was concerned that the growth of large chain stores was harming small "mom and pop" competitors. Congress undertook to strengthen the original Clayton Act to give small businesses greater protection from what Congress saw as large, powerful buyers extracting favorable concessions from their suppliers to the detriment of smaller competitors.[12] In particular, Congress wanted to rein in volume discounts, which were then permitted under Section 2 of the Clayton Act, as construed by the courts.[13] To achieve this purpose, Congress removed the provision permitting volume discounts.[14]

At the same time, Congress added an alternative standard for the type of competitive injury required to violate the new statute. The courts had interpreted the original language in the Clayton Act to require a plaintiff to show that the price differences it faced had caused a "generalized competitive injury."[15] The language Congress added in 1936 also prohibited price differences where the effect may be "to injure, destroy, or prevent competition *with any person . . . or with customers of either of them*."[16] This language does not ask whether the price differences have caused higher prices, lower output, or other anticompetitive effects in a relevant market. Rather, as the Supreme Court later held, this language "was intended to justify a finding of injury to competition by a showing of 'injury to the competitor victimized by the discrimination.'"[17]

2. Conduct Prohibited by the Act

The Robinson-Patman Act is commonly known as a price discrimination statute. Although economists do not uniformly agree on the precise definition of price discrimination, their definitions generally focus on the sale from the seller's perspective. This Report will use the definition endorsed by some economists as the economic definition of price discrimination—that is, price discrimination is "charging different customers prices that are not in proportion to marginal costs."[18] Under this definition, whether conduct amounts to price discrimination depends on whether the seller's margin between price and cost differs among the buyers to whom it sells.

By contrast, "price differences"—that is, charging different prices to different buyers—focus on the sale from the buyer's perspective. The key question is whether different buyers pay different prices for products of like grade and quality. The Robinson-Patman Act asks this question and allows such differential pricing only if particular, limited justifications are proven. Thus, the Act is arguably more of a "price differences" statute than a "price discrimination" statute.[19] Nonetheless, because the Act is understood as a price discrimination statute, this Section generally uses the term "price discrimination" to refer to price differences that the Act addresses.

The structure of the Robinson-Patman Act is to prohibit certain conduct and then provide exceptions from those prohibitions. As a general matter, Section 2(a) of the Robinson-Patman Act prohibits non-cost-justified price discrimination that causes competitive injury.[20] For example, if a manufacturer sold the same product to a large retailer at a lower price than to a small retailer, the disfavored, small retailer could allege that the manufacturer (and possibly the favored, large buyer) violated the Robinson-Patman Act.

To establish seller liability under Section 2(a), a plaintiff must show: (1) the relevant sales were made in interstate commerce; (2) the products were of like grade and quality; (3) the seller (defendant) discriminated in price between the plaintiff and another purchaser; and (4) the effect of such discrimination may be to injure, destroy, or prevent competition to the advantage of the favored purchaser.[21] Courts have allowed the plaintiff to prove the "favored competitor received a significant price reduction over a substantial period of time" as a means to show the price discrimination substantially lessened competition.[22]

The Robinson-Patman Act addresses other forms of discrimination in the terms of sale as well, largely to prevent sellers from effectively price discriminating through other means. To prevent disguised price discrimination, Section 2(c) prohibits parties to a transaction from receiving brokerage fees or commissions, except for services rendered.[23] Sections 2(d) and 2(e) require that promotional allowances and services be available on proportionately equal terms to all competing customers.[24]

Liability under the Robinson-Patman Act is not limited to sellers. Section 2(f) of the Act makes it unlawful for buyers "knowingly to induce or receive a discrimination in price" that is prohibited by the Act.[25] This provision was designed to address concerns that large buyers would use their buyer power to extract lower prices from manufacturers or suppliers.[26] Many observers argue that it is difficult to prove buyer liability, however.[27] Buyers cannot be held liable unless the plaintiff can establish a *prima facie* case against the seller and overcome any affirmative defenses that a seller could raise.[28]

Robinson-Patman Act claims generally can be characterized as either primary-line or secondary-line claims.[29] Primary-line claims allege that price discrimination by a manufacturer injures competition at the manufacturer level by harming one or more of the manufacturer's competitors. The theory behind primary-line claims is that a manufacturer might sell its product below cost to certain stores, so that a competing manufacturer would not be able to meet the lower prices and would go out of business; this theory depends on high entry barriers that would prevent entry to replace the lost competitor. In such a case, the competing manufacturer would complain of a primary-line injury.

This type of conduct—price predation at the manufacturer level—involves the acquisition or maintenance of market power through below-cost sales. In 1993 the Supreme Court held that primary-line claims must meet standards similar to those applied to predatory pricing claims brought under Section 2 of the Sherman Act.[30] The Court explained that primary-line injury is "of the same general character as the injury inflicted by predatory pricing schemes actionable under § 2 of the Sherman Act."[31] This interpretation has largely eliminated calls for further reform regarding primary-line claims.

A broad range of cases may raise claims of secondary-line injury, however. Secondary-line claims involve injury alleged at the level of the distributor or retailer, one step removed from the manufacturer that offered the discount. For example, a small retailer that did not receive the same discount as a larger retailer from the same manufacturer might allege secondary-line injury.

Section 3 of the Robinson-Patman Act authorizes the government to seek criminal penalties against any person who participates in a transaction he knows discriminates against a competitor of the purchaser or involves charging "unreasonably low prices" or different prices in a different part of the United States "for the purpose of destroying competition or eliminating a competitor."[32] This criminal provision of the Act has not been enforced since the 1960s.[33]

3. Affirmative Defenses to Section 2(a) of the Act

Four basic affirmative defenses are available to Robinson-Patman Act defendants. Section 2(a) itself provides for an affirmative defense if the difference in price is cost-justified.[34] For example, if volume discounts for a product are attributable solely to lower per-unit production and shipping costs—that is, if it is cheaper per unit for the manufacturer to make and send 100 widgets than just 20 widgets to a retailer—then those cost savings are permitted to be passed on to that retailer in the form of a lower price per unit. Section 2(a) also provides an affirmative defense for price differences resulting from a "response to changing conditions affecting the market for or marketability of the goods concerned."[35] This defense allows price differences if the demand for the product has decreased significantly due to the perishable nature of the goods, obsolescence of seasonal goods, or discontinuance of the product.[36] Section 2(b) of the Act allows an affirmative defense to Section 2(a) claims if the discriminatory pricing is offered "in good faith to meet an equally low price of a competitor" (also known as the meeting-competition defense).[37] Lastly, courts have also provided an affirmative defense if the advantageous price was practically or functionally available to the disfavored buyer.[38]

Some affirmative defenses are difficult to prove. For example, it is generally recognized as difficult and costly to meet the requirements of the cost-justification defense because the seller must be able to prove actual cost savings equal to or greater than the price difference.[39] On the other hand, courts have become more receptive to the meeting-competition defense over time. In 1983 the Supreme Court held that a seller could meet the generally lower price structure of a competitor in a different geographic market without demonstrating that it was meeting competition on a customer-by-customer basis.[40] Thus, if there were more competition in one area than another, the meeting-competition defense would permit the seller to charge different prices in the two areas.

B. Enforcement of the Robinson-Patman Act

Private parties, the Federal Trade Commission (FTC), and the Antitrust Division of the Department of Justice (DOJ) may enforce the Robinson-Patman Act. The Act is currently enforced primarily through private treble damages actions.[41] As a practical matter, the FTC is the only government enforcer of the Act; the DOJ has left civil enforcement of the Act to the FTC and has not enforced the criminal provisions since the 1960s.[42]

During the first three decades after the Act's passage, the FTC devoted "an overwhelming preponderance" of its antitrust resources to Robinson-Patman Act enforcement.[43] Beginning in 1969, however, the FTC sharply contracted its RP Act enforcement efforts.[44] From 1965 to 1968, the FTC undertook an average of 97 formal investigations and issued an average of 27 complaints annually.[45] By contrast, from 1975 to 1978, the FTC averaged only 4.3 formal investigations and 3 complaints annually.[46] The FTC has issued only one RP Act complaint since 1992.[47]

Private litigation under the Act also has fallen, and plaintiff success has been limited. Of 200 reported cases with Robinson-Patman Act claims filed in federal court in the past ten years, only three jury verdicts in favor of plaintiffs were affirmed on appeal.[48] One of these three was reversed by the Supreme Court.[49] Some observers believe this decline is related to the adoption of more restrictive judicial interpretations of the Act.[50] For example, the Supreme Court has held that an RP Act plaintiff is not entitled to "automatic damages" equal to the amount of the discount it did not receive,[51] but rather "ordinarily must show that it lost customers or profits because the favored customer used the discount either to lower its resale prices or otherwise to solicit business."[52]

3. RECOMMENDATION AND FINDINGS

55. Congress should repeal the Robinson-Patman Act in its entirety.*

By broadly discouraging price discounts, the Robinson-Patman Act potentially harms competition and consumers. The goal of the antitrust laws is to protect *competition* that benefits consumers. The Robinson-Patman Act does not promote competition, however. Instead, the Act protects *competitors*, often at the expense of competition that otherwise would benefit consumers,[53] thereby producing anticompetitive outcomes. The Act prevents or discourages discounting that could enable retailers to lower prices to consumers. "The chief 'evil' condemned by the Act [is] low prices, not discriminatory prices."[54] The Act thus reflects "faulty economic assumptions" and a significant "misunderstanding of the competitive process."[55]

Assuming that either price differences or price discrimination (as defined by economists) always or almost always harms consumers is inconsistent with fundamental economic principles. Price discounting generally benefits consumers. Price discrimination, as defined by economists, that is directed at ultimate consumers can have beneficial or harmful impacts, depending on the circumstances.[56] However, the Robinson-Patman Act is not targeted at harmful price discrimination. Rather, it condemns low prices.[57] Economists point out that "[t]he difficulty is to distinguish in practice between [beneficial] discrimination and systematic discrimination practiced by an entrenched monopolist that may be harmful. Hence, laws against price discrimination are difficult to write and enforce if they are to promote competition."[58]

* Commissioner Shenefield does not join this recommendation in full. He recommends repeal of Section 3 of the Act (the criminal provision) as well as 2(c)—the brokerage provision. He favors amending or reinterpreting the statute to make it clear that plaintiffs in secondary-line cases must prove competitive injury through the existence either of market power or buyer power in order to prevail under 2(a). This would cover 2(f) as well. He would introduce a parallel competitive injury requirement into 2(d) and 2(e) as well. Finally, he would relax the cost-justification standard by permitting a preferential price that was "reasonably related" to cost savings attributable to dealing with the favored buyer. Commissioner Shenefield further explains his position in his separate statement.

Commissioner Yarowsky joins the recommendation with the following qualification: In his view, the question unanswered by the Commission is not whether Robinson-Patman is working well—it clearly is not—but whether any price discrimination provision has a role to play in the generic antitrust laws, not just the tortured language of the current statute. On a number of occasions, Congress has considered, or delegated to various regulatory agencies, the creation of mechanisms to oversee price discrimination activities in various industries. With the disappearance of Robinson-Patman, we may well witness the proliferation of even more industry-specific regimes to combat price discrimination. Based on that experience, he believes Congress should actively reconsider the question of whether a re-sculpted, down-sized generic provision would have utility.

The Act imposes other, more indirect costs as well. Some firms incur costs through efforts to comply with the Act. Compliance efforts—such as differentiating products solely to avoid selling "commodities of like grade and quality" to different purchasers at different prices—can raise prices to consumers. Small businesses can incur greater costs in obtaining supplies when manufacturers sell only to large, not small, retailers to avoid violating the Act. All of these costs are likely to result in higher prices to consumers than would be the case if the Robinson-Patman Act were not on the books.

The economic reality is that price differences and price discrimination typically benefit, not harm, consumers. To the extent that price discrimination (as defined by economists) may harm consumer welfare, other antitrust laws already address such conduct. For all of these reasons, as explained in detail below, the Robinson-Patman Act should be repealed.

A. The Robinson-Patman Act Is Likely to Harm Competition and Consumer Welfare by Prohibiting or Discouraging Price Discrimination that Lowers Prices to Consumers

Wide agreement exists that many forms of price discrimination are procompetitive and beneficial to consumers. As long ago as 1969, the Neal Report pointed out that "most price discrimination is affirmatively beneficial to competition," and the instances in which price discrimination harms competition "are exceptional."[59] A substantial amount of recent economic literature shows that price differences among buyers of the same product are ubiquitous and occur in industries with many competitors and free entry that are generally viewed as operating in a competitive manner.[60]

1. Many legitimate, procompetitive reasons exist for price discrimination

Prices to different purchasers for the same or similar products differ for many legitimate reasons. Manufacturers and distributors negotiate prices based not only on costs of production, but on many other factors as well. One important factor is the relative supply and demand characteristics of the parties. One buyer may value the product more than another buyer and therefore may be willing to pay more for the product. A buyer may have more leverage in price negotiations if it can purchase from another supplier or produce the item itself, if the price is not to its liking. The same would be true for the supplier, if it could sell to other purchasers if it was not satisfied with the price offered by the buyer.

Beyond the supply and demand characteristics of individual firms, price differences can reflect differences in supply and demand in different geographic markets. As the Supreme Court has pointed out, levels of competition may vary in different geographic markets, and the "very purpose of the [meeting-competition] defense is to permit a seller to treat different competitive situations differently."[61] It is not at all clear, however, that the meeting-competition defense would cover all situations in which a manufacturer might wish to differentiate in pricing to reflect different supply and demand conditions in different geographic markets.

Volume discounts further illustrate legitimate reasons for price differences between purchasers. A manufacturer may be willing to accept discounted prices on a large order for its products for a number of reasons. First, a large order may allow the seller to achieve scale economies in manufacturing, which makes the large order less costly to fill. As explained above, scale economies and their relationships to price differences can be very difficult to prove, however.[62] Second, the per-unit cost of delivering a large order may be less than delivering a small order. Third, the large order may reduce the manufacturer's risk of not being able to sell as many products overall. A volume discount also may reflect other means by which a manufacturer wishes to improve its competitiveness. A manufacturer may discount to encourage a new purchaser to try its products in hopes that the first purchase will lead to future purchases. A manufacturer may wish to compensate or provide incentives to a distributor that aggressively promotes the manufacturer's products. The Robinson-Patman Act, however, impedes agreements that afford volume discounts. Indeed, preventing volume discounts was a principal objective of the Act.

Price discrimination can lead to cost-saving distribution practices that are efficient and normally lawful under the Sherman Act.[63] Manufacturers typically prefer that their distribution systems function in a competitive manner because this helps them compete more effectively against other manufacturers. Providing greater discounts—that is, charging lower prices—to a manufacturer's more aggressive distributors is generally procompetitive. It can prevent less aggressive distributors from free riding on the promotional services or quality of service provided by the manufacturer's more aggressive distributors, and, by encouraging competition among the distributors, it also can increase the quality of service they provide.[64] Manufacturers are more likely to use price discrimination among their distributors to increase competition at both the manufacturer and distributor levels than to reduce the competitiveness of the manufacturers' distribution systems.[65]

Whether a buyer may be willing to purchase significant quantities is another factor that can influence price negotiations. Typically, buyers that account for a significant portion of a manufacturer's sales bargain hard to get price discounts from the manufacturer; they can be described as having "bargaining power."[66] The discounts obtained through bargaining power can reduce a buyer/retailer's marginal cost, and thereby allow the buyer/retailer to pass on those cost savings to consumers. In fact, empirical evidence on drugstore and grocery products indicates that the presence of large chains, which typically have bargaining power, lowers prices to consumers.[67] Retailer bargaining power also could be better used to mitigate seller market power, absent the potential for Robinson-Patman Act liability.[68]

The Robinson-Patman Act, however, aims to prevent buyers from using their bargaining power to obtain these discounts, unless certain requirements are met. Some argue that the Supreme Court's interpretation of Section 2(f) has made buyer liability difficult to prove.[69]

Nonetheless, the Act creates some level of uncertainty about whether firms with bargaining power can bargain hard to obtain lower prices than less efficient competitors, and it also may provide an excuse for sellers that do not want to lower their prices for hard-bargaining buyers. Thus, the Act can discourage discounting that otherwise would lead to lower consumer prices.

2. Price differences can increase price competition and can encourage entry

The Robinson-Patman Act inhibits price competition that could lead to lower prices in oligopolies. In oligopolies firms monitor each other and recognize their mutual interdependence. Competition in such industries is enhanced when prices vary across buyers, making it harder to keep track of one's rivals. This increased difficulty of keeping track of one's rivals leads generally to more competitive prices. Differential pricing thus can promote more aggressive pricing. Under the Robinson-Patman Act, however, sellers may not selectively lower prices to gain or to retain an important buyer.[70]

Price discrimination also provides a means for new firms to enter a market, thereby making the market more competitive. To enter a new market successfully, an entrant may need to offer prices lower than those charged by existing firms to win one or more large accounts that will provide the entrant with sufficient scale to produce its products efficiently.[71] To overcome existing commercial relationships, would-be entrants may need to reduce prices selectively to such large accounts. The Robinson-Patman Act can make such entry unprofitable, however, by requiring a potential entrant to lower prices to *all* customers. Thus, the reduced price flexibility imposed by the Act can inhibit entry.

This inhibition on entry can prevent consumers from benefiting from the many types of increased competition that a new entrant may provide. New firms entering a market can benefit consumers by offering lower prices and putting downward pressure on prices. Moreover, even the potential for entry can spur existing firms in the relevant market to lower prices and increase quality. In sum, the Robinson-Patman Act requires price rigidity that imposes costs on consumers through higher prices, lower quality, and less choice than would be the case in its absence.

B. The Robinson-Patman Act Harms Consumer Welfare by Protecting Competitors, Rather than Competition

The purpose of the antitrust laws is to protect competition overall, not individual competitors.[72] Consumer welfare is protected by competition, not necessarily by the presence of a particular competitor in a relevant antitrust market.[73]

The Robinson-Patman Act stands this notion on its head. The language Congress added in 1936 prohibited price discrimination where the effect may be "to injure, destroy, or prevent competition *with any person . . . or with customers of either of them*."[74] Courts have interpreted this language to mean that an injury to an individual competitor through price discrimination is sufficient to prove a violation of the Act.[75] This is inconsistent with the purpose of the antitrust laws as interpreted by the courts.

In 1948 the Supreme Court held that the Robinson-Patman Act "was intended to justify a finding of injury to competition by a showing of *injury to the competitor* victimized by the discrimination."[76] Moreover, the Court held, competitive injury could be inferred (the "*Morton Salt* inference") in secondary-line RP Act cases.[77] Simply showing that some merchants had to pay more than others was "adequate" to conclude that "the competitive opportunities of certain merchants were injured," the Court held.[78] Therefore, to achieve an inference of competitive injury in a secondary-line RP Act case, the *Morton Salt* inference requires that a plaintiff prove only that a "favored competitor received a significant price reduction over a substantial period of time."[79]

Most courts have applied the *Morton Salt* inference broadly, concluding that the statutory language of "competitive injury" in the Robinson-Patman Act refers solely to injury to an individual competitor, not to overall competition in a relevant market.[80] Under this standard, it does not matter if the defendant can show that competition in a relevant market in fact was *not* harmed. As the Ninth Circuit has stated (without any trace of irony), "in a secondary-line Robinson-Patman case, the *Morton Salt* inference that competitive injury to individual buyers harms competition generally may not be overcome by proof of no harm to competition."[81]

Some circuits have applied the *Morton Salt* inference more narrowly, and held that competitive injury for purposes of the Robinson-Patman Act refers not to injury to individual competitors, but rather to competition overall in the relevant market. For example, the Eighth Circuit has held that the "Act refers not to the effect upon competitors, but to the effect upon competition in general[;] . . . analysis of the injury to competition focuses on whether there has been a substantial impairment to the vigor or health of the contest for business, regardless of which competitor wins or loses."[82] Consistent with this interpretation, some circuits have held that the *Morton Salt* inference is rebuttable, provided the defendant can show that there has been no harm to overall competition in the relevant market. Specifically, the D.C. Circuit has held that the *Morton Salt* inference "*can . . . be overcome by evidence showing an absence of competitive injury . . .* [and that although] a sustained and substantial price discrimination raises an inference, . . . it manifestly does not create an irrebuttable presumption of competitive injury."[83] Similarly, in a consent decree enjoining certain conduct by McCormick & Co. found to violate the Robinson-Patman Act, the FTC stated that it was willing "to look past the *Morton Salt* factors" in certain market settings to determine whether there was injury to competition overall.[84]

Most recently, the Supreme Court's opinion in *Volvo Trucks North America, Inc. v. Reeder-Simco GMC, Inc.* renewed, albeit equivocally, the view that the Robinson-Patman Act protects competitors rather than competition.[85] When defining injury to competition, the Court stated that a "hallmark of the requisite competitive injury . . . is the diversion of sales or profits from a disfavored purchaser to a favored purchaser," and that "a permissible inference of competitive injury may arise from evidence that a favored competitor received a significant price reduction over a substantial period of time."[86] The Court therefore reaffirmed the *Morton Salt* inference and indicated that a plaintiff must show only injury to a specific competitor, not injury to competition overall. In the final section of the opinion, however, the Court remarked that it resists "interpretation [of the Robinson-Patman Act] geared more to the protection of existing *competitors* than to the stimulation of *competition*."[87]

This very recent Supreme Court case reveals that, seventy years after passage of the Robinson-Patman Act, courts remain unable to reconcile the Act with the basic purpose of antitrust laws to protect competition and consumer welfare. The language in the Act regarding competitive injury has resulted in the protection of competitors, at the expense of competition overall and consumer welfare. There is no point in further efforts to reconcile the Act with the antitrust laws in general; the Robinson-Patman Act instead should be repealed.

C. The Robinson-Patman Act May Even Harm Small Firms in Some Cases

The methods that firms sometimes use to avoid liability under the Robinson-Patman Act can harm precisely the small businesses the Act intends to protect. For example, to avoid liability for price discrimination between larger and smaller retailers, a manufacturer can choose to sell its product exclusively to large retailers.[88] In such cases, small retailers may not be able to purchase the product at all, or may have to settle for second-best substitutes, due to the Robinson-Patman Act.[89] Alternatively, in the absence of an ability to price discriminate, manufacturers may switch to other means of promotion, such as national advertising, which (if subject to economies of scale) may disadvantage smaller competitors more than the prohibited discounts.

D. The Robinson-Patman Act Increases Costs of Doing Business and Likely Raises Prices to Consumers in a Variety of Ways

It is difficult to know the frequency and amounts of price discounts and corresponding savings for consumers that the Robinson-Patman Act has deterred.[90] In general, estimates of the effects of the Act have been based largely on anecdotal evidence and informed judgments about the way in which markets operate, rather than on systematically collected empirical evidence, which appears to be extremely limited.[91] Nonetheless, anecdotal evidence and informed judgment based on economic theory suggests that the additional costs to consumers of seventy years of forgone discounts are likely substantial. The Act's continued existence can discourage firms from taking procompetitive actions because doing so might lead to litigation asserting Robinson-Patman Act claims that, even were the litigation to be resolved in the company's favor, would involve distractions, expenses, and risks that make the procompetitive course of action not worth the cost of pursuing it.

Leaving aside the direct cost of lost discounts to consumers, the Act creates substantial compliance costs that also likely flow to consumers as higher prices. These costs include developing and operating compliance systems, training personnel, and obtaining legal advice.[92] There is typically strong interest in RP Act continuing-legal-education programs and instructional publications.[93] In addition, RP Act cases can be lengthy, complex, and expensive, even if the plaintiff does not ultimately win. These costs, too, are difficult, if not impossible, to quantify. The Commission did not receive any empirical data in response to its request for public comment on the compliance or litigation costs and benefits of the Act's enforcement. Nonetheless, there is no reason to believe that compliance and litigation costs are insignificant.

Putting aside these direct and indirect costs, the inefficient business practices that firms sometimes use to avoid liability under the Robinson-Patman Act impose costs that likely show up as higher consumer prices. For example, firms sometimes resort to inefficient product differentiation to avoid potential liability.[94] One method of avoiding liability under the Act is for a retailer to negotiate with a manufacturer to produce a product that is not "of like grade and quality" to products offered to other, possibly smaller retailers.[95] This enables the manufacturer to charge a much lower price than it legally could if it also provided the same product to smaller retailers. But the practice is wasteful because, but for the Robinson-Patman Act, there would likely be no need to package these products differently. As a result, with proper counsel and certain (albeit costly) techniques, sellers can avoid liability under the Act, but costs are added due to unnecessary product differentiation.

Finally, the existence of the Robinson-Patman Act may encourage foreign countries to adopt similar anticompetitive legislation. With increasing globalization, many foreign countries look to the United States for guidance in enacting new legislation, including antitrust legislation. To the extent that the Robinson-Patman Act is seen as a model for other countries, the continued existence of the Act can contribute to a proliferation of anticompetitive legislation worldwide.

E. The Existing Antitrust Laws Already Protect Consumers from Anticompetitive Price Discrimination

The term "buyer power" is used generally to describe two different concepts: bargaining power and monopsony power. Bargaining power refers to the bargaining power of a buyer and can increase, not decrease, consumer welfare. For example, bargaining power can help buyer/retailers reduce their marginal costs, which enables them to pass those savings on to consumers.[96]

By contrast, monopsony power is market power on the buyer side of a market.[97] In certain circumstances, monopsony power can harm consumers.[98] The main harm resulting from monopsonist conduct is the reduction of output by the seller, which harms consumer welfare by under-allocating resources to the production of the product.[99]

The Sherman Act, however, already provides a remedy against the exercise of monopsony power. Section 1 of the Sherman Act protects against unlawful price discrimination agreements based on monopsony power. Section 2 outlaws the unlawful acquisition or maintenance of monopsony power.[100] By contrast, the Robinson-Patman Act outlaws a much broader range of alleged "buyer power" that can actually benefit consumers by giving them lower prices.[101]

Some supporters of the Robinson-Patman Act argue that the Act prevents large firms from obtaining discounts larger than those offered to smaller rivals, then using those unequal concessions to lower prices to levels that small rivals cannot meet, thus eliminating the small rivals and ultimately raising prices for consumers.[102] As one comment asserted, unjustified price discriminations "may lead to *higher* consumer prices" if used by a firm to "acquire[] market power as a seller."[103] This argument suggests that large buyer/retailers may put their smaller competitors out of business by selling products below the smaller competitors' costs—but above the large buyers' costs—and thus acquire market power in the retail market and ultimately raise prices for consumers.[104]

This theory essentially argues that prices above a manufacturer's costs may be used in a price-predation scenario and should result in liability under the antitrust laws. Yet, the Supreme Court has already rejected this theory: in the context of price-predation allegations, above-cost pricing is legal.[105] To the extent that true price-predation schemes involving below-cost pricing are attempted, they may be challenged under Section 2 of the Sherman Act.

F. The Robinson-Patman Act Is Not the Right Tool Through Which to Achieve "Fairness for Small Businesses" and Other Social Objectives

The main benefits claimed by supporters of the Robinson-Patman Act flow from the Act's aim of protecting small business.[106] Such supporters claim "fairness to small businesses" as a reason to keep the Act. They argue the Act ensures equality of competitive opportunity and preserves small business by preventing power buyers from obtaining non-cost-justified preferences.[107] Supporters maintain that the Act "levels the playing field" for smaller businesses.[108]

In addition, supporters assert that benefits from the Act go beyond protecting competition by small businesses. They argue that preserving small businesses may offer advantages to consumers by expanding available choices, including "convenient locations, distinctive services, [and] superior selection,"[109] and by providing important social benefits, such as "desirable countervailing" political influence.[110] One commenter, discussing alleged price discrimination in discounts to booksellers, expressed the belief that a significant narrowing of the Act would have a "disastrous effect on the dissemination of culture and ideas in America."[111]

Consumers choose the winners and losers in the competitive process, however, through their purchasing decisions. If consumers desire diversity, for example, then they will be willing to pay for it. Indeed, allowing businesses to respond to consumer desires creates incentives for innovation in distribution and other areas that RP Act restrictions unintentionally may stifle. Firms that best meet consumers' desires in the most cost-effective way will succeed, while those that do not may fail. The competitive process can often be seen as unfair to those who lose. Nonetheless, it is competition itself—not the presence of a particular competitor—that best serves consumer welfare.

The Supreme Court has refused to give weight to arguments that harm could arise from vigorous competition in certain contexts, holding that such arguments are "nothing less than a frontal assault on the basic policy of the Sherman Act."[112] The Court has emphasized that the Sherman Act "reflects a legislative judgment that ultimately competition will produce not only lower prices, but also better goods and services."[113] "[T]he policy unequivocally laid down by the Act is competition."[114]

To limit price competition is not a sensible way to protect small businesses. As Judge Richard A. Posner has noted, "even if it were deemed desirable to protect small business, to do so by trying to limit price cuts given to competing big businesses would be an oblique, very costly, and probably ineffective method."[115] He argues that there are other, more direct, means of accomplishing this objective.[116] As small businesses have struggled to compete with larger chains over the past several decades, and many have gone out of business, it appears that the Robinson-Patman Act has been ineffective in truly protecting these small businesses.

G. The Potential Complexity of Future Enforcement of State Versions of the Robinson-Patman Act Is Not a Valid Justification for Continued Consumer Harm

Supporters of the Robinson-Patman Act argue that, even if the Act is repealed, state laws prohibiting price discrimination and other sector-specific restrictions will remain on the books.[117] They point out the potential for plaintiffs to respond to any repeal of the Robinson-Patman Act by bringing claims under currently underutilized state price discrimination laws.[118] They also note there could be expansions of such state laws.[119] Currently, state enforcers and state courts look to the case law developed under the Robinson-Patman Act for guidance in interpreting and applying state price discrimination laws. If the federal law is no longer available as an option for plaintiffs and a guidepost for state law, supporters argue, price discrimination will be governed by divergent state laws, thus increasing compliance costs and potentially creating a "mess."[120] Therefore, supporters argue, there could be significant costs to repealing the Robinson-Patman Act.

It is uncertain that the repeal of the Robinson-Patman Act will result in this "mess." It is possible that states will recognize that their anti-price discrimination statutes also harm their consumers and repeal those statutes. Alternatively, state courts could interpret such statutes in a manner that is less inconsistent with the antitrust laws by requiring proof of injury to competition. If states choose to continue to enforce such statutes, Congress could address that issue at that future date, and possibly consider preemption of such state statutes.

Chapter IV.B
Immunities and Exemptions, Regulated Industries, and the State Action Doctrine

1. INTRODUCTION

Free-market competition is the fundamental economic policy of the United States.[1] Competition in free markets—that is, markets that operate without either private or governmental anticompetitive restraints—spurs businesses to develop and sell as efficiently as possible the kinds and quality of goods and services that consumers desire.[2] Competitive markets also drive an economy's resources toward their fullest and most efficient uses, thereby providing a basis for economic development.[3] The U.S. economy is an example of how free markets can lead to the creation of wealth, making possible improved living standards and greater prosperity.[4] In recent decades, policymakers in many developing countries also have been persuaded that free-market competition yields productivity and other benefits far superior to the results produced by government control of the economy.[5]

Despite this record of success, a few sectors of the U.S. economy remain subject to government limitations on competition. This Section of the Report discusses three of the ways in which federal law or judicial standards currently prevent or restrain competition. They are: (1) statutory immunities or exemptions from some or all of the antitrust laws; (2) limitations on the full application of antitrust law as a consequence of continued economic regulation of certain industries; and (3) an overly broad interpretation of the state action doctrine that permits private anticompetitive conduct not authorized or supervised by state regulatory programs. Just as private restraints on competition can harm consumer welfare, so can these government restraints on competition.

Empirical studies of what happened when market forces were unleashed in previously regulated industries provide the best evidence of the harm that governmental restraints on competition can create. During the early part of the twentieth century, a belief that certain industries were either "natural" monopolies (that is, that the most efficient market structure included only one firm) or were at risk for "excessive competition" led to government regulation of prices, costs, and entry in those industries.[6] The industries tended to involve core services, such as electricity, natural gas, telecommunications, and transportation. Beginning in the 1960s and 1970s, however, attitudes changed. In some industries, such as electricity generation, technological progress made competition possible.[7] More generally, significant criticisms of the costs and market distortions that accompanied regulation prompted serious review of regulatory regimes. These two factors in particular combined to persuade policymakers to move toward deregulation in almost all regulated markets.[8]

Numerous studies of sectoral deregulation in the United States show that the unleashing of market forces has greatly increased efficiency and provided substantial benefits to consumer welfare. One comprehensive survey of empirical evidence on the U.S. deregulation experience concluded that the U.S. economy has gained at least $36 to $46 billion *annually* (in 1990 dollars) from deregulation, primarily in the transportation industries.[9] On a more specific level, an econometric analysis of trucking rates in states that continued to regulate trucking found that in the less-than-truckload (LTL) segment, regulation of entry increased rates by more than 20 percent, rate regulation increased those rates by 5 percent, and antitrust immunity for certain conduct increased rates by about 12 percent above what they would be absent regulation.[10]

These data give a sense of the order of magnitude of the costs imposed on U.S. consumers and the U.S. economy by government restraints on competition. By comparison, government restraints of the types discussed in this Section typically benefit only relatively small special interest groups. The Commission therefore makes the following general recommendation, as well as additional recommendations described below.

56. Congress should not displace free-market competition absent extensive, careful analysis and strong evidence that either (1) competition cannot achieve societal goals that outweigh consumer welfare, or (2) a market failure requires the regulation of prices, costs, and entry in place of competition.

A. Statutory Exemptions from the Antitrust Laws

1. Competitive Effects and Claimed Justifications

The antitrust laws stand as a bulwark to protect free-market competition. They prohibit anticompetitive restraints that harm consumer welfare. "[V]igorous competition, protected by the antitrust laws, does the best job of promoting consumer welfare and a vibrant, growing economy."[11]

Through legislation, however, Congress can exempt certain types of conduct by particular actors from some or all of the antitrust laws.[12] Currently, a wide variety of immunities, both partial and whole, exists in federal law. Congress, of course, is entitled to make judgments about the extent to which competition is in the public interest or other substantial and significant societal values trump the goal of consumer welfare.[13]

Nonetheless, antitrust exemptions can impose significant costs, which must be weighed against any benefits of an exemption. To the extent the antitrust laws do not apply, firms may take anticompetitive actions with impunity. As a practical matter, an exemption from all or part of the antitrust laws means firms can avoid the tough discipline of competition, at least to some extent. While the beneficiaries of an exemption likely appreciate reduced market pressures, consumers (as well as non-exempted firms) and the U.S. economy generally bear the harm from the loss of competitive forces.

Typically, antitrust exemptions create economic benefits that flow to small, concentrated interest groups, while the costs of the exemption are widely dispersed, usually passed on to a large population of consumers through higher prices, reduced output, lower quality, and reduced innovation.[14] The concentrated benefits provide incentives for interested parties to seek immunities from Congress, but the diffuse costs often have sufficiently minimal impact on individual consumers that they are unlikely to oppose the creation of immunities. Congress therefore is unlikely to hear from those who would be adversely affected by a proposed antitrust exemption.

The Commission focused on three immunities in particular. It held hearings on the McCarran-Ferguson Act, the Export Trading Company Act, and the Shipping Act. It held hearings on these three immunities because Congress is reexamining the McCarran-Ferguson Act;[15] the European Union recently eliminated its antitrust exemption for ocean carriers, leaving the United States as the only major country that still immunizes fixing shipping rates;[16] and the Commission received extensive comments regarding the Export Trading Company Act, which many observers overseas view as tarnishing the United States' reputation for free markets. The Commission discusses its assessment of the evidence gathered on these immunities and exemptions in Part 2 of this Section.

Antitrust exemptions can harm the U.S. economy and, in the long run, reduce the competitiveness of the industries that have sought antitrust exemptions. As noted above, competition drives firms to find ways to operate more efficiently and compete more effectively. "Few roles of government are more important to the upgrading of an economy than ensuring vigorous domestic rivalry."[17] Statutory exemptions from the antitrust laws undermine, rather than upgrade, the competitiveness and efficiency of the U.S. economy.

2. Summary of Recommendations

For the reasons articulated above and discussed in more detail in Part 2 of this Section, the Commission makes the following recommendations.

57. Statutory immunities from the antitrust laws should be disfavored. They should be granted rarely, and only where, and for so long as, a clear case has been made that the conduct in question would subject the actors to antitrust liability *and* is necessary to satisfy a specific societal goal that trumps the benefit of a free market to consumers and the U.S. economy in general.

A wide variety of statutory antitrust exemptions currently exists, as set forth in Annex A. Rather than performing detailed assessments of each of these individual existing immunities, the Commission concluded it could best contribute to Congress's evaluation of immunities by articulating relevant general principles that Congress may wish to use in considering whether to adopt, renew, or abolish any particular immunity. This work builds off of the analytical framework recommended by the National Commission for the Review of Antitrust Law and Procedures in its 1979 Report to the President and the Attorney General. That commission recommended that exemptions should be made only where "compelling evidence of the unworkability of competition or a clearly paramount social purpose" exists, and any exemptions should use the "least anticompetitive method of achieving the regulatory objective."[18] This Commission agrees, and the general principles that the Commission recommends follow. A more detailed discussion of these recommendations appears in Part 2 of this Section.

58. In evaluating the need for existing or new immunities, Congress should consider the following:

- **Whether the conduct to which the immunity applies, or would apply, could subject actors to antitrust liability;**
- **The likely adverse impact of the existing or proposed immunity on consumer welfare; and**
- **Whether a particular societal goal trumps the goal of consumer welfare, which is achieved through competition.**

59. The following steps are important to assist Congress in its consideration of those factors:

- **Create a full public record on any existing or proposed immunity under consideration by Congress.**
- **Consult with the Federal Trade Commission and the Antitrust Division of the Department of Justice about whether the conduct at issue could subject the actors to antitrust liability and the likely competitive effects of the existing or proposed immunity.**
- **Require proponents of an immunity to submit evidence showing that consumer welfare, achieved through competition, has less value than the goal promoted by the immunity, and the immunity is the least restrictive means to achieve that goal.**

60. **If Congress determines that a particular societal goal may trump the benefit of a free market to consumers and the U.S. economy in general, Congress should take the following steps:**

- **Consider a limited form of immunity—for example, limiting the type of conduct to which the immunity applies and limiting the extent of the immunity (for example, a limit on damages to actual, rather than treble, damages).**
- **Adopt a sunset provision pursuant to which the immunity or exemption would terminate at the end of some period of time, unless specifically renewed.**
- **Adopt a requirement that the Federal Trade Commission, in consultation with the Antitrust Division of the Department of Justice, report to Congress, before any vote on renewal, on whether the conduct at issue could subject the actors to antitrust liability and the likely competitive effects of the immunity proposed for renewal.**

61. **Courts should construe all immunities and exemptions from the antitrust laws narrowly.**

B. Regulated Industries, the Transition to Deregulation, and Antitrust Law

1. The Benefits of Deregulation

For many years, a wide variety of industries was subject to economic regulation—that is, the regulation of prices, costs, and entry. In recent decades, public policy in the United States has moved toward deregulation in most of those industries.[19] Various factors have driven the movement toward deregulation. Technological progress has facilitated the growth of competition in industries previously considered natural monopolies.[20] In addition, critiques of regulation have pointed out that federal regulatory agencies were sometimes "captured" by firms they regulated, to the detriment of the public interest, and that the costs of regulation were significantly more than anticipated.[21] The general conclusion is that, in many instances, "regulation reflects successful rent-seeking by private economic interests and generally reduces consumer welfare by restricting output."[22]

2. Summary of Recommendations

Congress's decision broadly to deregulate has brought substantial benefits to U.S. consumers and the U.S. economy.[23] The trend toward deregulation should be furthered where practicable. Free-market competition generally promotes efficiency and thus benefits consumer welfare, while economic regulation often results in inefficiency that increases prices to consumers. In the vast majority of cases, competition is more likely to benefit consumers than economic regulation. For the reasons set forth above and discussed in more detail of Part 3 of this Section, the Commission makes the following recommendation.

62. Public policy should favor free-market competition over industry-specific regulation of prices, costs, and entry. Such economic regulation should be reserved for the relatively rare cases of market failure, such as the existence of natural monopoly characteristics in certain segments of an industry, or where economic regulation can address an important societal interest that competition cannot address. In general, Congress should be skeptical of claims that economic regulation can achieve an important societal interest that competition cannot achieve.

a. The Application of Antitrust Law in the Context of Regulation and Deregulation

The relationship between antitrust law, regulation, and deregulation warrants careful scrutiny. In general, regulation is a substitute for competition, an alternative means by which policymakers hope to achieve the consumer welfare benefits associated with competition.[24] If competition has been entirely replaced with regulation, then the antitrust laws are generally unnecessary, because there is no competition to protect.

Given the problems arising from regulation, policymakers have searched for circumstances where competition, rather than regulation, can be relied on to benefit consumer welfare. When policymakers decide that regulation can be reduced or eliminated, because competition is feasible in particular markets, then antitrust law becomes necessary to ensure that competition flourishes.[25] In light of this, the Commission makes the following recommendation.

63. When the government decides to adopt economic regulation, antitrust law should continue to apply to the maximum extent possible, consistent with that regulatory scheme. In particular, antitrust should apply wherever regulation relies on the presence of competition or the operation of market forces to achieve competitive goals.

(i) Savings Clauses and Implied Immunities

Antitrust savings clauses appear in legislation to clarify the extent to which Congress intends to preserve the role of antitrust enforcement in a regulatory environment.[26] In legislation involving regulatory regimes, Congress should articulate clearly to what extent it intends the regulatory regime to displace the antitrust laws, if at all. Specific language directed to this issue can eliminate costly litigation about whether an immunity from antitrust law should be implied from the regulatory scheme. In the absence of a savings clause, courts may imply an immunity, resulting in outcomes not intended by Congress. Accordingly, the Commission makes the following recommendations.

64. **Statutory regulatory regimes should clearly state whether and to what extent Congress intended to displace the antitrust laws, if at all.***

65. **Courts should interpret savings clauses to give deference to the antitrust laws, and ensure that congressional intent is advanced in such cases by giving the antitrust laws full effect.†**

In the absence of a savings clause, courts will determine whether the nature of the regulatory scheme necessarily implies that firms subject to that regime should be immune from antitrust law. Courts generally are reluctant to recognize implied immunities to the antitrust laws. For example, as the Supreme Court explained in *National Gerimedical Hospital and Gerontology Center v. Blue Cross of Kansas City*, "implied antitrust immunity is not favored, and can be justified only by a convincing showing of clear repugnancy between the antitrust laws and the regulatory system."[27] This issue is before the Supreme Court this term in *Billing v. Credit Suisse First Boston Ltd.*[28]

The Commission agrees that *National Gerimedical* provides the proper standard for determining whether the existence of a regulatory regime implies an immunity from antitrust law and therefore makes the following recommendation.

* Commissioner Warden does not join this recommendation.

† Commissioners Garza and Warden do not join this recommendation.

66. Courts should continue to apply current legal standards in determining when an immunity from the antitrust laws should be implied, creating implied immunities only when there is a clear repugnancy between the antitrust law and the regulatory scheme at issue, as stated in cases such as *National Gerimedical Hospital and Gerontology Center v. Blue Cross of Kansas City*.*

The Supreme Court recently issued an opinion that has raised questions whether the Court gave sufficient deference to the savings clause that Congress adopted when it enacted the Telecommunications Act of 1996 (1996 Act), or whether it in effect implied an immunity from the antitrust laws despite that savings clause. In *Verizon Communications, Inc. v. Law Offices of Curtis V. Trinko LLP* Trinko, alleged that Verizon had violated Section 2 of the Sherman Act by breaching certain network interconnection duties under the 1996 Act.[29] After deciding that the plaintiff's claim did not state a cause of action under traditional antitrust principles, the Court concluded that the specific, regulatory duties to deal established under the 1996 Act did not also create a new cause of action under the refusal-to-deal doctrine of Section 2 of the Sherman Act.[30] Based on this, the Commission makes the following recommendation.

67. *Verizon Communications, Inc. v. Law Offices of Curtis V. Trinko LLP* is best understood only as a limit on refusal-to-deal claims under Section 2 of the Sherman Act; it does not displace the role of the antitrust laws in regulated industries.

(ii) Filed-Rate Doctrine

The filed-rate doctrine, also known as the *Keogh* doctrine, prohibits a private plaintiff from pursuing an antitrust action seeking treble damages where the plaintiff is claiming that a rate submitted to, and approved by, a regulator resulted from an antitrust violation.[31] At the time this doctrine was created, members of a regulated industry were typically required to file their proposed rates with regulators who reviewed the rates to ensure they were "fair and reasonable." In creating the doctrine in *Keogh*, the Supreme Court explained that only the relevant regulatory authority could change these rates, even if the rate was higher than it otherwise would be due to a price-fixing conspiracy.[32]

* Commissioner Delrahim does not join this recommendation.

Since deregulation, however, few industry members must file their rates with regulators, and fewer still have those rates formally reviewed for reasonableness. Nonetheless, courts have continued to apply the filed-rate doctrine to preclude antitrust claims where a tariff has been filed with a regulatory agency, regardless of whether the agency has actually reviewed and approved the rate.[33] In 1986 the Supreme Court reviewed the filed-rate doctrine and explained that a variety of factors "seem[ed] to undermine" the continuing validity of the *Keogh* doctrine.[34] Nonetheless, the Court concluded, it was for Congress to determine whether to abolish the filed-rate doctrine.[35] The Commission believes the time has come for Congress to address that issue and accordingly makes the following recommendation.

68. Congress should evaluate whether the filed-rate doctrine should continue to apply in regulated industries and consider whether to overrule it legislatively where the regulatory agency no longer specifically reviews proposed rates.

b. Merger Review in Regulated Industries

The antitrust agencies examine mergers and acquisitions notified to the agencies pursuant to the Hart-Scott-Rodino Act (HSR Act) to determine whether a proposed transaction may substantially lessen competition in violation of the Clayton Act.[36] The antitrust agencies apply the same merger standards to all industries, including those that formerly were regulated.

Four industries remain, however, in which a regulatory agency also has merger review authority.[37] In those industries the regulatory authority typically reviews a proposed transaction under its statutory "public interest" standard, which varies by industry. The regulatory authority can allow a transaction to proceed if it determines that the "public interest" benefits offered by the proposed transaction outweigh its likely anticompetitive effects.
