If the prescriber provides a paper copy of the prescription to the patient, the prescriber must request that the patient acknowledge receipt by signing a separate statement confirming receipt of the prescription. As discussed above with respect to obtaining signatures of affirmative consent to digital delivery, participants at the workshop discussed that some EHR companies haven't updated their systems in light of the new CLR requirements to allow prescribers to collect signatures electronically, which would reduce the record-keeping burden, and suggested that the Rule should expressly permit prescribers to obtain patient signatures digitally or on paper.[349] Specifically, at the workshop, Dr. Repka stated that the electronic medical records of the future will be able to accept electronic signatures that will be stored in ways other than on paper and says, ''if there's an option to do that, it would be nice. If you still needed it to be on a printable PDF, then not as convenient.'' [350]

When proposing changes to the Eyeglass Rule, the Commission noted the ''recordkeeping burden could be reduced to the extent that prescribers have adopted electronic medical records systems, especially those where patient signatures can be recorded electronically and inputted automatically into the electronic record.'' [351] The Commission resolves therefore to change the Rule to explicitly state that obtaining patient signatures ''on paper or in a digital format'' is permissible and complies with the Rule. Accordingly, § 456.4 of the final rule sets forth this language. The Commission believes this will resolve prescriber confusion regarding the need to print out digital forms and collect wet signatures that might then need to be scanned and stored electronically in an EHR system. As with electronic collection of patient consent to digital delivery, alleviating prescriber misunderstanding regarding signature collection should help reduce waste and facilitate faster, more efficient, Rule compliance.[352]

V. Final Rule Pertaining to Proof of Insurance Coverage as Payment

A. Proposed Requirement in the NPRM To Treat Proof of Insurance Coverage as Payment and the Basis for Such Proposal

The Eyeglass Rule requires that prescribers provide consumers with a copy of their prescription immediately after the eye examination is completed, but also contains a long-standing exception to allow a prescriber to refuse to give the patient a copy of their prescription until the patient has paid for the eye examination, so long as the prescriber would have required immediate payment had the eye examination revealed that no ophthalmic goods were required.[353] The CLR contains a similar provision, permitting the collection of fees for an eye examination, fitting, and evaluation before the release of a contact lens prescription, but also provides clarification that for purposes of this exception, a patient's presentation of proof of insurance coverage for those services shall be deemed to constitute a payment.[354] The Eyeglass Rule does not contain this insurance clarification, and staff has received questions from the public about this issue. The Commission proposed that such a proviso, which was initially formulated by Congress in drafting the FCLCA,[355] be added to the Eyeglass Rule, both because it is appropriate that a patient's proof of insurance coverage equates to payment, and to bring the two rules into conformity and eliminate unnecessary confusion.[356] Accordingly, in the NPRM the Commission proposed to amend § 456.2(a) to add the sentence, ''For purposes of the preceding sentence, the presentation of proof of insurance coverage for that service shall be deemed to be a payment.'' [357] The Commission invited public comment on the potential benefits and burdens of such an amendment.[358]

B. Comments on NPRM and Discussion at Workshop Regarding the Insurance Coverage as Payment Proposal

The Commission received a few public comments addressing this proposed amendment. NAROC supported the Commission's clarification that proof of insurance coverage shall be deemed to constitute a payment under § 456.2(a), and opined that this clarification will generally increase compliance with the Rule's prescription release requirement.[359] 1–800 CONTACTS also supported ''amending the [Rule] to follow the CLR in requiring that prescribers accept proof of insurance coverage as payment for purposes of automatic prescription release.'' [360]

The AAO expressed concern that the provision could create challenges for, and ultimately result in financial impacts to, ophthalmology practices, such as instances where a patient has already utilized their insurance benefit and would thus be ineligible at the time of the visit to be covered by

insurance.[361] Requiring the prescriber to accept proof of insurance as payment in such a situation would be problematic for the prescriber, since the insurance would not be obligated to pay anything. The AAO noted that a ''remedy for this would be to instead allow for insurance to be used as payment if the insurance carrier confirms that the patient is eligible for the benefit at the time of their visit.'' [362] An anonymous commenter stated there can be a problem with vision plans showing authorizations for services but not guaranteeing payment, which takes advantage of the prescriber.[363]

C. Additional Discussion and Commission Determination Regarding the Insurance Coverage as Payment Proposal

The Commission has decided that the proposed clarification in the NPRM's § 456.2(a) will aid prescribers' compliance with the Rule and help ensure that patients and prescribers understand when a prescription should be released. Accordingly, the Commission is adopting the provision as proposed in the NPRM as § 456.2(a)(2). Regarding the AAO's concern that prescribers should be allowed to wait until an insurance carrier confirms a patient's eligibility for a benefit at the time of service, the Commission notes that this is, in fact, what the provision would permit. Section 456.2(a)(2) states that proof of insurance coverage—not merely possession of an optical or health insurance policy—will be deemed to constitute payment. For the anonymous commenter who was concerned about vision plans that show authorizations for services but do not guarantee payment, this prescriber could withhold the prescription pending payment if coverage cannot be conclusively established. But in such a case, the prescriber also could not offer to sell the patient eyeglasses until after releasing the prescription to the patient.[364]

Participants at the workshop discussed that some patients may prefer not to have to make two separate payments—one for the examination fee, prior to receiving the prescription, and a separate one for the purchase of eyeglasses, if they choose to purchase from their prescriber's office.[365] Commission staff noted that the Eyeglass Rule does not mandate when prescribers collect payment for examination fees or eyeglasses, but instead merely requires that the prescription be released immediately after the exam and before offering to sell the patient eyeglasses.[366] Prescribers may decide to wait to collect the examination fee until a purchase is completed, if they believe their patients have a strong preference for a single transaction, so long as they already released the prescription prior to making that sale.[367]

VI. Final Rule Regarding ''Eye Examination'' Terminology

A. Proposed Revision in the NPRM To Change ''Eye Examination'' Term to ''Refractive Eye Examination'' and the Basis for Such Proposal

The Rule defines an ''eye examination'' as ''the process of determining the refractive condition of a person's eyes or the presence of any visual anomaly by the use of objective or subjective tests.'' [368] As discussed above, the Rule currently allows eye care prescribers to refuse to provide the patient with their prescription when the patient has not paid for the ''eye examination''—which refers back to the definition describing the refraction—as long as the prescriber does not have different policies for those whose examination revealed that no ophthalmic goods were required.[369] In response to the ANPR, the AOA and several individual prescribers requested that the Commission modify the Rule to change the term ''eye examination'' to ''refraction.'' [370] These commenters stated that an eye examination determines the health of the eye and includes many components that are not used to determine the refractive condition. According to some commenters, the Rule's definition for, and use of, the phrase ''eye examination'' more accurately describes refractive services rather than the full scope of an eye examination.[371] Commenters stated that the Rule should reflect that a comprehensive eye examination and a refraction are separate services,[372] and that while eye health exams are typically covered by Medicare, the testing required to produce the refractive prescription may not be a covered service under Medicare or other insurance plans, and therefore patients may be required to pay out of pocket for the service.[373] The commenters suggested that changing the Rule to reflect the separate services and payments involved would reduce consumer confusion.

In the NPRM, the Commission responded to the ANPR commenters by proposing to replace the term ''eye examination'' with ''refractive eye examination'' throughout the Rule, noting that the Eyeglass Rule's purpose is to ensure that prescribers provide patients with a copy of their prescription at the completion of an eye examination determining the patient's refraction, and that this prescription must be provided free of any additional charge, without obligation, and without a waiver.[374] The Commission opined that clarifying that the eye examination referred to in the Rule is a refractive examination would likely increase consumer understanding of their rights and prescriber compliance with the Rule. The Commission invited further public comment on the potential benefits and burdens of such an amendment; and asked whether the current definition in the Rule is a clear and accurate way of describing a refractive eye examination, whether using the term ''refractive eye examination'' in place of ''eye examination'' could help avoid confusion over when the prescriber must release the prescription, and whether prescribers should be allowed to withhold release of the prescription subject to any charges other than the one due for the refractive eye examination.[375]

B. Comments on NPRM and Discussion at Workshop Regarding the ''Refractive Eye Examination'' Proposal

1. Comments About the Proposed Terminology Change

The FTC received some comments in support of the proposed terminology change. 1–800 CONTACTS agreed with the Commission's proposal to replace the term ''eye examination'' with the term ''refractive eye examination'' throughout the Rule.[376] The National Taxpayers Union asserted that clarifying that an ''examination'' triggering the prescription release requirement is ''one involving a refractive diagnostic . . . should provide some reduction in overhead for providers, who might otherwise spend time and effort explaining to the consumer those conditions under which a prescription is not automatically furnished.'' [377] NAROC stated that it was not aware of compliance concerns arising from the use of the term ''eye examination'' versus ''refractive eye examination,'' and had never heard the complaint that a prescriber did not understand the context of the prescription-release requirement, but acknowledged that the proposed change would eliminate the issues described in the NPRM.[378] NAROC further recognized that prescribers also conduct examinations that are not related to prescribing corrective eyewear, and noted that the proposed change might improve the FTC's ability to enforce the Rule, in that the prescriber would not have the

excuse that they did not understand scope of the term.[379]

While not expressly taking a position on the NPRM proposal to change the terminology, the American Academy of Ophthalmology did express concern—in relation to insurance payments—that many patients are confused as to the difference between health exams that are covered by insurance and refractive exams which often are not.[380] The association said the Commission could be ''more proactive'' in explaining that eye health exams and exams that lead to eyeglass prescriptions are not the same services.[381]

AOA, while in favor of the proposed change in 2015, noted that its position had ''evolved'' since then,[382] and opined that the terminology change ''may not truly address any confusion that exists,'' noting that the results of a refractive examination do not necessarily provide all the information needed to determine and devise an optical prescription.[383] The AOA asked that if the FTC chooses to update the language as proposed, it should clarify that the update does not impact any State or Federal definitions of a comprehensive eye examination.[384]

At the workshop, Dr. Beatty echoed the AOA's concern that consumers benefit most from a comprehensive eye examination, and worried that labeling the exam that results in a prescription a ''refractive exam'' starts to ''confuse patients as to what the value is for having a full eye exam, and can start to make that feel the same as having some exam that you are getting online without the presence of the doctor.'' [385] At the same time, Dr. Beatty confirmed that the definition in the Eyeglass Rule accurately describes a refraction.[386]

2. Comments About the Need To Allow Prescribers To Make a Medical Decision To Withhold the Prescription, Where Appropriate

Commenters also noted that while a refraction may be provided to a patient for the purpose of determining their most current and appropriate eyeglass prescription, it may also be ''completed as a 'diagnostic tool' to assist in the determination of visual status when there are comorbidities in the visual system.'' [387] In this case, the intent of the refraction may not be to create and provide a prescription for eyeglasses or contact lenses, but rather to understand how the patient's refractive error may be a factor in decreased vision, and to help diagnose medical conditions in the eye, such as macular degeneration or a cataract.[388] In the latter scenario, the eye care professional may even determine that it is not appropriate to provide a prescription for corrective eyewear, if the refractive error is not the cause of the decreased vision and comorbidities are present. Commenters felt that the eye care provider should, in their discretion, be free to make the medical decision of whether to dispense the diagnostic refraction, and not be required by the Rule to release a copy of the prescription solely because they had tested the patients' refractive error.[389] Commenters also stated that regardless of whether the provider releases the prescription in that case, they should be able to charge the patient for the diagnostic examination that was completed.[390]

3. Comments About the Permissibility To Charge for the Refraction, as Opposed To Charging for the Prescription Release

Although the Rule allows eye care prescribers to withhold a patient's prescription until the patient has paid for the ''eye examination''—so long as the prescriber would have required immediate payment even if the exam had revealed that no ophthalmic goods were required—the Rule also prohibits prescribers from ''charg[ing] the patient any fee in addition to the ophthalmologist's or optometrist's examination fee as a condition to releasing the prescription to the patient.'' [391] This provision is intended to prevent a once-common practice whereby prescribers would charge their patients a separate fee for releasing the prescription, which could, in turn, dissuade patients from taking their prescription to shop elsewhere for eyeglasses. Some commenters discussed that consumers can be confused about whether a fee is being charged for the exam or for the prescription, and that the Rule language has resulted in some patients believing that they do not have to pay for the refractive exam.[392] Commission staff noted, based on their experience enforcing the Eyeglass Rule, that some practices may tell patients that there is a charge for the prescription, without indicating that the charge is actually for the refractive exam, rather than for receiving the prescription, and that this can lead to consumer confusion about their rights under the Rule.[393]

C. Additional Discussion and Commission Determination Regarding the ''Refractive Eye Examination'' Proposal

After considering all of the comments in the record on the question of the appropriate terminology for the ''eye examination'' definition, the Commission has decided to amend this term to ''refractive eye examination'' throughout the Rule.[394] Both the comments the Commission received in 2015 and the panel discussion at the 2023 workshop confirmed that the definition in the Rule most accurately describes a refraction. A refractive eye examination can be a portion of a more comprehensive exam, but by changing the terminology, the Rule will provide a clear indication to the consumer and prescriber that if the refraction has been completed, the prescription should be provided, barring a medical decision by the prescriber.

By making this change, the Commission is not suggesting that consumers would not benefit from a comprehensive eye examination, or that it would be preferable for consumers to seek out solely a refraction in order to obtain their prescription. But the Commission is aware that a refraction can be completed in a variety of contexts, and wishes to clarify that regardless of the purpose of the examination, the prescription should always be released whenever the optometrist or ophthalmologist determines the patient's refractive error.[395] The Commission is mindful, however, that in some cases in which the refraction may be used as a diagnostic tool, the provider may make a medical decision that it would not be appropriate for a patient to obtain eyeglasses. The Commission does not intend the Rule to override the provider's medical judgment in such cases. If a prescriber determines it is not medically appropriate for the results of a refractive exam to result in a prescription for a particular patient, the prescriber may choose not to release the prescription. But, in such cases, the prescriber may not then offer to sell the patient eyeglasses.[396] Moreover, the prescription should not be withheld merely due to it being inconvenient for the prescriber to provide it.

The Commission concludes that changing the term to ''refractive eye examination'' may help consumers understand that they may be required to pay for the refraction if it is not covered by a vision plan or other health insurance. Furthermore, this terminology change will help prescribers understand that while they may withhold the prescription pending receipt of payment for the refraction, it is not appropriate to make prescription-release contingent upon the payment for any additional service.

The Commission plans to undertake additional consumer education after the Rule is amended to help patients understand that they may be charged for the exam, but not for the prescription

itself. Revised business education materials can also advise prescribers on the types of fees that may be assessed as a condition of prescription release, as well as advise them to train staff to communicate the purpose of fees to patients.

VII. Miscellaneous Issues Raised in Comments

A. Pupillary Distance

1. Background and Comments

In the NPRM, the Commission explored whether to amend the Rule to require the inclusion of pupillary distance on eyeglass prescriptions. Pupillary distance is the measurement (in millimeters) of the distance between the pupils of a person's eyes and is typically needed to properly fit a pair of eyeglasses.[397] The Rule has historically left it to the States to determine what measurements constitute a complete refractive prescription, and thus, it has been up to the States to determine whether pupillary distance is required to be included on prescriptions.[398] In the NPRM, the Commission analyzed comments received in response to the ANPR in favor of and against adding a pupillary distance requirement and concluded that there was not adequate evidence in the rulemaking record at this time to determine that the failure to provide a pupillary distance on a prescription is an unfair practice.[399] As a result, in the NPRM the Commission did not propose to require prescribers to include the pupillary distance measurement on prescriptions.[400] However, since it had last invited comment on the question of whether to require the inclusion of pupillary distance in a prescription in 2015, and the market for optometry and eyeglasses may have evolved since then, the Commission, in the NPRM, again invited comment on this issue. Specifically, the Commission asked for input and information about changes to State regulation on the content of prescriptions, or to changes in the marketplace, or to changes in technology, that might affect and alter the Commission's prior conclusion that pupillary distance on prescriptions should not be required by rule.[401]

In response, the Commission did not receive any comments addressing changes to State regulations on the content of prescriptions, or changes in the marketplace, or changes to technology pertaining to pupillary distance. Commenters in favor of and against the inclusion of pupillary distance on prescriptions largely reiterated viewpoints previously expressed in response to the ANPR.

The Commission received a number of comments in favor of the Commission's NPRM determination not to require the inclusion of pupillary distance on prescriptions from optometry, ophthalmology, and optician trade groups (the AOA, AAO, and OAA, respectively). The AOA, for instance, agreed with the Commission's concern, as discussed in the NPRM, that requiring pupillary distance measurements on prescriptions could place the patient in the optical dispensary—where pupillary distance measuring devices are typically located and operated—prior to the patient receiving their prescription, thereby undercutting the Rule's long-standing principle (a foundation of the Rule) of separating a patient's eye examination from the retail dispensing of eyeglasses. The AOA and the OAA added further that, historically, taking pupillary distance measurements is not a standard part of an eye examination by an optometrist or ophthalmologist (it is typically performed by an optical goods dispenser, such as an optician, in the dispensary *after* a patient decides to purchase glasses), and stated that there was no reason to require that prescriptions from refractive eye exams, written by optometrists and ophthalmologists, should include pupillary distance.[402] The AOA also pointed to Commission language in the NPRM stating that there are zero-cost and relatively-low-cost alternative methods for consumers to obtain their pupillary distance if they wish to shop for glasses online.[403] The trade association NAROC also agreed with the Commission's NPRM determination, stating that if the pupillary distance requirement was added, prescribers and opticians might end up at odds over whose pupillary distance measurement should control.[404]

The OAA further expressed concern that if pupillary distance is required on prescriptions, opticians filling the prescription would have to abide by the exact measurements written on the prescription by the prescriber, regardless of the accuracy of the information or their own measurement, and stated that opticians—who have a long history of performing pupillary distance measuring tests—may consider several factors such as: whether the current pupillary distance measurement matches the previous measurement, changes that may have occurred since the issuance of the prescription, and the complexity of the prescription.[405]

The AAO also agreed with the Commission's decision not to mandate the inclusion of pupillary distance measurements on eyeglass prescriptions.[406] The group said that because many ophthalmologists do not take this measurement, and not all ophthalmic practices have an optician on staff to perform these measurements, if pupillary distance were required on prescriptions, ophthalmologists would be forced to make difficult practice decisions over the hiring of additional staff or the elimination of refractive services.[407]

On the other hand, some sellers and consumers said they would like the Commission to reconsider its decision and require prescribers to include pupillary distance on prescriptions. Online seller Eyeglasses.com stated that it receives hundreds of prescriptions from consumers each day and about half of them do not include the pupillary distance measurement, making it challenging to provide them with eyeglasses.[408] The seller contended that the failure to provide pupillary distance is an obstacle to consumer choice, and expressed its belief that prescribers do not add this measurement because they either do not want to take the extra time to take the measurement, or because such prescribers sell eyeglasses themselves, and withhold the measurement to make it more difficult for consumers to buy eyeglasses elsewhere. According to Eyeglass.com, consumers are frequently too embarrassed to ask for the pupillary distance measurement, and if they do ask the prescriber, it gives the prescriber an opportunity to discourage the patient from buying online or elsewhere. The seller also noted that some prescribers charge a fee to measure the pupillary distance, which is not prohibited by the Rule.[409]

1–800 CONTACTS, which also sells eyeglasses, reiterated the view that not giving consumers their pupillary distance measurement could discourage online shopping and result in diminished competition and less consumer choice.[410] It opined that the elements of unfairness are met when a prescriber's office takes the pupillary distance measurement during the patient's visit but fails to automatically provide that measurement to the patient, and reiterated that patients may not know to ask for their pupillary distance, may not want to offend the prescriber by asking for that measurement, or may be refused or charged for that measurement.[411] According to 1–800 CONTACTS, obtaining the pupillary distance measurement on their own may be a costly or time-consuming hassle for some consumers, and some consumers may not be aware of the ways in which they can obtain their pupillary distance

measurement. Moreover, in response to the Commission's stated concern that a pupillary distance requirement could have the unintended and undesirable consequence of placing the patient in the dispensary prior to them having their prescription in hand, 1–800 CONTACTS proposed that the pupillary distance measurement should be released in some other format, separate from the refractive prescription itself.[412] For this scenario, the commenter explained, the prescriber would release the prescription prior to the patient entering the dispensary, and the patient would then automatically receive their pupillary distance measurement separately after having it measured in the dispensary.[413] 1–800 CONTACTS asserted that an appropriately tailored amendment to automatically release a pupillary distance measurement is critical to creating prescription portability and promoting competition in the evolving market for prescription eyewear.[414]

Another commenter, a consumer, stated that pupillary distance measurements are needed to order glasses online, where glasses are much cheaper than in the optometrist's shop.[415] The commenter said that, when they ask their prescriber for the measurement, the prescriber does not provide it, and instead tells them that the measurement will be taken when they buy eyeglasses. The commenter felt this was a way to force consumers to buy their eyeglasses at their prescriber's office, or at the least, discourage them from buying glasses online.[416]

2. Pupillary Distance Requirement Determination

After considering the comments and evidence regarding pupillary distance, the Commission does not disturb its conclusion, reached in the NPRM and previous Eyeglass Rule rulemakings, not to mandate the inclusion of pupillary distance on prescriptions in States that do not otherwise include such a requirement. To determine an act or practice is unfair, the Commission must find that the act or practice causes or is likely to cause substantial injury to consumers; the injury is not reasonably avoidable by consumers themselves; and, the injury is not outweighed by countervailing benefits to consumers or to competition.[417] The comments submitted in response to the NPRM did not reveal any relevant changes in the marketplace, technology, or State regulations that sufficiently alter the landscape such that not providing a pupillary distance measurement is generally unfair. The comments largely raise the same points as those submitted in response to the ANPR,[418] indicating that requiring the inclusion of pupillary distance measurements on prescriptions could potentially increase consumer convenience and improve competition, but could also impose burdens on prescribers, hamstring opticians, and undercut other pro-competitive aspects of the Rule. On balance, upon review of the record, the Commission finds again that there is not sufficient evidence that the practice of not providing pupillary distance is an unfair act or practice.

Purchasing eyeglasses online can, indeed, be more convenient and less costly for consumers, and consumers can find it more difficult to shop online if their pupillary distance is not provided by prescribers. But every State determines what is required to be included in an eyeglass prescription, and only four require the inclusion of pupillary distance measurements.

Based on the record developed, the Commission concludes that preempting these State determinations by imposing a requirement to include pupillary distance on the prescription may have a detrimental overall effect for prescribers and consumers. Some prescribers—particularly ophthalmologists—would be required to take a measurement they do not ordinarily take, or might feel obligated, for professional and liability reasons, to hire new staff or acquire new equipment to take this measurement, which could result in higher costs passed on to patients in the form of higher prices.[419] Particularly for smaller practices, the costs to these providers could be considerable.

In addition, imposing such a requirement could undermine the pro-competitive aim of the Rule. If the Commission required the inclusion of pupillary distance, some prescribers might lead patients to the dispensary for the measurement, instead of adding expensive pupillary distance measurement equipment to the exam room.[420] As noted above, such a shift would place the patient in the dispensary prior to the patient receiving their prescription, a result that would blur the important distinction between the clinical eye exam and the retail dispensing process, a distinction that is central to the Rule, and that the Commission has consistently attempted to preserve.

Although commenters point to circumstances under which the act of not providing a pupillary distance measurement can be injurious, consumers have alternative means to obtain eyeglasses from a seller other than their prescriber. Other methods are available for consumers to obtain this measurement, and many of these methods—while possibly not as precise as a measurement taken with expensive equipment by an optician in a dispensary—are low-cost or no-cost. For instance, one seller stated that all you need is a mirror and a printable ruler,[421] and another provided instructions for using their digital ruler.[422] Consumers can also obtain this measurement at an in-person optical dispensary, though it may come at a small cost if the consumer is not purchasing eyeglasses at that shop.[423] Although some consumers reported problems with their vision when using eyeglasses made with pupillary distances they measured themselves using online tools,[424] NAROC stated that many online sellers have developed accurate alternative ways to measure pupillary distance.[425] Moreover, a new pupillary distance measurement does not have to be obtained every year or office visit. Obtaining it once is usually sufficient, since for most people, the measurement does not change significantly from one year to the next. The widespread availability of these alternative methods make it difficult to conclude at this time that the injury to consumers from prescribers failing to take and provide pupillary distance measurements is both substantial and not reasonably avoidable.

Importantly, the Commission's determination does not preclude States from defining prescriptions to include pupillary distance measurements. Indeed, in the handful of States that already do so, the Rule, by its operation, requires dispensing of such measurements. But the Commission is mindful that the vast majority of States have not required prescribers to include pupillary distance measurements, and the Commission is reluctant to override the determinations of local jurisdictions without a clearer record establishing that the status quo is unfair.

For these reasons and others described in the Commission's NPRM,[426] the Commission has decided at this time to retain its prior conclusion not to amend the Rule to add a pupillary distance requirement for prescriptions.[427]

B. Consumer and Business Education

Commenters and workshop participants stated that the Commission should better educate consumers about their rights to their prescription, or the confirmation process. Dr. Masoudi stated that consumers should be made more aware of their rights before they walk in the door.[428] This point was illustrated at the workshop by Felecia Neilly, who stated that before she became involved with this Rule review

process, she ''wasn't even aware of an eyeglass rule'' and did not know she had the option to receive the prescription.[429] As to the confirmation requirement, Dr. Montaquila stated that there is widespread confusion by his patients as to why they are signing a prescription.[430] One anonymous commenter stated that the burden should be on the FTC to provide education to the consumer.[431] The AAO added its concern that patients misunderstand that services resulting in a prescription, in addition to the prescription, are to be provided free of charge.[432]

Some commenters also mentioned that in addition to a need to educate consumers, there is a need to educate prescribers about their responsibilities under the Rule. NAROC requested the Commission work with industry to develop useful guidance or templates relating to patients' rights and prescribers' responsibilities with respect to eyewear prescription release.[433]

The Commission has existing guidance on the Eyeglass Rule on its website and has engaged in outreach to both consumers and prescribers at periodic intervals, including through press releases, consumer alerts, and business blogs announcing warning letters to prescribers.[434] Nevertheless, it agrees it should bolster its existing guidance on the Rule as an added measure to inform consumers of their rights, and businesses of their obligations, especially given the amendments to the Rule.

VIII. Paperwork Reduction Act

The Paperwork Reduction Act (''PRA''), 44 U.S.C. 3501 *et seq.,* requires Federal agencies to obtain Office of Management and Budget (''OMB'') approval before undertaking a collection of information directed to ten or more persons. Pursuant to the regulations implementing the Paperwork Reduction Act,[435] an agency may not collect or sponsor the collection of information, nor may it impose an information collection requirement unless it displays a currently valid OMB control number.

In this final rule, the Commission is amending a rule that contains recordkeeping and other collection of information requirements as defined by OMB regulations that implement the PRA. First, the Commission is modifying the Rule to require that: (i) if a paper copy of the prescription was provided to the patient, the prescriber must request that the patient acknowledge receipt of the prescription by signing a separate statement on paper or in a digital format confirming receipt of the prescription, and retain the confirmation for not less than three years; or (ii) if a digital copy of the prescription was provided to the patient (via methods including an online portal, electronic mail, or text message), the prescriber must retain evidence that such prescription was sent, received, or made accessible, downloadable, and printable.[436]

Section 456.4(a)(2) provides sample language for option paragraph (a)(2)(i) in that prescribers may use the single-sentence statement, ''My eye care professional provided me with a copy of my prescription at the completion of my examination,'' but also allows prescribers to craft their own wording of the signed confirmation if they so desire. For prescribers who choose to offer an electronic method of prescription delivery, the Rule will require that such prescribers identify the specific method or methods to be used and maintain records or evidence of affirmative consent by patients to such digital delivery for at least three years. For instances where a consumer refuses to sign the confirmation or accept digital delivery of their prescription, the Rule (§ 456.4(a)(3)) directs the prescriber to note the refusal and preserve this record as evidence of compliance. None of these new requirements, however, would apply to prescribers who do not have a direct or indirect financial interest in the sale of eyeglasses.

Below, the Commission describes and discusses the changes between the proposed rule regulatory text and this final rule, the public comments received relating to the collection of information burden, and the Commission's ultimate determination of the burden generated by the final rule.

A. Comments Regarding the NPRM Estimate for the Confirmation-of-Prescription-Release Requirement

In its NPRM, the Commission put forth estimates for the burden on individual prescribers' offices to generate and present to patients the confirmations of prescription release, and to collect and maintain the confirmations of prescription release for a period of not less than three years. Based on an estimate that there are 165 million eyeglass wearers in the United States, the Commission calculated the total disclosure and recordkeeping burden from the new requirement at 2,979,167 hours for prescribers and their staff (1,375,000 disclosure hours + 1,604,167 recordkeeping hours).[437] These totals were based on estimates that it would take prescribers' offices one minute to hand out a prescription, ten seconds for the patients to read and sign a confirmation-of-prescription-release statement or consent-to-electronic-prescription-delivery, and one minute for prescribers' offices to store (or scan and save) the signed confirmation or consent in their files.[438] The Commission's time estimates were based on previously-approved estimates for a nearly identical confirmation-of-prescription-release requirement added to the Contact Lens Rule in 2020.[439]

In its NPRM, the Commission requested comment on, among other things, the accuracy of the FTC's burden estimates, including whether the methodology and assumptions used were valid.[440] In response, the Commission received various comments from prescribers opining, among other things, that a confirmation requirement for eyeglass prescriptions would ''take an immense amount of time and take away from patient care,'' [441] be ''very time consuming,'' [442] and ''add a significant burden to small business optometry practices that already are enduring financial challenges and staffing issues.'' [443] More specifically, some commenters, such as the American Optometric Association and Eyeglass workshop panelist Dr. Jeffrey Michaels stated that the Commission had previously underestimated the time it takes to perform the confirmation requirement,[444] and commenter Coast Eyes Pllc suggested the paperwork cost would be $18,000 per provider per year.[445] Another workshop panelist, Dr. Stephen Montaquila concurred with Dr. Michaels, commenting that it takes his staff four minutes to complete the entire Contact Lens Rule process of printing out a patient's prescription, handing it to the patient, explaining why it needs to be signed, having the patient sign it, making a copy of it, and storing the signed copy as a record.[446] In addition, the National Taxpayers Union submitted a comment stating that while it generally supports the confirmation requirement, ''[G]iven the various reading speeds of customers who may be elderly or have limited proficiency in English, the 10-second estimate [to read and sign the statement] could prove low.'' [447] As noted previously in the discussion of the proposed confirmation requirement, the NTU also suggested that smaller optometry practices might bear a disproportionate share of the burden, which it estimated—based on the NPRM proposal and the estimate that that a ''modest optometry establishment'' might perform 3000 examinations per year—at an additional 167 hours and $4,123 per year for such an establishment.[448]

Some commenters, however, disagreed that it would take a significant amount of time to obtain a patient's signed confirmation. The NAROC commented that thousands of optometrists affiliated in co-location with NAROC member companies "regularly comply with [Contact Lens Rule confirmation-of-prescription-release requirements, as well as other requirements of the CLR and Eyeglass Rule] with little or no added cost or other burden on the eye care practice." [449] According to NAROC representative and Eyeglass Rule workshop panelist Joseph Neville, "I've personally witnessed a couple of situations where the process for contact lenses seemed very easy. . . . the prescription was handed over at the front desk by the staff person, and the staff person maybe a bit simplistically said, 'We'd like to ask you to sign this receipt for your prescription. We're required to get your signature acknowledging that you've received it.' And a couple of people, and again, anecdotes here that I witnessed on this, just said, 'Okay, fine, thank you.' " [450]

All of the above comments, however, are, as Mr. Neville acknowledged, anecdotal in nature.[451] The only new empirical evidence that the Commission is aware of regarding the time it will take prescribers and their staff to comply with a confirmation-of-prescription-release requirement comes from an American Optometric Association submission filed in response to a 2023 request for comment about extending Office of Management and Budget ("OMB") clearance for the information collection requirements of the Contact Lens Rule.[452] In that submission, the AOA said that the Commission "significantly underestimated" how long it would take prescribers to confirm prescription release for the Contact Lens Rule requirement, and cited a 2023 survey it conducted of some of its member optometrists which found that 84.8% report it takes 30 seconds or more to obtain the patient's signed confirmation for contact lens prescriptions, not counting additional time necessary to address patient questions about the form they are signing, and 69.9% of prescribers said patients "typically" have questions regarding the acknowledgment.[453] Since the confirmation-of-prescription-release requirement adopted herein is very similar to that for the Contact Lens Rule, the Commission regards AOA's comment regarding the CLR's burden as on point.

The Commission cannot, however, accord the AOA survey significant weight. As explained in the Commission's notice responding to public comments on extending OMB's approval for CLR collection of information for another three years,[454] it is very likely the AOA survey overestimates the average time necessary to obtain a confirmation because of the manner in which the survey solicited prescribers to respond. AOA emailed a newsletter to members and included an invitation to "Voice your concerns" about complying with the Contact Lens Rule. A small number of prescribers self-selected in response, and took part in the survey. Because the poll only included prescribers who responded to this invitation, it is questionable whether its findings are truly representative of the average prescriber.[455] Furthermore, framing the survey as an invitation for concerned prescribers to air their grievances rather than as a disinterested information-gathering tool affects the objective reliability of survey responses, making it much harder for the Commission to accord it significant weight.

The Commission also reiterates concerns—previously detailed in the Commission's CLR PRA Notice [456]—that the amount of time prescribers ascribe to patients reading and signing that Rule's confirmation statement may, in fact, be due largely to non-mandated choices with respect to the design of the statement. The Contact Lens Rule requires that patients read and sign a simple statement confirming receipt of their prescription, and allows that the one-sentence statement, "My eye care professional provided me with a copy of my contact lens prescription at the completion of my contact lens fitting," fully satisfies the requirement. However, the Contact Lens Rule also permits prescribers to design their own confirmation form and statement, and the survey did not specify or ask prescribers what form or wording of the confirmation statement that patients were reading and signing, making it difficult to determine a true average time it would take to comply with the requirements of the rule. Even more concerning (from the standpoint of assessing the burden) is that the AOA has supplied its members with a model template confirmation form that includes several additional paragraphs consisting of "important information to review prior to receiving your contact lens prescription." [457] This information includes various recommendations from the Centers for Disease Control ("CDC") and the Food and Drug Administration ("FDA") about healthy contact lens use (such as "Take out your contacts and call your eye doctor if you have eye pain, discomfort, redness, or blurry vision") as well as five bullet points listing some of the symptoms for an eye infection ("Irritated, red eyes, worsening pain in or around the eyes," etc.).[458] While the template document is titled "Contact Lens Prescription Acknowledgment Form," only at the very end is there a statement, "Sign below to acknowledge that you were provided a copy of your contact lens prescription at the completion of your contact lens fitting." [459]

According to workshop panelist Dr. Montaquila, the AOA template is a common form that eye doctors are using to obtain patient confirmations.[460] If this is indeed the case, it calls into question the relevance of AOA's survey results finding that it takes patients 30 seconds or longer to comply with the Contact Lens Rule requirements, since the majority of those 30 seconds would likely be taken up by patients reading information that the rule does *not* require, or even suggest, that they read. Widespread use of AOA's model template confirmation form might also account for why prescribers report that patients have questions, or are confused, as to why they need to sign a new form, since patients are being asked not merely to confirm they received their prescription, but that they received other information from the CDC and FDA.[461] While the additional information from these two Federal agencies may very well be useful to provide to patients, it is not required by the FTC, and the time it takes patients to read it is not part of the Rule's burden of compliance.

Despite the aforementioned concerns about the reliability of the AOA's survey in establishing the time it takes for a patient confirmation, the Commission does not wholly discount the survey, but rather views it as suggestive, and an additional indication that many prescribers sincerely believe the Commission's 10-second estimate does not accurately reflect the time required to obtain a patient's signed confirmation. The Commission has therefore decided to increase its estimate for the time required to obtain a patient confirmation signature (and the time to collect an affirmative consent to electronic delivery, in instances where the prescription is provided digitally rather than in paper) for the Eyeglass Rule from 10 seconds—as proposed in the NPRM—to 20 seconds for this final rule. The Commission concludes that 20 seconds may better reflect the time required for a patient to not just read a one-sentence confirmation, but also to physically sign

and return the document to prescriber's staff, and for any necessary staff explanation as to why the patient's signature is required.[462] The 20-second estimate may also better align with the original HIPAA estimate that was a basis for the initial CLR confirmation estimate, since the original HIPAA proposal accorded 10 seconds to hand out the acknowledgment and another 10 seconds to obtain a patient's signature and collect the document.[463]

The Commission hereby provides PRA burden estimates, analysis, and discussion for the existing Eyeglass Rule burden of automatically releasing a prescription at the completion of a refractive eye exam, as well as the new requirement to collect patient signatures as confirmation of prescription release or as consent to electronic prescription delivery. The Commission estimates these PRA burdens based on the comments and submissions discussed above, in conjunction with its long-standing knowledge and experience with the eye care industry. The Commission is submitting these amendments and a Supporting Statement to OMB for review.

B. Commission Estimate of the Total Burden = 3,208,333 Hours

1. Estimated Hour Burden of 1,375,000 Hours for Prescribers To Release Prescriptions

The number of adult eyeglass wearers in the United States is currently estimated to be approximately 165 million.[464] Assuming a biennial refractive eyeglass exam for each eyeglass wearer,[465] approximately 82.5 million people would receive a copy of their eyeglass prescription every year. Historically, the Commission has estimated that it takes one minute to provide the patient with a prescription copy.[466] It is possible that one minute is an overestimate of the amount of time required, particularly as more doctors move to digital delivery. As of now, however, we have not seen sufficient evidence to merit making a change to the approach we have taken in the past. We therefore estimate an annual disclosure burden for prescribers to formulate and release prescriptions of approximately 1,375,000 hours (82.5 million annual exams × 1 min/60 mins).

2. Estimated Hour Burden of Prescribers' Staff To Obtain and Store Patient Confirmation of Prescription Release = 1,375,000 Hours (343,750 Hours for Patients To Read and Sign Confirmations, 1,031,250 Hours for Prescribers' Offices To Scan and Store Such Confirmations)

The requirement to generate and present the confirmation of prescription release will not require significant time or effort. The requirement is flexible in that it allows different modalities and delivery methods at the discretion of the prescriber. The requirement is also flexible in that it does not dictate other details, such as the precise content or language of the patient confirmation. At the same time, prescribers and their staff would not be obligated to spend time formulating their own content for the confirmation, since the amended Rule provides draft language that prescribers are free to use, should they so desire. Furthermore, prescribers likely have forms and systems in place to maintain confirmation records already, since they already must comply with the similar confirmation requirement of the Contact Lens Rule, and may need make only minor adjustments to accommodate confirmations for eyeglasses prescriptions. As a result, the marginal cost of the Confirmation amendment to the Eyeglass Rule should be extremely low, possibly lower than that estimated herein.

As noted above, the requirement of § 456.4(a)(1)(i) to collect a patient's signature on the confirmation of prescription release and preserve it constitutes a new information collection as defined by OMB regulations that implement the PRA. Nonetheless, the Commission determines it will require minimal time for a patient to read the confirmation and provide a signature. As noted above, the Commission estimated in the Contact Lens Rule and the NPRM that it would take patients 10 seconds to read the one-sentence confirmation of prescription release and provide a signature.[467] However, for the reasons discussed above, the Commission now believes that 20 seconds is an appropriate estimate for this task.[468]

The second option, § 456.4(a)(1)(ii), involves digital delivery of the prescription and does not, in and of itself, constitute an information collection under the PRA, since no new information that would not otherwise be provided under the Rule is provided to or requested from the patient.[469]

In its NPRM, the Commission assumed that prescribers would elect digital prescription delivery 25% of the time, and thus would be required to obtain a signed confirmation for the other 75% of patients receiving prescriptions.[470] That assumption was based on the premise that the NPRM offered prescribers four options (confirmation on a stand-alone document, confirmation on a prescription copy, confirmation on a sales receipt, or digital delivery with no confirmation required). With no specific details that clearly show which option prescribers would prefer, the Commission employed the assumption that prescribers would choose each of four options in equal numbers.

The current Rule amendment has only two options, paper delivery or digital delivery, and thus if the Commission used the same equal-share assumption it followed in the NPRM, the percentage attributed to digital delivery (and thereby not implicating the burden of a confirmation) for PRA purposes would be 50%. However, based on conversations with prescribers and the industry, the Commission has reason to believe that regardless of widespread EHR adoption, many prescribers still do not provide patient portals or deliver prescriptions digitally to patients, and thus it would not be correct to designate 50% of all prescription releases as digital delivery. Further supporting this view, the aforementioned AOA survey found that only 35% of prescribers said they provided prescriptions electronically.[471] Even that might overcount the number of prescriptions delivered digitally, since the prescribers surveyed by AOA about their method for either obtaining patient confirmations and delivering prescriptions were permitted to select more than one option, so some of the 35% who chose digital delivery of prescription (and thus no confirmation) may also have responded that they use other options, meaning that the overall percentage of prescriptions released electronically is actually less than 35%.[472] Furthermore, as discussed above, there are questions as to the reliability of AOA's survey findings, and whether they are truly representative of the average prescriber. Therefore, in order to ensure that the PRA burden for the Rule is not underestimated, the Commission will retain the previously used assumption that just 25% of prescribers employ digital-prescription delivery, and the other 75% of approximately 82.5 million annual prescription releases require a consumer reading and signing a confirmation statement. Thus, assuming twenty seconds for each such release, prescribers' offices would devote

343,750 hours, cumulatively (75% × 82.5 million prescriptions yearly × 20 seconds each/60 secs/60 mins) to obtaining patient signatures as confirmations of prescription release.[473]

Maintaining those signed confirmations for a period of not less than three years should not impose substantial new burdens on individual prescribers and office staff. Since the Rule allows flexibility in how prescribers craft the confirmation statement, prescribers may add it to documents that they would already be saving, such as prescription copies (and the majority of States already require that optometrists keep records of eye examinations for at least three years[474]) or customer sales receipts (which are normally preserved for financial accounting and recordkeeping purposes). Even if the prescriber chooses to create and use a separate confirmation statement, storing a one-page document per patient per year should not require more than a few seconds, and an inconsequential, or *de minimis,* amount of record space. Some prescribers might also present the confirmation of prescription release in electronic form, enabling patients to sign a computer screen or tablet directly, and have their confirmation immediately stored as an electronic document.

For other prescribers, however, the recordkeeping requirement would likely require that office staff electronically scan the signed confirmation and save it as a digital document. For prescribers who preserve the confirmation by scanning it, Commission staff estimates that preserving such a document would consume approximately one minute of staff time.

The Commission does not possess information on the percentage of prescribers' offices that currently use and maintain paper records versus electronic records, or that scan paper files and maintain them electronically. Thus, for purposes of this PRA analysis, and to again guard against possibly underestimating the Rule's burden, the Commission will assume that all prescriber offices who opt for § 456.4(a)(1)(i) (who do not dispense prescriptions electronically) require a full minute per confirmation statement for storing such recordkeeping.

Assuming—as the Commission did above—that 25% of prescriptions will be delivered electronically, and thus 75% of prescriptions require a patient confirmation that must be scanned and saved, the recordkeeping burden for all prescribers' offices to scan and save such confirmations amounts to 1,031,250 hours (75% × 82.5 million prescriptions yearly × one minute for scanning and storing/60 mins) per year.

3. Estimated Hour Burden on Prescribers' Offices To Obtain and Store Patient Consents to Electronic Delivery = 458,333 Hours (114,583 Hours To Obtain Signed Consents and 343,750 Hours To Store Same)

As noted previously, § 456.4(a)(1)(ii), the second option for satisfying the confirmation-of-prescription-release requirement, involves digital delivery of prescriptions, and thus does not necessitate that prescribers obtain or maintain a record of the patient's signature confirming receipt of a prescription. However, this option does require that prescribers obtain and maintain records or evidence of the patients' affirmative consent to electronic delivery for three years. Based on the previous estimate that 25% of patients will receive digital delivery of their prescriptions, the Commission will use the assumption that consumers sign such consents for electronic delivery for one quarter of the 82.5 million prescriptions released per year,[475] and that this task would take the same amount of time as to obtain and preserve a signature of the patient's confirmation of prescription release. Thus, the Commission will assign 114,583 hours for the time required for prescribers' offices to obtain patients' affirmative consent to electronic delivery of their prescriptions[476] and 343,750 hours for the time to store and maintain such records.[477]

In total, the estimated incremental PRA recordkeeping burden for prescribers and their staff resulting from adding the confirmation-of-prescription-release requirement to the Rule amounts to 1,833,333 total hours (343,750 and 114,583 hours, respectively, to obtain signatures confirming release and consenting to electronic delivery, plus 1,031,250 and 343,750 hours, respectively, to maintain records of confirmation and consent for three years) for prescribers' offices. Adding this incremental PRA burden to the 1,375,000-hours burden resulting from the existing prescription-release requirement yields a total PRA disclosure and recordkeeping burden from the Rule of 3,208,333 hours for prescribers and their staff.

C. Estimated Labor Cost

The Commission derives labor costs by applying appropriate hourly-cost figures to the burden hours described above. Since prescribers conduct patient examinations and formulate the prescriptions, the time spent releasing prescriptions to patients has traditionally been attributed for PRA purposes to prescribers, rather than their office staff. As for the task of obtaining patient confirmations and consent to electronic delivery, this could be performed by prescribers or their support staff. In the past, the task of collecting patient signatures was attributed to prescribers, but based on more recent conversations with prescribers and others in the industry, it has become evident that this task is more appropriately designated as performed by prescribers' office staff.[478] Therefore, the Commission will continue to assume that prescribers release prescriptions to patients, but that prescribers' office staff perform the task of collecting patient signatures on confirmations and digital-release consents, as well as the labor pertaining to printing, scanning, and storing of both documents.

According to the U.S. Bureau of Labor Statistics (''BLS''), general office clerks earn an average wage of $20.94 per hour, optometrists earn an average wage of $68.75 per hour, and ophthalmologists—which are listed by BLS under ''surgeons''—earn an average wage of $150.06 per hour.[479] Using the average wage for office clerks, and the aforementioned estimate of 1,833,333 total hours for office staff to obtain signed patient confirmations and consents to digital prescription delivery and to store such documents, the Commission calculates an incremental burden of $38,389,993 from adding the confirmation of prescription release to the Eyeglass Rule.[480]

Based on our knowledge of the industry, we assume that of the 1,375,000 prescriber-labor hours relating to the Rule's requirement to release a copy of the prescription to the patient, optometrists are performing 85% (1,168,750) of such hours and ophthalmologists are performing the remaining 15% (206,250) of such hours. Applying this to the BLS wage figures results in a prescriber-labor burden for the existing burden of releasing prescriptions of $111,301,438 ($80,351,563 for optometrists + $30,949,875 for ophthalmologists).

Adding the $38,389,993 staff burden from the confirmation-of-prescription-release requirement to the $111,301,438 prescriber burden from the automatic prescription-release requirement already in place yields a total estimated annual labor cost burden for the Eyeglass Rule of $149,691,431. While not insubstantial, this amount constitutes less than one half of one percent of the estimated $35.6 billion retail market for eyeglass sales in the United States in 2022.[481] Furthermore, the actual burden

is likely to be less, because, as noted *supra,* prescribers who do not have a financial interest in the sale of eyewear will not be required to obtain patient confirmations, many prescribers' offices will require less than a minute to store the confirmation form, prescribers can use the same document to obtain confirmations for eyeglass prescriptions and contact lens prescriptions, and, as digital prescription delivery increases over time, the overall burden should correspondingly decrease.

D. Capital and Other Non-Labor Costs

The recordkeeping requirements detailed above regarding prescribers impose negligible capital or other non-labor costs, as prescribers likely have already the necessary equipment and supplies (*e.g.,* prescription pads, patients' medical charts, scanning devices, recordkeeping storage) to perform those requirements.

IX. Final Regulatory Analysis and Regulatory Flexibility Act Analysis

Under section 22 of the FTC Act, 15 U.S.C. 57b–3, the Commission must issue a final regulatory analysis related to a final rule only when it: (1) estimates that the amendment will have an annual effect on the national economy of $100,000,000 or more; (2) estimates that the amendments will cause a substantial change in the cost or price of certain categories of goods or services; or (3) otherwise determines that the amendments will have a significant effect upon covered entities and upon consumers. The Commission has determined that this final rule will not have such an annual effect on the national economy, on the cost or prices of goods or services, or on covered businesses or consumers.

The amendments adopted in this final rule require that prescribers obtain from patients, and maintain for a period of no less than three years, a signed confirmation of prescription release acknowledging that patients received their eyeglass prescriptions at the completion of their eye examination. The amendments also require some prescribers to obtain and maintain for three years a patient's consent to deliver prescriptions electronically, but only for prescribers who elect to offer this method of delivery as an alternative to providing prescriptions in paper, and only if the patient agrees.

As discussed in the Paperwork Reduction Act section of this document, the Commission approximates that collecting a patient's signature on the confirmation of prescription release (giving time for the patient to read the confirmation) in accordance with § 456.4 will take approximately 20 seconds. Providing the patient with the confirmation of prescription release in accordance with this provision will require prescribers' offices to present a statement of prescription release and request a patient signature. The amendment provides prescribers with language that they can use on a confirmation form, which will relieve prescribers of the burden of coming up with such language. This requirement may also involve some staff training, which should be minimal, particularly since prescribers' staff will already be trained in obtaining patient confirmation of prescription releases under the Contact Lens Rule.[482] As a result, complying with § 456.4(a) will impose only minimal incremental costs on prescribers' offices.[483]

The PRA section of this document also addresses the burden under § 456.4(b) for prescribers to maintain, for at least three years, records confirming their patients' receipt of prescriptions, and estimates it will take one minute for prescribers' staff to meet their recordkeeping obligations. This likely overstates the recordkeeping burden, since, as noted above, storing a one-page document per patient per year should not require more than a few seconds, and an inconsequential, or *de minimis,* amount of record space. Prescribers who decide to collect or maintain signatures electronically may already have electronic health records in place. Some prescribers might also present the confirmation of prescription release in electronic form, enabling patients to sign a computer screen or tablet directly, and have their confirmation immediately stored as an electronic document.

As further noted in the Paperwork Reduction Act section of this final rule, the estimated cost to prescribers of complying with all of the requirements of the Eyeglass Rule is just .0042 of the total retail market for prescription eyeglass sales, with the cost of this final rule representing less than a third of that amount. In sum, the burdens imposed on small entities are likely to be relatively small.

The Regulatory Flexibility Act (''RFA''), 5 U.S.C. 601–612, requires an agency to provide an Initial Regulatory Flexibility Analysis (''IRFA'') with a proposed rule and a Final Regulatory Flexibility Act (''FRFA'') with the final rule, if any, unless the agency certifies that the rule will not have a significant impact on a substantial number of small entities.

In the NPRM, the Commission determined the proposed amendments should not have a significant or disproportionate impact on prescribers' costs, and based on available information, the Commission certified that amending the Rule as proposed in the NPRM, would not have a significant impact on a substantial number of small entities. Nonetheless, the Commission determined that it was appropriate to publish an IRFA to inquire into the impact of the proposed rule on small entities. Based on the IRFA set forth in the Commission's NPRM, a review of the public comments submitted in response to that notice and the workshop notice, and the discussions from the Workshop itself, the Commission submits this FRFA. This document serves as notice to the Small Business Administration of the agency's certification of no significant impact.

A. Need for and Objectives of the Final Rule

The Commission has concluded that millions of American consumers in need of corrective vision wear are not receiving their eyeglass prescriptions after visiting their prescriber. It has also concluded that a rulemaking to add a confirmation-of-prescription-release requirement is necessary to increase the number of patients who receive their prescriptions, to inform patients of the Rule and of their right to their prescriptions, and to ensure the separation of eye examination and eyeglass dispensing, which fosters a competitive marketplace for eyeglasses. The Commission notes that prescribers who currently comply with the automatic-release provision of the Rule may presently face a competitive disadvantage because of widespread non-compliance by other prescribers. This creates an unlevel playing field and undermines fair competition. In addition, the Commission expects that this final rule will: reduce the number of seller requests to prescribers for eyeglass prescriptions; improve the Commission's ability to monitor overall compliance and target enforcement actions; reduce evidentiary issues, complaints, and disputes between prescribers and consumers; and bring the Eyeglass Rule into congruence with the confirmation-of-prescription-release requirements of the Contact Lens Rule, reducing confusion for prescribers and consumers, and easing compliance and enforcement for both rules.

B. Significant Issues Raised by Public Comments in Response to the IRFA and the Agency's Response, Including Any Changes Made in the Final Rule

In crafting the final rule, the Commission carefully considered the comments received throughout the Rule

review process. This document contains a detailed discussion of the comments received by the Commission and the Commission's response to those comments. The Commission did not receive any comment from the Chief Counsel for Advocacy of the Small Business Administration.

The Commission received 47 comments in response to the NPRM and Workshop notices. Some of the comments, from prescribers and prescriber groups, strongly opposed the confirmation-of-prescription-release requirement indicating that such a change was not needed or would be burdensome to comply with. Specifically, those commenters stated that there was not a compliance problem with the Eyeglass Rule's automatic-release provision and the confirmation requirement was therefore an attempt to ''fix something that was not broken.'' Some also commented that the Rule changes, if finalized, would add a burden to small business optometry practices that already are enduring financial challenges and staffing issues. A few commenters contended that compliance with the proposed amendments would take longer than the Commission estimated in its NPRM, as demonstrated by the amount of time it currently takes prescribers to comply with the existing Contact Lens Rule requirements that are similar to those proposed for the Eyeglass Rule.

In contrast to the position expressed above, commenters from NAROC said that it is their understanding—based on responses from their prescriber members—that compliance with the current Contact Lens Rule confirmation-of-prescription-release requirement is occurring with little or no disruption or expense.[484] And as explained in the PRA section of this document, the Commission has concerns about the reliability of some of the evidence, cited by those critical of the Rule's confirmation proposal, as to the burden of the existing contact lens confirmation requirement. The Commission did not ignore or dismiss any comments and evidence outright, however, and evaluated the evidentiary record as a whole in making a final determination.

The Commission is sensitive to the additional burden or cost that this final rule imposes on businesses. However, after weighing all of the comments and evidence, it finds that this final rule will provide many benefits with a relatively small burden or cost. In particular, the Commission determines that the potential benefit of increasing the number of patients in possession of their eyeglass prescriptions is substantial: namely, increased flexibility and choice for consumers; increased competition among eyeglass sellers; a reduced likelihood of errors associated with incorrect, invalid, and expired prescriptions, and consequently, improved patient safety; and an improved ability for the Commission to enforce and monitor prescriber compliance with the Rule's prescription-release requirements. The Commission concludes that revising the existing remedy of automatic prescription release by adding the confirmation-of-prescription-release mechanism is necessary and beneficial due to demonstrated failures of prescribers to comply with the automatic-release remedy, and to ensure the separation of eye examination and eyeglass dispensing, which engenders a competitive marketplace for eyeglasses. As a result, this final rule adopts the amendments proposed in the NPRM with the modifications discussed in this document.

In response to comments that the Commission, in its NPRM, underestimated the amount of time it takes to comply with the CLR confirmation-of-prescription-release requirements, and for other reasons noted in the PRA section of this document, the Commission increased its time estimate for complying with the new requirements.[485]

C. Description and Estimate of the Number of Small Entities to Which the Amendments Will Apply or Explanation Why No Estimate Is Available

This final rule applies to eyeglass prescribers, and many prescribers will fall into the category of small entities (*e.g.,* offices of optometrists with $9 million or less in annual receipts).[486] Determining a precise estimate of the number of small entities covered by the Rule's prescription release requirements is not readily feasible because most prescribers' offices do not release the underlying revenue information necessary to make this determination. In the NPRM, the Commission sought comment on the number or nature of small business entities for which the proposed amendments would have a significant impact.[487] In response, the AOA commented that ''doctors of optometry reported collecting $826,612, on average, in gross receipts in 2021.'' The AOA also stated that 91.9% of optometry practices have fewer than 25 employees.[488] Based on the AOA comment, and staff's knowledge of the eye care industry, including meetings with industry members and a review of industry publications, staff expects that a substantial number of these entities likely qualify as small businesses.[489]

D. Description of the Projected Reporting, Recordkeeping and Other Compliance Requirements of the Amendments, Including an Estimate of the Classes of Small Entities That Will Be Subject to the Requirement and the Type of Professional Skills That Will Be Necessary To Comply

The final rule will impose a confirmation-of-prescription-release requirement on all optometrists or ophthalmologists who have a direct or indirect financial interest in the sale of eyewear. If a paper copy of the prescription was provided to the patient, the prescriber must request that the patient acknowledge receipt of the prescription by signing a separate statement on paper or in a digital format confirming receipt of the prescription. If a digital copy of the prescription was provided to the patient, the prescriber must retain evidence that such prescription was sent, received or made accessible, downloadable, and printable. Prescribers are required to maintain the records or evidence associated with the confirmation of prescription release, or digital delivery of the prescription for at least three years. In addition, if a prescriber elects to provide a digital copy of the prescription to comply with the Rule, the prescriber is required to identify to the patient the specific method or methods of electronic delivery that they will use and to obtain the patient's verifiable affirmative consent to receive a digital copy through the identified method or methods. The prescriber must maintain records or evidence of the patient's affirmative consent for at least three years.

As discussed in section C of section IX., Final Regulatory Analysis and Regulatory Flexibility Act Analysis, we assume that many of the estimated 43,000 active optometrists and 18,000 active ophthalmologists fall within the definition of a small entity. As discussed in the PRA section of this document, we estimate that prescribers' office staff perform the task of collecting patient signatures on confirmations and digital-release consents, as well as the labor pertaining to printing, scanning, and storing of both documents. Prescribers' offices will have to train staff on, and set up procedures for complying with, the new requirements of the Eyeglass Rule. However, as discussed in the PRA section of this document, prescribers likely have forms and systems in place to maintain confirmation records already, since they already must comply with the similar confirmation requirement of the Contact

Lens Rule, and may need make only minor adjustments to accommodate confirmations for eyeglasses prescriptions.

E. Steps Taken To Minimize the Significant Impact, if Any, of the Amendments, Including Why Any Significant Alternatives Were Not Adopted

Commenters at the ANPR stage recommended, as alternatives to the signed acknowledgment proposal, conspicuous signage declaring consumers' right to a copy of their prescription, or an eye care patients' bill of rights notifying consumers of their rights under the Rule. As explained in the NPRM, the Commission ultimately decided against a signage provision, after determining that the benefits were limited and that requiring signage would be significantly less effective at ensuring contact lens prescription release than requiring a written patient confirmation.[490] As explained in the NPRM, the Commission also decided against another proposed alternative, an eye care patients' bill of rights, for reasons including that the bill of rights proposal does not require the type of prescriber recordkeeping that would allow for better Rule monitoring and enforcement, and would not help resolve disputes between patients and prescribers over whether a prescription had been released.[491]

In an attempt to minimize the burdens associated with the confirmation-of-prescription-release requirement, the Rule provides prescribers with different compliance options depending on whether they release a paper or digital copy of the prescription, and provides one-sentence sample language that prescribers can elect to use should they release paper copies of prescriptions. Moreover, this amendment aligns with the prescription-release-related provisions of the Contact Lens Rule, thereby reducing the confusion and complexity that might arise for consumers and prescribers from having different confirmation-of-prescription-release requirements for contact lens and eyeglass prescriptions. In addition, the marginal cost of the amendment to the Eyeglass Rule should be relatively low because the Contact Lens Rule already requires prescribers to obtain confirmation of prescription release and to maintain records of such. Some prescribers likely have forms and systems in place already, which may need only minor adjustments to accommodate confirmations for eyeglass prescriptions.

The Commission also adopts the proposed exemption to the confirmation-of-prescription-release requirements for prescribers who do not have a direct or indirect financial interest in the sale of eyeglasses as § 456.4(c).[492] The purpose of such an exemption is to reduce the burden on prescribers who do not sell lenses.

X. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs designated this final rule as not a ''major rule,'' as defined by 5 U.S.C. 804(2).

List of Subjects in 16 CFR Part 456

Advertising, Medical devices, Ophthalmic goods and services, Trade practices.

For the reasons stated in the preamble, the Federal Trade Commission amends 16 CFR part 456 as follows:

PART 456—OPHTHALMIC PRACTICE RULES (EYEGLASS RULE)

■ 1. The authority citation for part 456 is revised to read as follows:

Authority: 15 U.S.C. 57a.

■ 2. Amend § 456.1 by revising paragraphs (a), (b), (d), (e) and (g) to read as follows:

§ 456.1 Definitions.

(a) A *patient* is any person who has had a refractive eye examination.

(b) A *refractive eye examination* is the process of determining the refractive condition of a person's eyes or the presence of any visual anomaly by the use of objective or subjective tests.

* * * * *

(d) *Ophthalmic services* are the measuring, fitting, and adjusting of ophthalmic goods subsequent to a refractive eye examination.

(e) An *ophthalmologist* is any Doctor of Medicine or Osteopathy who performs refractive eye examinations.

* * * * *

(g) A *prescription* is the written specifications for lenses for eyeglasses which are derived from a refractive eye examination, including all of the information specified by State law, if any, necessary to obtain lenses for eyeglasses.

■ 3. Revise § 456.2 to read as follows:

§ 456.2 Separation of examination and dispensing.

It is an unfair act or practice for an ophthalmologist or optometrist to:

(a)(1) Fail to provide to the patient one copy of the patient's prescription immediately after the refractive eye examination is completed and before offering to sell the patient ophthalmic goods, whether or not the prescription is requested by the patient. Such prescription shall be provided:

(i) On paper; or

(ii) In a digital format that can be accessed, downloaded, and printed by the patient, after obtaining verifiable affirmative consent, pursuant to § 456.3.

(2) Provided: An ophthalmologist or optometrist may refuse to give the patient a copy of the patient's prescription until the patient has paid for the refractive eye examination, but only if that ophthalmologist or optometrist would have required immediate payment from that patient had the examination revealed that no ophthalmic goods were required. For purposes of the preceding sentence, the presentation of proof of insurance coverage for that service shall be deemed to be a payment;

(b) Condition the availability of a refractive eye examination to any person on a requirement that the patient agree to purchase any ophthalmic goods from the ophthalmologist or optometrist;

(c) Charge the patient any fee in addition to the ophthalmologist's or optometrist's refractive eye examination fee as a condition to releasing the prescription to the patient. Provided: An ophthalmologist or optometrist may charge an additional fee for verifying ophthalmic goods dispensed by another seller when the additional fee is imposed at the time the verification is performed; or

(d) Place on the prescription, or require the patient to sign, or deliver to the patient a form or notice waiving or disclaiming the liability or responsibility of the ophthalmologist or optometrist for the accuracy of the refractive eye examination or the accuracy of the ophthalmic goods and services dispensed by another seller.

§§ 456.3 through 456.5 [Redesignated as §§ 456.5 through 456.7]

■ 4. Redesignate §§ 456.3 through 456.5 as §§ 456.5 through 456.7, respectively.

■ 5. Add new § 456.3 to read as follows:

§ 456.3 Verifiable affirmative consent to providing the prescription in a digital format.

For a prescription copy provided in a digital format, the prescriber shall:

(a) Identify to the patient the specific method or methods of electronic delivery that will be used, such as text message, electronic mail, or an online patient portal;

(b) Obtain, on paper or in a digital format, the patient's verifiable affirmative consent to receive a digital

copy through the identified method or methods; and

(c) Maintain records or evidence of a patient's affirmative consent for a period of not less than three years. Such records or evidence shall be available for inspection by the Federal Trade Commission, its employees, and its representatives.

■ 6. Add new § 456.4 to read as follows:

§ 456.4 Confirmation of prescription release.

(a)(1) Upon completion of a refractive eye examination, and after providing a copy of the prescription to the patient, the prescriber shall do one of the following:

(i) If a paper copy of the prescription was provided to the patient, request that the patient acknowledge receipt of the prescription by signing a separate statement on paper or in a digital format confirming receipt of the prescription; or

(ii) If a digital copy of the prescription was provided to the patient (via methods including an online portal, electronic mail, or text message, and pursuant to § 456.3), retain evidence that such prescription was sent, received, or made accessible, downloadable, and printable.

(2) If the prescriber elects to confirm prescription release via paragraph (a)(1)(i) of this section, the prescriber may, but is not required to, use the statement, ''My eye care professional provided me with a copy of my prescription at the completion of my examination'' to satisfy the requirement.

(3) In the event the patient declines to sign a confirmation requested under paragraph (a)(1)(i) of this section, the prescriber shall note the patient's refusal on the document and sign it.

(b) A prescriber shall maintain the records or evidence required under paragraph (a) of this section for a period of not less than three years. Such records or evidence shall be available for inspection by the Federal Trade Commission, its employees, and its representatives.

(c) Paragraphs (a) and (b) of this section shall not apply to prescribers who do not have a direct or indirect financial interest in the sale of eye wear, including, but not limited to, through an association, affiliation, or co-location with an optical dispenser.

* * * * *

By direction of the Commission.

April J. Tabor,

Secretary.

Endnotes

[1] 16 CFR 456.2(a). A prescriber may withhold a patient's prescription until the patient has paid for the eye examination, but only if the prescriber would have required immediate payment if the examination had revealed that no ophthalmic goods were needed. *Id.* The Rule defines an ''eye examination'' as ''the process of determining the refractive condition of a person's eyes or the presence of any visual anomaly by the use of objective or subjective tests.'' 16 CFR 456.1. The Commission is changing this term in the final rule text to ''refractive eye examination,'' in order to make it more precise, and differentiate between eye health exams and refractive exams. *See infra* section VI, Final Rule Regarding ''Eye Examination'' Terminology. However, the meaning of the defined term remains the same, and since it has previously been referred to as ''eye exam'' or ''eye examination''—including by commenters—it is frequently referred to as such throughout the SBP.

[2] 16 CFR 456.2(c).

[3] 16 CFR 456.1(g).

[4] 16 CFR 456.2(b). The Rule thereby also prohibits conditioning the release of the prescription on the requirement that the patient purchase ophthalmic goods from the ophthalmologist or optometrist.

[5] 16 CFR 456.2(d).

[6] 16 CFR 456.2.

[8] *See* Eyeglass I Report, *supra* note 7, at 240–48 (detailing myriad accounts of prescribers refusing to release eyeglass prescriptions to their patients); *see also* Final Trade Regulation Rule, Advertising of Ophthalmic Goods and Services, 43 FR 23992, 23998 (June 2, 1978) [hereinafter Eyeglass I Rule] (finding that in nearly every survey of practicing optometrists considered in the rulemaking record, more than 50% imposed a restriction on the availability of eyeglass prescriptions to patients).

[9] Eyeglass I Rule, 43 FR 23998, 24007–08.

[10] *Id.* at 24003.

[11] *Id.*

[12] *Id.* at 23998.

[13] *Am. Optometric Ass'n* v. *FTC,* 626 F.2d 896, 915 (D.C. Cir. 1980). The Court held that the harm arose by making comparison-shopping harder, removing seller incentives to advertise, and reducing opticians' ability to compete. The Court overturned other provisions of the Rule related to bans on State advertising restrictions. *Id.* at 910–11.

[14] *Id.* at 916. Following the court's remand, FTC staff conducted additional investigation and recommended the Commission seek new comment on whether to keep the automatic-prescription-release requirement or change it to release-upon-request. Fed. Trade Comm'n, State Restrictions on Vision Care Providers: The Effects on Consumers (1980), *https://www.ftc.gov/reports/state-restrictions-vision-care-providers-effects-consumers-eyeglasses-ii.* The Commission then sponsored a survey—commonly known as the ''Market Facts Study''—to determine to what extent prescribers were complying with the Rule. The Study found that only a little more than one-third of prescribers were in ''technical compliance'' with the Rule's prescription-release requirement, and only 38% of consumers knew they were entitled to automatically receive their prescription. *See* Fed. Trade Comm'n, Ophthalmic Practice Rules: State Restrictions on Commercial Practice at 256–58 (Oct. 1986), *https://www.ftc.gov/reports/ophthalmic-practice-rules-state-restrictions-commercial-practice-eyeglasses-ii-report-staff* [hereinafter Eyeglass II Report]. Following the Market Facts Study, the Commission did not take any action to revise the Rule.

[15] Eyeglass II Report, *supra* note 14, at 249.

[16] *Id.* at 249, 274–76.

[17] Eyeglass I Rule, 43 FR 23992, 23998.

[18] Eyeglass II Report, *supra* note 14, at 275–76.

[19] Report of the Presiding Officer on Proposed Trade Regulation Rule: Ophthalmic Practice Rules, Public Record No. 215–63 (1986), *https://www.ftc.gov/reports/report-presiding-officer-proposed-trade-regulation-rule-ophthalmic-practice-rules-eyeglass-rule-16* [hereinafter Presiding Officer's Report].

[20] Eyeglass II Rule, 54 FR 10285, 10286–87. In addition to relying on the Market Facts Study, hearing testimony, and the Presiding Officer's Report, the Commission also cited a survey by the American Association of Retired Persons, which found significant non-compliance and continued lack of consumer awareness of their rights, particularly among older consumers. *Id.* at 10303 & nn.180 & 181; *see also* Eyeglass II Report, *supra* note 14, at 263 n.682 (noting that 32% of consumers who did not receive a prescription stated that they did not know to ask for one).

[21] *See Cal. State Bd. of Optometry* v. *FTC,* 910 F.2d 976 (D.C. Cir. 1990). The court overturned provisions related to certain State laws of optometry, which the court found could not be overridden by the FTC without more explicit authority from Congress. Following the court decision, in 1992, the Commission reissued the Eyeglass Rule, but without the portions declared invalid, and with renumbered designations pertaining to prescription release. *See* Final Trade Regulation Rule, Ophthalmic Practice Rules, 57 FR 18822 (May 1, 1992).

[22] Ophthalmic Practice Rules, Request for Comments, 62 FR 15865, 15867 (Apr. 3, 1997).

[23] 15 U.S.C. 7601–7610 (Pub. L. 108–164).

[24] Pursuant to the FCLCA, the Commission promulgated the Contact Lens Rule (''CLR'') on July 2, 2004. Contact Lens Rule, Final Rule, 69 FR 40482 (July 2, 2004) (codified at 16 CFR part 315).

[25] Ophthalmic Practice Rules, Final Rule, 69 FR 5451, 5453 (Feb. 4, 2004) (''2004 ER''). The Commission also made findings that: release of prescriptions enhances consumer choice; no evidence had been submitted that the Rule's restrictions on disclaimers and waivers were no longer needed; the automatic-release provision imposed only a minimal burden on prescribers; and retaining automatic release would keep the Eyeglass Rule consistent with the automatic-release provision of the Contact Lens Rule, 16 CFR part 315.

[26] 2004 ER, 69 FR 5453.

[55] The public comments submitted in response to the NPRM are available on *Regulations.gov* at *https://www.regulations.gov/document/FTC-2023-0001-0001* (''NPRM Comments''). There are 47 comments available at this link. Twenty-seven comments were received in response to the Commission's NPRM, and 20 comments were submitted in response to a subsequent public notice. *See infra* note 59.

[56] Public Workshop Examining Proposed Changes to the Ophthalmic Practice Rules (Eyeglass Rule), Public Workshop and Request for Public Comment, 88 FR 18266 (Mar. 28, 2023) [hereinafter WS Notice].

[57] *Id.* at 18268.

[58] The workshop transcript (along with the agenda and a video recording) is available on the FTC website at *https://www.ftc.gov/news-events/events/2023/05/clear-look-eyeglass-rule* [hereinafter WS Transcript].

[59] The public comments submitted in response to the WS Notice are available on *Regulations.gov* at *https://www.regulations.gov/document/FTC-2023-0001-0029* [hereinafter WS Comments]. There are 47 comments available at this link. Twenty-seven comments were received in response to the Commission's NPRM, and 20 comments were submitted in response to the WS Notice.

[60] The 2020 Contact Lens Rulemaking record includes comments to the CLR RFC; the CLR NPRM; the Public Workshop Examining Contact Lens Marketplace and Analyzing Proposed Changes to the Contact Lens Rule, Public Workshop and Request for Public Comment, 82 FR 57889 (Dec. 8, 2017) [hereinafter CLR WS Notice]; and the CLR SNPRM. Public comments received in response to these notices are available on *Regulations.gov: https://www.regulations.gov/document/FTC-2015-0093-0001* (CLR RFC Comments); *https://www.regulations.gov/document/FTC-2016-0098-0001* (CLR NPRM Comments); *https://www.regulations.gov/document/FTC-2017-0099-0001* (CLR WS Comments); and *https://www.regulations.gov/document/FTC-2019-0041-0001* (CLR SNPRM Comments). *Regulations.gov* has assigned each comment an identification number appearing after the name of the commenter. This document cites comments using the last name of the individual submitter, or the name of the organization and the individual within the organization who submitted the comment, along with the last four digits of the comment identification number assigned by *Regulations.gov.*

[61] The Commission has determined not to disturb that finding, even after analyzing comments suggesting it should do so. *See* section II.A, *infra.*

[62] *See* section II.A.1.a, *infra* note 126 and text, noting that two third-party surveys of eyeglass wearers reveal that the number of consumers not receiving their eyeglass prescription automatically after a refractive exam ranges from 25.6 million to 55.3 million a year (based on the Commission's estimate that 82.5 million consumers visit their eye care prescriber for a refractive exam each year). These figures are generally consistent with multiple prior surveys of contact lens users, which found significant percentages of contact lens users were not receiving their prescriptions from their prescribers following their exams, and provided an impetus for the adoption of a confirmation-of-prescription-release requirement in the CLR amendments of 2020. *See* section II.A.1.a, *infra* note 124; *see also* CLR Final Rule, 85 FR 50687.

[63] *See* 16 CFR 315.3.

[64] This final rule does not revisit some amendments that the Commission previously determined not to propose; namely, amending the Rule to require prescribers provide additional copies of eyeglass prescriptions; to require that prescribers respond to third-party seller requests for copies of, or verification of, prescriptions; or to set an expiration date for eyeglass prescriptions. In the NPRM, the Commission determined it did not need to seek further comment on these issues, and explained its rationale for not proposing these amendments. *See* NPRM, 88 FR 266–67 (additional copy), 271–73 (third-party seller requests), and 277–79 (expiration date).

[65] American Academy of Ophthalmology (''AAO''), ''Eye Health Statistics,'' *https://www.aao.org/newsroom/eye-health-statistics.* Estimates as to the number of

ophthalmologists vary, with some putting the number at closer to 17,000. Richard Edlow, ''By the Numbers: How Many ODs Are Actually Practicing Medical Eyecare,'' Rev. of Optm. Bus. (Nov. 3, 2021), *https://reviewob.com/by-the-numbers-how-many-ods-are-actually-practicing-medical-eyecare/.*

[66] In some States, optometrists can prescribe medicine and perform certain surgeries. AOA, ''What's a doctor of optometry?'' *https://www.aoa.org/healthy-eyes/whats-a-doctor-of-optometry*?

[67] Bureau of Labor Statistics, U.S. Dep't of Labor, Occupational Outlook Handbook, Optometrists, *https://www.bls.gov/ooh/healthcare/optometrists.htm.* Estimates as to the number of optometrists vary, with some putting the number at closer to 48,000. Edlow, *supra* note 65.

[68] Management & Bus. Acad. for Eye Care Prof'ls, ''Best Practices of Spectacle Lens Mgmt'' 2 (2015) (estimating revenue from prescription eyewear sales at 44% of total practice revenue, with contact lens sales revenue at 16%, eye exam revenue at 21%, and medical eye care revenue at 17%), *https://files.optometrybusiness.com/Best%20Practices%20Spectacle%20Lenses.pdf, see also infra* note 174, Lovejoy (WS Transcript at 19) (noting that data he has seen over the years shows that between 50–60% of gross revenues for practitioners who dispense eyewear is derived from product sales).

[72] Vision Council, ''VisionWatch—The Vision Council Market Analysis Report,'' at 17 (Dec. 2019) [hereinafter VisionWatch Report].

[73] Determining the precise number of adults, and adult eyeglass wearers, in the United States at any given time, is not possible, and estimates will change every year. According to the U.S. Census Bureau, in 2020 there were 258.3 million adults in the United States. ''U.S. Census Bureau, Age and Sex Composition: 2020,'' 2020 Census Briefs (2023), *https://www2.census.gov/library/publications/decennial/2020/census-briefs/c2020br-06.pdf.* Meanwhile, four different surveys of U.S. residents in 2021 and 2022 by The Vision Council found that 61–65% of adults wear glasses, which equates to approximately 158–168 million adults who wear eyeglasses, based on the 2020 census. Vision Council Consumer inSights reports 2022 Q1, Q2, Q3, Q4. In its NPRM, the Commission used a prior Vision Council estimate of 165 million adult eyeglass wearers, NPRM, 88 FR 252, which is within the 158–168 million range.

[100] Michaels (WS Transcript at 11).

[101] Sanders (WS Comment #0043) (Dr. Sanders' calculation is based on comparing his assumptions about the number of complaints received by the FTC to his estimate that prescribers perform 236 million refractions every year, an estimate the FTC has not seen evidence supporting); *see also* Coast Eyes Pllc (WS Comment #0046) (''Nothing is broken here. Patients get their prescription without conflict. . . . Prescribers are historically >99.9% compliant in the market's current state.'') Coast Eyes Pllc is operated by Dr. Sanders.

[102] AOA (WS Comment #0047 submitted by Benner).

[103] While the ophthalmic community has repeatedly stated that overall prescriber compliance with prescription release is extremely high, the community has not offered the FTC a consumer survey on this issue, despite repeated comments from the Commission noting the absence of empirical evidence to support their claim of substantial compliance, or to rebut the multiple consumer surveys in the record which show prescriber non-compliance. *See* NPRM, 88 FR 260 (''the Commission notes, as it did in the CLR Final Rule, that despite multiple opportunities and requests for comment since 2015, the Commission has yet to find or receive any reliable consumer-survey data rebutting or contradicting the submitted findings [showing compliance problems] for either contact lens users or eyeglass wearers, or establishing (other than anecdotally) that consumers consistently receive their prescriptions from prescribers.''). Indeed, when suggesting that the Commission consider the NERA survey, the AOA referenced the repeated comments from the Commission about the lack of survey data evidencing compliance. AOA (WS Comment #0047 submitted by Benner).

[104] AOA (WS Comment #0047 submitted by Benner).

[105] *Id.* According to Dr. Andrew Stivers from NERA Consulting, the survey did not specifically ask about compliance with the Rule's automatic-prescription-release requirement because the survey was not designed to examine compliance, but rather to examine consumer conduct and shopping habits for eyewear and, consequently, explore the ongoing *need* for consumers to possess a copy of their prescription. According to Dr. Stivers, whether prescribers are automatically providing patients with their prescriptions is not as relevant if the manner in which consumers purchase eyewear indicates that they don't suffer harm (or as great a harm) from not having their prescriptions released automatically. ''I do not address the Commission's contention of significant non-compliance with automatic release, although the provided evidence suggests a relatively limited problem, and does not provide evidence linking such a problem to harm today.'' Stivers (NPRM Comment #0018).

[106] AOA (WS Comment #0047 submitted by Benner).

[107] It is also not certain that there were not more than three respondents who mentioned a prescriber's failure to release their prescription. According to NERA, due to budgetary constraints, responses to open-

ended questions were not formally coded and reviewed. Rather, NERA searched all open-ended responses for variations of the words ''prescription,'' ''Rx,'' ''had to,'' ''forced,'' ''made to,'' ''choice,'' and ''pressure.'' AOA (WS Comment #0047 submitted by Benner). The three consumers who raised the issue of failure to release the prescription were identified via this search. It is possible, however, that additional respondents may have referenced a prescriber's failure to release prescriptions but used words or phrases that did not show up during NERA's targeted search, and the Commission did not receive the responses to the open-ended questions. This adds to the challenge of ascribing weight to, or drawing conclusions from, responses (or the lack of responses) to open-ended survey questions.

[108] *See* CLR Final Rule, 85 FR 50676; CLR SNPRM, 84 FR 24674–75. By some estimates, less than 5% of actual fraud victims file complaints, and for consumer complaints about FTC rule violations the percentage drops even further, perhaps because filing a complaint requires that consumers know what an FTC rule specifies, that it has been violated, and how to complain to the FTC about it. *Id.* It has generally been the Commission's experience that while a large number of complaints can indicate a rule compliance problem, a dearth of complaints does not necessarily indicate that there isn't a rule compliance problem.

[109] Neilly (WS Transcript at 16).

[110] Warby Parker (ANPR Comment #0817 submitted by Kumar). The October 2015 SurveyMonkey online survey was comprised of 1,329 respondents recruited from a sample that was U.S. Census-balanced and representative of the national distribution of major demographic factors, including age, gender, geography, and income. Respondents were not informed of the identity of the survey sponsor. Survey respondents who had purchased eyeglasses within the last three years (65% of the total respondents) answered questions about prescription information, purchase behavior, and prescriber experience. Within the set of respondents who had purchased within the last three years, 54% had purchased within the last 12 months. There were no significant differences in responses regarding automatic prescription release between those who had purchased within the last year and those who had purchased between one and three years prior to the survey. The significant difference in automatic-release compliance between optometrists and ophthalmologists may be due to the fact that fewer ophthalmologists sell eyeglasses, and might thus have less incentive to withhold a consumer's prescription, but the survey did not directly explore this issue. *See* ER NPRM, 88 FR 260 note 174.

[111] *Id.*

[112] ''FCLCA Study, Focus on Prescription (Rx)'' at 2, 9, attached as Exhibit B to 1–800 CONTACTS's comment in response to the FTC's 2015 Request For Comment (CLR RFC Comment #0555 submitted by Williams), *https://www.regulations.gov/comment/FTC-2015-0093-0555,* showing that of 303 eyeglass wearers surveyed, only 61% reported receiving a ''hard copy'' of their prescription at their last eye exam. Of that 61% who received a copy of the prescription, the poll found that 55% were given the copy automatically (in other words, approximately 34%—55% of 61%—of the total eyeglass wearers surveyed were given a copy in full compliance with the Rule), 31% of the 61% were not given a copy automatically but requested their prescription and were given it immediately in response (19% of the total surveyed), and 14% of the 61% were not given a copy of their prescription, asked for it, and were told to call the office or return for it at a later time (8.5% of the total surveyed). 39% of the total eyeglass users surveyed were not given a copy and did not ask for it, and thus never received a copy of their prescription. The survey was sponsored by 1–800 CONTACTS but conducted by an independent third-party polling firm, SSI, and respondents were not informed of the identity of the survey sponsor. As explained *infra* note 124, the Commission has recognized some concerns about the methodology used for this survey, particularly the use of the word ''hard copy,'' and the lack of an ''I don't know'' response option for some questions, but believes that the information remains strongly suggestive of non-compliance, particularly when viewed in conjunction with information from other sources and the absence of contradictory data.

[113] *Id.*

[114] *See* Coast Eyes Pllc (WS Comment #0046) (''The 'data/surveys' provided to the FTC that they are guiding their decision on come from online retailers who have a HUGE conflict of interest.'').

[115] AOA (WS Comment #0047 submitted by Benner) (''We [ ] question the FTC deriving much of its eyeglass rulemaking from its rulemaking on contact lenses. The eyeglass market and contact lens market have unique characteristics.'').

[116] *Id.* (quoting NERA Report). It was also noted that the median age of eyeglass patients is likely to be higher than that for contact lenses, and older patients are more likely to be confused or bothered by the need to sign a confirmation document. Repka (WS Transcript at 38–39).

[117] AOA (WS Comment #0047 submitted by Benner) at 25 (''[G]lasses purchasers are 10 percentage points more likely to consider other options for where to purchase.'').

[118] *Id.* A primary difference between eyeglass and contact lens examinations and prescriptions is that contact lens exams involve a lens ''fitting,'' in which consumers try on the lenses, and prescriptions are only provided after the fitting is complete. Fittings can sometimes entail sending consumers home with a set of lenses to try out for a few days, and thus sometimes the prescriber will not provide the prescription until after this process. This can lead some consumers to think they should have been provided their prescriptions when, in fact, the fitting was not yet complete. There is no such fitting for eyeglass prescriptions. *See also infra* note 123 (discussing how the different processes can affect survey results about prescription release).

[119] *See* CLR Final Rule, 85 FR 50675; CLR SNPRM, 84 FR 24673.

[120] Warby Parker (ANPR Comment #0817 submitted by Kumar).

[121] ''FCLCA Study, Focus on Prescription (Rx)'' at 2, 9, *supra* note 112.

[122] In particular, these survey results could not have been affected by some consumers erroneously thinking they should have received their prescriptions when, in fact, their contact lens fitting had not been finalized, since eyeglass prescriptions do not entail a fitting, and there is little or no reason for a consumer to think their eyeglass prescription had been finalized when, in fact, it hadn't been.

[123] *See supra,* note 118, explaining the fitting process for contact lenses. In theory, the differences between the contact lens prescription process and the eyeglass prescription process should mean that fewer eyeglass patients are confused as to whether they did or did not receive their prescriptions when they were supposed to. The fact that the percentage of eyeglass users surveyed who said they did not receive their prescriptions is similar, or even higher than that of contact lens wearers surveyed adds considerable credence to both types of surveys, and provides further support for the conclusion that a substantial number of consumers are not automatically receiving their prescriptions from prescribers as the Eyeglass Rule requires.

[124] The results from the individual consumer contact lens surveys are as follows: (1) June 2019 survey by Dynata (formerly known as SSI) on behalf of 1–800 CONTACTS of 1,011 contact lens users found that 21% said they never received their prescriptions (1–800 CONTACTS (CLR SNPRM Comment #0135 submitted by Montclair)); (2) January 2017 survey by Caravan ORC International on behalf of Consumer Action of 2,018 adults found that 31% of contact lens users said that at their last eye exam, their doctor did not provide them with a paper copy of their prescription (Consumer Action (CLR NPRM Comment #2954 submitted by Sherry)); (3) December 2016 survey of 1,000 contact lens users by SSI on behalf of 1–800 CONTACTS found that 24% of consumer respondents said they did not receive their prescription (1–800 CONTACTS (CLR NPRM Comment #2738 submitted by Williams)); (4) May 2015 SSI survey of 2,000 contact lens wearers found that 34% said they did not receive their prescription (1–800 CONTACTS (CLR RFC Comment #0555 submitted by Williams, Ex. C)); and (5) November 2014 SSI survey of 2,000 contact lens wearers found that 34% said they did not receive their prescription (1–800 CONTACTS (CLR RFC Comment #0555 submitted by Williams, Ex. C)). As noted in the CLR SNPRM, the manner in which a few of the questions were phrased in the 2014 and 2015 surveys raised some Commission concerns, since some questions were leading, lacked an ''I don't know'' response option, and used a term—''hard copy''—which not all consumers may understand. The more recent surveys represented an improvement because they included an option for respondents to acknowledge that they do not recall whether they received their prescriptions, and used the term ''paper copy'' rather than ''hard copy.'' CLR SNPRM, 84 FR 24672.

[125] *See* CLR Final Rule, 85 FR 50675.

[126] *See* section I.D.4, *supra* note 62. Since it is estimated that 165 million Americans regularly wear prescription glasses, and that each patient visits their eye care prescriber every two years for a refractive exam, the number of consumers not receiving their prescription automatically could be as high as 55.3 million a year, based on the Survey Sampling International survey, or 25.6 million, based on the SurveyMonkey poll. Multiple surveys in the record of contact lens users find similar non-compliance with prescription release requirements.

[127] Eyeglass I Rule, 43 FR 24003 (''[I]t is the Commission's finding that the failure to release ophthalmic prescriptions and related practices are unfair acts or practices,'' and such practices ''offend public policy in that they deny consumers the ability to effectively use available information and inhibit the functioning of the competitive market model.'').

[151] Stivers (WS Transcript at 20).

[152] Some prescribers are known to engage in a practice referred to as ''prescribing from the chair,'' in which prescribers recommend certain eyewear purchases to patients while the patients are still in the exam room. This is touted as a means of increasing prescribers' eyewear-sale capture rate. *See, e.g.,* Dr. Gayle Karanges, ''The 4 Most Powerful Ways I Prescribe from the Chair and Contribute to an 82% Eyewear Capture Rate,'' Rev.of Optm. Bus. (Apr. 7, 2021) (''Patients often view doctors, including optometrists, as authority figures. With that status, you have an opportunity to influence patients in their decision to follow your treatment plan and purchase the eyewear you have prescribed.''), *https://reviewob.com/the-4-most-powerful-ways-i-prescribe-from-the-chair-contribute-to-an-82-eyewear-capture-rate/*; Practice Tips by First Insight Corporation, ''How to Calculate and Increase Your Optical Capture Rate,'' Jul. 6, 2021 (describing how one doctor ''recommends and prescribes the eyewear needs while the patient is still in the exam chair . . . [and] then invites and guides the patient to the optical department, introducing the eyewear layout''), *https://www.first-insight.com/blog/calculate-increase-optical-capture-rate/.* The FTC is unaware how widespread this practice is, but it has concerns that such practices can further blur the line between medical practice and retail sales, and increase the risk that patients may feel undue pressure to purchase eyewear from their prescriber.

[153] Michaels (WS Transcript at 13).

[154] As an example, surveys from The Vision Council have found that 83% of consumers who recently had an eye exam and bought glasses said they purchased the glasses from their prescriber. The Vision Council, Consumer inSights Q1 2022. One interpretation of this might be that only 17% of consumers benefit from having a copy of their prescription with which to shop elsewhere. This seems supported by the NERA survey showing convenience is the most important factor in a consumer's decision as to where to buy glasses. On the other hand, another interpretation is that 83% of consumers buy glasses from their prescriber because many were not given their prescription, and they either felt uncomfortable demanding it or did not know that they could. This interpretation could also be supported by the NERA survey, since the survey found that price is the second-most important factor for consumers deciding where to purchase glasses, and buying glasses from a prescriber is often more expensive than other options. Because so many consumers do not currently receive their prescription after each exam, looking to their current conduct and behavior to determine what would happen if they did receive their prescription involves a great degree of speculation.

[155] *See, e.g.,* Lovejoy (WS Transcript at 15); National Taxpayers Union (NPRM Comment #0028 submitted by Sepp) (stating that the Eyeglass Rule has been a huge ''boon'' to competition in the marketplace).

[156] Lovejoy (WS Transcript at 15).

[157] Eyeglass I Rule, 43 FR 24003 (declaring that Rule § 456.7 (now § 456.2), which provides it is an unfair act or practice for a refractionist to fail to release a prescription immediately after the eye examination is completed, is justified ''both as a specific delineation of an unfair act or practice as well as a remedy to implement the right to advertise.'').

[158] *See, e.g.,* Montaquila (WS Transcript at 32) (patients already understand what their choices are before they even come in for an exam); Michaels (WS Transcript at 14) (noting that most patients seem to be evaluating their purchase options before they visit their prescriber).

[159] *See, e.g.,* Neilly (WS Transcript at 16) (''Before I got this notification [about the Eyeglass Rule workshop], I wasn't even aware of an eyeglass rule.''); Anonymous (WS Comment #0030) (''Being able to have a prescription in your hands as soon as the examination is done would be very beneficial.'').

[160] Brown (WS Transcript at 17). Dr. Stivers noted in a comment that a Commission-sponsored survey in 1981 (the Market Facts Survey) found that a significant percentage of consumers, even then, were aware that they did not have to buy eyeglasses from their examining eye doctor and could ask for their prescription. Stivers (NPRM Comment #0018) at 9. This is not incorrect (the Market Facts Survey results indicated that ''a large majority of consumers are knowledgeable enough to request an eyeglass prescriptions if they want one,'' Eyeglass II Report, *supra* note 14, at 262), but it should be noted that another survey conducted around that time (in 1985, by the American Association of Retired People) found that 83% of consumers—particularly the elderly—remained unaware of their right to ask for their prescription. Presiding Officer's Report at 22. It may also be worth noting that the format and phrasing of the Market Facts Survey questions may have been flawed (and came under criticism) because consumers were simply asked whether it was true or false that ''once a person decides where to have his eye examined, he must purchase his eyeglasses from his doctor,'' creating the possibility that some consumers answered ''false'' not because they understood they were free to take their prescription and shop elsewhere, but rather because they knew they

could not be forced to buy eyeglasses if they didn't want to. Eyeglass II Report, *supra* note 14, at 259–61. The Commission, after reviewing both the Market Facts and AARP surveys, and other evidence in the record, ultimately concluded at that time that ''there continues to be a lack of consumer awareness about prescription rights.'' Eyeglass II, 54 FR 10303. The two surveys are now roughly 40 years old, and more recent surveys show that many consumers are not fully aware of their prescription rights. *See infra* notes 161–163 and text.

[161] As with the SSI survey referenced above, the 2015 survey performed on behalf of 1–800 CONTACTS was submitted during the Contact Lens Rule review, but it was a poll of eyeglass wearers and is therefore on point. 1–800 CONTACTS (CLR NPRM Comment #2738 submitted by Williams). As noted during the Contact Lens Review, the manner in which the consumer awareness questions were phrased in the survey submitted by 1–800 CONTACTS did raise some concerns about the weight that should be accorded to the results. In particular, the questions were leading and used a term—''hard copy''—that some consumers might not understand. On the other hand, the question's phrasing may have led to under-reporting by consumers who did not want to acknowledge that they were unaware of their rights under Federal law (this is known as social-desirability bias). *See* Diamond, *Reference Guide on Survey Research,* in Reference Manual on Scientific Evidence, 2nd. ed., 248–64 (Federal Judicial Center 2000), *https://wwws.law.northwestern.edu/faculty/fulltime/diamond/papers/referenceguidesurveyresearch.pdf;* Floyd Jackson Fowler, Jr., *How Unclear Terms Affect Survey Data,* The Public Opinion Quarterly (Summer 1992), *https://www.jstor.org/stable/2749171; see generally,* Carl A. Latkin, et al., *The relationship between social desirability bias and self-reports of health, substance use, and social network factors among urban substance users in Baltimore, Maryland,* 73 Addictive Behaviors 133–36 (2017), *https://www.sciencedirect.com/science/article/abs/pii/S0306460317301752?via%3Dihub* (social desirability bias is the tendency of survey respondents to answer questions in a manner that will be viewed favorably by others, and can skew survey results by over-reporting attitudes and behaviors that may be considered desirable attributes, while underreporting less desirable attributes). Social-desirability bias in this instance likely serves to artificially lower the number of patients unaware of their right to their prescription. In other words, the way the question was phrased could lead to results that make it appear that more patients are aware of their rights than is, in fact, the case. *See* ''FCLCA Study, Focus on Prescription (Rx),'' attached as Exhibit B to 1–800 CONTACTS (CLR RFC Comment #0555 submitted by Williams) (One question was phrased, ''Are you aware that it is your right under federal law, as a patient to receive a hard copy of your contact lens/eye glasses prescription from your eye exam provider?'' and the other asked, ''Are you aware of the following . . .—Your eye exam provider cannot charge you for an actual hard copy of your prescription?'').

[162] CLR SNPRM, 84 FR 24675 (citing a Caravan ORC International survey submitted by Consumer Action (CLR NPRM Comment #2954 submitted by Sherry) and SSI survey submitted by 1–800 CONTACTS (CLR NPRM Comment #2738 submitted by Williams)).

[163] *See* Consumer Action (CLR NPRM Comment #2954 submitted by Sherry) (noting survey results showing that 65% of Hispanics and 63% of African Americans were unaware of their prescription rights, compared to 58% of white Americans surveyed, and that Hispanics were less likely to be given copies of their prescriptions after their contact lens exams); National Hispanic Med. Ass'n & League of United Latin Am. Citizens (CLR SNPRM Comment #0146 submitted by Benavides) (''Our community continually has been victimized and denied their prescriptions by prescribers and doctors at a higher rate than most other Americans''); League of United Latin Am. Citizens (CLR NPRM Comment #2336 submitted by Wilkes) (noting that many ''working families'' take time off from work to visit their eye doctor because they believe their eye doctor is the only place to buy eyewear).

[164] CLR SNPRM, 84 FR 24675; *see also supra* note 152 and text, noting that some prescribers blur the separation between exams and retail dispensing as a means of improving their eyeglass sales ''capture rate.''

[165] CLR SNPRM, 84 FR 24675.

[173] Eyeglass I Rule, 43 FR 23992. *See* section I.B, *supra* (discussing the history and purpose of the Rule).

[174] In most medical fields, a prescriber is prohibited from selling the product that they prescribe so as to prevent potential conflicts of interest. *See generally* Limitation on Certain Physician Referrals (commonly known as the ''Stark Law'') 42 U.S.C. 1395nn, (prohibiting physician self-referral, including for outpatient prescription medications); Anti-Kickback Statute, 42 U.S.C. 1320a–7b(b) (prohibiting physicians from receiving compensation for a prescription referral). While there are a few other medical professions apart from eyecare—such as veterinary care—in which the prescriber may sell what they prescribe, the Commission is unaware of another field in which prescribers generate such a substantial share of their income from commercial product sales. *See* Lovejoy (WS Transcript at 19) (''I do think that optometry is unique among the healthcare professions in the amount of revenue, the percentage of the total revenue that comes from product sales, the products that they prescribe. The surveys that I've seen and information over the years shows it consistently staying over 50%, maybe as high as 55 or 60% of gross revenues comes from product sales in the practitioners that are dispensing optometrists.''); NAROC (WS Comment #0049 submitted by Neville) (''Private dispensing optometrists today still make most of their revenue from selling the eyewear that they prescribe. These optometrists have a strong incentive to improve the 'capture rate' of in-office eyewear sales to their patients.'').

[175] H.R. Rep. No. 108–318 at 5 (2003); *see also* Letter from Senators Richard Blumenthal and Orrin G. Hatch of the U.S. Senate Regarding the Contact Lens Rule Rulemaking Proceeding & the Proposed Rule Set Forth in the Notice of Proposed Rulemaking (Aug. 11, 2017), *https://www.ftc.gov/system/files/filings/initiatives/677/public_comment_from_senators_blumenthal_and_hatch_re_contact_lens_rulemaking.pdf* (these comments were made in reference to the contact lens marketplace, but the same potential conflict of interest exists when eyeglass prescribers also sell eyeglasses to their patients).

[176] Eyeglass I Report, *supra* note 7, at 265.

[177] The ophthalmic community and its representative associations were once fervent advocates for the ''total vision care'' approach to eyecare, and argued that patients received the best care when they obtained glasses and contacts from the same eye doctor who examined them and determined their prescription. *See* Eyeglass I Report at 236–39. While the AOA no longer publicly advocates for ''total vision care,'' some prescribers still occasionally comment to the FTC that patients would be best served by a total-vision-care approach.

[178] *See* section I.D.5, *supra,* discussing the benefits of in-person eyeglass fittings.

[179] This is a different situation from patients complaining that they did not

receive their prescription from their prescriber even after paying for their exam, or had to ask for their prescription in order to get a copy. There is much less room for consumer confusion with respect to those types of complaints than for complaints that consumers had to pay for their prescription.

[180] The majority of patients who go in for an eye exam and need new glasses do end up purchasing them from their prescriber. According to data from The Vision Council, 83% of consumers surveyed who recently had an eye exam and bought glasses said they purchased the eyewear from their prescriber. The Vision Council, Consumer inSights Q1 2022. This is true even though, on average, prescribers charge significantly higher prices for eyeglasses than other alternatives such as online eyeglass sellers. The Vision Council, Market inSights 2019–2022.

[181] 16 CFR 456.2(a).

[182] There are situations where a doctor may conduct a refractive exam on a patient but then use his or her professional judgment to refrain from writing a prescription for corrective eyewear. *See* Lovejoy (WS Transcript at 56) (''[C]onsumers may want a prescription when they shouldn't have one [for medical reasons], and the potential prescriber, the physician or optometrist, ought to have the ability to say, 'No, I'm not prescribing eyewear for you for the following reasons.' And make a note of that in the record.''). In such situations, the prescriber would have no reason to offer to sell the patient eyewear and would be prohibited from doing so under the Rule.

[183] Panelists at the workshop discussed whether greater clarity in the Rule could help ensure that patients have their prescription in hand before being invited to purchase eyeglasses. *See* Aceto (WS Transcript at 52) (''That's one concern that some of our optician members have had some concerns with, and that is at the end of the actual doctor's exam, oftentimes they're directed to the dispensary just as a matter of course, and they purchase [eyeglasses] at the end of the actual [exam]. And the copays, the exam fees, the glasses are all taken [together]. Then they said, here's your eyeglass prescription. And some of our members have asked, is there a way that we could clarify that the prescription should come to them at the end of the doctor's experience?'').

[184] The Commission realizes that some eye care practices advertise a bundle where the consumer pays a fixed price for an eye examination and one or more pairs of frames, or complete eyeglasses. Such an offer may also be advertised as an opportunity to obtain a free eye exam with the purchase of eyeglasses. The amendment to the Rule's wording is not intended to change those practices' ability to make, and lawfully deliver upon, such offers. However, the prescriber must still provide the prescription to the patient before offering to sell them eyeglasses. By doing so, the patient should have the choice to take advantage of the advertised bundle, or to pay the practice's routine cost of an examination and walk away with no eyeglasses, but with their prescription. The exam cannot be contingent on the purchase of eyeglasses, as stated in the Rule. *See* 16 CFR 456.2. The Commission has provided guidance with respect to the Contact Lens Rule for similar bundles of eye exams offered with contact lenses, instead of eyeglasses. In that context, the Commission has stated that a prescriber is not prohibited from offering a bundled package of an eye examination and contact lenses, provided that consumers have an option to purchase the eye examination separately and still receive their prescription. Contact Lens Rule, Final Rule, 69 FR 40482, 40494. A similar result is appropriate here.

[192] OAA (NPRM Comment #0020 submitted by Allen) (''OAA believes that this revision ensures that the FTC's regulatory language is keeping pace with updates in technology.''); 1–800 CONTACTS (NPRM Comment #0025 submitted by Montclair) (''1–800 also supports . . . allowing prescribers to release a prescription in digital format with a patient's verifiable affirmative consent to a specific method for digital delivery.''); Aceto (WS Transcript at 42) (''[F]rom the optician standpoint and those who fill the prescription, it's sort of brilliant. Because again, we're keeping up with our current status of technology. It helps people, it's an all about an access type thing, and I think that that's a really, really good option.'').

[193] AOA (NPRM Comment #0023 submitted by Benner).

[194] NAROC (NPRM Comment #0024 submitted by Neville).

[195] Anonymous (NPRM Comment #0007) (''Most practices have an EMR system that also has a patient portal. Most of these patient portals provide access to the eye glass prescription. This new 'rule' is not necessary. If there is ever a question, the EMR system will always have a copy of the prescription available for anyone that wants it.''); Anonymous (NPRM Comment #0011) (''In 2009 The Hitech Act was passed which assured the use of electronic medical records. The EMR (The Electronic Medical Records Mandate) requires healthcare providers to convert all medical charts to a digital format. Incurring more costs on businesses for storage, paper, ink, private and government payroll, etc., is not an [ ] economically intelligent idea in a recession driven economy.''); Michaels (WS Transcript at 7) (''in my experience, 100% of the prescriptions that are coming out of our offices are automatically uploaded electronically to a portal the very second that the prescription is finalized. . . . That was the most important piece of the MIPS program that Medicare had. It mandated that patients get access to their portals. And so, in our experience, the vast majority of our patients don't want paper copies of the prescription. They want electronic copies so that they can have access in their phone and access at 2:00 in the morning, whenever they want it.'').

[196] Anonymous (NPRM Comment #0006). *See also* Rosemore (WS Comment #0045) (''As an optometrist, the added requirements would be a significant burden on my practice. Requiring more paperwork, consents, data storage, and time makes the cost of doing business go up significantly.'').

[197] One workshop participant suggested that prescribers who use electronic health records should not be required to transcribe an electronic prescription into a handwritten one, as this could introduce errors into the prescription. *See* Montaquila (WS Transcript at 22) (''Handwriting prescriptions after generating one in an electronic format increases time and cost, and is not risk-free. Researchers at Weill Cornell Medical College found error rates of 30 per 100 written prescriptions, and only seven per 100 electronic prescriptions. Now, that of course was from medications, but I would propose that contact lenses are no less complex when written on a sheet of paper.''). The FTC's requirement that patients be given the option to receive a paper copy would not necessitate a prescription to be converted from an electronic record to a handwritten one; instead the prescription could be printed out on paper, as was described by other workshop participants. *See* Hyder (WS Transcript at 53) (''If it's coming from the EHMR, I tend to get that when I'm checking out because it's being printed someplace other than the exam room.'').

[198] *See, e.g.,* U.S. Dep't of Health & Human Servs., The Office of the National Coordinator for Health Information Technology (''ONC''), ''Do I Need to Obtain Consent From My Patients to Implement a Patient Portal?,'' *https://www.healthit.gov/faq/do-i-need-obtain-consent-my-patients-implement-patient-portal* (noting that the Health Insurance Portability and Accountability Act (''HIPAA'') permits the disclosure of health information to the patient without requiring the patient's express consent and that portals are ''an excellent way to afford patients access to their own information and to encourage them to be active partners in their health care.'').

[203] *Id.*

[204] U.S. Dep't of Health & Human Servs., ONC, ''Individuals' Access and Use of Patient Portals and Smartphone Health Apps, 2022,'' *supra* note 200.

[205] *See, e.g.,* Hyder (WS Transcript at 43) (''I would say that we're supportive of giving the option for digital prescriptions. But again, we would agree with not mandating that every type of digital option be available.''); Beatty (WS Transcript at 42) (''I think we do have to be careful with how we consider that delivery though. Requirements for that delivery to include all of the methods, including SMS and MMS, would or could actually produce new burden. Not everyone who delivers these things electronically has access to an SMS system or an MMS system. And so we'd want to be able to provide the possibility of delivering them electronically, but also allow for the provider to have the choice of how the electronic delivery would occur.'').

[206] NAROC (NPRM Comment #0024 submitted by Neville) (''We note with approval that the prescriber will not be required to offer a digital copy of the prescription, which some prescribers may not be able to offer. But we also suspect that those prescribers using digital release for contact lenses will likely use it for eyeglass prescriptions as well, again, adding efficiency to office operations.'').

[207] Lovejoy (WS Transcript at 45) (''Well, I do think it is easier . . . if a patient can get a prescription through email either directly of the prescription itself or to a link to a website or a portal where they can obtain it. And anecdotally I've heard reports of being able to be standing at the office desk checking out and having the prescription emailed to you before you leave the office. It's in your iPad or your iPhone and ready to be used wherever you might want to use it.''); Hyder (WS Transcript at 45) (''I would say that it gives providers more ability to comply, but I can't say that we have data to show that it improves compliance.'').

[208] NPRM Comment #0006 (''What happens when they access their portal and print the prescription off from there? Will our portals have to update to require a signature as well?'').

[209] Repka (WS Transcript at 26) (''And then if a patient gets it in the portal, which in our portal is simple, they just go on if they have it, they can download it. They don't actually need to provide a signature. So we send a note asking for a signature, and we never get those returned because the patient doesn't have to. And the modules aren't set up in the EMR to be compliant with that. So they get a notification. If they happen to send it back, of course they have to print it, sign it, scan it, and then figure out how to upload it into the portal. And then the staff have to actually take it from the portal and put it into the right record so that it can be retained.'').

[210] Prescribers are also not required to obtain signed confirmations for contact lens prescriptions that are delivered digitally, provided the prescriber complied with the CLR's requirement for obtaining and storing a record of a patient's verifiable affirmative consent to digital delivery. 16 CFR 315.3(c)(1)(i)(D). Instead, the prescriber need only retain evidence that the prescription was sent, received, or made accessible, downloadable, and printable—evidence that will typically be electronic and automatic via the email, text, or portal method used by the prescriber. *Id.*

[211] *See* section III, *infra.*

[212] Anonymous (NPRM Comment #0006) (''We already have a record of the prescription on file for the patient and most EHRs track when they are printed out.''); Lovejoy (WS Transcript at 10) (the requirement, as proposed, ''sounds like it would not be difficult to have a record of the patient receiving access to their prescription through [the] portal, so that would not seem like a significant burden.'').

[213] Lovejoy (WS Transcript at 10).

[214] Beatty (WS Transcript at 43) (''So if a portal could possibly be confusing, having a website where the patient can enter rudimentary data and then get back just the prescription information that they were looking for should be acceptable too.'').

[215] Montaquila (WS Transcript at 23) (''[The electronic] approach is not without challenges. The method requires many steps and a secure system for data transmission. Additionally, some electronic health record systems cannot automatically transmit the eyeglass or contact lens prescription to the patient portal. So when a patient requests an electronic copy of their prescription in those scenarios, the doctor must first print the prescription, attach it to an email, and then send it to the patient. For storage, it is possible to attach the information to the patient's medical record, but colleagues report that some electronic health record systems impose costs to store data over time. So using this method for them would increase the doctor's cost in perpetuity.'').

[216] Through the 21st Century Cures Act, Congress authorized HHS to take action to promote the interoperability of health IT, support the use, exchange, and access of electronic health information, and limit information blocking. 21st Century Cures Act, Public Law 114–255, Title IV (2016). The Cures Act Final Rule, promulgated by the U.S. Dep't of Health & Human Servs., ONC, requires healthcare providers to enable patient access to enumerated classes of data in their electronic health record systems. ONC, 21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program, Final Rule, 85 FR 25642 (May 1, 2020). These data classes include providers' clinical notes and information on medications, and the ONC noted in the latest update (Version 4 from July 2023) to the United States Core Data for Interoperability (USCDI) that the definition of ''clinical tests'' includes ''visual acuity exam.'' ONC, *HealthIT.gov,* Interoperability Standards Advisory (ISA), Clinical Tests, USCDI V4, *https://www.healthit.gov/isa/uscdi-data-class/clinical-tests#uscdi-v4.* While this decision may result in consumers having greater access to their prescription information in their EHRs, it does not directly impact prescribers' obligations for automatic prescription release under the Eyeglass Rule.

[217] Brown (WS Transcript at 7) (''it is very concerning that patients might not understand how to access their prescriptions. It's wonderful that patients are . . . requesting or desiring these prescriptions to be available to them online. But from the Prevent Blindness perspective and the patient's perspective, not every single patient is the same. Not everybody has the same access. Not everybody has the same broadband capabilities, the same smartphone technologies. And a lot of patients lack health literacy that encourages us as a completely available use to, or available avenue for them to receive access to their prescriptions.''); Aceto (WS Transcript at 42) (''My only concern with [technology] is not everybody, as we talked about with different clientele and different patients and different modalities, not everybody's as well versed.''); Hyder (WS Transcript at 45) (''ophthalmology patients who are older[—for the] digital option, they may not even want or have any idea of how to access [it].'').

[218] Brown (WS Transcript at 7) (''So it is encouraging, but it seems [] that there's a missed opportunity if patients can access their records digitally, but if they're not also given other means to access their prescriptions.''); Beatty (WS Transcript at 42) (''And so we'd want to be able to provide the possibility of delivering [prescriptions] electronically, but also allow for the provider to have the choice of how the electronic delivery would occur. And then the patient to consent to whether they want that electronic delivery or if they would prefer to have a paper version.'').

[219] Montaquila (WS Transcript at 26) (Once the prescription is on the portal, ''we have to then teach them, if they want to use the portal, how to find it. They have to go in, they have to log in, they have to download it. It's not that difficult to do, but they still need the education as you would for any new system you'd use. But then we have plenty of patients who say, 'I'm not electronic, just give me a copy.' '').

[220] Aceto (WS Transcript at 45) (''I will say that a good amount of the time that we spend oftentimes as opticians is sometimes calling for verification. But I do worry that some of these other burdensome regulations like the affirmative consent, for example, isn't going to change that. Because if [patients] forget [the prescription] at home, if they don't have it, we end up calling. And I don't know that it's that much of a burden to [prescribers]. Because as we've called optometrist's office and ophthalmologist's office, I will tell you that without fail because of the great work of the FTC since 1978, there hasn't been as much pushback as before those rules were instigated.''); Beatty (WS Transcript at 46) (''I think that the number of patients who are issued a paper prescription only, to just not have it when they need it is relatively high. And so a simple request from the patient to have a paper copy should they need one I think is a really simple request on their side and not really burdensome. I think that as long as that prescription is issued at the request and there's an electronic version available to that patient, then it should be ample.'').

[221] The Commission notes that for some telemedicine exams, digital delivery might be the only practical way for a prescriber to transmit the prescription immediately after the exam; in such cases, medical practices may need to obtain patient consent during the intake process. If a patient is in a medical office, however, and only the prescriber is remote, the office could print a paper copy

of the prescription for the patient. *See* Lovejoy (WS Transcript at 45) (''And more and more we're seeing some of those prescriptions being written after a telemedicine eye exam where the doctor and the patient are in a real time communication, but the doctor's remote. And the only way for the doctor to prescribe and get the prescription to the patient is electronically. It can be then printed out at the office and the patient can use it either there at the location or take it someplace else, but the patient then has access to it electronically as well.'').

[222] *See* section II.C., *supra.*

[223] CLR Final Rule, 85 FR 50683.

[224] *See* section VIII.A, *infra.*

[225] The digital delivery provision also does not alter or pre-empt existing State and Federal requirements pertaining to the electronic delivery of records and consumer consent, such as the Electronic Signatures in Global and National Commerce Act, 15 U.S.C. 7001.

[226] 45 CFR 164.520; AOA (WS Comment #0047 submitted by Benner) (''Greater analysis of the overall burden [of] regulations on doctors would also be helpful to inform how best to streamline rule changes and explore alternative options, FTC could consider mirroring some of the acknowledgement requirements after the Department of Health and Human Services (HHS) Notice of Privacy Practices which does not require acknowledgment to be obtained at every visit. Seeking authorization to provide a prescription electronically could follow the same approach.'').

[227] Montaquila (WS Transcript at 35) (Allowing the consent form to be signed once ''would make it much easier for all of us to implement because we could educate [the patient] as to what the office policy is, whether that's paper or electronic or a combination thereof. It could happen at the outset when they first establish their relationship with us and only if we change policy or they make a request, because the patients could understand, 'I know your policy and I'm happy with it.' Or, 'I'm not happy with it, I want it done a different way.' And that could all be documented when we first meet them or at any time at [a] time [of] their choosing. So putting it in the patient's hands to have control.'').

[228] *See, e.g.,* 45 CFR 164.520(c)(1)(ii) (''No less frequently than once every three years, the health plan must notify individuals then covered by the plan of the availability of the notice and how to obtain the notice.'').

[229] For example, consider an instance where a prescriber obtains a patient's affirmative consent to digital prescription delivery via email in September 2024, and the prescriber relies on that consent to email prescriptions until and including the patient's September 2028 appointment. In 2029 the prescriber changes the digital delivery policy to delivery via patient portal, and the consumer signs a new affirmative consent during their annual 2029 appointment. The prescriber's office should retain the original affirmative consent to email delivery at least through September 2031 (September 2028 appointment plus three years), and should retain the 2029 consent to delivery via portal for three years, or for as long as the prescriber relies on that consent to provide prescriptions via portal, plus another three years.

[230] NPRM, 88 FR 268.

[231] CLR Final Rule, 85 FR 50682–50684; 16 CFR 315.2.

[232] *See* Office of the Federal Register, Regulatory Drafting Guide, Definitions, *https://www.archives.gov/federal-register/write/legal-docs/definitions.html* (''5. Do not include a substantive rule within a definition. A reader can easily miss a rule placed within a definition.'').

[233] Old Rule §§ 456.3, 456.4, and 456.5 are redesignated as new §§ 456.5, 456.6, and 456.7, respectively.

[234] 5 U.S.C. 553; 15 U.S.C. 57a(b)(1).

[235] *See* WS Transcript at 27–28, 36; Repka (WS Transcript at 28) (''The question [ ] was why the EMR companies haven't followed? Well, the new rule, it takes time to get a consumer base or a user base that goes and asks the big company to prioritize that development over 500 other development requests that they get. I think we clearly need one because a signature pad or a checkoff box, which just rolled out in Epic for procedure consents would make this easier.''); Montaquila (WS Transcript at 36) (''You mentioned Epic. I worked with one of the first Epic implementations in the country, believe it or not, way back. And they have a really good system with a signature pad. The system I use now has an iPad. You can open up, they can sign on the iPad. But I am talking to other colleagues who say that their EHR system has no option similar to this. All of them are probably moving in the same direction, right?'').

[236] *See, e.g.,* Repka (WS Transcript at 36) (''it still seems to me that the EMRs of the future will be able to accept this as an electronic signature, that it will store in some fashion other than necessarily on a paper that says any of the three things that you've had there. So that if there's an option to do that, it would be nice. If you still needed it to be on a printable PDF, then not as convenient.'').

[237] NAROC (NPRM Comment #0024 submitted by Neville). NAROC also requested the Commission be open to petitions from prescribers to allow additional digital methods of verifications as technology evolves and provided examples including the use of a personal identification number by the patient in an EHR, a fingerprint, a retinal scan, voice recognition or other verifiable consent documentation. WS Comment #0049 submitted by Neville. The FTC is open to new digital methods of verifications such as biometric data so long as the processes are optional, secure, there are methods in place to confirm and verify the identity of the signatory, and the signatures are designed such that they cannot be used by anyone other than their genuine owners.

[238] Montaquila (WS Transcript at 23) (''For the approach on screen, the consent is obtained on paper, but then other practices will use an electronic means to collect that signature.'').

[239] CLR NPRM, 81 FR 88535.

[273] *Id.*

[274] *Id.* The Commission has not been able to replicate NTU's cost calculation. Based on NTU's estimate that a ''modest optometry establishment'' might conduct 3000 examinations per year, and using the NPRM burden estimate of 10 seconds to obtain a patient's confirmation and one minute to store it, the requirement would impose an additional paperwork burden on such a practice of 58.3 hours per year (3,000 × 70 seconds ÷ 60 ÷ 60). Using the NPRM estimated wage rates for optometrists and office staff, such an additional burden would amount to an incremental burden of $1,439.88. However, staff does not know how accurate NTU's estimate for a ''modest optometry establishment'' is, and does not possess information about typical practices. As explained in this document's PRA section, staff based its ultimate burden calculations on the expected overall number of refractive exams that would result in a written prescription every year rather than trying to determine a number for a typical practice. *See* Paperwork Reduction Act, section VIII, *infra,* for an updated estimate for the amended Rule.

[276] NPRM Comment #0024 submitted by Neville.

[277] *Id.*

[278] Some of these comments were discussed above with respect to the Commission's determination that the failure to provide a prescription continues to be an unfair act or practice. *See* section II.A *supra.* One other commenter expressed disfavor with the proposal, but did not provide specific reasons for the opposition. Anonymous (NPRM Comment #0004).

[279] AOA (WS Comment #0047 submitted by Benner).

[280] AOA (WS Comment #0047 submitted by Benner). Appendix A to this comment contains a summary it created of the purported study results.

[281] AOA (WS Comment #0047 submitted by Benner). Similarly, at the workshop, Dr. Stivers suggested that most consumers sign papers at the doctor's office without reading them and questioned whether the confirmation of prescription release ''accomplish[es] anything in the broader context of all of the information that the patient is trying to absorb in that kind of environment.'' WS Transcript at 10.

[282] *See also* Stivers, WS Transcript at 11 (noting that regulations like the Eyeglass Rule require businesses to hire expensive attorneys and consultants to advise them, and the Commission should take into account the burden placed on ''the vast majority of practitioners or businesses in general that are absolutely law abiding.''

[283] *See* section VIII, *infra.*

[284] During the pendency of the Eyeglass Rulemaking, the American Optometric Association filed a comment in response to the Commission's Paperwork Reduction Act (''PRA'') notice for the Contact Lens Rule. That comment, CLR PRA Comment #0007 (submitted by Benner), is available at: *https://www.regulations.gov/comment/FTC-2023-0049-0007* (emphasis in original).

[285] AOA (NPRM Comment #0023 submitted by Benner; WS Comment #0047 submitted by Benner).

[286] Rosemore (WS Comment #0045) ''As an optometrist, the added requirements would be a significant burden on my practice . . . I'm not sure what sort of issue the Commission believes it is solving here.'' Dr. Rosemore added, ''I am disturbed that my profession continues to get treated like a punching bag. It appears to me that we are viewed by some at the Commission as predators to consumers instead of the doctors we are to our patients. I did nothing to deserve that treatment.'' Coast Eyes Pllc (WS Comment #0046) (''Nothing is broken here. Patients get their prescriptions without conflict. The financial/time/paper (material) burden on small business is not justified by the number of complaints.)''.

[287] Anonymous (NPRM Comment #0006) (''something that would take an immense amount of time and take away from patient care.''); Anonymous (NPRM Comment #0007) (isn't ''necessary'' and would be ''very time consuming.''); Cooper (NPRM Comment #0009) (''yet another example of an unnecessary, time consuming, and intrusive requirement [that would] add to cost of doing business which ultimately gets passed on to the patient (consumer)''); Anonymous (NPRM Comment #0011) (costly, time consuming, and redundant). [294] AAO (NPRM Comment #27).

[295] *Id.* The AAO recommended the Commission exempt from the confirmation-of-prescription-release amendment ophthalmology practices with fewer than ten full-time employees because they often operate with limited administrative support and may not use electronic health records. *Id.*

[296] WS Transcript at 31. Dr. Montaquila stated that he has not seen much difference since the Contact Lens Rule confirmation requirement was put in place andthat he'll give prescriptions whether or not there is a confirmation requirement in place.

[297] WS Transcript at 29.

[298] WS Transcript at 37–38.

[299] NPRM, 88 FR 287.

[300] NPRM, 88 FR 287.

[301] *Id.* at 281.

[302] The Commission has determined not to add an exemption for ophthalmology practices with fewer than ten full-time employees, as requested by the AAO. *See supra* note 295. It is equally important for patients at these practices to be aware of their right to receive their prescriptions and receive their prescriptions as it is for patients at larger practices. If the practices sell eyeglasses or have a direct or indirect financial interest in the sale of eyeglasses, they must comply with the confirmation-of-prescription-release amendments.

[304] WS Transcript at 34.

[305] Warby Parker (ANPR Comment #0817 submitted by Kumar) (bill of rights and signage); Tedesco (ANPR Comment #0042) (signage).

[306] AOA (NPRM Comment #0023 submitted by Benner); Masoudi (WS Transcript at 38) (suggesting that the FTC should be more active in making consumers more aware of their rights ''before they even walk in our door.''). Other commenters discussed a need for greater education generally in this area. *See* section VII.B, *infra.*

[307] NPRM Comment #0023 submitted by Benner. According to the AOA, these include: (1) online retailers cannot guarantee the glasses purchased will meet the consumers' visual needs; (2) if the eyeglasses do not fit well, the online retailer is not required to adjust the glasses in person, but will often instruct the consumer how to self-

adjust the glasses; and (3) the online retailer is not obligated to respond to any complaints or issues surrounding the purchase. *Id. See also* American Optometric Association, ''AOA: No letting up on Eyeglass Rule advocacy,'' Nov. 2, 2023, *https://www.aoa.org/news/advocacy/federal-advocacy/aoa-no-letting-up-on-eyeglass-rule-advocacy*.

[308] Durkee (NPRM Comment #15). At the workshop, panelist Pete Sepp of NTU inquired about the FTC not enforcing the Rule against prescribers who take actions aimed at improving automatic prescription release and suggested such actions be treated as ''safe harbors'' from FTC enforcement. One example he provided was for prescribers to show a training video to their employees on prescription release and retain evidence of the training. WS Transcript at 33. As explained in response, although every instance where a prescription is not automatically provided to a patient is a civil penalty violation, the Commission is generally not looking for one-off instances of non-compliance in its enforcement actions. *See* Bernstein (WS Transcript at 34). Nevertheless, the Commission does not believe expressly establishing ''safe harbors'' of the type described by Pete Sepp would sufficiently counter the significant non-compliance detailed elsewhere in this document.

[309] *See* section II, *supra.*

[310] *Id.*

[311] NPRM, 88 FR 263. This inquiry is particularly relevant in that, as the Commission has stated, it is primarily interested in bringing actions against repeat offenders, not prescribers who may make a one-off mistake in forgetting to release a prescription.

[312] *U.S.* v. *Doctors Eyecare Ctr., Inc.,* No. 3:96–cv–01224–D (N.D. Tex. June 24, 1996). The complaint alleged that the eye care center only released prescriptions when patients asked for them, and included waivers of liability on patients when doing so. The prescriber paid a $10,000 civil penalty and was enjoined from future violations of the Eyeglass Rule. *See* Press Release, Fed. Trade Comm'n, Dallas Eyecare Center Agrees to Settle Charges That They Failed to Give Consumers Copies of Their Eyeglass Prescriptions (May 3, 1996), *https://www.ftc.gov/news-events/press-releases/1996/05/dallas-eyecare-center-agrees-settle-charges-they-failed-give*.

[313] NAROC's comment mentions that, while a requirement for signage in the office was rejected as inadequate, industry members might use the option of making information easily available to customers in other formats, such as websites or point of sale handouts about patients' rights or prescriber responsibilities. NPRM Comment #0024 submitted by Neville. NAROC proffered these ideas as additive to, and not instead of, the confirmation proposal, which it supports. An anonymous commenter suggests that the FTC should educate the consumer and ''[m]aybe provide a template to the providers so that the consumer gets the same info, presented the same way at every provider?'' WS Comment #0037. It is unclear whether the commenter is suggesting this action in addition to, or instead of, the signed acknowledgment proposal. The Commission discusses business and consumer education as an additional method to increase business and consumer awareness of responsibilities and rights, respectively, in section VII.B, *infra.*

[314] NPRM, 88 FR 264 (signage), 263–64 (bill of rights).

[315] *See* CLR SNPRM, 84 FR 24675; Eyeglass I Rule, 43 FR 23998.

[316] NPRM, 88 FR 263.

[317] Commission staff first identified this issue in its Eyeglass II Report, where it explained that the automatic release requirement had not helped to prevent ''evidentiary squabbles''—as the Commission had hoped it would—but instead had increased them, because whether or not a prescriber had released a prescription could not, in most cases, be ascertained absent documentary evidence. Eyeglass II Report, *supra* note 14, at 275–76.

[318] *See* sections IV.C.2.a and VIII.A, *infra* (describing how many prescribers are using confirmation forms that contain extraneous information and thus, likely take far longer to read and sign than actually required under the rule).

[319] This calculation is based on estimates that there are 165 million eyeglass wearers who get exams every other year, and that there are 18,000 ophthalmologists and 43,000 optometrists in the United States. As discussed above, section I.D.5, *supra* note 67, this may undercount the number of optometrists, which could mean the per-provider burden is even less. On the other hand, the burden may fall differently on different providers (depending on their size, or volume, or electronic-records adoption, for instance), and at least one commenter, the National Taxpayers Union, felt it might be disproportionally felt by small providers. *See* section IV.B, *supra.*

[320] AOA (WS Comment #0047 submitted by Benner).

[321] *Id.*

[322] AOA's appendix A to its workshop comment (WS Comment #0047 submitted by Benner) does not contain information about the methodology of the survey or the representativeness of the surveyed population. This analysis assumes the methodology is sound and the population surveyed is appropriately representative—assumptions which may or may not be correct.

[323] Moreover, 28% of respondents disagree with the statement that the amount of paperwork they have to complete at a doctor's appointment is overwhelming (with another 25% responding neutrally) and 34% of respondents disagree with the statement that the complexity of the paperwork they have to complete at a doctor's appointment is overwhelming (with another 25% responding neutrally).

[324] However, the Commission notes that some of the burden that commenters suggest has resulted from the CLR confirmation-of-prescription-release requirement appears to be wrongfully attributed to that requirement. *See* sections IV.C.2.a, *infra,* and section VIII.A, *infra* (describing how in one form in use by many prescribers' offices, and recommended in the AOA's online toolkit for complying with the CLR, five out of six paragraphs are extraneous to the confirmation-of-prescription-release proposal).

[325] These options include permitting electronic delivery of eyeglass prescriptions, in which case prescribers would not need to request that the patient acknowledge receipt of the prescription. Yet, flexibility exists for prescribers who prefer to provide paper copies to their patients, as they do not need to offer an electronic option. *See* section III.C, *supra.* For instances in which a patient refuses to confirm prescription release, the prescriber shall note the patient's refusal on the document and sign it.

[326] *See* section III.C, *supra.*

[327] If multiple eyeglass prescriptions are provided on paper at the same time, the prescriber can obtain confirmation of prescription release with one signature, and need not obtain separate signatures for each prescription confirmation.

[328] To reduce the burden associated with prescription release, a prescriber could create a document requesting a single signature to confirm receipt of both an eyeglass and a contact lens prescription (in cases where both prescriptions are finalized at the same time). Such a document could meet the requirements of both rules so long as it is clear and conspicuous what the patient is signing for, and that the signature requested confirms receipt of *both* the contact lens and eyeglass prescriptions. Similarly, as mentioned above, a prescriber could use one document to obtain verifiable affirmative consent to digital prescription release of both contact lens and eyeglass prescriptions.

[329] NPRM, 88 FR 287.

[330] *Id.*

[331] 16 CFR 315.3(c)(3).

[332] *See* NPRM, 88 FR 260–61. The same purpose is stated for the exemption in the Contact Lens Rule. CLR Final Rule, 85 FR 50687.

[333] Current guidance issued by the Commission in connection with the Contact Lens Rule states the same. FTC, FAQs: Complying with the Contact Lens Rule, *https://www.ftc.gov/business-guidance/resources/faqs-complying-contact-lens-rule* (''If you're not sure if your interest qualifies, err on the side of caution and ask your patients to confirm receipt of their prescriptions.'').

[334] One commenter requested an exemption in long-term care settings for the confirmation requirement, as well as for affirmative consent for digital delivery. This commenter said that, in the long-term care setting, the parties responsible for the patients are almost never present during the exam and the patients themselves are not able to give consent and as a result, prescribers coordinate care with, and provide prescriptions to, facility staff. Morer (NPRM Comment #0021). In such situations, the Commission recommends the prescriber note in their records to whom the prescription was provided (*e.g.,* staff or caregiver), and whether it was provided on paper, or made available digitally and by what method. As with the instance where a patient refuses a copy of a prescription, *see supra* note 325,

the prescriber could relay that information to the Commission should questions about compliance arise.

[335] 16 CFR 315.3(c)(1) (CLR); NPRM, 88 FR 266.

[336] Montaquila (WS Transcript at 22). The Commission notes that other offices using EHRs could collect and store signatures electronically, as Dr. Montaquila noted they do for the consent to digital delivery. *Id.* at 23.

[337] Montaquila presentation, FTC Eyeglass Rule Workshop, *https://www.ftc.gov/system/files/ftc_gov/pdf/Stephen-Montaquila-OD-Presentation.pdf*.

[338] AOA, Contact Lens Rule Compliance Toolkit (July 2020), *https://www.aoa.org/AOA/Documents/doctor%20resources/Contact-Lens-Rule-Compliance-Toolkit.pdf*.

[339] WS Transcript at 22. Dr. Montaquila shared an example of a what the prescription pad looks like. *See* Montaquila presentation, FTC Eyeglass Rule Workshop, *https://www.ftc.gov/system/files/ftc_gov/pdf/Stephen-Montaquila-OD-Presentation.pdf*. This pad is also shown in the AOA's toolkit, with a note that doctors should contact the AOA Marketplace if interested in obtaining the product. *See* AOA, Contact Lens Rule Compliance Toolkit at 9 (July 2020), *https://www.aoa.org/AOA/Documents/doctor%20resources/Contact-Lens-Rule-Compliance-Toolkit.pdf*. At the bottom of each prescription sheet, after a statement in bright blue declaring, ''Contact lenses are medical devices which require ongoing medical care for optimal performance and safety. Please contact our office if you experience any signs of complications including pain, redness, loss of vision,'' there is a statement in black for patients to ''Sign below to indicate you were provided a copy of your contact lens prescription at the completion of your contact lens fitting,'' with a space for a signature and the date.

[340] WS Transcript at 22. Dr. Montaquila referenced *HealthIT.gov* data, as of 2021. *See* U.S. Dep't of Health & Human Servs., ONC, ''Office-based Physician Electronic Health Record Adoption,'' *https://www.healthit.gov/data/quickstats/office-based-physician-electronic-health-record-adoption*. The 88% figure, however, pertains to U.S. office-based physicians, but not specifically to optometrists or ophthalmologists. Moreover, this figure relates to adoption of EHR by doctors for their recordkeeping, but does not necessarily cover the use of EHR, and specifically portal-use, by patients themselves. There may be instances where doctors retain their records in electronic format but do not make them available via portal for their patients to access. And even when records are available electronically, many patients may opt not to use prescriber portals. *See* section III.B.1, *supra* (discussing patient portal access and usage) and section VIII.B.2, *infra* (discussing AOA survey of a small sample of optometrists showing that just 35% provided prescriptions electronically).

[382] AOA (WS Comment #0047).

[383] NPRM Comment #0023 submitted by Benner (''The refractive error measured should be analyzed with other testing data, and an assessment of the patient's visual needs obtained during an in-person examination. This information is used to determine if, and in what amount, an optical correction is needed to provide optimal vision and comfort for all viewing distances.''); *see also* OAA (NPRM Comment #0020 submitted by Allen) (''A refraction may include objective and subjective assessment of the patient's refractive status; however, the results of a refraction do not provide all the information needed to determine an optical prescription.''); AOA (WS Comment #0047 submitted by Benner) (''we believe that the market has significantly evolved . . . thereby negating the need for any language adjustments in the rule. We believe the original language should stand without revision.'').

[384] AOA (WS Comment #0047 submitted by Benner).

[385] Beatty (WS Transcript at 54).

[386] *Id.* at 55–56.

[387] Boatner (WS Comment #0036); *see also* Lovejoy (WS Transcript at 49) (describing a

scenario where an ophthalmologist may ''want to do a measure of whether or not there is a refractive error to help with the medical diagnosis, but may not want to write a prescription at the end of that because that's not what the chief complaint is about and they don't see a need for the patient to have a prescription for corrective eyewear.'').

[388] Boatner (WS Comment #0036); Beatty (WS Transcript at 49).

[389] Boatner (WS Comment #0036); Lovejoy (WS Transcript at 51, 56) (stating that an exemption for use of medical judgment to withhold the prescription should be written into the Rule).

[390] Boatner (WS Comment #0036); *see also* Hyder (WS Transcript at 50).

[391] 16 CFR 456.2(c).

[392] *See* Hyder (WS Transcript at 50) (noting that some ophthalmologists have reported having patients say, ''you're not allowed to charge me for my refraction,'' and opining, ''there needs to be something that states in the rule that refraction services are different than the cost of a prescription.'').

[393] Botha (WS Transcript at 49).

[394] The term has been revised in the following sections of the final rule: (1) Definitions, Section 456.1(a), (b), (d), (e) and (g); (2) Separation of examination and dispensing, § 456.2(a)(1) and (2) and (b) through (d); and (3) Confirmation of prescription release, § 456.4(a)(1).

[395] The Commission also makes clear that requirement to release prescriptions does not depend on how prescribers label their exams, and whether a prescriber charges a fee for that particular practice. The definition for the amended refractive eye exam terminology remains ''the process of determining the refractive condition of a person's eyes or the presence of any visual anomaly by the use of objective or subjective tests.'' § 456.1(b). A prescriber who charged a patient only one fee—designated as for an eye health exam—but also performed an exam that determined the refractive condition of a person's eyes or the presence of any visual anomaly, is still required to automatically release the prescription upon completion of the exam. A prescriber is only permitted to not release a prescription automatically following a refractive exam if the prescriber makes a medical determination that the patient should not be given a prescription for eyeglasses.

[396] Workshop panelists who spoke on this issue were unanimous in agreeing that if a prescriber decides not to provide the prescription in their medical judgment, then it is appropriate that they do not sell eyewear to that patient. WS Transcript at 57.

[397] *See, e.g.,* ACLens, ''Measuring Pupillary Distance (PD),'' *https://www.aclens.com/measuring-pupillary-distance.*

[398] The Rule, as amended, defines a prescription as the ''written specifications for lenses for eyeglasses which are derived from a refractive eye examination, including all of the information specified by state law, if any, necessary to obtain lenses for eyeglasses.'' 16 CFR 456.1(g). As of the date of the NPRM, only four States, Alaska, Kansas, Massachusetts, and New Mexico, required the inclusion of pupillary distance measurements on prescriptions. NPRM, 88 FR 273.

[404] NAROC (Comment #0024).

[405] OAA (NPRM Comment #0020 submitted by Allen).

[406] AAO (NPRM Comment #0027 submitted by Repka).

[407] AAO (NPRM Comment #0027 submitted by Repka). Others also expressed favor with the Commission's decision not to require pupillary distance on prescriptions. Anonymous (NPRM Comment #0012) (the only way to ensure accurate measurement is by having the patient try on the desired frame and it is impossible to determine segment height and optical center without fitting the frame on the patient's face and marking the lens center); Anonymous (WS Comment #0034) (requiring pupillary distance on prescriptions would be the ''absolute death of the optical industry'' and it would be unfair to ''require people who properly train their staff to freely give the expertise so the consumer can go to another provider that has no such staff and get glasses.'').

[408] *Eyeglasses.com* (WS Comment #0040).

[409] *Id. Eyeglasses.com* also stated that, for purchases of bifocal, trifocal, or progressive lenses, a segment height is required and that consumers should be able to get a segment height measurement from an optical professional so they can include it when ordering eyeglasses online. *Id.*

[410] 1–800 CONTACTS (NPRM Comment #0025 submitted by Montclair).

[411] *Id.*

[412] *Id.*

[413] This commenter urged the Commission to require prescribers to ask patients to confirm receipt of the PD measurement, in addition to receipt of the prescription. 1–800 CONTACTS (NPRM Comment #0025 submitted by Montclair).

[414] *Id.*

[415] Beckman (WS Comment #0041).

[416] *Id.* An unidentified commenter agreed, indicating that when the optometrist fails to measure and include pupillary distance measurements on the prescription, they are preventing the consumer from shopping around and discovering lower prices elsewhere. Anonymous (NPRM Comment #0010). Another consumer comment does not explicitly mention pupillary distance, but stated it is their right to receive all of their personal medical information, and states they have to go to other sellers to be able to afford eyeglasses. Crete (WS Comment #0035).

[417] *See* section I.C, *supra.*

[418] *See* NPRM, 88 FR 274.

[419] As explained in the NPRM, pupillary distance measuring systems vary in cost and precision, and ''if the Commission required prescribers to include pupillary distance measurements on prescriptions, it is unlikely that prescribers would use less expensive rulers and the like, but instead—for professional and liability reasons—would select more technologically sophisticated methods, such as a digital centration device, to take the measurement. Such devices, and the training, staff, and exam time necessary to operate the devices, could be costly.'' 88 FR 276.

[420] The Commission recognizes that there is a tension between the fact that there are zero and low-cost methods to measure pupillary distance and the fact that prescribers claim providing the measurement requires expensive equipment and potential increases in staff. However, both things can be true. Consumers are able to ascertain serviceable pupillary distance measurements without expensive training and equipment, while medical professionals will likely want—and perhaps even feel professionally obligated—to provide a measurement that meets higher standards of technical precision.

[421] EyeBuyDirect, ''How to Measure Pupillary Distance (PD),'' *https://www.eyebuydirect.com/guides/how-to-measure-your-pd.*

[422] Zenni, ''Measure your pupillary distance (PD),'' *https://www.zennioptical.com/measuring-pd-infographic.* The Commission has not analyzed whether the various methods consumers may use to determine their pupillary distance, or whether sellers manufacturing eyeglasses in accordance with self-measured pupillary distances, are permitted in all jurisdictions. The Commission noted this in the NPRM, 88 FR 274, but did not receive any comments on this topic in response to the NPRM.

[423] The FTC has heard from consumers that they have been charged between $15 and $40 to obtain an in-person pupillary distance measurement.

[424] Bailer (ANPR Comment #0191); Emanuel (ANPR Comment #0282); Land (ANPR Comment #0311).

[425] ANPR Comment #0748 submitted by Cutler.

[426] NPRM, 88 FR 276.

[427] Because the Commission did not find adequate evidence of unfairness, it need not consider alternative ways to remedy that unfairness. Thus, it does not address seller 1–800 CONTACTS' alternate methods for providing pupillary distance to patients.

[439] CLR Final Rule, 85 FR 50709. The estimates for the Contact Lens Rule's confirmation requirement were, in turn, based on a (1) survey of how long it took consumers to read a proposed Contact Lens Rule confirmation statement, and (2) previously approved burden estimates for a similar patient-acknowledgment requirement under HIPAA rules, found at 45 CFR 164.520(c)(2)(ii).

[440] 88 FR 284.

[441] Anonymous (NPRM Comment #0006).

[442] Anonymous (NPRM Comment #0007).

[443] AOA (NPRM Comment #0023). *See also* Rep. Williams, House Committee on Small Business (WS Comment #0044) (''The Committee fears that this rule will have a disproportionate impact on small businesses by adding redundant requirements to already understaffed practices.'').

[444] Michaels (WS Transcript at 9) (''I don't think that it's a burden to provide the prescription. Where I see the burden is to ask for paperwork, to say, 'Sign this piece of paper acknowledging that we've already given you a prescription.' There's a lot of time, effort, discussion around that. I think that that is something that is greatly underestimated in terms of how long it takes.''); AOA (WS Comment #0047 submitted by Benner).

[445] Coast Eyes Pllc (WS Comment #46).

[446] Montaquila (WS Transcript at 23–24). Dr. Montaquila did not break down his 4-minute estimate by task, so it is unclear how long he estimates it takes for a consumer to simply read and sign the confirmation statement, as opposed to the time it takes for his staff to print out the prescription and confirmation and store the patient confirmation as a record. In its NPRM, the Commission allowed a total of two minutes and 10 seconds for the entire process (one minute for prescribers to print out the prescription, 10 seconds for the confirmation signature, and an additional minute for staff to store the signed confirmation.).

[447] National Taxpayers Union (NPRM Comment #0028 submitted by Sepp).

[448] *See* section IV.B, *supra* note 274 and text. As noted previously, the Commission has not been able to replicate the NTU estimate. Accepting NTU's assumption that a small practice performs 3000 refractive eyeglass examinations per year, the confirmation requirement would add a paperwork burden of $1,439.88 for such a practice based on the proposal and PRA analysis applied in the NPRM, and an increased paperwork burden of $1,318.73 based on the amendment and PRA analysis of this Final Rule. While the AOA has stated that approximately 92% of optometry practices have fewer than 25 employees and average $826,612 in gross receipts per annum (AOA NPRM Comment #23), the Commission does not have information detailing how many refractive eyeglass examinations a typical practice performs—or even what a ''typical practice'' is and whether it is advisable to weigh the burden based on a typical practice experience—and finds it preferable to calculate the burden based on the overall number of eyeglass wearers in the United States, and the estimate that each wearer obtains a refractive eye exam for eyeglasses every two years.

[449] NAROC (NPRM Comment #0024 submitted by Neville); *see also* Consumer Action (NPRM Comment #0026 submitted by McEldowney) (''we do not believe it is a burden on providers to obtain, document, and retain a consumer's affirmative receipt of their prescription.'').

[450] Neville (WS Transcript at 28–29).

[451] Coast Eyes Pllc did not provide any evidence in support of its $18,000 estimate, and it is not clear where this calculation comes from.

[452] AOA (CLR PRA Comment #0007 submitted by Benner), *https://www.regulations.gov/comment/FTC-2023-0049-0007* (filed in response to FTC Request For Comment, 88 FR 55044 (Aug. 14, 2023), *https://www.regulations.gov/document/FTC-2023-0049-0001*).

[453] *Id.* According to the AOA, the survey was conducted in-house by its Health Policy Institute and Research Departments, and distributed to member optometrists via AOA's weekly email newsletter with a link and invite to the survey titled, ''Voice your concerns by Oct. 9: Complying with the FTC Contact Lens Rule.'' Of members who responded to the AOA's link request, 327 completed the survey.

[454] FTC Notice, Proposed Collection, 88 FR 88076, 88079, Dec. 20, 2023 (''2023 CLR PRA''). Following this notice and response to commenters, on Jan. 26. 2024, OMB approved the extension request for CLR clearance. Notice of Office and Management and Budget Action, OMB Control No. 3084–0127.

[455] The Commission notes that while the AOA claims to represent some 50,000 optometric professionals, only 327 members responded to the AOA's invitation and completed the survey, which could indicate that many of those who self-selected and took part in the survey were those who have concerns about the confirmation requirement, while most other AOA members do not have such concerns. However, there could be other reasons for the relatively small number of prescribers (in proportion to the total membership) who responded, so the Commission will not draw inferences from the low response rate.

[456] 2023 CLR PRA, 88 FR 88079.

[459] *Id.*

[460] Montaquila (WS Transcript at 23).

[461] The Commission has never subscribed to the belief that consumers will be greatly confused as to why they are signing a straightforward confirmation statement such as, ''My eye care professional provided me with a copy of my contact lens prescription at the completion of my contact lens fitting.'' The Commission's understanding is based on a common sense reading of the statement, but is also supported by a survey submitted during the Contact Lens Rule rulemaking showing that 90% of consumers responded they understood the proposed confirmation statement, and 94% responded that they had no follow-up questions. Laurence C. Baker, ''Analysis of Costs and Benefits of the FTC Proposed Patient Acknowledgment and Recordkeeping Amendment to the Contact Lens Rule,'' 13 (2017), *https://www.ftc.gov/system/files/summaries/initiatives/677/10192017_meeting_summary_from_mko_for_the_contact_lens_rule_rulemaking_proceeding.pdf.*

[462] The Commission recently made a similar revision to its estimate of the time required to obtain confirmation for the Contact Lens Rule, and the revised burden figures received clearance by the Office of Management and Budget. *See supra* note 454.

[463] Standards for Privacy of Individually Identifiable Health Information, Final Rule, 67 FR 53182, 53261 (Aug. 14, 2002) (implementing 45 CFR 164.520(c)(2)(ii)).

[464] *See* section I.D.5, *supra* note 73.

[465] The Commission relies on industry sources for its estimate that eyeglass wearers typically obtain one refractive eye exam every two years. *See, e.g.,* AOA, Excel and Jobson Medical Information, The State of the Optometric Profession: 2013, at 4, *https://www.reviewob.com/wp-content/uploads/2016/11/8-21-13stateofoptometryreport.pdf* (showing an average interval between exams of 25 months); AOA, Comprehensive Eye Exams, *https://www.aoa.org/healthy-eyes/caring-for-your-eyes/eye-exams?* (showing recommended examination frequency for adult patients 18–64 of ''at least every two years'' for asymptomatic/low risk patients). In contrast to the CLR, which establishes a one-year minimum term for most contact lens prescriptions (16 CFR 315.6(a)) (a term-length mirrored by a majority of States, *see* CLR NPRM, 81 FR 88545, n.245) the Eyeglass Rule does not discuss or define prescription expiration terms, and many States do not set any limit for eyeglass prescriptions. Some eyeglass wearers, therefore, can legally go many years between refractive eye examinations. But the Commission will use two years as a basis for purposes of this assessment, since that is recommended interval for the majority of eyeglass wearers.

[466] *See, e.g.,* CLR SNPRM, 84 FR 24693 n.347.

[467] CLR Final Rule, 85 FR 50709. This estimate was based on responses to a consumer survey regarding how long it would take consumers to read the form, and a prior PRA estimate for consumers to complete a similar signed acknowledgment. *See* CLR SNPRM, 84 FR 24693; NPRM, 88 FR 282.

[468] *See supra* note 462–63 and accompanying text.

[469] In order to utilize § 456.4(a)(1)(ii) however, a prescriber must obtain and maintain records or evidence of affirmative consent by patients to electronic delivery of

their prescriptions. The burden to do so is included in the recordkeeping burden calculation of this PRA section.

[470] NPRM, 88 FR 283.

[471] AOA (CLR PRA Comment #0007 submitted by Benner).

[472] The survey found that approximately 57% said they used a separate signed confirmation form, 35% said they opted for digital delivery, 15% used a confirmation statement on a signed sales receipt, 27% used a confirmation statement on a signed prescription copy, and 9% selected ''other.'' As noted, prescribers were permitted to choose more than one option, so these percentages add up to more than 100%.

[473] Section 456.3(a)(3) also requires that in the event that a patient declines to sign a confirmation requested under paragraph (a)(1)(i) the prescriber must note the patient's refusal on the document and sign it. However, the Commission has no reason to believe that such notation should take any longer than for the patient to read and sign the document, so the Commission will maintain its calculation as if all confirmations requested under paragraph (a)(1)(i) require the same amount of time. It is worth noting that using the 82.5 million figure here is an overestimate by the Commission, since it does not deduct for the number of patients who visit a prescriber who does not have a direct or indirect financial interest in the sale of eye wear and would not be required to confirm receipt of prescriptions under Rule amendment § 456.4(c). However, staff does not currently possess information as to what number of prescribers will qualify for the exception in § 456.4(c), and so has assumed that all patients receiving a prescription will either sign a confirmation of prescription release or a consent to receive their prescription electronically every year.

[474] *See, e.g.,* 246 Mass. Code Regs. § 3.02 (requiring optometrists to maintain patient records for at least seven years); Wash. Admin. Code § 246–851–290 (requiring optometrists to maintain records of eye exams and prescriptions for at least five years); Iowa Admin. Code r. 645–182.2(2) (requiring optometrists to maintain patient records for at least five years).

[475] 20,625,000 prescriptions (82.5 million prescriptions × 25%). As noted in section III.C., *supra,* prescribers may not need to obtain patient consents at every visit. But the Commission does not have reliable information as to the percentage of consumers that are new to their prescribers as opposed to being repeat visitors or how often prescribers' practices with digital prescription delivery will change and require new consents, and thus how many will or will not have to sign a consent-to-electronic-delivery. Thus, the Commission will assume, for PRA calculation purposes, that every time a consumer receives a digital prescription, the prescriber's staff has collected a signed consent. This very likely results in a significant overestimation of the consent burden.

[476] 20,625,000 prescriptions yearly × 20 seconds/60 secs/60 mins.

[477] 20,625,000 affirmative consents × one minute/60 mins) for storing such records.

[478] This is further supported by comments during the Eyeglass Rule Workshop, such as that of panelist Dr. Montaquila, who noted that his staff completes the process ''from explaining why we're doing it to the patient, providing them with their prescription, making copies, providing their prescription back to them, and ultimately storing it. . . . Our staff has to explain, 'You're signing this for this reason' '' Montaquila (WS Transcript at 22, 28). *See also* Neville (WS Transcript at 28) (commenting that he has observed situations where the doctor pushed a button to have the prescription printed out at the front desk, the prescription was handed over at the desk by the staff person, and the staff person obtained the patient's signature on the confirmation); AOA Report for Complying with the FTC Contact Lens Rule, (survey to prescribers, Question 3, ''Have you experienced challenges in training staff on the new requirements for the Contact Lens Rule?''; Question 9 ''How much time per day does your staff spend on addressing patient questions with the acknowledgment form and process?'').

[479] Bureau of Labor Statistics, U.S. Department of Labor, Occupational Employment Statistics, *https://www.bls.gov/news.release/ocwage.t01.htm.*

[480] Based on information that there are approximately 61,000 optometrists and ophthalmologists in the United States, this averages to $629 per prescriber per year.

[481] The Vision Council, Market inSights 2022. Total market value of eyeglass frames and lenses. Does not include exams, reading glasses, or contact lenses. The $149,691,431 cost of the Eyeglass Rule is 0.0042 of the total $35.6 billion market value.

[482] It is possible that bringing the prescription confirmation requirements for eyeglass prescriptions into conformity with those for contact lenses will ease staff training burdens rather than increase them, since prescribers' staff will not have to learn to differentiate between the two types and treat them differently for rule purposes.

[483] As explained in the PRA Section, *supra,* the Commission calculates an incremental burden of $38,389,993 from adding the confirmation of prescription release to the Eyeglass Rule. The Commission need not issue a final regulatory analysis under section 22 of the FTC Act because this amount does not meet the threshold of an annual effect on the national economy from the amendment of $100 million or more or cause the other changes or effects described in section 22(a)(1)(B) and (C). *See* 15 U.S.C. 57b–3.

[486] See 13 CFR 121.201 (Small Business Size Regulations).

[487] *See* NPRM, 88 FR 285.

[488] AOA (NPRM Comment #0023 submitted by Benner).

[489] According to one publication, 65% of optometrists work in a practice owned by an optometrist or ophthalmologist, practices that are likely small businesses. *See* AOA, ''An Action-Oriented Analysis of the State of the Optometric Profession: 2013,'' at 7 *https://reviewob.com/wp-content/uploads/2016/11/8-21-13stateofoptometryreport.pdf.* This publication also reported that although it could not ascertain the precise number of independent optometric practices, it estimated that as of 2012, there were 14,000 to 16,000 optometric businesses with no corporate or institutional affiliation. *Id.*

FEDERAL TRADE COMMISSION

16 CFR Part 465

RIN 3084–AB76

Trade Regulation Rule on the Use of Consumer Reviews and Testimonials

AGENCY: Federal Trade Commission.

ACTION: Final rule.

SUMMARY: The Federal Trade Commission (''FTC'' or ''Commission'') is issuing this final rule and Statement of Basis and Purpose (''SBP'') relating to certain specified unfair or deceptive acts or practices involving consumer reviews or testimonials. This final rule, among other things, prohibits selling or purchasing fake consumer reviews or testimonials, buying positive or negative consumer reviews, certain insiders creating consumer reviews or testimonials without clearly disclosing their relationships, creating a company-controlled review website that falsely purports to provide independent reviews, certain review suppression practices, and selling or purchasing fake indicators of social media influence.

DATES: This rule is effective October 21, 2024.

FOR FURTHER INFORMATION CONTACT: Michael Ostheimer, (202) 326–2699, Attorney, Division of Advertising Practices, Bureau of Consumer Protection, Federal Trade Commission, Room CC–6316, 600 Pennsylvania Avenue NW, Washington, DC 20580.

I. Background

A. Advance Notice of Proposed Rulemaking

On November 8, 2022, the Federal Trade Commission (''Commission'' or ''FTC'') published an advance notice of proposed rulemaking (''ANPR'') to address certain deceptive or unfair acts or practices involving consumer reviews or testimonials.[1] Specifically, the ANPR discussed: (1) reviews or endorsements by people who do not exist, who did not actually use or test the product or service, or who were misrepresenting their experience with it; (2) review hijacking, where a seller steals or repurposes reviews of another product; (3) marketers offering compensation or other incentives in exchange for, or conditioned on, the writing of positive or negative consumer reviews; (4) owners, officers, or managers of a company (a) writing reviews or testimonials of their own products or services, or publishing testimonials by their employees or family members, which fail to provide clear and conspicuous disclosures of those relationships, or (b) soliciting reviews from employees or relatives without instructing them to disclose their relationships; (5) the creation or operation of websites, organizations, or entities that purportedly provide independent reviews or opinions of products or services but are, in fact, created and controlled by the companies offering the products or services; (6) misrepresenting that the consumer reviews displayed represent most or all of the reviews submitted when, in fact, reviews are being suppressed based upon their negativity; (7) the suppression of customer reviews by physical threat or unjustified legal threat; and (8) selling, distributing, or buying followers, subscribers, views, and other indicators of social media influence. As part of the ANPR, the Commission solicited public comment on, among other things, whether such practices are prevalent and, if so, whether and how to proceed with a notice of proposed rulemaking

[1] Fed. Trade Comm'n, Trade Regulation Rule on the Use of Reviews and Endorsements, 87 FR 67424 (Nov. 8, 2022) [hereinafter ''ANPR''], *https://www.federalregister.gov/documents/2022/11/08/2022-24139/trade-regulation-rule-on-the-use-of-reviews-and-endorsements.* The ANPR was entitled ''Trade Regulation Rule Concerning Reviews and Endorsements.'' In order to better reflect its content, the Commission subsequently decided to change the name of the proposed rule to ''Trade Regulation Rule on the Use of Consumer Reviews and Testimonials.''

(''NPRM'').[2] The ANPR provided for a 60-day comment period, and the Commission received 42 responsive comments [3] from review platforms and other businesses, trade associations, consumer advocacy organizations, entities dedicated to fighting fake reviews, a public interest research center, a think tank, academic researchers, and individual consumers.[4] Most commenters expressed support for the Commission proceeding with the rulemaking. Five comments expressed the view that a rulemaking was unnecessary, was premature, or should not apply to the commenter's constituents, or expressed skepticism about the utility of a rulemaking.

B. Notice of Proposed Rulemaking

Based on an extensive review of the comments received in response to the ANPR, the Commission's own history of enforcement, and other sources of information, the Commission published the NPRM on July 31, 2023.[5] In the NPRM, the Commission stated that it has reason to believe that certain unfair or deceptive acts or practices involving consumer reviews or testimonials are prevalent, including: (1) fake consumer reviews and testimonials, as well as reviews and testimonials that otherwise misrepresent the experiences of the reviewers and testimonialists; (2) the unfair or deceptive reuse or repurposing of consumer reviews; (3) the giving of incentives for reviews conditioned on the sentiment of the reviews; (4) the use of consumer reviews and testimonials written by company insiders without disclosure of their relationships to the company; (5) marketers setting up purportedly independent websites, organizations, or entities to review or endorse their own products; (6) seller websites representing that the consumer reviews displayed represent most or all of the reviews submitted when, in fact, reviews are being suppressed based upon their negativity; (7) review suppression by unjustified legal threat or physical threat; and (8) the sale and misuse of fake indicators of social media influence for commercial purposes.[6] The Commission identified no disputed issues of material fact; explained its considerations in developing the proposed rule; solicited additional public comment thereon, including specific questions designed to assist the public in submitting comments; and provided interested parties the opportunity to request to present their position orally at an informal hearing.[7] Finally, the NPRM set out the Commission's proposed regulatory text.[8]

In response to the NPRM, the Commission received 100 responsive and non-duplicative comments [9] from entities and individuals interested in the proposed rule,[10] which are discussed in sections III and IV. Although some commenters raised concerns and recommended specific modifications or additions to the Commission's proposal, the majority of commenters generally supported the Commission's proposal. Three commenters submitted timely requests to make oral statements at an informal hearing (''the hearing requesters'').[11]

C. Notice of Informal Public Hearing

On January 16, 2024, the Commission published an Initial Notice of Informal Hearing, which also served as the Final Notice of Informal Hearing.[12] The Notice designated the Honorable Carol Fox Foelak, an Administrative Law Judge for the Securities and Exchange Commission, to serve as the presiding officer for the informal hearing and stated that the hearing requesters could speak at the informal hearing, make documentary submissions to be placed on the public rulemaking record, or both. Written submissions were due on or before January 30, 2024. In response to the Notice of Informal Hearing, the Commission received seven comments.[13] The Notice also stated that the Commission had decided not to proceed with proposed § 465.3,[14] which pertained to the unfair or deceptive reuse or repurposing of a consumer review written or created for one product so that it appears to have been written or created for a substantially different product.

As announced in the Notice of Informal Hearing, the informal hearing began as scheduled on February 13, 2024.[15] Because the Commission had not designated disputed issues of material fact, the February 13 hearing session included no cross-examination or rebuttal submissions but did include oral statements from the three hearing requesters.[16] One of the hearing requesters, the Interactive Advertising Bureau (''IAB''), a trade association, argued that there were two disputed issues of material fact.[17] The other two hearing requesters discussed their comments submitted pursuant to the NPRM. At the conclusion of this hearing session, the presiding officer issued an order inviting further submissions, including specific evidence, concerning whether there were disputed issues of material fact.[18] IAB submitted a letter that described the results from a survey directed to its members—to which eighteen unidentified members responded [19]—regarding the impact of the proposed rule, including their estimated compliance costs.[20]

On February 23, 2024, the presiding officer issued an order finding one disputed issue of material fact, namely, ''[w]hether the compliance costs for businesses will be minimal.'' [21] However, the February 23 order stated that ''[i]t can be argued that . . . even

[2] *See* ANPR, 87 FR 67427.

[3] The Commission also received six unresponsive comments.

[4] The comments are publicly available on this rulemaking's docket at *https://www.regulations.gov/docket/FTC-2022-0070/comments.*

[20] Letter Brief from Interactive Advertising Bureau to Presiding Officer Foelak (Feb. 20, 2024), *https://www.ftc.gov/system/files/ftc_gov/pdf/r311003iabsubmission20240220.pdf.*

[21] Order by Presiding Officer Foelak (Feb. 23, 2024), *https://www.ftc.gov/system/files/ftc_gov/pdf/p311003aljorder20240226.pdf.*

if the actual costs are more than double what the FTC assumed, it would not change the outcome of the rule, and therefore, it is not a 'disputed issue[ ] of *material* fact necessary to be resolved.' " [22] The order provided that the presiding officer was nevertheless scheduling an additional hearing session for March 5, 2024, because "an expert witness or proposed testimony from affected firms' compliance officers or legal counsel" might "shed light on what would be involved with compliance review and implementation" and "could give the FTC a way of better quantifying cost." [23] The March 5 hearing session was subsequently moved to March 6, 2024 at the trade association's request.[24]

At the March 6 hearing session, the trade association put on one witness: its Executive Vice President for Public Policy, an attorney, who testified about the results of two limited surveys of its members.[25] FTC staff conducted cross examination. The attorney's testimony about the surveys [26] did not call the Commission's cost estimates into legitimate question. Only a small number of unidentified trade association members completed the surveys, and no evidence was submitted to indicate that they were representative of any group, much less all affected businesses.[27] Further, only a few of the survey respondents gave compliance cost estimates, none of which were accompanied by explanation or evidence of their factual bases, and all of which could have been influenced by the trade association's misconceptions about the law and the proposed rule.[28]

The presiding officer issued a recommended decision on May 8, 2024, stating that based on the evidence, "it cannot be found whether or not the proposed rule will have compliance costs that will be minimal." [29] Later in the decision, the presiding officer explained that the evidence "falls short as the basis for a finding that compliance costs would not be minimal" because "a minute sample of businesses that would be affected by the proposed rule responded to the surveys, and there is insufficient information about the nature of those businesses, how they calculated potential compliance costs, and the methodology of the surveys." [30]

In crafting the final rule, the Commission has carefully considered the comments received and the rulemaking record as a whole, which includes the oral statements made at and documents submitted for the informal hearing. As a result, the final rule contains some changes from the proposed rule. These modifications, mostly clarifications and limitations, discussed in detail in section IV of this document, are based upon input from commenters and careful consideration of relevant law. Section IV also discusses commenters' recommendations that the Commission declined to adopt, along with the Commission's reasons for rejecting them. Accordingly, the Commission adopts the proposed rule with limited modifications as discussed below. The rule will take effect October 21, 2024.

II. The Legal Standard for Promulgating the Rule

The Commission is promulgating 16 CFR part 465 pursuant to section 18 of the FTC Act, 15 U.S.C. 57a, which authorizes the Commission to promulgate, modify, and repeal trade regulation rules that define with specificity acts or practices in or affecting commerce that are unfair or deceptive within the meaning of section 5(a)(1) of the FTC Act, 15 U.S.C. 45(a)(1).[31]

Whenever the Commission promulgates a rule under section 18(a)(1)(B), the rule must also include a Statement of Basis and Purpose ("SBP") that addresses: (1) the prevalence of the acts or practices addressed by the rule; (2) the manner and context in which the acts or practices are unfair or deceptive; and (3) the economic effect of the rule, taking into account the effect on small businesses and consumers.[32] In this section of the preamble, the Commission summarizes its findings regarding each of these requirements.

A. Prevalence of Acts or Practices Addressed by the Rule

In its ANPR, the Commission described its enforcement record, demonstrating the pervasiveness of the deceptive or unfair commercial acts or practices involving reviews or other endorsements it was examining.[33] In the NPRM, the Commission cited additional enforcement evidence, including actions brought by State Attorneys General ("AGs") and private lawsuits, as well as international evidence, and also took notice of additional indications of prevalence that came from commenters.[34]

In support of the finding that fake reviews are prevalent, the NPRM cited to (1) FTC, State, and private cases; (2) statistics from review platforms, a platform insider, academic and other researchers, consumer surveys, investigative journalists, and others about the incidence of fake reviews; (3) information about the pervasiveness of consumer review rings that facilitate the buying, selling, or exchange of fake reviews; (4) the experiences of regulators in other countries and of international bodies; and (5) reporting regarding the use of generative artificial intelligence ("AI") tools that make it easier for bad actors to write fake reviews.[35] In support of the finding that fake testimonials are prevalent, the NPRM discussed relevant FTC cases, an in-depth Better Business Bureau investigative study that examined fake celebrity endorsements, a celebrity lawsuit involving the fraudulent use of the celebrities' names, and an FTC consumer alert about fake Shark Tank celebrity testimonials.[36] In support of the finding that misrepresentations of endorsers' experiences are prevalent, the NPRM cited to FTC cases and a

[35] *Id.* at 49370–72. AI tools make it easier for bad actors to pollute the review ecosystem by generating, quickly and cheaply, large numbers of realistic but fake reviews that can then be distributed widely across multiple platforms. AI-generated reviews are covered by the final rule, which the Commission hopes will deter the use of AI for that illicit purpose.

[36] NPRM, 88 FR 493720–73.

comment by the North American Insulation Manufacturers Association (''NAIMA'') asserting that testimonials by those misrepresenting their experiences with insulation products are plentiful.[37] The Commission concluded that the unfair or deceptive reuse or repurposing of consumer reviews is prevalent, relying upon a prior Commission case and numerous news articles.[38] To show how commonly incentives are given in exchange for reviews with the incentives conditioned on the sentiment of the reviews, the NPRM pointed to FTC and private cases, analyses by researchers of markets for procuring reviews, and the experience of a small business employee commenter who said a competitor was providing incentives for 5-star reviews.[39] The Commission found prevalence of unfair or deceptive insider reviews and testimonials based on its prior cases; a State AG action; statistics from a review platform commenter about how many reviews of businesses were written by their owners, officers, or employees, or their family members; and an individual commenter who relied upon insider reviews in selecting an auto repair shop.[40] The NPRM cited prior cases regarding the prevalent practice of marketers setting up purportedly independent websites, organizations, or entities to review or endorse their own products.[41] The Commission found prevalence of suppression of negative reviews on retailer or business websites based on a platform's comment, a recent FTC case, and what it learned in another investigation about more than 4,500 merchants that were automatically publishing only 4- or 5-star consumer reviews.[42] The NPRM relied upon reports by platform and other commenters, as well as FTC and State AG cases, regarding review suppression by unjustified legal threat or physical threat.[43] Finally, with respect to the prevalence of sales and misuse of fake indicators of social media influence for commercial purposes, the NPRM discussed cases brought by the FTC, a State AG, and private parties, and published reports on social media bots and fake social media accounts.[44]

B. Manner and Context in Which the Acts or Practices Are Deceptive or Unfair

The rule is intended to curb certain unfair or deceptive uses of consumer reviews and testimonials. It contains several provisions to promote accuracy and truthfulness in reviews and testimonials and, thus, will allow American consumers to make better-informed purchase decisions. The key provisions of the rule prohibit conduct that is inherently deceptive or unfair, including creating, selling, and buying fake or false reviews or testimonials; buying reviews in exchange for, or conditioned on, their sentiment; and using reviews and testimonials from company insiders that hide their relationships to the company. The rule also includes prohibitions against misleading, company-controlled review websites or entities; unfair or deceptive review suppression practices; and the misuse of fake indicators of social media influence.

C. The Economic Effect of the Rule

As part of the rulemaking proceeding, the Commission solicited public comment and data (both qualitative and quantitative) on the economic impact of the proposed rule and its costs and benefits.[45] In issuing the final rule, the Commission has carefully considered the comments received and the costs and benefits of each provision, taking into account the effect on small businesses and consumers, as discussed in more detail in sections VI and VIII of this document. The record demonstrates that the most significant anticipated benefit of the final rule is increased deterrence of clearly unfair or deceptive acts or practices involving consumer reviews or testimonials. Another significant benefit is the expansion of the remedies available to the Commission, including the ability to more effectively obtain monetary relief. This is particularly critical given the U.S. Supreme Court's decision in *AMG Capital Management, LLC* v. *FTC,* which held that equitable monetary relief, including consumer redress, is not available under section 13(b) of the FTC Act.[46] Post-*AMG,* the Commission's primary means for obtaining redress is section 19 of the FTC Act. By issuing the final rule, the Commission can obtain such redress based on violations of the rule in one proceeding under section 19(a)(1), which will be significantly faster than the two-step process for obtaining redress under section 19(a)(2).[47] By allowing the Commission to secure redress more quickly and efficiently, this rule will also allow the Commission to preserve enforcement resources for other mission priorities.[48] As an additional benefit, the rule will enable the Commission to seek civil penalties against violators.[49] Without an efficient way to seek civil penalties, bad actors have little fear of being penalized for using fraud and deception in connection with reviews and endorsements. Increased deterrence will have consumer welfare benefits and will benefit honest competition.[50] Moreover, the final rule is likely to impose relatively small compliance costs on honest businesses.[51]

III. Overview of the Comments [52]

The Commission received 100 responsive and non-duplicative comments in response to the NPRM from a diverse group of individuals (including consumers and law students), industry groups and trade associations, review platforms, retailers, and other businesses, consumer advocacy organizations, and government entities.

In the NPRM, the Commission invited the public to comment on any issues or concerns the public believed were relevant or appropriate to the Commission's consideration of the

[47] *See* 15 U.S.C. 57b(a)(1), (2); *see also* NPRM, 88 FR 49377–78 (discussing impact of *AMG Cap. Mgmt.*).

[48] When the rule has been violated, the Commission can commence a Federal court action and seek to recover money for consumers or obtain an order imposing civil penalties. *See* 15 U.S.C. 57b(a)(1), 15 U.S.C. 45(m)(1)(A). Without the rule, the path to monetary relief is longer and requires the Commission to first conduct an administrative proceeding to determine whether the respondent violated the FTC Act; if the Commission finds that the respondent did so, the Commission issues a cease-and-desist order, which might not become final until after the resolution of any resulting appeal. Then, to recover money for consumers, the Commission must prove in a separate Federal court action that the violator engaged in fraudulent or dishonest conduct. *See* 15 U.S.C. 57b(a)(2).

[49] *See* section 5(m)(1)(A) of the FTC Act, 15 U.S.C. 45(m)(1)(A) (providing that violators of a trade regulation rule ''with actual knowledge or knowledge fairly implied on the basis of objective circumstances that such act is unfair or deceptive and is prohibited by such rule'' are liable for civil penalties for each violation). In addition, any entity or person who violates such a rule (irrespective of the state of knowledge) is liable for any injury caused to consumers by the rule violation. The Commission may pursue such recovery in a suit under section 19(a)(1) of the FTC Act, 15 U.S.C. 57b(a)(1).

[50] NPRM, 88 FR 49382–85.

[52] Minor changes to formatting, grammar, and punctuation have been made to some of the comments quoted in this document. These changes do not entail any substantive changes.

proposed rule.[53] The NPRM also posed twenty-three specific questions for the public.[54] The first two are broad questions addressed in this section III, which also discusses several issues or concerns that commenters raised generally without reference to particular sections of the rule. Responses to the more specific questions in the NPRM are discussed in section IV of this document, a section-by-section analysis of the final rule. Questions relating to the Paperwork Reduction Act (''PRA'') and Regulatory Flexibility Act (''RFA'') and are addressed in sections VII and VIII of this document, respectively.[55]

A. Furthering the Commission's Goal

In Question 1 of the NPRM, the Commission asked whether its proposal would further the Commission's goal of protecting consumers from clearly unfair or deceptive acts or practices involving consumer reviews and testimonials.[56]

Several commenters expressly addressed this question. A review platform and a business that specializes in identifying fake online reviews submitted comments stating that the proposed rule would further the Commission's goal of protecting consumers from clearly unfair or deceptive acts or practices involving consumer reviews.[57] Another review platform commenter answered that there are ''numerous advantages of the FTC's proposed new Rule,'' that it is ''generally supportive of this intervention overall,'' and that the proposed rule ''will be helpful to set out clear rules that expressly prohibit practices like writing or purchasing fake reviews, providing compensation or incentives in exchange for reviews, and certain acts of unfair review suppression.'' [58] A business commenter similarly answered that the ''Proposed Rule addresses many concerns about unfair or deceptive acts or practices involving consumer reviews and testimonials, such as false and biased reviews.'' [59] Both of these commenters also noted areas in which they thought certain provisions of the proposed rule should be adjusted or clarified; those issues are addressed below.[60] A consumer organization said that ''[i]n general, . . . the proposed Rule will reduce the incentives for businesses to purchase, disseminate, or sell fake consumer reviews or testimonials,'' but thought that the proposed rule should have placed explicit restrictions on third-party review platforms.[61] The Commission notes that this topic is beyond the scope of the rulemaking, which focuses instead on those responsible for inarguably unfair or deceptive acts or practices regarding reviews and testimonials.

B. Adoption of the Proposed Rule as a Final Rule

In Question 2 of the NPRM, the Commission inquired whether it should finalize the proposed rule, the reasons for why commenters were in favor of or against the finalization of the proposed rule, and whether the Commission should make any changes to its original proposal.[62]

Only two commenters directly addressed this question. A business commenter agreed that the Commission should finalize the proposed rule.[63] A review platform commenter said it ''supports this Rule and would support the Commission finalizing the Rule.[64] It also suggested adjustments to the Commission's proposal, which are addressed below in this document.

Numerous individual commenters,[65] trade associations,[66] and consumer organizations [67] expressed general support for the proposed rule. For example, an individual commenter wrote, ''I completely agree with the proposal. . . . Because review sections have become so untrustworthy (being impossible to tell whether a company has paid for positive reviews of its own product, or for negative reviews on a rival's product), review sections have become functionally useless for me. This makes it difficult to purchase any products online, since real consumer feedback is one of the few ways to determine whether I should buy the product or service without first examining it in person.'' [68] Another individual stated, ''I support the rules as specified, and applaud the FTC's action in this regard. It is extremely difficult for the consumer to determine the validity of online reviews—even within specific retailers such as amazon. There is little benefit for large online retailers to ensure that reviews are accurate, and this fact is evident in the large number of bogus reviews found on amazon, newegg, youtube and other sites.'' [69] A third individual wrote, ''I strongly support the rules against fake review

[55] *Id.* at 49388. In addition to soliciting public comment on the NPRM's PRA and RFA analyses in the PRA and RFA sections, the NPRM also posed two specific questions related to the PRA and RFA analyses. Question 4 inquired whether ''the proposed rule contains a collection of information,'' and Question 5 asked, ''Would the proposed rule, if promulgated, have a significant economic impact on a substantial number of small entities? If so, how could it be modified to avoid a significant economic impact on a substantial number of small entities?'' *Id.* at 49381–86, 49388.

[68] Markey Cmt.

[69] Anderson Cmt.

and testimonials and fines for businesses and people who write them. As a consumer, I often use reviews to help determine whether a product or service is reliable; the prevalence of fake reviews makes this impossible.'' [70] A trade association commented, ''The NPRM proposes rules that are appropriately scoped to target the bad actors [who are] intent on committing fraud through fake or deceptive reviews. . . . The NPRM strikes the appropriate balance between enhancing the Commission's tools to target bad actors and preserving industry flexibility to develop innovative and effective solutions to maintain consumer confidence in reviews.'' [71] A consumer organization stated, ''The Commission absolutely should finalize the proposed rule to better protect shoppers and hold businesses accountable.'' [72]

A number of individual consumers,[73] a review platform,[74] other industry members,[75] and consumer organizations [76] supported the Commission's proposal, but urged the Commission to go further and impose additional requirements, such as by adding provisions that would apply to third-party review platforms. As noted above, such provisions would be beyond the scope of the rulemaking. Similarly beyond the scope of the rulemaking is an individual's suggestion that the Commission should restrict the highlighting of testimonials on websites and prohibit payments for reviews.'' [77] A review platform's comment ''applaud[ed] . . . the Commission . . . for its extensive efforts to address the problem of deceptive review practices, as reflected in the Commission's notice of proposed rulemaking, and . . . fully support[ed] and endorse[d] the Commission's proposed Rule.'' [78] Its suggestions for several provisions are discussed below. A consumer group stated that the proposed rule ''is needed'' and ''addresses an urgent problem: fabricated and otherwise deceptive reviews and ratings of products and services,'' but asked for numerous modifications to strengthen it.[79] These proposals are discussed below.

A few individual commenters [80] and industry commenters [81] were supportive of a rule but expressed the need for clarifications or modifications. An individual commenter wrote that ''[a]ll of the rules proposed . . . make (common) sense'' but identified ''a few scenarios that highlight that the language in the proposed rules is a bit ambiguous'' and that with ''steep penalties like this, guidelines need to be clear, concrete, AND simple so businesses can understand.'' [82] Another individual commenter said that the proposed rule ''takes great strides,'' but that two proposed sections, 465.4 and 465.6, are too restrictive.[83] A retailer wrote, ''On the whole, . . . the Proposed Rule contains provisions that are reasonable and would provide additional protection to consumers'' but ''there are a few provisions . . . that are not well drafted or that need additional language.'' [84] Another retailer said that it ''supports a tailored rule that focuses on the bad actors that harm consumers,'' but that the proposed rule ''sweeps more broadly, extending to the activities of legitimate businesses that do not uncover abuses that they 'should have' identified, regardless of their good faith efforts'' and that ''[s]uch an overbroad rule would have significant unintended negative consequences on legitimate conduct.'' [85] An industry organization commented that the proposed rule ''is an important step, and we share the Commission's goal of improving consumer confidence in reviews and testimonials'' but ''strongly urge[d] the Commission to reexamine . . . [four] provisions'' to address what it viewed as First Amendment concerns and for other reasons.[86] The specific suggestions or concerns raised by these and other commenters are addressed below. In particular, whether in the text of the final rule or in the discussion below, the Commission is clarifying the scope or meaning of various rule provisions to cover the specific activities or conduct that harm consumers and avoid ambiguity or overbreadth.

Only four commenters, two individual commenters [87] and two trade associations,[88] said that the proposed rule was unnecessary or unwarranted. One of the individuals, wrote that ''the rule seems to be unnecessary as it is unlikely to actually provide the benefit to consumers of removing falsified reviews'' because it is difficult to identify and trace fake reviews and ''punish[ ] an offender'' and that the proposed rule ''also has potential to penalize non-offenders'' when competitors purchase ''review bombs.'' [89] The commenter asserted that the FTC's estimated benefits are based on faulty assumptions such as that ''the entirety of the loss'' from false reviews ''would be eliminated simply because the rule is enacted.[90] The commenter said that the FTC should either maintain the status quo or require websites with consumer reviews to include a disclosure that ''some reviews may have not been made by genuine customers, may potentially have been paid

testimonials, etc.'' [91] The other individual commenter said that the ''proposed rule is unnecessary because all of the practices considered by the rule 'are already unlawful under Section 5 of the FTC Act,' it has potentially massive compliance costs for American businesses'' (citing the FTC's estimated cost), ''and the better salutation [sic] is to work with States and review platforms to resolve the issue.'' [92] One of the trade associations stated that the ''Proposed Rule is [u]nnecessary,'' that ''current FTC enforcement authority has been effective in addressing such clearly deceptive practices, and there is no indication how or why a trade regulation rule is needed, or how such a rule would more effectively address concerns about such deceptive practices,'' and that ''a need to alleviate the 'difficulty' of obtaining monetary relief under the FTC Act where such authority has never existed, does not provide an adequate basis for the issuance of a Magnuson-Moss rulemaking.'' [93] The other trade association asserted that (1) it ''does not believe that rulemaking is warranted, wise, or a balanced approach, in part because it raises serious First Amendment concerns;'' (2) ''a well-designed rule would focus on a defined trade'' but the ''record to date does not establish that customer reviews, the use of those reviews, or the dissemination of those reviews by commercial platforms is itself a defined trade;'' (3) the ''FTC should not promulgate a rule solely because the augmented penalties attendant to a rule violation could ostensibly advance a Commission goal generally;'' and (4) ''the FTC fail[ed] to show how enforcement actions, many of which were settled by consent order, translate into 'prevalence.' '' [94]

The Commission disagrees with the four commenters who said that the proposed rule was unnecessary or unwarranted. The Commission believes that the status quo is inadequate to address consumer harm and that the rule will add deterrence and aid enforcement even though the practices covered by the rule are already unlawful under section 5 of the FTC Act. Greater deterrence and more effective enforcement are legitimate reasons to engage in a rulemaking, whereas difficulties in enforcing a rule against some violators are no reason to eschew it.[95] Further, the compliance costs estimated by the Commission are greatly outweighed by the estimated benefits to consumers and honest competition. The Commission notes that the harm caused by the acts and practices addressed cut across multiple trades. The Commission addresses potential First Amendment concerns and arguments regarding prevalence below.

IV. Section-by-Section Analysis

The following discussion provides a section-by-section analysis of the provisions proposed in the NPRM, and discusses the comments received, the Commission's responses to the comments, and the provisions adopted in the final rule.[96]

A. § 465.1—Definitions

1. Overview

The proposed rule included definitions for the following terms: ''business''; ''celebrity testimonial''; ''clear and conspicuous''; ''consumer review''; ''consumer testimonial''; ''indicators of social media influence''; ''officers''; ''purchase a consumer review''; ''reviewer''; ''substantially different product''; ''testimonialist''; and ''unjustified legal threat.'' In Question 6 of the NPRM, the Commission asked whether the proposed definitions are clear and what changes should be made to any definitions. In Questions 11 and 21 of the NPRM, the Commission asked specifically about the definitions of ''substantially different product'' and ''unjustified legal threat,'' respectively. In the following definition-by-definition analysis, the Commission discusses each definition proposed in the NPRM, relevant comments not otherwise addressed in the discussion of the corresponding substantive provisions of the final rule, and the definitions that the Commission is finalizing.[97]

[95] The Commission is aware that a business could attempt to damage a competitor's reputation by purchasing fake positive reviews for that competitor and then reporting those reviews to the platform on which they appear. In investigating a fake review matter, FTC staff would take such a possibility into account.

[96] The Commission notes that many commenters raised similar concerns or addressed overlapping issues. To avoid repetition, the Commission has endeavored to respond to issues raised in similar comments together. Responses provided in any given section apply equally to comments addressing the same subject in the context of other sections. Moreover, throughout the SBP, the Commission discusses justifications for the final rule that are informed by its careful consideration of all comments received, even where that discussion is not linked to a particular comment.

[97] Because the Commission is adding additional definitions and not including one proposed definition, the definitions are renumbered in the final rule.

2. Definition-by-Definition Analysis

a. Business

The proposed rule defined ''business'' as ''an individual, partnership, corporation, or any other commercial entity that sells products or services.'' This term appeared in the proposed definitions of ''celebrity testimonial,'' ''consumer review,'' ''consumer testimonial,'' and ''officers,'' and in every substantive section of the proposed rule. For the following reasons, the Commission adopts the definition of ''business'' largely as proposed, with a minor, non-substantive clarification as described below.

A trade association commenter noted correctly that the Commission's rulemaking authority is limited to acts or practices ''in or affecting commerce.'' [98] It recommended that the Commission insert ''in or affecting commerce as defined in section 4 of the Federal Trade Commission Act (15 U.S.C. 44)'' in the definition of a ''business.'' [99] The Commission declines to make this modification. An entity that is selling products or services is engaging in commerce and, even without the commenter's proposed addition, the acts and practices covered by the final rule are limited to commercial practices.

A consumer advocacy organization commenter argued that the definition of a business potentially liable under the proposed rule was unduly narrow and should be expanded to include ''advertisers,'' ''endorsers,'' and ''[a]dvertising agencies, public relations firms, review brokers, reputation management companies, and other similar intermediaries.'' [100] However, advertisers, advertising agencies, public relations firms, review brokers, reputation management companies, and other similar intermediaries all sell products or services and are covered by the Commission's definition of ''business.'' To the extent that an endorser is in the business of selling reviews or testimonials, the endorser is covered by the definition. The Commission is therefore not making the proposed change.

A review platform commenter suggested that, to avoid ambiguity, the Commission clarify that ''sells products or services'' in the definition of ''business'' applies to each of the types of entities listed in the definition, not just to ''any other commercial

[98] National Federation of Independent Businesses, Cmt. on NPRM at 2 (Sept. 12, 2023), *https://www.regulations.gov/comment/FTC-2023-0047-0047* (''NFIB Cmt.'').

[99] *Id.*

[100] TINA Cmt. at 6–7.

entity.'' [101] The Commission is adopting this recommendation to clarify the intended scope of the definition.

For the reasons explained in this section, the Commission is finalizing the definition of ''business'' to mean an individual who sells products or services, a partnership that sells products or services, a corporation that sells products or services, or any other commercial entity that sells products or services.

b. Celebrity Testimonial

The proposed rule defined ''celebrity testimonial'' as ''an advertising or promotional message (including verbal statements, demonstrations, or depictions of the name, signature, likeness, or other identifying personal characteristics of an individual) that consumers are likely to believe reflects the opinions, beliefs, or experiences of a well-known person who purchased, used, or otherwise had experience with a product, service, or business.'' The Commission is finalizing the definition of this term—which is used in § 465.2, Fake or False Consumer Reviews, Consumer Testimonials, or Celebrity Testimonials—with one modification.

A trade association commenter said that the definition of a celebrity endorsement should be clarified to exclude ''a situation where a celebrity or celebrity likeness appears or is used by a business as a promotion, without any specific advertising or opinions presented.'' [102] The commenter gave the example of an athlete who appears at a business to sign autographs or simply appears, without making any statements or representations about the business.[103] Such situations should not be excluded from the scope of the definition because a business's use in advertising or promotion of a celebrity or a celebrity's image can, even without any additional statements, imply that the celebrity has a positive opinion of the business or its products or services and therefore constitute a celebrity testimonial. However, if consumers would not interpret the celebrity's appearance to reflect the celebrity's opinions of, beliefs about, or experiences with, a business or its products or services, then the appearance is not a testimonial. That issue is thus highly dependent on specific facts. Further, to take the commenter's example, it is highly unlikely that a celebrity who does nothing more than sign autographs or appear at a business could violate § 465.2, because such signings or appearances alone would likely not communicate anything to consumers about the celebrity's use or experience with a product, service, or business.

A second trade association asserted that the definition of a ''celebrity testimonial'' does not give advertisers adequate notice as to when a testimonial is a ''celebrity'' testimonial or a ''consumer'' testimonial.[104] The commenter requested that the Commission provide further guidance on what constitutes a ''well-known'' individual.[105] Based upon common usage, well-known individuals include those famous in the areas of entertainment, such as film, music, writing, or sport, and those known to the public for their positions or successes in business, government, politics, or religion. Individuals who earn money through their work as ''influencers'' are also well known, as are those who have been featured in the news or media. More important, whether someone is well known does not matter for purposes of rule interpretation and enforcement because any provisions that apply to celebrity testimonials also apply to consumer testimonials.

A business commenter suggested replacing ''a well-known person'' in the definition with a ''widely known all-purpose public figure'' or ''widely known public figure'' for the purpose of ''clarity.'' [106] It said that Black's Law Dictionary defines the term ''all-purpose public figure'' to mean ''[s]omeone who achieves such pervasive fame or notoriety that he or she becomes a public figure for all purposes and in all contexts.'' [107] To be ''well known,'' one need not have such pervasive fame as to be a public figure for all purposes and in all contexts. For example, an influencer may be well known to a subset of individuals interested in a particular subject. The commenter gave no justification for narrowing the definition of a ''celebrity testimonial,'' and the Commission declines to do so.

A public interest research center commenter said that the definitions of ''celebrity testimonials'' and ''consumer testimonials'' should ''be broadened to explicitly include non-natural persons, such as businesses and public sector entities.'' [108] Although endorsements by such organizations are addressed in the Commission's Endorsement Guides,[109] the Commission did not intend for any provision using the term ''testimonials'' to apply to endorsements by entities. To clarify that the Commission does not intend for any provision using the term ''testimonials'' to apply to endorsements by entities, the Commission is substituting the word ''individual'' for the word ''person'' wherever the word appeared in the Commission's original proposal.[110] The only section of the rule that applies to endorsements by entities or purported entities is § 465.6, which addresses company-controlled review websites or entities. However, § 465.6 does not apply to consumer or celebrity testimonials.

c. Clear and Conspicuous

The proposed rule defined ''clear and conspicuous'' to mean ''that a required disclosure is easily noticeable (*i.e.,* difficult to miss) and easily understandable,'' including in eight enumerated ways, listing proposed requirements for ''any communication that is solely visual or solely audible,'' ''[a] visual disclosure,'' ''[a]n audible disclosure,'' and ''any communication using an interactive electronic medium,'' and providing, inter alia, that such disclosures ''must use diction and syntax understandable to ordinary consumers,'' ''must appear in each language in which the representation that requires the disclosure appears,'' and ''must not be contradicted or mitigated by, or inconsistent with, anything else in the communication.'' Based on the following, the Commission is finalizing the definition of this term—which is used in § 465.5, Insider Consumer Reviews and Consumer Testimonials—with one modification.

A trade association commenter suggested not using the terms ''diction'' and ''syntax'' in the definition because many of those subject to the rule ''may not know the meaning of th[os]e words.'' [111] The commenter suggested replacing them with ''words'' and

[109] *See* Fed. Trade Comm'n, Guides Concerning Use of Endorsements and Testimonials in Advertising (''Endorsement Guides''), 16 CFR 255.4.

[110] The Commission is using the term ''individual'' in the context of this rule to mean a single human being. *See Individual* (def. 1), *Dictionary.com,* LLC, *https://www.dictionary.com/browse/individual* (last visited July 5, 2024) (defining ''individual'' as ''a single human being, as distinguished from a group''). The Commission notes that, in the context of a different rulemaking, it has proposed defining ''individual'' to mean ''a person, entity, or party, whether real or fictitious, other than those that constitute a business or government'' under 16 CFR 461. *See* Fed. Trade Comm'n, Trade Regulation Rule on Impersonation of Government and Businesses, 89 FR 15072, 15083 (Mar. 1, 2024).

[111] NFIB Cmt. at 2.

''grammar.'' [112] ''Diction'' means the choice and use of words.[113] ''Syntax'' involves the arrangement of words and phrases and is a subset of grammar.[114] The Commission believes that the meaning of ''diction'' and ''syntax'' are sufficiently clear.

One trade association commenter asserted that it is unnecessary to have a definition of ''clear and conspicuous'' because the ''phrase . . . has a meaning under FTC jurisprudence.'' [115] The definition is based on that jurisprudence and decades of Commission experience policing deceptive and unfair conduct. The Commission believes it is both helpful and necessary that the rule provides more explicit guidance on what does and does not constitute a clear and conspicuous disclosure.

Several commenters asserted that the proposed definition was overly prescriptive and not sufficiently flexible.[116] The Commission disagrees and reiterates that the definition contains basic, common-sense principles, such as requiring visual disclosures in a size consumers can see and audible disclosures at a volume they can hear. The definition merely provides a baseline and provides a great deal of flexibility in what a disclosure should say and how it appears. The basic, enumerated requirements are necessary for a disclosure to be effective.

Two commenters objected to the requirement that internet disclosures be ''unavoidable,'' an objective standard that depends on whether consumers could have avoided the disclosure, which, per the definition is the case when ''a consumer must take any action, such as clicking on a hyperlink or hovering over an icon, to see'' the disclosure.[117] The commenters do not believe that a disclosure has to be unavoidable for it to be effective; they noted that a staff business guidance document, issued in 2000 and updated in 2013, allowed for the possibility that avoidable disclosures, *e.g.,* those available through a hyperlink, could be clear and conspicuous.[118] The Commission believes that a disclosure is not effective when it is not seen or heard, including when the reason for it not being seen or heard is its avoidability. The staff guidance said that ''[d]isclosures that are an integral part of a claim or inseparable from it should not be communicated through a hyperlink,'' and the purported independence and objectivity of a reviewer or testimonialist is often integral.[119] Further, some readers misunderstood the staff guidance about the necessity of properly labeling hyperlinks to convey the ''importance, nature, and relevance of the information'' to which the hyperlinks lead. The staff guidance said that, to be effective, the label of the hyperlink might need to give the essence of the disclosure, with the hyperlink leading to the details.[120] Even had these qualifications been absent, the Commission is not bound by the 2013 staff business guidance, which is currently under review in light of an evolution of views over time regarding online disclosures and avoidability.[121]

One commenter asked whether a disclosure in the first line of a product review would be considered unavoidable.[122] For the purposes of this rule, the Commission would consider such a disclosure to be unavoidable. A different commenter expressed concern that the requirement that a disclosure ''stand out'' would require new formatting techniques for companies hosting reviews and preclude a disclosure from being in the review itself.[123] For the purposes of this rule, the Commission would consider a disclosure at the beginning of a text-only consumer review to ''stand out.''

A trade association said that ''the average social media user is familiar with where text is found in any given social media post, and social media platforms already make text visible against a variety of backgrounds'' so ''[r]equiring the endorsement-disclosure text to differ from other text is not only impractical, but it could actually create confusion for social media users who have grown accustomed to viewing all text related to a post in a certain manner.'' [124] The Commission recognizes that, on a social media platform that allows only uniform text, it is not possible to have the text of a disclosure appear in different text. As with a text-only consumer review, the Commission would consider a disclosure at the beginning of such a text-only testimonial to ''stand out.'' On visual platforms with superimposed text, it is quite possible and reasonable to require that the text of a disclosure ''stand out.''

One commenter asserted that being ''unavoidable'' and being ''easily noticed'' are ambiguous concepts.[125] The Commission disagrees. ''Unavoidable'' means that a consumer cannot avoid a disclosure such as by failing to click on a link or by failing to scroll. ''Easily noticeable'' is a simple and objective standard evaluated from the perspective of a reasonable consumer.

Two commenters asserted that it would be difficult to make clear and conspicuous disclosures required by the proposed rule on a small screen.[126] They did not explain why that would be the case, and the Commission does not believe that compliance with the rule's disclosure requirement should be difficult on handheld devices.

One commenter asserted that, because of the proposed definition of clear and conspicuous, ''[t]here is no need for the FTC to determine whether the resulting speech is rendered deceptive, untrue, or inaccurate.'' [127] The Commission disagrees. The only substantive provision for which the definition is relevant is § 465.5. A business would not violate that provision merely by having a disclosure that is not clear and conspicuous. Rather, the business would have to engage in conduct that would be unfair or deceptive in the absence of a clear and conspicuous disclosure (*e.g.,* a corporate officer

giving a consumer endorsement without disclosing that they are an insider). As discussed below, the Commission is finalizing proposed § 465.5 with a modification to clarify to clarify that the provision is limited to conduct that would violate section 5 of the FTC Act.[128] The same commenter also surmised, based on the similarity of the definition of ''clear and conspicuous'' to the definition of the same phrase in the Endorsement Guides, that the Commission intends that the examples used in the Endorsement Guides would also be examples of violative behavior under the rule.[129] That is not the case. The Endorsement Guides address a broader range of conduct than the rule. Of the three examples in the Endorsement Guides that illustrate whether disclosures are clear and conspicuous, two of them address issues—the payment of influencers and implied typicality—not covered by the rule.[130] The third example involves a disclosure that individuals appearing in a television ad and giving testimonials are paid actors.[131] Such conduct would not be covered by the rule unless the underlying testimonials were fake or false.

One commenter, a trade association, stated that it was ''unclear if the Commission has considered any social media platform constraints with respect to the length of posts (*e.g.,* character and time limits),'' and asked (1) whether and how hashtags can meet the ''clear and conspicuous'' requirement, (2) whether '''#Ad' is a sufficient visual disclosure of a material relationship,'' and (3) that the Commission ''provide more examples, including appropriate use of hashtags in disclosures, in its final rule.'' [132] Another trade association requested in its comment that the Commission provide ''visual examples of 'insider' endorsement disclosures that the Commission finds acceptable.'' [133] The Commission believes it is not difficult to comply with the rule's disclosure requirements in the social media context. Depending upon their wording and appearance, hashtags can be clear and conspicuous for purposes of the rule. In a social media post promoting a brand, it might be sufficient to prominently disclose an employee relationship via a hashtag beginning with the brand name and followed by the word ''employee.'' Whether ''#ad'' would be an adequate disclosure would depend on the specific context. It could be adequate at the beginning of a social media post by the testimonialist, but it would likely be inadequate in a television ad or magazine ad featuring the testimonialist. Because the only provision for which the definition is relevant is § 465.5, which addresses the failure to disclose insider relationships, the disclosure could be as simple as the testimonialist describing a product as ''my company's'' or ''my wife's company's.''

A commenter asserted that disclosures ''utilizing a social media platform's built-in disclosure tool should be . . . at least sufficient enough to avoid the risk of penalties under the FTC's rulemaking authority.'' [134] As it has previously said, the Commission supports development of effective, built-in disclosure tools but is concerned that some of the existing tools lead to inadequate disclosures that are too poorly contrasting, fleeting, or small, or may be placed in locations where they do not catch the user's attention.[135] Whether a business could be subject to civil penalties for social media posts by insiders who utilized a social media platform's built-in disclosure tool would depend on whether a court would find that the business met the knowledge standard of section 5(m)(1)(A) of the FTC Act.

A trade association's comment expressed concerns about the proposed requirement that ''[i]n any communication made through both visual and audible means, such as a television advertisement, the disclosure must be presented simultaneously in both the visual and audible portions of the communication even if the representation requiring the disclosure is made in only one means.'' [136] The commenter said that ''it is unnecessary and duplicative to require video endorsements that include visual and audio components to include both visual and audio disclaimers,'' and ''requiring an additional visual disclaimer, on top of a disclaimer that an endorser may easily include via audio, is cumbersome, and restricts companies' marketing capabilities.'' [137] On reflection, in the context of this rulemaking and as to the relationships of company insiders, if a communication makes an endorsement in only its visual or audio portion, then it should be sufficient for a disclosure to appear in the same format as the claim that requires the disclosure. On the other hand, if an endorsement is conveyed in both the audio and visual portions of a communication, then the disclosure should be made in both the audio and visual portions. Consumers can watch a video with the sound off or listen to it without looking at the screen. The Commission is changing the relevant language to, ''[i]n any communication made through both visual and audible means, such as a television advertisement, the disclosure must be presented in at least the same means as the representation(s) requiring the disclosure.'' This change makes the rule less restrictive while still accomplishing the Commission's goal of ensuring that consumers are fully informed. A different trade association noted that the ''simultaneous disclosure requirement is confusing and would benefit from examples of sufficient simultaneous disclosure.'' [138] Because the Commission is not finalizing the simultaneous disclosure requirement contained in the proposed rule, it is not providing further guidance on the meaning of simultaneous.

The second trade association also asked ''if a social media influencer posts a video and discloses verbally in the video that they have a brand ambassador relationship with the retailer/brand, is it sufficient to display in the text accompanying the posted video some written disclosure'' or would the disclosure ''need to be embedded or flash across the video itself.'' [139] The rule does not address or apply to an influencer's disclosure of a brand ambassador relationship. The rule's only disclosure requirements are in § 465.5 and apply to company insiders. Whether a testimonial in a social media post by a company insider requires a superimposed textual disclosure depends on whether there is an endorsement communicated by the visual portion of the post. If there is an endorsement in the visual portion, there would need to be a disclosure in the visual portion. If the endorsement is communicated only in the audio portion of the post, there would not need to be a disclosure in the visual portion.

d. Consumer Review

The proposed rule defined ''consumer review'' as ''a consumer's evaluation, or a purported consumer's evaluation, of a product, service, or business that is

[139] *Id.*

submitted by the consumer or purported consumer and that is published to a website or platform dedicated in whole or in part to receiving and displaying such evaluations.'' The proposed definition also noted that, for the purposes of the rule, consumer reviews include consumer ratings regardless of whether they include any text or narrative. The Commission has determined to finalize the definition of this term—which is used in §§ 465.2 through 465.6—with a minor, technical change.

A comment from a review platform supported the proposed definition, calling it ''particularly clear and holistic.'' [140]

A comment from an individual asserted that the ''definition of 'consumer' implies an individual who purchased the product for their own use'' and that when a ''product is provided by the company seeking a review, for the purposes of it being reviewed, the reviewer is arguably not a consumer.'' [141] The Commission disagrees that a ''consumer'' is necessarily a purchaser. For purposes of the rule, a consumer is a person who purchased, used, or otherwise had experience with a product, service, or business.

A trade association commenter suggested deleting the definition's element that a consumer review be ''published.'' [142] It said that a ''consumer review should still be considered a 'review' before it is publicly displayed by a website or platform.'' [143] Although that may be true for some purposes, the Commission declines to make that change. A consumer review that is submitted to a website or platform but never published does not in and of itself deceive consumers, although the failure to publish a review may be deceptive pursuant to paragraphs (a)(1) and (b) of § 465.7. Paragraphs (a)(1) and (b) of § 465.7 are worded in a way that does not limit their application to published reviews, because they relate to suppressed reviews.

A comment from a consumer advocacy organization suggested deleting the portion of the definition that refers to publication to a website or platform ''dedicated in whole or in part to receiving and displaying such evaluations.'' [144] It asked whether the definition would ''only apply to reviews on a website 'dedicated' to posting reviews, such as Yelp'' and whether ''it include[s] any website where reviews are possibly posted, like Reddit?'' [145] The commenter continued, ''Would a website be excluded if only a very small portion of the website contained consumer evaluations?'' [146] The commenter asserted that ''[a]ll fake reviews and ratings that are used to market a product or service should be captured in the . . . Rule—no matter where they are posted.'' [147] The definition is not limited to consumer reviews on websites that are dedicated entirely to posting such reviews. It would also cover reviews on a portion of a website, no matter how small a portion, that is dedicated to receiving and displaying such reviews, such as a reviews page or the review sections of product pages on a retailer's website. The definition would not, however, cover consumer statements about products or services on a website or portion of a website, such as Reddit, that is not dedicated to receiving and displaying reviews. Such free-floating consumer statements are outside of the generally understood context in which content is submitted and published as reviews. Under some circumstances, such statements might be considered ''consumer testimonials,'' such as when an advertiser has paid for them.

A comment from a review platform raised two issues with the ''consumer review'' definition.[148] It said that ''[b]are ratings provide no context, making them virtually useless for other consumers or to businesses that might use consumer feedback to improve their services'' and suggested that ''the Commission differentiate between reviews and ratings.'' [149] The fact that bare ratings do not provide context does not mean that consumers do not rely on them or on aggregate ratings that include bare ratings. The Commission does not see a reason to distinguish between reviews and ratings for the purposes of the rule, and the commenter did not provide such a reason. The same commenter also expressed ''concern[ ] with the definition's use of the word 'purported[,]' . . . which has a negative connotation that feeds into the false narrative that consumer reviews are inherently unreliable'' and suggested replacing ''purported'' with different language.[150] The definition simply recognizes and accounts for the undisputed fact that some reviews are fake. Just because some reviews are unreliable does not suggest that reviews are generally unreliable. The Commission declines to adopt this recommendation.

To conform with the Office of the Federal Register's drafting requirements, the Commission is changing a reference to ''this Rule'' to ''this part.'' [151]

e. Consumer Testimonial

The proposed rule defined ''consumer testimonial'' as ''an advertising or promotional message (including verbal statements, demonstrations, or depictions of the name, signature, likeness, or other identifying personal characteristics of an individual) that consumers are likely to believe reflects the opinions, beliefs, or experiences of a consumer who has purchased, used, or otherwise had experience with a product, service, or business.'' The Commission is finalizing the definition of the term—which is used in §§ 465.2 and 465.5—as originally proposed.

A trade association commenter expressed concern that consumers seeing a clearly dramatized television commercial might unreasonably believe that the actors' scripted lines actually reflected their opinions, beliefs, or experiences and could therefore be considered consumer testimonials.[152] It suggested clarifying the definition by inserting ''reasonably in the circumstances'' after ''that consumers are likely to believe.'' [153] The Commission agrees that it would not be reasonable for viewers to consider ''an obviously fictional dramatization'' to be an endorsement.[154] The Commission does not, however, believe it is necessary to modify the definition. The concept of ''reasonable consumers'' from FTC jurisprudence [155] is incorporated into the concept of consumers being likely to believe something.

The same public interest research center that commented, as discussed above, that the Commission should broaden the definition of ''celebrity testimonials'' to explicitly include non-natural persons (such as businesses and

public sector entities)[156] made the same comment with respect to the definition of ''consumer testimonials.''[157] The Commission declines to make that change in the latter definition for the same reason it declined to make it in the former definition.

f. Indicators of Social Media Influence

The proposed rule defined ''indicators of social media influence'' as ''any metrics used by the public to make assessments of an individual's or entity's social media influence, such as followers, friends, connections, subscribers, views, plays, likes, reposts, and comments.'' For the following reasons, the Commission adopts the definition of ''indicators of social media influence''—a term which is used in § 465.8, Misuse of Fake Indicators of Social Media Influence—largely as proposed, with one modification described below.

A comment from a consumer advocacy organization suggested explicitly including ''Saves'' and ''Shares'' within the definition of indicators of social media influence.''[158] The commenter explained that the number of times that social media posts are saved or shared serves as indicators of social media influence and that both ''Saves'' and ''Shares'' are offered for sale on the internet.[159] Because the NPRM proposed to define the term as ''any metrics used by the public to make assessments of an individual's or entity's social media influence,'' ''Saves'' and ''Shares'' were already covered by the definition as originally proposed. However, merely for the purpose of clarification, the Commission is adding them to the listed examples of indicators. The same commenter also suggested that the Commission expand the definition to include engagement metrics that are not publicly visible but that are used to gain an algorithmic advantage.[160] Such non-visible indicators are outside the scope of this rulemaking, and the Commission chooses not to address them at this time.

One review platform commenter suggested that the Commission ''simplify the definition to exhaustively list the current metrics that are such indicators.''[161] The commenter continued that ''whether a given metric is 'used by the public to make assessments of an individual's or entity's social media influence' may become the subject of substantial dispute in future cases . . . in the absence of an exhaustive, disjunctive list of indicators.''[162] The Commission intends the listed indicators to be examples and non-exhaustive, a flexible and efficient approach that avoids having to modify the rule when such metrics change. The Commission has no reason to believe that its approach will result in substantial disputes in its cases.

For the reasons explained in this section, the Commission is finalizing the definition of ''indicators of social media influence'' to mean any metrics used by the public to make assessments of an individual's or entity's social media influence, such as followers, friends, connections, subscribers, views, plays, likes, saves, shares, reposts, and comments.

g. Officers

The proposed rule defined ''officers'' as ''including owners, executives, and managing members of a business.'' The Commission is finalizing the definition of this term—which is used in §§ 465.2 and 465.5.

A review platform commenter said that including ''managing members'' in the definition of ''officers'' ''could suggest that managers are officers.''[163] The commenter also suggested that the definition of ''officers'' ''should be refined to only include 'senior management members' of a business,'' thereby creating ''a clearer distinction between those in a position of leadership versus lower-level employees, or staff that may have the title 'manager' without any practical level of control and power to exert influence over others.''[164]

Because a ''managing member'' is a commonly understood term referring to an owner and senior manager of a limited liability company, and because the term does not refer to all ''managers'' of a business, the Commission declines to remove ''managing members'' from the definition of ''officer.'' As discussed below, the Commission continues to believe it appropriate that §§ 465.2 and 465.5 apply to both officers and managers and is therefore not limiting the definition of ''officers'' to ''senior management members.'' A new definition of ''managers'' is discussed below.[165]

h. Purchase a Consumer Review

The proposed rule defined ''purchase a consumer review'' as ''provid[ing] something of value, such as money, goods, or another review, in exchange for a consumer review.'' For the following reasons, the Commission adopts the definition of ''purchase a consumer review''—a term which is used in § 465.2, Fake or False Consumer Reviews, Consumer Testimonials, or Celebrity Testimonials—largely as proposed, with two modifications described below.

An individual commenter wrote, ''[r]egarding payment for reviews, the use of . . . discounts on future purchases from the business should be specifically prohibited as well.''[166] A review platform commenter suggested ''that the Commission list additional examples of . . . what the Commission considers 'value.' ''[167] Specifically, it suggested adding ''gift certificates,'' ''services,'' ''discounts,'' ''coupons,'' and ''contest entries.''[168] Such examples of value were covered by the proposed definition, which applies to ''something of value'' provided in exchange for a consumer review'' but, for purposes of clarification, the Commission is adding these examples of value in the final definition. The review platform commenter also suggested adding ''other incentives,''[169] which the Commission thinks is unnecessary, given that the list is only exemplary and preceded by the words ''such as.''

Another review platform commenter suggested using language explicitly stating that the listed examples of ''value'' are not exhaustive.[170] The Commission believes that, because the phrase ''such as'' precedes the list of examples, this is already sufficiently clear from the language of the definition.

The proposed definition used the term ''goods.'' To ensure that terminology is used consistently throughout the rule, the Commission is replacing the term ''goods'' with the synonymous word ''products'' in the final definition.[171]

For the reasons explained in this section, the Commission is finalizing the definition of ''purchase a consumer review'' to mean to provide something

of value, such as money, gift certificates, products, services, discounts, coupons, contest entries, or another review, in exchange for a consumer review.

i. Reviewer

The proposed rule defined ''reviewer'' as ''the author or purported author of a consumer review.'' The Commission is finalizing the definition of the term—which is used in §§ 465.2 and 465.5—as originally proposed.

One review platform commenter objected to the use of the word ''purported'' in the definition of ''reviewer,'' just as it objected to that word's inclusion in the definition of ''consumer review.'' [172] The commenter asserted that ''purported'' feeds into the false narrative that consumer reviews are inherently unreliable. As discussed above, the use of the word ''purported'' simply recognizes and accounts for the undisputed fact that some reviews are fake.[173] The Commission declines to modify the definition of ''reviewer.''

j. Substantially Different Product

The proposed rule defined ''substantially different product'' as a product that differs from another product in one or more material attributes other than color, size, count, or flavor. The defined term appeared in proposed § 465.3, Consumer Review or Testimonial Reuse or Repurposing, which the Commission is no longer planning on finalizing.[174] Given that the Commission has decided not to proceed with proposed § 465.3 at this time, it is not including a definition of ''substantially different product'' in the final rule.

k. Testimonialist

The proposed rule defined ''testimonialist'' as ''the person giving or purportedly giving a consumer testimonial or celebrity testimonial.'' None of the comments received addressed the definition of testimonialist. As already discussed in section IV.A.2.b of this document, the Commission is substituting the word ''individual'' for the word ''person'' wherever the word appeared in the Commission's original proposal. Aside from this minor, clarifying modification, the Commission has determined that it will finalize the definition of the term—which is used in §§ 465.2 and 465.5—as originally proposed.

l. Unjustified Legal Threat

The proposed rule defined ''unjustified legal threat'' as ''a threat to initiate or file a baseless legal action, such as an action for defamation that challenges truthful speech or matters of opinion.'' For the following reasons, the Commission adopts the definition—a term which is used in § 465.7, Review Suppression—largely as proposed, with two modifications described below.

The NPRM asked whether ''the definition of 'unjustified legal threat' is sufficiently clear.'' One company's comment said that the proposed definition was clear.[175] A trade association said ''the term 'unjustified' is a vague standard that leaves unclear what legal support a business must have for its legal position before it warns the creator of a review of possible legal proceedings.'' [176] A comment from State Attorneys General suggested changing ''unjustified'' to ''unfounded, groundless, or unreasonable'' in order to provide a more objective legal standard for evaluating the types of legal threats that are not permitted.[177] The Commission agrees in part with this recommendation. As a clarification of what it intended, the Commission is changing ''unjustified'' to ''unfounded or groundless.'' Specifically, this change avoids the unintended, potentially broader scope of the term ''unjustified,'' which is also freighted with subjective considerations, in favor of terms that reflect objective legal standards. For similar reasons, the Commission is not adding ''unreasonable,'' a term which is unnecessary and not as precise in this particular situation as ''unfounded or groundless.''

The State Attorneys General comment also recommended that the definition include ''a threat to enforce an agreement that is void, voidable, or unenforceable.'' [178] It said that the word ''unjustified'' may be insufficient to address merchants arguing that their legal threats were justified by their non-disclosure agreements that limit consumer reviews.[179] The change from ''unjustified'' to ''unfounded or groundless'' addresses this concern. A comment from a review platform suggested that the Commission expand the definition to include threats based on form contracts that violate the Consumer Review Fairness Act (''CRFA'').[180] Given that such form contracts are already prohibited by the CRFA,[181] the Commission declines to address them in this rulemaking.

A consumer group's comment disagreed with the definition's use of the phrase ''baseless legal action'' on the basis that it ''open[s] just as many questions as the underlying term it attempts to define.'' [182] A company's comment noted that the phrase ''a baseless legal action'' is vague, and recommend that the Commission instead adopt language that is based upon Rule 11(b)(2) of the Federal Rules of Civil Procedure.[183] Specifically, the commenter recommended changing ''a baseless legal action'' to ''a legal action that is not warranted by existing law or a nonfrivolous argument for extending, modifying, or reversing existing law or establishing new law.'' [184]

The Commission is partially adopting the commenter's suggestion by adopting language that is loosely based upon Federal Rule of Civil Procedure 11(b)(2) and (3).[185] However, the Commission is not adopting the phrase ''extending, modifying, or reversing existing law or establishing new law'' because it is highly doubtful that companies would threaten consumers by asserting that, while no lawsuit is warranted under existing law, they will bring a lawsuit anyway and try to change existing law. Instead, the Commission chooses to clarify the definition by changing ''threat to file a baseless legal action'' to ''legal threat based on claims, defenses, or other legal contentions unwarranted by existing law or based on factual contentions that have no evidentiary support or will likely have no evidentiary support after a reasonable opportunity for further investigation or discovery.''

A review platform commenter was concerned that the proposed definition's ''wording opens the door to bad actors being able to claim defamation on weakly justified grounds and to seek to game the system by deliberately constructing legal terms which can then be deployed to suppress reviews.'' [186] The Commission believes that the revised definition addresses this

[172] Yelp Cmt. at 4.

[173] *See supra* Section IV.A.2.d of this document.

[174] Some commenters suggested edits to the definition, such as removing ''flavor'' from the list of attributes that might not be material, adding other product attributes to that list, or adding flexibility by removing the listed attributes altogether. [186] Trustpilot Cmt. at 17–18.

concern, especially given its inclusion of language from Federal Rule of Civil Procedure 11(b)(2) and (3), which is intended to avoid such misuse of the court system. In any event, the Commission is deleting ''such as an action for defamation that challenges truthful speech or matters of opinion'' because this example is unnecessary and possibly confusing in this context.

For the reasons explained in this section, the Commission is adopting the proposed definition of an ''unfounded or groundless legal threat'' with clarifying changes. The final definition provides that an ''unfounded or groundless legal threat'' is a legal threat based on claims, defenses, or other legal contentions unwarranted by existing law or based on factual contentions that have no evidentiary support or will likely have no evidentiary support after a reasonable opportunity for further investigation or discovery.

3. Proposed Additional Definitions

In Question 7 of the NPRM, the Commission asked what additional definitions, if any, are needed. In Questions 14 and 18 of the NPRM, the Commission asked whether it should define the terms ''managers'' and ''relatives,'' respectively. As discussed below, various commenters suggested that the Commission define the following terms and phrases that appear in the proposed rule: ''dissemination,'' ''manager,'' ''relative,'' and ''purchase or procure fake indicators.'' One commenter suggested that the Commission define ''review hosting'' and exclude it from the scope of § 465.2.[187]

a. Dissemination

The term ''disseminate'' appears in both proposed and final §§ 465.2 and 465.5. A comment from a trade association stated that the Commission should define ''disseminate'' ''within Proposed § 465.2(b) to include only the affirmative posting or intentional distribution of reviews, where a company has actual knowledge that the reviews are false or fraudulent in nature.'' [188] The commenter continued by saying that ''disseminate'' should ''not include passive actions such as allowing a review to be posted or published on a company's web page, unless the company has actual knowledge that the review is false or fraudulent in nature'' or ''retailers sharing reviews with third-party platforms such as Google.'' [189] Within both §§ 465.2 and 465.5, however, ''disseminate'' applies only to testimonials, not to consumer reviews. One of the basic canons of statutory and regulatory construction is that words are to be understood in their ordinary, everyday meanings—unless the context indicates that they bear a technical sense.[190] In §§ 465.2 and 465.5, the Commission intended for the term to have its ordinary, everyday meaning—that is, to spread or to convey something, rather than the proposed definition.[191] Accordingly, the Commission declines to add the proposed definition.

b. Manager

The term ''manager'' appeared in proposed § 465.5, Insider Consumer Reviews and Consumer Testimonials, and was undefined. Due to the clarifying changes to § 465.2 that are discussed in further detail below, the term is now included in both final § 465.5 and final § 465.2, Fake or False Consumer Reviews, Consumer Testimonials, or Celebrity Testimonials.

One business commenter noted that it is unnecessary to define ''manager.'' [192] An industry organization wrote in its comment that the failure to define the term ''manager'' ''raises concerns about the number of a firm's employees impacted.'' [193] A review platform commenter said that using the term ''manager'' without any definition is particularly problematic,[194] noting that someone ''may have the title 'manager' without any practical level of control and power to exert influence over others. For example, it is possible in a business for a person to have the title 'manager' while holding a relatively junior position and without having any employees that directly report to them.'' [195] Proposed and final § 465.5(c) address ''managers'' soliciting or demanding consumer reviews from employees or agents. In this context, the Commission's intent was for the term ''manager'' to be limited to those who supervise others. Thus, the Commission is adopting a definition for the term ''manager'' to make this clarification, which will ensure that § 465.5(c) is not interpreted as more restrictive than the Commission intended.[196]

A business commenter that operates in the insurance-marketing space explained that independent-contractor insurance agents who build their own agencies are referred to as ''managers'' and asked that the definition of ''managers'' expressly carve out ''managers in the insurance marketing space'' or at least clarify that managers are those ''who are employed by the company.'' [197] As similar situations may arise in other contexts, the Commission is adopting the commenter's latter recommendation, and clarifying that managers are employees of the businesses.

For the reasons explained in this section, the final rule adopts a definition for the term ''manager.'' The final rule defines the term ''manager'' as an employee of a business who supervises other employees or agents and who either holds the title of a ''manager'' or otherwise serves in a managerial role.

c. Relative

The term ''relative'' appeared in proposed § 465.5, Insider Consumer Reviews and Consumer Testimonials. It was undefined in the proposed rule.

Two commenters suggested that the Commission define the term ''relative.'' A comment from a review platform said that a plain reading of ''relative'' could cover ''an extremely broad range of people'' and ''is likely to extend to persons who may not be biased since they are in reality not close to the

[187] As discussed below in Section IV.H. of this document, the Commission is adding definitions of two phrases in response to concerns raised by commenters: ''fake indicators of social media influence'' and ''distribute fake indicators of social media influence.''

[195] *Id.* at 12.

[196] If the term were only to appear in § 465.2(c), such a clarification would not be needed. This is because § 465.2(c) also covers employees and agents.

[197] Family First Life Cmt. at 13.

business.'' [198] The commenter suggested that the prohibition in § 465.5(c) be limited to close relatives such as immediate family members.[199] A comment from a business organization said that the term ''relative'' is too vague and that ''[i]t is unclear whether the rule applies to third cousins, the spouses of a stepbrother's child from a previous marriage, or friends that are considered family.'' [200] The commenter continued that ''[l]arge companies creating monitoring programs for testimonials need some clarity about what relatives will be captured under the Rule.'' [201]

As discussed below, the Commission believes that some rule provisions should be limited to ''immediate relatives.'' [202] The Commission is adding a definition of an ''immediate relative,'' which clarifies that the term refers to a spouse, parent, child, or sibling. In the final rule, the term ''immediate relative'' is used in §§ 465.2(c) and 465.5(c).

d. Purchase or Procure Fake Indicators

The phrase ''purchase or procure fake indicators of social media influence'' is used in proposed and final § 465.8, Misuse of Fake Indicators of Social Media Influence. The phrase was undefined in the proposed rule.

A consumer advocacy commenter stated that leaving the terms ''purchase'' and ''procure'' undefined ''leaves ambiguity regarding which types of incentives are restricted,'' and suggested defining the phrase ''purchase or procure fake indicators of social media influence'' to mean ''to provide something of value, such as money, goods, or another indicator of social media influence (*i.e.*[,] a 'like'), in exchange for a fake indicator of social media influence.'' [203] The Commission declines to adopt the commenter's suggestion.[204] The definition proposed by the commenter would unnecessarily narrow the types of actions that would be covered by the rule to an exchange. In the final rule, the Commission intends for the term ''procure'' to bear its ordinary, everyday meaning—that is, to obtain something.[205] Even if there is any ambiguity in the term ''purchase,'' any exchange of value in order to obtain fake indicators of social media influence would be ''procuring'' the fake indicators.

e. Review Hosting

A retailer submitted a comment suggesting that ''review hosting'' be defined and excluded from the scope of § 465.2.[206] The commenter suggested the following definition:

Review hosting includes but is not limited to activity associated with maintaining a repository of consumer reviews and testimonials for display such as: offering review submission functionality, collecting and moderating reviews, organizing and displaying reviews, aggregating reviews into star ratings, and providing guidance to consumers about how to leave reviews where no incentive is offered.[207]

As discussed below, the Commission did not intend for its proposal to apply to simply hosting consumer reviews.[208] The Commission is therefore, for the purpose of clarification, adopting a definition of the term ''consumer review hosting'' in order to exclude mere review hosting from certain provisions of the rule. The Commission is not adopting the commenter's proposed definition because it included activities that go beyond the core of mere review hosting and because it begins with the phrase ''include but is not limited to,'' which would allow it to include an unknown, larger category of activities. The final rule defines ''consumer review hosting'' as providing the technological means by which a website or platform allows consumers to see or hear the consumer reviews that consumers have submitted to the website or platform. The exclusion of ''consumer review hosting'' from certain sections of the rule is discussed below.

B. § 465.2—Fake or False Consumer Reviews, Consumer Testimonials, or Celebrity Testimonials

Proposed § 465.2 addressed fake or false consumer reviews, consumer testimonials, and celebrity testimonials. Based on the following, the Commission has determined to finalize these prohibitions, with a number of revisions. The following paragraphs discuss comments relating to (1) proposed § 465.2 generally, (2) common language in all three paragraphs, (3) the individual paragraphs, 4) the knowledge standard, and (5) other potential requirements.

Numerous individual commenters wrote about the importance of authentic reviews or testimonials and that fake or false ones should be prohibited.[209] A technology company commenter wrote that it ''would welcome rules to prohibit fake reviews and place stronger obligations on businesses who host them to better protect consumers.'' [210]

A celebrity commenter wrote that he had ''received more than 100 emails from consumers who have been induced to purchase fake products through the mis-use of . . . [his] image and the images of other Shark Tank 'sharks.' '' [211]

A business commenter suggested explaining the ''financial consequence of fake reviews,'' such as whether it is ''~$50,000 per fake review.'' [212] The maximum civil penalty is currently $51,744 per violation, but courts must take into account the statutory factors set forth in section 5(m)(1)(C) of the FTC Act and may impose much lower per-violation penalties.[213] Ultimately, courts will also decide how to calculate the number of violations in a given case.

1. Common Language in § 465.2(a), (b), and (c)

Proposed § 465.2 consisted of three paragraphs, each of which sought to address unfair or deceptive conduct by

[200] Chamber of Commerce Cmt. at 7.

[201] *Id.*

[202] *See infra* Section IV.E.2 of this document.

[203] Consumer Reports Cmt. at 4.

[204] Commenters also expressed concern about or sought guidance on the meaning of the term ''procure'' as used in proposed § 465.2(c), but they did not expressly suggest that the Commission define the term. The use of the term ''procure'' in § 465.2 is discussed below in the context of that substantive provision. *See infra* Section IV.B.4 of this document.

[205] *See Procure* (def. 1), *Merriam-Webster.com* Dictionary, *https://www.merriam-webster.com/dictionary/procure* (last visited July 5, 2024) (establishing that the word ''procure'' means, among other things, ''to get possession of (something)'' or ''to obtain (something) by particular care and effort'').

[206] Amazon Cmt. at 7. As discussed below, other commenters also argued that § 465.2 should not apply to merely hosting reviews. *See infra* section IV.B.5 of this document.

prohibiting specified types of reviews or testimonials: (1) by someone who ''does not exist,'' (2) by someone ''who did not use or otherwise have experience with the product, service, or business that is the subject'' of it, or (3) ''that materially misrepresents, expressly or by implication, the [person's] . . . experience with the product, service, or business.'' For the purpose of the following discussion, references to ''fake or false'' reviews or testimonials cover these three types of reviews or testimonials.

A trade association asserted that the Commission lacked sufficient evidence of prevalence of reviews and testimonials that ''materially misrepresent[ ] . . . the reviewer's or testimonialist's experience.'' [214] The trade association asserted that some of the cases cited by the Commission also involved ''actual fake reviews'' and therefore should not count as evidence of prevalence.[215] The Commission disagrees: a fake or fabricated review misrepresents the purported reviewer's experience (*e.g.,* that the reviewer used the product and what their experience was). The commenter also asserted that five of the cases cited by the Commission to establish prevalence ''provide no additional details about the unfair or deceptive act or practice at issue aside from bare allegations that the consumer testimonials in the case involved misrepresentations of the consumer's experience,'' and therefore are insufficient to establish prevalence.[216] However, the quoted representations in each of the Commission's complaints makes clear the nature of the misrepresentations.[217] Furthermore, even if a Commission complaint does not provide all details about a specific misrepresentation, that does not mean that it cannot serve as evidence of prevalence. The Commission thus has a strong basis for its conclusion that reviews and testimonials misrepresenting the experiences of the reviewers and testimonialists are prevalent.

The same trade association and another one expressed concern that the ''prohibition on *all* reviews that are authored by individuals that [sic] 'do not exist' or have not used the product would prohibit a wide swath of non-deceptive speech, including for example, any satirical reviews that a business authors, creates, sells, purchases, disseminates, or procures.'' [218] As discussed in the NPRM, the Commission's intent was to prohibit misrepresentations resulting from reviews or testimonials by someone who does not exist or who did not use or otherwise have experience with the product, service, or business.[219] The Commission is unsure of the extent to which there are satirical reviews that could run afoul of the provision as proposed. Nonetheless, upon a review of the comments, the Commission now recognizes that absent an express reference to material misrepresentations, the provision could be interpreted to prohibit other potentially non-deceptive speech, such as the use of virtual influencers.[220] To avoid this unintended consequence, the Commission is clarifying that § 465.2 is limited to prohibiting material misrepresentations. As finalized, the prohibitions in § 465.2 are expressly limited to reviews and testimonials ''materially misrepresent[ing], expressly or by implication . . . that the reviewer or testimonialist exists; . . . that the reviewer or testimonialist used or had experience with the product, service, or business that is the subject of the review or testimonial; or . . . the reviewer's or testimonialist's experience with the product, service, or business that is the subject of the review or testimonial.''

A different trade association raised several concerns about the common language of proposed § 465.2. It asserted that the provision ''would prohibit the use of a dead person's endorsement because arguably that person does not exist.'' [221] The Commission does not interpret a person who ''does not exist'' to include a person who died after making an endorsement, but that concern should be resolved by the new language regarding material misrepresentations. The commenter went on to question ''what constitutes an 'actual experience,' '' asking whether a person who saw a label had actual experience with it and whether a person who tasted an item purchased at a restaurant but did not visit the restaurant had actual experience.[222] The proposed provision did not use the term ''actual experience,'' and the persons in the commenter's posited hypotheticals did have legitimate experience with the product or service but should not misrepresent that experience as more than it was. The commenter also said that ''it is unclear if the . . . element—materially misrepresenting the experience with the product or service—relates to the experience or an opinion about the product or service.'' [223] It relates to the person's ''experience'' with the product or service, that is, what actually happened when they used or otherwise experienced it and not simply their ''opinion'' of it. The same commenter asked whether ''an actor portraying an actual reviewer'' is misrepresenting their experience as long as it is ''clear that it is an actor portrayal.'' [224] The provision does not prohibit using an actor to portray a real testimonialist.

An individual commenter who raised the same concern about whether actors could portray real testimonialists [225] went on to express concerns that the actor ''shouldn't misrepresent who the original person was,'' such as by misrepresenting ''the effectiveness/health benefits of [a] product by hiring a very fit in shape person.'' [226] The Commission has issued guidance stating that ''use of an endorsement with the image or likeness of a person other than the actual endorser is deceptive if it misrepresents a material attribute of the endorser.'' [227] Nevertheless, the Commission does not intend for § 465.2 to address such misrepresentations.

A consumer organization's comment requested that the Commission ''explicitly indicate that fake . . . ratings are an independent and separate violation from deceptive narrative reviews.'' [228] The Commission believes that making this distinction is unnecessary and declines to make this change.

2. § 465.2(a)

Proposed § 465.2(a) would have made it a violation for a ''business to write, create, or sell a consumer review, consumer testimonial, or celebrity testimonial'' that is fake or false.

An individual commenter noted that the prohibition ''is too specific and it would be easy for a business to find an alternative method not prohibited by the rule.'' [229] The commenter posited an example: ''a business could have someone next to them tell them their review and someone could transcribe it, technically the business did not create, make, or sell anything and thus would not be in violation.'' [230] If a business is paying an individual to transcribe a fake or false review, it is creating or making the review, and would therefore have violated § 465.2(a). Accordingly, the Commission declines to modify the prohibition in response to the commenter's concern.

A trade association submitted a comment asking the Commission to ''confirm that when a real consumer authors the review, the business cannot be said to have written or created it, and thus . . . section [465.2(a)] could not apply.'' [231] The Commission is unsure what the commenter means by a ''real consumer authors the review.'' The provision would apply if, for example, a business employs a ''real consumer'' to write fifty reviews of a product under different names.

A comment from a retailer that publishes reviews said that ''review brokers and other bad actors . . . coordinate the high-volume writing, buying, and selling of fake reviews'' and that the rule should apply to those ''approaching customers, instructing them on how to create fake reviews and avoid detection, and connecting them with bad actors operating [fake] accounts.'' [232] Brokers of fake reviews would generally fall under the provision's prohibition against selling a consumer review, given that such brokers are generally being paid to provide fake reviews.

A trade association commenter suggested clarifying that ''business'' in § 465.2(a) ''refers to a business that helps to create or sell reviews or testimonials.'' [233] Although the paragraph does apply to such businesses, it also applies to a business that writes or creates fake reviews or testimonials for its own products or services. For this reason, the Commission declines to adopt the commenter's suggestion.

An individual commenter asked whether the prohibition covers ''people who leave reviews in good faith'' if ''they were getting paid for it.'' [234] Neither § 465.2(a) nor any section of the rule imposes liability on individual consumers who write honest reviews, even if they are paid for doing so.

Another individual commenter requested that civil penalties be imposed ''on the company for soliciting the reviews, rather than on the reviewer, unless the reviewer knowingly is leaving fake reviews.'' [235] Under § 465.2(a), an individual who is in the business of writing, creating, selling, or brokering reviews could be liable for creating consumer reviews that are fake or false. That individual could only be subject to civil penalties if they did so with actual knowledge or knowledge fairly implied on the basis of objective circumstances that they were engaging in an act or practice that is unfair or deceptive and is prohibited by the rule.[236]

An individual commenter expressed concern that ''competing parties could potentially create fake reviews on another party in order to give the impression that the party is in violation of the'' rule.[237] Although such misconduct is possible, the target of such misconduct would not be liable under § 465.2(a), based on how it is worded. For example, the target would not have been the one who created, wrote, or sold the review, nor would the target have purchased the review. The competitor who engaged in such misconduct might be liable for deceptive or unfair conduct under the FTC Act.

3. § 465.2(b)

Proposed § 465.2(b) would have made it a violation for a business to ''purchase a consumer review'' or ''disseminate or cause the dissemination of a consumer testimonial or celebrity testimonial'' about ''the business or one of its products or services'' which ''the business knew or should have known'' was fake or false.

A consumer organization commented that, by limiting § 465.2(b) to a business posting reviews or disseminating or causing the dissemination of testimonials about ''the business or one of its products or services,'' the Commission's proposal limits liability to the business itself ''instead of including other . . . creators or disseminators of deceptive reviews and testimonials.'' [238] In response to the commenter's concern, the Commission notes that those creating or disseminating deceptive reviews and testimonials could be liable under § 465.2(a).

A trade association asked whether a business '' 'disseminates' reviews for its products merely by . . . placing them in advertising/marketing materials.'' [239] Section 465.2(b) applies only to the dissemination of testimonials, but if a business includes consumer reviews in its advertising or marketing materials, those reviews become ''testimonials'' and are covered.

Another commenter requested that the Commission ''clarify the limited applicability of 'to disseminate or cause the dissemination' in proposed § 465.2(b) so the definition does not wrongly apply to third parties that host or license reviews.'' [240] The phrase ''to disseminate or cause the dissemination'' applies only to testimonials and not to consumer reviews, so it could not apply to third parties that host or license reviews. The only situation in which § 465.2(b) applies to consumer reviews is when a business purchases a consumer review.

4. § 465.2(c)

Proposed § 465.2(c) would have made it a violation for a business to ''procure a consumer review for posting on a third-party platform or website, about the business or one of its products or services,'' which ''the business knew or should have known'' was fake or false.

Several commenters questioned the scope and ''vagueness'' of the undefined term ''procure'' in proposed § 465.2(c).[241] A trade association wrote that ''the Commission should explain that a retailer does not 'procure a consumer review for posting on a third-party platform or website' simply by requesting that previous customers submit reviews, and then allowing submitted reviews to be posted on the retailer's own website or sharing customer reviews with Google.'' [242] The

Commission did not intend to cover such activities. Instead, the Commission intended to cover a much more limited set of activities: the procurement of fake and false reviews from company insiders. The Commission is therefore revising § 465.2(c) by limiting it to a business procuring consumer reviews ''from its officers, managers, employees, or agents, or any of their immediate relatives.''

A trade association's comment questioned the phrase ''its products or services'' in the context of what was proposed § 465.2(c).[243] It asked whether the term would apply to all of the products sold by a department store, an online marketplace, or a consignment business.[244] The Commission recognizes that the phrase ''its products or services'' was ambiguous. In order to address this inadvertent ambiguity, the Commission is making clarifying changes by replacing the phrase ''its products or services'' with the phrase ''the products or services it sells'' in § 465.2(b) and (c), as well as in other places where it appears in the rule.[245] The revised language captures what the Commission originally intended and would apply to products sold by a department store, an online marketplace, or a consignment business.

5. § 465.2(d)

Upon consideration of the comments received, the Commission is adding paragraph (d) in § 465.2 to clarify the scope of § 465.2(b) and (c). The Commission recognizes that, when a business sends a broad solicitation to customers to post customer reviews, one or more recipients might also be employees of the business. If any such employee then posts reviews, one might consider those reviews to have been ''procured'' from the employee. Similarly, the Commission recognizes that broad, incentivized solicitations to the general public or past customers to post about a product on social media could be considered ''causing the dissemination'' of testimonials. It would not be reasonable to expect a business to know whether such resulting reviews or testimonials were fake or false, and the Commission did not intend to cover those reviews in this section of the proposed rule. Therefore, the Commission is adding § 465.2(d)(1), which clarifies that § 465.2(b) and (c) do not apply to ''generalized solicitations to purchasers to post reviews or post testimonials about their experiences with the product, service, or business that is the subject of the review or testimonial.'' By ''generalized solicitations,'' the Commission means to exempt from § 465.2(b) and (c) solicitations sent to large groups of customers, such as those who purchased a particular item or who became customers during a given time period, where specific customers are not chosen based on the likelihood that they will express a particular sentiment. In contrast, solicitations made only to customers whom the business believes to be happy customers would not be ''generalized solicitations'' and would therefore be subject to § 465.2(b) and (c).

As the Commission said in the NPRM, § 465.2 does not ''apply to any reviews that a platform simply publishes and that it did not purchase.'' In other words, the Commission did not intend for § 465.2 to apply to platforms that simply host third-party content and does not believe that the section can be interpreted otherwise. Nonetheless, numerous commenters expressed concern over whether the section covered the mere hosting of third-party content.[246] A number of industry commenters and an individual commenter asked the Commission to expressly exempt those who host consumer reviews created by a third party.[247] Three industry comments asked the Commission to create a safe harbor for review hosting when the company has reasonable processes in place to identify and remove fake reviews.[248] Consistent with its statement in the NPRM, the Commission is adding § 465.2(d)(2) to provide an explicit exemption for ''merely engaging in consumer review hosting'' from the scope of § 465.2(b) and (c).

A trade association noted that, in the ''case of reviews being shared between retailers and third-party platforms,'' ''it would be unfair to immunize the search platform from liability for the review shared by the retailer, but not to immunize the retailer for the review created by the potential bad actor.''[249] However, a retailer or other entity will not be liable for sharing consumer reviews unless it would have been liable for displaying those same reviews on its own website.

Two comments raised the issue of hosting both reviews and testimonials. A trade association commenter expressed concern that the Commission should ''avoid sweeping in companies such as online retailers that host consumer reviews and testimonials and engage in activities such as organizing, moderating, aggregating, and prompting the submission of reviews and testimonials.''[250] Another trade association made a very similar comment and ''urge[d] the FTC to confirm that liability under this section would require the company to do more than host reviews/testimonials.''[251] As for reviews, § 465.2 will not prohibit an online business that hosts reviews from prompting the submission of reviews from the general public or from organizing, moderating, or aggregating them. Nonetheless, certain unfair or deceptive conduct that involves prompting the submission of reviews or moderation could violate § 465.4 or § 465.7(b), respectively.[252] As for testimonials, it is unclear what hosting scenarios the commenters are contemplating. The Commission is not adding an exemption for ''merely hosting testimonials'' because there is no provision in the rule that applies to testimonial hosting because testimonials are, by definition, advertising or promotional messages. A business that puts testimonials on its own website is ''disseminating'' them and is not merely ''hosting'' them. When such testimonials are fake or false, the business should face potential liability under this paragraph. On the other hand, a business that has on its website a community forum in which consumers can comment about the business and the products or services it sells could be merely hosting the community forum. A comment in the community forum touting one of the business's products, which was posted by a consumer who was not incentivized to do so and who has no other connection to the company, is not a testimonial in the first place, so it would not fall under § 465.2(b). The same analysis would apply to a business that hosted a section on its website

[243] *Id.* at 5.

[244] *Id.* at 5–6.

[245] See §§ 465.5(a), (b), and (c), 465.6, and 465.7(b) of the rule.

[246] One industry commenter expressed a general concern that was not tied to a specific provision ''that the Proposed Rule imposes liability on companies for the dissemination and/or display of fake reviews that clashes with Section 230 of the *Communications Decency Act.*'' TechNet Cmt. at 3. As discussed below, the Commission is including exemptions for mere consumer review hosting in §§ 465.2 and 465.5. *See infra* section IV.B.5 of this document.

[247] *See, e.g.,* NRF Cmt. at 5–6; IAB Cmt. at 6; Amazon Cmt. at 7–9; CCIA Cmt. at 3; Abbott Cmt.

[248] TechNet Cmt. at 2; IAB Cmt. at 5; NRF Cmt. at 7. A trade association also requested a ''safe harbor'' but did not tie it to any specific provision of the proposed rule. NADA Cmt. at 4.

[249] NRF Cmt. at 6.

[250] IAB Cmt. at 4.

[251] ANA Cmt. at 12–13.

[252] Prompting the submission of consumer reviews that must be positive in order to obtain an incentive could violate § 465.4. Moderation of consumer reviews that results in the suppression of some of them based upon their ratings or their negative sentiment could violate § 465.7(b).

where consumers could answer questions posed by other consumers.

A business organization commenter said the Commission should ''make clear [that] Section 465.2 does not apply to platforms or retailers that display ratings even if they prompt review submissions or aggregate star ratings of submitted reviews.'' [253] Paragraphs (b) and (c) of § 465.2 do not apply to mere consumer review hosting, even if the business prompts review submissions or aggregates star ratings.

The commenter continued by saying that ''the Commission must clearly indicate that the Rule provision would not apply to any website displaying a consumer review or testimonial that they did not purchase or procure,'' arguing that ''Section 230 [of the Communications Decency Act] . . . broadly immunizes providers of an interactive computer service from liability for presenting third party content.'' [254] If a business creates fake or false reviews or testimonials and displays them on its website, it is not presenting third-party content. It could be liable for such reviews or testimonials under § 465.2(a). The commenter made a similar argument with respect to the applicability of § 465.2(b) to a website that displays a fake or false testimonial and thus causes its dissemination.[255] Section 465.2(b) does apply if such testimonials are about the business or one of the products or services it sells. Such testimonials are advertising, not third-party content covered by section 230 of the Communications Decency Act (47 U.S.C. 230).

6. Knowledge Standard

Like proposed § 465.2(b) and (c), final § 465.2(b) and (c) are limited to situations in which businesses ''knew or should have known'' that they were engaging in the conduct that was prohibited. Commenters had varied reactions to this standard, with some finding it appropriate, others finding it too high, and others finding it too low.

A corporate commenter noted that, for the purpose of § 465.2(b) and (c), '''[s]hould have known' needs to be the standard.'' [256] Similarly, an individual commenter recommended that the FTC adopt the ''knew or should have known'' standard for purposes of § 465.2(b) and (c):

> because it: (1) sufficiently effectuates consumers' shared interest in reducing the prevalence of unfair or deceptive online consumer reviews and testimonials, (2) avoids unfairly imposing liability on unwitting, blameless business transgressors, and (3) conveniently aligns with the FTC's existing ''has good reason to believe'' standard for similar purpose of application of FTC Act Section 5 to the use of endorsements and testimonials in advertising.[257]

However, several commenters objected to the imposition of civil penalties based upon a ''should have known'' standard, believing that standard would be too onerous.[258] For example, an industry organization said that proposed § 465.2(b) and (c) are ''problematic because [they] place[ ] the onus on the business to have knowledge of the author's state of mind as to whether their actual experience was expressed. . . , an impossible task for anyone but the'' author.[259] The industry organization also claimed that the risk of a civil penalty will ''likely . . . compel businesses to drastically limit the consumer reviews or testimonials they seek out or even allow on their websites.'' [260] Under section 5(m)(1)(A) of the FTC Act, 15 U.S.C. 45(m)(1)(A), however, the Commission can seek civil penalties for a rule violation only by showing that a defendant had ''actual knowledge or knowledge fairly implied on the basis of objective circumstances that such act is unfair or deceptive and is prohibited by such rule'' (hereinafter shortened to ''actual knowledge or knowledge fairly implied''). A lower knowledge standard in a Commission rule—such as the ''knew or should have known'' standard found within certain sections of the proposed rule—does not override the higher standard found in section 5(m)(1)(A) of the FTC Act. The Commission has not suggested otherwise in the course of this rulemaking.

Other commenters objected similarly, saying that ''knew or should have known'' is too low as a knowledge threshold and that the standard should be actual knowledge, but did not tie their concerns to the imposition of civil penalties.[261] For example, some of the comments expressing concern about a ''knew or should have known'' standard appeared to focus primarily on the standard's supposed applicability to, and harsh impact on, websites hosting reviews.[262] As another example, a trade association commenter recommended ''that the Commission define 'knew,' as used in . . . § 465.2, as 'having actual knowledge,' and remove the 'should have known' language.'' [263]

Additionally, two commenters advocated for a standard higher than ''should have known'' but lower than actual knowledge. With respect to activities such as ''purchasing'' a review, they said that businesses should be held responsible for ensuring the reviews are authentic but recommended a ''knew or consciously avoided'' standard.[264] One of the commenters asserted that the proposed ''should have known'' standard ''is vague and does not provide adequate specificity about the sorts of actions businesses should take to ensure that they will not be held liable for not detecting that a review they purchased was fake.'' [265] The commenter said a ''consciously avoided'' knowing standard would allow for liability when a business takes no steps to respond to receiving repeated complaints raising red flags about the authenticity of a particular purchased review.[266]

As part of the NPRM, the Commission also inquired whether, instead of the ''should have known'' standard, the Commission should adopt a ''knew or could have known'' standard. Only two commenters addressed that proposed standard. An individual commenter said that such a standard would ''ambiguously expand the proposed Rule's prosecutorial scope and possibly open unsuspecting businesses to financial penalties for violations they had no inkling of having committed in the moment.'' [267] Another individual commenter, who incorrectly thought the proposed rule provided a private right of action, said that such a standard ''provides scienter never used in consumer law'' and the ''courts could potentially become overwhelmed with an influx of claims.'' [268]

Other commenters advocated for a lower standard than ''knew or should have known.'' An individual commenter did not think that ''knew or should have known'' was appropriate because it would make it ''very difficult to prove'' violations and recommended that the Commission require ''businesses to be able to show they used reasonable

diligence through policies and procedures to prove that the[ ] reviews are legitimate.'' [269] A consumer organization said in its comment that ''there is no need for a knowledge or intent requirement under this Rule'' as ''Section 5 of the FTC Act does not otherwise require the Commission to prove knowledge or intent when enforcing against entities engaging in deceptive practices.'' [270] It continued that ''the Commission can and should consider knowledge and intent in deciding the equities of bringing any enforcement action.'' [271]

After reviewing and considering the comments received, the Commission believes that the most appropriate standard for imposing liability under § 465.2(b) and (c) is the ''knew or should have known standard.'' As discussed above,[272] those paragraphs were not intended to apply to consumer review hosting and § 465.2(d)(2) now contains an explicit exemption for consumer review hosting.[273] Thus, the ''knew or should have known'' language in § 465.2(b) and (c) will not have a harsh impact on review platforms, as some of the commenters suggested. Eliminating the knowledge standard altogether, however, may indeed have an overly harsh impact on businesses in some circumstances, and the idea garnered almost no public support. For example, it would be unreasonable to hold a company liable for publishing a testimonial when it had no reason to know that the testimonial misrepresented the testimonialist's experience. The Commission sees no reason why the standard should be higher than ''knew or should have known.'' The ''knew or should have known'' standard—which the Commission has used in other rules [274]—thus best achieves the appropriate, equitable balance between protecting consumers and holding marketers accountable for deceptive conduct while not overly burdening marketers that engage in the responsible use of reviews and testimonials.

Two trade associations' comments said that if ''the Commission . . . imposes a 'should have known' standard, the Commission must provide greater clarity about what sorts of indicators of inauthenticity would provide companies with sufficient notice to trigger liability.[275] They both said, ''Without that guidance and faced with the risk of significant civil penalty exposure for failing to stop the actions of undiscovered third parties, many businesses would likely be deterred from using consumer reviews or testimonials at all.'' [276] The Commission has already addressed the knowledge standard found in section 5(m)(1)(A), which applies to the imposition of civil penalties. In the discussion of § 465.2(b) and (c) below, the Commission provides further guidance as to what is intended by ''knew or should have known.''

Several other commenters discussed general views about the application of the ''knew or should have known'' standard. For example, an individual commenter said that ''[a] business cannot always reasonably know that a testimonial contains testimony that is fake or false, if the influencer expresses to them that it is true.'' [277] The Commission agrees with this assertion.

A comment from a public interest research center said that the ''lack of an adequate endorser oversight program should be a per se violation of the 'know or should have known' standard as that is tantamount to the company deliberately avoiding knowing.'' [278] A consumer organization commenter said that the following actions should be considered knowledge that a review is fake or false: ''failure to meaningfully police'' for suspicious review activity, ''inducements to provide reviews without clearly instructing the reviewer to clearly disclose material conflicts,'' ''materially incentivizing reviews where it's impossible to convey material conflicts (*e.g.,* providing a five-star review with no accompanying narrative on TripAdvisor),'' and ''failure to take meaningful steps to confirm the existence of the purported celebrity or meaningfully document the celebrity's purported experience with the product or service.'' [279] The Commission encourages businesses to have endorser oversight programs, and whether a company has and follows such a program could impact the exercise of prosecutorial discretion. The Commission does not intend, however, for companies to be liable under this section of the rule based merely on the absence of an oversight program or on these other suggested bases.

A corporate commenter said that ''how a business 'should have known' that a reviewer does not exist is not apparent,'' and posited that, under a ''should have known'' standard, ''perhaps [a] business may be under a duty to reach out to the reviewer, but it is unclear how many resources the business must expend to attempt to contact the reviewer.'' [280] First, as noted, § 465.2(d)(2) exempts businesses merely engaging in consumer review hosting from § 465.2(b) and (c). Another key limitation here is the exemption for generalized solicitations under § 465.2(d)(1). That exemption means that businesses can send such solicitations to their customers without creating any investigative obligation for resulting reviews under § 465.2(b) or (c), even if such reviews have been ''purchased.'' [281]

With respect to ''purchased'' reviews under § 465.2(b)the rule's ''knew or should have known'' standard does not impose a general duty to reach out to the reviewers or investigate whether each resulting review is fake or false. While each case will depend on its specific facts, it is possible that a business may possess clear indications that purchased reviews are likely to be fake or false, in which case a failure to investigate further may trigger liability under the ''should have known''

[271] *Id.* at 4–5. An individual commenter disagreed, stating that ''the complete removal of a knowledge requirement in favor of a strict liability approach would almost guarantee situations of unwarranted punishment under the proposed rule.'' Poole Cmt. at 3.

[272] *See supra* section IV.B.5. of this document.

[273] The final rule would therefore not require a business that is merely hosting consumer reviews on its platform to prove that the reviews it is hosting are legitimate.

[274] Other Commission rule provisions with a ''knew or had reason to know'' requirement include § 460.8 of Labeling and Advertising of Home Insulation (commonly known as the R-Value Rule), which prohibits non-manufacturers of home insulation from relying on R-value data provided by the manufacturer if they ''know or should know'' the data is false or not based on proper tests. 16 CFR 460.8; *see also* 16 CFR 460.19(e) (non-manufacturers are liable only if they ''know or should know that the manufacturer does not have a reasonable basis for the claim''); 16 CFR 436.7(d) (franchise sellers must notify prospective franchisees of any material changes ''that the seller knows or should have known occurred'').

[275] IAB Cmt. at 5–6; ANA Cmt. at 13. An individual commenter said that the Commission should ''provide some clear and objective criteria or indicators for identifying fake reviews, such as the use of bots, scripts, templates, or multiple accounts, or the lack of verifiable purchase or experience, or the inconsistency with other reviews or information'' and this ''would help businesses and consumers to distinguish between genuine and fake reviews.'' Ravnitzky Cmt. at 1.

[276] IAB Cmt. at 5–6; ANA Cmt. at 13. As explained above, these concerns are unwarranted given that the ''should have known'' standard has no bearing here on the imposition of civil penalties, for which the Commission must prove that a defendant met the higher knowledge standard of section 5(m)(1)(A) of the FTC Act.

[281] Paying for or giving other incentives in exchange for consumer reviews expressing a particular sentiment regarding the product, service, or business that is the subject of the review would violate § 465.4 of the rule.

standard. For example, a business that hires a third party to provide free samples of its products to consumers in order to generate reviews, without more, may have no reason to investigate the resulting reviews. However, a business may be on notice that the resulting reviews are likely fake or false if they are submitted too quickly after purchase or many of them are submitted in a very short period of time or refer to the wrong product. As for § 465.2(c), which applies only to reviews by insiders, a possible reason for knowing that such reviews are likely fake or false could be that an insider sent emails to a manager over time that together showed that the insider was using multiple accounts to submit reviews to the same website.

A company that is in the business of identifying fake consumer reviews described ways that a business purchasing or procuring a consumer review should know that the review is fake or false. These indications include the named reviewer not being a customer, the content of the review being vague or odd, many reviews arriving at once, and the use of unnatural language or ''keyword stuffing.'' [282] A review platform commenter gave similar ways that a business could identify fake reviews, such as ''the review text describes a product or service that is not offered by the business, the review clearly references the wrong business name, or perhaps if a review . . . acknowledges that the reviewer has never shopped there.'' [283] Although, as previously stated, each case depends on its specific facts, these various indications may indeed suggest that one or more purchased or insider reviews are likely fake or false, in which case a failure to reasonably investigate them may trigger liability under the ''should have known'' standard.

With respect to testimonials, there may be red flags that should indicate to a business that a testimonial is likely fake or false, and, thereby, would serve as indicia of the fact that the business should have known that the testimonials that it disseminated were fake or false. For example, the Commission alleged that Google asked iHeartMedia, Inc. radio personalities to record product testimonials for a smartphone using a standard script written for Google and refused to provide the radio personalities with the product when requested.[284] If a business provides the text for a testimonial, it should have a reasonable basis to conclude, based on inquiry or otherwise, that the text is truthful for the testimonialist. A testimonialist asking for the product should cause a business to question whether the testimonialist used the product. If a business knows that a testimonialist is using a competing product, it should inquire into whether a testimonial for its own product is truthful. For example, a business should investigate whether a celebrity testimonial for its new smartphone is false if the testimonial claims the celebrity exclusively uses the smartphone, but the social media post containing the testimonial indicates that the celebrity posted it using a competing smartphone brand.

A review platform said in its comment that, ''if procuring fake reviews is the action of a single, rogue employee trying to help the business they work for, on a practical level it may be difficult for a business to have knowledge of'' it.[285] The commenter suggested that the Commission consider ''whether it is in fact disproportionate for knowledge and liability to be attributed to a business because of the actions of a well-intentioned rogue employee.'' [286] Whether a business will be held responsible under the rule for a rogue employee under a ''knew or should have known'' standard will be a fact-intensive inquiry. While a business may not be aware of every employee's activities, it should be pay attention to red flags. Assuming that the facts are such that the business should have known of the rogue employee's actions, whether the business would also be subject to civil penalties would depend on whether a court finds that the business met the actual knowledge or knowledge fairly implied standard of section 5(m)(1)(A) of the FTC Act.

7. Other Proposals

Some commenters suggested that the Commission impose additional requirements. Many commenters suggested that third-party platforms featuring reviews should be held responsible for certain conduct, such as for: failing to report businesses that they suspect are posting fake reviews,[287] the ''lack of identification verifications,'' [288] not posting notices reminding consumers that there is no guarantee of the veracity or accuracy of customer reviews,[289] engaging in review ''manipulation'' for advertising purposes,[290] failing to disclose publicly certain information about posted reviews,[291] or failing to employ reasonable measures to root out fraud and deceptive reviews.[292] A review platform suggested imposing requirements on social media companies and internet service providers to address the sale of fake reviews,[293] and a trade association proposed that the Commission require reviewers to identify themselves and that social media sites hosting reviews verify reviewers' identities.[294] As explained above, the Commission's intent from the outset of this rulemaking was to focus on clearly unfair or deceptive conduct involving reviews and testimonials. This intent is reflected in, as explained above, the addition of a definition of the term ''consumer review hosting'' and the explicit exclusion of such mere hosting from the coverage of certain rule provisions. This focus should not be taken to signal that third-party platforms do not bear significant responsibility for combatting fake reviews.

An individual commenter recommended ''requir[ing] proof of purchase of [a] product for a consumer to leave a review.'' [295] Another individual commenter would have the Commission hold businesses that recruit, direct, and compensate influencers responsible for the influencers' false or fake testimonials.[296] A third commenter asked that the Commission ''ensure there is a way for anyone who is believed to have violated reviewing policies [to have] a chance to reinstate their ability to leave

[296] Taylor V. Cmt. at 2.

reviews.'' [297] A consumer organization recommended making clear that ''it is a deceptive practice to aggregate fake reviews in a product's consumer rating'' and that ''reviews requiring a disclosure should not be included in a product's rating.'' [298] The Commission appreciates these additional suggestions but declines to add any of them to the rule. The suggestions are beyond the scope of the rulemaking, which focuses instead on those responsible for clearly unfair or deceptive acts or practices regarding reviews and testimonials, and which is limited to those acts or practices for which the Commission has evidence of prevalence.

In response to other commenters suggesting that the Commission impose liability on review sites and online retailers, a trade association asked the Commission to make clear that sections 5 and 18 of the FTC Act contain no express authorization for assisting-and-facilitating liability.[299] As this legal issue goes beyond, the context of this rulemaking, the Commission declines to address it here.

C. § 465.3—Consumer Review or Testimonial Reuse or Repurposing

Proposed § 465.3 sought to address a business using or repurposing a consumer review written or created for one product so that it appears to have been written or created for a substantially different product. It also sought to cover businesses that caused such use or repurposing.

The Commission received varied comments, both supportive and critical, about this provision.[300] As described above, some commenters also raised concerns about the definition of ''substantially different product,'' a term that appeared only in this provision and is key to determining the circumstances in which the provision would apply; one of those commenters proposed a disputed issue of material fact related to that definition.[301] The Commission would need to address those concerns before finalizing the provision. As it is not able to resolve those concerns on the current rulemaking record, the Commission has decided not to finalize the provision. If the Commission chooses later to engage in further rulemaking regarding the provision, it will address the comments at that time.

D. § 465.4—Buying Positive or Negative Consumer Reviews

Proposed § 465.4 sought to address businesses providing ''compensation or other incentives in exchange for, or conditioned on, the writing or creation of consumer reviews expressing a particular sentiment, whether positive or negative, regarding the product, service, or business that is the subject of the review.'' Based on the following, the Commission has decided to finalize this provision with two modifications.[302]

Comments from a retailer and a trade association expressed that they found the section important and useful. The retailer said, ''This section is important to ensure that the rule covers bad actors that seek inauthentic reviews reflecting a particular predetermined sentiment.'' [303] The trade association wrote, ''Providing compensation in exchange for reviews that must reflect a particular sentiment is a deceptive practice,'' and expressed support for ''the Commission's goal of targeting and eliminating this practice.'' [304]

Three individual commenters mistakenly thought that proposed § 465.4 banned paid or incentivized customer reviews and were opposed to such a ban. One of them said the proposed provision would ''ban reviews which are made by those who have been provided an item,'' that ''[g]enerally the writer includes a list of sponsors on, or within, their blog/website,'' and that ''[i]f such sponsorship relationships are eliminated . . ., the ability of writers to review a variety of items will disappear.'' [305] The second one wrote, ''Section 465.4 of the proposed rule prohibits the incentivization of or compensation on for the creation of consumer reviews or testimonials. . . . [I]t is unnecessarily restrictive.'' [306] The third commenter did not support the provision ''forbidding paying for reviews'' because the practice ''does not . . . deceive the public unless the paid review service dictates that the review must be positive.'' [307] These commenters misunderstand the nature of § 465.4. First, § 465.4 does not apply to testimonials, only to consumer reviews, and then only to reviews that appear on a website or portion of a website dedicated to receiving and displaying such reviews. A blogger's ''review'' is not considered a consumer review for purposes of the rule; if such a review was incentivized, it would be considered a testimonial. Second, § 465.4 does not prohibit paid or incentivized consumer reviews. It only prohibits paid or incentivized consumer reviews when the business soliciting the review provides compensation or an incentive in exchange for a review expressing a particular sentiment.

In Question 12 of the NPRM, the Commission asked whether the prohibition in § 465.4 should ''distinguish in any way between an explicit and implied condition that a consumer review express a particular sentiment.'' [308]

A business commenter responded, ''Real consumers' reviews often contain multiple sentiments on what businesses did right and what they did wrong. This is helpful.'' [309] The meaning of this comment is unclear.

Another business commenter responded to Question 12 of the NPRM by stating that § 465.4 ''should unequivocally prohibit explicit conditions only,'' because this would ''provide[ ] a clear standard for businesses and reviewers to follow,'' and ''the lack of clarity in how the Proposed Rule would prohibit 'implied conditions' [would] stifle[ ] businesses' ability to encourage and to entice reviews in a legitimate manner.'' [310] The Commission disagrees and believes that businesses are capable of soliciting and encouraging reviews without suggesting that the reviews must be positive to obtain an incentive. The commenter also asserted that the Commission ''has no experience bringing enforcement actions against a business for allegedly creating an implied condition that a review or endorsement be positive,'' referencing the cases the Commission cited in the NPRM.[311] That assertion is incorrect. The respondent in *AmeriFreight, Inc.* did not expressly state that the reviews needed to be positive but only implied it, encouraging past customers to submit reviews in order to be eligible for a $100 ''Best Monthly Review Award'' given to ''the review with the most captivating subject line and best content.'' [312] The respondent also told past customers that

they should ''be creative and try to make your review stand out for viewers to read.'' [313]

Two trade associations gave examples of what they asserted were innocuous requests for reviews that could be considered as implying that reviews need to be positive in order to receive an incentive. One said that its members will sometimes automatically contact customers saying, ''Tell us how much you loved [product] for 10% off your next purchase!'' and that such a request could ''be read to violate this Section of the Proposed Rule—even if a negative review would still entitle the consumer to the incentive or bonus.'' [314] The other commenter wrote that, if the Commission says that ''a business may not implicitly seek positive reviews in exchange for incentives, then the rule could apply to such offers as, 'Tell us how much you loved your visit to John's Steakhouse and get a $5 coupon' or 'Tell your friends about all the fun you had at Jane's Arcade for a chance to win prizes,' '' and asserted that such requests are justified because businesses ''prefer to use these enthusiastic and positive messages when seeking reviews, as opposed to less inspiring messages like, 'Write a review and save 10% next time.' '' [315] The problem with the enthusiastic and positive messages suggested by these commenters is that consumers receiving them could reasonably take the message that their reviews must be positive and enthusiastic in order to obtain the reward. As the second commenter noted, there are perfectly acceptable, albeit less ''inspiring,'' alternatives. The second commenter also said that ''a reasonable consumer would infer that a business prefers positive reviews, and so even a neutral request such as, 'Write a review and receive a discount off your next purchase,' might be construed as impliedly requesting a positive review.'' [316] The Commission disagrees. The fact that businesses prefer positive reviews is not a basis on which to conclude that consumers would interpret any such ''neutral request'' as containing an implied condition that reviews must be positive to receive the offered discount.

A consumer organization said in its comment that, ''[w]hen a reviewer feels pressured to express a certain sentiment, regardless of how that pressure was generated, the net result is a deceptive review,'' and that there should be ''no distinction made between explicitly and implicit conditioning of compensation or other incentives.'' [317] A second consumer organization commenter said that ''[i]mplied conditions may be just as salient as express conditions'' and quoting *Aronberg* v. *FTC,* 132 F.2d 165, 167 (7th Cir. 1942), said that, ''[i]n interacting with businesses, '[t]he ultimate impression upon the mind of the reader arises from the sum total of not only what is said but also of all that is reasonably implied.' '' [318] The Commission agrees with both of these commenters.

Advocating for limiting the provision to express conditions, a trade association acknowledged that the NPRM clarified that the provision does not cover review gating,[319] the mere solicitation of positive reviews, or incentivized reviews (except for those required to express a particular sentiment), but argued that, ''[r]egardless, the Proposed Rule still could be read to prohibit such behavior—*i.e.,* when a Company solicits a review that it has reason to believe will be positive.'' [320] The Commission does not consider this statement to be a fair reading of the provision. Just because a business engages in review gating or otherwise expects reviews to be positive does not mean there is either an express or implied requirement that reviews need be positive to obtain an incentive. The Commission notes that, although § 465.4 does not cover ''review gating,'' review gating can nonetheless violate section 5 of the FTC Act.[321]

A review platform commenter said that prohibiting an ''implied condition to express a particular sentiment could create a number of gray areas'' and ''encouraged the FTC to provide guidance and examples to businesses.'' [322] The examples, discussed above, by the trade association asking consumers to say how much they ''love'' something or how much fun they had are excellent examples of implied conditions.

The Commission has decided to clarify that the rule prohibits businesses from providing incentives conditioned on the writing or creation of consumer reviews expressing a particular sentiment, regardless of whether the conditional nature of the incentive is express or implicit. For this purpose, the Commission is adding the phrase ''expressly or by implication'' in § 465.4 to clarify that, although the incentive needs to be conditioned on the writing or creation of consumer reviews expressing a particular sentiment in order for conduct to violate § 465.4, the condition may be implicit.

Three commenters argued that the Commission should allow the compensation or incentives addressed in § 465.4 as long as they are disclosed in the resulting reviews. For example, the first commenter wrote, ''A reasonable consumer can easily understand that when a reviewer is incentivized or compensated, the content they produce may be skewed in a more positive light. A mere disclaimer is sufficient to stave off misrepresentation.'' [323] This statement may be correct for some incentivized reviews when there is no express or implied condition for those reviews to express a particular sentiment. For such reviews, an adequate disclosure that incentives were provided in exchange for the review may be able to cure a misleading impression that the reviews were independent and unbiased. However, such a disclosure does not reveal to consumers the requirement that reviews be positive. In addition, even if an individual review disclosed that it resulted from incentives requiring the review to be positive, such a disclosure would not be effective in instances where a consumer relies on the overall average star rating and does not read all individual reviews. Furthermore, the Commission believes that, if incentives are conditioned on reviews expressing a particular sentiment, many resulting reviews will not be merely misleading but false. For example, the offer of an incentive in exchange for a positive review may lead some reviewers to create positive reviews even when they had a negative experience with the product, service, or business. No disclosure can adequately cure a false review.[324]

[324] *See* FTC Policy Statement on Deception, 103 F.T.C. at 180 (''[*P*]*ro forma* statements or

The second commenter taking this position pointed to examples in the Endorsement Guides,[325] claiming inaccurately that they stand for the proposition that businesses are allowed to offer incentives in exchange for positive reviews.[326] The Endorsement Guides do contain an example involving incentives for reviews conditioned on the reviews being positive: ''[a] manufacturer offer[ing] to pay genuine purchasers $20 each to write positive reviews of its products on third-party review websites.'' [327] However, consistent with the Commission's approach in this section, the Guides provide that ''[s]uch reviews are deceptive *even if the payment is disclosed* because their positive nature is required by, rather than being merely influenced by, the payment.'' [328]

The third commenter taking this position suggested that it should be acceptable to use a disclosure like, ''We asked customers to tell us how much they loved their visit to John's Steakhouse, and here's what some of them said! (customers who submitted reviews received a $5 coupon).'' [329] The scenario the commenter describes does not involve consumer reviews. It involves consumer testimonials, which are not covered by § 465.4. Further, it is unlikely that one could make such a disclosure in the context of consumer reviews, given how reviews are usually presented on a business's own website and the lack of control over the way they are presented on a third-party website. In addition, the disclosure does not communicate that the customers had to ''tell how much they loved their visit *in order to* receive a $5 coupon.'' Furthermore, as discussed above, many incentivized reviews conditioned on consumers saying how much they ''loved their visit'' are likely false regardless of such a disclosure.

Two commenters, an individual and a review platform, requested that § 465.4 go further and prohibit all incentives given in exchange for reviews regardless of any requirement to express a particular sentiment.[330] An individual commenter would have the Commission ''require businesses to disclose any form of incentive that they provide or arrange for reviewers.'' [331] These requests are beyond the scope of this rulemaking but are addressed in the Endorsement Guides, which provide that unexpected material connections such as incentives given in exchange for customer reviews without any requirement as to the sentiment of the reviews must be disclosed clearly and conspicuously.[332] The Commission continues to believe that this principle from the Endorsement Guides is an appropriate expression of what incentivized review practices would or would not violate section 5 of the FTC Act. In any event, there is no basis on the current rulemaking record for the Commission to conclude that *all* incentivized reviews should be prohibited or that *all* incentivized reviews should require a disclosure.

Two commenters, an individual and a review platform, recommended that § 465.4 also prohibit offering compensation to remove or change consumer reviews.[333] Another individual commenter inquired about paid review removal without stating a position on the topic.[334] The Commission previously noted that, ''[i]n procuring [or] suppressing . . . consumer reviews of their products, advertisers should not take actions that have the effect of distorting or otherwise misrepresenting what consumers think of their products.'' [335] A product marketer paying consumers to change or remove truthful negative reviews may be engaging in an unfair or deceptive act or practice that has the effect of distorting or otherwise misrepresenting what consumers think of a marketer's products. Nevertheless, that act or practice is beyond the scope of this rulemaking.

E. § 465.5—Insider Consumer Reviews and Consumer Testimonials

Proposed § 465.5 sought to prohibit certain undisclosed insider reviews and testimonials. It had three subparts. Proposed § 465.5(a) would have prohibited an officer or manager of a business from writing or creating a consumer review or consumer testimonial about the business or one of its products or services that failed to have a clear and conspicuous disclosure of the officer's or manager's relationship to the business.[336] Proposed § 465.5(b) would have applied to testimonials, but not consumer reviews. It would have prohibited a business from disseminating or causing the dissemination of a consumer testimonial about the business or one of the products or services by one of its officers, managers, employees, or agents, or any of their relatives, if that testimonial failed to have a clear and conspicuous disclosure of the testimonialist's relationship to the business or to the officer, manager, employee, or agent, and if the business knew or should have known of that relationship. Proposed § 465.5(c) would have applied to consumer reviews, but not testimonials, and would have been limited to when an officer or manager of a business solicits or demands a consumer review about the business or one of its products or services from an employee, an agent, or a relative of any such officer, manager, employee, or agent. Proposed § 465.5(c) would have prohibited that conduct when (1) the person requesting the review knew or should have known the prospective reviewer's relationship to the business (or to one of its officers, managers, employees, or agents), (2) the request resulted in a consumer review without a disclosure, and (3) the person requesting the review (a) did not instruct the prospective reviewer to disclose clearly and conspicuously that relationship, (b) knew or should have known that such a review appeared without such a disclosure and failed to take remedial steps, or (c) encouraged

disclaimers may not cure otherwise deceptive messages''); *Removatron Int'l Corp.* v. *FTC,* 884 F.2d 1489, 1497 (1st Cir. 1989) (''Disclaimers or qualifications in any particular ad are not adequate to avoid liability unless they are sufficiently prominent and unambiguous to change the apparent meaning of the claims and to leave an accurate impression. [336] Due to an inadvertent drafting error, the regulatory text of proposed § 465.5(a), which addressed an officer or manager of a business writing or creating a consumer review or consumer testimonial about the business or its products or services, only referenced disclosure of the officer's but not the manager's relationship to the business. The Commission clearly intended that proposed § 465.5(a) require disclosure of the manager's relationship as well. *See* NPRM, 88 FR 49379 (''Proposed § 465.5(a) would prohibit an officer or manager of a business from writing or creating a consumer review or consumer testimonial about the business or its products or services if the consumer review or consumer testimonial does not have a clear and conspicuous disclosure of the officer's or manager's relationship to the business.'').

the prospective reviewer not to make such a disclosure. The Commission has determined to finalize proposed § 465.5 with a number of modifications.[337]

Two individual commenters shared their experiences with insider reviews. One individual commenter ''made a purchase based on a glowing review'' but ''later discovered that the person who wrote the review was, in fact, a salesperson for the same company, receiving a commission based on my purchase,'' and the purchase turned out to be ''a fraudulent service.'' [338] Another individual commenter shared their experience as an employee: ''I was asked to leave positive reviews in Amazon . . . and in other sites to boost the number of positive reviews for our products. The CEO asked employees to do this and include family members. In fact, I found the immediate family and friends of the CEO leaving glowing reviews of the product.'' [339]

A business commenter said, ''If you allow insider reviews, disclosure [of the reviewers' relationship to the business] should be mandatory.'' [340] Another business commenter wrote that ''limiting . . . § 465.5(a)–(c) to circumstances in which the requisite disclosure is absent is a fair restriction on businesses that would simultaneously protect consumers all while allowing businesses to effectively advertise.'' [341] The commenter noted that the ''requirement for clear-and-conspicuous disclosure is used widely throughout federal and state consumer protection laws.'' [342] The commenter was also concerned that a rule might ''infringe on the ability of employees and independent contractor agents . . . to inform others of their experiences with an employer or principal.'' [343] To the extent that the commenter is referring to review websites that specialize in reviewing employers from the perspective of employees, it is obvious that the reviewers are employees or former employees, and no further disclosure appears necessary.

A trade association commented that it ''understands the Commission's concern that in some cases, employees may have an incentive to post positive reviews on behalf of their company's products,'' but the concern ''is already addressed through Section 5 and the Endorsement Guides.'' [344] The Commission continues to believe that certain conduct should be addressed by a trade regulation rule even if it can also be addressed through section 5 enforcement actions. Having specific conduct addressed by a rule provides the general public with further clarity as to what steps are necessary to conform its conduct to the requirements of the law, deters prevalent unlawful conduct, and allows the Commission to bring enforcement actions more efficiently and effectively.

A retailer recommended that the provision ''be revised to further incorporate a requirement that the 'insider' review/testimonial be 'fake' or 'false,' in order to better target the deceptive acts of bad actors that use their employees to generate fake reviews and testimonials that purport to be from actual customers.'' [345] The Commission rejects that suggestion, as the intention of § 465.5 is to address certain inherently biased reviews and testimonials. Fake and false reviews are already addressed by § 465.2.

1. Material Connections

Commenters pointed out what they saw as inconsistencies between proposed § 465.5 and section 5 of the FTC Act. A retailer commenter wrote that proposed § 465.5 was ''inconsistent with the longstanding principles in the Endorsement Guides . . . that disclosures must be made when the connection between a reviewer and the sponsoring advertiser is material, meaning it would affect the weight or credibility that consumers give to the endorsement.'' [346] A trade association noted in its comment that the section ''seeks to impose liability for reviews and testimonials authored by certain employees or their relatives that lack disclosures regardless of context, and whether that connection is material under the circumstances'' and ''would impose civil penalties for reviews or testimonials that are not even deceptive.'' [347] Another trade association opined ''that a reviewer's out-of-state second cousin [who] works a minimum-wage job at a retailer would (hopefully) not be a 'material connection' requiring disclosure under the Endorsement Guides, because such connection would not bias the reviewer's review, and therefore would not make the review misleading.'' [348] The same trade association and a business organization also commented that the provision poses concerns under the First Amendment by ''broadly prohibiting certain reviews or testimonials by 'insiders' regardless of whether that speech is deceptive in context.'' [349] The Commission intended for § 465.5 to be limited to unfair or deceptive failures to disclose material connections, and is now clarifying this intent. Specifically, in paragraphs (a) through (c) of § 465.5, the Commission is limiting the covered relationships to ''material'' relationships. In § 465.5(a) and (b), the Commission is also clarifying that, under certain circumstances, the relationship of a consumer testimonialist may be clear to the audience without disclosure. For example, the audience may already be aware that an executive is associated with a particular company, or the context of an ad may otherwise communicate a relationship with a particular company. Specifically, in § 465.5(b), which applies only to consumer testimonials, the Commission is adding the requirement that ''the relationship is not otherwise clear to the audience,'' and in § 465.5(a), which involves both consumer reviews and testimonials, it is adding, ''unless, in the case of a consumer testimonial, the relationship is otherwise clear to the audience.'' The Commission does not believe that, absent a disclosure, a relationship will ever be clear to consumers in the context of an ordinary consumer review.

2. Relatives

Proposed § 465.5(b) and (c) would have required disclosures in some circumstances involving consumer testimonials or reviews from ''relatives'' of a company's officers, managers, employees, or agents. Some commenters voiced concerns pertaining to these requirements.

For example, a review platform, explaining that it prohibits reviews about a business or its products by someone whose immediate family owns or works for the business, asked how businesses would ''know whether reviews have been submitted by the extended family (such as the second cousins) of their officers, managers, employees, or agents,'' questioned whether it would be proportional to seek penalties when extended family are involved, and suggested ''narrowing the scope of the family requirement'' to ''immediate family.'' [350] A trade association said that ''relatives can include cousins, nieces/nephews, and other more distant familial

[337] Proposed § 465.5(b) and (c) are being renumbered as final § 465.5(b)(1) and (c)(1).

relationships,'' that ''even immediate family relationships (parents, children, siblings) are not always closely held'' because ''adult siblings are not necessarily in each other's day-today lives,'' and that ''it would be more appropriate to substitute the term . . . 'members of the same household' as that would suggest individuals that have regular contact with an employee.'' [351] A business organization wrote in its comment that the term ''relative'' is too vague and that ''[i]t is unclear whether the rule applies to third cousins, the spouses of a stepbrother's child from a previous marriage, or friends that are considered family,'' concluding that ''[l]arge companies creating monitoring programs for testimonials need some clarity about what relatives will be captured under the Rule.'' [352] A second trade association said in its comment that ''relatives'' of ''any company employee should not be considered 'insiders''' because ''[i]n most cases, such family members would have no incentive to post a fake review.'' [353] However, the Commission intended for § 465.5 to address biased reviews and testimonials by insiders or their relatives, not the writing of ''fake [or false] reviews,'' which is addressed in § 465.2.

To reduce the compliance burden, the Commission is removing relatives from § 465.5(b) and limiting what was originally proposed as § 465.5(c)(1), which is now split into three separate prohibitions. One prohibition addresses officers or managers soliciting or demanding a consumer review from ''any of their [own] immediate relatives.'' A second prohibition addresses officers or managers soliciting or demanding reviews from employees or agents. A third prohibition addresses solicitations or demands by officers or managers that ''employees or agents seek such [consumer] reviews from their relatives.'' In such instances the request will likely be a general one (such as ''Ask your relatives to review us'' or ''Get three family members to review us''), although it could also be more specific (such as ''Get your spouse to write us a review''). As set forth in § 465.5(c)(1)(i), any reviews resulting from demands that employees or agents solicit their relatives would only be violations if the resulting reviews were written by immediate relatives of the employees or agents.

3. Agents

A trade association objected to the inclusion of the undefined term ''agents'' in proposed § 465.5(b) and (c) and suggested its removal. The commenter said that ''it is not clear what individuals would be considered 'agents' of the business'' and the meaning of the term ''agent'' could ''dramatically expand the scope of the compliance programs that businesses will likely need to create in order to mitigate their risks under this section'' which ''would be particularly important for small businesses.'' [354] The Commission intends for the term ''agents'' in this rule to apply only to those agents that promote the company or its products, such as representatives of advertising agencies, public relations firms, and review management firms. As discussed below, given the clarifications of and limitations to § 465.5(b)(1) and (c)(1), the Commission has no reason to believe that the inclusion of ''agents'' will ''dramatically expand the scope of the compliance programs.'' [355]

4. Scope

Several comments addressed the scope of proposed § 465.5, including the scope of liability of businesses in the context of insider reviews and testimonials. For example, a trade association asserted that § 465.5 should ''be limited to the extent it references employees (or agents) who are not officers or managers, and who were not instructed by their superiors to post reviews.'' [356] A retailer asked for a safe harbor that would apply to employee reviews and testimonials ''if businesses are not encouraging insider reviews and testimonials.'' [357] The Commission intended for the provision to apply to reviews or testimonials by employees or agents who are not officers or managers only when (1) the reviews are requested or solicited by an officer or manager of the business or (2) the testimonials appear in advertising or promotional messages actively disseminated by the business. As discussed in this section, the Commission's clarifications and limitations should resolve any concerns arising from any broader interpretation.

Two trade associations and another industry organization asserted in their comments that § 465.5 ''appears to impose liability on businesses for distributing the content of third parties, even when they had no knowledge that the content violated the proposed rule.'' [358] As the commenters used the word ''distributing,'' the Commission assumes that these comments pertain to the liability of businesses under § 465.5(b), which prohibits businesses from ''disseminating or causing the dissemination of consumer testimonials'' by insiders without disclosures. The testimonials covered by § 465.5 are, by definition, a business's advertising or promotional messages, so the Commission does not consider them to be third-party content. The section covers such testimonials when disseminated by the business itself, by its officers or managers, or in response to solicitations or demands from its officers or managers. With respect to the commenters' concern that businesses will be liable even when they had no knowledge that the content violated the rule, the Commission discusses below the appropriate application of the ''knew or should have known'' standard.

A retailer's comment expressed ''significant concerns with this section if the FTC intends to apply it to marketplace service providers with hundreds of thousands of employees.'' [359] A trade association said in its comment that, ''to the extent the Commission intends for this language to apply to reviews or testimonials written by employees of online retailers with hundreds of thousands of employees, the Commission has failed to demonstrate that this is an unfair or deceptive act or practice that is prevalent'' as ''[n]one of the cases cited in the NPRM involved this type of company.'' [360] With respect to employees, the section applies only to (1) testimonials by employees that the company chooses to disseminate and (2) reviews that are solicited or demanded by company officers or managers. Further, the Commission has sufficient evidence of prevalence as to the use of insider reviews and testimonials,[361] and that evidence need not specifically include examples of companies of every size, such as those ''with hundreds of thousands of employees.''

A trade association's comment ''urge[d] the Commission to add a safe harbor . . . that will assure businesses acting in good faith that they will not face civil penalty liability for the actions of rogue individuals.'' [362] Again, whether a business will be subject to civil penalties will depend on whether

the facts show that the business had actual knowledge or knowledge fairly implied of the violation. A business will not violate the rule—much less be subject to civil penalties—merely because employees write consumer reviews without disclosing their relationship to the business, but it may violate the rule when an officer or manager of the company solicited or demanded such reviews. A business will also not be liable under § 465.5 simply because one of its employees (other than an officer or manager) or agents makes an unsolicited social media post. However, as discussed above, a business might be liable under § 465.2(a) for an employee posting fake testimonials to social media on behalf of the company.[363]

Two commenters addressed general review solicitations from businesses to their customers. A trade association said that ''[b]usinesses which seek reviews from their customers generally seek reviews from all customers, and again, do not currently monitor or screen for potential relatives or agency relationships.'' [364] A review platform operator wrote in its comment, ''An automated review invitation system can operate via integration with, for example, a C[ustomer] R[elationship] M[anagement] platform where customer details are automatically fed through to generate review invitations following on from purchases or experiences. The information within the system could be as minimal as a name and email address. . . . It could therefore be possible for businesses to inadvertently invite persons that are related to an officer, manager, employee, or agent . . . . In practice, it will be difficult to check whether any invitation recipients could fall within the very wide group of persons outlined at [§] 465.5(c), and it will also be difficult to draw a firm line between what types of indicators are sufficient to warrant imputing constructive knowledge.'' [365] The Commission did not intend for § 465.5(c) to cover such generalized invitations to past purchasers to write reviews. The Commission is therefore adding language in § 465.5(c)(2) to clarify that § 465.5(c)(1) ''does not apply to generalized review solicitations to purchasers for them to post reviews about their experiences with the product, service, or business.'' The Commission is making a similar clarification in § 465.5(b)(2)(i); specifically, that § 465.5(b)(1) ''does not apply to generalized review solicitations to purchasers for them to post testimonials about their experiences with the product, service, or business.''

The Commission has also added § 465.5(b)(2)(ii), which exempts ''merely engaging in consumer review hosting'' from § 465.5(b)(1). Thus, an unsolicited employee review merely appearing on the business's website cannot violate the provision against disseminating insider testimonials.

A trade association noted that ''[l]arge national retail chains collectively employ millions of workers who are also their customers'' and ''[w]hile a retailer may provide guidance on disclosing their relationship, it should not be liable for policing their customer reviews for posts that may have been submitted by any one of their thousands or millions of employees—who in many cases may be using ambiguous screennames or not be readily identifiable.'' [366] The Commission points out that only § 465.5(c) applies to customer reviews by employees, and that provision only applies to employee reviews that an officer or manager has solicited or demanded. If there are no such solicitations or demands, then § 465.5 does not apply to employee reviews. When an officer or manager does solicit or demand a review, the business would only be liable if the officer or manager (1) ''encouraged the prospective reviewer not to make . . . a disclosure,'' (2) ''did not instruct that prospective reviewers disclose clearly and conspicuously their relationship to the business,'' [367] or (3) ''knew or should have known that such a review appeared without such a disclosure and failed to take remedial steps.'' It is only under the last of the three clauses that a business might be liable for any ''policing'' of reviews, and, as discussed below, any such obligations should not be unduly burdensome.[368]

An industry organization commenter expressed concern that § 465.5 ''would require the disclosure of personally identifying information'' and impact employees' privacy.[369] The Commission does not see how the provision requires the disclosure of personally identifying information. Section 465.5 requires the disclosure of unexpected material connections but does not require that employees identify themselves by name. Testimonialists and reviewers could be anonymous, or use pseudonyms, and include general phrases indicating their relationship to the business, such as ''my employer's product,'' ''my company's,'' or ''my spouse's company.''

5. Knowledge Standard

A number of commenters discussed the ''knew or should have known'' standard contained in § 465.5(b) and (c). A trade association said that a '' 'knew or should have known' standard . . . [in] § 465.5 aptly reflects that the rule is targeting bad actors that intend to commit fraud through fake reviews.'' [370] A consumer organization ''advise[d] the Commission against relying on knowledge standards that will introduce unnecessary evidentiary burdens in the enforcement process'' and against making it ''a condition of liability,'' noting that instead ''the Commission can and should consider knowledge and intent in deciding the equities of bringing any enforcement action.'' [371] A review platform said ''that 'should have known' is too low as a knowledge threshold and this should therefore be limited to 'knew', *i.e.,* actual knowledge.'' [372] A trade association called the ''should have known'' standard ''vague.'' [373] A business commenter also described ''should have known'' as vague and suggested limiting the knowledge standard to actual knowledge.[374] A trade association and a retailer said that civil penalties should not be based upon a ''should have known'' standard.[375] The retailer continued, ''In the alternative, if the Commission refuses to elevate the knowledge standard for this section, the final rule must provide greater guidance on the sorts of scenarios that would give rise to liability.'' [376] Specifically, the retailer asserted that the Commission would have to provide ''additional information about when a company or officer/manager 'should' know that an 'insider' review or testimonial violates the rule.'' [377] A trade association wrote in its comment that ''the Commission should raise the knowledge standard for this section to actual knowledge,'' which ''would ensure that companies that are actually complicit in the proliferation of deceptive insider reviews and testimonials are the targets of this section, rather than well-meaning

businesses that fail to discover and remedy reviews or testimonials by employees, managers, officers, agents, or any of those individuals' relatives that lack disclosures.'' [378] The commenter continued, ''[r]egardless of the knowledge standard the Commission imposes, the final rule must provide greater guidance on what sorts of scenarios would give rise to liability under this section.'' [379]

The Commission chooses to retain the proposed ''knew or should have known'' standard in § 465.5(b)(1) and (c)(1)(ii)(c). First, the Commission notes again that it cannot obtain civil penalties under section 5(m)(1)(A) of the FTC Act for a rule violation unless it proves that a defendant had actual knowledge or knowledge fairly implied that the act or practice is unfair or deceptive and is prohibited by the rule. With respect to § 465.5(b)(1), the provision applies only to testimonials that the business disseminates or causes to be disseminated, *i.e.,* it applies to the business's own advertising and promotional activities. As noted above, § 465.5(b)(1) does not apply to unsolicited social media posts by employees or to social media posts that result from generalized solicitations. The Commission does not expect that a business will ask every potential testimonialist whether they are an agent of the business. There may be red flags, however, that should cause a business to realize that a prospective testimonialist is likely an insider, such as the testimonial featuring an image of that person standing in front of the company's headquarters. If a business routinely asks prospective testimonialists how they became interested in the business or its products, it should not avoid looking at answers that might indicate a covered connection.

With respect to § 465.5(c)(1)(ii)(c), the Commission believes that, if officers and managers of a business request or demand that the business's employees or agents write consumer reviews or solicit or demand that such employees or agents seek such reviews from their relatives, it is more than reasonable to have those officers and managers take on certain responsibilities with respect to those reviews. The employees, agents, and relatives on the receiving end of such requests or demands are likely to assume that their reviews should be positive, which gives such reviews an inherent bias. Therefore, officers and managers should instruct that prospective reviewers make disclosures. When they demand that employees or agents seek reviews from their relatives, the officers or managers should instruct the employees or agents to ask their immediate relatives to make disclosures. The officers and managers should also take remedial steps when they know or should know that resulting insider reviews appeared without a disclosure. The Commission does not expect an officer or manager to scour every review of the business for possible insider reviews appearing without a disclosure. There may be red flags, however, that should cause officers or managers to inquire further. An example that is at least applicable to smaller companies is a review without a disclosure by someone the soliciting officer or manager recognizes as having the same last name as an employee whom the officer or manager told to obtain reviews from relatives. Another example is an employee sending a soliciting officer or manager a link to the resulting review, in which case the officer or manager should take the time to see if that review has a disclosure. By taking ''remedial steps,'' the Commission means that the officer or manager should request that the reviewer delete the review or add a clear and conspicuous disclosure to it.

6. Other Suggestions

Commenters recommended that the Commission adopt a number of additional requirements or prohibitions. An individual commenter said that insider reviews should be banned and that disclosures are insufficient to cure them.[380] One consumer group proposed that (1) ''non-disclosed insider ratings'' should be ''independent and separate violation[s] from deceptive narrative reviews;'' (2) ''symbolic ratings—both independently and when aggregated—should feature a clear and conspicuous disclosure of necessary material connections;'' and (3) ''reviews requiring a disclosure should not be included in a product's aggregate rating without a disclosure.'' [381] Another consumer group suggested the following: (1) § ''465.5(a) and (c) should apply to all employees and board members of a business;'' (2) § 465.5(b) and (c) be extended ''to employees or board members of other companies with a material business relationship with the first business;'' (3) § 465.5(c) should be extended ''to include solicitations or demands of employees of companies with which the business conducts material business;'' (4) § 465.5(c) should prohibit ''any employee or board member of a business to solicit or demand from another employee or board member (or relative of an employee or board member) a consumer review about the business or one of its products or services;'' and (5) ''employees of a business should not be permitted to provide star or numerical reviews that count toward an aggregate or average rating, even if their conflict of interest is otherwise disclosed in an accompanying narrative review.'' [382] Some of these proposals go beyond the scope of this rulemaking. Based on its policy expertise, the Commission declines to make any of these changes at this time. The Commission notes, however, that some may, in certain situations, involve unfair or deceptive acts or practices that violate section 5 of the FTC Act.

F. § 465.6—Company-Controlled Review Websites or Entities

Proposed § 465.6 sought to prohibit a business from representing, expressly or by implication, that a website, organization, or entity that it controls, owns, or operates provides independent reviews or opinions about a category of businesses, products, or services including the business or one or more of its products or services. Based on the following, the Commission has determined to finalize this provision with two limiting modifications.[383]

A business organization, a retailer, and a review platform submitted comments supporting the intent of proposed § 465.6.[384] For example, the business organization noted that it ''was supportive of a . . . rule aimed at addressing the practice of marketers setting up purportedly independent websites, organizations, or entities to review or endorse their own product.'' [385]

Some commenters argued that, as drafted, the provision was overly broad and would prohibit conduct that was not deceptive or unfair. A business organization said that, as drafted, proposed § 465.6 ''. . . could capture retailers that sell their own house brands'' and ''prevent media companies from operating general review websites that publish reviews by independent critics and consumers about films or television produced by affiliated studios or divisions.'' [386] A consumer

[386] *Id.*

organization similarly said that, ''as written, . . . [proposed § 465.6] would make it illegal for companies to host any reviews whatsoever so long as some of the reviews touch on a category of business, products, or services the company provides'' and would prohibit ''customer review forums on sites such as Home Depot and Amazon.'' [387] A retailer said that ''the plain text of . . . [proposed § 465.6 would] sweep[ ] in more conduct that is neither deceptive nor unfair—for example, where Company A provides customer reviews authored by others to Company B, without disclosing an ownership relationship.'' [388] A trade association wrote that proposed § 465.6 ''could be applied to prohibit retailers from representing that any consumer reviews or opinions featured on their own websites are independent, even if they are.'' [389] A retailer commented that proposed § 465.6 is ''overly broad and would prohibit a business from using a related entity from [sic] testing or comparing products in good faith and publishing those results, even if the company clearly disclosed that the test or comparison was done by an affiliate.'' [390] A review platform asked in its comment that the Commission clarify that the section would not ''unintentionally lead[ ] to review sites being unable to host reviews of their own company or sector.'' [391] The Commission recognizes and agrees with the above concerns and is making two responsive modifications to narrow final § 465.6 in a way that better reflects the Commission's intent. The Commission is excluding ''consumer reviews'' from the scope of final § 465.6 and changing the prohibition against ''represent[ing]'' to a prohibition against ''materially misrepresent[ing].''

A trade association commented that ''many retailers host product reviews on their online shopping websites and make no direct claims that the reviews are independent'' and asked the Commission to ''make clear that it is permissible for retailers to host product reviews on a site they control and operate.'' [392] Assuming that the commenter is referring to retailers hosting independent consumer reviews on a site they operate or control, then this is permissible under § 465.6. If the retailer's website misrepresents that it provides independent reviews or opinions by experts or organizations, then the retailer could be liable under § 465.6.

Two commenters asked the Commission to adopt a safe harbor provision for disclosures of the relationship between the business and the provider of the purportedly independent reviews or opinions.[393] The Commission's modifications address this request effectively by providing that businesses do not violate § 465.6 if they are not materially misrepresenting independence. The Commission believes that contradictory disclosures cannot cure a false express claim, such as a false express claim of independence. If a false claim of independence is merely implied, whether a disclosure is adequate to cure it will depend on the net impression of the website or advertisement, *i.e.,* whether it materially misrepresents independence even with the disclosure.

A trade association commented that ''[i]t would be helpful to make it clear that . . . § 465.6 only applies to websites or entities whose core service is providing reviews or opinions.'' [394] The term ''core service'' is ambiguous, and it is not clear how one would determine whether it applies to reviews or opinions provided by a given website or other entity. False material claims that a website or entity provides independent reviews or opinions would still be deceptive even if such reviews or opinions are not the website's or entity's core service. The NPRM cited a number of cases in which businesses created purportedly independent seals or badges that they then awarded to their own products; the awarding of such seals or badges was clearly not their core business.[395] The NPRM also cited cases involving purportedly independent review websites, and, although such review websites might have appeared to be a ''core service,'' the true core business was selling the respondent's or defendant's own products.[396] Focusing on the ambiguous term ''core services'' would likely open the door to manipulation and evasion of the prohibition. The commenter further noted that it would also be ''useful to clarify what 'independent reviews or opinions' means.'' [397] In this context, the term ''independent'' merely refers to explicit or implicit claims that reviews or opinions are not coming from a business that offers any of the products or services being reviewed or evaluated.

A business organization commenter suggested that the Commission not finalize § 465.6 because ''the fraudulent nature of reviews on purportedly independent websites would likely be covered by . . . [§§] 465.2 and 465.5 of the . . . Rule.'' [398] Those sections are limited to consumer reviews and consumer or celebrity testimonials and do not apply to reviews, seals, or other opinions by purportedly independent experts, organizations [399] or other entities. Therefore, § 465.6 is not duplicative of either § 465.2 or § 465.5.

G. § 465.7—Review Suppression

Proposed § 465.7 sought to prohibit two different types of consumer review suppression.

1. § 465.7(a)

Proposed § 465.7(a) sought to prohibit anyone from using an unjustified legal threat or a physical threat, intimidation, or false accusation in an attempt to prevent a consumer review or any portion thereof from being written or created or to cause a consumer review or any portion thereof to be removed. Based on the following, the Commission is finalizing § 465.7(a) with several revisions for the purpose of clarity.[400]

A number of commenters supported the provision.[401] The NPRM asked whether it is ''appropriate that . . . § 465.7(a) focuses on the specific types of listed threats or activities,'' and two

[387] Consumer Reports Cmt. at 9.

[388] Amazon Cmt. at 12. The commenter suggested that the Commission ''clarify the regulatory language to make clear that it covers only reviews authored by the owner company or its agents.'' *Id.* The Commission is not adopting this approach because § 465.6 is not limited to websites with reviews. It also applies to organizations or entities that misrepresent that they provide independent reviews or opinions (*e.g.,* seals) about a category of businesses, products, or services including the business or one or more of the products or services it sells.

business commenters responded that it is.[402] One of the commenters said that ''[t]his narrow approach protects consumers, all while ensuring clarity for businesses and avoiding the pitfall of ambiguity in the . . . Rule.'' [403] However, as already noted above, based on the comments and on the proposed definition for the phrase ''unjustified legal threat,'' the Commission is adopting a definition for the phrase ''unfounded or groundless legal threat,'' instead of a definition of the phrase ''unjustified legal threat,'' as originally proposed.[404]

A trade association commenter noted that '' 'intimidation' means threat of the use of force'' so it ''duplicates 'physical threat' '' and should be deleted.[405] A review platform commenter questioned why the ''proposed text is limited to 'physical threats' '' and said that non-physical threats, such as verbal threats in the form of abusive or coercive language, should not be tolerated and should be acted against.'' [406] A consumer group's comment said that ''[t]he term 'intimidation' seems sufficiently broad to cover most types of threats not otherwise covered by 'legal' or 'physical' threats.'' [407] The Commission disagrees with the first commenter because, in this context, ''intimidation'' means things other than legal or physical threats. Intimidation can include abusive communications, stalking, character assassination, and sexual harassment when those things are used to intimidate, that is to force someone into or deter someone from taking some action by inducing fear.[408]

Three commenters voiced concerns about the fact that proposed § 465.7(a) included ''false accusation[s]'' as a type of conduct that could amount to review suppression. A review platform noted that the determination of whether an accusation is false ''introduces an element of subjectivity,'' and that it would ''be preferable to ground this in a legal basis, such as defamation.'' [409] A trade association wrote that ''a statement by a business about a consumer review or the consumer making a review may sometimes be in order,'' and a prohibition on false accusations should ''allow breathing room for First Amendment free speech concerns, such as requiring a guilty mental state from the maker of an accusation before culpability attaches.'' [410] It recommended adding ''knowing that it is false or with reckless disregard as to its truth or falsity.'' [411] A second trade association asserted that proposed § 465.7(a) was ''not narrowly tailored to serve a compelling state interest because it applies regardless of the magnitude of the alleged error or intent or state of mind of the business that makes the false statement.'' [412] In order to illustrate its point, the second trade association also posited a scenario involving false accusations by a restaurant owner in a private conversation with a disgruntled patron.[413] The owner in the hypothetical did not know the accusations were false and did not act recklessly. In response to these comments, final § 465.7(a) adopts the phrase ''a public false accusation in response to a consumer review that is made with the knowledge that the accusation was false or made with reckless disregard as to its truth or falsity,'' rather than the phrase ''false accusation,'' as originally proposed. This change resolves the commenters' concerns regarding the accuser's state of mind, clarifies the Commission's intent that the provision applies only to public accusations, and provides greater clarity, thereby making compliance less burdensome. In response to the concern about subjectivity, the Commission notes that courts can make objective determinations of whether a given accusation is false. One of these commenters also asserted broadly that § 465.7(a) ''regulates 'pure speech,' not conduct, because it applies to the use of words to convey a message'' and that speech is not commercial speech if it does not propose a commercial transaction.[414] This assertion has no basis in First Amendment law and is an overly limited articulation of what counts as commercial speech. When a business makes a public false accusation in response to a consumer review in an attempt to cause the review to be removed, the speech at issue is clearly commercial speech because it is intended to promote the product, service, or business that was the subject of the negative consumer review.

Two commenters, a review platform and a trade association, said that the provision should be strengthened by also covering attempts to force a consumer review or a portion thereof to be changed or edited.[415] Proposed § 465.7(a) would have prohibited certain acts made in an attempt to, among other things, ''cause a consumer review or any portion thereof to be removed.'' The Commission believes that, in most cases, changing or editing a review would necessarily require removing a portion of it. Accordingly, the Commission is clarifying that final § 465.7 applies to such modifications of reviews by adding ''whether or not that review or a portion thereof is replaced with other content,'' immediately after ''cause a consumer review or any portion thereof to be removed.''

A trade association's comment asked that the ''Rule be clarified to emphasize that it does not prohibit companies from contacting customers who post negative reviews to resolve the reported issues.'' [416] The commenter was concerned that ''sensitive customers could argue that such communication from the Company (no matter how innocuous) amounts to intimidation.'' [417] The Commission does not believe that a company engages in intimidation by merely contacting customers to resolve reported issues or simply asking satisfied customers to update their reviews. Specifying that a consumer's concerns will be addressed only if the consumer changes or removes a truthful negative review may be an unfair or deceptive act or practice that has the effect of distorting or otherwise misrepresenting what consumers think of a marketer's products,[418] but that issue is beyond the scope of this rulemaking.

A consumer organization's comment said that, ''[j]ust as businesses may use threats or intimidation to prevent a consumer from leaving a negative review, they may use similar tactics to ensure receipt of a positive review,'' thus concluding that § 465.7(a)'s ''prohibitions . . . should also apply to compelled creation of positive reviews.'' [419] Although compelling the creation of positive reviews through threats or intimidation may be an unfair or deceptive act or practice, the

[419] Consumer Reports Cmt. at 9. Although it does not involve § 465.7(a), a business urged the Commission to ''deter meritless legal threats by platforms against providers and users of pro-consumer tools.'' Mozilla Cmt. at 6. Such threats are beyond the scope of this rulemaking.

Commission declines to address that practice in this rulemaking at this time.

A dental trade association expressed that, because Federal and State privacy laws prohibit dentists and other health care providers from disclosing patient information, their ability to correct the record when they are themselves a target of deceptive or unfair reviews is limited.[420] The commenter asked the Commission to permit dentists and other health care providers to disclose patient information in response to a review (limited to the scope of the topics addressed in the review) without violating any FTC privacy-based prohibitions.[421] This request is beyond the scope of this rulemaking.

2. § 465.7(b)

Proposed § 465.7(b) sought to prohibit a business from misrepresenting, ''expressly or by implication, that the consumer reviews of one or more of its products or services displayed on its website or platform represent most or all the reviews submitted to the website or platform when reviews are being suppressed (*i.e.,* not displayed) based upon their ratings or their negativity.'' Proposed § 465.7(b) enumerated reasons for suppressing reviews that would not be considered suppression based upon their ratings or their negativity, so long as the criteria for withholding reviews are applied to all reviews submitted without regard to the favorability of the review. Proposed § 465.7(b) listed the following valid reasons for review suppression: (1) ''the review contain[ed] . . . [(a)] trade secrets or privileged or confidential commercial or financial information, . . . [(b)] libelous, harassing, abusive, obscene, vulgar, or sexually explicit content, . . . [(c)] the personal information or likeness of another person, . . . [(d)] content that is discriminatory with respect to race, gender, sexuality, ethnicity, or another protected class, or . . . [(e)] content that is clearly false or misleading;'' (2) ''the seller reasonably believe[d] the review is fake;'' or (3) ''the review is wholly unrelated to the products or services offered by or available at the website or platform.'' Based on the following, the Commission has determined to finalize this prohibition with some modifications.[422]

Multiple commenters said that the practice of product sellers suppressing less favorable reviews was problematic. One individual commenter said they were ''[d]isgusted by businesses who[ ] filter/have control over their . . . reviews.'' [423] Another individual commenter stated that ''[t]he removal of reviews that are critical, but accurate of the service or good creates an illusion and ultimately, defrauds the consumer of their choice,'' but also worried about how ''the FTC [will] catch companies that delete negative reviews.'' [424] A third individual commenter said that the ''Rule should prohibit businesses from suppressing . . . honest negative reviews.'' [425] A fourth individual commenter wrote that ''[b]usiness should be barred from misrepresenting reviews on their websites and from suppressing negative reviews.'' [426] The State Attorneys General said that, when ''a merchant . . . only posts positive consumer reviews on its website, instead of both favorable and negative reviews, [it] can potentially mislead consumers into believing that such reviews represent most or all of the reviews submitted to the merchant's website.'' [427] A retailer wrote that it ''support[s] the goals of section 465.7[(b)], which prohibits sellers from suppressing customer reviews based on their negativity'' and ''believe[s] that it is critically important that customers not be deprived of useful, negative feedback when deciding whether to purchase a product.'' [428]

The NPRM asked whether ''it [is] appropriate that proposed § 465.7(b) is limited to circumstances in which reviews are being suppressed based on rating or negativity,'' and a business commenter agreed that it was.[429]

A trade association commenter said ''that the Commission has . . . failed to satisfy the requirement that the specific unfair or deceptive acts or practices identified in the rule be prevalent.'' [430] According to the commenter, ''The rulemaking record cites only one case, one closing letter, and one comment in support of the Commission's conclusion that review suppression is prevalent.'' [431] The commenter understates the significance of the evidence that the Commission considered in finding that the suppression of reviews based upon their rating or sentiment is prevalent. The closing letter to Yotpo, a company that provided review management services, is significant because the investigation revealed that more than 4,500 Yotpo merchant clients were automatically publishing only 4- or 5-star reviews and that most 1-star reviews and 2-star reviews submitted to those merchants were suppressed.[432] The investigation of Yotpo shows that there was widespread suppression of negative reviews. The Commission thus has a strong basis for its conclusion that the suppression of negative reviews on retailer or business websites is prevalent.

A review platform's comment suggested changing ''based upon their ratings or their negativity'' to ''based upon their ratings or their sentiment'' because ''reviews can be difficult to categorize as wholly 'negative' or 'positive.' '' [433] The Commission intended for the phrase ''based upon their ratings or their negativity'' to refer to the suppression of reviews based on their ratings or their sentiment. However, in light of the comment, the Commission now realizes that the use of the word ''negativity'' in this context could be subject to misinterpretation and be construed to imply that a review must be wholly negative for its suppression to be problematic. Accordingly, the Commission is clarifying its original intent by changing ''their negativity'' to ''their negative sentiment.'' The commenter also said that ''consumer harm may result if someone suppresses a review, regardless of the sentiment expressed in the review.'' [434] The Commission is not expanding the rule to address other types of review suppression not based on ratings or negative sentiment. There are numerous legitimate reasons for suppressing consumer reviews, including those listed in § 465.7(b)(1), (2), and (3). Furthermore, such an expansion would be beyond the scope of the rulemaking.

A trade association's comment requested that the Commission ''carve out the use of reviews in marketing materials'' because the provision ''could effectively prohibit retailers from highlighting any customer reviews in advertising—even though customers understand that advertising normally highlights particularly positive

[420] ADA Cmt. at 1.

[421] *Id.* at 1–2.

[422] One modification, discussed above, is changing ''its products or services'' to ''the products and services it sells.'' *See supra* section IV.B.4. of this document. Another modification discussed above is changing ''person'' to ''individual.'' *See supra* section IV.A.2.b of this document. As it has done elsewhere in the rule, the Commission is limiting the misrepresentations prohibited to ''material'' misrepresentations. Nonetheless, in the context of § 465.7(b), the Commission believes that all such misrepresentations would likely always be material.

[434] *Id.*

reviews.'' [435] The Commission did not intend for proposed § 465.7(b) to cover the use of consumer reviews in marketing materials. Specifically, proposed § 465.7(b) was only intended to cover misrepresentations about the body of reviews in a ''reviews'' section of a website or platform—that is, a portion of a website or platform dedicated in whole or in part to receiving and displaying consumer reviews—and not misrepresentations about whether a highlighted review is ''representative.'' The Commission is clarifying this by changing ''displayed on its website or platform'' to ''displayed in a portion of its website or platform dedicated in whole or in part to receiving and displaying consumer reviews.'' The Commission notes however, that the use of non-representative consumer reviews in marketing could be deceptive in violation of section 5 of the FTC Act.[436]

A trade association asked that the Commission ''clarify what it means for a review to be ''suppressed (*i.e.,* not displayed).'' [437] The trade association said that ''[m]any businesses that operate websites that display consumer reviews will organize those reviews in reasonable ways to help consumers navigate what might be a large corpus of varying consumer commentary'' and that, ''[i]f a business takes reasonable steps to organize their reviews, those reviews should not be considered 'suppressed.' '' [438] The Commission agrees that organizing reviews does not qualify as suppressing reviews. The Commission notes, however, that organizing reviews in a way that makes it difficult for consumers to know about or find negative reviews could be an unfair or deceptive act or practice in violation of section 5 of the FTC Act. The commenter also asked that the Commission change ''not displayed'' to ''not displayed or accessible.'' [439] The Commission is instead clarifying its original intent by changing ''not displayed'' to ''not displayable,'' so that the provision only covers reviews that consumers will be unable to view even if they were to sort or filter the reviews differently. Another trade association's comment said that ''the Rule should explicitly allow retailers to sort reviews by objective measures unrelated to the positivity of the review, where the sorting method is disclosed.'' [440] As modified, § 465.7(b) does not prohibit the sorting or organization of reviews, so the proposed modification is unnecessary.

Four industry commenters argued that there are legitimate reasons for suppressing consumer reviews beyond those listed in proposed § 465.7(b).[441] One of these commenters, a retailer, gave examples of other legitimate reasons for suppressing a review: ''describing violence, encouraging illegal activities or misuse of the product, incorporating hyperlinks that could jeopardize customer online safety, or using a language not supported by the website.'' [442] Three of the industry commenters said that, by limiting review suppression to the listed reasons, the provision violated the First Amendment and section 230 of the Communications Decency Act,[443] and all four asked the Commission to clarify that the listed reasons are not exhaustive.[444] The Commission agrees that there are legitimate reasons for suppressing reviews beyond those listed and is clarifying that the listed criteria for review suppression are non-exhaustive examples.

Proposed § 465.7(b) provided that suppression was not violative ''so long as the criteria for withholding reviews are applied to all reviews submitted without regard to the favorability of the review.'' The Commission is clarifying that the criteria must be applied to all reviews equally. Additionally, to be consistent with the above clarification regarding sentiment, the Commission is changing ''without regard to the favorability of the review'' to ''without regard to sentiment.''

An individual commenter asked whether a company could ''have a policy of not posting reviews that mention other products'' or suppress a review that is ''patently false (wrong company, wrong product, wrong location, *etc.*).'' [445] As long as the policy is applied to all reviews equally, those could be legitimate reasons for suppressing reviews.

A trade association commented that one of the listed, acceptable reasons for suppressing reviews is too limited. Specifically, it said that ''libelous'' reviews would not cover reviews with an oral component that were ''slanderous,'' and it thus recommended using the word ''defamatory.'' [446] The Commission intended to cover all defamatory consumer reviews, not just written ones, and the Commission is making that clarification.

Another one of the listed, acceptable reasons for suppressing reviews was that ''the seller reasonably believes the review is fake.'' A review platform commented that it is important that this criteria ''cannot be used by a business to seek to censor consumer reviews based on a valid experience'' and said that, without information about the reviewer, the reviewer's location, and the reviewer's other reviews, ''it can be difficult to accurately identify fake reviews.'' [447] One individual commenter wrote that this ''is overbroad and gives sellers leeway to suppress reviews at their discretion so long as they claim a belief that said reviews were fake.'' [448] The commenter recommended ''revising this provision to add specificity and identify the parameters of what a fake review looks like.'' [449] A seller does not risk liability if the suppression occurs for a reason other than the review's rating or negative sentiment. The provision's phrase ''such as'' recognizes that it is proper to suppress reviews for legitimate reasons. For this specific enumerated exception, ''the seller [only needs to] reasonabl[y] believe[ ] the review . . . [to be] fake.'' Thus, if there are indicia that would lead a reasonable person to believe that the review is fake, the seller would meet this exception.

A different, listed acceptable reason for suppressing reviews was ''content that is discriminatory with respect to race, gender, sexuality, ethnicity, or another protected class.'' The Commission is changing ''protected class'' to ''intrinsic characteristic'' in order to more closely echo the language in the CRFA on which the reason is based.[450]

---

[435] NRF Cmt. at 12.

[436] An individual commenter said it would be helpful to have rule language ''around a business being allowed to highlight specific testimonial reviews on their website as long as there is a disclaimer or prominent indication that the page does not represent all reviews for the business.'' Anonymous 3 Cmt. The rule does not prohibit such ''highlighting'' of specific reviews or testimonials, but the creation of a safe harbor for such highlighting is beyond the scope of the rule. In addition, the Commission believes that the wording of the proposed disclosure is likely inadequate.

[449] *Id.*

[450] *See* Consumer Review Fairness Act of 2016 § 2(b)(2)(C)(i), 15 U.S.C. 45b(b)(2)(C)(i).

A trade association noted that the ''FTC should not prohibit sellers from excluding reviews that solely discuss service experience and do not include comments on the product.'' [451] The rule as clarified does not prohibit suppressing reviews that solely discuss customer service as long as the criteria is applied equally to all reviews. The Commission notes, however, that it has expressed the view that suppressing customer reviews about a ''particular seller's customer service, delivery, returns, and exchanges'' can be deceptive in violation of section 5 of the FTC Act.[452]

A consumer organization expressed concern that proposed § 465.7(b) ''allows businesses to suppress reviews when they contain 'harassing,' 'abusive,' or 'obscene' content, which are highly subjective terms likely to be interpreted broadly by businesses that have a clear interest in suppressing reviews that may harm their public perception.'' [453] The commenter suggested that, ''to preserve the public benefit of reviews that contain instances of objectionable content,'' the Commission could ''allow businesses to redact such content but require them to leave the remainder of the review along with any corresponding score or numerical rating available for public consumption.'' [454] Appropriate redaction of portions of consumer reviews may be difficult or infeasible in some instances. The Commission declines to impose such a requirement at this time.

The State Attorneys General asked in their comment that the Commission ''delete[ ] the phrase 'based upon their ratings or their negativity' at the end of the first sentence.'' [455] The State Attorneys General's reasoning for this request was that the language is unnecessarily limiting and superfluous'' because ''a company seeking to suppress negative reviews could potentially succeed by offering reasons that are proxies for negativity'' and ''any legitimate suppression should already be sufficiently covered by the robust carve-outs set forth in § 465.7(b)(1).'' [456] The Commission declines to make that change, as the enumerated ''carve-outs'' do not exhaustively identify every legitimate reason for suppressing reviews.

A business organization asserted that proposed § 465.7(b) ''implies a 'gross feedback score' must be disclosed along with the 'net feedback score,' which is the actual number of reviews viewable to a user.'' [457] The commenter is incorrect, as § 465.7(b) contains no such disclosure requirements.

An individual commenter expressed concern as to how the FTC will ''catch companies that delete negative reviews'' and suggested offering rewards ''for individuals or organizations to help address'' the problem.[458] The Commission will use the investigative and law enforcement tools at its disposal to identify bad actors who suppress reviews.

In connection with proposed § 465.7(b), several commenters recommended that the Commission impose additional consumer review-related requirements. An individual commenter asked the Commission to ''require businesses to display consumer reviews in a fair and transparent manner, such as by allowing consumers to choose how they want to sort or filter reviews, and by disclosing any criteria or algorithm that they use to rank or highlight reviews.'' [459] Another individual commenter said that ''companies . . . should be required to maintain and periodically disclose records of review suppression,'' which would, at a minimum, ''contain the number of reviews suppressed at each rating level and an associated justification.'' [460] A review platform recommended the Commission expand the scope of the rule to (1) prevent reviews from ''being misquoted and manipulated via quoting select parts of reviews,'' and (2) require that the criteria on which consumer reviews are selected for showcasing (*e.g.,* on a website carousel) be made clear.[461] A consumer organization commented that consumers should be able to assume that the reviews that they see on a business's website are representative of the reviews the business receives, and if ''a business wishes to curate reviews, the business should have the burden to transparently communicate the fact and nature of the curation to consumers.'' [462] One individual commenter asked that the proposed rule be ''extended to include penalties for Pay-to-Play platforms that engage in practices such as manipulating ratings and suppressing negative reviews for businesses that advertise on their websites,'' [463] and another commenter thought the rule should cover ''companies that profit from shaming businesses by posting negative reviews while unilaterally determining positive reviews are 'unverified'—effectively holding any positive sentiment back until the business subscribes to the platform.'' [464] Some of these proposed requirements are beyond the scope of this rulemaking, although some of the acts and practices described may be deceptive or unfair in violation of section 5 of the FTC Act. For example, misquoting reviews can be deceptive [465] and showcasing or curating reviews might deceptively represent that the reviews presented are representative or typical of the reviews received. Based on its policy expertise, the Commission declines to address any of these practices in this rulemaking at this time.

H. § 465.8—Misuse of Fake Indicators of Social Media Influence

Proposed § 465.8(a) sought to prohibit anyone from selling or distributing fake indicators of social media influence that can be used by persons or businesses to misrepresent their influence or importance for a commercial purpose. Proposed § 465.8(b) sought to prohibit anyone from purchasing or procuring fake indicators of social media influence to misrepresent their influence or importance for a commercial purpose. Based on the following, the Commission has determined to finalize these prohibitions with certain modifications.[466]

Several commenters raised concerns about the meaning of the term ''fake'' in the context of indicators of social media influence. A trade association asked, ''Does 'fake' only mean that the likes and followers were created by bots or through fake accounts? If a social media influencer were to recommend that their followers also follow another business' social media account, would that also be 'procuring' of 'fake' indicators of social media influence? . . . If the FTC means to capture a specific category of 'likes,' 'follows,' or other metrics that do not reflect any real opinions, findings, or experiences with the marketer or its products or services, it should make that

[466] One modification is changing ''Rule'' to ''part.'' Another modification, discussed above, is changing ''persons'' to ''individuals.'' *See supra* section IV.A.2.b of this document.

intention more clear.'' [467] A retailer asked for ''confirmation . . . that this provision would not apply where companies award legitimate indicators of influence to certain users upon satisfaction of objective criteria, even if those individuals are later discovered to have circumvented or abused those criteria.'' [468] A second trade association said that, ''[w]hen . . . indicators are awarded based on legitimate criteria, they serve this informative and non-deceptive purpose'' and the ''innovative companies that develop these indicators of influence should not be punished if bad actors try to abuse the processes,'' so the Commission ''should . . . clarify that this section applies to true 'fake' indicators of social media influence.'' [469] In response to these comments, the Commission is clarifying what it intended as ''fake indicators of social media influence.'' For this purpose, the final rule includes a definition of the phrase ''fake indicators of social media influence'' in § 465.1(h), which defines the phrase as indicators of social media influence derived from bots, purported individual accounts not associated with a real individual, accounts created with a real individual's personal information without their consent, hijacked accounts, or that otherwise do not reflect a real individual's or entity's activities, opinions, findings, or experiences. If a social media influencer were to recommend that their followers also follow another social media account, any resulting followers of the second account would not be ''fake.'' If a company awards legitimate indicators of influence to certain users upon satisfaction of objective criteria reflecting the influence of the users, the company would not be selling ''fake'' indicators, even if bad actors were able to deceive the company.

Three commenters addressed the section's lack of a knowledge requirement. A retailer commenter wrote that ''a business could be in violation of this provision even if it innocently sold or procured a fake indicator, without knowledge or any indication that the indicator was fake,'' which it said ''is patently unreasonable.'' [470] A second retailer similarly ''recommend[ed] that the rule be revised so that it only applies when the seller/buyer knows the indicators are fake.'' [471] A trade association suggested ''revising this section to additionally require that the seller or purchaser act 'with knowledge that the indicators of influence are fake.' '' [472] The Commission recognizes that someone could think that they were paying for a promotional campaign to increase their followers but, unbeknownst to the purchaser, the entity offering the campaign was lying and just providing fake followers. It is also possible that a company might bestow a legitimate indicator of social media influence, like a seal, that the company does not know is based upon or derived from fake indicators of social media influence. The Commission is therefore narrowing the provision by adding ''that they knew or should have known to be fake'' to both § 465.8(a) and (b).

A trade association's comment asserted that ''the Commission failed to meet the prevalence requirement'' because ''the evidence the Commission . . . cited in the NPRM . . . all relate[s] to the use of actual 'fake' indicators of influence that the seller or purchaser knew were fake.'' [473] The Commission believes that, with the addition of the definition of ''fake indicators'' and the knowledge requirement, it has sufficiently addressed the commenter's concerns.

A trade association expressed concern that the provision would ''hold[ ] retailers vicariously liable for the actions of independent endorsers,'' that is, the influencers and other endorsers that they hire.[474] That was not the Commission's intention. The distribution of fake indicators of social media influence was intended to mean the distribution *to* individuals or businesses who could use the indicators to misrepresent their influence, not causing the dissemination of social media by users of such fake indicators, *e.g.,* by hiring influencers who happen to have fake followers. The Commission is clarifying this intent by adding a definition of ''distribute fake indicators of social media influence'' in § 465.1(g).

Although no commenter specifically raised the issue in the context of § 465.8, the Commission is adding the concept of materiality to both § 465.8(a) and (b) in terms of the scope of misrepresentations covered therein, so as to be consistent with other parts of the rule.

A consumer organization said in its comment that the Commission ''should clarify that 'procure' '' in § 465.8(b) ''includes the creation of automated bot or other fake accounts that 'follow' or 'subscribe' to an account, artificially inflating the popularity of that account.'' [475] The Commission declines to make this change. It is not the creation of the bot or fake account, itself, that the rule makes illegal, but the use of the bot or fake account to follow another user, watch another user's videos, or create other fake indicia of social media influence. The same commenter said the Commission should ''remove the word 'fake' from the Rule to clarify that it covers the purchase or procurement of any social media engagement . . . from both real and fake accounts unless those incentives can be disclosed to people who can view the engagement.'' [476] The use of incentivized indicia of social media influence is not necessarily deceptive in all cases, and it is beyond the scope of this rulemaking.

Finally, a trade association and a retailer suggested changing the prohibition in § 465.8(a) from selling or distributing fake indicators that ''can be used'' by persons to misrepresent their influence to those that ''are used'' by persons to misrepresent their influence.[477] The trade association said that ''[a]pplying this section to indicators of social media influence that 'can be' used for this purpose, but are not, would mean that the rule prohibits conduct that is not deceptive.'' [478] Such fake indicators are not physical products that people collect and then use later as desired. Instead, their existence is premised on and limited to situations in which they appear deceptively on a social media site. Therefore, any person or business that obtains fake indicators of social media influence is misrepresenting their social media influence. While some individuals may not be doing so for a commercial purpose, those individuals are excluded from the rule's scope. Further, a person or entity that is in the business of selling or distributing fake indicia of social media influence is engaging in commerce, and it is unreasonable to posit that no buyers would use such indicia to misrepresent their social media influence for a commercial purpose. The Commission therefore declines to make the suggested modification.

I. § 465.9—Severability

Proposed § 465.9 provided that the provisions of the rule are separate and severable from one another and that, if any provision is stayed or determined to

be invalid, the remaining provisions shall continue in effect. The Commission did not receive any comments regarding proposed § 465.9. The Commission is changing ''shall continue in effect'' to ''will continue in effect'' which is more precise. With that clarification, the Commission is finalizing § 465.9.

V. Final Rule

For the reasons described above, the Commission has determined to adopt the provisions of §§ 465.1, 465.2, and 465.4 through 465.9 with clarifying or limiting modifications. The Commission declines to finalize proposed § 465.3 regarding consumer review or testimonial reuse or repurposing.

VI. Final Regulatory Analysis Under Section 22 of the FTC Act

Under section 22 of the FTC Act, the Commission, when it promulgates any final rule for a ''rule'' as defined in section 22(a)(1), must include a ''final regulatory analysis.'' 15 U.S.C. 57b–3(b)(2). The final regulatory analysis must contain (1) a concise statement of the need for, and objectives of, the final rule; (2) a description of any alternatives to the final rule which were considered by the Commission; (3) an analysis of the projected benefits, any adverse economic effects, and any other effects of the final rule; (4) an explanation of the reasons for the determination of the Commission that the final rule will attain its objectives in a manner consistent with applicable law and the reasons the particular alternative was chosen; and (5) a summary of any significant issues raised by the comments submitted during the public comment period in response to the preliminary regulatory analysis, and a summary of the assessment by the Commission of such issues. 15 U.S.C. 57b–3(b)(2)(A)–(E).

The Commission received several comments that included elements that the Commission identified as specifically in response to the preliminary regulatory analysis. Two trade associations asserted that compliance costs would be higher than estimated by the Commission. These associations stated that the risk of statutory penalties would lead many of their members to engage in compliance activities beyond those assumed for the high-cost compliance scenario in the NPRM.[479] In the preliminary regulatory analysis, the high-cost compliance scenario assumed an average compliance burden of 8 hours of attorney time for firms with greater than 500 employees. This average is consistent with some firms, especially the largest ones in industries more reliant on reviews and testimonials, choosing to make more extensive improvements to their compliance programs. In addition, the Commission has narrowed the rule and clarified the rule requirements as described in section IV of this document. For these reasons, the Commission continues to believe the high-cost scenario likely overestimates compliance costs, and chooses to not modify its estimate of possible compliance costs for that scenario, but it does present a sensitivity analysis below that assesses what effect systematic underestimation of compliance costs would have on the rule's net benefits to the public.

One individual commenter asserted that the benefits the Commission estimated in the NPRM did not justify the estimated compliance costs because the same results could be obtained using the FTC's existing section 5 authority.[480] As explained in detail in this final regulatory analysis, the Commission believes that the final rule will increase deterrence of unfair or deceptive acts or practices involving consumer reviews and testimonials relative to relying on its existing authority and that the net benefits of the rule justify its promulgation.

A second individual commenter claimed that it was unreasonable to assume that the rule would eliminate the entire loss to consumers, in terms of choosing products optimally, from the impact of bad information in false reviews. The commenter asserted that deterrence would be only partial because some circumstances would make it difficult to identify such reviews.[481] The Commission believes that its estimate of the benefits of *reducing* manipulated reviews is appropriate, as discussed further below. However, the Commission presents additional sensitivity analysis below that assesses the effect of systematic overestimation of the degree to which the rule would fix review manipulation, and determines that, even conceding that point, the quantified net benefits are highly positive.

Finally, a business offering third-party review fraud detection tools offered research that it claimed showed that the rule would generate benefits of $180.83 billion and that the benefits would outweigh the costs 100:1.[482] These estimates are similar to those of the Commission.

A. Need for, and Objectives of the Final Rule

The Commission believes that the final rule will substantially improve its ability to combat certain specified, clearly unfair or deceptive acts or practices involving consumer reviews or testimonials. Although such unfair or deceptive acts or practices are already unlawful under section 5 of the FTC Act, the rule will increase deterrence of such conduct by allowing courts to impose civil penalties against the violators. In addition, the final rule will allow the Commission to seek court orders requiring violators to compensate consumers for the harms caused by their unlawful conduct. The Commission believes that the rule will accomplish these goals without significantly burdening honest businesses and that the rule will provide significant benefits to consumers and honest competitors.

The final rule will allow courts to impose civil penalties under section 5(m)(1)(A) of the FTC Act, 15 U.S.C. 45(m)(1)(A), against those who engage in the deceptive or unfair conduct that the final rule prohibits. The ability to obtain civil penalties is important because it can be difficult to quantify consumer losses that stem from the use of unfair or deceptive consumer reviews and testimonials. Without civil penalties, persons who engage in such conduct might avoid monetary consequences for their unlawful conduct simply because there is insufficient evidence to link their unlawful conduct to quantifiable losses suffered by consumers. And if there are no monetary consequences, potential wrongdoers have little incentive to refrain from engaging in unlawful practices. Because the final rule will allow courts to impose civil penalties for violations, it provides the deterrence necessary to incentivize compliance with the law, even in cases where it is difficult to quantify consumer harm.

In addition, the final rule is necessary to allow the Commission to recover redress more efficiently to redress consumer harm resulting from the unfair or deceptive use of reviews or testimonials. In 2021, the U.S. Supreme Court in *AMG Capital Management, LLC*

[479] NRF Cmt. at 2–3, 13–14; IAB Cmt. at 5, 15. IAB also raised this issue in the context of the informal hearing discussed above in section I of this document. *See, e.g., Petition by Interactive Advertising Bureau to Designate Disputed Issues of Material Fact* (Feb. 12, 2024), *https://www.ftc.gov/system/files/ftc_gov/pdf/r311003iabpetition20240212.pdf.* As noted above, the presiding officer at that hearing found that IAB had not shown that compliance costs would be more than minimal.

[480] Camp-Martin Cmt. at 2–3.

[481] Slezak Cmt. at 3.

[482] Transparency Company Cmt. at 6–9.

v. *FTC*[483] ruled that section 13(b) of the FTC Act[484] did not authorize the Commission to seek court orders requiring wrongdoers to return money unlawfully taken from consumers through unfair or deceptive acts or practices or give up the unjust gains they earned from engaging in such unlawful conduct. The *AMG* ruling has made it significantly more difficult for the Commission to return money to injured consumers, particularly in cases that do not involve rule violations.[485]

Since *AMG,* the primary means for the Commission to return money unlawfully taken from consumers is section 19 of the FTC Act, 15 U.S.C. 57b, which provides two paths for consumer redress. The longer path, under section 19(a)(2), typically requires the Commission to first conduct an administrative proceeding to determine whether the respondent violated the FTC Act; if the Commission finds that the respondent did so, the Commission issues a cease-and-desist order, which might not become final until after the resolution of any resulting appeal to a Federal court of appeals. After the conclusion of the administrative proceeding (and any appeal), the Commission must initiate an action in Federal court to obtain monetary relief under section 19 and, in that action, the Commission must prove that the violator engaged in objectively fraudulent or dishonest conduct.[486] In effect, the section 19(a)(2) pathway requires the Commission to file two separate actions to obtain monetary relief.

The more efficient path to monetary relief is under section 19(a)(1), which allows the Commission to recover redress in one Federal court action for violations of a Commission rule relating to unfair or deceptive acts or practices.[487] Only a small portion of the Commission's past cases challenging unfair or deceptive consumer reviews or testimonials involved rule violations that would allow the Commission to seek monetary relief under section 19(a)(1). With the final rule, however, the Commission will be able to use section 19(a)(1) to obtain redress for consumer losses attributable to violations of the rule.

Overall, outlawing egregious review and testimonial practices in the final rule expands the Commission's enforcement toolkit and allows it to deliver on its mission by stopping and deterring harmful conduct and, in some cases, making American consumers whole when they have been harmed. The unfair or deceptive acts or practices involving reviews and testimonials encompassed by this final rule are prevalent and harmful to consumers and honest businesses. Thus, the unlocking of additional remedies through this rulemaking—particularly, the ability to obtain civil penalties against violators and redress for consumers or others injured by the conduct—will allow the Commission to more effectively police and deter harmful review and testimonial practices that plague consumers and honest businesses.

B. Anticipated Costs and Benefits of the Final Rule

As discussed below, the Commission has determined that the rule's benefits greatly outweigh its costs. The rule promotes accuracy in reviews and testimonials by prohibiting certain unfair or deceptive acts or practices involving reviews and testimonials. Thus, this rule will help the vast majority of American consumers who rely on such reviews and testimonials to make better-informed purchase decisions. The rule prohibits (1) the creation, sale, purchasing, or procurement from insiders of fake or false reviews, and (2) buying of reviews conditioned on the reviews expressing particular sentiments. It also includes prohibitions on fake or false consumer or celebrity testimonials, certain insider reviews without adequate disclosures, misleading company-controlled review websites or entities, certain review suppression practices, and the misuse of fake indicators of social media influence.

In the analysis below, the Commission describes the anticipated impact of the rule. Where possible, the Commission quantifies the benefits and costs. If a benefit or cost is quantified, the Commission indicates the sources of the data relied upon. If an assumption is needed, the analysis makes clear which quantities are being assumed. The Commission measures the benefits and costs of the rule against a baseline in which no rule has been promulgated by the Commission. For the remainder of section VI, and in the interest of brevity, the term ''reviews'' collectively refers to both reviews and testimonials.

Quantifiable benefits stem from consumer welfare improvements and consumer time savings. With the rule, reviews will be more accurate overall, leading consumers to purchase higher-quality products or products that are better-matched to their preferences. The rule will also lead to more trustworthy aggregate review ratings (*e.g.,* star ratings), leading some consumers to spend less time scrutinizing reviews to determine their validity. Quantifiable costs primarily reflect the resources spent by businesses to review the rule and to take any preemptive or remedial steps to comply with its provisions. Because the rule is an application of preexisting law under section 5 of the FTC Act, the Commission expects these compliance costs to be minimal.

A period of ten years is used in the baseline scenario because FTC rules are subject to review every ten years.[488] Quantifiable aggregate benefits and costs are summarized as the net present value over this ten-year period in Table 1.1. The discount rate reflects society's preference for receiving benefits earlier rather than later; a higher discount rate is associated with a greater preference for benefits in the present. The present value is obtained by multiplying each year's net benefit by a discount factor raised to the power of the number of years in the future the net benefit accrues.

1. Estimated Benefits of the Final Rule

This section describes the beneficial impact of the rule, provides quantitative estimates where possible, and describes benefits that are only assessed qualitatively. The quantifiable estimates reflect benefits stemming from the decrease in online review manipulation on third-party platforms or company websites, which covers most of the prohibitions contained in the rule. This analysis does not calculate benefits from the other aspects of the rule—that is, the prohibitions on fake or false celebrity testimonials, company-controlled entities that deceptively purported to provide independent opinions, review suppression, and the misuse of fake indicators of social media influence—because of the limited quantitative research in these areas. Some of these benefits are likely to be substantial. The quantified benefits are presented by benefit category, rather than stemming from a specific provision of the rule, because the relevant provisions have the same end goal—that is, to improve the information available to consumers by reducing the level of review manipulation. Therefore, it is difficult to disentangle the benefits stemming from each provision.

Existing academic literature in economics, marketing, computer science, and other fields documents the importance of online reviews; specifically that the number of online reviews and aggregate ratings are extremely important for consumer purchase decisions. It is widely documented that the presence of online reviews improves consumer welfare via reductions in both search costs and the level of information asymmetry that exists prior to purchase.[489]

When making purchase decisions, consumers typically have incomplete information on product quality and attributes. Searching for additional information is costly. Consumers incur costs—including time and effort costs—to seek, evaluate, and integrate incoming information. Online platforms where past users share information about their experiences can significantly lower search costs.

Researchers have also demonstrated that consumer reviews create value for consumers beyond a reduction in search costs. Consumers are better able to learn of a product's quality and attributes when there is free-flowing, non-manipulated commentary from past consumers. Consumer reviews lead to ''better'' decisions by increasing the level of information available prior to purchase and reducing uncertainty. By the same token, the academic literature also documents that manipulated or fake reviews lead to reductions in consumer welfare by leading consumers to buy low-quality products or otherwise make suboptimal purchase decisions.[490]

A secondary benefit is deterrence of the specified review practices. The rule is essentially the only means for imposing civil penalties in most cases involving such practices. Civil penalties are not available for conduct that violates section 5(a)'s prohibition on unfair or deceptive acts or practices—rather, a violation of an FTC rule is necessary to impose civil penalties under section 5(m)(1)(a). Civil penalties act as a deterrent to fraud and deception in connection with reviews.[491]

To obtain redress without alleging a rule violation, the Commission must typically first determine in an administrative proceeding that the respondent violated the FTC Act, successfully defend that determination in any appeal to a Federal court of appeals, and then initiate a second action in Federal district court under section 19(a)(2) in which the Commission must prove that the conduct at issue is ''one which a reasonable man would have known under the circumstances was dishonest or fraudulent.'' [492] Although these requirements are likely to be satisfied in cases involving the conduct covered by

[491] In October 2021, the Commission authorized a Notice of Penalty Offenses concerning endorsement practices that the FTC determined to be unfair or deceptive in prior administrative cases, including falsely claiming an endorsement by a third party; misrepresenting whether an endorser is an actual, current, or recent user; and failing to disclose an unexpected material connection with an endorser. *See, e.g.,* Press Release, Fed. Trade Comm'n, *FTC Puts Hundreds of Businesses on Notice about Fake Reviews and Other Misleading Endorsements* (Oct. 13, 2021), *https://www.ftc.gov/news-events/news/press-releases/2021/10/ftc-puts-hundreds-businesses-notice-about-fake-reviews-other-misleading-endorsements.* The notice allows the agency to seek civil penalties pursuant to section 5(m)(1)(B) of the FTC Act against a company that received the notice and then engages in conduct that the Commission previously determined to be unfair or deceptive. 15 U.S.C. 45(m)(1)(B).

[492] 15 U.S.C. 57b(a)(2). Depending on the egregiousness of the misconduct and the harm it is causing, the Commission also may seek preliminary injunctive relief in Federal court. 15 U.S.C. 53(b).

the rule, it would take substantially more time and resources, and would significantly delay any redress to consumers, compared to a single Federal court action alleging a rule violation, in which the court adjudicates both whether the defendant violated the rule and, if so, the appropriate amount of monetary relief to award.[493]

Given the prevalence of unfair or deceptive conduct involving reviews and testimonials, the Commission will have no shortage of bad actors to investigate; it can invest the extra resources freed up by the final rule into more investigations and actions with respect to consumer reviews or testimonials. In sum, the potential consumer-redress benefits of the rule are significant: the Commission can put a stop to more inarguably unfair or deceptive consumer reviews, return more money to consumers, and obtain that redress more quickly.

a. Consumer Welfare Benefits From Better-Informed Purchase Decisions

The study containing the most direct estimate of welfare losses from review manipulation finds that the presence of fake reviews leads consumers to lose $0.12 for every dollar spent in an experimental setting.[494] The study considers a limited number of kinds of review manipulation, which notably does not include suppression of negative reviews or misrepresenting the independence of reviews, which might mean that $0.12 is an underestimate of the effect of the rule. However, the study also measures the effect of complete elimination of inflated star ratings and false written narratives, which might mean that $0.12 is an overestimate of the effect of the rule. Thus, the Commission believes that a reasonable proxy for the effect of the rule's elimination of much review manipulation is that consumers will gain an estimated $0.12 for every dollar spent on goods whose online reviews included fake or false ones.

To estimate consumer welfare benefits from better-informed purchase decisions, the Commission first estimates the total amount of sales for which consumers consult online reviews. U.S. e-commerce sales by retail firms totaled $1.119 trillion in 2023.[495] The Commission assumes that all online retail sales had some form of user-generated commentary (*e.g.,* on third-party review platforms or on company websites), and that this commentary factored into consumers' purchase decisions for these goods.

Online reviews are also important for commerce that is not conducted online, including for revenues earned by the hospitality industry and by other services. Sales for businesses classified as ''Food Services and Drinking Places'' by the U.S. Census totaled $980.15 billion in 2022, which includes revenue from restaurants and bars.[496] The Commission assumes that consumers rely on reviews for only a portion of these sales. Some consumers—particularly those living in rural parts of the country and in smaller cities—may have a small set of familiar food and drink establishments available to them, making online reviews less influential to their decision to patronize a particular one. Moreover, prior research has found that online reviews do not impact revenues of chain restaurants.[497] Accordingly, the Commission assumes that consumers rely on reviews for twenty-five percent of the total revenue generated in the food services and drinking places sector (twenty-five percent of $980.15 billion, or $245.04 billion).[498]

Online reviews are also important for sales in other service sectors. In 2022, total revenue was $316.35 billion for the accommodations sector (which includes hotels and vacation rentals), and total revenue was $67.70 billion for personal services (including beauty salons, barber shops, health clubs, and non-veterinary pet care), totaling $384.05 billion for both sectors.[499] About half of hotel revenue is generated by business travelers, who might rely less on online reviews than leisure travelers do.[500] In addition, pre-paid hotel bookings and vacation rentals booked online are already accounted for in the e-commerce sales figure described above. Furthermore, some consumers may be loyal customers of local salons and other personal services, regardless of these businesses' online reputations. For these reasons, the Commission assumes that a subset of accommodation and personal services revenues is affected by consumer reviews. Similar to the calculation for the food and drinking places industry, the Commission assumes that twenty-five percent of total accommodation and personal care services revenue is impacted by consumer reviews (twenty-five percent of $384.05 billion, or $96.01 billion). The total estimated revenue for services impacted by consumer reviews is $341.05 billion (the sum of $245.04 billion and $96.01 billion). Combining the revenue estimates described above yields $1.461 trillion in estimated sales of goods or services for which consumers incorporate reviews into their decision-making.

Quantitative estimates of the incidence of fake or false reviews vary by source.[501] Nevertheless, at least three prior studies examining the degree of review manipulation as a proportion of businesses or products (rather than as a proportion of *reviews*) contain similar findings. According to these studies, approximately ten percent of products or businesses have some manipulated

[493] *See, e.g.,* Press Release, Fed. Trade Comm'n, *Marketers of Ab Force Weight Loss Device Agree to Pay $7 Million for Consumer Redress* (Jan. 14, 2009), *https://www.ftc.gov/news-events/news/press-releases/2009/01/marketers-ab-force-weight-loss-device-agree-pay-7-million-consumer-redress* (describing a 2009 settlement of a follow-on section 19(a)(2) action against Telebrands Corp. that was brought after the conclusion of litigation over a 2003 administrative complaint alleging violations of section 5).

[497] *See* Michael Luca, *Reviews, Reputation, and Revenue: The Case of Yelp.com,* Harvard Bus. Sch. Working Paper 12–016 (2016).

[498] Twenty-five percent is likely a reasonable estimate based on the difference in revenues for new restaurants and established restaurants. A study conducted by Toast, Inc., found that new restaurants earn approximately $112,000 in average revenue per year. Justin Guinn, *What is the Average Restaurant Revenue for a New Restaurant?, https://pos.toasttab.com/blog/on-the-line/average-restaurant-revenue* (last visited July 5, 2024). This is approximately twenty-five percent of average revenue for restaurants overall ($486,000, according to the website Eat Pallet, *see* Shari Mason, *How Much Do Restaurants Make in a Day? Solved,* May 24, 2024, *https://eatpallet.com/how-much-do-restaurants-make-in-a-day*).

[499] *See* U.S. Census Bureau, *Service Annual Survey (SAS), supra* note 496 (listing total 2022 revenue of $316,350,000,000 for NAICS Code 721 and listing total 2022 revenue of $67,698,000,000 for NAICS Codes 812111 through 812199 and NAICS Code 81291.

[500] *See* Linchi Kwok, *Will Business Travel Spending Return to the Pre-Pandemic Level Soon?,* Hospitality Net, Sept. 22, 2022, *https://www.hospitalitynet.org/opinion/4112075.html.*

[501] These estimates range from the single digits to over twenty percent. *See* Tripadvisor, *2023 Review Transparency Report, https://www.tripadvisor.com/TransparencyReport2023* (last visited July 5, 2024) (finding that 4.4 percent of review submissions were fraudulent); Trustpilot, *Transparency Report 2024, https://assets.ctfassets.net/b7g9mrbfayuu/7p63VLqZ9vmU2TB65dVdnF/6e47d9ee81c145b5e3d1e16f81bba89a/Trustpilot_Transparency_Report_2024.pdf* (last visited July 5, 2024) (stating that its software removed 6 percent of reviews due to being fake); Yelp, *2023 Yelp Trust & Safety Report* (Feb 28, 2024), *https://trust.yelp.com/trust-and-safety-report/2023-report* (stating that 16 percent of submitted reviews were marked as ''not recommended'' by Yelp's software); Devesh Raval, *Do Gatekeepers Develop Worse Products? Evidence from Online Review Platforms,* (Feb. 27, 2023), *https://deveshraval.github.io/reviews.pdf* (Working Paper) (finding that the share of hidden (likely fake) Yelp reviews is as high as 47 percent).

consumer reviews.[502] Thus, a basic approximation of total e-commerce sales involving some review manipulation is ten percent of $1.119 trillion, or $111.9 billion. Similarly, a basic approximation of review-dependent service industry sales involving some review manipulation is ten percent of $341.05 billion, or $34.1 billion.

Importantly, online businesses that engage in review manipulation are likely to earn less revenue than other e-commerce companies. For example, prior research has found that independent firms and sellers offering lower-quality products are more likely to engage in review manipulation.[503] Therefore, e-commerce sales affected by review manipulation are likely to be lower than the $111.9 billion in sales described above. A more conservative estimate of e-commerce sales involving review manipulation can be obtained by using price differentials of review-manipulated products versus others. Because products with online review manipulation have price points that are approximately 19 percent of the average price of goods sold online (according to research using data from Amazon),[504] a more conservative estimate of review-manipulated products' revenue is 1.9 percent (19 percent × 10 percent) of all $1.119 trillion in e-commerce sales, or $21.26 billion. Because the Commission does not have data on the revenue or quantities sold of review-manipulated products, it assumes that revenue is constant across price points and relies solely on the price differential to approximate revenue. The Commission does not similarly adjust revenues for non-e-commerce firms (*e.g.,* restaurant and hotels) because there is less variation in prices in those industries.

The Commission estimates annual welfare gains by applying the $0.12 estimate, described above, to the estimated amount of U.S. sales that are likely to have some manipulated consumer reviews, yielding an annual estimate of welfare gains in the range of $6.64 billion (12 percent of $55.36 billion, the sum of $21.26 billion and $34.1 billion) and $17.52 billion (12 percent of $146.0 billion, the sum of $111.9 billion and $34.1 billion). Assuming that e-commerce sales increase linearly over the next ten years at the same rate as they did in the past year,[505] the present value of consumer welfare improvements from better-informed purchasing decisions is estimated to be between $57.03 and $230.36 billion as described in Table 2.1.

TABLE 2.1—ESTIMATED BENEFITS FROM CONSUMER WELFARE IMPROVEMENTS FROM PURCHASE DECISIONS

[2024–2033]

Percent of e-commerce revenue impacted by review manipulation	Total annual welfare improvements from better-informed purchase decisions (in billions)	Total 10-year (2024–2033) welfare improvement, 3% discount rate (in billions)	Total 10-year (2024–2033) welfare improvement, 7% discount rate (in billions)
10	$17.52	$230.36	$196.91
1.9	6.64	67.40	57.03

b. Consumer Time Savings From Increased Reliability of Summary Ratings

The rule's prohibitions against deceptive and unfair consumer review acts and practices would increase the reliability of consumer reviews. The Commission assumes that this improvement in the dependability of reviews will lead consumers to place more trust in aggregate measures (*e.g.,* aggregate star ratings), which many review settings use to summarize consumer reviews. This in turn will lead some consumers to spend less time scrutinizing individual reviews to detect red flags commonly found in manipulated reviews (*e.g.,* spelling and grammar mistakes, generic highly positive or negative statements, and lack of detail). Therefore, the rule is likely to result in some amount of time savings for consumers who consult online reviews before making purchases.

Approximately eighty percent of Americans are online shoppers.[506] Of those who shop online, fourteen percent shop online more than once a week, twenty percent shop online once a week, twenty-three percent shop online once every two weeks, twenty-five percent shop online once a month, and the remainder do so every few months.[507] Different age groups of online shoppers spend various amounts of time reading reviews before making a purchase decision. On average, younger consumers spend more time reading reviews than older consumers.[508] This analysis does not incorporate time spent by consumers researching reviews of

[502] *See* Nan Hu et al., *Manipulation of Online Reviews: An Analysis of Ratings, Readability, and Sentiments,* 52(3) Decision Support Systems 674–84 (Feb. 2012) (finding that 10.3 percent of books sold on Amazon had manipulated reviews); Luca, *Fake It Till You Make It: Reputation, Competition, and Yelp Review Fraud, supra* note 490 (finding that ten percent of Boston restaurants had filtered 5-star reviews on Yelp) (Table 3, row 4); Raval, *Do Gatekeepers Develop Worse Products? Evidence from Online Review Platforms, supra* note 501 (finding that 9.7 percent of businesses with reviews or complaints with the Better Business Bureau are of low quality, where fake reviews inflate ratings) (Table III, column 3, row 1).

[503] *See, e.g.,* Sherry He et al., *The Market for Fake Reviews,* 41(5) Mktg. Sci. 896 (2022), *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3664992;* Dina Mayzlin et al., *Promotional Reviews: An Empirical Investigation of Online Review Manipulation,* 104(8) Am. Econ. Rev. 2421–55 (2014).

[504] *See* Davide Proserpio et al., *How Fake Customer Reviews Do—and Don't—Work,* Harvard Bus. Rev., Nov. 24, 2020, *https://hbr.org/2020/11/how-fake-customer-reviews-do-and-dont-work.* The authors find that products sold on Amazon with manipulated reviews are typically in the $15 to $40 price range. The midpoint of this range ($27.50) represents 19 percent of the average product's price ($142.74, according to one study *see* Semrush Inc., *Amazon Pricing Study: The Most Expensive Products, Category Volatility, and Seasonal Price Shifts,* Mar. 22, 2022, *https://www.semrush.com/blog/amazon-pricing-study*).

[505] E-commerce sales increased by 7.6 percent from 2022 to 2023. *See* U.S. Census Bureau, *Quarterly Retail E-Commerce Sales 4th Quarter 2023, supra* note 495. Using growth in the past year to predict future e-commerce sales results in a more conservative estimate than using a longer time frame. E-commerce sales experienced higher annual growth rates prior to 2021 (14 percent from 2018 to 2019, 43 percent from 2019 to 2020, and 14 percent from 2020 to 2021) and grew 7.7 percent from 2021 to 2022. This analysis does not project revenues for non-e-commerce industries because linear trends during recent years are unique to the pandemic and are unlikely to be accurate for future years.

[506] *See* Pew Research Center, *Online Shopping and E-Commerce,* Dec. 19, 2016, *https://www.pewresearch.org/internet/2016/12/19/online-shopping-and-e-commerce.*

[507] *See* Int'l Post Corp., *Cross-Border E-Commerce Shopper Survey 2022,* Jan. 2023, *https://www.ipc.be/-/media/documents/public/publications/ipc-shoppers-survey/onlineshoppersurvey2022.pdf.*

[508] *See* BrightLocal, *Local Consumer Review Survey 2019,* Dec. 11, 2019, *https://www.brightlocal.com/research/local-consumer-review-survey-2019.*

restaurants, hotels, and other goods and services that are not purchased online because of the limited amount of information available regarding consumers' total time spent on such activities.

According to the Bureau of Labor Statistics, the average hourly wage in 2023 was $31.48.[509] Recent research suggests that individuals living in the United States value their non-work time at eighty-two percent of average hourly earnings.[510] Thus, Americans overall value their non-work time at $25.81 per hour on average.

The survey data does not specify whether consumers were surveyed regarding the time spent reading reviews before the purchase of a single product or whether the question concerned the purchase of multiple products. This analysis assumes that the time listed in the survey results pertains to the purchase of a single product. It also assumes that the implementation of the rule will reduce the time spent reading reviews by ten percent. Combining the above figures results in $2.49 billion in consumer time savings per year, or a present value of $33.53 billion to $39.19 billion over a 10-year period, as described in Table 2.2.

In addition, there are likely to be other utility-related benefits consumers receive when reading nonmanipulated online reviews or consulting more accurate aggregate summary measures, such as increased satisfaction (apart from purchasing decisions) and decreased frustration. The Commission is not able to quantify these benefits.

Finally, some consumers may spend *more* time reading reviews if reviews are less likely to be fake or otherwise manipulated. This increase in time spent reading reviews may offset any time savings from the increased reliability of summary ratings. Therefore, the Commission presents another scenario in Table 2.2 where consumers do not gain any benefits from time savings. However, as before, there are likely to be additional benefits that are difficult to quantify (*e.g.,* decreased frustration) that result from reading more accurate reviews, likely yielding positive net benefits related to reading reviews even when consumers spend more time doing so.

TABLE 2.2—ESTIMATED BENEFITS FROM TIME SAVINGS

[2024–2033]

Scenario 1—Improved Reliability of Aggregate Measures Reduces Overall Time Spent Reading Reviews	
Number of online shoppers, age 18–34 [a]	60,467,204
Average amount of time spent reading online reviews before making a purchase decision (in hours), age 18–34	0.336
Number of online shoppers, age 35–54 [a]	67,273,832
Average amount of time spent reading online reviews before making a purchase decision (in hours), age 35–54	0.231
Number of online shoppers, age 55+ [a]	78,920,814
Average amount of time spent reading online reviews before making a purchase decision (in hours), age 55+	0.167
Total amount of time all online shoppers spend reading online reviews before making a purchase decision (in hours)	48,991,116
Total amount of time U.S. online shoppers spend reading online reviews per year (in hours) [b]	1,728,406,578
Value of time for online shoppers (per hour)	$25.81
Percentage of time saved	10%
Total annual time savings	$4,461,017,378
Total 10-year (2024–2033) time savings, 3% discount rate (in billions)	$39.19
Total 10-year (2024–2033) time savings, 7% discount rate (in billions)	$33.53
Scenario 2—Increase in Time Spent Reading Reviews Offsets Time Savings from Improved Reliability of Summary Measures	
No quantifiable benefit	$0

c. Benefits Related to Competition

Accurate online reviews have been shown to improve competition. Several studies have found that online reviews are particularly important for independent and newer firms.[511] Ratings are more influential for these firms because consumers do not have strong prior beliefs as to their quality. New entrants whose sales benefit from online reviews typically offer higher quality goods and services. On the other hand, lower-quality firms often experience revenue losses with more online review activity.[512]

Relatedly, fake, false, and manipulated online reviews allow companies to surpass competitors. One study found that it only takes 50 fake reviews for a seller to pass any of its competitors in terms of visibility (*e.g.,* via rankings or search results).[513] It follows that by curbing the number of fake, false, or manipulated reviews, the rule would benefit consumers by improving the competitive environment for legitimate firms selling higher-quality products (*i.e.,* those who do not rely on review manipulation to sell their goods). While the benefits resulting

from improvements in the competitive environment are difficult to quantify, the Commission believes they are likely to be substantial.

2. Estimated Costs of the Final Rule

This section describes the costs associated with the rule, provides quantitative estimates where possible, and describes costs that are only assessed qualitatively. While the Commission only quantifies benefits from reduced review manipulation and not the other rule provisions above, the Commission quantifies compliance costs for all aspects of the rule.

a. Compliance Costs

The acts and practices prohibited by the rule are unfair or deceptive under section 5 of the FTC Act. The rule targets acts or practices that are clear violations of section 5, and businesses that are already compliant will not experience any additional compliance costs as a result of the rule. Moreover, the FTC routinely provides guidance to businesses on complying with FTC law, which will make the implications of the rule easy to understand for a wide range of businesses. Finally, in response to the comments, the Commission has both narrowed and clarified the rule requirements relative to the proposed rule (*see* section IV of this document). Accordingly, one of the scenarios reflected in Table 3.1 assumes that businesses will spend a *de minimis* amount of time interpreting the rule and make no changes to their current policies.

However, because businesses now face the potential for civil penalties if they engage in conduct that violates the final rule, businesses may choose to incur additional administrative burdens to ensure compliance. The Commission presents another scenario in Table 3.1 where businesses notify their employees of the rule, conduct a review of their processes, and take any steps they deem important to ensure compliance. For firms that already comply with section 5 of the FTC Act, these steps might be out of caution so as not to risk the possibility of violating the rule. For example, some sellers may currently flag and remove reviews on their websites that they reasonably believe are fake. While this practice would not amount to a violation of the relevant rule provision (§ 465.7(b)), the rule may lead some businesses to choose to take extra steps to verify the inauthenticity of such reviews before suppressing them. A business may also decide to notify its employees of the rule. For example, if certain employees are responsible for posting new product pages or managing the company's social media presence, business owners may wish to notify these employees to ensure compliance. Although cautious firms may elect to conduct additional compliance review, the rule would not require any additional recordkeeping or notices beyond what is required by section 5 of the FTC Act.

For the heightened compliance review scenario in Table 3.1, the Commission makes assumptions about the number of businesses impacted and the number of person-hours involved in compliance activities. In 2021, there were approximately 34.77 million total firms in the United States. Of these firms, 19,688 had 500 or more employees (''large companies''), and the remaining 34.75 million had fewer than 500 employees (''small companies'').[514] The Commission assumes that all 19,688 large companies had some form of online consumer review presence (*e.g.*, on third-party business platforms such as Yelp or Google Reviews, or on their own websites). It assumes that 74 percent of the 34.75 million small companies (25.71 million companies) had an online consumer review presence.[515]

With heightened compliance review, the Commission assumes that lawyers at large companies, whose time is valued at $70.08 per hour,[516] will spend eight hours conducting a one-time review of the rule and notifying employees whose role involves creating new product pages, managing the company's social media presence, and any other relevant practices covered by the rule. It assumes that small company owners, whose time is valued at $33.48,[517] and are less likely have formal compliance programs, spend one hour doing the same.

In addition, some companies may spend time reviewing their automated processes to ensure that they comply with the rule. These costs, which companies might incur just once or on a recurring basis, are likely to be minimal. The Commission does not quantify these process-related costs because, among other things, the Commission does not know the number of firms that might undertake such a review.

The total estimated costs are tabulated in Table 3.1.

TABLE 3.1—ESTIMATED COMPLIANCE COSTS

	2024 Only
Scenario 1—No Review	
No cost	$0
Total cost	$0
Scenario 2—Heightened Compliance Review	
Number of large companies (in thousands)	19.69
Cost per hour of rule review and related activities	$70.08
Number of hours of rule review and related activities	8
Subtotal (in millions)	$11.04
Number of small companies with online reviews (in thousands)	25,715.23
Cost per hour of rule review and related activities	$33.48

[514] *See* U.S. Census Bureau, *2021 SUSB Annual Data Tables by Establishment Industry, https://www.census.gov/data/tables/2021/econ/susb/2021-susb-annual.html* (last visited July 5, 2024) (listing 6.29 million total firms with at least one paid employee) and U.S. Census Bureau, *Nonemployer Statistics, https://www.census.gov/programs-surveys/nonemployer-statistics.html* (listing 28.48 million firms with no paid employees) (last visited July 5, 2024).

[515] Seventy-four percent of small businesses have at least one Google review. *See* BrightLocal, *Google Reviews Study: How Many Reviews Do Local Businesses Need?,* Oct. 31, 2018, *https://www.brightlocal.com/research/google-reviews-study/.*

[516] *See* Bureau of Labor Statistics, *Occupational Outlook Handbook: Lawyers, https://www.bls.gov/ooh/legal/lawyers.htm* (last visited July 5, 2024).

[517] *See* Payscale, *Average Small Business Owner Salary, https://www.payscale.com/research/US/Job=Small_Business_Owner/Salary* (last visited July 5, 2024) (reporting median base salary of $69,648 for small business owners). We assume small business owners work 2,080 hours per year.

TABLE 3.1—ESTIMATED COMPLIANCE COSTS—Continued

	2024 Only
Number of hours of rule review and related activities	1
Subtotal (in millions)	$860.95
Total cost (in millions)	$871.98

b. Other Impacts of the Rule

There are several other potential effects from the rule. While the proposed requirements are far from onerous, there is the possibility that some sellers may ''overcorrect'' in response to the penalties available for rule violations. For example, a firm may encounter an excess of fake, negative reviews from a competitor. While § 465.7(b) permits the suppression of reviews that the seller reasonably believes are fake, an overcautious seller seeking to suppress fake reviews from competitors may choose to display no reviews whatsoever so as not to risk violating the rule. Alternatively, such a firm may take no action towards suspected fake reviews to avoid a possible rule violation. Both of these hypothetical scenarios would likely hurt the information environment for consumers. The Commission believes that such unintended consequences of the rule are very unlikely, especially in light of how the rule has been clarified and narrowed in response to the comments.

C. Reasonable Alternatives and Explanation of Why Particular Alternative Chosen

The Commission has attempted to catalog and quantify the incremental benefits and costs of the provisions included in the final rule. Extrapolating these benefits over the 10-year assessment period and discounting to the present provides an estimate of the present value for total benefits and costs of the rule, with the difference—net benefits—providing one measure of the value of regulation.

Using our low-end estimate above, the present value of quantified benefits for consumers from the rule's requirements over a 10-year period using a 7% discount rate is estimated at $57.03 billion. The present value of quantified costs for covered firms of complying with the rule's requirements over a 10-year period using a 7% discount rate is estimated at $0.83 billion. This generates an estimate of the present value of quantified net benefits equal to $56.16 billion using a discount rate of 7%. Using the upper-end assumptions discussed in the preceding analysis results in net benefits of $230.44 billion using a discount rate of 7%.

To examine the sensitivity of the net benefits conclusions to the possibility of systematic underestimating of compliance costs, the Commission calculates costs and benefits in a scenario where all labor costs turn out to be ten times larger than the parameter values in the heightened compliance review scenario. For both small and large companies, the number of hours of rule review and related activities are increased by a factor of ten. All benefits and other cost parameters are unchanged in this analysis. With these new parameters, compliance review will cost $8.72 billion in 2024, and the present value of quantified net benefits will be equal to $48.31 billion using a discount rate of 7%. Thus, while the Commission believes compliance costs in the heightened compliance scenario are likely overestimates, even if they are instead severe underestimates, the quantified net benefits are highly positive.

To examine the sensitivity of the net benefits conclusions to the possibility of systematic overestimating of the effectiveness of deterrence, the Commission calculates costs and benefits in a scenario in which the rule only partially eliminates the welfare losses to consumers caused by the various types of review manipulation covered by the rule. For this scenario, the Commission instead assumes that consumers will gain an estimated $0.04, rather than $0.12, for every dollar spent on goods whose online reviews included fake or false ones, the minimum welfare improvement reported for partial elimination of review manipulation in the study on which these estimates are based.[518] Under this scenario, the present value of quantified net benefits under a 7% discount rate is $18.14 billion instead of $56.16 billion. Combining the two scenarios, if the Commission both systematically underestimates compliance costs and systematically overestimates the effectiveness of the rule in preventing review manipulation, the present value of quantified net benefits under a 7% discount rate is $10.29 billion. Thus, even if the main compliance cost estimates above are underestimates and the main welfare benefits above are overestimates, the quantified net benefits are highly positive.

One alternative to the final rule would be to terminate the rulemaking and rely instead on the existing tools that the Commission currently possesses to combat the specified review and testimonial practices, such as consumer education and enforcement actions brought under sections 5 and 19 of the FTC Act. Failing to strengthen the set of tools available in support of the Commission's enforcement program against unfair or deceptive consumer reviews or testimonials would deprive it of the net benefits outlined above.

The Commission expects unquantified benefits to outweigh unquantified costs for this rule. As noted above, the benefits from several rule provisions are unquantified, while the compliance costs of all rule provisions are quantified. Thus, the quantified net benefits of $56.16 billion above likely underestimate the benefits to the public. Furthermore, these estimates are robust to uncertainty. Even assuming systematic underestimation of compliance costs and systematic overestimation of the rule effectiveness, the quantified net benefits are large and positive. Therefore, this regulatory analysis indicates that adoption of the rule will result in benefits to the public that outweigh the costs.

VII. Paperwork Reduction Act

The Paperwork Reduction Act (''PRA''), 44 U.S.C. 3501 *et seq.,* requires Federal agencies to seek and obtain Office of Management and Budget (''OMB'') approval before undertaking a collection of information directed to ten or more persons. As part of the NPRM, the Commission noted that the proposed rule did not contain an information collection requirement. However, for the purpose of confirmation, in Question 4 of the NPRM, the Commission nonetheless asked commenters whether the proposed rule contained a collection

[518] *See* Akesson, *The Impact of Fake Reviews on Demand and Welfare, supra* note 494 (reviews for inferior products that had inflated star ratings but accurate written narratives caused consumers to lose $0.04 in welfare for every dollar spent).

of information.[519] One commenter responded, ''Yes, it does. It contains our research and others' research, as well as valuable estimates to harm/costs for all 3 parties: consumers, businesses, and government.'' [520] The Commission believes that this commenter was addressing whether the NPRM was collecting information, as opposed to whether the proposed rule would contain a collection of information within the meaning of the PRA. No other comments responding to the NPRM or Notice of Hearing addressed this question. While the Commission finalizes the proposed rule with some limiting modifications and clarifications based on the comments it received, it has not added any new requirements that would collect information from the public. Accordingly, the Commission has determined that the final rule neither includes a new collection of information, nor modifies an existing collection of information.

VIII. Regulatory Flexibility Act—Final Regulatory Flexibility Analysis

The Regulatory Flexibility Act (''RFA''), 5 U.S.C. 601 *et seq.,* requires an agency to provide an Initial Regulatory Flexibility Analysis (''IRFA'') with a proposed rule and a Final Regulatory Flexibility Analysis (''FRFA'') with a final rule, if any, unless the Commission certifies that the rule will not have a significant economic impact on a substantial number of small entities.[521] The purpose of a regulatory flexibility analysis is to ensure that an agency considers potential impacts on small entities and examines regulatory alternatives that could achieve the regulatory purpose while minimizing burdens on small entities.

In the NPRM, the Commission provided an IRFA, stating its belief that the proposal will not have a significant economic impact on small entities, and soliciting comments on its burden estimate. In addition to publishing the NPRM in the **Federal Register***,* the Commission announced the proposed rule through press and other releases. The Commission received comments from small businesses and associations that represent small businesses. In order to reduce compliance burdens on small businesses and other small entities, the Commission finalizes the proposed rule with some limiting modifications and clarifications as described in section IV of this document.

The Commission believes that the rule will not have a significant economic impact upon small entities, although it may affect a substantial number of small businesses. The rule primarily prohibits certain unfair or deceptive acts or practices involving consumer reviews or testimonials and does not impose a reporting or recordkeeping requirement upon businesses. In addition, the Commission does not anticipate these changes will impose any additional significant additional costs upon small businesses. Specifically, as discussed in further detail below, the Commission anticipates than an average small business will spend, at most, one hour on compliance review, incurring a cost of $33.48.[522] Therefore, the rule imposes no new significant burdens on law-abiding small businesses. The Commission has determined, nonetheless, that it is appropriate to publish an FRFA to identify the impact of the rule on small entities. Therefore, the Commission has prepared the following analysis:

A. Reasons for the Rule

The Commission describes the reasons for the rule in section VI.A. of this document. The FTC's law enforcement, outreach, and other engagement in this area indicate that certain unfair or deceptive acts or practices involving consumer reviews or testimonials are prevalent. The rule will benefit consumers and legitimate businesses without imposing significant burdens.

B. Statement of the Objectives of, and Legal Basis for, the Rule

The Commission describes the objectives for the rule in section VI.A of this document. The legal basis for the rule is section 18 of the FTC Act, 15 U.S.C. 57a, which authorizes the Commission to promulgate, modify, and repeal trade regulation rules that define with specificity acts or practices in or affecting commerce that are unfair or deceptive within the meaning of section 5(a)(1) of the FTC Act, 15 U.S.C. 45(a)(1).

C. Issues Raised by Comments, the Commission's Assessment and Response, and Any Changes Made as a Result

One individual commenter accepted the Commission's estimated compliance costs on small businesses but said it was unfair that ''small companies with online reviews would bear almost all of the [rule's] estimated compliance costs.'' [523] As the Commission stated in the NPRM, it is likely that only a minority of small businesses would elect to conduct optional compliance review and the total compliance costs for small businesses is likely to be significantly lower than the Commission's estimate.[524]

One trade association simply asserted that certain provisions of the proposed rule could be detrimental to small businesses but did not specifically address the IRFA.[525] This commenter expressed concern about: (1) civil penalty exposure for failing to stop the actions of undiscovered third parties providing reviews and testimonials appearing on a business's website; (2) a subsequent broadening of the proposed rule to prohibit incentivized reviews other than those required to express a particular sentiment; and (3) potential liability when an agent's review or testimonial appears without a disclosure.[526] The Commission addresses these specific concerns in section IV of this document and has narrowed the rule or provided clarification as appropriate.

The Commission does not believe that it needs to make any changes to its IRFA in response to these comments.

Section IV provides a section-by-section analysis that discusses the provisions proposed in the NPRM, the comments received, the Commission's responses to the comments, and any changes made by the Commission as a result.

D. Comments by the Chief Counsel for Advocacy of the SBA, the Commission's Assessment and Response, and Any Changes Made as a Result

The Commission did not receive any comments from the Chief Counsel for Advocacy of the SBA.

E. Description and Estimate of the Number of Small Entities to Which the Rule Will Apply

The final rule could impact small entities that currently have, or might potentially, solicit consumer reviews or disseminate consumer testimonials. It could also impact small entities that use celebrity testimonials or have a social media presence. It is likely that the rule will primarily affect businesses that sell products or services directly to consumers. For example, the rule is less likely to impact small entities that manufacture niche raw materials for other businesses or small agricultural

[523] Camp-Martin Cmt. at 2–3.

[524] NPRM, 88 FR 49388.

[525] IAB Cmt. at 1–15.

[526] *Id.* at 2, 5–6, 8–9, 10.

firms that do not sell directly to consumers. Nevertheless, for a conservative estimate of total costs, the Commission assumes that the rule will impact all industry classes of small entities.

As described in section VI.B.2 of this document, there are approximately 34.75 million small businesses in the United States. Prior research has found that 74 percent of small businesses have at least one Google review.[527] On the one hand, it is possible that, across all platforms (beyond Google reviews), a higher percentage of small businesses have consumer reviews or testimonials, celebrity testimonials, or a social media presence. On the other hand, it is likely that many of these firms do not interact with reviews and such passive firms would not be affected by the rule. The Commission does not have the appropriate data to refine this estimate. Therefore, its best estimate is that no more than 25.71 million (74 percent × 34.75 million) small businesses will be impacted by the rule.

F. Description of the Projected Reporting, Recordkeeping, and Other Compliance Requirements

The rule contains no reporting or recordkeeping requirements. Therefore, many law-abiding businesses are likely to incur no additional compliance costs with the rule.

As described in section VI.B.2 of this document, a cautious firm may elect to undertake additional compliance review due to the potential for civil penalties for rule violations. If every small business impacted by the rule conducts one hour of compliance review, each firm would incur $33.48 of compliance costs, which reflects the estimated hourly earnings of a small business owner.[528] Therefore, under the conservative estimate of heightened compliance review for all small businesses, costs to small businesses would total $860.95 million (25.71 million × $33.48). Because it is likely that only a minority of small businesses will elect to conduct optional compliance review, total compliance costs for these entities are likely to be significantly lower than this estimate.

G. Description of Steps Taken To Minimize Impact of the Rule on Small Entities

In response to comments, the Commission has narrowed the rule and clarified the rule requirements as described in section IV of this document, which should minimize further any economic impact on small entities. In its IRFA, the Commission described an alternative to the proposed rule, namely, to rely on the Commission's previously existing tools, such as consumer education and enforcement actions brought under sections 5 and 19 of the FTC Act, to combat the specified review and testimonial practices. The Commission believes that promulgation of the rule will result in greater net benefits to the marketplace while imposing no additional burdens beyond what is required by the FTC Act. As described in further detail in section VI.B.1.c of this document, the rule will not only result in significant benefits to consumers but also improve the competitive environment, particularly for small, independent, or new firms. Therefore, the rule appears to be superior to this alternative for small entities.

IX. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs has designated this rule as a ''major rule,'' as defined by 5 U.S.C. 804(2).

List of Subjects in 16 CFR Part 465

Advertising.

■ For the reasons set forth above, the Federal Trade Commission amends 16 CFR Chapter I by adding part 465 to read as follows:

PART 465—RULE ON THE USE OF CONSUMER REVIEWS AND TESTIMONIALS

Sec.
465.1 Definitions.
465.2 Fake or false consumer reviews, consumer testimonials, or celebrity testimonials.
465.3 [Reserved]
465.4 Buying positive or negative consumer reviews.
465.5 Insider consumer reviews and consumer testimonials.
465.6 Company-controlled review websites or entities.
465.7 Review suppression.
465.8 Misuse of fake indicators of social media influence.
465.9 Severability

Authority: 15 U.S.C. 57a.

§ 465.1 Definitions.

(a) *Business* means an individual who sells products or services, a partnership that sells products or services, a corporation that sells products or services, or any other commercial entity that sells products or services.

(b) *Celebrity testimonial* means an advertising or promotional message (including verbal statements, demonstrations, or depictions of the name, signature, likeness, or other identifying personal characteristics of an individual) that consumers are likely to believe reflects the opinions, beliefs, or experiences of a well-known individual who purchased, used, or otherwise had experience with a product, service, or business.

(c) *Clear and conspicuous* means that a required disclosure is easily noticeable (*i.e.,* difficult to miss) and easily understandable by ordinary consumers, including in all of the following ways:

(1) In any communication that is solely visual or solely audible, the disclosure must be made through the same means through which the communication is presented. In any communication made through both visual and audible means, such as a television advertisement, the disclosure must be presented in at least the same means as the representation(s) requiring the disclosure.

(2) A visual disclosure, by its size, contrast, location, the length of time it appears, and other characteristics, must stand out from any accompanying text or other visual elements so that it is easily noticed, read, and understood.

(3) An audible disclosure, including by telephone or streaming video, must be delivered in a volume, speed, and cadence sufficient for ordinary consumers to easily hear and understand it.

(4) In any communication using an interactive electronic medium, such as social media or the internet, the disclosure must be unavoidable. A disclosure is not clear and conspicuous if a consumer must take any action, such as clicking on a hyperlink or hovering over an icon, to see it.

(5) The disclosure must use diction and syntax understandable to ordinary consumers and must appear in each language in which the representation that requires the disclosure appears.

(6) The disclosure must comply with these requirements in each medium through which it is received, including all electronic devices and face-to-face communications.

(7) The disclosure must not be contradicted or mitigated by, or inconsistent with, anything else in the communication.

(8) When the representation or sales practice targets a specific audience, such as children, the elderly, or the terminally ill, ''ordinary consumers'' includes members of that group.

(d) *Consumer review* means a consumer's evaluation, or a purported consumer's evaluation, of a product, service, or business that is submitted by

[527] *See supra* note 515.

[528] *See* Payscale, *Average Small Business Owner Salary, supra* note 517.

the consumer or purported consumer and that is published to a website or platform dedicated in whole or in part to receiving and displaying such evaluations. For the purposes of this part, consumer reviews include consumer ratings regardless of whether they include any text or narrative.

(e) *Consumer review hosting* means providing the technological means by which a website or platform enables consumers to see or hear the consumer reviews that consumers have submitted to the website or platform.

(f) *Consumer testimonial* means an advertising or promotional message (including verbal statements, demonstrations, or depictions of the name, signature, likeness, or other identifying personal characteristics of an individual) that consumers are likely to believe reflects the opinions, beliefs, or experiences of a consumer who has purchased, used, or otherwise had experience with a product, service, or business.

(g) *Distribute fake indicators of social media influence* means the distribution of fake indicators of social media influence to individuals or businesses who could use the indicators to misrepresent their influence.

(h) *Fake indicators of social media influence* means indicators of social media influence generated by bots, purported individual accounts not associated with a real individual, accounts created with a real individual's personal information without their consent, or hijacked accounts, or that otherwise do not reflect a real individual's or entity's activities, opinions, findings, or experiences.

(i) *Immediate Relative* means a spouse, parent, child, or sibling.

(j) *Indicators of social media influence* means any metrics used by the public to make assessments of an individual's or entity's social media influence, such as followers, friends, connections, subscribers, views, plays, likes, saves, shares, reposts, and comments.

(k) *Manager* means an employee of a business who supervises other employees or agents and who either holds the title of a ''manager'' or otherwise serves in a managerial role.

(l) *Officers* include owners, executives, and managing members of a business.

(m) *Purchase a consumer review* means to provide something of value, such as money, gift certificates, products, services, discounts, coupons, contest entries, or another review, in exchange for a consumer review.

(n) *Reviewer* means the author or purported author of a consumer review.

(o) *Testimonialist* means the individual giving or purportedly giving a consumer testimonial or celebrity testimonial.

(p) An *unfounded or groundless legal threat* is a legal threat based on claims, defenses, or other legal contentions unwarranted by existing law or based on factual contentions that have no evidentiary support or will likely have no evidentiary support after a reasonable opportunity for further investigation or discovery.

§ 465.2 Fake or false consumer reviews, consumer testimonials, or celebrity testimonials.

(a) It is an unfair or deceptive act or practice and a violation of this part for a business to write, create, or sell a consumer review, consumer testimonial, or celebrity testimonial that materially misrepresents, expressly or by implication:

(1) That the reviewer or testimonialist exists;

(2) That the reviewer or testimonialist used or otherwise had experience with the product, service, or business that is the subject of the review or testimonial; or

(3) The reviewer's or testimonialist's experience with the product, service, or business that is the subject of the review or testimonial.

(b) It is an unfair or deceptive act or practice and a violation of this part for a business to purchase a consumer review, or to disseminate or cause the dissemination of a consumer testimonial or celebrity testimonial, about the business or one of the products or services it sells, which the business knew or should have known materially misrepresented, expressly or by implication:

(1) That the reviewer or testimonialist exists;

(2) That the reviewer or testimonialist used or otherwise had experience with the product, service, or business that is the subject of the review or testimonial; or

(3) The reviewer's or testimonialist's experience with the product, service, or business that is the subject of the review or testimonial.

(c) It is an unfair or deceptive act or practice and a violation of this part for a business to procure a consumer review from its officers, managers, employees, or agents, or any of their immediate relatives, for posting on a third-party platform or website, when the review is about the business or one of the products or services it sells, and when the business knew or should have known that the review materially misrepresented, expressly or by implication:

(1) That the reviewer exists;

(2) That the reviewer used or otherwise had experience with the product, service, or business that is the subject of the review; or

(3) The reviewer's experience with the product, service, or business that is the subject of the review.

(d) However, paragraphs (b) and (c) of this section do not apply to:

(1) Reviews or testimonials that resulted from a business making generalized solicitations to purchasers to post reviews or testimonials about their experiences with the product, service, or business; or

(2) Reviews that appear on a website or platform as a result of the business merely engaging in consumer review hosting.

§ 465.3 [Reserved]

§ 465.4 Buying positive or negative consumer reviews.

It is an unfair or deceptive act or practice and a violation of this part for a business to provide compensation or other incentives in exchange for, or conditioned expressly or by implication on, the writing or creation of consumer reviews expressing a particular sentiment, whether positive or negative, regarding the product, service, or business that is the subject of the review.

§ 465.5 Insider consumer reviews and consumer testimonials.

(a) It is an unfair or deceptive act or practice and a violation of this part for an officer or manager of a business to write or create a consumer review or consumer testimonial about the business or one of the products or services it sells that fails to have a clear and conspicuous disclosure of the officer's or manager's material relationship to the business, unless, in the case of a consumer testimonial, the relationship is otherwise clear to the audience.

(b)(1) It is an unfair or deceptive act or practice and a violation of this part for a business to disseminate or cause the dissemination of a consumer testimonial about the business or one of the products or services it sells by one of its officers, managers, employees, or agents, which fails to have a clear and conspicuous disclosure of the testimonialist's material relationship to the business, when the relationship is not otherwise clear to the audience and the business knew or should have known the testimonialist's relationship to the business.

(2) However, paragraph (b)(1) of this section does not apply to:

(i) Generalized solicitations to purchasers for them to post testimonials about their experiences with the product, service, or business, or

(ii) Merely engaging in consumer review hosting.

(c)(1) It is an unfair or deceptive act or practice and a violation of this part for an officer or manager of a business to solicit or demand a consumer review about the business or one of the products or services it sells from any of their immediate relatives or from any employee or agent of the business, or to solicit or demand that such employees or agents seek such reviews from their relatives, when:

(i) The solicitation or demand results in an officer's or manager's immediate relatives, an employee or agent, or the immediate relatives of an employee or agent writing or creating such a review without a disclosure of the reviewer's material relationship to the business, and

(ii) The officer or manager:

(A) Encouraged the prospective reviewer not to make such a disclosure,

(B) Did not instruct that prospective reviewers disclose clearly and conspicuously their relationship to the business, or

(C) knew or should have known that such a review appeared without such a disclosure and failed to take remedial steps.

(2) However, paragraph (c)(1) of this section does not apply to generalized solicitations to purchasers for them to post reviews about their experiences with the product, service, or business.

§ 465.6 Company-controlled review websites or entities.

It is an unfair or deceptive act or practice and a violation of this part for a business to materially misrepresent, expressly or by implication, that a website, organization, or entity that it controls, owns, or operates provides independent reviews or opinions, other than consumer reviews, about a category of businesses, products, or services including the business or one or more of the products or services it sells.

§ 465.7 Review suppression.

It is an unfair or deceptive act or practice and a violation of this part:

(a) For anyone to use an unfounded or groundless legal threat, a physical threat, intimidation, or a public false accusation in response to a consumer review that is made with the knowledge that the accusation was false or made with reckless disregard as to its truth or falsity, in an attempt to:

(1) Prevent a review or any portion thereof from being written or created, or

(2) Cause a review or any portion thereof to be removed, whether or not that review or a portion thereof is replaced with other content, or

(b) For a business to materially misrepresent, expressly or by implication, that the consumer reviews of one or more of the products or services it sells displayed in a portion of its website or platform dedicated in whole or in part to receiving and displaying consumer reviews represent most or all the reviews submitted to the website or platform when reviews are being suppressed (*i.e.,* not displayable) based upon their ratings or their negative sentiment. For purposes of this paragraph, a review is not considered suppressed based upon rating or negative sentiment if the suppression occurs based on criteria for withholding reviews that are applied equally to all reviews submitted without regard to sentiment, such as when:

(1) The review contains:

(i) Trade secrets or privileged or confidential commercial or financial information,

(ii) Defamatory, harassing, abusive, obscene, vulgar, or sexually explicit content,

(iii) The personal information or likeness of another individual,

(iv) Content that is discriminatory with respect to race, gender, sexuality, ethnicity, or another intrinsic characteristic, or

(v) Content that is clearly false or misleading;

(2) The seller reasonably believes the review is fake; or

(3) The review is wholly unrelated to the products or services offered by or available at the website or platform.

§ 465.8 Misuse of fake indicators of social media influence.

It is an unfair or deceptive act or practice and a violation of this part for anyone to:

(a) Sell or distribute fake indicators of social media influence that they knew or should have known to be fake and that can be used by individuals or businesses to materially misrepresent their influence or importance for a commercial purpose; or

(b) Purchase or procure fake indicators of social media influence that they knew or should have known to be fake and that materially misrepresent their influence or importance for a commercial purpose.

§ 465.9 Severability.

The provisions of this part are separate and severable from one another. If any provision is stayed or determined to be invalid, the remaining provisions will continue in effect.

By direction of the Commission.

April J. Tabor,

Secretary.

FEDERAL TRADE COMMISSION

16 CFR Part 425

RIN 3084–AB60

Negative Option Rule

AGENCY: Federal Trade Commission.

ACTION: Final rule.

SUMMARY: The Federal Trade Commission (''FTC'' or ''Commission'') issues final amendments to the Commission's trade regulation ''Rule Concerning Use of Prenotification Negative Option Plans,'' retitled the ''Rule Concerning Recurring Subscriptions and Other Negative Option Programs'' (''Rule,'' ''final Rule'' or ''Negative Option Rule''). The final Rule now applies to all negative option programs in any media. This document also contains the text of the final Rule, the Rule's Statement of Basis and Purpose (''SBP''), and a final regulatory analysis.

DATES:

Effective date: This rule is effective January 14, 2025.

Compliance date: Regulated entities have until May 14, 2025 to comply with §§ 425.4 through 425.6.

ADDRESSES: Relevant portions of the record of this proceeding, including this document, are available *at https://www.ftc.gov.*

FOR FURTHER INFORMATION CONTACT: Katherine Johnson, Attorney, (202) 326–2185, *kjohnson3@ftc.gov,* Division of Enforcement, Bureau of Consumer Protection, Federal Trade Commission, 600 Pennsylvania Ave. NW, Washington, DC 20580.

SUPPLEMENTARY INFORMATION:

I. Overview

The Commission commenced this proceeding because it had reason to believe unfair and deceptive negative option practices are widespread in the marketplace. Negative option programs can provide substantial benefits for sellers and consumers. However, consumers cannot realize these benefits when sellers make material misrepresentations to induce consumers to enroll in such programs, fail to provide important information, bill consumers without their consent, or make cancellation difficult or impossible. Unfair and deceptive negative option practices have been a persistent source of consumer harm for decades, saddling shoppers with recurring payments for products and services they never intended to purchase nor wanted to continue buying. In the past, the Commission sought to address these practices through individual law enforcement actions and a patchwork of laws and regulations. Nevertheless, problems persist, as demonstrated by both a steady stream of State and Federal law enforcement actions and thousands of consumer complaints each year. To address these practices, the Commission proposed amending the current Negative Option Rule to establish clear, enforceable performance-based requirements for all negative option features in all media. The Commission solicited comments first in an advance notice of proposed rulemaking (''ANPR'') and then on proposed amendments in a notice of proposed rulemaking (''NPRM''). The Commission designed these amendments to ensure consumers understand what they are purchasing and allow them to cancel their participation without undue burden.

Among other things, this final Rule (1) prohibits misrepresentations of any material fact made while marketing using negative option features; (2) requires sellers to provide important information prior to obtaining consumers' billing information and charging consumers; (3) requires sellers to obtain consumers' unambiguously affirmative consent to the negative option feature prior to charging them; and (4) requires sellers to provide consumers with simple cancellation mechanisms to immediately halt all recurring charges.

The Commission now promulgates a final Rule. Pursuant to 15 U.S.C. 57a(a)(1)(B), the Rule, *inter alia,* defines the following acts and practices as unfair or deceptive within the meaning of section 5 of the FTC Act:

- to misrepresent any material fact made while marketing using a negative option feature (§ 425.3);
- to fail to clearly and conspicuously disclose material terms prior to obtaining a consumer's billing information in connection with a negative option feature (§ 425.4);
- to fail to obtain a consumer's express informed consent to the negative option feature before charging the consumer (§ 425.5); and
- to fail to provide a simple mechanism to cancel the negative option feature and immediately halt charges (§ 425.6).

Further, the Rule, consistent with the final sentence of 15 U.S.C. 57a(a)(1)(B) includes requirements prescribed for the purpose of preventing such acts or practices.

The final Rule differs from the proposed Rule in two significant ways. First, the proposed Rule would have required sellers to provide annual reminders to consumers of the negative option feature. Second, the proposed Rule would have prohibited sellers from forcing consumers to receive saves [1] without first obtaining consumers' unambiguously affirmative consent. The Commission has considered comments both supporting and opposing these proposed provisions. As explained in the section-by-section analysis, the Commission declines to adopt these provisions of the proposed Rule at this time. Instead, the Commission plans to seek further comment through a supplemental NPRM (''SNPRM''), and therefore, keeps the record open on these issues.[2]

Finally, in response to the comments, the Commission adds two definitions and two provisions to the final Rule for clarity. The final Rule explicitly defines the terms ''material'' and ''interactive electronic medium'' consistent with how they were defined and discussed in the NPRM. Additionally, the final Rule includes a severability provision and a provision allowing requests for exemptions from the final Rule consistent with the Commission's Rules of Practice.[3]

II. Background

A. Statutory Authority

The Commission promulgates the final Negative Option Rule, 16 CFR part 425 pursuant to section 18 of the FTC Act, 15 U.S.C. 57a, the Administrative Procedure Act (''APA''), 5 U.S.C. 533; and part 1, subpart B of the Commission's Rules of Practice, 16 CFR 1.7–1.20. Section 18 permits the Commission to promulgate, amend, and repeal trade regulation rules that define with specificity acts or practices that are unfair or deceptive within the meaning of section 5(a)(1) of the FTC Act, 15 U.S.C. 45(a)(1); and allows the Commission to prescribe requirements for the purpose of preventing these unfair or deceptive acts and practices.

B. Negative Option Marketing

1. Negative Option Programs

Negative option programs come in a variety of forms, but all share a central feature: each contain a term or condition that allows a seller to interpret a customer's silence, or failure to take an

[1] Save was defined in the proposed Rule to mean an attempt by a seller to present any additional offers, modifications to the existing agreement, reasons to retain the existing offer, or similar information when a consumer attempts to cancel a negative option feature. Proposed Rule § 425.2(f).

[2] *See* 16 CFR 1.11 (''Commission's Rules of Practice'' or ''Commission Rules''); *cf.* Impersonation Rule, 89 FR 15072 (Feb. 29, 2024).

[3] *See* 16 CFR 1.16.

affirmative action, as acceptance of an offer.[4] Negative option programs generally fall into four categories: prenotification plans, continuity plans, automatic renewals, and free trial (*i.e.,* free-to-pay or nominal-fee-to-pay) conversion offers.

Prenotification plans are the only negative option practice currently covered by the Commission's current Negative Option Rule, originally promulgated in 1973. Under such plans (*e.g.,* book-of-the-month clubs), sellers provide periodic notices offering goods to participating consumers and then send—and charge for—those goods only if the consumers take no action to decline the offer. The periodic announcements and shipments can continue indefinitely. In continuity plans, consumers agree in advance to receive periodic shipments of goods or provision of services (*e.g.,* bottled water delivery), which they continue to receive until they cancel the agreement. In automatic renewals, sellers (*e.g.,* a magazine publisher, credit monitoring service provider, etc.) automatically renew consumers' subscriptions when they expire, unless consumers affirmatively cancel the subscriptions. Finally, in free-to-pay plans, consumers receive goods or services for free (or at a nominal fee) for a trial period. After the trial period, sellers automatically begin charging a fee (or higher fee) unless consumers affirmatively cancel or return the goods or services.

Some negative option offers include upsell or bundled offers, where sellers use consumers' billing data to sell additional products from the same seller or pass consumers' billing data to a third party for their sales. An upsell occurs, *e.g.,* when a consumer completes a first transaction and then receives a second solicitation for an additional product or service. A bundled offer occurs, *e.g.,* when a seller packages two or more products or services together.

Importantly, negative option programs are distinct from other continuing agreements such as installment contracts. In an installment contract, consumers are obligated for the entire contractual period for the entire contract. A prime example of this type of transaction is a contract for purchasing a vehicle, which outlines terms, such as price, interest rate, and payment schedule. The contract thus allows the consumer to pay the purchase price of the vehicle over time. Consumers' failure to pay amounts due under an installment agreement may bring the total balance due, and may trigger halting performance, or provide the seller with other contractual rights.

A negative option, in contrast, merely determines whether a seller may continue to send, and charge for, goods or provide services without the consumer's further action. Notably, a contract could have both installment and negative option features. Take, for instance, a software license agreement. A consumer may purchase a software license for a year, in which the consumer is obligated for the entire year, payable monthly, to renew automatically at the conclusion of the year unless the consumer cancels the agreement.[5] Canceling the agreement during the first year does not void a consumer's obligation to pay for the whole first year, but it does terminate the consumer's responsibility for the next year.

2. Prevalence of Deceptive or Unfair Negative Option Acts and Practices

Negative option programs are widespread in the marketplace and can provide substantial benefits for sellers and consumers. For businesses, the benefits of negative option marketing include ''greater revenue predictability, customer base continuity, and the ability to better plan in advance.'' [6] For consumers, such benefits may include opportunities to explore new products prior to purchase (*e.g.,* free trials),[7] broader selections at lower prices and transaction costs,[8] and the convenience of uninterrupted products or services.[9] However, consumers cannot reap these benefits when marketers misrepresent material facts, fail to make adequate disclosures, bill consumers without their consent, or make cancellation difficult or impossible. Over the years, such problematic practices have remained a persistent source of consumer harm, saddling consumers with recurring payments for products and services they never intended to purchase nor wanted to continue buying.

The Commission tried to address these practices through individual law enforcement cases and a patchwork of regulations (*see* discussion at sections III–IV). Nevertheless, problems persist, as demonstrated in part by the tens of thousands of complaints consumers submit about these practices to the FTC each year. Moreover, the Commission and States continue to regularly bring cases challenging harmful negative option practices, including more than 35 recent FTC cases.[10] These matters involved a range of deceptive or unfair practices, including inadequate disclosures for ''free'' offers and other products or services, enrollment without consumer consent, and inadequate or overly burdensome cancellation and refund procedures.[11] As discussed further below, the continuing stream of cases; the high volume of ongoing complaints; and comments on the record all demonstrate prevalent unfair and deceptive practices and unabated consumer harm.

III. The FTC'S Existing Regulatory Scheme

A. The FTC's Current Negative Option Rule

The Commission first promulgated the Rule in 1973 pursuant to the FTC Act, 15 U.S.C. 41 *et seq.,* finding some negative option marketers committed

[4] The Commission's Telemarking Sales Rule defines a negative option feature as a provision in an offer or agreement to sell or provide any goods or services ''under which the customer's silence or failure to take an affirmative action to reject goods or services or to cancel the agreement is interpreted by the seller as acceptance of the offer.'' 16 CFR 310.2(w).

unfair and deceptive practices that violated section 5 of the Act, 15 U.S.C. 45. Based on practices at the time, however, the Rule only applied to prenotification plans for the sale of goods, and therefore, does not reach the vast majority of modern negative option programs.[12]

Specifically, the Rule required prenotification plan sellers to disclose their plans' material terms clearly and conspicuously before consumers subscribe. To do so, it required sellers to disclose seven material terms: (1) how subscribers must notify the seller if they do not wish to purchase the selection; (2) any minimum purchase obligations; (3) the subscribers' right to cancel; (4) whether billing charges include postage and handling; (5) that subscribers have at least ten days to reject a selection; (6) that if any subscriber is not given ten days to reject a selection, the seller will credit the return of the selection and postage to return the selection, along with shipping and handling; and (7) the frequency with which announcements and forms will be sent.[13] In addition, sellers had to disclose the specific periods during which they would send introductory merchandise, give consumers a specified period to respond to announcements, provide instructions for rejecting merchandise in announcements, and promptly honor written cancellation requests.[14]

B. Other Current Regulatory Requirements

Several other statutes and regulations also address harmful negative option practices. First, section 5 of the FTC Act has served as the Commission's primary mechanism for addressing deceptive negative option claims. Additionally, the Restore Online Shoppers' Confidence Act (''ROSCA''), 15 U.S.C. 8401–8405, the Telemarketing Sales Rule (''TSR''), 16 CFR part 310, the Postal Reorganization Act (*i.e.,* the Unordered Merchandise Statute), 39 U.S.C. 3009, and the Electronic Fund Transfer Act (''EFTA''), 15 U.S.C. 1693–1693r, all address various aspects of negative option marketing. ROSCA, however, is the only law primarily designed to do so, but only for online transactions.

1. Section 5 of the FTC Act

Section 5(a) of the FTC Act, 15 U.S.C. 45(a), is the core consumer protection statute enforced by the Commission. That statute broadly prohibits ''unfair or deceptive acts or practices'' but does not specifically address negative option marketing.[15] Therefore, in guidance and cases, the FTC has highlighted six basic requirements negative option marketing must follow to avoid deceptive and unfair practices.[16] First, marketers must disclose the material terms of a negative option offer including, at a minimum: the existence of the negative option offer; the offer's total cost; the transfer of a consumer's billing information to a third party, if applicable; and how to cancel the offer. Second, section 5 requires these disclosures to be clear and conspicuous. Third, sellers must disclose the material terms of the negative option offer before consumers agree to the purchase. Fourth, marketers must obtain consumers' consent to such offers. Fifth, marketers must not impede the effective operation of promised cancellation procedures and must honor cancellation requests that comply with those procedures. Finally, marketers cannot make any material misrepresentation regarding any portion of the transaction.

In addition to these deception-based requirements, the Commission has repeatedly stated billing consumers without consumers' express informed consent is an unfair act under the FTC Act.[17]

2. ROSCA

Enacted by Congress in 2010 to address, in part, ongoing problems with online negative option marketing, ROSCA contains general provisions related to disclosures, consent, and cancellation.[18] Specifically, ROSCA prohibits charging or attempting to charge consumers for goods or services sold on the internet through any negative option feature unless the marketer: (1) clearly and conspicuously discloses all material terms of the transaction before obtaining the consumer's billing information, regardless of whether a material term directly relates to the terms of the negative option offer; [19] (2) obtains a consumer's express informed consent before charging the consumer's account; and (3) provides simple mechanisms for the consumer to stop recurring charges.[20] ROSCA, however, does not prescribe specific steps marketers must follow to comply with these provisions and is limited to online transactions.

Furthermore, pursuant to the statute, a violation of ROSCA is treated as a violation of a Commission trade regulation rule under section 18 of the FTC Act.[21] Thus, the Commission may seek a variety of remedies for violations of ROSCA, including civil penalties under section 5(m)(1)(A) of the FTC Act; [22] injunctive relief under section 13(b) of the FTC Act; [23] and consumer redress, damages, and other relief under section 19 of the FTC Act.[24]

3. Telemarketing Sales Rule

The TSR prohibits deceptive telemarketing acts or practices,

---

[12] The Rule defines ''negative option plan'' narrowly to apply only to prenotification plans. 16 CFR 425.1(c)(1). In 1998, the Commission clarified the Rule's application to such plans in all media, stating that it ''covers all promotional materials that contain a means for consumers to subscribe to prenotification negative option plans, including those that are disseminated through newer technologies.'' 63 FR 44555, 44561 (Aug. 20, 1998).

[13] 16 CFR 425.1(a)(1)(i)–(vii).

[14] 16 CFR 425.1(a)(2) and (3); *id.* 425.1(b).

[15] Under the FTC Act, ''unfair or deceptive acts or practices'' include acts or practices involving foreign commerce that cause or are likely to cause reasonably foreseeable injury within the United States or involve material conduct occurring within the United States. 15 U.S.C. 45(a)(4)(A). Section 5(n) of the FTC Act provides that ''unfair'' practices are those that cause or are likely to cause substantial injury to consumers which is not reasonably avoidable by consumers themselves and not outweighed by countervailing benefits to consumers or to competition. 15 U.S.C. 45(n).

[24] 15 U.S.C. 57b(a)(1), (b).

including those involving negative option offers, and certain types of payment methods common in deceptive negative option marketing. Specifically, the TSR requires telemarketers to disclose all material terms and conditions of the negative option feature, including the need for affirmative consumer action to avoid the charges, the date (or dates) the charges will be submitted for payment, and the specific steps the customer must take to avoid the charges. It also prohibits telemarketers from misrepresenting such information and contains specific requirements related to payment authorization.[25] The TSR, however, only applies to negative option offers made over the telephone.

4. Other Relevant Requirements

EFTA [26] and the Unordered Merchandise Statute [27] also contain provisions relevant to unfair and deceptive negative option marketing. EFTA prohibits sellers from imposing recurring charges on a consumer's debit cards or bank accounts without written authorization.[28] The Unordered Merchandise Statute provides that mailing unordered merchandise, or a bill for such merchandise, constitutes an unfair method of competition and an unfair trade practice in violation of section 5 of the FTC Act.[29]

IV. Limitations of Existing Regulatory Requirements

The existing patchwork of laws and regulations does not provide industry and consumers with a consistent legal framework across media and offers. For instance, as discussed above, the current Rule does not cover common practices such as continuity plans, automatic renewals, and free-to-pay conversions.[30] In addition, ROSCA and the TSR do not address negative option programs in all media. Yet, harmful negative option practices that fall outside of ROSCA and the TSR's coverage still occur.[31]

Additionally, ROSCA lacks specificity about cancellation procedures and the placement, content, and timing of cancellation-related disclosures. Instead, the statute requires marketers to provide ''simple mechanisms'' for the consumer to stop recurring charges without guidance about what is simple. While the statute provides more than adequate specificity to avoid blatant violations, it makes law enforcement actions much more difficult for closer calls, even when these practices cause significant harm.

V. Negative Option Rulemaking and Enforcement Efforts

The Commission initiated its last regulatory review of the Negative Option Rule in 2009,[32] following a 2007 FTC workshop and subsequent Staff Report.[33] The Commission completed the review in 2014.[34] At the time, the Commission found the comments supporting the Rule's expansion ''argue convincingly that unfair, deceptive, and otherwise problematic negative option marketing practices continue to cause substantial consumer injury, despite determined enforcement efforts by the Commission and other law enforcement agencies.'' [35] It also noted practices not covered by the Rule (*e.g.,* trial conversions and continuity plans) accounted for most of the Commission's enforcement activity in this area. Nevertheless, the Commission declined to expand or modify the Rule because the enforcement tools provided by the TSR and, especially, ROSCA, which had only recently become effective, might prove adequate to address the extant problems. The Commission emphasized, however, if ROSCA and its other enforcement tools failed to protect consumers, the Commission would consider whether and how to amend the Rule.[36] Since that review, the problems with negative options have persisted.[37]

VI. Rule Review and Request for Comment

A. 2019 Advance Notice of Proposed Rulemaking

Given the persistence of unfair and deceptive practices despite significant law enforcement attention at both the Federal and State level, the Commission published its 2019 advance notice of proposed rulemaking (''ANPR'') seeking comments on the current Rule, as well as possible new measures to reduce consumer harm created by deceptive or unfair negative option marketing.[38] Specifically, the Commission sought comment on various alternatives, including amendments to existing rules to further address disclosures, consumer consent, and cancellation. The Commission also requested input on whether and how it should use its authority under section 18 of the FTC Act to expand the Negative Option Rule to address prevalent unfair or deceptive practices involving negative option marketing.[39] In response, the Commission received 17 comments.[40]

B. 2021 Enforcement Policy Statement

On November 4, 2021, the Commission published an ''Enforcement Policy Statement Regarding Negative Option Marketing'' (''2021 Enforcement Policy Statement'' or ''EPS'') to provide guidance regarding its enforcement of

[25] 16 CFR 310.3(a).

[26] 15 U.S.C. 1693–1693r.

[27] 39 U.S.C. 3009.

[28] EFTA provides that the Commission shall enforce its requirements, except to the extent that enforcement is specifically committed to some other Federal government agency, and that a violation of any of its requirements shall be deemed a violation of the FTC Act. Accordingly, the Commission has authority to seek injunctive relief for EFTA violations, just as it can seek injunctive relief for other section 5 violations.

[29] The Commission has authority to seek the same remedies for violations of the Unordered Merchandise Statute that it can seek for other section 5 violations. The Commission can seek civil penalties pursuant to section 5(m)(1)(B) of the FTC Act from violators who have actual knowledge that the Commission has found mailing unordered merchandise unfair. 15 U.S.C. 45(m)(1)(B).

[30] Indeed, the prenotification plans covered by the Rule represent only a small fraction of negative option marketing. In 2017, for instance, the Commission estimated that fewer than 100 sellers (''clubs'') were subject to the current Rule's requirements. 82 FR 38907, 38908 (Aug. 16, 2017).

[31] *See, e.g., In re Dun & Bradstreet, Inc.,* FTC Docket No. C–4761 (2022); *FTC* v. *Nobetes Corp.,* No. 2:18–cv–10068 (C.D. Cal. 2018); *FTC* v. *Dill,* No. 2:16–cv–00023 (D. [34] 79 FR 44271 (July 31, 2014).

[35] 79 FR 44275. The Commission cited a number of its law enforcement actions challenging negative option marketing practices, including, for example, *FTC* v. *Process Am., Inc.,* No. 2:14–cv–00386 (C.D. Cal. 2014) (processing of unauthorized charges relating to negative option marketing); *FTC* v. *Willms,* No. 2:11–cv–00828 (W.D. Wash. 2011) (internet free trials and continuity plans); *FTC* v. *Moneymaker,* No. 2:11–cv–00461 (D. Nev. 2011) (internet trial offers and continuity programs); *FTC* v. *Johnson,* No. 2:10–cv–02203 (D. Nev. 2010) (internet trial offers); and *FTC* v. *John Beck Amazing Profits, LLC,* No. 2:09–cv–04719 (C.D. Cal. 2009) (infomercial and telemarketing trial offers and continuity programs).

[36] 79 FR 44275–76.

[37] *See* sections VI–VII of this SBP.

[38] ANPR, 84 FR 52393 (Oct. 2, 2019).

[39] Section 18 of the FTC Act authorizes the Commission to promulgate rules that define with specificity acts or practices in or affecting commerce which are unfair or deceptive. 15 U.S.C. 57a(a)(1)(B). The Commission may issue regulations ''where it has reason to believe that the unfair or deceptive acts or practices which are the subject of the proposed rulemaking are prevalent.'' 15 U.S.C. 57a(b)(3). The Commission may make such a prevalence finding if it has issued cease and desist orders regarding such acts or practices, or any other available information indicates a widespread pattern of unfair or deceptive acts or practices. Rules under section 18 ''may include requirements prescribed for the purpose of preventing such acts or practices.''

[40] The comments are available online. *See Regulations.gov*, Negative Option Rule (ANPR), FTC–2019–0082, *https://www.regulations.gov/docket/FTC-2019-0082.*

various statutes and FTC regulations.[41] The 2021 Enforcement Policy Statement enunciated various principles rooted in FTC case law and restated previous guidance related to the provision of information to consumers, consent, and cancellations. Among these principles, the Statement emphasized ROSCA's requirement that sellers disclose all material terms related to the underlying product or service that are necessary to prevent deception, regardless of whether that term relates directly to the terms of the negative option offer.[42] In addition, consistent with ROSCA, judicial decisions applying section 5, and cases brought by the Commission, the 2021 Enforcement Policy Statement reiterated sellers should obtain consumers' acceptance of the negative option feature separately from any other portion of the transaction. Finally, the Statement explained sellers should provide cancellation mechanisms at least as easy to use as the method the consumer employed to initiate the negative option feature.

C. 2023 Notice of Proposed Rulemaking

After reviewing the comments received in response to the ANPR and issuing the 2021 Enforcement Policy Statement, the Commission issued a notice of proposed rulemaking (''NPRM'') on April 23, 2023 (88 FR 24716). In the NPRM, the Commission proposed amending the existing Rule to prohibit material misrepresentations and to require sellers to provide important information to consumers, obtain consumers' express informed consent, and ensure consumers can easily cancel negative option programs if they choose. All these proposed changes would be applicable to all forms of negative option marketing across all media (*e.g.,* telephone, internet, traditional print media, and in-person transactions).[43]

The Commission designed the proposed amendments to curb deceptive or unfair practices occurring in negative option marketing. The Commission sought public comment on ''all aspects'' of the proposal, ''including the likely effectiveness of the proposed Rule in helping the Commission combat unfair or deceptive practices in negative option marketing.'' [44] The Commission further identified specific questions and areas where it solicited available data and evidence, including data and evidence supporting alternatives to the proposed regulations.[45] The Commission did not identify any disputed issues of material fact that needed to be resolved at an informal hearing.[46] The comment period closed on June 23, 2023.

In response, the Commission received more than 16,000 comments, and published the 1,162 unique comments from stakeholders representing a wide range of viewpoints.[47] Although some commenters raised concerns and recommended specific modifications or additions to the proposed Rule (some of which the Commission adopts as discussed herein), the majority generally supported the Rule. The Commission discusses these comments in section VII below.

D. Informal Hearing and Recommended Decision

Section 18 of the Federal Trade Commission Act, 15 U.S.C. 57a, and the Commission's Rules of Practice, 16 CFR 1.11(e),[48] provide interested persons the opportunity to make an oral statement at an informal hearing upon request.[49] The Commission received six [50] such requests. Additionally, although the Commission did not designate any disputed issues of material fact in the NPRM, two interested commenters, IAB and NCTA, proposed the Commission consider several potential disputed issues of material fact.[51]

On December 8, 2023, the Commission published an Initial Notice of Informal Hearing (88 FR 85525, ''Hearing Notice''). The Hearing Notice designated the Honorable Carol Fox Foelak, Administrative Law Judge for the Securities Exchange Commission, to serve as the presiding officer of the informal hearing and scheduled the informal hearing for January 16, 2024. In the Hearing Notice, the Commission again did not designate any disputed issues of material fact, finding the issues raised by IAB and NCTA did not need to be resolved at the informal hearing through cross-examination.[52]

On January 16, 2024, Judge Foelak commenced the informal hearing, at which IAB, NCTA, Performance Driven Marketing Institute (''PDMI''), TechFreedom, and the International Franchise Association (''IFA'') appeared and made oral submissions subject to cross-examination.[53] Included in their oral and written submissions, IAB and

[41] EPS, 86 FR 60822 (Nov. 4, 2021).

[42] The Commission recently alleged a negative option seller's failure to disclose it was impeding access to its movie subscription service violates ROSCA. *In re MoviePass, Inc.,* FTC Docket No. C–4751 (2021).

[43] The Commission proposed to issue such amendments pursuant to section 18 of the FTC Act, which authorizes it to promulgate rules specifying acts or practices in or affecting commerce which are unfair or deceptive. 15 U.S.C. 57a(a)(1)(B). Several commenters raised concerns the Commission failed to follow section 18's procedures for two reasons. First, commenters argued the Commission's proposed Rule went beyond the scope of the ANPR. *See, e.g.,* ESA, FTC–2023–0033–0867; USTelecom-The Broadband Association (''USTelecom''), FTC–2023–0033–0876; Retail Industry Leaders Association (''RILA''), FTC–2023–0033–0883; U.S. Chamber of Commerce (''Chamber''), FTC–2023–0033–0885; The Computer & Communications Industry Association (''CCIA''), FTC–2023–0033–0984; IAB, FTC–2023–0033–1000; National Retail Federation (''NRF''), FTC–2023–0033–1005). Second, they argued the Commission's proposed Rule did not satisfy the specificity and prevalence requirements of section 18. The Commission addresses these comments in section VII.A.

[44] NPRM, 88 FR 24730.

[45] *See* NPRM, 88 FR 24728 (inviting comments on free trials); *id.* at 24729 (requesting comments on proposed annual reminder provision); *id.* at 24730 (inviting comments on conflicts with existing state requirements; *id.* (seeking comments on proposed material changes provision and exempted activities or entities); *id.* (inviting submissions of ''data, views, and arguments on the proposed amendments''); *id.* at 24732–33 (inviting comments on the impacts on small businesses, including any modifications to reduce costs or burdens for small entities); *id.* at 24734 (inviting comments on the Paperwork Reduction Act analysis). *See also id.* at 24730 (NPRM section XIII, Request for Comments).

[46] *See* 16 CFR 1.11(e).

[47] Unique public comments to the NPRM are available online. *See regulations.gov,* Negative Option Rule (NPRM), FTC–2023–0033–0001, *https://www.regulations.gov/document/FTC-2023-0033-0001.* The Commission published 1,162 unique comments. As explained at *regulations.gov,* agencies may withhold duplicate/near duplicate examples of a mass-mail campaign. *See* Gen. Servs. Admin., *Regulations.gov* Frequently Asked Questions, Find Dockets, Documents, and Comments FAQs, ''How are comments counted and posted to *Regulations.gov*?,'' *https://www.regulations.gov/faq.* The Commission cannot quantify the number of individuals or entities represented by the comments. The number of comments undercounts the number of individuals or entities represented by the comments because many comments, including those from different types of organizations, jointly represent the opinions or interests of many. Overall, the Commission received 16,612 comments. Of those, 15,449 were not posted online for various reasons (*i.e.,* 14 unrelated, 23 duplicates, and 15,412 that appear to be non-unique responses to mass media campaigns) and one comment was withdrawn. The Commission has considered all timely and responsive public comments it received in response to its NPRM.

[48] The FTC Act provides that ''an interested person is entitled to present his position orally or by documentary submission (or both).'' 15 U.S.C. 57a(c)(2)(A).

[49] 16 CFR 1.11(e).

[50] The six requesters were (1) International Franchise Association; (2) TechFreedom; (3) Performance Driven Marketing Institute; (4) NCTA—The Internet & Television Association; (5) Frontdoor; and (6) Interactive Advertising Bureau. All but one—TechFreedom—identified their interest in the proceeding either as industry groups or private companies.

[51] *See* Notice of Informal Hearing (''Hearing Notice''), 88 FR 85525, 85526 (Dec. 8, 2023).

[52] 88 FR 85526–27.

[53] The Hearing Notice also allowed interested persons to make additional written submissions. The following interested parties timely filed additional written submissions on December 22, 2023: (1) BSA—The Software Alliance; (2) PDMI; (3) U.S. Chamber of Commerce; (4) IAB; (5) NCTA; and two individuals. All filings related to the Hearing Notice are available online at *regulations.gov* at *https://www.regulations.gov/document/FTC-2023-0073-0001.*

NCTA renewed their requests to have the presiding officer designate disputed issues of material fact.[54] Following the hearing, Judge Foelak designated two disputed issues: (1) will the proposed rule have an annual effect on the national economy of $100 million or more?; and (2) what will the recordkeeping and disclosure costs associated with the proposed rule be? Judge Foelak held subsequent hearings on January 31, 2024, and February 14, 2024. She allowed post-hearing briefs filed by February 22, and February 28, 2024, respectively, and issued her recommended decision on April 12, 2024. Based on the evidence, the presiding officer found: (1) the proposed Rule will have an annual effect on the national economy of $100 million or more; and (2) there is insufficient evidence to make a finding regarding the size of the recordkeeping and disclosure costs associated with the proposed Rule.[55]

VII. Discussion of Final Rule

A. Legal Standard for Promulgating the Final Rule

As explained above in section II, the Commission promulgates the final Rule, 16 CFR part 425, pursuant to section 18 of the FTC Act, also known as Magnuson-Moss rulemaking (''Magnuson-Moss''). Under section 18 and the Commission Rules,[56] to promulgate a rule the Commission must: (1) issue a SBP with statements detailing: (a) the prevalence of the acts or practices treated by the rule; (b) the manner and context in which such acts or practices are unfair or deceptive; and (c) the economic effect of the rule, taking into account the effect on small business and consumers; and (2) ''define with specificity acts or practices which are unfair or deceptive.'' The Commission addresses these requirements in part A.1–2. In part A.3, the Commission addresses additional legal issues, including the ANPR's scope and the ''major questions'' doctrine.

1. Statements Required Under Section 18(d) of the FTC Act

(a) Statement Regarding Prevalence of the Acts and Practices Treated by the Rule

Under the Magnuson-Moss statute, the Commission may promulgate rules if it ''has reason to believe that the unfair or deceptive acts or practices which are the subject of the proposed rulemaking are prevalent.'' [57] An act or practice is ''prevalent'' if the FTC has previously issued cease and desist orders regarding the act or practice, or if ''any other information available to the Commission indicates a widespread pattern of unfair or deceptive acts or practices.'' [58] Based on the rulemaking record, the Commission has more than sufficient reason to believe unfair or deceptive acts and practices in the negative option marketplace are prevalent. These practices include: (1) material misrepresentations made while marketing using negative option features to induce consumers to enter into negative option programs; (2) failure to provide important information about material terms prior to billing consumers; (3) lack of informed consumer consent; and (4) failure to provide consumers with a simple cancellation method, including failure to honor cancellation requests, refusal to provide refunds to consumers who unknowingly enrolled in programs, denying consumers refunds, forcing them to pay to return the unordered goods, requiring consumers to cancel using a more difficult method than the one used to sign up for the program, and forcing consumers to contend with multiple upsells before allowing cancellation.[59] These practices cause consumer harm by luring consumers into purchasing goods and services they do not want, or ensnaring consumers into unwanted recurring payments that are difficult or impossible to cancel.

The Commission relies on substantial evidence in the record showing a widespread pattern of unfair or deceptive conduct in the negative option marketplace. This evidence generally falls into three categories: State, private, and Federal actions (including administrative and Federal court FTC law enforcement actions); consumer complaints and comments; and studies. The Commission discusses each in turn below.

Federal, State, and Private Actions. As discussed in the ANPR and NPRM, the volume of enforcement efforts in recent years seeking to stem illegal negative option marketing is significant. These matters involve a range of deceptive and unfair practices, including: failure to adequately disclose the existence of negative options, including after the expiration of free trials; enrollment without consumer consent; and inadequate or unnecessarily burdensome cancellation and refund procedures. The FTC itself has brought at least 35 such cases in the years since ROSCA was enacted.[60] The Consumer Financial Protection Bureau (''CFPB'') also has brought many of its own negative option cases.[61] Truth in Advertising, Inc. (''TINA''),[62] a consumer advocacy organization, stated in 2019 that more than 100 Federal class actions involving various negative option terms and conditions have been filed since 2014. Notwithstanding these actions, according to TINA, ''the incidence of deceptive negative option

[54] Subsequently, IFA also asserted there were disputed issues of material fact regarding the impact to both small businesses and their consumers. IFA, FTC–2024–0001–0009.

Cal. 2015); *CFPB* v. *Affinion Group Holdings, Inc.,* No. 5:15–cv–01005 (D. Conn. 2015); *CFPB* v. *Intersections Inc.,* No. 1:15–cv–835 (E.D. Va. 2015). Notably, the CFPB has independent authority to enforce FTC rules, and both agencies share some overlapping jurisdiction. *See* 12 U.S.C. 5581(b)(5)(B)(ii).

[62] TINA, FTC–2019–0082–0014 (cmt. to ANPR, *https://www.regulations.gov/comment/FTC-2019-0082-0014*) and FTC–2023–0033–1139 (cmt. to NPRM).

offers continues to rise.'' [63] TINA also reports that deceptive negative options ''have only continued to grow'' since its 2019 comment.[64]

Several state Attorneys General [65] also referenced dozens of enforcement actions taken in recent years to address the proliferation of deceptive negative option practices they regularly encounter, including the ''lack of informed consumer consent, lack of clear and conspicuous disclosures, failure to honor cancellation requests and/or refusal to provide refunds to consumers who unknowingly enrolled in plans.'' [66] These agencies explained their actions ''demonstrate that problems persist in this area and that additional regulatory action is needed.'' [67] For example, over the last decade, New York alone has reached 23 negative option settlements involving a variety of products and services such as membership programs, credit monitoring, dietary supplements, and apparel.[68] They also described several multi- and individual state law enforcement actions involving negative option offers for products and services such as satellite radio, social networking services, language learning programs, security monitoring, and dietary supplements. They further recounted numerous, illustrative complaints from consumers who ordered what they thought were free, no-obligation samples but then found themselves enrolled in costly continuity programs.[69]

Additionally, the State AGs outlined several ongoing investigations into deceptive or unfair negative option programs since 2019. These investigations include allegations of misrepresenting offers as free when they were not; and failure to clearly and conspicuously disclose negative option features.[70]

Additionally, consumer advocacy organizations and others explained that the widespread prevalence of deceptive acts and practices underscores the ''ongoing need for [S]tate engagement to limit negative option abuses.'' [71] Several commenters observed that more than half of States specifically regulate some aspect of negative option marketing.[72] A group of law professors explain this ''ongoing engagement just shows that unscrupulous negative-option business models remain such a problem that [S]tates *increasingly* find themselves needing to step in.'' [73]

Consumer Complaints and Comments. The FTC receives tens of thousands of complaints about negative options each year through its Sentinel complaint database, and marketers receive many more as demonstrated by evidence in FTC cases.[74] Additionally, TINA explained that negative options are one of its top complaint categories. These complaints usually involve consumers who unwittingly enroll in programs and then find it difficult or impossible to cancel.[75]

Moreover, hundreds of consumer comments detailed specific practices (discussed more thoroughly in connection with the section-by-section analysis below) demonstrating the prevalence of unfair or deceptive negative option practices. Likewise, comments from public interest and consumer advocacy groups further describe existing deceptive or unfair practices prevalent in the negative option marketplace. For example, Berkeley Consumer Law Center explained businesses regularly use dark patterns [76] to facilitate enrollment in subscription-based products and inhibit cancellation, and provided numerous examples of these activities.[77] A group of law professors referenced the burgeoning industry offering to help consumers identify and cancel their unwanted subscriptions. As they explained: ''One might expect that, if consumers experienced the marketplace as one in which they are adequately informed of recurring payments and readily able to cancel them, there would not be an emerging industry to help them do just that.'' [78]

Members of Congress also detailed ongoing problems in this area. Citing the increase in consumer complaints and consumer harm in recent years, Representative Takano stated, ''deceptive online marketing and unclear recurring payment plans are leaving too many consumers on the hook for products they may not want or even know they purchased.'' [79] Representatives Schiff and Norton noted their constituents' desire for greater protections in the negative option marketplace, stating the ''proposed updates will help put the consumers

[65] Several State Attorneys General offered comments to the ANPR (FTC–2019–0082–0012 (State Attorneys General cmt. to ANPR, *https://www.regulations.gov/comment/FTC-2019-0082-0012*)), and additionally 26 Attorneys General for the States of Alabama, Arizona, California, Colorado, Connecticut, Delaware, District of Columbia, Hawaii, Illinois, Maine, Maryland, Massachusetts, Michigan, Minnesota, Nebraska, Nevada, New Jersey, New York, North Carolina, North Dakota, Oklahoma, Oregon, Pennsylvania, Vermont, Washington, and Wisconsin (''State AGs'') filed comments in response to the NPRM. *See* State AGs, FTC–2023–0033–0886 (cmt. to NPRM).

[66] NPRM, 88 FR 24720; State Attorneys General (ANPR), FTC–2019–0082–0012. They further explained the nature of the underlying products often fails to alert consumers of their enrollment in a negative option program. For instance, many offers involve credit monitoring or anti-virus computer programs costing less than $20 a month and have no tangible presence for consumers. The State AGs explained consumers are often unaware of having ordered these products, never use them, and never notice them on their bills. The State AGs further explained these transactions often pull consumers into a stream of recurring payments by obtaining credit card information to ostensibly pay for a small shipping charge. Consequently, they commented many consumers have been billed for such services for years before discovering the unauthorized charges. *Id.*

back in control of their purchases and subscriptions.'' [80]

Studies. Finally, ''studies cited by commenters confirm a pattern of consumer ensnarement in unwanted recurring payments.'' [81] A Better Business Bureau study of FTC data, titled ''Subscription Traps and Deceptive Free Trials Scam Millions with Misleading Ads and Fake Celebrity Endorsements,'' demonstrated complaints about free trials doubled between 2015 and 2017, with complaints during the period reaching nearly 37,000.[82] The BBB study shows consumer losses in FTC ''free trial offer'' cases exceeded $1.3 billion (over the ten years covered by the study).[83] A group of consumer and public interest advocacy organizations, including the National Consumers League [84] stated that, according to the BBB, the average consumer loss for a free trial is $186.[85]

Referring to another survey conducted in 2016, TINA noted unwanted fees associated with trial offers and automatically renewing subscriptions ranked as ''the biggest financial complaint of consumers.'' [86] Similarly, TINA noted the FBI's internet Crime Complaint Center recorded a rise in complaints about free trial offers, growing from 1,738 in 2015 to 2,486 in 2017.[87] A 2019 *Bankrate.com* survey cited by NCL found that 59% of consumers have been signed up ''against their will'' for ''free trials'' that automatically converted into a recurring payment.[88]

NCL and others also cited a 2017 national telephone survey commissioned by *CreditCards.com* finding 35% of U.S. consumers have enrolled in at least one automatically renewing contract without realizing it.[89] In response to the NPRM, the Public Interest Groups cited more recent studies confirming the continued prevalence of harms from deceptive and unfair negative option practices. For instance, consumer groups referenced a 2022 study, which concluded ''on average, consumers pay two-and-a-half times what they originally estimated on monthly subscriptions, likely due to the lack of adequate notice from sellers.'' [90] They also noted burdensome cancellation procedures remain rampant. ''One survey found that more than half of respondents reported it took an average of three months to cancel unwanted recurring payments.'' [91] That same study reported 71% of individuals lost more than $50 a month in unwanted subscriptions. Another study concluded consumers underestimate how much they pay to maintain their subscriptions by an average of $133/month (or $1,596 per year), and 42% of the consumers had forgotten about a subscription for which they continued to pay.[92]

Finally, TINA also noted a consumer survey by the Washington Attorney General's office finding ''59% of Washingtonians (3.5 million residents) may have been unintentionally enrolled in a subscription plan or service when they thought they were making a one-time purchase.'' [93] TINA contended this is ''consistent with'' the 2022 Bankrate survey finding more than half of U.S. adults experience unwanted charges from a subscription or membership.[94] These findings are further supported by a Chase Bank study in 2021 finding nearly three-quarters of Americans waste more than $50 a month on unwanted subscription fees.[95]

Despite the robust evidence that unfair or deceptive practices are exceedingly prevalent, several trade organizations challenged the Commission's proposed prevalence determination. However, their arguments, as discussed below, are not persuasive.

First, they argued the Commission must show prevalence in a specific industry in order to regulate negative option practices in that industry, but the Commission failed to do so. For instance, NCTA asserted there is no evidence of widespread deceptive negative option practices in the broadband, cable, or voice industries warranting regulation.[96] Other commenters argued the Commission must identify the prevalence of a specific deceptive or unfair act to warrant regulating that specific act or practice under Section 18. For instance, IAB, NCTA, TechNet, and TechFreedom argued the Commission failed to show prevalence of misrepresentations about the underlying product or service in connection with negative option contracts. Similarly, three commenters argued the Commission should limit the scope of the Rule to business-to-consumer transactions and exclude business-to-business (''B2B'') transactions, in part, because the Commission failed to show ''the prevalence of harms created by automatically-renewing subscriptions entered into in the business-to-business context.'' [97]

As demonstrated above, however, there is ample evidence in the record demonstrating the prevalence of the specific unfair and deceptive practices across numerous sectors of the economy, which the Commission now addresses in an industry-neutral fashion.[98] Moreover, nothing in Section 18 requires the Commission to find prevalence regarding a specific industry or group.[99] The Commission need only

find ''some basis or evidence'' demonstrating the practice the Commission seeks to regulate ''does indeed occur.'' [100] Such evidence exists here in abundance. As NCTA itself pointed out, individual consumers complained of deceptive and unfair practices in its members' industries.[101] Further, ''consumer subscription models are rapidly growing in popularity,'' [102] and there is evidence of the proliferation of negative option features in virtually every industry.[103] The harms outlined here resulted from the negative option transaction itself, and many businesses, regardless of industry, are incentivized to continue to leverage negative options to the possible detriment of consumers.[104] The Commission also declines to limit the scope of the final Rule by excluding business-to-business transactions. As explained in Section VII.B.1, the Commission has a long history of protecting businesses, particularly small business, in their role as consumers; the practices and harms described here impact these consumers, as well.

(b) The Manner and Context in Which the Acts or Practices Are Unfair or Deceptive

Pursuant to Section 18 and the Commission's Rules, the Commission must also state the manner and context in which the prevalent acts or practices are unfair or deceptive. The record demonstrates consumers are often lured into enrolling in negative option programs through seller misrepresentations about material facts—for instance, when a seller offers a product for ''free'' when it is not.[105] Additionally, sellers misrepresent other aspects of the deal, such as product features, processing or shipping fees, billing information use, deadlines, consumer authorization, refunds, cancellations, among other facts.[106]

Sellers also often fail to disclose important information about the offer prior to billing the consumer. As detailed in the comments from, *inter alia,* State AGs and TINA, sellers fail to disclose in a clear and conspicuous manner the existence of the negative option feature, refund and cancellation deadlines, or other material terms of the agreement, resulting in consumers purchasing goods or services they do not want.[107] All of these unfair or deceptive acts are further supported in dozens of FTC, State AG, and class action cases.[108]

The record also demonstrates sellers fail to obtain consumers' express informed consent to the negative option feature before charging them. For instance, as detailed in representative consumer complaints from State AGs and several FTC cases, consumers are often unwittingly enrolled into recurring subscriptions with promises of no- or low-cost or discounted rates (not knowing that agreeing will result in subscription to a costly membership), with consumers not realizing the deceptive and unfair enrollment until they see unexpected charges, often after several billing cycles.[109]

Finally, substantial record evidence shows sellers often fail to provide a simple cancellation method. If consumers cannot easily leave a negative option program when they wish, the negative option feature is merely a means of charging consumers for goods or services they no longer want. Commission cases, the Sentinel complaint database, and State Attorneys General's complaints all show sellers often use difficult and cumbersome cancellation mechanisms to prevent or curtail cancellations.[110] This fact is further corroborated by studies discussed above.[111]

[100] *Pennsylvania Funeral Dirs. Ass'n, Inc.* v. *FTC,* 41 F.3d 81, 87–88 (3d Cir. 1994) (holding the FTC did not need ''substantial, rigorous, quantitative studies'' or to show the practice occurs in a certain percentage of transactions through the country to find prevalence). ''Further, even where there is a limited record as to the prevalence of a practice on a nationwide basis or where the data reviewed only relates to a few states, the practice can be found to be prevalent enough to warrant a regulation.'' *Id.* at 87.

[111] Section VII.A.1.a.

(c) Statement as to the Economic Effect of the Rule

Finally, pursuant to section 18 and the Commission's Rules, the SBP must include a statement regarding the economic effect of the Rule. As part of these rulemaking proceedings, the Commission solicited and received comments on the economic impact of the proposed Rule. In issuing the final Rule, the Commission has carefully considered the comments and other information received as well as the costs and benefits of each provision, as discussed in more detail in section X, Final Regulatory Analysis. That analysis demonstrates the benefits of the Rule far exceed the costs. Benefits were evaluated on a per-cancellation basis; that is, the analysis assumes the primary consumer benefit of the Rule will come in the form of faster cancellations. Costs were evaluated primarily to reflect resources spent by businesses to review and come into compliance with the Rule. The overall net benefit of the Rule is estimated to exceed $5.3B (and could be as much as $49.2B) over the first 10 years (in 2023 dollars).

2. Magnuson-Moss Specificity Requirement

Pursuant to Magnuson-Moss, the Commission must also define with specificity acts or practices which are unfair or deceptive and either prohibit those activities or establish rules to prevent them. The Commission has done just that, despite some commenters' arguments to the contrary. Specifically, IAB and others[112] argue the provision prohibiting material misrepresentations fails to define claims that fall within its scope, and therefore, ''fails to identify covered acts with the requisite level of specificity.''[113]

First, section 18 does not require the Commission to define claims with specificity, only acts or practices. The practice of misrepresenting the material facts of a transaction, for instance, is a deceptive practice, but could vary depending on the transaction's terms. Requiring the Commission to identify particular claims would make its rules no better than a leaky sieve, unable to effectively address consumer harm.

Second, the NPRM and the final Rule do define with the requisite specificity the unfair or deceptive negative option acts and practices covered by the Rule.[114] While those critical of the proposed Rule cite to *Katharine Gibbs School* v. *FTC,* 612 F.2d 658 (2d Cir. 1979), this case is inapposite. In *Katharine Gibbs School,* the Second Circuit held the Commission failed to connect elements of its trade regulation rule to specifically defined unfair or deceptive acts or practices. The opinion held the Commission may not merely set requirements and then define failure to meet those requirements as unfair or deceptive acts or practices. The Commission must instead identify some underlying deceptive or unfair conduct and connect the rule requirements to that conduct.

In contrast here, the Commission specifically identified misrepresentation of material facts as a deceptive practice, and defined the term ''material'' with the same meaning it has under Section 5 of the FTC Act.[115] Moreover, the misrepresentations provision goes further, providing categories of potentially material facts to assist the marketplace in understanding the provision and supporting those examples with cases.[116] Thus, the final Rule's prohibition against material misrepresentations is not only connected to underlying deceptive or unfair conduct, but in fact prohibits that very conduct.

3. Other Legal Issues

Several commenters raised additional challenges to the Commission's ability to promulgate the Rule. These challenges fall into two categories. First, some commenters argued the Commission failed to give adequate notice of the scope of the proposed amendments to the Rule in the ANPR in accordance with Section 57a(b)(2)(A) of the FTC Act. Second, four commenters argued the Commission exceeded its grant of Congressional authority under the ''major questions'' doctrine. The Commission addresses each argument below.

(a) ANPR

Several commenters asserted the ANPR, issued in 2019, failed to provide adequate notice of the acts and practices to be covered by the proposed Rule. Specifically, ESA, USTelecom, RILA, a coalition of trade associations, Chamber, CCIA, IAB, and NRF argued the ANPR failed to provide notice the proposed Rule would cover misrepresentations of all material facts; would require express informed consent to opt-in to receive a save;[117] and would require an annual reminder.[118] Thus, according to these commenters, including these provisions in the final Rule would violate Section 18(b)(2)(A). They further argued the lack of these topics' inclusion in the ANPR meant that affected entities had inadequate opportunity to provide input, leading to an inadequate rulemaking record.[119]

These arguments, however, are unpersuasive. Section 18 imposes no requirement the ANPR have the level of specificity the commenters demand. In fact, the statute only says the ANPR must include ''a brief description of the area of inquiry under consideration, the objectives which the Commission seeks to achieve, and possible regulatory alternatives under consideration by the Commission.''[120] The Commission included a discussion of each of these topics in the ANPR.[121] Moreover, the affected entities have had the chance to raise concerns with the Rule in their comments to the NPRM, which the Commission has considered and responded to in this Statement of Basis and Purpose.

(b) Major Questions Doctrine

Four commenters asserted the Rule implicates the ''major questions'' doctrine.[122] According to the Supreme Court, the major questions doctrine is implicated in ''extraordinary cases . . . in which the history and the breadth of the authority that the agency has

[121] ANPR, 84 FR 52393; *see also id.* 52396–8 (Request for Comments); Section VII.B.3.b.1 (discussing ANPR in context of § 425.3).

[122] PDMI, FTC–2023–0033–0864; ACT App Association, FTC–2023–0033–0874; Coalition, FTC–2023–0033–0884; Chamber, FTC–2023–0033–0885.

asserted, and the economic and political significance of that assertion, provide a reason to hesitate before concluding that Congress meant to confer such authority.'' [123] Citing this authority, the commenters argue Congress only granted the FTC ''limited and tailored authorities to regulate certain mediums and types of negative option marketing, but not all mediums and types as the NPRM encompasses.'' [124] Further, they assert Congress never intended for the Commission to create a comprehensive regulatory scheme for negative option marketing that encompasses the variety of requirements proposed in the NPRM. Because negative option programs play an ever-increasing role in the economy, these commenters claim the proposed Rule would ''dramatically alter'' how companies structure their subscription services.[125] More specifically, they assert the prohibition against misrepresentations, together with the ability to seek civil penalties in Federal court, would expand the FTC's authority beyond that envisioned by Congress.

However, far from exceeding Congressional intent, the Rule merely effectuates that intent in a way wholly consistent with the specific requirements set forth in Section 18 of the FTC Act. Specifically, Congress explicitly authorized the Commission to prescribe ''rules which define with specificity acts or practices which are unfair or deceptive acts or practices in or affecting commerce (within the meaning of such section 5(a)(1)),'' which ''may include requirements prescribed for the purpose of preventing such acts or practices.'' [126] As demonstrated below, each of the Rule's provisions identifies specific deceptive or unfair acts or practices that are prevalent throughout the marketplace and ties each Rule provision tightly to those findings.

As the Supreme Court explained, courts use the ''major questions doctrine'' when examining ''extraordinary cases'' where agency action would ''make a radical or fundamental change'' to a statutory scheme and assert ''extravagant'' authority over the national economy through ''ambiguous statutory text,'' citing ''modest words,'' ''vague terms,'' ''subtle device[s],'' or ''oblique or elliptical language.'' [127] Here, no such extraordinary circumstance exists. The prohibitions and disclosures in the Rule do not effect a major change in the economy. In fact, all the substantive requirements in the Rule are already extant under section 5 of the FTC Act, ROSCA, or the TSR. Moreover, the Rules' terms, as explained below, are neither vague, oblique, or elliptical—in fact, if anything, they are clearer than the legal authority just cited.

B. Discussion of Specific Rule Provisions, Section-by-Section Analysis

Below, for each provision of the proposed Rule, the Commission reviews the provision, summarizes comments received in response, and sets forth the final Rule with an analysis of the comments and other record evidence.

1. Proposed § 425.1 Scope

The Commission proposed eliminating the old Rule's prescriptive requirements applicable to prenotification plans and replacing them with flexible, but enforceable, standards. The proposed requirements would apply to all forms of negative option marketing, including prenotification and continuity plans, automatic renewals, and free trial offers.[128] The expanded coverage would establish a common set of requirements applicable to all types of negative option marketing. The proposed Rule would cover offers made in all media, including internet, telephone, in-person, and printed material, and would apply to all ''negative option sellers.'' With certain exceptions, not applicable here, the FTC Act provides the agency with jurisdiction over nearly every economic sector.[129]

(a) Negative Option Seller

(1) Comments

The scope of the proposed Rule covered ''negative option seller,'' defined to mean ''the person selling, offering, promoting, charging for, or otherwise marketing goods or services with a negative option feature.'' Several commenters raised concerns regarding the scope of this definition.

The Chamber, for example, suggested the Commission delete the term ''promoting'' from the definition.[130] It cited a wide variety of actors who could be swept in by the term, including ''advertising companies, web designers, [and] entities in the supply chain,'' who ''may not actually play an active role in determining'' what consumers see and hear about negative option programs.[131] An individual business commenter also criticized the term, saying to include ''promoting'' ''would potentially burden our technicians and our business when we provide service for equipment manufacturers that have their own service contract programs.'' [132]

ETA, representing the payments industry, addressed the words ''charging for'' in the definition.[133] ETA interpreted those words not to cover ''intermediaries, such as payment processors, that merely effect the transfer of funds from the consumer buyer to the merchant seller resulting from a negative option feature.'' [134] ETA noted that payment intermediaries typically ''do not control the terms of the negative option feature and do not control the interface with the consumer buyer.'' [135] ETA therefore suggested the final Rule ''include an express exemption for payment processors and other intermediaries.'' [136]

Other commenters, while not specifically criticizing the definition of negative option seller, raised concerns about the scope of the proposed Rule where third parties are involved in marketing and cancellation. For example, several suggested the Rule exempt a seller who contracts with a third party for subscription enrollment, management, or cancellation services.[137] PDMI argued, ''it is

[123] *West Virginia* v. *EPA,* 597 U.S. 697, 721 (2022) (internal quotations cleaned up). *Accord Biden* v. *Nebraska,* 143 S. Ct. 2355, 2372 (2023).

[124] Coalition, FTC–2023–0033–0884.

[125] *See, e.g.,* PDMI, FTC–2023–0033–0864.

[126] 15 U.S.C. 57a(a)(1)(B).

[127] *West Virginia* v. *EPA,* 597 U.S. at 723 (cleaned up).

[128] The proposed Rule stated it applied to any form of negative option plan. Because ''negative option plan'' was a defined term in the old Rule specifically referring to prenotification plans, the Commission modifies the scope to apply to any form of ''negative option program.''

[129] Certain entities or activities are wholly or partially exempt from FTC jurisdiction under the FTC Act, including most depository institutions, charities, transportation and communications common carriers, and the business of insurance. Under Sections 4 and 5 of the FTC Act, however, the Commission's jurisdiction extends to companies organized to carry on business for their own profit or that of their members, even if those companies are organized under state law as a not-for-profit entity. *See California Dental Ass'n* v. *FTC,* 526 U.S. 756 (1999). *But see* n.151.

[130] Chamber, FTC–2023–0033–0885.

[132] Individual commenter, FTC–2023–0033–1136.

[133] Electronic Transactions Association (''ETA''), FTC–2023–0033–1004.

[134] *Id.*

[135] *Id.*

[136] *Id.* IHRSA noted health and fitness membership charges are typically processed on a monthly basis from the time of agreement, and in many cases by a third-party service provider. IHRSA, FTC–2023–0033–0863.

[137] NCTA asserted, ''The proposed rule also fails to account for third-party sign-up arrangements. For example, programmers have arrangements with Roku, Amazon, Apple, and others that allow consumers to sign up through these third parties for their streaming services.'' NCTA, FTC–2023–0033–0858. N/MA suggested the Commission ''should make clear that when a sale with a negative option feature is made through a third party that controls the process of purchasing and/or cancelling a subscription with a negative option feature, any new requirements would apply to the third party only, and not to the company that fulfills the

imperative that the Proposed Rule exempt sellers from compliance with those provisions that are not under their direct control . . . [and] should also exempt the seller from any misrepresentations made by a third-party platform.'' [138] NRF expressed concern a careful retailer could still ''face steep financial penalties for negligent misrepresentations (concerning, *e.g.,* product efficacy) based on information provided by third-party vendors.'' [139]

(2) Analysis

Based on the record, the Commission revises the definition of ''negative option seller'' to remove the word ''promoting,'' but declines to create status-based exemptions.[140] Moreover, the Commission clarifies it will enforce the final Rule in accordance with established section 5 principles regarding parties' responsibilities for, and involvement in, relevant activity. This approach should fully address commenters' concerns while maintaining the Rule's consumer protections.

As several commenters observed, a wide variety of actors may have secondary or tertiary roles in promoting products or services with a negative option feature. Further, as the Chamber noted, ''many of those participants . . . may not actually play an active role in determining how the negative option is presented to the consumer.'' [141] Similarly, participants in the promotion process may have no role in cancellation. Deleting the word ''promoting'' from the definition of negative option seller addresses this issue by ensuring those who have no active participation in the negative option feature are outside the Rule's coverage. However, this amendment does not mean all actors involved in promotion are exempt from the Rule. A participant who promotes and takes on a further role ''selling, offering, charging for, or otherwise marketing goods or services with a negative option feature'' remains subject to the final Rule, including the provisions covering ''promoting'' such goods or services for those who meet the negative option seller definition.[142]

The Commission declines to adopt a status-based exemption for payment intermediaries. Such exemptions are overbroad, excluding actors engaged in the practices condemned by the Rule. For example, a payment processor selling its own services on a negative option basis, as opposed to just providing payment services for another negative option seller, is no different than any other business covered by the Rule. Additionally, as ETA correctly noted, the words ''charging for'' as used in the Rule do not cover intermediaries merely effecting the transfer of funds from the consumer buyer to the merchant seller. This is consistent with the Commission's interpretation of ROSCA's coverage of persons who ''charge or attempt to charge any consumer.'' [143] Based on longstanding section 5 principles, the Commission has not enforced ROSCA against payment intermediaries solely for their conduct in effecting funds transfers.[144] The Commission will apply the same principles to the Rule.[145]

Similarly, the Commission will not grant blanket exemptions to sellers who contract with third parties while offering subscription services. The Commission expects negative option sellers to evaluate their commercial relationships with the Rule's provisions in mind. Even where a seller does not directly manage its negative option feature disclosures, consent, or cancellation, it can satisfy its obligations under the Rule by choosing to contract with third parties who act in accordance with the Rule and monitoring those parties' performance. An exemption for all sellers who contract with third parties to manage aspects of their negative option programs would effectively nullify the Rule by incentivizing less than legitimate sellers to contract with actors engaged in deceptive practices to maximize negative option enrollments and frustrate cancellation with impunity. A seller cannot evade its responsibility to deal honestly with consumers by contracting with a third party who does not.[146]

(b) Insurance

(1) Comments

Several commenters asked the Commission to expressly exclude insurance and State-regulated service contracts from the Rule.[147] They argued Congress prohibited the FTC from regulating the ''business of insurance'' in section 2 of the McCarran-Ferguson Act and the FTC exempted insurance sales in its Cooling-Off Rule.[148] They also asserted, ''State regulations in every jurisdiction require an insurer to give notice of a policy renewal,'' and State rules prohibit negative options.[149] Other commenters argued the Commission should exempt all service contract providers from the Rule due to existing State laws and regulations,[150] regardless

subscription.'' N/MA, FTC–2023–0033–0873. Marketplace Industry Association (''MIA'') requested ''the Commission clarify that where there are third-party payment platforms managing Subscriptions on behalf of businesses . . . (collectively, ''Third Party Subscription Managers''), that such Third Party Subscription Managers be legally responsible and legally liable for compliance with the proposed Rule. As is the case with Third Party Subscription Managers, businesses that offer Subscriptions have zero control over such Subscriptions, including the initiation of Subscriptions or the cancellation of Subscriptions. Said another way, it is impossible for businesses to comply with the proposed Rule where there are Third Party Subscription Managers. As such, the Association requests that the Commission make clear that Third Party Subscription Managers be responsible for compliance with the proposed Rule, including any penalties for noncompliance.'' (''Frontdoor''), FTC–2023–0033–0862 (noting majority of states have rigorous laws

Continued

of whether they are engaged in the ''business of insurance'' within the meaning of the McCarran-Ferguson Act.

(2) Analysis

The Commission declines to exempt insurance or service contracts from the Rule. The final Rule can be enforced by the Commission only against covered persons and activities within the Commission's jurisdiction.[151] Restating or further specifying each jurisdictional limit in the final Rule's text, therefore, is not necessary.

Additionally, the requested industry-wide exemption is considerably broader than the FTC's jurisdictional limitations. The McCarran-Ferguson Act does not exempt entities engaged in the business of insurance from the Commission's jurisdiction unless such entities are subject to State regulation.[152] Moreover, activities of entities within the insurance industry that are beyond the scope of the ''business of insurance'' are subject to the Commission's jurisdiction.[153] No commenter provided any compelling reason to exempt these otherwise covered activities from the Rule.

Finally, commenters' citations to existing State laws and regulations governing service contract sellers indicate these sellers already provide disclosures and protections consistent with the Rule. As a practical matter, sellers who already provide consumers the Rule's protections should not be burdened by its application.[154]

(c) Business-to-Business

(1) Comments

Nine commenters noted the NPRM did not expressly address whether the proposed Rule would apply to business-to-business (''B2B'') transactions. Seven, including five industry associations,[155] said it should not apply.[156] Two individuals disagreed.[157]

Commenters advocating against including B2B sales in the Rule asserted the Commission should presume businesses are more sophisticated than individual consumers,[158] and contended B2B contracts typically are individually negotiated.[159] For example, ZoomInfo maintained business consumers are generally ''more sophisticated than individual consumers,'' explaining B2B contracts ''are assumed to result from arm's-length negotiation and often benefit from professional legal counsel.'' [160] Similarly, NCTA, an organization representing the internet and television industry, characterized business consumers as ''typically sophisticated,'' and said the Commission should not intervene in transactions based on ''[n]on-form contracts that are the subject of extensive bargaining between sophisticated companies.'' [161]

Seller and consumer commenters differed on whether the harmful negative option practices discussed in the NPRM are extant for B2B consumers. In support of excluding B2B transactions, two commenters asserted there is insufficient evidence of harm in the B2B context to support a prevalence finding.[162] A B2B consumer, however, noted individuals and small businesses both suffer from the harms of deceptive and unfair negative option practices. ''As a small business owner,'' the individual wrote, ''as well as a consumer, I am especially aware of how purposely difficult many companies make it to cancel their services. From telephone companies to travel channel companies . . . to email targeting campaigns . . . the cancelling process is ridiculously complex and at times hidden, if it exists at all on their websites.'' [163]

Seller and consumer commenters also differed on the significance of existing State law B2B exclusions. Three B2B sellers recommended the Commission follow those States that exclude B2B transactions.[164] A consumer, however, asserted such exclusions are why this Rule is necessary.[165] Specifically, the commenter explained: ''negative option marketing also greatly affect[s] many individual sellers and small businesses,'' but due to B2B exclusions, ''some larger corporations or companies are able to take advantage of that loophole and use predatory negative option practices against individual sellers and small businesses.'' [166]

Some sellers also referred to other Federal regulations to support excluding businesses from the scope of the Rule. For instance, ETA and NCTA each noted the Commission excluded most B2B transactions in the TSR. ETA made the same observation about the Cooling Off Rule.[167] Both CTIA and USTelecom approvingly cited the FCC's approach. USTelecom explained, ''the FCC has limited certain consumer protection rules to 'mass-market retail services' '' that are '' 'marketed and sold on a standardized basis to residential customers, small businesses, and other end-user customers such as schools and libraries.' '' [168] USTelecom further explained, ''Mass-market retail services stand in contrast to 'customized or individually negotiated arrangements' that are typically offered to larger organizations.'' [169]

ETA questioned whether the Commission has authority to address B2B transactions. ETA argued the proposed Rule would let the Commission ''interpose regulatory influence and law enforcement authority in contractual arrangements between businesses in a way that has not been authorized by Congress or

---

for the offering, sale, and renewal of home service contracts, including the use of automatic renewals and applicable cancellation rights).

[151] Nothing in this Rule, however, shall limit another agency's ability to enforce this Rule within its own statutory authority, even if that authority is different than the FTC's authority. *See, e.g.,* 12 U.S.C. 5581(b)(5)(B)(ii).

[152] *FTC* v. *IAB Mktg. Assocs. LP,* 746 F.3d 1228, 1235 (11th Cir. 2014) (''[T]he FTC Act applies to the business of insurance only to the extent that such business is not regulated by state law.'').

[153] The Supreme Court has explained that, under the McCarran-Ferguson Act, a three-part factual inquiry is necessary to evaluate whether any particular activity constitutes the business of insurance. *See Union Labor Life Ins. Co.* v. *Pireno,* 458 U.S. 119, 129 (1982). First, does the activity have the effect of transferring or spreading a policyholder's risk; second, is the activity an integral part of the policy relationship between the insurer and the insured; and third, is the practice limited to entities within the insurance industry. *Id.* This inquiry requires a factual analysis of the activities in question.

[154] Moreover, service contract sellers, like other interested persons, may seek full or partial exemption from the final Rule. *See* Section VIII.A.1 (discussing new § 425.8, Exemptions provision).

justified by the Commission's own rationale for the Proposed Rule.'' [170] ETA cited the Commission's use of ROSCA in the *First American Payment Systems* case to illustrate its view the Rule's application in the B2B context would be impermissible regulation of ''an automatic renewal clause in an arm's length commercial agreement.'' [171]

Finally, ETA and ZoomInfo argued various provisions of the Rule, such as the disclosure and notice requirements, could present unusual implementation problems in B2B transactions. For instance, ETA asserted disclosure requirements could result in operational uncertainty because the Commission did not consider all the typical terms included in B2B agreements. Similarly, ZoomInfo explained ''B2B agreements are often complex, involving multiple decision-makers and points of contact, who might rotate or leave their roles over the course of a contract.'' [172]

(2) Analysis

The final Rule, like the proposed Rule, covers B2B transactions. It has been the Commission's longstanding view that section 5 of the FTC Act [173] protects business consumers as well as individual consumers. Moreover, commenters' arguments that, under section 5, all business consumers must be held to a heightened standard of sophistication are inconsistent with settled law.

The Commission has long enforced the FTC Act against those who deceive and act unfairly to businesses and other organizations.[174] As the Supreme Court explained in *FTC* v. *Standard Educ. Soc.,* 302 U.S. 112, 116 (1937), ''Laws are made to protect the trusting as well as the suspicious.'' This principle applies no less to the business consumer than to the individual.[175] The Commission maintains a decades-long list of business protection cases on its website and dedicates significant effort to educate and protect small businesses.[176] Indeed, the Commission has made protecting small businesses a priority.[177]

Moreover, the TSR never exempted B2B transactions entirely. Importantly, the Commission recently amended the TSR to cover a broader scope of B2B activity. Specifically, in 2024, the Commission expanded the TSR to prohibit material misrepresentations and false or misleading statements in B2B calls due to the ongoing harm to small businesses from such practices.[178]

Additionally, recent Commission actions to protect small businesses underscore the fact deceptive practices pertaining to negative option features occur in B2B transactions just as they do with individual consumers. None of these cases present the arms-length negotiation of contracts by sophisticated parties that commenters claim to be universal. For example, in its 2022 action against *First American Payment Systems,*[179] the Commission alleged the defendants violated section 5 and ROSCA by making false claims about fees and cost savings to persuade merchants in small- and medium-sized businesses, many of whom had limited English proficiency, to enter into payment processing agreements.[180] Once enrolled, the defendants allegedly withdrew funds from merchants' accounts without consent, and made it difficult and expensive to cancel the service. Under a stipulated court order, the defendants must (among other things) make it easier for merchants to cancel their services.

In the Commission's 2022 *Dun & Bradstreet* [181] matter, the complaint alleged multiple deceptive practices pertaining to products the defendant marketed to small- and medium-sized businesses, in violation of section 5. The resulting consent order includes substantial provisions pertaining to negative option features.

The Commission's 2022 action against *Vonage* [182] also illustrates this point. The complaint detailed the defendants' deceptive and unfair practices targeting both business and residential customers and alleged those practices violated section 5 and ROSCA.[183] The stipulated court order includes multiple provisions relating to consent, cancellation, and disclosures pertaining to both individual and business consumers.

Nonetheless, two arguments for excluding B2B transactions warrant additional discussion. *First,* several commenters elide the distinction between B2B agreements generally and individually negotiated B2B agreements. It is neither the purpose nor the effect of the final Rule to prevent businesses from entering into agreements with individually negotiated negative option terms. By requiring the cancellation mechanism to be ''at least as easy to use'' as the consent mechanism, the final Rule incorporates a symmetrical standard that accounts for individually negotiated B2B agreements. A B2B consumer who consents to a negative option feature through an individually negotiated term of an agreement can also individually negotiate the cancellation mechanism. Moreover, as the Commission noted above, it will enforce this Rule in the same manner in which it enforces section 5 of the FTC Act.[184] The Commission has not used its consumer protection authority in the type of large individually negotiated B2B transactions commenters are worried about.[185] Unsurprisingly, no commenter cited any historical instance to the contrary. Thus, the Rule preserves the ability of sophisticated business consumers to individually negotiate B2B agreement terms.[186]

The final Rule is less prescriptive and more flexible than that order,

Continued

Second, it appears several commenters mistakenly thought the required simple cancellation mechanism would necessarily terminate all aspects of any broader contract or agreement. In fact, this provision only pertains to cancellation of the negative option feature. Complex commercial agreements, such as those described by ETA, will have numerous provisions unrelated to negative option features. Nothing in this Rule prohibits these provisions from being subject to separate cancellation and termination terms.

2. Proposed § 425.2 Definitions

In the NPRM, the proposed Rule set forth several definitions. For example, the proposed Rule defined ''negative option feature'' as a contract provision under which the consumer's silence or failure to take affirmative action to reject a good or service or to cancel an agreement is interpreted by the negative option seller as acceptance or continuing acceptance of an offer. This definition is consistent with the TSR and ROSCA (which references the TSR's definition). The proposed term includes, but is not limited to, automatic renewals, continuity plans, free-to-pay conversion or fee-to-pay conversions, and pre-notification negative option plans.[187]

Additionally, the proposed Rule defined ''clear and conspicuous,'' ''negative option seller,'' and ''save.'' To define ''clear and conspicuous,'' the FTC imported its definition developed through years of enforcement experience. As explained in the NPRM, the proposed definition substantially overlaps with the concepts provided in California and District of Columbia negative option laws,[188] with one exception. Specifically, the District of Columbia definition requires disclosures to be visually proximate to any request for consumer consent. The final Rule incorporates this requirement in a separate consent section.

(a) Summary of Comments

The Commission did not receive any comments specifically supporting any proposed definition, though several commenters generally supported the concepts incorporated in the definitions, such as ''clear and conspicuous disclosures.'' Several commenters critiqued the Commission's omission of certain definitions, such as ''material'' in connection with § 425.3 and § 425.4,[189] ''simple cancellation mechanism,'' [190] ''practical,'' and ''normal business hours,'' [191] because these terms are used throughout the Rule. Other commenters asked the Commission to add a definition for ''consumer'' that excludes businesses,[192] while another asked the Commission to include small businesses in that definition.[193] Similarly, other commenters asked the Commission to ''exempt'' certain industries from, or otherwise alter the scope of, the definition of ''negative option seller.'' [194]

Several commenters critiqued the proposed definitions. For example, ESA stated ''the definition of 'save' [195] is overly broad and would prohibit the presentation of useful, consumer-friendly details about a consumer's subscription before they cancel it.'' [196] Other commenters questioned why the ''clear and conspicuous'' definitions says a disclosure is not clear and conspicuous, if a consumer must click on a hyperlink to see it.[197]

Additionally, several commenters requested the Commission revise certain of its proposed definitions for clarity. For instance, the National Federation of Independent Businesses (''NFIB'') asked the Commission to revise the definitions for ''clear and conspicuous'' and ''negative option feature'' to ''make their meanings clearer'' [198] by, for example, using simpler words in the clear and conspicuous definition (''words and grammar'' versus ''diction and syntax'') or by providing detailed examples of each type of program covered in the definition of negative option feature. NFIB further explained ''Those regulated by and served by subsection 425.2(d) most likely would understand the meaning of an automatic renewal, but perhaps not the meaning of the other examples.'' [199]

(b) Analysis

Based on the record, the Commission makes several changes to the proposed definitions. First, as explained in sections VII.B.1.3 (material) and VII.B.6.c.2.b.ii (interactive electronic medium), it adds definitions of material and interactive electronic medium for clarity. Further, as discussed in section VII.B.4, the Commission modifies the definition of clear and conspicuous.

Second, the Commission removes the definition of save. As discussed in section VII.B.6.c the proposed saves provision did not achieve the right balance between protecting consumers from unfair tactics and allowing sellers to provide necessary and valuable information about cancellation. Therefore, the Commission declines to include the NPRM's proposed limitation on saves, and instead will consider issuing an SNPRM in the future for

thereby promoting more flexibility in the marketplace.

[187] Section II of this Notice contains descriptions of these various plans.

[188] Cal. Bus. & Prof. Code section 17601 and DC Code section 28A–202.

[194] *See, e.g.,* Asurion, FTC–2023–0033–0878 (exempt service contracts); Chamber, FTC–2023–0033–0885 (exclude promoting); ETA, FTC–2023–0033–1004 (exclude ''charging for''). These requests are more appropriately addressed in the scope and requested exemptions, and the Commission does not consider them here.

[195] Save was defined in the proposed Rule as an attempt by a seller to present any additional offers, modifications to the existing agreement, reasons to retain the existing offer, or similar information when a consumer attempts to cancel a negative option feature.

[196] ESA, FTC–2023–0033–0867. PDMI argued similarly as to the definition of save. FTC–2023–0033–0864 (arguing sellers should be able to be able to immediately discuss pause, skip or modification options without having to ask for permission, particularly because it is impossible to know which customers prefer to cancel as opposed to merely modify their current plan). *Accord* USTelecom, FTC–2023–0033–0876 (definition of Save overly broad); RILA, FTC–2023–0033–0883 (modify definition of save to allow short clarification and confirmation of intent follow-up communications); Chamber, FTC–2023–0033–0885; CDI, FTC–2023–0033–0887 (''Commission should exclude information about permanent, irreparable harms that may result from cancellation, and is relevant to the current subscription or product plan.''); CCIA, FTC–2023–0033–0984; IAB, FTC–2023–0033–1000 (definition of save overly broad and ''would prohibit the presentation of useful, consumer-friendly details about a consumer's subscription before they cancel it.'').

[197] *See, e.g.,* NCTA, FTC–2023–0033–0858 (definition does not take into account small screens); Chamber, FTC–2023–0033–0885 (''The requirements that disclosure on the internet or mobile applications be 'unavoidable' and 'immediately adjacent' rase practical concerns.''); CCIA, FTC–2023–0033–0984 (definition should ''hew closely to the Commission's guidance in its *.com Disclosures* policy to ensure regulatory consistency.'').

[198] NFIB, FTC–2023–0033–0789. *Accord* Kuehn, FTC–2023–0033–0871 (proposed revised definition of negative option feature); Chamber, FTC–2023–0033–0885 (requests the definition of negative option feature to be revised to exclude monthly subscription services). *See* section VII.B.4 for further discussion of proposed modifications. *See also* ETA, FTC–2023–0033–1004 (clarify and narrow ''automatic renewal in the definition).

[199] NFIB, FTC–2023–0033–0789 (requesting specific examples of each type of program be included in the definition of negative option feature); *see also* IHRSA, FTC–2023–0033–0863 (observes the Commission does not define what ''automatic renewal, continuity plan'' and other examples of negative option features mean).

further comment. Accordingly, without the saves provision, the Commission determines there is no need for a defined term at this time.

Although several commenters critiqued the lack of definitions for such terms as ''simple cancellation mechanism,'' ''practical,'' or ''normal business hours,'' the Commission addresses these concerns with further clarification, rather than with formal definitions, in the section-by-section analysis below. As to commenter requests for a definition of ''consumer'' expressly excluding (or including) business-to-business transactions, the Commission similarly addresses these requests in the sections regarding scope and requested exemptions, above.

Finally, NFIB asked the Commission to add specific examples of each type of negative option program to the text of the Rule, stating those served by the Rule would likely not understand these ''terms of art.'' [200] The Commission discusses examples of each type of negative option program in more detail as part of the SBP at section II. Further, the Commission typically engages in robust consumer and business education campaigns when promulgating and issuing final rules and will do so here. The Commission therefore disagrees the Rule must incorporate these examples into the text.[201]

3. Proposed § 425.3 Misrepresentations

Section 425.3 of the proposed Rule prohibited sellers from misrepresenting ''any material fact related to the transaction, such as the negative option feature, or any material fact related to the underlying good or service.'' [202] As explained in the NPRM, ''misrepresentations in negative option marketing cases often involve deceptive representations not only related to the negative option feature but to the underlying product (or service) or other aspects of the transaction as well.'' [203] These include ''misrepresentations related to costs, product efficacy, free trial claims, processing or shipping fees, billing information use, deadlines, consumer authorization, refunds, [and] cancellation.'' [204]

The FTC Act provides the legal basis for the Commission to prevent and remedy misrepresentations in the negative option context. Specifically, section 5(a)(1) of the FTC Act declares unfair or deceptive acts or practices in or affecting commerce to be unlawful. Negative option sellers making material misrepresentations are engaged in deceptive practices. Addressing these practices through the Rule prevents deception by giving the Commission the ability to seek civil penalties (where appropriate under 5(m)(1)(a)), where they are not already provided, thus deterring misrepresentations, protecting consumers, and leveling the playing field for ''honest sellers who must compete with those who engage in deception.'' [205]

(a) Summary of Comments

The State AGs strongly supported this provision, stating, for example, it would ''combat[ ] seller misrepresentations, by providing the FTC with authority to seek civil penalties and consumer redress for material misrepresentations in all types of media.'' [206] Echoing the NPRM, they explained, ''[l]ike the FTC, we have found that negative option marketing cases 'often involve deceptive representations not only related to the negative option feature but to the underlying product (or service) or other aspects of the transaction as well.' '' [207]

Law Professors further supported prohibiting ''material misrepresentations . . . whether or not the false claim is exclusively about the negative option feature.'' [208] They, too, offered evidence of the prevalence of misconduct, stating ''entities like the Better Business Bureau have long reported, based on FTC and other data, the prevalence of misrepresentation in certain negative option arrangements, and non-FTC enforcement efforts confirm the problem.'' [209] Citing multiple sources, they argued the ''Commission thus has more than ample 'reason to believe that' co-occurring negative option violations and other misrepresentations 'are prevalent.' '' [210]

These commenters further argued the Commission should not adopt a narrower provision limited strictly to the elements of a negative option feature because, in their view, it would be difficult ''to fully separate misrepresentations regarding the negative option feature from all other material misrepresentations.'' [211]

Several commenters, largely trade groups and sellers, criticized the proposed provision. As discussed in section V.A, several questioned the prevalence of misrepresentations [212] and asserted the provision was not within the scope of the ANPR.[213] Additionally, several commenters argued the provision is overbroad, and suggested it is unnecessary in light of existing law. Finally, they proposed ways to narrow the proposed provision.

Several commenters objected to the scope of the proposed provision. Citing Commissioner Wilson's dissent to the NPRM, TechNet noted the proposed Rule ''would capture alleged misrepresentations regarding the underlying product or service 'wholly unrelated' to the negative option feature.'' [214] Three commenters asserted no current trade regulation rule

---

[214] TechNet, FTC–2023–0033–0869.

prohibits misrepresentations so broadly.[215]

Similarly on scope, some commenters also argued the proposed language lacked the specificity necessary to give sellers notice of what conduct would violate the Rule.[216] For example, ACT App Association asserted, ''Notwithstanding best efforts, tech startups' ability to flawlessly adhere to the vague and broad language used in this rule is unrealistic.'' [217]

A few commenters provided hypotheticals or asked rhetorical questions to illustrate concerns about the proposal's breadth. MIA, for example, stated, ''if a streaming service advertises, 'movies that you will love,' but you do not 'love' them, is that a violation of this rule subject to penalties? If a housekeeping service claims, 'great cleaning every time,' but the resulting cleanliness is not up to the consumer's 'standards,' will that trigger this provision and any resulting penalties?'' [218] The Chamber asked, ''[c]ould a privacy policy, for example, be considered a material representation covered under this requirement?'' [219]

Many of these commenters argued the reach of the proposed Rule would negatively impact consumers by discouraging negative option offerings. TechNet said, ''[f]or a variety of subscription services, the main drivers of consumer engagement are the subscription services' ability to provide financial savings, convenience, and access to premium services. . . . Unfortunately, the NPRM ignores these benefits and would discourage the offering of subscription services altogether.'' [220] ESA feared ''this section will discourage industry members from developing and offering innovative negative option plans that consumers will enjoy.'' [221]

Several commenters asserted existing laws and regulations make the proposed provision unnecessary. Some argued section 5's prohibition against deceptive practices already provides the Commission sufficient authority on this issue.[222] Others asserted State laws and regulations prohibiting misrepresentations are sufficient to protect the public.[223]

Commenters were divided on ROSCA's coverage. NRF, for example, said ''[i]n light of the Commission's decision that ROSCA already prohibits deceptive statements made in connection with a subscription, even if not directly related to subscription terms, many of the proposed amendments are unnecessary.'' [224] In contrast, PDMI said while *MoviePass* ''perhaps reflects a colorable approach,'' the application of ROSCA there ''exceeded Congress' intent.'' [225] Similarly, IAB asserted the proposed Rule would break new ground by ''grant[ing] the Commission authority to seek monetary remedies against a first-time offender for misrepresentations that would not give rise to monetary relief if made outside the context of an autorenewal agreement.'' [226]

Several commenters recommended changes if the proposed provision remains in the Rule. BSA, for example, suggested the Commission should define the term ''material,'' citing the TSR and the FTC Policy Statement on Deception as examples.[227] Separately, RILA urged the Commission ''to include clear language stating a 'reasonable person standard' will apply to determinations of 'material facts' related to products.'' [228]

Several commenters suggested the Commission limit the misrepresentation provision to the terms of the negative option feature. For instance, BSA advocated for limiting the provision ''to facts relating to the transaction and not every material fact relating to the underlying good or service.'' [229] CCIA and CDI agreed, stating the final phrase should instead cover only those material facts related to the underlying negative option feature and exclude ''any material fact related to the underlying good or service.'' [230]

(b) Analysis

Based on the record, the Commission adopts a clarified version of the material misrepresentation section and adds a definition for further clarification. Specifically, the final Rule omits the proposed language referring to ''any material fact related to the transaction, such as the negative option feature, or any material fact related to the underlying good or service'' and instead prohibits misrepresentation of ''any material fact,'' and defines ''material'' consistent with the TSR and section 5 of the FTC Act. Further, to enhance clarity and specificity, the text lists several examples of potentially material fact categories, taken from Commission precedent.

As further explained below: (1) despite commenters' concerns to the contrary, this provision is consistent with the ANPR and prevalence requirements of section 18 of the FTC Act; (2) consistent with ROSCA, the final provision is not limited to material misrepresentations about the negative option feature itself; (3) the Commission declines to exclude any subset of material misrepresentations from the scope of the Rule; and (4) for clarity, the Commission adds a definition of ''material'' consistent with established law of section 5 and other Commission Rules.

(1) *Adoption of a prohibition against misrepresentations is consistent with the ANPR and is appropriate to address prevalent unfair or deceptive acts or practices.*

Prior to the publication of any notice of proposed rulemaking promulgated under the Magnuson Moss Act, the Commission must publish an advance notice of proposed rulemaking (ANPR).[231] That notice must contain a ''brief description of the area of inquiry under consideration, the objectives which the Commission seeks to achieve, and possible regulatory alternatives

[215] NCTA, FTC–2023–0033–0858; PDMI, FTC–2023–0033–0864; TechFreedom, FTC–2023–0033–0872.

[216] For example, the Coalition and IAB both said, ''The NPRM fails, however, to identify which claims would constitute a material fact, and thus fails to identify covered acts with the requisite level of specificity.'' Coalition, FTC–2023–0033–0884; IAB, FTC–2023–0033–1000. PDMI similarly claimed the proposed provision's lack of specificity ''renders [the proposed Rule] overly vague and unlawful.'' [231] 15 U.S.C. 57a(b)(2).

under consideration by the Commission.'' [232] The ANPR in this case meets this standard. Specifically, in the ANPR, the Commission stated the objective of the Rule was to prevent deceptive or unfair practices in the marketing of products and services with negative option features. Several industry associations submitted comments in response to the ANPR, illustrating the effectiveness of the ANPR in soliciting views of the interested public and affected industry before issuing the NPRM.[233] Moreover, as detailed herein, the Commission has reviewed and carefully considered the views of the public and industry as expressed in response to both the ANPR and NPRM.

The record demonstrates misrepresentations made to induce consumers to enter into negative option programs are prevalent. Specifically, the Commission's enforcement experience (including consumer complaints, matters cited in the NPRM, and matters cited in this Statement of Basis and Purpose) as well as the experiences of the State AGs, the information cited by the Law Professors, and comments by consumer commenters all support this conclusion.[234]

As several commenters critical of the proposed provision correctly note, misrepresentations to induce consumers to join negative option programs are already unlawful under section 5, as well as under other State and Federal laws and regulations, depending on (among other things) media used and jurisdiction. This fact, however, does not undermine the need for the Rule provision. By definition, a section 18 trade regulation rule addresses conduct that is already prohibited under section 5. With such prohibited conduct defined, the trade regulation rule may also more broadly ''include requirements prescribed for the purpose of preventing such acts or practices,'' but the core of a trade regulation rule is the description of acts or practices already violative of section 5.[235] The misrepresentations section of the Rule is narrower than the full scope of tools available under section 18. It simply prohibits conduct that is already deceptive. Such a provision promotes clarity and confidence in the marketplace and provides for more effective remedies (*i.e.,* civil penalties, where appropriate) against wrongdoers.

Moreover, the fact that ROSCA's disclosure requirement [236] already essentially prohibits material misrepresentations about online negative option transactions, means much of the rhetoric predicting the downfall of negative option marketing simply is ill-founded. Indeed, the Chamber pointed to the ''clear popularity and use of negative option features across the economy'' even as ROSCA has been law for over a decade.[237] Far from undermining legitimate business, the Rule's express prohibition on misrepresenting material facts in connection with promoting or offering for sale a negative option feature should increase consumer confidence in negative option marketing, thus making it easier for legitimate businesses to market their products.

(2) Prohibiting misrepresentation of any material facts, not just those pertaining to the negative option feature, promotes clarity consistent with ROSCA and Commission precedent.

The final Rule prohibits misrepresentation of ''any material fact.'' In doing so, it provides a non-exhaustive list of categories of potentially material facts (including transaction terms) and adds a definition of ''material,'' consistent with section 5 and the TSR. Specifically, consistent with section 5, ''material'' means ''likely to affect a person's choice of, or conduct regarding, goods or services.'' [238] This approach both clarifies the terms most at issue and ensures the Rule accords with longstanding section 5 precedent.

The Commission declines to limit the misrepresentations prohibition solely to elements of the negative option feature.[239] First, the Commission finds imposing such a narrow restriction would be inconsistent with existing protections. Pursuant to ROSCA section 8403, sellers must ''clearly and conspicuously disclose all material terms of the transaction before obtaining the consumer's billing information.'' As Congress has explained, a healthy marketplace ''must provide consumers with clear, accurate information and give sellers an opportunity to fairly compete with one another for consumers' business.'' [240] Limiting a misrepresentations prohibition solely to misrepresentations about the negative option feature itself would fall well short of the scope of ROSCA and the Commission's responsibility to protect the public.

Moreover, seller commenters themselves highlighted transaction elements other than negative option terms as critical to inducing consumers to choose negative option features. IAB, for example, pointed to the promise of ''broader selection and lower prices'' or ''convenience and savings.'' [241] Similarly, TechNet identified the ''ability to provide financial savings, convenience, and access to premium services'' as ''the main drivers'' of varied subscriptions.[242]

Furthermore, such a distinction may invite dishonest actors to misrepresent material facts about a transaction so long as they felt they could evade monetary liability for such misrepresentations. Moreover, simply refraining from making material misrepresentations is hardly a significant burden given the fact that such misrepresentations are already illegal under section 5 of the FTC Act, and subject to civil penalties when made on the internet and over the telephone pursuant to ROSCA and the TSR, respectively.

(3) The Commission declines to exclude any material facts from the scope of the provision.

To further promote clarity, the Commission includes a list of non-exclusive examples in the text of § 425.3. In addition to the negative option feature itself, the examples include certain characteristics the Commission has identified as presumptively material for more than 40 years [243] and which have in fact appeared as the subject of material misrepresentations in Commission negative option cases—cost,[244] purpose

[232] 15 U.S.C. (b)(2)(A)(i).

[233] Section 425.3 is the only remaining section as to which commenters made this ANPR argument.

[234] *See* section VII.1.a. [244] In the negative option context, material cost misrepresentations may include any cost (and total

Continued

or efficacy,[245] and health or safety.[246] The record demonstrates the list must be non-exclusive because the Commission has observed the use of material misrepresentations other than those enumerated to induce consumers to enter into transactions with negative option features, including, for example, characteristics of the seller,[247] the format of the ad or other sales communication,[248] consumer authorization,[249] consumer privacy or data security,[250] and endorsements or testimonials.[251] The Commission cannot predict what other material misrepresentations dishonest actors may employ in the future.

Some commenters asserted section 18 does not authorize the Commission to prohibit material misrepresentations in a given area of commerce. Section 18, however, permits the FTC to promulgate ''rules which define with specificity acts or practices which are unfair or deceptive acts or practices in or affecting commerce (within the meaning of [section 5(a)(1)]) . . . [and] may include requirements prescribed for the purpose of preventing such acts or practices.'' [252] It places no additional restrictions on the scope of this rulemaking.

Several commenters appear to think section 18 requires the Commission to define specific claims as deceptive; for example, two commenters cited the Business Opportunity Rule's treatment of misrepresentations.[253] While the cited Rules show one way to meet the statute's specificity requirements, the statute does not require the Commission to define *claims* with specificity, but instead *acts or practices.*[254] For example, in the Business Opportunity Rule, the practice of misrepresenting ''any material aspect of any assistance offered to a prospective purchaser'' in a business opportunity transaction is a specific type of deceptive practice in or affecting commerce.[255] By the same token, the practice of misrepresenting material facts to induce consumers to consent to negative option features constitutes a specific type of deceptive practice.

The record, including the submissions of many industry commenters, shows negative option features are found across industries, but are consistently distinguishable as a subset of general commercial practices. As commenters point out, negative option features offer many distinct benefits to consumers and sellers. These benefits do not lose their distinct character merely because they occur across different kinds of goods and services sold across different channels. While the record shows this practice offers distinct benefits, it also shows the practice is plagued by distinct abuse. This is not a hypothetical statement; the Commission is not promulgating the final Rule because negative option features may engender deception, whether relating to the feature itself or to other material facts, but rather because the record shows they have.[256] Just as with the benefits of

costs) from inception through the course of the commercial relationship, including misrepresentations as to recurring costs and refunds or guarantees. *See, e.g., FTC* v. *FloatMe Corp.,* No. 5:24–cv–00001 (W.D. negative option marketing, these problems do not lose their distinct character, in other words they are distinct practices, even though they appear in a variety of contexts.

In addressing this deceptive practice, the Commission remains guided by core principles articulated in its 1983 Deception Policy Statement. As the Commission explained, in considering whether to act against a deceptive practice, the Commission will observe the extent to which consumers themselves have been able to police and generate consequences for seller deception.

> Finally, as a matter of policy, when consumers can easily evaluate the product or service, it is inexpensive, and it is frequently purchased, the Commission will examine the practice closely before issuing a complaint based on deception. There is little incentive for sellers to misrepresent (either by an explicit false statement or a deliberate false implied statement) in these circumstances since they normally would seek to encourage repeat purchases. Where, as here, market incentives place strong constraints on the likelihood of deception, the Commission will examine a practice closely before proceeding.[257]

The record shows the practice of misrepresenting material facts to induce consent to negative option features has created distinct issues consumers have not been able to address themselves, enabling sellers to collect numerous recurring payments before consumers detect the misrepresentation and act to stop the charges. This problem is not confined to a particular subset of industries or misrepresentations but instead is a too-frequent practice throughout negative option marketing.[258] Specifically, when a consumer makes a series of purchases from the same seller in ordinary circumstances (rather than through a negative option), each purchase requires the consumer to actively, even if only briefly, re-evaluate the transaction and affirmatively consent. Dishonest negative option sellers too easily bypass these typical guardrails of ''repeat purchases.'' Thus, up-front misrepresentations can induce consumers into recurring transactions lacking ordinary sales' built-in interruptions for re-evaluation and renewed consent. As with other areas where consumers have limited opportunities for critical up-front evaluation (for example, consumers cannot easily evaluate medical claims about dietary supplements), so too, here, the Commission finds additional protection warranted.

The Commission has considered commenters' section 18 specificity concerns pertaining to material misrepresentations and finds them unsupported by the record. These commenters suggest a hypothetical world where negative option features provide distinguishable commercial benefits without presenting distinguishable material misrepresentation challenges. The reality is otherwise. Thus, the final Rule prohibits the specific practice of sellers misrepresenting material terms or facts in connection with negative option sales.

(4) For clarity, the final Rule adds a definition of ''material'' consistent with precedent.

As noted above, and as suggested by commenters, the Commission defines ''material'' in the final Rule. This definition adds clarity and addresses the rhetorical questions raised by commenters regarding scope. Specifically, consistent with section 5, the TSR, and longstanding Commission policy and case law, the final Rule defines the term to mean likely to affect a person's choice of, or conduct regarding, goods or services.[259] Thus, mere puffery is not material.[260]

The hypotheticals posed by MIA—''movies that you will love'' or ''great cleaning every time''—are classic examples of puffery, and thus, are not within the scope of materiality.[261] The response to the question posed by the Chamber—whether misrepresentation of a privacy policy would be covered—depends, as it always has, on whether the seller misrepresents its privacy policy in a way likely to affect consumer choice or conduct.

4. Proposed § 425.4 Important Information

Section 425.4 of the proposed Rule prohibited sellers from failing to disclose ''any material conditions related to the underlying product or service that is necessary to prevent deception, regardless of whether that term directly relates to the terms of the negative option offer.'' [262] As explained in the NPRM, the Commission drafted this provision because ''many sellers fail to provide adequate disclosures, thereby luring consumers into purchasing goods or services they do not want.'' [263] To address this issue, the proposed Rule required sellers to provide the following important information prior to obtaining a consumer's billing information: ''(1) that consumers' payments will be recurring, if applicable; (2) the deadline by which consumers must act to stop charges; (3) the amount or ranges of costs consumers may incur; (4) the date the charge will be submitted for payment; and (5) information about the mechanism consumers may use to cancel the recurring payments.'' [264]

The Commission also proposed requirements regarding the form and location of this important information, as its ''law enforcement experience and consumer complaints are replete with examples of hidden disclosures, including those in fine print, buried in paragraphs of legalese and sales pitches, and accessible only through hyperlinks.'' [265] Thus, under the proposed Rule, information ''directly related to the negative option feature . . . must appear immediately adjacent to the means of recording the consumer's consent for the negative option feature.'' Information ''not directly related to the negative option feature . . . must appear before consumers make a decision to buy (*e.g.,* before they 'add to shopping cart').''

Further, the proposal stated all disclosures must be clear and conspicuous as defined in § 425.2(c). Among other elements of the clear and conspicuous definition, the proposed Rule specified that in any communication using an interactive electronic medium, such as the internet, mobile application, or software, the disclosure must be unavoidable. The proposed Rule also specified that a disclosure is not clear and conspicuous if a consumer ''must take any action, such as clicking on a hyperlink or hovering over an icon, to see it.''

Finally, the proposed Rule prohibited sellers from including any information that interferes with, detracts from, contradicts, or otherwise undermines the ability of consumers to read, hear, see, or otherwise understand the required disclosures. The final clause of this prohibition ''includ[ed] any

information not directly related to the material terms and conditions of any negative option feature.''

Through these provisions, the Commission sought to prevent deception by businesses taking advantage of the gray areas in current law, to deter fraudulent actors through the possibility of monetary relief, and to ''level the playing field for legitimate businesses, freeing them from having to compete against those employing deception.'' [266]

(a) Summary of Comments

Thousands of commenters supported the important information requirement, stating it is ''critically important that companies make it explicitly clear what consumers are signing up for.'' [267] Consumers identified problematic practices the provision would address, including insufficient and unclear disclosures in small print or those appearing too late in the transaction. For example, an individual commenter said, ''[t]oo many [sellers] hide these details in extra fine print, and increasingly text is in a very light gray color, making it even harder to read.'' [268] Another individual commenter noted, ''I ordered skin care from a tv infomercial only to find out it was a subscription thing though none of this was disclosed by famous actresses on the promotion. . . . I went back to my receipt of what I originally ordered and in fine print saw that I had been duped!'' [269]

Several individual commenters indicated clear upfront disclosures would help them make informed choices and improve their willingness to try negative option offerings, particularly if the disclosure provided an easy cancellation mechanism. As one put it, ''I am much more like[ly] to try—and buy—a new service if I know there is an easy way to cancel online.'' [270] Another said, ''I actually subscribe to far fewer services than I would if I knew that I could easily cancel once I had tried a sample.'' [271]

Public advocacy commenters also supported the provision. The Berkeley Consumer Law Center said, ''the requirement of 'clear and conspicuous' disclosures of 'any material term related to the underlying goods or services that is necessary to prevent deception' will help prevent cancellation terms from being shrouded in mystery through complicated terms and conditions, while also blocking the practice of hiding subscription services that are needed to fully use a product.'' [272] Similarly, a coalition of consumer and public interest advocacy organizations asserted the proposed disclosure requirement ''will clearly inform consumers of the terms of the contract and how they may terminate the agreement.'' [273]

Law enforcement commenters likewise supported the important information requirements. The State AGs said they would ''repel the abusive practices of hidden disclosures, 'including those in fine print, buried in paragraphs of legalese and sales pitches, and accessible only through hyperlinks.' '' [274] They particularly emphasized their support for ''the required disclosure of 'the information necessary for the consumer to cancel the negative option feature.' '' [275] The California Auto-Renew Task Force (''CART''), a group of Southern California prosecutors, supported disclosures appearing ''immediately adjacent to the means of recording the consumer's consent for the negative option feature.'' [276] CART asserted this provision, together with others, ''will greatly minimize consumer deception and ensure that consumers fully understand—and agree to—the nature of the transaction under consideration.'' [277]

Other commenters, mostly industry groups,[278] expressed several concerns with the proposed requirements, specifically with the definition of ''clear and conspicuous,'' the scope and timing of the material terms to be disclosed, specific disclosure requirements, placement, and treatment of other information.[279]

Multiple commenters claimed the requirement that disclosures using an interactive electronic medium must be ''unavoidable'' would be unworkable given the additional provision that a ''disclosure is not clear and conspicuous if a consumer must take any action, such as clicking on a hyperlink or hovering over an icon, to see it.'' [280] Commenters noted it would be difficult or impossible to implement this requirement on small screens (such as mobile phones), and it may reduce rather than improve clarity.

Several commenters also objected to the requirement sellers disclose material terms other than those pertaining exclusively to the negative option feature, asserting this would be overbroad.[281] Additionally, commenters questioned how the Commission would enforce a requirement to disclose material terms before obtaining a

[266] NPRM, 88 FR 24727.

[267] Thousands of consumers submitted the following identical comment in their own names: ''It's critically important that companies make it explicitly clear what consumers are signing up for and to make canceling fast and easy. If you signed up online, you should be able to cancel online. If it took one click to join, it should take one click to cancel. Implementing this consumer protection rule has the potential to save American consumers millions of dollars and I hope it is implemented as soon as possible.'' While apparently a response to a mass solicitation, many consumers further personalized their submission by adding their unique experiences and desire for the Rule. *See, e.g.,* Individual commenter, FTC–2023–0033–0161; –0163; –0164; 0198; –0204; –0545; 0658.

[268] Individual commenter, FTC–2023–0033–0268. Similarly, another individual commenter said, ''Businesses should not present agreements in tiny print on an agent's tablet for the customer to sign. I can't read the print.'' Individual commenter, FTC–2023–0033–0349.

[278] Not all industry groups criticized the provision. Specifically, MIA wrote, ''The Association agrees with the important information requirement under the proposed Rule.'' MIA, FTC–2023–0033–1008.

[279] In addition, some commenters cited industry-specific laws and regulations pertaining to disclosures as rendering the proposed provision unnecessary or counterproductive. ACA Connects-America's Communications Association (''ACA''), FTC–2023–0033–0881; NCTA, FTC–2023–0033–0858; SFE, FTC–2023–0033–1151; USTelecom, FTC–2023–0033–0876.

[280] ANA, FTC–2023–0033–1001; CCIA, FTC–2023–0033–0984; Coalition, FTC–2023–0033–0884; ESA, FTC–2023–0033–0867; IAB, FTC–2023–0033–1000; NCTA, FTC–2023–0033–0858; Chamber, FTC–2023–0033–0885. NFIB suggested the Commission strike the provision ''The disclosure must use diction and syntax understandable to ordinary consumers'' and replace it with '' 'The disclosure must use words and grammar that ordinary consumers would likely understand.' '' FTC–2023–0033–0789.

[281] ACT App Association, FTC–2023–0033–0874; ANA, FTC–2023–0033–1001; BSA, FTC–2023–0033–1015; CCIA, FTC–2023–0033–0984; NCTA, FTC–2023–0033–0858; NFIB, FTC–2023–0033–0789; NRF, FTC–2023–0033–1005; PDMI, FTC–2023–003–0864; Sirius XM, FTC–2023–0033–0857; Chamber, FTC–2023–0033–0885.

consumer's billing information, especially where a consumer previously elected to save billing information with the seller.[282] Commenters also found the requirement that material terms ''not directly related to the negative option feature . . . must appear before consumers make a decision to buy'' to be vague.[283]

Several commenters took issue with the five specific disclosures in the proposed Rule. For example, the requirement to disclose ''the date (or dates) each charge will be submitted for payment'' drew substantial criticism, with several commenters asserting appropriate disclosures regarding frequency should suffice.[284] Commenters also criticized the requirements to disclose deadlines to act and the amount or range of costs.[285] A group of direct marketers asserted, for example, ''the Proposed Rule goes too far in appearing to require a specific date by which consumers must act to stop charges when certain negative option plans are inherently more flexible and allow consumers to cancel anytime.'' [286] Commenters also found the requirement to disclose ''the information necessary for the consumer to cancel the negative option feature'' was vague and impractical. They contended the requirement would result in unnecessary details crowding out other disclosures.[287] IAB contended ''[a] more effective strategy [regarding cancellation disclosures] would be to make clear but concise disclosures of where that information can be found.'' [288]

Additionally, multiple commenters criticized the provision requiring the placement of material terms ''directly related to the negative option feature'' . . . ''immediately adjacent'' to recording the consumer's consent.[289] Commenters asserted having numerous disclosures in a constrained space would impair consumers' ability to make informed choices. As an individual commenter explained, ''this important information may still become overwhelming to a user, or challenge the integrity of other disclosures if it must compete for space (especially because this disclosure must be placed immediately adjacent to where a user will consent to the negative option feature).'' [290] NRF found unclear the distinction between which terms are or are not ''directly related to the negative option feature.'' [291] Other commenters noted the ''immediately adjacent'' requirement may not be appropriate for voice transactions.[292]

Finally, one commenter expressed uncertainty about the meaning of the ''other information'' provision. NRF said it ''asks companies to walk a tight rope between ensuring they contain all material terms, while risking liability if they include '*any* information not directly related to the material terms.' '' [293]

The State AGs also recommended three amendments to this proposal. First, they recommended requiring sellers to ''disclose all material policies concerning cancellation.'' Second, they recommended ''sellers be required to disclose 'all the information necessary for the consumer to effectively cancel the negative option feature.' '' (Emphasis in comment.) They explained, ''[d]isclosures in the form of 'click-here-to-cancel' icons, which lead to terms and conditions pages, confusing cancellation flows, or do not otherwise explain how to cancel online, should not be permitted.'' Third, they recommended ''the FTC amend this provision to require that the important information identified by this proposed Rule be provided to the consumer in a manner that is capable of being retained by the consumer.'' [294]

(b) Analysis

Based on the record, the Commission retains proposed § 425.4 with several clarifications. First, as explained in section VII.B.3 of this SBP, the Commission adds a definition of ''material'' at § 425.2(e). Second, in § 425.4(a), the Commission clarifies three of the listed types of important information sellers must provide and omits one to address commenters' concerns. Third, as explained in section VII.B.4.b.2 of this SBP, the Commission revises the definition of ''clear and conspicuous'' in § 425.2(c). Fourth, in § 425.4(b)(2) the Commission clarifies language regarding ''placement'' of disclosures. Finally, the Commission clarifies the language prohibiting sellers from including ''any other information'' that ''interferes with, detracts from, contradicts, or otherwise undermines'' consumers' abilities to read, hear, see, or understand the required disclosures.

(1) The Commission declines to limit the required important information under § 425.4(a).

The Commission declines to limit the scope of the required information under this provision to only information related to the negative option feature. Section 425.4(a)'s requirement that sellers disclose ''all material terms'' prior to obtaining the consumer's billing information is consistent with ROSCA and section 5 of the FTC Act. Moreover, in the Commission's law enforcement experience such a provision is necessary to prevent deception.[295] Therefore, extending this requirement is well within the Commission's rulemaking authority.[296]

To address commenters' concerns about clarity, however, § 425.2(e) adds a definition of ''material;'' specifically, material means ''likely to affect a person's choice of, or conduct regarding, goods or services.'' [297] This definition is consistent with longstanding section 5 case law and other Commission rules defining ''material.'' [298]

[296] 15 U.S.C. 57a(a)(1)(B).

[297] Additionally, the Commission changes ''any'' to ''all'' material terms, and deletes the phrase ''related to the underlying good or service that is necessary to prevent deception'' for clarity. Specifically, the Commission makes clear that sellers are required to disclose all material terms, consistent with the requirements of ROSCA.

[298] *See In re Cliffdale Associates, Inc.,* 103 F.T.C. 110, 165 (1984) (misleading impression created by a solicitation is material if it ''involves information that is important to consumers and, hence, likely

Continued

Additionally, the Commission modifies the proposed list of important information.[299] The Commission retains the first proposed requirement that sellers must disclose ''[t]hat consumers will be Charged for the good or service, or that those Charges will increase after any applicable trial period ends, and, if applicable, that the Charges will be on a recurring basis, unless the consumer timely takes steps to prevent or stop such Charges.'' [300] The Commission continues to find this requirement appropriate to combat deception.

The Commission revises the second proposed disclosure, that sellers provide ''*the deadline* (by date or frequency) by which the consumer must act in order to stop *all* charges.'' As revised, this provision requires sellers to disclose ''*each deadline* (by date or frequency) by which the consumer must act to prevent or stop *the* Charges.'' This change clarifies there may not be a single ''deadline'' by which a consumer must act to ''stop all charges.'' A single seller, for example, may offer a single consumer multiple goods or services, and the consumer may wish to stop some charges without terminating the entire relationship. The Commission also clarifies that ''frequency'' as used in the final Rule includes a description of an irregular frequency (*e.g.,* within a certain period after the seller notifies the consumer a new item in a series has become available) as well as a regular one (*e.g.,* the 15th of each month).

The Commission also clarifies the third proposed disclosure. The proposed Rule required sellers to disclose ''[t]he amount (or range of costs) the consumer will be charged, and, if applicable, the frequency of such charges a consumer will incur unless the consumer takes timely steps to prevent or stop those charges'').[301] The record suggests, however, that in some circumstances, the amounts to be charged may be inexact before the seller obtains the consumer's billing information. For example, taxes or delivery fees may depend in part on the billing information the consumer provides. Thus, the Commission clarifies under the final Rule as adopted, the ''amount (or range of costs)'' need not be exact if an exact figure is impossible, but the seller must give a reasonable approximation. For example, it is within the meaning of ''amount (or range of costs)'' for a seller to disclose an amount ''plus tax'' where the seller requires billing information to determine the actual amount of tax. However, a ''plus shipping'' disclosure may not be sufficient if the amount of shipping is beyond what a consumer would reasonably expect or is greater than the amount a seller would reasonably incur for shipping. In such a circumstance, the seller would need to provide an estimate of shipping costs. These clarifications should address commenters' concerns about having to disclose an exact cost when doing so is not possible.

The final Rule omits the proposed fourth disclosure: the date (or dates) each charge will be submitted for payment. The Commission is persuaded by commenters' concern that a specific date or dates may be cumbersome or impossible to calculate. For example, if the seller will submit a charge when it ships a new item in a series, the seller may not be able to predict the specific dates it will submit the charge in the future. In addition, in light of the change to the placement requirements of § 425.4(b)(2)(i), discussed below, including these dates could reduce the clarity and conspicuousness of higher priority adjacent disclosures (especially cancellation deadlines, which will often occur before dates of charges). If, however, disclosure of the date (or dates) each charge will be submitted for payment is necessary to prevent deception in individual cases, such disclosure is required under § 425.4(a). However, its placement is governed by revised § 425.4(b)(2)(ii) rather than § 425.4(b)(2)(i).

Finally, the Commission clarifies the fifth proposed mandatory disclosure (the fourth in the final Rule). The proposed Rule required sellers to disclose ''[t]he information necessary for the consumer to cancel the negative option feature''. In contrast, the final Rule requires sellers to disclose ''The information necessary for the consumer to find the simple cancellation mechanism required pursuant to § 425.6''. This change addresses commenters' concern the language of the proposed Rule, combined with the placement requirements of § 425.4(b)(2)(i), would result in detailed cancellation disclosures crowding out other important required disclosures.[302] This new language should provide consumers with concise critical upfront information about how to cancel, while offering sellers flexibility to avoid obscuring other important information.[303]

Some sellers expressed concern regarding the timing of disclosures where a consumer previously elected to save billing information with the seller. To address this concern the Commission now clarifies that, where a consumer has previously provided account information to the seller and expressly allowed the seller to store that information,[304] the seller must make the required disclosures prior to obtaining the consumer's consent to use saved account information.[305]

(2) The Commission modifies the requirements of § 425.4(b) to promote clarity.

Section 425.4(b)(1) provides, ''[e]ach disclosure required by paragraph (a) of this section must be clear and conspicuous.'' The Commission retains this requirement but revises the definition of clear and conspicuous at § 425.2(c) to address commenters' concerns regarding space-constrained

to affect their choice of, or conduct regarding, a product.''); *see also FTC* v. *Cyberspace.com, LLC,* 453 F.3d 1196, 1201 (9th Cir. 2006); 16 CFR 310.2(t) (TSR); 16 CFR 461.1 (Impersonation Rule); Policy Statement on Deception (Oct. 14, 1983) (appended to *In re Cliffdale Assocs., Inc.,* 103 F.T.C. 110, 174 (1984)).

[299] In the misrepresentations provision (§ 425.3), the final Rule uses the term ''including'' to provide examples of categories of potentially material facts. In the disclosures provision, the final Rule retains the proposed Rule's use of ''and including'' (rather than just ''including'') to establish all of the specifically listed disclosures as being always material.

[300] NPRM, 88 FR 24735 (proposed 425.4).

[301] The final Rule requires sellers to disclose ''The amount (or range of costs) the consumer will be Charged and, if applicable, the frequency of the Charges a consumer will incur unless the consumer takes timely steps to prevent or stop those Charges.''

[302] For example, IAB suggested the Commission should require sellers ''to make clear but concise disclosures of where [cancellation] information can be found, so consumers can find that information if and when it is relevant to them.'' IAB, FTC–2023–0033–1000.

[303] The Commission declines to adopt the State AGs three suggestions to supplement this section. The Commission expects the final Rule will address two of those suggestions (disclosure of ''all material policies concerning cancellation'' and of ''all the information necessary for the consumer to effectively cancel the negative option feature'') through the requirement that sellers disclose all material terms (§ 425.4), the prohibition of misrepresentations of material facts or terms including those pertaining to cancellation (§ 425.3), and the requirement of a simple cancellation mechanism (§ 425.6). The Commission expects to address the concerns underlying their third suggestion (''to require that the important information identified by this proposed Rule be provided to the consumer in a manner that is capable of being retained by the consumer''), through its further development of the reminders requirement. In the interim, the Commission expects the Rule provisions as adopted will encourage sellers to make important information easy to find and easy to retain.

[304] It is a violation of section 5 for a seller to retain and use a consumer's payment information without the consumer's consent. *E.g., FTC* v. *Classic Closeouts LLC,* No. 2:09–cv–2692 (E.D.N.Y. 2009).

[305] *See FTC* v. *Amazon.com, Inc.,* No. 2:23–cv–00932, 2024 WL 2723812, at *11 (W.D. Wash. May 28, 2024) (''Nothing in ROSCA says that companies . . . may not give consumers the option to autofill the billing information already on file or simply to provide billing information after the disclosures, but ROSCA requires that consumers be given that choice *after* the disclosures.'') (emphasis in original).

disclosures.[306] Specifically, the Commission deletes the sentence, ''A disclosure is not Clear and Conspicuous if a consumer must take any action, such as clicking on a hyperlink or hovering over an icon, to see it.'' This prohibition would have made effective space-constrained disclosures of the terms required by the final Rule difficult if not impossible. However, a clear and conspicuous disclosure still must be ''unavoidable.'' By this requirement, consumers are protected from buried or inconspicuous disclosures. Sellers, on the other hand, can make disclosures ''unavoidable'' even if the consumer must take some action to see it. Specifically, the seller could make it impossible for the consumer to consent to a transaction or feature unless and until the consumer has seen the disclosure. For example, a seller dealing with space constraints on a mobile device might not display a consent button until after the consumer has scrolled down to a clear disclosure and then clicked a button indicating they have seen the disclosure.

Section 425.4(b)(2) (''Placement'') retains the proposed Rule's structure requiring a subset of disclosures to ''appear immediately adjacent to the means of recording the consumer's consent for the negative option feature,'' while setting a more general timing requirement regarding other disclosures. However, the Commission has revised some terms to promote clarity.

Specifically, final § 425.4(b)(2)(i) requires only the four specific mandatory disclosures listed in § 425.4(a) to appear ''immediately adjacent to the means of recording the consumer's consent.'' The Commission is persuaded by commenters' concerns that requiring market participants to determine which required disclosures are ''directly related to the negative option feature,'' and which are not, is too great a burden and could lead to consumer confusion.[307] Thus, rather than define ''directly related to the negative option feature,'' the Commission removes this phrasing and confines the ''immediately adjacent'' requirement to a specific, narrow list of disclosures. This change provides clarity and improves predictability for consumers, and should prevent disclosure overload.

Several commenters requested clarification of the ''immediately adjacent'' requirement in the context of voice transactions.[308] In response, the Commission clarifies to comply with this requirement, a voice transaction seller must make the required disclosures immediately before requesting and recording the consumer's consent to the negative option feature.

Two commenters expressed concern that requiring sellers to make disclosures ''before consumers make a decision to buy'' creates uncertainty because it is unclear when that triggering event occurs.[309] The Commission agrees. Therefore, it revises § 425.4(b)(2)(ii) to provide generally for all required disclosures to appear before the seller obtains consumer consent to the transaction pursuant to § 425.5. This amended language provides a triggering event based on a clear point in the process. Additionally, the Commission revises § 425.4(b)(2)(ii) to remove the phrase ''not directly related to the negative option feature,'' doing so for the same clarity reasons described above for removing the phrase ''directly related to the negative option feature'' from § 425.4(b)(2)(i).

Finally, the Commission adopts a clarified version of § 425.4(b)(3) (''Other information''). The Commission retains the proposed Rule's requirement that sellers not employ ''other information that interferes with, detracts from, contradicts, or otherwise undermines the ability of consumers to read, hear, see, or otherwise understand the disclosures.'' However, the Commission finds the final clause in the proposed Rule (''including any information not directly related to the material terms and conditions of any negative option feature'') could be read to contradict other requirements of the Rule. Specifically, there may be necessary material disclosures not directly related to the terms and conditions of a negative option feature, and it is illogical to simultaneously require these disclosures (through §§ 425.4(a) and (b)(2)) and prohibit them (through § 425.4(b)(3)). The Commission therefore omits the clause from the final Rule. This revision does not alter the requirement of § 425.4(b)(2)(i) that certain specific disclosures be made clearly and conspicuously immediately adjacent to the means of recording the consumer's consent. A seller who makes additional disclosures immediately adjacent to the means of recording the consumer's consent in a manner undermining the clarity and conspicuousness of the required § 425.4(b)(2)(i) disclosures violates § 425.4(b)(2)(i) and § 425.4(b)(3).

5. Proposed § 425.5 Consent

Section 425.5(a) of the proposed Rule prohibited sellers from charging consumers before obtaining their express informed consent to the negative option feature. This provision mirrors 15 U.S.C. 8403(2) (ROSCA), but provided specificity for sellers covered by the Rule and to prevent unfair and deceptive practices. Specifically, the provision addressed one of the most pervasive problems of negative option marketing: sellers employing inadequate consent procedures to increase enrollment. Even for marketers trying to comply with the law, negative option programs present unique challenges. Specifically, consumers often focus on the aspects of an offer that mirror the offers they regularly encounter (*e.g.,* the quality, functionality, and one-time price of the item) and think they are consenting to these core attributes while missing the negative option feature.

To address this problem, § 425.5(a)(1) of the proposed Rule required sellers to obtain a consumer's unambiguously affirmative consent to the feature separately from any other portion of the transaction. Section 425.5(a)(2) of the proposed Rule further required the seller to exclude any information that ''interferes with, detracts from, contradicts, or otherwise undermines'' the consumer's ability to provide express informed consent to the negative option feature. This prohibition is consistent with longstanding Commission precedent that consent can be subverted, including by so-called ''dark patterns,'' sophisticated design practices used to manipulate users into making choices they would not otherwise have made.[310]

Additionally, under § 425.5(a)(3) of the proposed Rule, sellers had to obtain consumers' unambiguously affirmative consent to the rest of the transaction to ensure consumers agreed to all elements of the agreement, even those not specifically related to the negative option feature. Further, § 425.5(a)(4) of the proposed Rule required sellers to obtain and maintain (for three years or a year after cancellation, whichever is

[306] The Commission declines to adopt NFIB's suggested change to strike the provision ''The disclosure must use diction and syntax understandable to ordinary consumers'' and replace it with '' 'The disclosure must use words and grammar that ordinary consumers would likely understand.' '' Particularly in the context of audio disclosures, the terms ''diction and syntax'' provide clearer requirements than the terms ''words and grammar.'' NFIB, FTC–2023–0033–0789.

[308] Coalition, FTC–2023–0033–0884; Chamber, FTC–2023–0033–0885.

[309] Kuehn, FTC–2023–0033–0871; NRF, FTC–2023–0033–1005.

[310] *See, e.g., FTC* v. *RevMountain, LLC,* No. 2:17–cv–02000 (D. Nev. 2017); *FTC* v. *Cyberspace.com, LLC,* 453 F.3d 1196 (9th Cir. 2006); *United States* v. *Mantra Films, Inc.,* No. 2:03–cv–9184 (C.D. Cal. 2003); *FTC* v. *Crescent Publ'g Grp., Inc.,* 129 F. Supp. 2d 311 (S.D.N.Y. 2001).

longer) verification of the consumer's consent. The Commission specifically sought comment on the appropriate recordkeeping period.[311]

To maintain consistency with the TSR, § 425.5(b) contained a cross-reference to 16 CFR part 310 so sellers subject to the TSR know they must comply with all applicable provisions of that Rule, including those related to pre-acquired account information and free-to-pay conversions.

Proposed § 425.5(c) provided an exemplar consent mechanism for those making written offers (including those on the internet) to illustrate how sellers could obtain consumers' unambiguously affirmative consent to the negative option feature. Specifically, this provision stated for all written offers, sellers may obtain such consent through a check box, signature, or other substantially similar method, which the consumer must affirmatively select or sign to accept the negative option feature. This consent had to be independent from any other portion of the offer.[312]

Finally, the Commission invited comments on whether sellers offering free trials should be required to obtain an additional round of consent before charging a consumer at the end of a free trial.[313]

(a) Summary of Comments

Consistent with the Commission's and States' enforcement experience,[314] individual consumers' comments confirm the need for clear, unambiguous, affirmative consent to a negative option feature. These comments identify numerous examples of consumers' unwitting enrollment in negative option programs.[315]

Sellers and trade groups also supported the requirement,[316] as did consumer groups.[317] However, sellers and trade groups expressed concern about the requirement that sellers obtain separate, unambiguously affirmative consent to the ''rest of the transaction,'' as opposed to the ''negative option feature'' itself. Specifically, these commenters asserted consumers may be confused where the product or service itself is only offered as a negative option, such as with streaming services or periodicals.[318] As explained by one commenter, in these situations a second consent is likely unanticipated, and thus, could be confusing.[319]

Other groups asserted if consumers are confused, they may not affirmatively consent to the rest of the transaction, which could cause uncertainty about the existence of the contract.[320] Commenters also noted too many required actions during the purchasing process may lead to ''fatigue'' and ''cognitive overload,'' causing consumers to abandon transactions they may have otherwise wanted.[321] Finally, several commenters complained the separate consent requirements would be difficult (and costly) to implement, but without any benefit to consumers.[322]

---

[311] NPRM, FR 88 24727 n.70; *see also id.* at 24734.

[312] To avoid potential conflict with EFTA, this proposed provision does not apply to transactions covered by the preauthorized transfer provision of that Act, 15 U.S.C. 1693e, and Regulation E, 12 CFR 1005.10. Those EFTA provisions, which apply to a range of preauthorized transfers include some used for negative options, contain various prescriptive requirements (*e.g.,* written consumer signatures that comply with E-Sign, 15 U.S.C. 7001–7006, evidence of consumer identity and assent, the inclusion of terms in the consumer authorization, and the provision of a copy of the authorization to the consumer) beyond the measures identified in the proposed Rule. Consequently, compliance with the proposed Rule would not necessarily ensure compliance with Regulation E. For example, use of a check box for consent without additional measures may not comply with Regulation E's more specific authorization requirements.

[322] NCTA, FTC–2023–0033–0858 (''would require companies to change their current customer sign-up flows, at significant cost, without providing consumers with any additional benefits''); PDMI, FTC–2023–003–0864 (''requiring merchants to implement a double opt-in would impose an extraordinary financial and resource burden on sellers.''); *id.* (double opt-in requirements ''makes absolutely no sense, where, as is often the case, there is no transaction separate from the negative option transaction''); SCIC, FTC–2023–0033–0879; Chamber, FTC–2023–0033–0885 (little to no evidence that double opt-in will create any

Thus, these commenters asked the Commission to exclude transactions where the negative option feature is not independent of the good or service being sold, *i.e.,* where the good or service is itself only offered as a negative option,[323] or to delete the requirement that sellers obtain separate, unambiguous, affirmative consent "to the rest of the transaction." [324]

Two commenters asked the Commission to modify the proposed provision by merging consent to the transaction and the negative option feature. These commenters suggested a separate consent should only be necessary where there are two independent portions of the transaction: one related to the negative option feature and a second for the sale of a separate good or service (including a free trial).[325] Without this change, commenter Kuehn suggested "the proposed Rule could have the unintended result of diminishing the efficacy of other important terms of the contract." Accordingly, Kuehn suggested the Commission revise the definition of negative option feature to encompass the entire contract (rather than a provision of the contract).[326] This alteration, along with changing "rest of the transaction" to "the sale of another good or service," would make it clear separate consent is only required where the seller has both an auto renewal agreement and the sale of another good or service.

IAB, DCN, CTA, and several direct marketing companies asserted the Commission could achieve the same outcome—informed consent—through less restrictive means, *e.g.,* by requiring a clearer disclosure of the negative option feature.[327] For example, CTA posited: "[a]lternatively, to advance the same goal, and because the Proposed Rule already requires clear and conspicuous disclosure of material terms, the FTC could instead require subscription service providers to prominently disclose subscription terms in a manner that differentiates them from other disclosures, such as in bolded or underlined font, in the course of obtaining consumer consent to the transaction." [328] Additionally, several commenters questioned "why a seller should be precluded from including other material terms of the transaction in obtaining a single consent." [329]

Some commenters raised additional concerns. For instance, several commenters challenged the Commission's statement that a separate check box or similar method could be used to record a consumer's unambiguously affirmative consent. Specifically, PDMI contended the check box, signature, or "substantially similar" method of consent could quickly become obsolete and "replaced by far more effective and consumer friendly mechanisms." [330] Another, NRF, argued courts routinely hold a separate check box is not required for consumers to manifest asset to terms and conditions of the agreement, so long as the terms are reasonably conspicuous.[331] Finally, a group of direct marketing companies, argued standalone consent is not necessary or reasonable, and other methods could suffice. They suggested the Commission include language that it "shall be a question of fact" whether the seller obtained consent through another means.[332]

Additionally, several trade groups and sellers expressed concern about the NPRM's proposed recordkeeping requirements. For instance, one trade group explained the proposed requirements "would require sellers to maintain records of consumer consent for at least three years, even for consumers who signed up for a free trial and cancelled it before being charged. As drafted, the proposed amendments would also require sellers to maintain records of consumer consent for eleven years for individuals who continuously subscribe to negative option features for at least ten years." [333]

Numerous commenters asserted these recordkeeping requirements would increase costs, which could ultimately be passed onto consumers,[334] or small businesses, especially with respect to in-person and telephone transactions.[335] Others raised concern the proposed recordkeeping requirement could conflict with best privacy practices. For example, commenters noted the retention period is at odds with the need to minimize the amount of consumer data that businesses hold and to enable customers to request deletion of their data.[336] Commenters also suggested the Commission reduce the length of the recordkeeping requirement, *e.g.,* to six months,[337] or revise the proposal to eliminate the requirement for those who do not allow customers to purchase without

consumer benefit, instead will increase consumer fatigue); *see also* IAB, FTC–2023–0033–1000 (double opt-in could be especially burdensome for bundled services, requiring consumers to check an additional box for each service, without added benefit to clarity or disclosure); ICA, 2023–0033–1142 ("requiring recording keeping of "express informed consent" potentially expressed through verbal, digital, or written records for multiple years will be an onerous and expensive requirement for small business owners to fulfill.").

accepting the terms of the negative option feature.[338]

Two consumer groups supported the consent provision but asked the Commission to add clarifying language. Specifically, Berkeley Consumer Law Center asked the Commission to state the Rule strictly prohibits the use of dark patterns to obtain consent and that consent cannot be given through silence. A group of professors asked the Commission to clarify that disclosures ''appear in each language in which the representation that requires the disclosure appears.'' [339]

Finally, commenters split on whether the Rule should require separate affirmative consent for free-trial offers. Several consumers supported requiring separate consent at the conclusion of a free-trial period,[340] with one consumer suggesting the Commission ban free-trial offers that require the prepurchase of the good or service.[341] Other consumer interest and public advocacy groups reiterated consumers often forget, or are unaware they have signed up for, a negative option feature in connection with a free trial offer.[342] Sellers and trade groups disagreed, specifically noting the Commission's own analysis indicating a separate consent may not be necessary given the other requirements of the Rule [343] and existing State laws.[344]

(b) Analysis

Based on the record, the Commission removes the proposed requirement that sellers obtain separate consent to ''the rest of the transaction'' under § 425.5(a)(3). Further, the Commission modifies the recordkeeping requirement to require sellers to maintain records only for three years from the date of consent. Alternatively, if sellers can show by a preponderance of the evidence they use processes that make it technologically impossible for a consumer to purchase the good or service without consent, sellers need not retain such records.[345] Finally, the Commission declines to modify the consent provisions to require separate consent for free-trial offers. However, should the Commission seek additional comments about a provision to require annual reminders,[346] it will consider addressing such offers at that time.

Prior to addressing each of the issues listed above, it is important to clarify one point. A negative option feature is not itself a product or service—it is simply a mechanism for repeatedly consenting to the extension of a contract through silence. Thus, there are not situations in which the negative option feature is the product, as some commenters suggested. In the example provided above, a subscription to a streaming entertainment service can be offered with (*e.g.,* the offer renews each month until cancellation) or without (*e.g.,* the subscription lasts one year and then must be affirmatively renewed, or it cancels) a negative option feature. There are situations in which sellers only offer products or services on a negative option basis; however, doing so does not lessen the need to ensure consumers consent to the negative option mechanism within the agreement. Therefore, the analysis below does not separately address this issue.

(1) The Commission does not adopt a requirement for separate consent to ''*the rest of the transaction*'' *because it is unnecessary, confusing, and hard to implement.*

Based on the comments, the Commission finds requiring consumer consent to ''the rest of the transaction'' apart from the negative option feature is unnecessary, potentially confusing, and may be hard to implement. First, even without the separate consent requirement, the proposed Rule contained several elements that work together to ensure consumers know they are agreeing to a negative option feature. Specifically, the proposed Rule required sellers to obtain the consumer's unambiguously affirmative consent to the negative option feature separately from any other portion of the transaction [347] through, for example, a separately presented check box.[348] It also required sellers to clearly and conspicuously provide important information immediately adjacent to the request for consumer consent, including that the charge will be recurring, the deadline to act to stop charges, the amount of the charges, and information necessary to cancel.[349] Further, the proposed Rule stated the seller cannot include any information or employ any techniques that interfere with the consumer's ability to understand these important disclosures and provide unambiguously affirmative consent to the negative option feature.

Given these protections, a separate consent requirement is not necessary.[350] Second, the Commission agrees the separate consent requirement could cause consumer confusion. Moreover, compliance with the Rule's required disclosure and consent provisions should address the concerns commenters raised regarding deception. Finally, several sellers suggested, and there is no evidence to the contrary, that seeking consent to both the negative

And, consumers shouldn't be automatically charged the day after the trial expires.''); Individual commenter, FTC–2023–0033–1069 (''A free trial should not create an automatic subscription!''); Individual commenter, FTC–2023–0033–0607 (''A 'trial offer' should be just that—a ONE-TIME purchase.'').

[342] State AGs, FTC–2023–0033–0886 (''the State Attorneys General again respectfully encourage the FTC to require sellers offering free trials to obtain an additional round of consent before charging a consumer at the completion of the free trial.''); Law Professors, FTC–2023–0033–0861 (''we ask that the Commission require additional consent from the consumer before a business may convert a free (or nominal-fee) trial into an expensive subscription. Indeed, it seems that Congress, in adopting ROSCA, validated consumer expectations that they would ''have an opportunity to accept or reject [a] membership club offer at the end of [a] trial period.''); TINA, FTC–2023–0033–1139 (''Such consumer complaints are consistent with survey data showing that 42 percent of consumers forget they are still paying for a subscription they no longer use.[ ] 'Many of those happen after you get enticed by a free trial for an online streaming service or a monthly subscription service for clothes or personal items, and then you forget to cancel it after that trial is over.' '').

[343] Sirius XM, FTC–2023–0033–0857 (''As long as consumers are clearly informed about the terms of a free trial offer and evince affirmative consent, no further consumer consent should be required when the free trial period expires.'').

[344] CCIA, FTC–2023–0033–0984; Chamber, FTC–2023–0033–0885.

[345] This change will not affect a seller's obligation to maintain appropriate records under other regulations, *e.g.,* the TSR.

[346] *See* section VII.B.7.

[347] Section 425.5(a)(1).

[348] Section 425.5(c) allows sellers to comply with the requirement to obtain unambiguously affirmative consent to the negative option feature through a check box, signature, or other substantially similar method.

[349] *See* Rule § 425.4(a)(1)–(4).

[350] The Commission further notes because the seller is obtaining express informed consent to the negative option feature separately from the rest of the transaction, consumers are, in effect, agreeing to both the negative option feature and the sale of the good or service separately.

option feature and the rest of the transaction could be hard to implement for many sellers. Thus, the final Rule does not contain the separate consent requirement.[351]

(2) The Commission modifies the recordkeeping requirements to address legitimate privacy concerns and reduce undue burden on small businesses.

Section 425.5(a)(4) of the proposed Rule required sellers to obtain and maintain (for three years or a year after cancellation, whichever was longer) verification of the consumer's consent to the negative option feature. Implementation of this requirement would undoubtably enhance the FTC's ability to enforce the Rule. However, the Commission agrees the proposal creates privacy concerns. The Commission has long recommended companies employ data retention policies that ''dispose of data once it has outlived the legitimate purpose for which it was collected.'' [352] Therefore, the Rule's data retention requirement, could, in some instances, be at odds with this guidance. Further, several commenters asserted a longer recordkeeping requirement will be burdensome, particularly for small businesses.

Balancing the Commission's interest in robust Rule enforcement against privacy and burden concerns, the Commission modifies the proposed Rule. Specifically, § 425.5(a)(3) of the final Rule requires sellers to keep or maintain verification of the consumer's consent for a period of three years from the date of consent (rather than three years or a year after cancellation, whichever is longer). Removing the requirement that sellers keep records until one year after cancellation prevents the retention of records for very long periods of time while the contract is still in force. Moreover, as some commenters stated,[353] sellers can employ technological processes for online consent that could alter the balance of concerns. Specifically, it is technologically feasible to make it impossible for customers to enroll without providing unambiguously affirmative consent. The Commission therefore further modifies the recordkeeping requirement to eliminate the requirement entirely if a seller can demonstrate it meets this threshold. The final provision will allow sellers to destroy consumer records more quickly, while accomplishing the same goal.[354] Finally, the Commission clarifies maintaining copies of advertisements or telephone scripts documenting the disclosures provided in general does not meet this requirement. Such information is easily manipulated by deceptive sellers and cannot show any particular consumer received the disclosures prior to giving consent. Therefore, sellers must either maintain records of each consumer's unambiguously affirmative consent or demonstrate they satisfy the technological exemption provision.

(3) Other concerns raised by commenters do not warrant modifications to the rule.

As noted above, a few commenters questioned the Commission's proposed exemplar consent mechanism under § 425.5(c). This proposed provision states for written offers, a check box, signature, or ''substantially similar'' method can be used to obtain a consumer's unambiguously affirmative consent. The Commission notes the mechanism applies to the negative option feature only, and thus corrects the cross-reference contained in this provision from (a)(3) to (a)(1).

The Commission further notes this provision does not require a check box or signature. The Commission offered these methods only as examples a seller can use to obtain unambiguously affirmative consent, not the only ways to do so. Thus, the exemplar does not conflict with caselaw holding that a check box is not required to manifest consent. The Commission also declines to include language in the final Rule, as one commenter suggested,[355] stating whether a seller has complied with this provision is a question of fact. This is unnecessary because the Commission always evaluates sellers' practices on a case-by-case basis to determine whether they comply with the law.

The Commission further declines to remove this provision's reference to ''substantially similar'' methods as some commenters requested. The language is intended to cover any method that affords consumers all the same protections as a check box or signature. The phrase ''substantially similar'' performs this function while allowing for technological advancement, innovation, and adaption without tying sellers to specific mechanism that may become obsolete.

Further, the Commission declines to modify the final Rule to allow sellers to obtain express informed consent by merely ''disclosing'' the negative option more clearly through, *e.g.,* bolded or underlined font, rather than obtaining expressed informed consent separately for the negative option feature. Although this change would be ''less restrictive,'' it would not adequately protect consumers from unknowingly enrolling in negative option programs. In the NPRM, the Commission balanced the need for clear, unavoidable disclosure of, *inter alia,* the negative option feature with the need for flexibility to allow sellers to best communicate their entire message to consumers. The proposed Rule strikes the right balance. As discussed above, proposed § 425.4 (Important Information), required sellers to clearly and conspicuously disclose important information about the negative option feature, immediately adjacent to the means of recording consent to the feature, and, under § 425.5 (Consent), separately from any other portion of the transaction. The Commission did not specify exact placement, language, or font size because doing so would have diminished flexibility without a sufficient corresponding benefit.

While this balance is appropriate, the required disclosure of important information under § 425.4 does not replace the requirement that sellers obtain consumers' express informed consent. To avoid harm from unfair and deceptive practices, it is imperative consumers unequivocally understand they are agreeing to enrollment in a negative option program and demonstrate their agreement.

The Commission also declines to add language stating (1) the Rule strictly prohibits the use of dark patterns to obtain consent and (2) consent cannot be given through silence. The Rule already addresses both concerns. First, the Rule bars any information that ''interferes with, detracts from, contradicts, or otherwise undermines'' the consumer's ability to provide express informed consent. To the extent dark patterns run afoul of any of these requirements, they are prohibited. To the extent they do not, consumers' express informed consent as required by the Rule is not implicated. Second, under § 425.5, consumers already must give affirmative consent.

Finally, the Commission does not need to clarify, as some commenters suggested, that required consents ''appear in each language in which the

[351] *See* § 425.5(a)(3).

[352] NCTA, FTC–2023–0033–0858 (citing FTC, ''Protecting Consumer Privacy in an Era of Rapid Change'' (2012) at 28, *www.ftc.gov/reports/protecting-consumer-privacy-era-rapid-change-recommnedations-businessespolicymakers*).

[353] ANA, FTC–2023–0033–1001; ESA, FTC–2023–0033–0867 (for purchases that cannot be completed without a consumer's consent, a business will be deemed compliant with any recordkeeping requirement and is not required to maintain an individual record of consent).

[354] Importantly, if the seller does not maintain records and cannot satisfy the technological exemption, the seller has violated the Rule.

[355] Direct Marketing Companies, FTC–2023–0033–1016.

representation . . . appears.'' [356] To obtain a consumer's express informed consent, each disclosure must be clear and conspicuous and immediately adject to the means of recording the consumer's consent. To meet the clear and conspicuous standard as defined in the Rule, the disclosure must, among other things, ''appear in each language in which the representation that requires the disclosure appears.'' [357]

(4) The Commission does not modify the Rule to require separate consent for free trial offers.

In the NPRM, the Commission invited comments on whether the Rule should require an additional (or alternative) round of consent after the end of a free trial offer. As explained in the NPRM, if the seller follows the proposed Rule's disclosure and consent requirements, consumers should understand they are enrolled in, and will be charged for, the negative option feature once the free trial ends. As discussed above, however, several commenters explained with enough time between initial enrollment and charge after conversion, consumers are primed to forget the negative option feature.[358] The Commission agrees this an important issue; however, clear upfront disclosures lessen the chance a negative option feature may be unfair or deceptive. Specifically, clear, accurate upfront disclosures reduce the risk of deception, and the potential harms caused are more likely to be reasonably avoidable (*i.e.,* the consumer can simply refuse to enter into the contract). That said, taking advantage of consumers' ''forgetfulness'' is extremely troubling and thus ripe to be addressed by other means.

6. Proposed § 425.6 Simple Cancellation (''Click to Cancel'')

Section 425.6 of the proposed Rule contains several requirements to ensure consumers can easily cancel negative option features. As explained in the NPRM, ''easy cancellation is an essential feature of a fair and non-deceptive negative option program,'' but one that has become ''far too often illusory.'' [359] ''If consumers cannot easily leave a negative option program, the negative option feature is little more than a means of charging consumers for goods and services they no longer want.'' [360]

To prevent unfairly trapping consumers in a transaction they do not want, the proposed Rule directed sellers to provide a cancellation mechanism that (1) immediately halts recurring charges; (2) is as simple to use as the mechanism the consumer used to consent to the negative option feature; and (3) is readily accessible through the same medium the consumer used to provide that consent. The Commission intended these requirements to erect clear guardrails, while providing sellers with the flexibility to innovate. Therefore, rather than propose specific prohibitions, which may lose utility over time, or inadvertently provide a roadmap for deception, the proposed Rule outlined a performance-based standard mapping the contours of what constitutes a simple mechanism, without overly prescriptive requirements.

(a) § 425.6(a) and (b) Simple Mechanism Required for Cancellation; and Simple Mechanism at Least as Simple as Initiation

(1) Summary of Comments

Proposed § 425.5(a) and (b) required a fast and easy cancellation mechanism that, at minimum, allows the consumer to cancel as easily as they enrolled in the program. The Commission received thousands of comments in support of this provision, with individual consumers uniformly expressing their desire for a simple easy to use cancellation mechanism.[361] Such comments included: ''If you signed up online, you should be able to cancel online. If it took one click to join, it should take one click to cancel;'' [362] ''I would like the option to cancel my subscriptions, [and] offers online just as easily as it was to sign up;'' [363] ''As more and more services enter online use, it is ridiculous that consumers have to jump through so many hoops to cancel services when it is so easy to sign up for them;'' [364] and ''Consumers need the one-click option.'' [365]

Some commenters suggested unsubscribing should be easier than enrolling,[366] and others, ''very easy.'' [367] Indeed, several advocated for an ''Unsubscribe link,'' [368] similar to those available under the CAN–SPAM Act.[369] Numerous commenters complained they

[361] Individual commenter FTC–2023–0033–0029 (''Please implement this necessary rule to protect consumers and save us hours on the phone cancelling services we signed up for with one click online.''); Individual commenter, FTC–2023–0033–0072 (''I have had issues with some online subscriptions which were entered into purely online, but to cancel I had to call a phone number open only during certain business hours. I would like a rule that requires all subscriptions to be available to cancel through the same means as they were initiated, whether that is online, in person, phone, mail, or chat. I believe that would be fair to people of all technological levels while allowing businesses to conduct business how they feel comfortable without allowing them to create unnecessary hurdles for customers looking to end their service.'').

[362] Individual commenter, FTC–2023–0033–0111. Thousands of individual consumers repeated this phrase through a mass media campaign. *See, e.g.,* Anonymous commenter, FTC–2023–0033–0013; Individual commenter, FTC–2023–0033–0016 (''If I can subscribe in one click, I should be able to unsubscribe in one click.''); Individual commenter, FTC–2023–0033–0017 (''It should be as easy as one click to cancel an online account.''); Individual commenter, FTC–2023–0033–0068 (''Being able to go online and with a simple click be able to cancel a subscription would be a dream.''); *see also* Individual commenter, FTC–2023–0033–0015 (''Ending a subscription should be as easy as it was to sign up. it makes no sense how hard it is to close out an account with some places.''); Individual commenter, FTC–2023–0033–0020 (''The time has come to make it as easy for consumers to cancel subscriptions as it has been to start them.''); Individual commenter, FTC–2023–0033–0087 (''I think any offer you can buy with a click should also be an offer to unsubscribe with a click.'').

[363] Individual commenter, FTC–2023–0033–0003; *see also* Individual commenter, FTC–2023–0033–0010 (''I for one would be for the Easing of subscription cancellation. Having it be much harder to cancel a subscription than start it simply shouldn't be.''); Anonymous commenter, FTC–2023–0033–0024 (''It should be no harder for consumers to stop giving a company their money than it is for them to start giving it to them.''); Individual commenter, FTC–2023–0033–0025 (''In fact, it should be as easy to cancel as it is to sign up.'').

If it took one click to join, it should take one click to cancel. Kind of like 'unsubscribing' from an email newsletter you don't want to get anymore.''); Individual commenter, FTC–2023–0033–0236 (''When I get an email from a politician I'm not interested in there is always an unsubscribe button. Why can't paid subscriptions be the same?'').

[369] Controlling the Assault of Non-Solicited Pornography and Marketing Act of 2003 (''CAN–SPAM Act''), 15 U.S.C. 7701–7713; 16 CFR part 316.

often have to resort to disputing the charge with credit card companies (or cancelling the card altogether) because cancellation is so difficult or impossible.[370] Additionally, commenters described the simple cancellation mechanism requirements as a ''no brainer,'' ''common sense,'' and ''only fair'' to consumers.[371] These and others commenters complained of the hundreds of dollars [372] and hours [373] wasted on unused and unwanted products and services they were not effectively able to cancel due to byzantine cancellation procedures.[374]

As summarized by the Berkeley Consumer Law Center, ''requiring the mechanism of cancellation be as simple as enrollment'' will minimize ''overly complex cancellation processes with multiple steps,'' and prevent sellers ''from trapping consumers in automatically renewing subscriptions through obstacles created by tedious processes or confusion.'' [375]

Sellers and trade organizations argued the proposed requirements were ''too vague.'' [376] For instance, PDMI asserted the requirement that the simple cancellation mechanism be as easy to use as the one used to initiate the transaction provides no clear guidance on when a transaction is ''initiated.'' Several industry and trade groups echoed this comment, contending ''as easy as'' is a difficult, and often subjective, standard.[377] Other businesses complained the proposed Rule fails to define ''simple mechanism'' [378] and making cancellation as easy as enrollment was not possible because they serve different purposes.[379] IAB asserted the proposed requirements were overbroad in relation to the prevalent acts or practices the Commission identified.[380]

(2) Analysis

Considering the overwhelming support for a simple cancellation [381] mechanism that immediately halts charges,[382] and given substantial evidence supporting the need for such mechanism to prevent unfair and deceptive acts and practices, the Commission retains proposed § 425.6(a) and (b).[383] The Commission disagrees with commenters' argument that the ''as easy as'' standard is vague. The Commission has provided considerable guidance on what constitutes a simple or ''easy'' cancellation mechanism through numerous cases and its 2021 Enforcement Policy Statement.[384]

[375] Law Professors, FTC–2023–0033–0861; *see also* State AGs, FTC–2023–0033–0886 (''state attorneys general strongly endorse the FTC's efforts to ensure that consumers enrolled in subscription services or other negative option plans are continuing to pay for those plans because they want to maintain their subscriptions, and not because it is too much trouble to cancel.'').

[376] PDMI, FTC–2023–003–0864; ACT App Association, FTC–2023–0033–0874 (elusive language); IAB, FTC–2023–0033–1000 (unclear how to measure simplicity).

[377] Chamber, FTC–2023–0033–0885 (''ambiguous and hard to implement requirement); NRF, FTC–2023–0033–1005 (as simple as not defined and no examples).

[378] ACT App Association, FTC–2023–0033–0874. The Commission does indeed define ''simple mechanism'' through the requirements of § 425.6, as well as through existing caselaw and the 2021 Enforcement Policy Statement. *See* n.385.

[379] ESA, FTC–2023–0033–0867; IHRSA, FTC–2023–0033–0863; Chamber, FTC–2023–0033–0885; BSA, FTC–2023–0033–1015.

[380] IAB, FTC–2023–0033–1000. The Commission addresses IAB's prevalence assertions elsewhere. *See* section VII.A.

[381] Beyond the near universal support by consumers and consumer advocacy groups, some trade groups also supported the goal of ensuring consumers have a quick and easy mechanism to cancel. RILA, FTC–2023–0033–0883; *see also* Sirius XM, FTC–2023–0033–0857 (''All parties want an easy-to-use and an accessible method of cancellation''); ZoomInfo, FTC–2023–0033–0865 (''We concur with the FTC's recognition that negative option terms, often concealed in 'fine print', can be difficult for consumers to negotiate or even to comprehend fully, and that canceling these contracts can be unfairly burdensome.'').

[382] Some commenters asked for clarification regarding whether the requirement under § 425.6(a) would also immediately cancel the entire contract. *See, e.g.,* N/MA (''The FTC should also clarify that the ''Click to Cancel'' proposal applies only to the negative option portion of a subscription and not to the entire subscription.''). The language of the Rule is clear—cancellation under the Rule applies only to the negative option portion of the contract, and not the entire contract. Section 425.6 (''it is violation of this Rule . . . for the negative option seller to fail to provide a simple mechanism for a consumer to cancel the negative option feature''). Thus, when a consumer cancels, all terms and conditions continue until the expiration of the contract or agreement.

[383] BSA specifically requested the Commission revise subsection (a) to the following: ''We suggest revising this language to clarify the intended result by stating the obligation is 'to cancel the negative option feature and immediately stop any recurring charges for the good or service.' '' BSA, FTC–2023–0033–1015. However, this change could create ambiguity regarding application of the subsection to the initiation of charges under free- and fee-to-paid conversions. Accordingly, the Commission will not incorporate the suggested change.

Continued

Moreover, the ''as easy as'' standard is even clearer in context, *i.e.,* a flexible measure that ensures consumers have similar cancellation and consent experiences in terms of time, burden, expense, and ease of use, among other things.[385] The Commission is aware these experiences may not always be perfectly symmetrical. Consumers may have to verify or authenticate their identity, for instance,[386] or they may be asked to confirm their intent to cancel.[387] However, reasonable verification, authentication, or confirmation procedures should not create distinctly asymmetrical experiences, particularly if the cancellation mechanism is located within account or user settings secured by authentication requirements for access. Any authentication, verification, or confirmation procedure that creates unreasonable asymmetry runs afoul of section 5 of the FTC Act and the Rule. Moreover, given the extensive record and the Commission's experience with sellers using verification and authentication tools to thwart or delay cancellation,[388] the Commission declines to create a safe harbor for these activities as some States have [389] and as some commenters requested.[390]

Nevertheless, as some commenters point out, the proposed initiation or purchase date trigger may provide insufficient clarity.[391] Not all negative option features begin with a purchase (*e.g.,* free trials), and when a transaction is initiated is subject to interpretation or possible manipulation. Given this ambiguity, businesses attempting to comply with the proposed Rule may have difficulty, and those attempting to evade the proposed Rule may find loopholes with the proposed initiation or purchase date trigger. Thus, the Commission revises § 425.6(b) [392] to require the simple cancellation mechanism be ''as easy as'' the mechanism the consumer used ''to consent'' to the negative option feature, rather than ''initiate'' or ''purchase'' the feature. The moment of consent avoids the lack of clarity the terms ''purchase'' and ''initiate'' introduce and clarifies the action to which the cancellation must be compared.

(b) Proposed § 425.6(c) Minimum Requirements for Simple Mechanisms

(1) Summary of Comments

The proposed Rule required sellers to provide a simple cancellation mechanism through the same medium (internet, phone, in-person) the consumer used to consent to the negative option feature. Almost uniformly, consumers supported this requirement.[393] However, a number of a trade groups disagreed, arguing, as explained below, the requirement is too prescriptive, or could lead to accidental or inadvertent cancellation.[394] Instead, these commenters suggested the Commission allow consumers to choose their cancellation medium (*e.g.,* based on ''consumer expectations,'' convenience, or common use by the seller).[395]

Consumer groups and law enforcement asked the Commission to add minimum requirements to the simple cancellation mechanism. For instance, the State AGs asked the Commission to include the various requirements stated in the 2021 Enforcement Policy Statement, *e.g.,* require negative option sellers ''not [to] erect unreasonable barriers to cancellation or impede the effective operation of promised cancellation procedures, and must honor cancellation requests that comply with such procedures.'' [396] They also urged the Commission to adopt language from New York's statute, which provides simple cancellation mechanisms must be ''cost effective, timely, and easy to use.'' [397] Additionally, the Center for Data Innovation asked the Commission to create a working group to define simple mechanism further, including best practices for businesses.[398]

Finally, some commenters suggested the record lacks evidence that it would be unfair or harmful to consumers to have a cancellation process different from the sign-up process.[399] Accordingly, they argued promulgating a trade regulation rule requiring such symmetry is beyond the Commission's authority. Further, IAB argued the Commission cannot create new requirements defining simple cancellation methods beyond ROSCA's simplicity standard, *i.e.,* that sellers provide simple mechanisms to stop recurring charges, because Congress already decided the appropriate standard.[400]

(a) Proposed § 425.6(c)(1): Online Cancellation

Section 425.6(c)(1) of the proposed Rule specifically addressed online cancellation, requiring sellers to provide a cancellation mechanism over the same website or web-based application the consumer used to consent. Thousands of commenters repeated the mantra: ''If you signed up online, you should be able to cancel online,'' noting they often face hurdles finding a cancellation mechanism, and then must call and

Inc., No. 1:17–cv–09083 (S.D.N.Y. 2017); *FTC* v. *AAFE Prods. Corp.,* No. 3:17–cv–00575 (S.D. Cal. 2017); *FTC* v. *JDI Dating, Ltd.,* No. 1:14–cv–08400 (N.D. Ill. 2014).

[385] Some commenters raised the concern that sellers might create complicated signup procedures to justify complex cancellation mechanisms. ESA, FTC–2023–0033–0867; State AGs, FTC–2023–0033–0886; IAB, FTC–2023–0033–1000. As pointed out by the State AGs sellers must comply with all requirements of a simple cancellation mechanism, including that consumers can promptly effectuate cancellation through an accessible means.

[386] Commenters insisted that reasonable authentication and verification procedures be allowed prior to cancellation to ensure that only authorized persons are making changes to an account. NFIB, FTC–2023–0033–0789; IHRSA, FTC–2023–0033–0863; ESA, FTC–2023–0033–0867; N/MA, FTC–20230033–0873; RILA, FTC–2023–0033–0883; ANA, FTC–2023–0033–1001.

[400] IAB, FTC–2023–0033–1000.

spend significant time on the telephone to cancel their subscriptions.[401]

In contrast, RILA suggested consumers would not always expect to find a cancellation function through the same online medium the consumer used to enroll. ''For example, contracts are . . . increasingly concluded online through third parties or via social media apps. Regardless of how a customer initially signs up, once she/he establishes a purchasing arrangement with a seller, the customer will logically look to the seller to cancel.'' [402] Several commenters agreed, stating where a consumer enrolls through a third party, or through an IoT device, the consumer may naturally look to the seller with whom the consumer has the agreement.[403]

Similarly, trade groups, such as NCTA and PDMI, argued mandating consumer cancellation through the same website or web-based application the consumer used to initiate the transaction is too prescriptive.[404] Several of these commenters asserted the proposed requirement is unnecessary and contrary to consumer expectations.[405] They further contended when consumers enroll online, any online cancellation mechanism should be adequate.[406] Further, these commenters suggested it may not be possible to offer the same website or web-based application due to contractual obligations and limitations imposed by third parties.[407]

Additionally, broadband, wireless, and streaming groups, such as NCTA and USTelecom, suggested the same-medium requirement is particularly troublesome for their industries because consumers often subscribe to multiple, or bundled, services, rendering cancellation online through a single click difficult or impossible. These industries posited consumers often do not, in fact, want to cancel, but rather seek to downgrade or modify services. Therefore, requiring a consumer to speak to a live agent best accomplishes this goal, regardless of how the consumer enrolled.[408]

Alarm companies raised a similar concern, *i.e.,* there are no safeguards to ensure the consumer intended to cancel (rather than, *e.g.,* unsubscribe from marketing emails) when cancelling online. They also emphasized the importance of verifying a consumer's identity prior to cancellation. As explained by a commenter representing various alarm company clients, alarm companies' ''cancellation procedures are designed to prevent inadvertent or malicious disabling of alarm monitoring services, often by directing consumers to call trained customer support representatives who can verify the consumer's identity via their secure passcode and ensure any changes made to the account are intentional and fully informed.'' [409]

(b) Proposed § 425.6(c)(2): Telephone Cancellation

Proposed § 425.6(c)(2) addressed situations in which sellers obtain consumer consent by telephone. In these situations, the proposed Rule required sellers to provide a telephone number to consumers and ''assure'' all calls are answered promptly during ''normal business hours'' and are no more costly than the call to enroll.

Several commenters asked the Commission to modify this section. Specifically, N/MA asked that sellers be allowed to confirm telephone cancellations through email verification.[410] A group of law professors asked the Commission to require sellers to answer cancellation calls in ''comparable timeframe to sign-up calls.'' [411] They also suggested telephone answering systems should not be limited to normal business hours if they are entirely automated. The State AGs further asked the Commission to incorporate the guidance for telephone cancellation from the 2021 Enforcement Policy statement, for example, ensuring ''the calls are not lengthier or otherwise more burdensome than the telephone call the consumer used to consent to the negative option feature,'' and prohibiting sellers from ''hang[ing] up on consumers who call to cancel; plac[ing] them on hold for an unreasonably long time; provid[ing] false information about how to cancel; or misrepresent[ing] the reasons for delays in processing consumers' cancellation requests.'' [412]

(c) Proposed § 425.6(c)(3): In-person Cancellation

For in-person sales, proposed § 425.6(c)(3) required sellers to offer online or telephone call cancellation mechanisms in addition to the same in-person mechanism, where practical. The proposed Rule further required sellers not make telephone cancellation more costly than the method used to consent to the negative option feature.

Individual consumers identified the many ways in which demanding in-person cancellation is unfair. For instance, they observed it may not always be possible to cancel in person, as was true during the COVID pandemic,[413] after a consumer moves from the area,[414] or for people with young children or who have difficulty leaving their home.[415] Others

[401] Individual commenter, FTC–2023–0033–0215 (''If you signed up online, you should be able to cancel online. If it took one click to join, it should take one click to cancel.''); Individual commenter, FTC–2023–0033–0847; Anonymous commenter, FTC–2023–0033–0040 (''My negative experience was that it was a simple 'click' on-line to sign up for a service but to cancel same service it took three phone calls and hours of my time. If I can sign up with a 'click' then I SHOULD be able to cancel with a 'click.' '').

[415] Individual commenter, FTC–2023–0033–0741 (''[m]any places . . . require you to go in person to cancel—they won't even let you do it over the phone! This harms anyone that may have trouble leaving the house regularly, including disabled folks and parents of small children and those caring for older or ailing family members.''). *See also* TechFreedom, FTC–2023–0033–0872 (''Returning to the in-person venue where the initial sale occurred may be inconvenient, or even impossible, for the consumer.''); Individual commenter, FTC–202–0033–1141 (''Sometimes an unexpected move or unforeseen circumstances make it impossible to cancel in person. I would like to see an option to be able to cancel remotely, even if the subscription was purchased on site.'').

complained they showed up numerous times in person, only to be told they could not cancel because the manager was not available.[416] One commenter complained sellers demanded consumers cancel by certified mail if they originally consented in person.[417]

In contrast, two trade associations requested the Commission allow sellers to require consumers to cancel in person if they signed up in person. These commenters argued such a limitation is appropriate due to the unique challenges of their industries. For example, IHRSA, which represents the health and fitness industry, stated, ''it is appropriate for a brick-and-mortar business'' to require customers to cancel in person ''to verify their identity.'' The International Carwash Association (''ICA'') stated some of its members sell products and services exclusively in person; therefore, it asked the Commission to not ''force'' these small business owners ''to set up an online marketplace'' to process cancellations if the seller does not already have an online presence.[418]

(2) Analysis

(a) The Commission retains the general ''same medium'' requirements of § 425.6(c).

Based on the record, the final Rule retains the general requirements proposed in § 425.6(c); specifically, the negative option seller must provide a simple cancellation mechanism through the same medium (such as internet, telephone, mail, or in-person) the consumer used to consent to the negative option feature. Further, the final Rule retains § 425.6(a) that requires sellers to provide consumers with a simple mechanism to immediately stop charges that is cost-effective, timely, and easy to use. Such a mechanism cannot include ''unreasonable barriers to cancellation or impede the effective operation of promised cancellation procedures.''[419] This provision makes adding language from the 2021 Enforcement Policy Statement or the New York statute unnecessary because the simple mechanism provision already includes it. Further, several commenters asked the Commission to allow consumers to choose additional, alternate means of cancellation.[420] This modification, however, is also unnecessary. The ''same medium'' requirement presents a floor, not a ceiling. That is, it only requires businesses to offer consumers the ability to cancel in the manner they were able to sign up. Sellers are free to provide additional cancellation mechanisms, giving consumers choices.

Moreover, despite some commenters' assertions to the contrary, the Commission has clear authority to issue a rule requiring sellers to offer cancellation through the same medium as enrollment. As detailed in section VII.A, there is a substantial record demonstrating the negative option practices covered by this Rule are unfair or deceptive, prevalent, and have caused significant consumer harm.[421] Moreover, Magnuson-Moss empowers the Commission to promulgate requirements designed to prevent any unfair or deceptive practice it identifies with specificity.[422] By promulgating a rule that prevents sellers from making cancellation unreasonably difficult, the Commission has done so here. Further, while ROSCA does not provide for APA rulemaking, it does not limit the Commission's authority to issue a trade regulation rule.[423] In fact, the Commission's Negative Option Rule predates ROSCA, and the statute does not rescind that Rule.

(b) The Commission modifies the requirements of § 425.6(c)(1): Online Cancellation.

In response to comments, the Commission makes several changes to clarify the online cancellation mechanism requirements. First, it removes the requirement that, for website or web-based applications, cancellation must be afforded through the same precise means as consent. Instead, the final Rule provides the simple cancellation must be easy to find. Second, the revised provision incorporates a definition of ''interactive electronic medium'' in place of ''internet.'' Third, the Commission excludes cancellation mechanisms requiring interaction with a live or virtual agent, unless the consumer consented to the negative option feature through such mechanism. Each modification is discussed below.

(i) The simple cancellation mechanism must be easy to find.

Consumers uniformly opposed having to engage with a representative to cancel when they could simply click a button to enroll.[424] They also expressed deep

---

[416] *See, e.g.,* Individual commenter, FTC–2023–0033–0510 (''I had to go in person 3 different times because the manager wasn't there so to cancel it'').

[417] Individual commenter, FTC–2023–0033–0007 (''I work dispute resolutions for a bank. I see so many cases where someone is trying to cancel something like a gym membership and, while they can sign up in person, they for some reason have to mail a certified letter to the [company's] home office. That has always seemed unreasonable and deliberately contrived.'').

[418] ICA, FTC–2023–0033–1142. ICA's comment seems to suggest a misunderstanding that the Rule would require both telephone and online cancellation for in-person consent. It does not. A business may elect either online or telephone (or both), but there must be at least one mechanism in addition to in-person cancellation.

[419] EPS, 86 FR 60823; *see also* NPRM, 88 FR 24728 (explaining the simple cancellation mechanism proposed in the Rule should remove barriers, such as unreasonable hold times or verification requirements).

[420] *See, e.g.,* N/MA, FTC–2023–0033–0873 (subscribers should be allowed to choose method most convenient; subscribers who sign up by mail may prefer to cancel online or by telephone, and consumers who subscribed by telephone may prefer to cancel online); Sirius XM, FTC–2023–0033–0857 (''For example, requiring a customer to use direct mail to cancel if the customer used direct mail to accept a subscription offer would be inconvenient for the customer and not the customer's expected or desired means for cancellation. Instead, the cancellation method should be an easy-to-use mechanism for a consumer to stop recurring charge which would closely track consumer expectations and allow for changes in technology.''); State AGs, FTC–2023–0033–0886 (''We respectfully suggest requiring sellers to allow *all* consumers to cancel through *any* medium that the seller uses to sell subscriptions or memberships, regardless of the medium through which that particular consumer signed up.'').

[423] NPRM, 88 FR 24716 n.9. Although, as stated in the NPRM, Congress did not direct the FTC to promulgate implementing regulations, it certainly did not preclude them, and the language contained in ROSCA confirms the FTC's authority to do so. 15 U.S.C. 8404(a) (''Violation of this chapter or any regulation prescribed under this chapter shall be treated as a violation of a rule. . . .''); *see also id.* 8404(b) (''Any person who violates this chapter or any regulation prescribed under this chapter'' shall be subject to penalties); *id.* 8404(c) (''Nothing in this section shall be construed to limit the authority of the Commission under any other provision of law.'').

[424] Individual commenter, FTC–2023–0033–0003 (''When signing up, I didnt talk to a single individual. So its fair that when cancelling, I should not have to talk to a single individual.''); Individual commenter, FTC–2023–0033–0006 (was forced to call ''and speak with several agents'' because unable to cancel online); Anonymous commenter, FTC–2023–0033–0044 (shouldn't be forced to make a phone call and sit on hold for hours if signed up online); Individual commenter, FTC–2023–0033–0072 (fair to consumers to allow consumers to cancel through same means as they were initiated); Individual commenter, FTC–2023–0033–0087 (''I think any offer you can buy with a click should also be an offer to unsubscribe with a click''; having to call instead is a scam); Anonymous commenter, FTC–2023–0033–0095 (''I would like to specify that [company] did not allow to terminate the account online. They specifically requested a phone call, which they then ignored for as long as possible. This practice is unfair and deceptive and needs to be outlawed.''); Anonymous commenter; FTC–2023–0033–0097 (FTC should ban practice of companies only offering cancellation via phone call, despite not requiring a phone call for signup); Individual commenter, FTC–2023–0033–0274 (''having to call the company to cancel when the party clicked on the website is forced verbal speech''); Individual commenter, FTC–2023–0033–0356 (''If you signed up online, you should be able to cancel online. If it took one click to join, it should take one click to cancel. I am tried [sic] of calling some call center, waiting on hold, and then having someone go through a long script about why I should not cancel. Generally make it as easy to cancel as to sign up.''); Individual commenter, FTC–2023–0033–0379 (''I have now been charged for a full month because I have to call and speak

frustration over having to hunt to find cancellation mechanisms, usually buried deep within a website or in fine print on a bill or other correspondence.[425] The Commission has brought numerous cases alleging these practices are unfair or deceptive.[426] The proposed Rule sought to prevent these unfair and deceptive practices by requiring sellers to provide an easily accessible online cancellation mechanism to consumers who enrolled online.[427] As several commenters rightly noted, however, consumers may not always expect (and it may not always be possible) to use the same precise means for both enrollment and cancellation.[428]

Accordingly, to clarify the intent of the original language and to better match consumer expectation with actual cancellation procedures, the Commission now clarifies that where a consumer enrolls online, whether through a website, a mobile application, chat, email, or messaging, consumers must be afforded an equally simple online cancellation experience, *i.e.,* one that allows them easily to find and use the cancellation mechanism.[429]

Many commenters agreed consumers would consider a link or button located on a website or within a user's account or device settings to be ''easy to find.'' [430] Providing a clearly-labeled cancellation button in a consumer's account or user settings is, thus, one example of a simple online cancellation mechanism.[431] The Commission cautions, however, while such a mechanism need not be exactly the same as the consent mechanism, the seller cannot make it more difficult to use or find than the consent mechanism. For example, the seller cannot prominently label the mechanism within the account settings but make it difficult for consumers to find the account settings in the first instance.

Further, the Commission emphasizes that the cancellation mechanism must be easy to find at the time the consumer decides to cancel. Providing an easy-to-find mechanism at consent does not mean the mechanism will be easy to find later when the consumer wants to cancel, and therefore will not prevent unreasonable barriers to cancellation. Thus, providing the information necessary to find the cancellation mechanism at enrollment (as required under § 425.4) does not discharge the seller's obligation to ensure cancellation is easy to find when most relevant to the consumer.[432]

(ii) ''Interactive electronic medium'' is broadly defined to include all methods of electronic communication.

The State AGs asked the Commission specifically to address the requirements for cancellation by chat, text messaging, and email. The State AGs explained that although chat and text are increasingly common cancellation mechanisms, they share some of the same qualities and potential problems as telephone cancellation because they require interaction with a live or virtual customer representative.[433] Further, the State AGs suggested email should not be an acceptable cancellation medium for online consent.[434]

To address these concerns, the Commission revises the proposed provision to refer to ''interactive electronic medium'' rather than ''internet.'' This change clearly includes text, chat, and email within the scope of online cancellation mechanisms.

to a representative instead of clicking to cancel.''); Individual commenter, FTC–2023–0033–0443 (''If the public is allowed to set up an account online we should be allowed to cancel online without ever making a phone call. The consumer should have more rights than corporations.''); Individual commenter, FTC–2023–0033–0617 (''It is truly obnoxious to be able to click to join but have to research to find the way to cancel, often involving making a phone call and being left on hold.''); Individual commenter, FTC–2023–0033–0716 (''We shouldn't have to call the company to cancel!''); Individual commenter, FTC–2023–0033–0788 (requiring a call when enrolled online is ''coercive and unfair''); Individual commenter, FTC–2023–0033–0822 (''I am sick of having to call a phone number to cancel something I signed up for on line, and often speaking to someone who is snide, sarcastic, or downright rude!'').

[425] Individual commenter, FTC–2023–0033–0065 (''Often a company makes it significantly more difficult to even find out where or how to cancel a subscription.''); Individual commenter, FTC–2023–0033–0024 (''It took a Google search to find the right Customer Service number because it was hidden or unavailable on the website.''); Individual commenter, FTC–2023–0033–0084 (finally found corporate number to cancel trampoline park after scouring website for a membership enrolled online); *see also* Individual commenter, FTC–2023–0033–0067 (''why are they allowed to sign you up for automatic renewal with no way to cancel nothing on their web page in order to cancel a subscription''); Individual commenter, FTC–2023–0033–0071 (biggest annoyance is that subscriptions can be signed up for so easily with a few buttons on the remote but nearly impossible to cancel); Anonymous commenter, FTC–2023–0033–0108 (''I certainly hope this goes through. These companies make it incredibly difficult to even find the cancel or opt out option.''); Anonymous commenter, FTC–2023–0033–0123 (''Straight forward plain language cancelation instructions that are easy to locate should be required.''); Individual commenter, FTC–2023–0033–0124 (''Clearly there should be an easy way to unsubscribe that is easy to find.''); Individual commenter, FTC–2023–0033–0560 (cancellation page should be easy to find); Individual commenter, FTC–2023–0033–0642 (''If you signed up online, you should be able to cancel online. If it took one click to join, it should take one click to cancel. I have had trouble finding where to cancel on multiple subscription services. Often, they are confusing on purpose to keep customers like me trapped in the payment cycle. Some require an email or phone call to a separate customer service representative. Cancelling should not be harder than signing up for their service.''); Individual commenter, FTC–2023–0033–0685 (''I am tired of having to screen grab the fine print to figure out my options for cancelling subscriptions-it just shouldn't be this hard!?!''); Ashley Sheil on behalf of Maynooth University and in collaboration with Radboud University, FTC–2023–0033–1006 (observing that companies may take advantage of the ''as easy as'' requirement, and recommending any termination button should be highlighted and in an obvious location).

[426] *See* n.385 (citing simple cancellation cases).

[427] NPRM, 88 FR 24728 (''On the internet, this 'Click to Cancel' provision requires sellers, at a minimum, to provide an accessible cancellation mechanism on the same website or web-based application used for sign-up.'').

[428] *See, e.g.,* ESA, FTC–2023–0033–0867 (''Such a requirement would not be helpful for players seeking to cancel a subscription, as in-game is not the place that most players would expect to find a cancellation ingress.''); RILA, FTC–2023–0033–0883 (''The method that a consumer uses for initial sign-up may not be the place where that consumer would expect to find a simple cancellation function. For example, contracts are also increasingly concluded online through third parties or via social media apps. Regardless of how a customer initially signs up, once she/he establishes a purchasing arrangement with a seller, the customer will logically look to the seller to cancel the arrangement.'').

[429] The Chamber asked the Commission to clarify that web-based chat is an appropriate cancellation where a consumer signs up online. As is clear from the record, unless the seller required the consumer to engage with an agent through a web-based chat to enroll, the Rule will preclude requiring the consumer to do so to cancel. There is substantial evidence this asymmetrical practice of requiring consumers to engage with agents (live or virtual) for cancellation but not enrollment is one of the principal methods sellers use to create unfair and deceptive cancellation procedures. Accordingly, it is appropriate to include limitations within the Rule to prevent unscrupulous sellers from using such practices.

[430] Individual commenter, FTC–2023–0033–0124 (''Clearly there should be an easy way to unsubscribe that is easy to find.''); Individual commenter, FTC–2023–0033–0252 (''I had been thinking of contacting my Governor to suggest just such a rule that the method provided for signing up for a service must also be provided for cancelling the same service, be just as easy to find, and require no more steps than it took to sign up.''); Individual commenter, FTC–2023–0033–0560 (''And ensure the bill is explicit with requirement to make it EASY TO FIND HOW TO REACH the company or cancellation page.''); Individual commenter, FTC–2023–0033–0640 (''The Federal Trade Commission needs to make it mandatory for companies to have an easy to find button to cancel a subscriptions -online-.''); Individual commenter, FTC–2023–0033–0784 (''And the cancel button should be easy to find and as attractively marketed as an opportunity to extend a subscription (font size, colors, etc.).''); Individual commenter, FTC–2023–0033–1006 (cancellation should be highlighted and in an obvious location).

[431] *See, e.g.,* Cal. Bus. & Prof. Code § 1702(d)(1)(A); Conn. Gen. Stat. Ann. § 42–158ff (d)(1)(A); N.J. Stat. Ann. § 56:8–42.1.a.

[432] *See, e.g.,* Individual commenter, FTC–2023–0033–0022 (''Note that subscriptions are by their very nature long lasting in time, therefor requirements should not just emphasize some fine print disclosure at the time of sign up but also it should be easy to check back with the company or their many layers of subcontractors to cancel at anytime in the future.'').

[433] State AGs, FTC–2023–0033–0886.

[434] *Id.*

Specifically, the phrase ''interactive electronic medium'' used in the ''clear and conspicuous'' definition includes all media that involve electronic communications (except telephone calls), whether or not they strictly use the internet (and thus would otherwise be ''online''). Consumers may not know whether a text or chat is MMS (online) or SMS (offline), for example. This broader definition should provide flexibility to sellers while continuing to require parallel cancellation and sign-up procedures to meet consumers expectations.

Although the State AGs suggested prohibiting the use of email as a cancellation mechanism, the record provides no basis for doing so. Further, consistent with the Commission's definition of interactive electronic medium, several States specifically allow sellers to use email as an online cancellation method.[435] Thus, the final Rule does not bar the use of email to effectuate online cancellation.

(iii) No interaction with representatives for online cancellation.

The State AGs noted, and consumer comments further support, the fact that sellers have often used chat, text, and messaging to perpetrate the same abuses documented for telephone cancellation. The Commission, therefore, reiterates all cancellation mechanisms, including chat, text, messaging, and email, are subject to the same ''simple'' requirements, *i.e.,* sellers may not erect unreasonable barriers or prevent consumers from immediately halting charges. Cancellation mechanisms must be as easy to use as the mechanism the consumer used to sign up, in terms of time, expense, burden, and ease of use; and the mechanism must be as readily accessible as the means the consumer used to consent in the first place.

Consumer comments, as well as the Commission's and State AGs' enforcement experience demonstrate asymmetrical enrollment and cancellation experiences, such as requiring telephone cancellation when consumers can easily sign up online without speaking with an agent, are unfair. Specifically, this asymmetry creates unreasonable barriers to cancellation, such as unreasonable hold times, unreasonable verification requirements, and aggressive save tactics. Moreover, comments and the Commission's enforcement experience indicate consumers likely understand a simple online enrollment experience as an implied claim that the cancellation experience also will be simple.[436] As consumers themselves explain, they do not anticipate engaging with a customer service representative (whether by phone, or through a web-based chat or messaging) if they did not do so to sign up for the negative option feature.[437] Thus, the Commission further clarifies, for online consent, the seller cannot require the consumer to engage with an agent or customer service representative to cancel unless the consumer did so at enrollment.[438]

Finally, the Commission declines to exclude industries providing bundled services from the same medium requirement. NCTA and other industries with such services insisted their customers are better served by speaking with a live representative, even when they enroll online.[439] They expressed concern these sellers cannot confirm a consumer's cancellation intent (consumers may want to modify or renegotiate services) or apprise consumers of any negative consequences of cancellation (loss of access to emergency services, for example) without a live discussion.[440] They further assert providing this information online could be complicated and expensive for the seller and not what the consumer would prefer.[441] NCTA noted only 30% of its members' customers sign up online, with the remaining 70% enrolling in person or over the phone.[442]

NCTA's comment seems to suggest the simple cancellation mechanism requirement demands a certain asymmetry—specifically, no matter how complex online enrollment is, the proposed Rule would require a simple ''one click'' cancellation mechanism, which could preclude the seller from confirming cancellation intent or apprising consumers of negative consequences of cancellation. The Commission reiterates the simple cancellation requirement requires symmetry in terms of, *inter alia,* time, burden, expense, and ease of use. It does not require use of the exact same mechanism.

Further, existing verification procedures, such as two-factor authentication, are routinely used to ensure a consumer's identity in highly sensitive situations. Thus, they are more than sufficient to ensure the correct person is cancelling and do not require the use of a cancellation mechanism different than enrollment. Moreover, at this juncture, the Commission has removed the proposed ''saves'' provision from the final Rule, making communication regarding material consequences of cancelling easier to convey (so long as communicating through the same medium).

(c) The Commission adopts § 425.6(c)(2): Telephone Cancellation as proposed, with one exception.

The Commission adopts the telephone cancellation provision as proposed, except the final Rule removes the requirement sellers must assure all calls are answered during normal business hours. Instead, the final Rule requires sellers to promptly effectuate cancellation requests by consumers via a telephone number that is answered or records messages during normal business hours.

Several commenters suggested specific changes were necessary to enhance the proposed telephone medium requirements. For instance, the State AGs asked the Commission to include the various requirements detailed in the 2021 Enforcement Policy Statement, *e.g.,* require negative option

[435] *See, e.g.,* Cal. Bus. & Prof. Code § 17602 (''The business shall provide a method of termination that is online in the form of either of the following: By an immediately accessible termination email formatted and provided by the business that a consumer can send to the business without additional information.''); Conn. Gen. Stat. Ann. § 42–158ff (an electronic mail message from the business to the consumer, which is immediately accessible by the consumer and to which the consumer may reply without obtaining any additional information); N.J. Stat. Ann. § 56:8–42.1 (a termination email formatted and provided by the subscription service provider that a consumer can email to the subscription service provider without being required to provide any additional information).

[436] *See* nn.362–369; *see also* vlogbrothers, Why isn't this Illegal?, *https://www.youtube.com/watch?v=FjAw1LMShIA&pp=ygUMdmxvZ2Jyb3RoZXJz* (last visited Aug. 25, 2024).

[437] *See, e.g.,* Anonymous commenter, FTC–2023–0033–0024 (could not cancel online even though consumer could upgrade online and via TV); Individual commenter, FTC–2023–0033–0137 (''3 months to cancel, 3 minutes to sign-up. Seriously?''); Individual commenter, FTC–2023–0033–0252 (detailing three instances where consumer signed up online with a few clicks but was required to call to cancel, concluding ''the method provided for signing up for a service must also be provided for cancelling the same service, be just as easy to find, and require no more steps than it took to sign up.''); Individual commenter, FTC–2023–0033–0457 (''If I enrolled in a subscription online, there are no good reasons why I can't disenroll that way as well. Forcing me to call a number to unsubscribe, which is only staffed during 'normal business hours,' unnecessarily complicates the process''); Anonymous commenter, FTC–2023–0033–0802 (this practice of making someone call or chat to someone to cancel a membership is predatory).

[438] The Chamber asked the Commission to ''make clear that a web-based chat qualifies as an appropriate cancellation mechanism where a customer signed up for a service online.'' FTC–2023–0033–0885. The Commission reiterates that a web-based chat cancellation mechanism may be appropriate, but only if the consumer enrolled through a virtual or live agent.

sellers ''not [to] erect unreasonable barriers to cancellation or impede the effective operation of promised cancellation procedures, and . . . honor cancellation requests that comply with such procedures.'' However, the proposed provisions already include these requirements.[443]

Nonetheless, several commenters correctly pointed out requiring sellers to answer cancellation calls during normal business hours could create considerable costs for small businesses while not directly addressing the core problem identified by the Commission—the unreasonable delay of cancellation requests. To address these concerns, the Commission first clarifies normal business hours are those hours in which the business would normally engage with its customers. A seller, however, cannot make telephone cancellation available only at times that are so inconvenient they erect a barrier to cancellation. For instance, it would be improper to limit cancellation calls to only between midnight and 3 a.m., regardless of whether these are the seller's normal business hours. Importantly, however, the final Rule does not require a seller to physically answer the telephone call (a task that could be difficult for, *e.g.,* a sole proprietorship). An answering machine that clearly provides for cancellation (*e.g.,* a message stating: if you want to cancel your subscription please identify that subscription, and leave identifying information) would comply with this provision of the Rule. To effectuate the provision's intent, the final Rule states sellers, whether answering the cancellation call in person or not, must effectuate that cancellation promptly. Thus, a seller could not, for example, have an answering machine it does not regularly monitor or for which it does not promptly effectuate cancellation requests.

Notably, the final Rule retains the requirement that, for the mechanism to be at least as simple as the one used to initiate the recurring charge, any cancellation call cannot be more expensive than the call used to enroll (*e.g.,* if the sign-up call is toll free, the cancellation call must also be toll free). Consumers would not expect such fees, rendering them unfair or deceptive.[444]

(d) The Commission adopts § 425.6(c)(3): In-Person Cancellation as proposed.

Based on the Commission's experience and that of other States, as well as many comments in the record, requiring in-person cancellation presents significant opportunities for unfair and deceptive practices. To prevent such practices, the final Rule adopts provision 425.6(c)(3) essentially as proposed. Thus, the provision continues to require in-person sellers to provide alternatives to in-person cancellation, either online or by phone, at the seller's choice. The Commission, however, corrects the requirement that if the alternative is a telephone call, the call cannot be more costly than the in-person consent. That proposal connected two unrelated costs and thus did not make logical sense. To effectuate the purpose of this provision, however, the Commission adds language stating the call cannot impose any cost that creates an unreasonable barrier to cancellation, including by making the call unreasonably expensive.[445]

To address ICA's concerns, the Commission clarifies the Rule does not require sellers who sell in-person to maintain an alternative online presence to process cancellations. Sellers who have no such presence can allow cancellations by phone if they comply with the simple telephone cancellation requirements detailed above.

(c) § 425.6(d) Saves

(1) Summary of Comments

Proposed § 425.6(d) would have required sellers to immediately effectuate cancellation unless they obtained the consumer's unambiguously affirmative consent to receive a save prior to cancellation. The Commission explained the record shows many businesses have created unnecessary and burdensome obstacles to cancellation, including forcing uninterested consumers to sit through multiple upsells before allowing them to cancel.[446] Individual consumer commenters corroborated the pervasive use of such unfair tactics to thwart cancellation.[447]

[445] N/MA suggested there may be instances where the original method of consent is no longer available. FTC–2023–0033–0873. For example, if the person signed up a trade show in person, returning to the in-person venue may be impossible. The Commission notes the in-person method only must be made available, ''where practical.''

[446] NPRM, 88 FR 24729.

[447] *See, e.g.,* Individual commenter, FTC–2023–0033–0006 (''Last year I had the pleasure of trying to cancel a radio subscription which took 2 attempts and far too much time to accomplish. Unable to cancel online, I was forced to call and speak with several agents trying to convince me to keep their service. After nearly a half hour of insisting I wanted to cancel, they simply hung up on me which forced me to start the cancellation process all over again from the beginning.''); Anonymous commenter, FTC–2023–0033–0024 (able to cancel only after listening to a ''long sale pitch about why he shouldn't''); Anonymous commenter, FTC–2023–0033–0066 (when you request a cancellation, will pass your call on to a more ''experienced representative'' in an attempt to convince you to keep your service. They do not listen to your concerns, instead make you jump through hoops for a cancellation which makes me not want to be one of their customers even more); Individual commenter, FTC–2023–0033–0071 (call to cancel and they repeatedly said ''well let's just see how we can save you money'' instead of canceling); Individual commenter, FTC–2023–0033–0082 (''You have to call them and endure a high pressure pitch to renew . . . . It wastes time and minutes on your phone bill''); Anonymous commenter, FTC–2023–0033–0097 (the only way to cancel a service is to call them on the phone, intended to allow for sales reps to make a pitch); Individual commenter, FTC–2023–0033–0120 (''However, when you attempt to cancel a continuous subscription you are told you cannot do that and you must call the provided phone number. You are connected to a sales person who then will negotiate with you to continue at a lower rate.''); Individual commenter, FTC–2023–0033–0125 (''The only way for me to cancel this service was to CALL THEM DIRECTLY, whereupon they spent nearly half an hour trying to upsell me into a two year subscription.''); Individual commenter, FTC–2023–0033–0130 (''It should not be required to call (and sit on hold forever), only to have to sit through a diatribe of hard-sell techniques to try to convince

Continued

one not to cancel.''); Individual commenter, FTC–2023–0033–0233 (''I had to wait on hold and then get sales pitch after sales pitch after sales pitch to cancel a digital-only [newspaper] subscription that I signed up for online.''); Individual commenter, FTC–2023–0033–0228 (had difficulty canceling a newspaper subscription of all things as it required consumer to call an 800 number during the day and then had to listen to multiple sales pitches and saying ''No! What part of 'no' don't you understand'' to cancel); Individual commenter, FTC–2023–0033–0312 (''I and members of my family have had to use valuable time to call corporations to cancel subscriptions, each time getting a long pitch to keep the subscription. If I wanted to keep it, I would not be calling to cancel it.''); Individual commenter, FTC–2023–0033–0356 (''If it took one click to join, it should take one click to cancel. I am tired of calling some call center, waiting on hold, and then having someone go through a long script about why I should not cancel.''); Individual commenter, FTC–2023–0033–0457 (Forcing me to call a number to unsubscribe, which is only staffed during ''normal business hours,'' unnecessarily complicates the process for the provider's benefit: I don't need to give opportunity to upsell or persuade me to continue at a reduced price.); Individual commenter, FTC–2023–0033–0491 (''Some have even required me to make a phone call and listen to a hard sell before they will cancel the service.''); Individual commenter, FTC–2023–0033–0597 (have to sit and turn down multiple offers to cancel); FTC–2023–0033–0677 (sit and ''suffer through a long sales pitch'' to cancel); Individual commenter, FTC–2023–0033–0784 (''I suggest limiting the seller's efforts to pitch additional offers & modifications when trying to cancel . . . . no one wants to wade through too many of screens until the cancel 'finally' appears.''); Anonymous commenter, FTC–2023–0033–0785 (person being ''penalized by losing time waiting to speak to a customer service rep, having to decline further sales, or being stuck with recurring charges they don't want''); Individual commenter, FTC–2023–0033–0798 (difficult to cancel subscriptions, including by repeatedly forcing the customer to turn down ''special offers'' to entice the customer not to cancel); Individual commenter, FTC–2023–0033–0815 (No reason to have to call customer service reps who will keep trying to prevent me from canceling); Individual commenter, FTC–2023–0033–0835; Individual commenter, FTC–2023–0033–0850 (Have to make a long awkward phone call and wait on hold or long repetitive live chat); Individual commenter, FTC–2023–0033–0913 (''I've experienced having to call to cancel a subscription only to be forced to listen to a sales spiel in order to do so.''); Individual commenter, FTC–2023–0033–0967 (''Some have even required me to make a phone call and listen to a hard sell before they will cancel the service.''); Individual commenter, FTC–2023–0033–0999 (Consumers should have an on-line option to cancel. A national media company ONLY provides a cancel option with a call to customer service. When doing so, you are met with a CS rep that will not accept your request to cancel, talks over you, continued harassment, making offer after offer. We must stop this deceptive practice.); Individual commenter, FTC–2023–0033–1063 (''Now I'm about to cancel my [company name] account. If it's anything like the last time when I moved, I expect to spend several hours dealing with multiple levels of salespeople, trying to convince me to stay.''); Individual commenter, FTC–2023–0033–1099 (Once customer service is contacted, it should not take more than about 90 seconds to cancel a subscription instead of the endless questions of why you want to cancel. Then try to keep you by offering a discounted rate on yet another year of useless service. Please make this end.); Individual commenter, FTC–2023–0033–1138 (The agent, made multiple attempts to sell me the service, disregarding my many direct statements that I just wanted to cancel.); Individual commenter, FTC–2023–0033–1150 (They make you call their company so that sales retention can try to talk you into staying with freebies etc.); Individual commenter, FTC–2023–0033–1153 (There is no reason a person should be subjected to 20 minutes or repeated drilling if they say upfront that they want to cancel service.).

However, other commenters explained some of the ''barriers'' consumers complained about are necessary to prevent harm, at least in certain situations. Specifically, commenters noted consumers might not understand the negative consequences of cancellation,[448] and the provision might prevent consumers from taking advantage of money-saving offers prior to cancellation.[449] Some commenters also expressed confusion regarding whether verification or authentication procedures, or discussion of consumers' attempts to pause or modify their existing offers, would violate the Rule.[450] Finally, commenters noted the proposed provision requiring consumers to opt-in to saves could interfere with the simplicity of a cancellation mechanism.[451]

(2) Analysis

Based on the record, the Commission determines revisions to this proposed provision are necessary, for which the Commission would need to seek additional comment. Therefore, the Commission does not adopt this provision in the final Rule at this time. On one hand, the record demonstrates saves are often used simply as a barrier to prevent cancellations.[452] On the other, the proposed opt-in save provision could have unintended consequences.[453] Specifically, the provision may thwart attempts to confirm consumers' intent or apprise consumers of any negative consequences of cancellation (*e.g.,* losing data). Moreover, the opt-in save provision may prevent consumers from obtaining valuable concessions (*e.g.,* lower prices), which they would otherwise want.

Consequently, the proposed saves provision did not achieve the right balance between protecting consumers from unfair tactics and allowing sellers to provide necessary and valuable information about cancellation. Therefore, the Commission will consider issuing an SNPRM in the future seeking a better solution to this difficult problem.

However, the Commission notes the removal of the saves proposal is not a license to erect unreasonable and unnecessary barriers to cancellation. The final Rule requires sellers to provide a simple, easy to use cancellation mechanism. Save attempts that interfere with this mandate by requiring consumers to navigate through upsells, jump through unreasonable hoops, or wait unreasonable amounts of time to cancel are neither simple nor easy.[454]

7. Proposed § 425.7 Annual Reminders

In the NPRM, the Commission proposed requiring sellers to provide an annual reminder to consumers for non-physical goods sold with a negative option feature. Under this proposal, reminders would have needed to identify the product or service, the frequency and amount of charges, and the means to cancel. Additionally, the proposal required Negative Option Sellers to provide the reminders through the same medium the consumer used to consent to the negative option feature. The Commission opined the delivery of physical goods may remind consumers they enrolled in a negative option feature. Therefore, these consumers effectively already receive reminders and can reasonably avoid further payments by canceling their subscription. For services lacking a regular, tangible presence (*e.g.,* data security monitoring or subscriptions for online services), however, many consumers may reasonably forget they enrolled and, consequently, incur charges for services they do not want or use. Thus, the Commission concluded, the failure to provide reminders for such contracts would meet all elements of unfairness.[455] The Commission sought

[455] NPRM, 88 FR 24729, citing FTC Policy Statement on Unfairness, appended to *In re International Harvester Co.,* 104 F.T.C. 949 (1984). ''To justify a finding of unfairness the injury must satisfy three tests. It must be substantial; it must not be outweighed by any countervailing benefits to consumers or competition that the practice produces; and it must be an injury that consumers themselves could not reasonably have avoided.'' *Id.; see also* 15 U.S.C. 45(n) (Commission has no authority to declare a practice unfair ''unless the act or practice causes or is likely to cause substantial injury to consumers which is not reasonably avoidable by consumers themselves and not

comment on this proposal, including whether it should narrow the coverage of the proposed language, for example, by types of covered services or the duration between reminders.[456]

(a) Summary of Comments

The Commission received 32 comments in response.[457] Consumers, public interest and consumer advocacy groups, and academics, among others, generally supported the reminder requirement, observing, for example, that ''subscription-based products and services have become so widespread that consumers are having difficulty keeping track of them all.'' [458] The commenters asserted the proposed ''annual notice will clearly inform consumers of the terms of the contract and how they may terminate the agreement.'' [459] Despite this support, virtually every group of commenters—individuals, consumer advocates, trade organizations, and industry groups—suggested the Commission modify or clarify its proposal.

Only three commenters specifically requested the Commission jettison a reminder provision altogether. Specifically, ESA argued the requirement (1) would impose a significant burden on businesses because several State laws already require reminders or notices; (2) would be improper because the Commission did not raise reminders in the ANPR; and (3) would increase the overall number of notices consumers receive, which could result in consumers ignoring reminders, thus benefiting bad actors. NCTA suggested the Commission should instead ''allow businesses flexibility to determine whether to provide reminders.'' [460] IAB also ''recommend[ed] that the Commission remove this requirement for several reasons.'' [461] Both ESA and NCTA conceded, however, the Commission could adopt the provision with additional modifications, such as making the reminders optional (NCTA) or offering consumers the ability to opt-out of subscription reminders (ESA).[462] Other commenters agreed, asking for ''less prescriptive'' requirements that would allow businesses more flexibility.[463]

Several commenters, while not urging the Commission to reject the reminder requirement, suggested the NPRM proposal did not satisfy the unfairness test. For instance, CTA, a technology trade association, questioned whether there was sufficient basis to find a lack of annual reminder is an unfair practice or causes consumer harm.[464] Similarly, two other commenters from the communications industry questioned whether a lack of annual reminder would be unfair in the specific context of services that are ''always on,'' such as cable or wireless services.[465]

A few commenters asked to be exempted from the reminder requirement based on the nature of their industries or the frequency of existing notices.[466] For instance, cable/broadband/wireless/streaming industry groups suggested they should be exempt for the same reasons they argued the unfairness test did not render the lack of reminders illegal in their industries. Similarly, these and other sellers, such as service contract providers, suggested consumers who receive monthly bills are already effectively receiving reminders, and therefore, these transactions should be exempt.[467]

Several commenters questioned the proposed requirement that sellers provide the annual reminder through the same medium the consumer used to consent to the negative option feature.[468] For example, several commenters observed that requiring reminders through a telephone call could violate the TCPA, the TSR, or at minimum, be a nuisance, and thus ignored by consumers.[469] Many of these commenters advocated for letting consumers choose how they want to receive annual reminders,[470] or allowing sellers to provide reminders through any medium they typically use to communicate with consumers.[471]

Additionally, several commenters disagreed with the Commission's observation that agreements involving delivery of physical goods inherently create a ''regular, tangible presence'' that serves as a reminder of the contract.[472] For example, they noted some companies charge a monthly fee, but only deliver physical goods at the consumer's request.

Some commenters stated that, without Federal preemption, the annual reminder requirement would create another layer of regulatory complexity because several State laws already require reminders or notices.[473] In contrast, Professor Hoofnagle stated many ''credit card processing service'' providers likely afford a simple and inexpensive means for sellers to comply with State and Federal mandates ''because policy changes can be made programmatically in dashboards.'' [474]

Several commenters suggested the Commission amend the proposal. For instance, TINA and several individual consumers recommended the Commission require reminders at the end of a free trial period.[475] Others suggested the Commission require more frequent reminders, such as every six

outweighed by countervailing benefits to consumers or to competition'').

months, or before each charge.[476] They noted that under an annual notice requirement, a consumer could be charged up to 12 times before discovering a negative option feature.[477] One commenter asked the Commission to require a reminder for so-called ''zombie'' agreements, ones that have long periods, *e.g.,* 24 months, of inactivity.[478]

In contrast, other commenters noted consumers may suffer from ''notice fatigue'' given the increasing popularity of subscription services.[479] Some argued there is no evidence of tangible consumer benefit from additional notices, and consumers should be given a choice whether to opt-in to receive annual reminders (or more frequent reminders), or to opt-out.[480] Three commenters suggested sending annual reminder notices could increase opportunities for phishing and other deceptive practices.[481]

Finally, several commenters asked the Commission to clarify certain aspects of the reminder requirement. For instance, ANA asked the Commission to explain what constitutes the ''same medium,'' and a group of law professors asked for more detail about what constitutes an adequate telephone reminder.[482] Additionally, some commenters asked the Commission to clarify that sellers can rely on contact information provided by the consumer at the time of consent,[483] or to provide that abiding by State reminder requirements satisfies a seller's obligations under this provision.[484]

(b) Analysis

After reviewing these comments, the Commission determines it needs additional information on the scope and particularities of the proposed annual reminder requirement. The record suggests, given the proliferation of subscription and auto-renewal services, consumers have difficulty tracking all the negative option services and products in which they may be enrolled—so much so that there are now companies claiming to help consumers keep track of these services for a fee. As one commenter noted, consumers should not have to sign up for yet another service to manage all their subscriptions.[485] Thus, limiting the reminder provision to just non-physical goods, and only annually, may not adequately mitigate the harm caused by negative option practices in the marketplace.

Additionally, the Commission shares some commenters' concerns that consumers may ignore these reminder calls. Further, as some commenters noted, the proposed provision does not specify the timing for these reminders (*e.g.,* should sellers issue reminders annually from the date of initial purchase and a specific number of days before the charge?). Accordingly, the Commission will consider issuing a SNPRM seeking additional comment on these issues at a later date.

8. Proposed § 425.8 Relation to State Laws

In its NPRM, the Commission proposed that amendments to the Rule would not affect State laws, regulations, orders, or interpretations relating to negative options, except to the extent they are inconsistent with the final Rule, and then only to the extent of the inconsistency. A State provision would not be ''inconsistent'' with the proposed Rule if it affords any consumer greater protection than the Rule.[486]

The Commission received a range of comments in response. On one end, a commenter opined the ''FTC cannot preempt existing [State] laws,'' so it should instead strive for ''harmonization and consistency with existing laws.'' [487] At the other end, multiple industry groups said the Commission should completely preempt State laws in this area.[488] These commenters argued having both State and Federal standards may confuse consumers and create financial and operational burdens for sellers, thus raising consumer prices. For example, NCTA asserted that, without preemption, the proposed Rule ''would encourage the enactment of new [S]tate laws with differing standards.'' [489] Another industry commenter suggested the Commission should work with lawmakers on one national standard.[490]

Other industry groups and individual businesses supported preemption in various ways. For example, CTA argued the Rule should ''preempt [S]tate laws with differing requirements.'' [491] Two additional commenters, including a mixed group of industry associations, asserted the Rule should set the ceiling and preempt any State provision that is more stringent.[492]

NRF said the Rule should ''preempt any [S]tate law requirements that contradict or are inconsistent with the Rule . . . to the extent of the inconsistency.'' [493] To effectuate this change, NRF suggested the Commission adopt language from California's Automatic Renewal Law, which it said other States have copied. NRF proposed State laws be deemed inconsistent if they require disclosures or actions ''that contradict . . . the [final rule],'' and requirements be deemed contradictory if they use the same terms differently from the final rule or require ''using a term different from the one required in the [final rule] to describe the same item.'' [494]

Several industry groups expressed concern regarding potential confusion about preemption. For example, ACA Connects asserted it ''may be unclear whether and to what extent [a particular State law offers] 'greater' or 'lesser' protection than [the proposed Rule]'' and asked for more guidance generally or for a process that lets interested parties ask the Commission if a

[494] *Id.*

particular State law is inconsistent.[495] NRF noted such a system has worked well with gift card laws, explaining the CARD Act (Pub. L. 111–24, 124 Stat. 2385) preempts less restrictive State laws.[496]

Finally, a group of law professors supported the Commission's proposed Rule. They noted ''more than half of [S]tates . . . regulate some negative option marketing practices,'' and said the Commission ''does not occupy the field or displace non-conflicting [S]tate [laws].'' [497] The professors added States ''can often move more nimbly to address problematic elements and evolving business models'' and should retain the ability to do so.[498]

Having considered the foregoing comments, the Commission will streamline the text of the final Rule for clarity and efficiency, while maintaining the substance of the proposed Rule's proposed preemption language (renumbered in the final Rule as § 425.7). The FTC Act does not expressly preempt State law, and the legislative history of the FTC Act indicates Congress did not intend the FTC to occupy the consumer protection regulation field.[499] Therefore, any preemptive effect of the Rule must be limited to instances where it is not possible to comply with both State law and the Rule, or where application of State law would frustrate the purposes of the Rule.[500] This approach preserves States' ability to continue to act as laboratories to handle new and changing business models. This approach is consistent with other Commission Rules.[501]

Therefore, § 425.7 of the final Rule specifies the Rule does not supersede, alter, or affect State statutes, regulations, orders, or interpretations relating to negative option marketing, except to the extent a State statute, regulation, order, or interpretation is inconsistent with the Rule. The final language also continues to make clear State requirements are not inconsistent with the Rule to the extent they afford greater protection to any consumer. The manners in which a State law may provide greater protection are many. For example, a State law that requires sellers to remind consumers at the end of a free trial that they are about to be billed would provide greater protection to consumers and not be inconsistent with the Rule.

VIII. Modifications, Alternatives Considered

A. New Provisions in Final Rule for Clarification

1. New § 425.8 Exemptions

The NPRM sought comment on whether the Rule should exempt any entities or activities that are otherwise subject to the Commission's authority under the FTC Act.[502] Several commenters requested Rule exemption for their business or industry.[503] These commenters made various arguments based on the law and facts in their particular circumstances. For example, some argued existing State licensing and other requirements that already apply to their activities adequately address the problems identified in the NPRM and additional rules would only interfere with the existing regulatory structure. Because such decisions are highly fact dependent, the Commission must consider exemptions, even of larger groups, on an individualized basis pursuant to the FTC's Rules of Practice.[504] Pursuant to these rules, interested persons may file petitions for exemption with relevant evidence and data. If the Commission deems the petition sufficient to warrant further consideration, it will follow the procedures outlined in § 1.31 of its rules.

The Commission adopts a new section, § 425.8. Pursuant to this provision, and consistent with the Commission's Rules of Practice, sellers and other covered persons may seek full or partial exemptions if they can demonstrate application of the Rule's requirements to a particular product or service, or class of product or service, is not necessary to prevent the acts or practices to which the Rule relates.

2. New § 425.9 Severability

One commenter, NFIB, asked the Commission to address severability in the Rule.[505] Specifically, NFIB proposed a provision stating if a court finds any part of the Rule to be invalid, then the remainder of the Rule remains in force. The Commission agrees with this proposal. It is the Commission's intent that the provisions of the final Rule are separate and severable from one another; therefore, if any provision is stayed or determined to be invalid, the remaining provisions shall continue in effect. Thus, the final Rule includes this language in a new section, § 425.9.[506]

B. Notice of Material Changes

In the NPRM, the Commission sought comment on whether and how sellers should notify consumers when they make material changes to contracts with a negative option.[507] As discussed in the NPRM, several commenters responding to the ANPR recommended the Commission require sellers to send consumers notices of such changes. TINA, for example, asserted the Commission should require such notice and provide consumers an opportunity to cancel before the terms become effective.[508] Several States require similar notices.[509] The Commission, however, did not require notice of material changes in the proposed Rule. As it explained at the time, whether a seller's failure to provide such notice is unfair or deceptive is a highly fact-specific inquiry that must be determined on a case-by-case basis. Given the importance of the issue, however, the Commission requested further comment.

1. Summary of Comments

Five commenters responded.[510] TINA reiterated sellers should provide

consumers with notice of material changes to subscription terms.[511] Further, it asserted the Commission's reasoning is at odds with State laws and the Commission's longstanding position on material terms, *i.e.,* that they be ''clearly and conspicuously disclosed when relevant to the marketing being presented.'' [512] TINA further argued allowing businesses to ''hide'' material changes to these contracts is likely to cause injury because consumers ''do not read these contracts (let alone monitor them for changes) and a significant minority of consumers are not even aware they are bound by these subscription contracts.'' [513]

In contrast, ESA, USTelecom, ACA, and IAB supported the Commission's proposal. IAB and ESA said it is ''industry practice for subscription-based services and products to have regular price increases over time,'' and consumers expect it.[514] USTelecom agreed with the Commission's rationale that ''whether such a practice is unfair or deceptive depends heavily on the facts presented in each case.'' [515] ACA, a telecommunications trade association, noted the FCC and States already have notice requirements for contract term changes.[516]

2. Analysis

Based on the record, the Commission does not require notice of material changes to contract conditions in the final Rule. The final Rule requires the seller disclose important information prior to charging the consumer. Such information includes all material terms, including, *e.g.,* the range of costs the consumer will be charged and the frequency of charges that will incur unless the consumer takes timely steps to prevent or stop them. The seller's failure to disclose such information upfront, clearly and conspicuously, violates the Rule.

Moreover, State laws have different predicate requirements (*e.g.,* less robust initial disclosures) and, importantly, are often based on different legal authority. Additionally, the Commission's final Rule does not conflict with its longstanding advice on clear upfront disclosure. The final Rule requires just such disclosure, § 425.4; and the Commission has never required after sale disclosure based on its section 5 authority.

Finally, as the Commission explained in the NPRM, whether a seller's failure to notify a consumer of material changes is unfair or deceptive could be heavily dependent on the particular facts and circumstances, such as the seller's upfront marketing claims. For example, based on a clear upfront agreement to allow periodic price increases, consumers may understand that firms can make small price increases over long periods of time. On the other hand, significant unilateral changes to the terms of the agreement, such as huge prices increases over short periods of time would probably be inconsistent with reasonable consumer expectation, and therefore, deceptive or unfair. Because the determination of whether a practice runs afoul of section 5 in this context is highly fact dependent, the Commission declines to address it at this time. Nevertheless, the Commission will continue to monitor the need for such a requirement and will continue to bring enforcement actions when appropriate.

C. Consumer Education

The Commission solicited comments on alternative approaches such as additional consumer and business education, and received two comments in response.[517] The Commission plans to continue its efforts to provide information to help consumers with their purchasing decisions and avoid ensnarement in unwanted recurring payment programs. However, consumer education is not a substitute for improving existing regulatory provisions. Consumer education is likely to have a limited benefit where sellers lure consumers into an agreement without consumers' knowledge, particularly with the use of dark patterns.

D. Implementation Date

Several industry groups and one individual commenter asked the Commission to delay the final Rule's effective date. Three commenters sought a delay of at least 12 months or up to 18 months, citing generalized concerns that changes can take time ''given the complexities'' of the proposed Rule.[518] The Chamber asked for a two-year period ''depending on the scope and specific requirements of the final rule.'' [519] By contrast, consumers generally encouraged the Commission to enact the Rule without delay.[520]

None of the commenters identified a precise period it would take to comply with a specific provision or otherwise detailed what would necessitate a particular length of time.[521] They did, however, detail the general actions they would need to take. For example, NCTA explained, ''this proposal would require companies to change and update their customer processes and user interfaces to provide the mandated notices, obtain additional consent, and implement cancellation mechanisms,'' as well as troubleshoot those changes in a careful way to avoid ''glitches and issues that would affect service and frustrate and harm consumers.'' [522]

The Commission recognizes changes to processes and disclosures typically require some time to address and has regularly provided a grace period for implementation of its rules.[523] Small businesses in particular may require time to ensure their modified processes conform to the Rule. To address these concerns, the final Rule provides 180 days from the date the final Rule is published to come into full compliance. However, sellers must comply with § 425.3 60 days after publication of the Rule, consistent with 5 U.S.C. 801(a)(3). This section prohibits misrepresentations in connection with a negative option feature. Existing law already requires sellers not to make misrepresentations. Therefore, this provision should not impose an added time or cost burden on businesses operating lawfully.[524]

The Commission recognizes the remainder of the final Rule may require some businesses to implement or modify systems, software, or procedures. As detailed in the NPRM, however, the existing legal landscape already includes a patchwork of relevant Federal laws and regulations in

[522] NCTA, FTC–2023–0033–0858.

[523] *E.g.,* 38 FR 33766 (Dec. 7, 1973) (original Negative Option Rule, 6-month grace period); 60 FR 43842 (Aug. 23, 1995) (TSR. 4-month grace period); 89 FR 26767 (Apr. 16, 2024) (TSR amendment, 180-day grace period); 79 FR 55615 (Sept. 17, 2014) (Merchandise Rule amendments, 3-month grace period).

[524] Similarly, the various procedural sections of the Rule, *e.g.,* § 425.1 (Scope), § 425.2 (Definitions); § 425.7 (Relation to State Laws), § 425.8 (Exemptions), and § 425.9 (Severability) are also operative 60 days after publication.

addition to State laws to address sellers' negative option practices.[525] The Commission has also issued guidance to businesses on the basic requirements that negative option marketers must follow to avoid deception.[526] Compliance with these statutes and regulations should mean sellers have a significant head start on their compliance efforts.

Moreover, the Commission has streamlined the final Rule, significantly reducing the compliance burdens. Specifically, for reasons detailed in section VII, above, the final Rule omits or modifies proposed requirements that gave some commenters particular concern. Most notably, the Commission omitted the entire annual reminder and saves requirements. As commenters pointed out, these two sections imposed the greatest compliance burdens on sellers.[527] Their removal, therefore, should substantially reduce the time and expense needed to ensure processes comply.

Similarly, other modifications should clarify and streamline requirements, making compliance easier. For example, the final Rule eliminates certain recordkeeping requirements.[528] Additionally, the final Rule narrows the required disclosures.[529] These changes combined with existing law obviate the need for a lengthy grace period.

E. Anti-Abuse Provision

The Law Professors suggested the Commission include an ''anti-abuse'' provision to provide a mechanism for enforcement against sellers' attempts to evade the Rule.[530] Such a provision would make it an ''unfair or deceptive act or practice'' for a seller to, for example, set up a facially complicated sign-up process to allow for a similarly complicated cancellation process, but in practice to simplify the sign-up process to maximize enrollment.[531] As the Law Professors acknowledge, such attempts to evade the Rule already violate the Rule, and the record does not suggest a need for such an additional anti-abuse provision.

IX. Congressional Review Act

Pursuant to the Congressional Review Act, 5 U.S.C. 801 *et seq.,* we anticipate the Office of Information and Regulatory Affairs will designate the final Rule as a ''major rule,'' as defined by 5 U.S.C. 804(2).

X. Final Regulatory Analysis

Under section 22(a) of the FTC Act, 15 U.S.C. 57b–3(a), the Commission must issue a preliminary regulatory analysis for a proceeding to amend a rule if the Commission: (1) estimates that the amendment will have an annual effect on the national economy of $100 million or more; (2) estimates that the amendment will cause a substantial change in the cost or price of certain categories of goods or services; or (3) otherwise determines that the amendment will have a significant effect upon covered entities or upon consumers. Although the Commission preliminarily determined the proposed amendments to the Rule would not have such effects on the national economy; on the cost of goods and services offered for sale by mail, telephone, or over the internet; or on covered parties or consumers, several commenters raised concerns with the Commission's preliminary determination. Ultimately, the presiding officer determined, after receiving additional comments from interested stakeholders, the proposed amendments would have such effect.[532] In accordance with section 22, the Commission therefore issues its final regulatory analysis below.

A. Introduction

Under section 22 of the FTC Act, 15 U.S.C. 57b–3, the final regulatory analysis must contain (1) a concise statement of the need for, and objectives of, the final rule; (2) a description of any alternatives to the final rule which were considered by the Commission; (3) an analysis of the projected benefits, any adverse economic effects, and any other effects of the final rule; (4) an explanation of the reasons for the determination of the Commission that the final rule will attain its objectives in a manner consistent with applicable law and the reasons the particular alternative was chosen; and (5) a summary of any significant issues raised by the comments submitted during the public comment period in response to the preliminary regulatory analysis, and a summary of the assessment by the Commission of such issues.

[532] Recommended Decision by Presiding Officer, *https://www.regulations.gov/comment/FTC-2024-0001-0042.*

The Commission received comments from trade associations regarding the preliminary regulatory analysis in the NPRM, and three presented testimony and expert reports at the informal hearing. Comments and testimony, including reports submitted by experts, were largely conclusory in nature.[533] The general theme of the comments and testimony, however, was that the compliance costs would be higher than those estimated in the NPRM's preliminary analysis, and the Commission herewith presents revised estimates of those compliance costs.

B. Regulatory Analysis

1. Concise statement of the need for, and the objectives of, the final Rule.

As discussed previously, the objective of the proposed amendments is to curb deceptive or unfair negative option practices . The legal basis for the proposed amendments is section 18(a)(1)(B) of the FTC Act, which provides the Commission with authority to issue ''rules which define with specificity acts or practices which are unfair or deceptive acts or practices in or affecting commerce.'' [534]

As described in this SBP, the amendments address unfair or deceptive negative option practices. The FTC, other Federal agencies, and State attorneys general have brought multiple administrative and judicial actions to stop and remedy harmful negative option practices. The record demonstrates, however, that existing legal authorities fall short because they leave consumers unprotected from certain practices and constrain the relief the Commission may obtain for law violations to redress consumers and deter future unlawful activity. In the ANPR and NPRM, the Commission explained it receives thousands of consumer complaints a year related to negative option marketing.

As discussed above in sections III–VII, the final Rule clarifies existing requirements regarding negative option marketing currently dispersed in other rules and statutes administered by the FTC and provides a consistent legal framework across media and offers. It also consolidates all requirements, such as those in the TSR and ROSCA, specifically applicable to negative

[533] Where specific components of the Rule, as anticipated when the NPRM was published, were discussed, commenters combined them, such that the concerns expressed cannot readily be separated to reflect what remains in the final Rule. For example, NCTA claims that ''(t)he rigid 'Click-to-Cancel' requirements and limits on 'saves' will harm consumers,'' but addresses these harms only in combined and qualitative ways. FTC–2023–0073–0008.

[534] 15 U.S.C. 57a(a)(1)(B).

option marketing. The final Rule also provides clarity about how to avoid deceptive negative option disclosures and procedures. For example, ROSCA lacks specificity about cancellation procedures and the placement, content, and timing of cancellation-related disclosures. The final Rule now provides clear standards for sellers about, *inter alia,* the content and timing of important information disclosures and what constitute ''simple mechanisms'' for the consumer to stop recurring charges. Further, the Rule allows the Commission to seek civil penalties and consumer redress under section 19(a)(1) of the FTC Act in contexts where such remedies are currently unavailable, such as deceptive or unfair practices involving negative options in print materials and face-to-face transactions (*i.e.,* in media not covered by ROSCA or the TSR).

2. A description of any alternatives to the final Rule which the Commission considered.

In formulating the final Rule, the Commission makes every effort to avoid imposing unduly burdensome requirements on sellers. To that end, the Commission avoids, where possible, proposing specific, prescriptive requirements that could stifle marketing innovation or otherwise limit seller options in using new technologies. In the NPRM, the Commission sought comments on several alternatives, including provisions related to consent requirements (additional consent for free trials) and reminder requirements (narrowing the scope of product types requiring reminders). The Commission also sought comments on how it could modify the proposed amendments to reduce costs or burdens for small entities. In response to the comments, and as discussed in the section-by-section analysis, the Commission determines not to finalize the proposed Rule in its entirety. Instead, the Commission finalizes a Rule that limits the material terms to be disclosed immediately adjacent to consent for the negative option feature; removes the limitation on saves and the accompanying recordkeeping requirement; removes the annual reminder provision; and modifies the length of the recordkeeping requirement for verification of consent to three years and provides an alternative method of compliance.

One alternative to the final Rule would be to terminate the rulemaking and rely instead on the existing legal framework to combat unfair or deceptive negative option practices. Another alternative would be to limit the scope of the final Rule to just those negative option plans that are marketed in person or through the mail and therefore, currently, are covered only by section 5 of the FTC Act and not by ROSCA or the TSR. However, failing to proceed in accordance with the final Rule would substantially reduce or eliminate the benefits of the Rule, including clarifying the requirements currently spread throughout statutes and regulations and covering negative options in media not subject to the TSR or ROSCA.

Given that the Commission expects the unquantified benefits and unquantified costs of the final Rule to be small, and that there is considerable scope for the net benefits to remain positive and large even if compliance costs have been substantially underestimated, this regulatory analysis indicates that adoption of the Rule will result in benefits to the public that outweigh the costs.

3. An analysis of the projected benefits and any adverse economic effects and any other effects of the final Rule.

(a) Summary of Benefits and Costs

The primary consumer benefits of the final Rule, relative to the existing regulatory baseline,[535] come in the form of faster cancellations when consumers wish to cancel subscriptions.[536]

The final Rule requires negative option sellers to provide cancellation mechanisms that are at least as easy to use as the mechanisms by which consumers consent to negative option plans. For negative option sales made online or over the telephone, ''at least as easy to use'' requires that the cancellation mechanism operate in the same medium and take no more time or effort than the consumer used when enrolling in the negative option plan. For negative option sales that are made in-person or through the mail, the final Rule requires that, in addition to offering cancellation through the specific method used for enrollment, the seller must also offer at least one alternate cancellation mechanism that can be used remotely, *e.g.,* cancellation via a website, email, or a toll-free telephone number and, again, that the consumer can cancel the negative option contract at least as quickly as he or she completed enrollment in the negative option plan.

In the following analysis, the Commission describes the anticipated effects of the final Rule. Where possible, it quantifies the benefits and costs. If a benefit or cost is quantified, it indicates the sources of the data relied upon. If an assumption is needed, the text makes clear which quantities are being assumed. The Commission measures the benefits and costs of the Rule against the existing regulatory baseline that consists primarily of ROSCA, the TSR, and section 5 enforcement.[537]

[535] As explained in section III of the SBP, several other statutes and regulations address harmful negative option practices. Section 5 of the FTC Act, which prohibits unfair or deceptive acts or practices, has traditionally served as the Commission's primary mechanism for addressing deceptive negative option claims. ROSCA, the TSR, 1the Unordered Merchandise Statute, and EFTA all address various aspects of negative option marketing.

[536] The final Rule also requires that specific disclosures relating to negative option features be provided separately to consumers before consent is obtained, whereas the existing regulatory framework requires that all material terms of a negative option contract be disclosed in a clear and conspicuous manner. The new disclosure requirements will aid consumers in understanding both that they are entering a negative option contract and the terms and conditions of that contract, especially how they can cancel the contract and when such cancellation must occur to avoid future charges. No consumer testing of the final Rule's disclosure requirements, relative to a ''control'' of ''clear and conspicuous'' disclosure requirements under the existing regulatory baseline, has been done. Accordingly, it is not possible to quantify any incremental consumer comprehension of a negative option plan at the time a consumer provides consent to that plan that may result from the final Rule's disclosure requirements. Moreover, some academic studies claim that ''[n]ot only do consumers have a tendency to forget, but also a tendency to forget that they forget,'' suggesting that any gain in comprehension of the negative option features of an agreement that might be measured under consumer testing might not be durable. *See* Sophia Wang, ''One Size Does Not Fit All: The Shortcomings of Current Negative Option Legislation,'' 26 Cornell J. of L. & Pub. Policy, 197, 212 n.135 (2016) citing Keith M. Marzilli Ericson, ''Forgetting We Forget: Overconfidence and Memory,'' 9 J. Eur. Econ. Assoc. 43 (2011). Additionally, if the disclosures required by the final Rule come to be viewed as ''boilerplate'' language that consumers rush through, or consumers consider those disclosures to be less salient than other aspects of the transaction, such as acquiring a free trial of a product or service, the final Rule's disclosures may not offer any incremental benefit over existing ''clear and conspicuous'' because ''people have limited attentional resources and will overlook non-salient features of any transaction.'' *See* Tess Wilkinson-Ryan, ''A Psychological Account of Consent to Fine Print,'' 99 Iowa L. Rev. 1745 (2014). Concerns such as these are consistent with some consumer advocacy groups seeking amendments that would require a second round of consent to be obtained at the end of a free trial and before any recurring charges could be initiated in addition to routine reminders of recurring charges. *See, e.g.,* TINA, FTC–2019–0082–0014 (seeking amendments to require notice and re-affirmance of consumer consent, prior to being charged because consumers may forget about the trial and incur unwanted charges or enrollments at the end of the offer, particularly with long trial periods).

[537] The Unordered Merchandise Statute and EFTA also address various aspects of negative option marketing, but violations of those laws in relation to negative option marketing are typically pleaded in conjunction with violations of other laws; without loss of generality, the regulatory analysis expressly considers only ROSCA, the TSR, and section 5 as the regulatory baseline against which incremental benefits and costs from the final Rule are measured.

First, the likely per-cancellation benefits of the final Rule in relation to four scenarios under the existing regulatory baseline are considered. Next, the number of transactions relevant to each scenario are estimated. The product of average benefits-per-cancellation in each scenario multiplied by the likely number of consumer cancellation transactions for each scenario, summed across all scenarios, provides an estimate of the aggregate, quantifiable, consumer benefits produced by marketers' compliance with the final Rule's cancellation requirements. Quantifiable costs primarily reflect the resources spent by businesses to review the Rule and to take any preemptive or remedial steps to comply with its provisions, including, when and as needed, making changes to the manner they receive and process cancellation requests from consumers.

The Commission estimates the present discounted value of quantified benefits over ten years, using a 2 percent discount rate, will range between $6.1 and $49.3 billion. Annualized over 10 years, the Commission estimates the quantified benefits will range between $682.8 million and $5.5 billion per year. The Commission estimates the present discounted value of quantified costs over ten years, using a 2 percent discount rate, will range between $100.9 and $826.2 million. Annualized over ten years, the Commission estimates the quantified costs will range between $11.2 and $92.0 million per year. These estimates are presented in Table 1 below.

TABLE 1—SUMMARY OF TOTAL QUANTIFIED BENEFITS AND COSTS

[In millions, 2023 dollars]

	Low	High
Present Discounted Value over 10 years, 2% discount rate		
Benefits	$6,133.57	$49,315.39
Costs	100.89	826.15
Net Benefits	*5,307.43*	*49,214.50*
Annualized over 10 years, 2% discount rate		
Benefits	682.83	5,490.11
Costs	11.23	91.97
Net Benefits	*590.86*	*5,478.88*

(b) Benefits of the Final Rule

This section describes the beneficial impacts of the Rule, provides quantitative estimates where possible, and describes benefits that are only assessed qualitatively.

The quantifiable estimates reflect benefits stemming from the decreased amount of time and effort consumers will need to expend cancelling subscriptions, and in contexts where data are available, welfare gains from avoided expenditure for unwanted subscriptions, under the final Rule relative to marketers' compliance with the existing regulatory baseline. This section first estimates per-consumer savings from cancellation mechanisms that would become at least as easy to use as the mechanisms through which consent to the negative option transactions was given and then estimates the number of cancellation transactions to which those benefits apply.

In addition to these quantified benefits, there are several benefits we do not quantify. First, marketers' compliance with the final Rule is likely to improve consumer confidence in using subscriptions [538] and increase the number of consumers who are willing to subscribe and obtain the convenience, and often cost savings, that subscriptions can provide. Second, research in economics and psychology finds the perceived monetary and psychological costs from switching products or services can lead consumers to make sub-optimal decisions. The final Rule, by reducing these costs through simpler cancellation methods, may improve consumer decision-making by reducing enrollments in subscriptions that consumers do not value and increasing enrollments in subscriptions that they do value.[539]

Marketers' compliance with the final Rule, and the consumer confidence that compliance inspires, may also ''exert additional competitive pressures on businesses who offer subscription contracts (and) could increase productivity in the sector.'' [540]

Compliance with the final Rule may also result in some allocative effects when consumers can cancel online instead of by telephone. In such cases, consumers will be able to cancel subscriptions at times of the day that may be more convenient to them than the hours that subscription sellers staff their telephone lines and from devices that they find more convenient to use than telephones.[541]

[538] One survey found that consumers without subscriptions were much more pessimistic about the ability to cancel subscriptions than were consumers who had subscriptions. *See* Jabil, ''Connected Packaging Perceptions and Attitudes: A Consumer Insights Survey'' (July 2021), *https://www.jabil.com/dam/jcr:ecdb74e6-c34f-4c30-aa34-c10269617db6/2021-connected-packaging-survey.pdf#page=3.* Another recent study finds that consumers are aware that they may be inattentive in future and not cancel subscriptions that they no longer desire, and so are less likely to sign up for negative-option subscriptions. *See* Klaus Miller, *et al.,* ''Sophisticated Consumers with Inertia: Long-Term Implications from a Large-Scale Field Experiment'' (2023), *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4065098.*

[539] A large literature in economics has documented that consumers face switching costs and/or psychological biases towards inertia. *See, e.g.,* Brigitte Madrian & Dennis Shea, ''The Power of Suggestion: Inertia in 401(k) Participation and Savings Behavior,'' 116 Quarterly J. of Econ. 1149 (2001); William Samuelson and Richard Zeckhauser, ''Status Quo Bias in Decision Making,'' 1 J. of Risk & Uncertainty 7 (1988). Research has found that many consumers do not cancel subscriptions due to such inertia effects. *See, e.g.,* Miller, *et al.* (2023); Liran Einav, *et al.,* ''Selling Subscriptions'' (2023), *https://harris.uchicago.edu/sites/default/files/mahoney_ppe_seminar_paper_9-26-23_0.pdf.*

[540] *See* U.K. Department for Business and Trade, ''Impact Assessment—Digital Markets, Competition and Consumers Bill: Subscription Measures,'' at 3 (Apr. 20, 2023), *https://publications.parliament.uk/pa/bills/cbill/58-03/0294/ImpactAssessment Annex2.pdf.*

[541] In some instances, an online cancellation completed at, say, 11:59 p.m., compared to a counterfactual in which a call center closed at, say, 8 p.m., could result in sparing a consumer from a recurring charge that would take effect the next day, and such instances would result in actual monetary

Continued

Finally, the Commission's estimates of quantified benefits are based on reductions in time and effort from cancelling subscriptions to non-business consumers. The Commission expects small businesses may also benefit in similar ways from less costly cancellations, but it does not quantify such benefits due to lack of data on business cancellation transactions.

The following subsections then estimate the quantified benefits from reductions in time and effort from cancelling subscriptions. First, in subsection (1), the Commission estimates the per-cancellation benefit relative to the regulatory baseline for (i) online cancellation when only ROSCA-compliant telephonic cancellation was available, (ii) simpler online cancellation when only ROSCA-compliant online cancellation was available, (iii) simpler telephone cancellation when only TSR-compliant cancellation was available, and (iv) online or telephone cancellation when only in-person or mail cancellation was available. The Commission then estimates the number of cancellation transactions in subsection (2), and finally calculates benefits as the per-cancellation benefit in each scenario multiplied by the number of affected transactions in subsection (3).

(1) Estimating Per-Cancellation Benefits

For each of the four scenarios below, the Commission estimates a range of benefits that a consumer will gain each time they cancel a negative option subscription. In these scenarios, the Commission assumes a final Rule-compliant online cancellation should take no more than 30 seconds to one minute, based on the Commission's experience that the average time for consumers to read required disclosures and provide consent to a negative option plan online is 30 seconds to one minute. For telephone cancellations under the final Rule, the Commission assumes that a rule-compliant cancellation should take no more than one to two minutes, based on the assumption it takes a telemarketer twice as long to read required disclosures to a consumer as it would take a consumer to read such disclosures to his or herself online.

(a) Estimated Per-Cancellation Benefit Relative to ROSCA-Compliant Telephonic Cancellation

For consumers enrolling in negative option plans online, the existing regulatory baseline, ROSCA, requires marketers to provide ''simple'' cancellation mechanisms. A facially ROSCA-compliant, ''simple'' telephonic cancellation may, nonetheless, require more time and effort from consumers than was expended when enrolling in the negative option plan. Online subscription sellers' compliance with the final Rule will save consumers that extra measure of time and effort.

To estimate the average time savings to consumers of a final Rule-compliant ''click-to-cancel'' mechanism compared to a ROSCA-compliant simple telephonic cancellation, this analysis first assumes that ROSCA-compliant simple telephonic cancellations take no more time than the ''average handle time'' for all customer service requests made to call centers, which an industry source indicates is six minutes and three seconds.[542] As discussed at the beginning of this subsection, the Commission assumes a final Rule-compliant cancellation should take no more than 30 seconds to one minute, saving consumers between five minutes and three seconds and five minutes and 33 seconds per cancellation relative to a simple telephonic cancellation.

The Commission then assumes consumers, on average, value their non-work time at 82% of the mean hourly wage of $31.48, or $25.81 (*i.e.,* .82 × $31.48) per hour.[543] Accordingly, the Commission estimates the faster online cancellations the final Rule will provide, relative to ROSCA-compliant telephonic cancellations, will be valued at between $2.17 (*i.e.,* 5:03 minutes × $25.81/hour) and $2.39 (*i.e.,* 5:33 minutes × $25.81/hour).

(b) Estimated Per-Cancellation Benefit Relative to ROSCA-Compliant Online Cancellation

For online cancellations of online-entered subscriptions, the Commission lacks a source of average cancellation times presumed to be ROSCA-compliant that is as comprehensive as that used for the average handle times of call centers. The Commission relies, instead, on an experiment that involved signing up for 16 online subscriptions between August 2 to October 4, 2022, then canceling each one, and recording the time it took to cancel, as well as the variety of other obstacles faced in canceling.[544] To estimate the average time for online cancellations, the Commission subtracts the time incurred in canceling the three subscriptions that required telephonic cancellation from the aggregate time reported to cancel all 16 subscriptions. This yields an average of two minutes and 4 seconds per online cancellation.[545]

Based on the Commission staff's experience, the average time needed to read the required disclosures and provide consent to a negative option feature is 30 seconds to one minute. An online cancellation that took no longer than the provision of online consent would therefore save the consumer between one minute and four seconds and one minute and 34 seconds. Valuing consumers' time at $25.81 per

---

savings to consumers, but we are unable to estimate the frequency of such occurrences or the monetary savings they would engender.

[542] *See* Michelle Hawley and Shane O'Neill, ''21 Important Call Center Statistics to Know About,'' (Apr. 3, 2024), *https://www.cmswire.com/contact-center/16-important-call-center-statistics-to-know-about.* We use this proxy for the time a ROSCA-compliant telephonic cancellation takes only for the express purpose of estimating the incremental benefits to consumers of a final Rule-compliant cancellation replacing a ROSCA-compliant telephonic cancellation. ''Average handle time'' has not been used as a standard for ROSCA enforcement and is not intended to set a standard here.

[543] The Commission uses a mean hourly wage rate of $31.48; *see* Bureau of Labor Statistics, ''May 2023 National Occupational and Wage Estimates, Unites States,'' *https://www.bls.gov/oes/current/oes_nat.htm.* A meta-analysis of studies on how consumers value time used in traveling (an area in which ''a huge literature has arisen'') has determined that consumers value time used in that matter at 82% of their wage rate. *See* Daniel S. Hamermesh, ''What's to Know About Time Use?,'' 30 J. Econ. Surv. 1, 198–203 (2015). The Commission assumes for the purpose of the final Rule consumers value transaction costs savings in the same way that they value travel time.

[544] *See* Caroline Sinders, ''How Companies Make It Difficult to Unsubscribe,'' *https://pudding.cool/2023/05/dark-patterns.* Among the obstacles noted for otherwise seemingly simple online cancellations were that some websites did not use straight forward terms, such as ''unsubscribe'' or ''cancel,'' and instead put the cancellation path under titles such as ''auto-renew'' or ''edit plan.''

[545] The researcher reported the aggregate time expended to cancel all 16 subscriptions was 57 minutes and 31 seconds. Of the three subscriptions that required telephonic cancellations, one call took 17 minutes and 36 seconds, one took seven minutes, and the time to cancel the third one was not reported (apart from explaining that it was necessary to call three times due to the seller's ''technical difficulties''). The Commission replaces this missing value with the average handle time found by Hawley/O'Neill (2024) of six minutes and three seconds. The Commission therefore subtracted 30 minutes and 39 seconds from the aggregate cancellation time of 57 minutes and 31 seconds; measured in seconds, this becomes 3,451 − 1,839 = 1,612. Dividing this result by 13 equals 124 seconds, or two minutes and 4 seconds. The Commission notes this average cancellation time, though relevant for this regulatory analysis, has not been used as a standard for ROSCA enforcement and is not intended to set a standard here. Moreover, while we have calculated this average, the study notes cancellation took under one minute for three large sellers of digital entertainment subscriptions. Last, the Commission notes one commenter opined, ''(f)or the most part,'' companies offer convenient, no-hassle, cancellation options that probably take about five clicks on average, though the commenter did not indicate a time duration. *See* Individual commenter, FTC–2023–0033–0780.

hour, as assumed above, the final Rule would therefore save consumers who enroll online and cancel online time that they value at between $0.46 (*i.e.,* 1:04 seconds × $25.81/hour) and $0.67 (*i.e.,* 1:34 minutes × $25.81/hour).

(c) Average Per-Cancellation Benefit Relative to TSR-Compliant Cancellation

For consumers enrolling in negative option plans via telemarketing, the existing regulatory baseline is the TSR. The TSR does not specify a performance standard specific to negative option cancellations. Although egregious cancellation delays can be pleaded against telemarketers under § 310.3(a)(1)(vii) (requiring disclosure of all material terms and conditions of the negative option feature) or § 310.3(a)(2)(ix) (prohibiting misrepresentation directly or by implication of any material aspect of a negative option feature), the final Rule's requirement that the cancellation mechanism be at least as easy to use as the consent mechanism provides cancellation-specificity to negative options sold through telemarketing that is lacking under the existing regulatory baseline. Because telemarketers have substantial discretion in designing and implementing consent processes specific to their programs, telemarketers will have a clear benchmark for the speed with which they must complete a final Rule-compliant cancellation.

As described at the beginning of this subsection, the Commission assumes it takes telemarketers between one and two minutes to read the required disclosures to consumers and receive their consent for enrollment in a negative option plan. Using the same average handle time measure of six minutes and three seconds used a previous scenario to proxy for baseline time spent for a telephonic cancellation, the Commission assumes the final Rule will save consumers who consent to a negative option sale via telemarketing, and cancel in the same manner, between four minutes and three seconds and five minutes and three seconds. Evaluating that time saving in the same manner as above, compliance with the final Rule results in a per-cancellation time saving that is worth between $1.74 (*i.e.,* 4:03 minutes × $25.81/hour) and $2.17 (*i.e.,* 5:03 minutes × $25.81/hour).

(d) Estimated Per-Cancellation Benefit Related to In-Person Enrollments

Some sellers market negative option plans in ways that are not covered by ROSCA or the TSR. Those that involve in-person enrollment and only offer in-person or mail cancellation, in particular, may be highly burdensome to consumers. The final Rule requires sellers who offer in-person enrollment to offer at least one alternate cancellation method that consumers may use remotely, *e.g.,* online [546] or via telephone.

Providing consumers with an alternative to in-person cancellations will give consumers a faster route to cancel a subscription and may also spare some consumers from incurring additional recurring charges which might accrue during the pendency of a slow cancellation mechanism, enabling consumers to reallocate their spending power in directions of greater utility, resulting in allocative efficiencies.

Unlike negative option transactions entered into online (ROSCA) or by telephone (TSR), the Commission lacks comprehensive experience with negative option plans that require cancellation in person or through the mail. However, because many gym/fitness center/health studio memberships (hereafter, ''gym memberships'') are sold via negative options [547] and may require cancellation via certified mail or in person (sometimes even when consumers can enroll online [548]), the Commission proxies the per-cancellation benefits of an additional, remote, method of cancellation by looking at those benefits in the context of gym memberships.[549]

As noted in the comment submitted by comment filed by IHRSA,[550] The Global Health & Fitness Association, ''many (fitness club) operations allow several options for agreement termination through simple online solutions including online account management, email cancellation requests, and specific online cancellation buttons or forms'' and ''[m]any of these options are currently available for members who have purchased their membership either online or in person.'' IHRSA did not quantify the share of their member organizations that provide such cancellation opportunities or the number or share of consumer cancellation transactions in which online cancellation is available. Accordingly, the Commission assumes the low-end of the range of quantifiable benefits to consumers who purchased negative option plans in person, but could currently cancel online is the same as the same the low-end of the range for consumers who purchased negative option plans online and had access to online cancellations: $0.46 per cancellation.

Notwithstanding IHRSA's assertion that many fitness clubs offer online cancellation, at least 25 individual consumers submitted comments attesting to the difficulties of canceling gym memberships. Some wrote in general terms of the difficulties consumers experience in canceling such memberships as something that contributed to their support for the Rule.

[546] At the seller's choice, an online cancellation method may be through a website or via email.

[547] IHRSA, The Global Health & Fitness Association, commenting on behalf of itself and the industry (*see* FTC–2023–0033–0863) claimed there were clear distinctions between in-person, brick and-mortar health and fitness businesses and online subscription services, explaining a month-to-month contract is a very different risk to consumers than a long-term contract that begins after a free trial or auto-renews without notice. IHRSA further claims short-term (*e.g.,* month-to-month) continuous service agreements should be distinguished from purely online subscription services targeted by the rule. IHRSA further (mis-) characterizes the Rule as appearing to be concerned with paid contracts that initiate automatically after a free trial period or auto-renew without notice after a long, pre-paid initial term. IHRSA notes consumers with membership agreements with firms in its industry are on notice of the recurring cost because of the monthly charge and have the option to cancel each month under the terms of their contract. The Commission disagrees with IHRSA's characterization of the Rule; the Rule is not intended to exclusively, or even primarily, address online subscription services or long-term contracts that begin after a free trial or auto-renew without notice, but to address all recurring charge plans where the consumer's silence or failure to cancel is interpreted as consent to recurring charges. Accordingly, consumer memberships with firms in IHRSA's industry where consumers have the option to cancel each month squarely fit within the Rule's coverage of negative option plans.

[548] Individual commenter, FTC–2023–0033–0233.

[549] The International Carwash Association (''ICA''), however, commented many of its 60,000 U.S. members offer carwash subscriptions that offer a reduced price for carwashes to subscribers and strengthen the relationship with customers and reduce dependence on cash transactions for these businesses. *See* FTC–2023–0033–1142. These subscriptions may be purchased in person, on the world wide web, via a mobile app, or at an automated teller, which indicates at least some of those subscriptions are covered by ROSCA. ICA asserts cancellation through a means other than in person may be burdensome to the generally small businesses that operate carwashes. *Id.* Although commenter Rocket Money, FTC–2023–0033–0998, mentioned ''car wash chains that require consumers to visit a specific location to cancel their membership as an example of draconian cancellation requirements they experienced working with consumers, no individual consumer commenter mentioned difficulties with carwash subscriptions. Because no consumer commenter provided any other indication of the number of carwash subscriptions purchased or the costs of cancelling such subscriptions, even anecdotally, they are excluded from the analysis. The estimate of the consumer benefits that would flow from the final Rule's provision that an extra, remote, cancellation mechanism be required of marketers who currently offer only in person or mail cancellation mechanisms may therefore be an under-estimate of such benefits.

[550] FTC–2023–0033–0863.

- ''What seems more troublesome tend to be stuff like gym memberships.'' [551]
- ''I work dispute resolutions for a bank. I see so many cases where someone is trying to cancel something like a gym membership and, while they can sign up in person, they for some reason have to mail a certified letter to the companies (sic) home office.'' [552]
- ''I have experienced so much frustration ending memberships with gyms, online subscriptions, etc. over many years and welcome help in this matter. So many friends I speak to share similar stories of how they were roped into paying for longer memberships and subscriptions that they no longer wanted.'' [553]
- ''Many places, like [specific fitness center chain], require you to go in person to cancel—they won't even let you do it over the phone! This harms anyone that may have trouble leaving the house regularly, including disabled folks and parents of small children and those caring for older or ailing family members, not to mention being horribly inconvenient for everyone else.'' [554]

Many others conveyed personal experiences with burdensome gym membership cancellation. The Commission relies upon these comments to estimate the high-end of the range of quantifiable benefits that the final Rule will provide to consumers who purchase negative option plans in-person. Examples of these include:

- ''I had to write a letter and physically mail it to cancel a gym membership I singed [sic] up for on an iPad.'' [555]
- ''Recently it took me three days and several hours to cancel a gym membership (that) had taken less than 20 minutes to join, on line [sic].'' [556]
- ''I had to go in person 3 different times because the manager wasn't there so [sic] to cancel it.'' This consumer attached a screen shot of the gym's cancellation policy, which read, in part, ''There is no contract and you are free to cancel your Direct Debit at any time. If you do decide to cancel your membership, you must allow at least 7 days before the fifth of the month to ensure your payment is cancelled and advise Reception of the cancellation.'' Both ''(a)t *least* 7 days before the fifth of the month,'' and the failure to specify whether ''7 days'' is seven business days or seven calendar days introduce considerable uncertainty as to when, precisely, the consumer must tender a cancellation to avoid the next recurring payment.[557]
- ''Years ago, I had signed up for a gym membership, and after a change in job situation, was no longer able to make use of it. Repeated attempts to reach the gym membership department and cancel my membership went unheeded—a [sic] got a classic runaround, and as often forwarded to unattended phone numbers—and I kept racking up monthly bills for a membership I didn't want . . . . It was only through a personal relationship with someone who worked in the corporate office that I was finally able to get past their automatic renewals and effect a cancellation.'' [558]
- ''We wanted to cancel the [gym] membership, but when we called and emailed, we were told we couldn't cancel that way. We had to send a certified letter or go in person. We have gone in person twice to try to cancel or [sic] membership and it has been a nightmare.'' [559]
- ''Personally, I have been impacted by my local gym's undisclosed policies and shady cancelation policies that have costed me hundreds of dollars.'' [560]
- ''They bill you monthly for your gym membership but when you want to cancel your membership that's when the problems arise. You cannot do it over phone or on their website. You have to go into the gym personally to cancel said membership. Not only that I was told that I'd have to go to the gym [home gym] where I signed up in order to cancel membership. I could only imagine what this would be like had I moved out of the state. Please help us stop these practices.'' [561]
- ''I am currently trying to cancel a gym membership and have been overwhelmed by how difficult it has been . . . . I just called my gym . . . and the pre-recorded automated answering message literally says there is no direct line to the gym! That's outrageous!!!'' [562]
- ''My personal experience is with my gym membership . . . . Getting out of it was terrible, and I'd hate to see it happen to anyone else.'' [563]

Based on these comments, the Commission makes the simplifying assumption that the worst gym membership cancellation experiences involve three failed attempts at cancellation, each costing one hour of time, and that, because of those cancellation failures, three unwanted monthly charges were processed. The Commission assumes a fourth cancellation attempt, also costing one hour of time, succeeds in halting the recurring payments.

As above, the Commission values consumers' time at $25.81/hour. The typical gym membership costs between $40 and $70 a month.[564] The Commission therefore assumes, at the high-end, consumers incur gym membership cancellation costs of $313.25 (*i.e.,* (4 × $25.81) + (3 × $70)) in the absence of this Rule.[565] As stated previously, the Commission assumes a final Rule-compliant cancellation should take no more one minute at the high end, which has a value of consumers' non-market time of $0.43. Then, to estimate the high-end avoided burden that such consumers would experience under the final Rule, the Commission takes the difference between the high-end cancellation costs in the absence of this Rule ($313.25) and the high-end final Rule-compliant cancellation costs ($0.43), which equates to $312.82. Accordingly, the low-to-high range of benefits provided by the final Rule to consumers who purchase negative option plans in person or through the mail ranges from $0.46 to $312.78.[566]

(e) Summary of Per-Cancellation Benefits

Table 2 presents a summary of the per-cancellation benefit the Commission estimates would result from this final Rule. For subscriptions that are currently cancelled over the phone but would be cancelled online under this final Rule, the Commission estimates

[564] *See* Dana George, ''This Is How Much the Average American Really Spends on Gym Memberships,'' Jan. 7, 2024, *https://www.fool.com/the-ascent/personal-finance/articles/this-is-how-much-the-average-american-really-spends-on-gym-memberships.* Because this report is from January 2024, the Commission assumes it measured gym membership costs in 2023 dollars.

[565] Note the avoided recurring payments associated with delayed cancellations may overstate the amount of consumer surplus gained attributable to the final Rule if consumers continue to use their gym membership during that period of delayed cancellation. However, it is difficult to estimate the extent to which that occurs due to lack of data. A part of those gains may also be transfers of producer surplus from firms to consumers.

[566] Other cancellation methods gyms may currently offer, such as in-person visits that succeed in cancellation and cancellation via certified mail, would fall in between these low/high endpoints, as would the benefits to consumers if those methods were augmented under the final Rule not with online cancellations but with telephonic cancellations.

consumers would experience a benefit of between $2.17 and $2.39 per cancellation. For subscriptions that are currently cancelled online and would move to a simpler online cancellation under this Rule, the Commission estimates consumers would experience a benefit of between $0.46 and $0.67 per cancellation. For subscriptions that are currently cancelled over the phone and would move to a simpler telephone cancellation under this Rule, the Commission estimates consumers would experience a benefit of between $1.74 and $2.17 per cancellation. For subscriptions enrolled in person that would be required to provide online or telephone cancellation under this Rule, the Commission estimates consumers would experience a benefit of between $0.46 and $312.82 per cancellation.

TABLE 2—ESTIMATES OF BENEFIT PER CANCELLATION

[In 2023 dollars]

	Low	High
Phone to Online Cancellation	$2.17	$2.39
Online to Simpler Online Cancellation	0.46	0.67
Phone to Simpler Phone Cancellation	1.74	2.17
In-Person to Online or Phone Cancellation	0.46	312.82

(2) Estimating the Number of Consumer Cancellation Transactions

(a) Baseline Number of Subscriptions

The Commission regards ''consumers'' for the purposes of this analysis as the U.S. population over the age of 18;[567] this is estimated to be 269 million in 2025,[568] the first year in the ten-year period over which the Commission estimates the benefits and costs of the final Rule (''Year 1'').

Because negative option sales are a form of marketing of goods and services, and not an industry or type of output, and because no occupational category is uniquely associated with negative option marketing, no publicly produced data source, such as the Economic Census, tracks the use of negative option marketing in the United States. Accordingly, the Commission must look to other data sources, to estimate the number of subscription cancellations and the channels through which consumer consent was obtained and cancellation mechanisms provided.

To estimate the aggregate number of consumer cancellation transactions, the Commission relies upon a credible source that found that, as of mid-2023, 83% of American consumers had at least one subscription.[569] The Commission assumes, for the purposes of this analysis, that the percentage of American consumers with at least one subscription remains constant over ten years. Accordingly, in Year 1 the Commission assumes 223.27 million consumers (*i.e.,* .83 × 269 million) have at least one subscription.

To estimate the total number of subscriptions held by U.S. consumers the Commission looks to data on the average number of subscriptions per subscriber. One source, relying upon a large sample of U.S. consumers conducted in late 2023 and early 2024, reported, ''[t]he average subscriber now has 4.5 subscriptions.''[570] The Commission therefore applies a multiplier of 4.5 to the number of consumers estimated to have at least one subscription to estimate the aggregate number of subscriptions held by consumers in each year. Continuing with the Year 1 example from above, the Commission assumes the 223.27 million U.S. consumers who have subscriptions collectively hold 1,004,715 subscriptions (*i.e.,* 223.27 million × 4.5). The Commission acknowledges some uncertainty in these estimates which could lead to overestimation since subscriptions may be held by households of multiple individual consumers or underestimation due to potential growth in subscription-based goods and services.

(b) Baseline Number of Cancellations

The Commission next considers how many subscriptions consumers may want to cancel. To do so, we look to subscription ''churn,'' or cancellation, rate data. Churn rates can reflect intentional cancellations as when a consumer completes a merchant's cancellation process, but can also reflect involuntary or passive cancellations, which occur when the payment mechanism the consumer has on file with the merchant is unable to be processed by the merchant.[571] Churn rates may be calculated on a monthly, quarterly, or annual basis,[572] and some rates do not disclose a time dimension; mischaracterizing a monthly churn rate as an annual churn rate could vastly underestimate the volume of annual cancellations.

One source reports an aggregate measure of voluntary[573] churn of 3% per month.[574] The Commission assumes

[567] Although this final Rule also benefits small businesses that purchase negative option plans, the Commission does not have sufficient data to quantify those effects in this analysis.

[568] *See* U.S. Census, ''Demographic Turning Points for the United States: Population Projections for 2020 to 2060: Population Estimates and Projections,'' Feb. 2020, *https://www.census.gov/library/publications/2020/demo/p25-1144.html.* The Commission linearly extrapolated between the report's figures for the population over the age of 18 in 2020 and its estimates of the same population in 2030 to estimate the number of consumers in years 2025 through 2029. Similarly, the Commission linearly extrapolated between the report's estimates of the over age 18 population in 2030 and 2040 to estimate the over age 18 population in the years 2031 through 2034.

[569] *See* Julia Stoll, ''SVOD service user shares in the U.S. 2015–2023'' (Sept. 7, 2023) (noting 83 percent of U.S. consumers used a subscription video-on-demand service in 2023), *https://www.statista.com/statistics/318778/subscription-based-video-streaming-services-usage-usa.*

[570] Bango, ''Subscription Wars: Super Bundling Awakens,'' at 4 (2024) (based on data from 5,000 U.S. subscribers), *https://bango.com/resources/subscription-wars-super-bundling-awakens.*

[571] *See* Stripe, ''Subscription churn 101: A complete guide for businesses'' (Jan. 23, 2024), *https://stripe.com/resources/more/subscription-churn-101.*

[572] *Id.* (noting the choice often depends on your business cycle and how often you want to assess your performance).

[573] Some consumers may welcome an ''involuntary'' cancellation of a subscription, and other cancellations that payment processors perceive as ''involuntary'' may reflect consumers' deliberate cancellation of a credit card as a means of escaping a subscription that was difficult to cancel. The Commission's analysis nonetheless uses only the reported ''voluntary'' churn rate to avoid the possibility of over-estimating the consumer benefits of the final Rule.

[574] Recurly, a subscription management platform used across multiple industries, reports an overall churn rate of 4.1% per month and parses this rate into that arising from voluntary cancellations, 3%, and involuntary cancellations, 1%, with, presumably, 0.1% lost to rounding. Recurly explains its methodology in producing these estimates is based on a sample of over 1,200 subscription sites on the Recurly platform over 12 months (January to December 2023); its churn rates are monthly, calculated by dividing the number of subscribers who churn during the month by the total number of subscribers and uses median, 25th, and 75th percentile values to eliminate outliers and provide a more accurate representation of the data in its view. *See* Recurly, ''What is a good churn rate?,'' *https://recurly.com/research/churn-rate-benchmarks.* Other payment processors report similar churn rates but provide fewer details on the

Continued

this rate is constant from month to month and from year to year and therefore assume that the average annual churn rate across all subscriptions is 36%.[575] This churn rate, multiplied by the number of subscriptions held by consumers each year, provides the yearly estimate of how many subscriptions are cancelled by consumers.[576] Continuing with the Year 1 example from above, the Commission therefore estimates 361.70 million cancellations (*i.e.,*.36 × 1,004.72 million) will occur in Year 1 of the analysis and that this number will increase to 384.82 million by Year 10. Table 3 presents the number of subscriptions and total number of cancellations expected in each year.

TABLE 3—NUMBER OF SUBSCRIPTIONS AND TOTAL CANCELLATIONS PER YEAR

[In millions]

Year	Subscriptions	Cancellations
1	1,004.72	361.70
2	1,012.48	364.49
3	1,020.25	367.29
4	1,028.02	370.09
5	1,035.79	372.88
6	1,043.56	375.68
7	1,049.91	377.97
8	1,056.26	380.25
9	1,062.61	382.54
10	1,068.96	384.82

(c) Number of Cancellations by Enrollment and Baseline Cancellation Method

As discussed in the estimates of per-cancellation benefits, the estimated per-cancellation benefits stemming from the final Rule depend on the regulatory baseline cancellation methods relative to those that would be made available under the final Rule. To determine the number of cancellations for which the four categories of per-cancellation benefits estimates would apply, the Commission uses data on its enforcement experience to determine the share of cancellations likely to occur through online and telephone methods. For cancellations of subscriptions that are enrolled in person, the Commission uses data on gym membership cancellations as a proxy.

(i) In-Person Subscriptions

As a proxy for the number of subscriptions entered into in person, the Commission uses a report from Renew Bariatrics that claims 19 percent of the U.S. population are members of gyms or health clubs.[577] The Commission assumes gym members are uniformly distributed by age and multiplies the U.S. adult population by 19 percent to estimate that 51.11 million adults will have active gym membership subscriptions when this final Rule goes into effect. An IHRSA article from 2019 stated the average health club has an annual attrition rate of 28.6 percent.[578] Interpreting this to mean 28.6 percent of all adult gym members cancel their memberships each year, the Commission estimates 14.62 million gym membership subscriptions will be cancelled in the first year of this Rule. In Year 10, the Commission estimates 15.55 million gym membership subscriptions will be cancelled. The Commission uses these estimates as a proxy for the total number of subscriptions that are entered into in person and cancelled each year.

The Commission acknowledges several limitations with this proxy. To begin, there are likely many other types of businesses, such as car washes, lawn care, pest control, and personal care and grooming establishments, that may offer in-person subscription enrollment. To the extent these subscriptions are not included in the count, the estimates may be understated. Further, the source that states 19 percent of the population are members of gyms does not specify the age distribution of the gym members. The Commission has assumed children and adults are distributed uniformly across that 19 percent; however, if adults are more likely to have gym memberships than children, the estimates of gym memberships and cancellations among adults will be understated. On the other hand, gym memberships are not always individual memberships; multiple family members may share a single-family membership. In estimating the number of gym memberships and cancellations, the Commission has assumed each adult gym member has their own subscription, which may overestimate the number of subscriptions and cancellations.

(ii) Online and Telephone Subscriptions

The Commission assumes all subscriptions that are not entered into in person are instead entered into either online or over the phone. Subtracting the in-person subscription, as proxied by gym membership cancellations, from the total number of cancellations, the Commission estimates 347.08 million subscriptions entered into either online or over the phone will be canceled in the first year of this Rule. This number would increase to 369.27 million cancellations in Year 10.

To estimate the distribution of cancellation methods for these subscriptions that are entered into online and over the phone, the Commission reviewed matters it has brought and resolved[579] in which complaints specifically alleged negative option cancellation mechanisms that violated ROSCA, the TSR, or section 5.[580] The Commission found 54 matters met these criteria.

Online[581] enrollment was possible in 42 of 54 matters that met the review

data underlying their churn rate estimates or do not distinguish voluntary from involuntary churn rates.

[575] Because consumers may cancel a subscription and then enroll in a different subscription (or even re-enroll in a recently canceled subscription), the Commission assumes average, aggregate, monthly voluntary churn rates are additive across months and that the number of consumers with subscriptions do not ''decay'' at a rate of 3% per month. Indeed, another report found one-quarter of U.S. consumers cancelled a streaming video service in the past 12 months and resubscribed to the same service, with younger generations significantly more likely to return. *See* Deloitte, Digital Media Trends Survey: 16th Edition (2022), *https://www2.deloitte.com/us/en/insights/industry/technology/digital-media-trends-consumption-habits-survey/summary.html.* The Deloitte report also notes the average churn cancellation rate has remained consistent since 2020 at about 37% across all paid streaming video on demand services. Similarly, a comment from NCTA, FTC–2023–0073–0008, quotes Congressional testimony from Consumer Reports that 36% of consumers who subscribed to streaming services, switched and resubscribed multiple times over a period of 12 months.

[576] The Commission is aware a recent survey of U.S. subscribers found 75% identified one subscription as one they will never cancel or even pause. *See* Bango (2024) at 8. The Commission assumes no adjustment is needed to the reported ''churn'' rate in light of this finding as subscriptions with such loyalty are already reflected in the denominator of the reported churn rate.

[577] *See* ''28 Gym Membership Statistics: Average Cost of Memberships,'' Renew Bariatrics (Jan. 4, 2024), *https://renewbariatrics.com/gym-membership-statistics/.*

[578] *See* ''Why Health Club Retention Requires a Technology Solution,'' IHRSA (May 20, 2019), *https://www.healthandfitness.org/improve-your-club/why-health-club-retention-requires-a-technology-solution/#:~:text=Acquiring%20a%20new%20customer%20is%20five%20times,rates%20by%205%%20increases%20profits%20from%2025%%2D95%.*

[579] This tally does not include ongoing matters or matters that obtained ''fencing-in'' relief encompassing the sale of negative options without expressly pleading complaint counts related to cancellation mechanisms.

[580] In many instances, ROSCA and TSR counts were cross-pled as section 5 counts; in parsing cancellation transactions by their enrollment methods, we use ''section 5'' to refer to instances in which neither ROSCA nor TSR violations were pled.

[581] For ease, the Commission includes in this tally two negative option plans that enrolled consumers via phone apps. Similarly, the Commission regards matters involving online marketing of negative options that were resolved before the passage of ROSCA (and some others that were resolved after the passage of ROSCA, but addressed online

criteria. In the remaining 12 matters, enrollment occurred over the phone. Among the 42 matters in which online enrollment was possible, only six firms offered online[582] cancellation,[583] and the remaining 36 firms offered only telephonic cancellation.[584] Among the 12 matters in which enrollment occurred over the telephone; none of the firms offered online cancellation, therefore, the Commission treats these 12 matters as if only telephone cancellation was available.[585] To summarize, the Commission finds that, among subscriptions that are entered into online and over the phone, 66.7 percent (*i.e.,* 36/54) offered online enrollment and only telephone cancellation, 11.1 percent (*i.e.,* 6/54) offered online enrollment and online cancellation, and 22.2 percent (*i.e.,* 12/54) offered telephone enrollment and telephone cancellation. Extrapolating the baseline cancellation methods from enforcement matters may weight the online enrollment/telephone cancellation subscriptions and the telephone enrollment/telephone cancellation subscriptions more heavily than is currently experienced in the market. It also assumes that there are no subscriptions offered in the baseline with cancellation methods that are already compliant with the provisions of this Rule. The Commission explores the impacts of these limitations in a sensitivity analysis in section (d).

Multiplying the distribution of cancellation methods for subscriptions entered into online and over the phone by the total number of cancellations of online and telephone subscriptions, the Commission estimates the annual number of cancellations that fall into each of these categories. In Year 1, the Commission estimates that, in the absence of this final Rule, there would be 231.39 million cancellations by telephone of subscriptions entered into online, 38.56 million online cancellations of subscriptions entered into online, and 77.13 million telephone cancellations of subscriptions entered into over the phone.

(iii) Summary of Subscription Cancellations by Enrollment and Baseline Cancellation Method

Table 4 provides the number of subscription cancellations each year distributed across the four enrollment and regulatory baseline cancellation method categories: online enrollment and telephone cancellation; online enrollment and online cancellation; telephone enrollment and telephone cancellation; and in-person enrollment.

TABLE 4—CANCELLATIONS BY ENROLLMENT AND BASELINE CANCELLATION METHOD

[In millions]

Year	Online enrollment, telephone cancellation	Online enrollment, online cancellation	Telephone enrollment, telephone cancellation	In-person enrollment
1	231.39	38.56	77.13	14.62
2	233.18	38.86	77.73	14.73
3	234.96	39.16	78.32	14.84
4	236.75	39.46	78.92	14.96
5	238.54	39.76	79.51	15.07
6	240.33	40.06	80.11	15.18
7	241.79	40.30	80.60	15.27
8	243.26	40.54	81.09	15.37
9	244.72	40.79	81.57	15.46
10	246.18	41.03	82.06	15.55

(3) Total Quantified Benefits

To estimate total benefits from this final Rule, the Commission first matches the enrollment and baseline cancellation method categories from the previous section to the four scenarios used to estimate the per-cancellation benefit. The Commission assumes that, under this final Rule, subscriptions enrolled online and cancelled over the phone in the baseline would move to online cancellations; subscriptions enrolled online and cancelled online would move to simpler online cancellation; subscriptions enrolled over the phone and cancelled over the phone would move to simpler telephone cancellation; and subscriptions enrolled in person would allow online or phone cancellation.

Next, the Commission multiplies the number of cancellations in each baseline category by the matched per-cancellation benefit on the low- and the high-end and then sums across all four categories to obtain total benefits each year. Those totals are presented in Table 5. In the first year following implementation of the final Rule, the Commission estimates the benefits will

marketers' conduct that occurred prior to the passage of ROSCA), as ROSCA matters for the purposes of assessing the incremental benefits of the final Rule relative a regulatory baseline of ROSCA's simple cancellation mechanism.

[582] In a few of these matters, online cancellation was offered in addition to telephonic cancellation, and to simplify the analysis, the Commission attributed half to the measure of telephonic cancellations and half to the measure of online cancellations. In a few other instances the Commission's designation of ''online'' cancellation includes cancellation by email or within the marketer's app.

[583] In contrast, other evidence indicated that 81.25% of U.S. online marketers offered online cancellation. *See, e.g.,* Sinders (2023). Different research looked at nine U.S. news media publishers that sold subscriptions online. When two ''personas'' created by the researchers subscribed to each of the nine publications, and then attempted to cancel, 17 of the 18 subscriptions could be canceled online; one publication permitted only the California resident persona to cancel online and offered only telephonic cancellation to the persona posing as a Texas resident. *See* Ashley Sheil, *et al.,* ''Staying at the Roach Motel: Cross-Country Analysis of Manipulative Subscription and Cancellation Flows,'' in Mueller, F.F. (ed.), CHI '24: Proceedings of the CHI Conference on Human Factors in Computing Systems (May 11–16, 2024), *https://repository.ubn.ru.nl/handle/2066/30690.*

[584] In some of the 36 matters, no cancellation method was disclosed by the seller, and in a few other matters consumers were required to return merchandise through the mail to prevent a free trial from rolling over into a subscription or to obtain a refund for merchandise that was shipped to a consumer, and for which the consumer was charged. Such instances generally occurred before the passage of ROSCA, and it is highly unlikely that an online marketer who offered only a mailed-in cancellation could be in compliance with ROSCA's requirement that cancellation mechanisms be ''simple.'' Without loss of generality, the Commission therefore treats instances in which online cancellation was not offered as instances in which only telephonic cancellation was offered to consumers.

[585] Some required the return of merchandise through the mail if consumers wanted refunds. In two matters, no cancellation mechanism was revealed. Without loss of generality, we assume that cancellation could take place telephonically.

range between $661.52 million and $5.32 billion. In Year 10, the Commission estimates the benefits will range between $703.82 million and $5.66 billion. Using a 2 percent discount rate, the Commission estimates the present discounted value of benefits over 10 years to range between $6.13 and $49.32 billion. Annualized over 10 years using a 2 percent discount rate, the Commission estimates the benefits to range between $682.83 million and $5.49 billion per year.

TABLE 5—TOTAL QUANTIFIED BENEFITS

[In millions, 2023 dollars]

Year	Low	High
1	$661.52	$5,318.76
2	666.63	5,359.88
3	671.75	5,401.01
4	676.86	5,442.14
5	681.98	5,483.26
6	687.09	5,524.39
7	691.27	5,558.00
8	695.45	5,591.62
9	699.63	5,625.23
10	703.82	5,658.84
Present Discounted Value of Benefits over 10 years, 2% discount rate	6,133.57	49,315.39
Annualized Benefits over 10 years, 2% discount rate	682.83	5,490.11

(c) Estimated Costs of the Final Rule

This section describes the costs associated with firms coming into compliance with the final Rule, provides quantitative estimates where possible, and describes costs that are only assessed qualitatively. Whereas benefits were estimated based on cancellation transactions, compliance costs are estimated on the basis of firms covered by the final Rule. The Commission first examines the comment record on compliance costs and then estimates the compliance costs for the initial year and subsequent nine years following implementation of the final Rule.

(1) The Comment Record

The comment record has not provided specific data useful to the estimation of the costs of compliance with the disclosure, cancellation, and recordkeeping requirements of the final Rule.

Some industry commenters addressed compliance costs by providing broad, aggregate, conclusory cost estimates; because those costs were not itemized by specific features of the Rule as proposed in the NPRM, the Commission is unable to use those comments to estimate compliance costs relevant to the substantially narrowed scope of the final Rule in comparison to the Rule proposed in the NPRM.[586] The same is generally true of testimony and expert reports submitted in conjunction with the informal hearing. Those materials did not focus on providing specific, relevant, data that would permit estimating compliance costs of the final Rule.[587]

[586] For example, NCTA, FTC–2023–0073–0008, indicated some major cable operators estimate it could cost $12–$25 million per company and take 2–3 years to rebuild their systems and *one* of its members thought annual costs could be 15–20% of the implementation costs (an industry rule of thumb). This comment does not itemize costs across different elements of the specific rules adopted. Additionally, estimates of the annual costs of maintaining systems may be blanket costs that include a host of programming maintenance features that are unrelated to the specific disclosures and ''click to cancel'' features of the final Rule. Moreover, NCTA's comment indicated customers of top cable operators enrolled over the phone (43%), online (30%), and in person (24%) and calls to customer service are answered within 30 seconds and lines are available 24 hours a day, 7 days a week. Accordingly, no extra compliance steps may be necessary with respect to offering final Rule-compliant cancellations for enrollments made by telephone, and compliance with the final Rule's requirement that firms offer an extra cancellation mechanism for in-person enrollments likely could be met through reliance on these firms' existing telephonic cancellation capabilities. Accordingly, the provision of an online cancellation mechanism will be required only for the 43% of their consumers who presently enroll online, and NCTA has not provided estimates of compliance costs that are specifically tailored to that segment of their consumer base. Because NCTA members who enroll consumers online already, clearly, have websites, the Commission rejects the notion that adding ''click to cancel'' functionality to websites that already include an order path for enrolling, and likely also include functionality for registering a payment mechanism for automated billing, would cost $12–$25 million, particularly in light of NCTA's discussion of compliance with the 2019 Television Viewer Protection Act (''TVPA'') which, NCTA claims, already regulates *the very same practices* the FTC is attempting to regulate here. NCTA further claims major cable operators estimate that it cost approximately $2.5 to 4 million per company and took about one year for TVPA compliance. However, having *already* incurred the costs to comply with ''the very same practices'' the final Rule addresses in the course of complying with the TVPA, there would appear to be no incremental costs to comply with the final Rule. Therefore, because the final Rule is narrower in scope than as proposed in the NPRM and because it offers firms the opportunity to apply to be excluded, the Commission rejects NCTA's claim compliance with the Rule would be multiples of TVPA compliance costs and require building online cancellation systems virtually from the ground up and expensive ongoing recordkeeping requirements across all services. Accordingly, the Commission does not include in the estimates of compliance costs the aggregate, non-specific, and possibly idiosyncratic compliance costs NCTA cites. Similarly, an expert's survey submitted by IAB (attachment B to FTC–2024–0001–0010) found only six respondents (out of more than 100,000 companies subject to the proposed Rule) indicated the annual cost of compliance would be a total of $50 million, but provided no itemization of these costs, such that they cannot be disaggregated to comport with the narrower scope of the final Rule.

[587] For example, an expert report (Christopher Carrigan and Scott Walster, FTC–2024–0001–0026) filed by IAB concluded the effects of the proposed Rule, if finalized, on the U.S. economy would surpass $100 million annually. The Commission agrees with this conclusion. The Commission disagrees, however, with both the initial and on-going compliance costs used by Carrigan-Walster; both were liberally based on replicating assumptions made in the preliminary regulatory analysis in the NPRM. Further, their assumptions are inappropriate to this cost analysis because they fail to account for the fact firms subject to the final Rule, unlike firms subject to the proposed Unfair or Deceptive Fees Rule, are already required to provide clear and conspicuous disclosures of all material facts relating to the sale of negative option contracts under the totality of ROSCA, the TSR, and section 5 of the FTC Act, and to provide simple cancellation mechanisms under ROSCA for those firms covered by ROSCA. In addition, firms subject to the final Rule are also required to comply with a variety of other laws relating to negative option sales, including the current Prenotification Rule, EFTA, the Unordered Merchandise Statute, numerous State laws, various laws and regulations that effect specific industries, such as the Television Viewer Protection Act of 2019 (TVPA), other FCC regulations, and, for multi-national entities, various foreign laws. Accordingly, the units of specialized labor, *e.g.,* lawyer, web developer, and business analyst time, that Carrigan-Walster adopt from the Unfair or Deceptive Fees NPRM are not valid representations of the usage of such inputs that are *incremental* to compliance

Another commenter addressed the Paperwork Reduction Act cost estimate in the NPRM in a way that conflated it with the totality of compliance costs. IFA, which represents firms, including small firms, in the fitness, preventative healthcare, personal wellness or children's extracurricular activities industries, commented, ''the FTC's estimate (in the NPRM) that it will cost companies merely three hours annually at $22.15/hr to comply is grossly understated for IFA's members.'' [588] The Commission agrees the final Rule's compliance costs will exceed the Paperwork Reduction Act costs discussed in the NPRM because the Paperwork Reduction Act costs only include burden associated with information collection requirements, such as recordkeeping and disclosure costs, while the total compliance costs include those costs as well as costs of familiarization with the Rule and costs to bring cancellation mechanisms into compliance. IFA did not, however, provide a sufficiently detailed alternative estimate of annual or ongoing general compliance or recordkeeping costs for its members.[589] Similarly, IFA provided no information on the enrollment mechanisms used by its members nor an estimate of what share of its members offer negative option plans.[590]

IFA did, however, comment that many of its members already offer consumers the ability to pause or ''freeze'' memberships, noting, ''consumers take advantage of alternatives to membership cancellation at rates of 10% to 40%, with many consumers electing to reactivate their memberships, saving thousands of dollars annually in increased membership rates and additional initiation fees.'' While pause/freeze capabilities are indeed beneficial to consumers, they do not relieve a firm from an obligation to offer a cancellation mechanism. IFA did not provide similar data on what percentage of its member firms' consumers are dissatisfied with pause/freeze opportunities and seek authentic cancellations or what cancellation mechanisms its member firms make available to consumers.

The technological capability to pause or freeze subscriptions suggests the presence of software architecture ''scaffolding'' upon which a cancellation mechanism could be built at a modest incremental cost. Alternatively, the offering of subscription pauses or freezes by some IFA members may suggest those members use the services of third-party e-commerce hosting platforms or payment processors who routinely provide consumer subscription account management tools relied on by businesses, including small businesses. As discussed, below, existing software scaffolding and the utilization of third-party consumer subscription management tools can facilitate low- (and even no-) cost compliance with some of the final Rule's requirements.

(2) Initial Compliance Costs

The Commission has previously estimated that 106,000 firms offer negative option plans.[591] The Commission assumes that to come into compliance with the final Rule, all 106,000 firms selling negative option plans will need to expend some resources to familiarize themselves with the final Rule and some firms will incur costs related to improvements in their pre-consent disclosures and cancellation mechanisms.

Familiarization costs: No commenters presented estimates expressly related to the costs of legal and managerial review of the final Rule and front-line staff training needed to come into compliance. The U.K. ''Impact Assessment,'' using surveys and interviews with managers of firms that sold goods and services via negative options, found that firms would need between four and 16 hours of ''senior staff'' time, depending upon the size of the firm, to gain familiarization with their proposed rule, and between zero and 80 hours of ''service staff'' time, again depending upon the size of the firm.[592] The Commission assumes that similarities between American and British firms are such that the same units of time are relevant for American firms to gain familiarity with the final Rule. In the American context, the Commission assumes ''senior staff time'' is proxied by ''attorney time,'' and uses the mean hourly wage for attorneys, $84.84 per hour, to estimate those costs.[593] Similarly, the Commission assumes ''service staff time'' is proxied by the average of mean wages for salespersons and clerical workers, which is $23.27.[594] Accordingly, the

with the final Rule relative to its existing regulatory baseline.

[588] *See* IFA, FTC–2024–0001–0001.

[589] IFA provided an extreme example relevant to what it identified as a preventative healthcare franchise system without disclosing how many individual firms belonged to that system. In the context of that system, IFA stated it would take thousands of hours to access if modifications are necessary to existing contracts, marketing, and operational processes and implement any requirements, costing hundreds of thousands of dollars. IFA did not, however, provide detailed, itemized, estimates of compliance costs that relate to the specific features of the final Rule, which has been substantially streamlined relative to what was proposed in the NPRM, making IFA's highly aggregated notion of compliance costs for one particular group system' inapplicable to the current cost analysis. The same lack of specificity is present in IFA's discussion of ''Fitness franchise systems.'' With somewhat greater specificity, IFA estimates costs to comply with disclosure and recordkeeping requirements are 24 hours annually, but IFA did not disclose what type of labor inputs are involved in those tasks nor the number of fitness facilities that will incur these costs. Moreover, IFA reveals its members estimate the impact to member lifetime value will exceed $100,000 per fitness center and lost revenue is expected to be nearly $40,000 annually per fitness center, but these figures cannot properly be considered compliance costs as they may, in fact, represent benefits consumers receive from speedier exits from fitness club memberships that are no longer wanted by consumers.

[590] Some of its members may offer yearly contracts that do not auto-renew, but that apportion payments over 12 months for the convenience of consumers. Such contracts are installment plans, and not negative option plans. Others may conduct business on a pay-as-you-go basis.

[591] As explained in the NPRM, this estimate is based primarily on data from the U.S. Census North American Industry Classification System (NAICS) for firms and establishments in industry categories wherein some sellers offer free trials, automatic renewal, prenotification plans, and continuity plans. Based on NAICS information as well as Commission staff's own research and industry knowledge, the Commission identified an estimated total of 530,000 firms involved in such industries. However, the Commission estimates only a fraction of the total firms in these industry categories offer negative option features to consumers. For example, few grocery stores and clothing retailers, which account for approximately a third of the of the total estimate from all industry categories, are likely to regularly offer negative option features. In addition, some entities included in the total may be exempt from the Commission's authority. Accordingly, the Commission estimates approximately 106,000 business entities (20%) offer negative option features to consumers. *See* 88 FR 24733. Although no commenter proposed a different number, ETA, FTC–2023–0033–1004, challenged the Commission's estimated number of firms selling negative option plans on the basis that it did not account for ''the many providers of goods and services to business where automatic renewal clauses are used.''

[592] *See* U.K. ''Impact Assessment'' (2023) at 26. While the U.K.'s rule may not be directly analogous to the final Rule, it addresses similar problems associated with consent and cancellation associated with negative option practices. Therefore, the burden the U.K.'s rule places upon subscription sellers, in terms of executive and staff resources to read and understand the rule and assess whether existing procedures are in compliance or need to be revised, may be highly similar to the familiarization steps that U.S. businesses will need to undertake.

[593] The mean hourly wage for lawyers in 2023 was $84.84; *see* Bureau of Labor Statistics, ''Occupational Employment and Wages, May 2023, 23–1011 Lawyers,'' *https://www.bls.gov/oes/current/oes231011.htm.*

[594] The Commission uses a mean hourly wage for sales personnel of $25.62; *see* Bureau of Labor Statistics, ''Occupational Employment and Wages, May 2023, 41–0000 Sales and Related Occupations (Major Group),'' *https://www.bls.gov/oes/currenT/oes410000.htm.* The Commission uses a mean hourly wage for clerical workers of $20.94, *see* Bureau of Labor Statistics, ''Occupational Employment and Wages, May 2023, 43–9061 Office Clerks, General,'' *https://www.bls.gov/oes/currenT/oes439061.htm.* The average of these two mean wage rates is $23.27.

Commission estimates the aggregate initial year familiarization costs as ranging between $35.97 million and $341.22 million.

Disclosures: Clear and conspicuous disclosures are already required by the existing regulatory baseline; § 425.4(a)(1)–(4) of the final Rule adds specificity to those disclosures, albeit in a flexible way.[595] As estimated below, the Commission assumes some marketers are already in compliance with the disclosure requirements of the final Rule; for these marketers, there are no incremental costs of compliance with the disclosure requirements of the final Rule.

For online marketers, the current regulatory baseline is ROSCA, which requires marketers to clearly and conspicuously disclose all material terms of the transaction before obtaining the consumer's billing information. To the extent ROSCA-covered marketers' current disclosures lack the specificity required by the final Rule, the Commission estimates changes will be needed only to textual elements of such marketers' websites and that no changes to the underlying website architecture will be needed. The Commission further assumes any such changes, if needed, will be made by website developers, whose mean hourly wage is $45.95.[596] Similarly, some telemarketers and in-person negative option marketers may need to modify their sales agents' scripts to incorporate the disclosures required by the final Rule. Without loss of generality, the Commission assumes the mean wage rates of marketers' staff who will make such script changes is proxied by the mean wage rates of web developers.[597] Although in the Commission's experience these changes should take very little time, perhaps as little as one hour, the Commission adopts a range of one to 10 hours to complete this task.[598]

Accordingly, the Commission estimates that for those marketers whose disclosures are not already in compliance with the requirements of the final Rule, disclosure compliance costs will range between $45.95 and $459.50.

Cancellation mechanisms: Section 425.6 of the final Rule requires negative option marketers to provide a simple cancellation mechanism that is in the same medium, and at least as simple for the consumer to use, as the mechanism by which the consumer provided consent to the negative option plan. Additional requirements are medium-specific. For example, when consent is provided through an interactive electronic medium, the cancellation mechanism (also provided through an interactive electronic medium) must be easy for the consumer to find when the consumer seeks cancellation information (for example, on a website, the cancellation mechanism cannot be hidden in ''terms and conditions'' or otherwise difficult to find) and cannot require interactions with live or virtual representatives (such as chatbots) if no such interactions were required when the consumer consented.

When consent is provided over the telephone, the final Rule requires that telephonic cancellation must be available during normal business hours and not be more costly for the consumer to use than the telephone call the consumer used to consent to the negative option feature.

When consumer consent to a negative option plan is provided via an in-person method, the marketer must offer cancellation opportunities, where practical, in a like manner. In addition, the marketer must offer an alternative simple cancellation mechanism through an interactive electronic medium or by providing a telephone number that satisfies all final Rule requirements related to use of those cancellation media.

The costs negative option sellers will incur in the initial year following implementation of the final Rule to bring their cancellation mechanisms into compliance with the final Rule will depend upon their pre-existing cancellation mechanisms. No commenter provided research or data on the frequency of use of different cancellation mechanisms across negative option marketers or on the incremental costs to make the existing cancellation mechanism compliant with the requirements of the final Rule.[599]

Because the comment record has not provided sufficient data to estimate the costs of compliance with the final Rule's cancellation requirements, the Commission turns to data from the U.K.'s ''Impact Assessment'' on regulating subscriptions there. Based on these sources, the Commission finds some sellers of negative option plans are already in compliance with the cancellation requirements of the final Rule, and many others will incur only minimal costs to make their cancellation flows compliant with the final Rule.

The relevant experimental research looked at the cancellation practices of 16 online subscription sellers, many of them large and well-known firms, and noted the cancellation mechanisms made available to consumers and how easy those mechanisms were for consumers to locate and use.[600] Although the number of firms sampled in this research was small, publicly available data on total enrollments, located for just seven of the 16 firms, collectively numbered over 350 million,[601] which may lend significance

[595] The final Rule requires disclosure of: the fact consumers will be charged; the amount(s) they will be charged; when the consumer must act (by deadline or frequency) to prevent or stop charges; and the information needed for the consumer to find the simple cancellation mechanism.

[596] *See* Bureau of Labor Statistics, ''Occupational Employment and Wages, May 2023, 15–1254 Web Developers,'' *https://www.bls.gov/oes/2023/may/oes151254.htm.*

[597] This is consistent with the approach taken in the expert report submitted by IAB. *See* Carrigan-Walster, FTC–2024–0001–0026 (noting many firms using negative option marketing present offers through the internet and, for firms presenting offers through other means, web developer time is used as a proxy for worker time to create the presentation of the offers).

[598] The assumed range of one to 10 hours is consistent with the time estimate used for compliance checks and minor modifications of websites in the Unfair or Deceptive Fees NPRM. *See* 88 FR 77420 (Nov. 9, 2023).

[599] Trade association commenters who addressed cancellation mechanisms used by their members, and whether those mechanisms were or were not symmetric with enrollment mechanism or as easy to use as enrollment mechanisms did so only in a very general manner. For example, NCTA (FTC–2024–0001–0011) commented that, in 2021 and 2022, customers of top cable operators enrolled over the phone (43%), online (30%), and in person (24%)'' but provided no information on available cancellation mechanisms. Additionally, NCTA stated its analysis shows complaints received about cancellation are very limited (approximately 0.017% of cancellations) out of the approximately 14 million customers who cancelled some or all of their services from NCTA's largest cable operator members in 2022. Anecdotes such as these, about ''top'' or ''largest'' companies do not provide sufficiently reliable data for the instant analysis. Similarly, IHRSA's comment about ''many'' fitness club operations allowing options to cancel by simple online solutions is not specific enough to be helpful (*see* FTC–2023–0033–0863).

[600] *See* Sinders (2023).

[601] The Commission located subscriber estimates for seven (Amazon, Ancestry, Hulu, Netflix, Paramount+, The Boston Globe, and The New York Times) of the 16 firms included in the research. The number of U.S. subscribers to Amazon Prime is estimated to reach 171.8 million in 2024. *See https://www.yaguara.co/amazon-prime-statistics.* At year-end 2023, Ancestry.com had over 3 million subscribers. *See https://www.ancestry.com/corporate/newsroom/press-releases/ancestry-releases-2023-annual-impact-report--underscoring-corpor.* As of the second quarter of 2024, Hulu had 50.2 million paid U.S. subscribers. *See https://www.statista.com/statistics/258014/number-of-hulus-paying-subscribers*). Also as of the second quarter of 2024, Netflix had 84.11 million subscribers in the U.S. and Canada. *See https://www.statista.com/statistics/483112/netflix-subscribers.* Even if the Commission makes the extreme assumption that every Canadian held a Netflix subscription, that would still leave approximately 50 million U.S. subscribers. Paramount+ had over 71 million subscribers as of the first quarter of 2024. *See https://www.theverge.com/2024/4/29/24144766/paramount-plus-now-has-over-71-million-subscribers*). The Boston Globe had 260,000 (mostly digital) subscribers in 2023. *See https://pressgazette.co.uk/north-america/us-local-news-*

to this research beyond what might otherwise be associated with a sample size of 16 firms. Moreover, the methodology of the study suggests that the researcher's experiences with enrollment and cancellation likely would be typical of any consumer undertaking the same enrollment and cancellation tasks with those firms.

The experimental research found that 18.75% (*i.e.,* 100 × 3/16) of the online marketers studied offered online cancellations in a straightforward, easy to use manner such that it took the researcher less than one minute to complete a subscription cancellation. The Commission therefore assumes that 18.75% of online sellers of negative option plans will not need to change their websites to come into compliance with the cancellation requirements of the final Rule. Although this research did not specifically measure the adequacy of pre-consent disclosures, the Commission assumes that companies who make cancellation so easy for consumers perform equally well in making disclosures. Accordingly, the Commission assumes that the 18.75% of online firms selling negative options that will not incur incremental costs to comply with the final Rule's cancellation requirements also will not incur any incremental costs to comply with the final Rule's disclosure requirements. The Commission assumes that the remaining 81.25% of online negative option sellers that lacked such easy-to-use cancellation mechanisms also performed less well in making the disclosures required by the final Rule, such that they would incur initial year compliance costs of improving their disclosures as indicated by the range estimated above.

The same research found that 62.5% (*i.e.,* 100 × 10/16) of sampled online negative option sellers had cancellation paths that took longer for consumers to complete as a result of nomenclature, not website architecture. These sites, rather than using straightforward terms such as ''unsubscribe'' or ''cancel,'' put the cancellation path under titles such as ''auto-renew'' or ''edit plan,'' [602] and locating the cancellation mechanism delayed the researcher in completing the cancellation task because of the non-intuitive labeling of the entry point into the cancellation mechanism. In such instances, more intuitive, consumer-friendly labeling of the existing cancellation architecture is assumed to be what is needed for these sites to come into compliance with the cancellation requirements of the final Rule. The Commission assumes such relabeling will not require any additional programming or changes to the underlying website architecture. In the Commission's experience, such ''cosmetic'' changes can be made quickly and inexpensively, possibly in as little as one hour of a website developer's time. The Commission notes, however, that the U.K. ''Impact Assessment,'' in considering ''general updates to websites such as reflecting the clearer communication on contract conditions and updating cancellation options,'' estimated that such changes would ''require eight hours' work from an IT professional and that these costs are uncorrelated with the size of the business.'' [603] The website changes contemplated in that assessment likely exceed those required to merely relabel consumer-facing elements of an existing cancellation architecture. Out of an abundance of caution, however, the Commission uses the U.K.'s estimate of eight hours as an upper bound on the time required to make the needed changes and further assumes that the relevant ''IT professionals'' are website developers, which, as noted previously, have a mean wage rate of $45.95. Accordingly, the Commission assumes each firm that needs to relabel existing cancellation mechanisms to make those mechanisms easy for consumers to locate and use will spend between $45.95 (*i.e.,* 1 × $45.95) and $367.60 (*i.e.,* 8 × $45.95) to come into compliance with the final Rule's cancellation requirements.

Lastly, the aforementioned research found that 18.75% (*i.e.,* 100 × 3/16) of online negative option sellers offered only telephonic cancellation. Such firms, because they were online sellers, clearly had online ordering and payment website architecture in place, and so had ''scaffolding'' upon which online cancellation architecture could be built. No commenter provided relevant data on the costs of building-out a ''click-to-cancel'' mechanism in such instances, and the U.K ''Impact Assessment'' indicated it ''lacked high quality evidence on the costs businesses would incur'' to integrate ''easy exiting mechanisms into websites.'' As a result, the ''Impact Assessment'' turned to ''external estimates'' from ''[t]he U.S. eCommerce agency OuterBox [which] indicates a possible range of costs. It suggests that integrating simple tools into an existing eCommerce platform would cost most businesses approximately $500'' in 2022.[604] In 2023 dollars, that amount is $532.05.[605] The Commission notes, however, that many payment processors and website hosting platforms used by many businesses, particularly small and medium-sized businesses, provide marketers with consumer subscription account management tools that provide consumers with ''click-to-cancel'' functionality at no direct [606] incremental cost to marketers.[607] As no commenter

subscribers-ranking. As of mid-year 2024, the New York Times had 10.8 million subscribers. *See https://www.nytimes.com/2024/08/07/business/media/new-york-times-earnings.html.* The Commission was unable to locate subscriber data for some of the other firms sampled (*e.g.,* Savage Fenty, Daily Harvest, Deliveroo) and in some other instances found subscriber data reported only on a global basis (*e.g.,* Google One, Adobe).

[602] In the researcher's view, this kind of naming is confusing and adds unnecessary friction to the cancellation process. *See* Sinders (2023).

[603] U.K. ''Impact Assessment'' (2023) at 26.

[604] U.K. ''Impact Assessment'' (2023) at 27 (citing a report from 2022).

[605] *See* Bureau of Labor Statistics, ''CPI Inflation Calculator,'' *https://www.bls.gov/data/inflation_calculator.htm.* We note that this amount is equal to 10.25 hours of computer programmer time valued at a mean hourly wage rate of $51.90; *see* Bureau of Labor Statistics, ''Occupational Employment and Wages, May 2023, 15–1251 Computer Programmers,'' *https://www.bls.gov/oes/current/oes151251.htm.* As such, this is consistent with the outcome of the approach used by Carrigan-Walster, FTC–2024–0001–0026, in proxying the first-year costs of compliance costs with each of the six provisions of the Rule proposed in the NPRM (which differed, substantially, from the narrowed final Rule, although not with respect to ''click to cancel'' provisions). That approach made the ad hoc assumption that technological changes required by the Rule would require the same labor inputs as similar requirements in the NPRM for the FTC's Rule on Unfair or Deceptive Fees, notwithstanding the two rules differ substantially in their regulatory baselines. *See* 88 FR 77420.

[606] To the extent that a marketer uses the easy subscription account management and cancellation tools offered by hosting platforms or payment processors and the presence of such tools reduces consumers' perception of the risks of entering into a subscription agreement with the marketer, the marketer's sales may increase along with any payments to the platform or processor that are based on the number of transactions or aggregate sales.

[607] See, for example, Shopify's help page at *https://help.shopify.com/en/manual/products/purchase-options/shopify-subscriptions/customer-experience#subscription-management-for-customers,* ''Shopify Subscriptions displays subscription information to customers in the checkout. For example, when buying a subscription product, the order frequency and discount amount for the subscription is displayed in the order summary . . . . During checkout, your customer needs to agree to the cancellation policy terms to confirm that they understand they're purchasing a subscription. They can't complete their purchase without agreeing to this policy . . . . Customers can log in to their customer account to view and manage their subscription orders. Customers can resume, skip, and cancel their subscriptions, and manage their payment methods and shipping address.'' Moreover, Shopify offers a variety of consumer subscription management tools to merchants that use Shopify for payment processing (''checkout'') or website hosting at no incremental cost to merchants *See https://apps.shopify.com/categories/selling-products-purchase-options-subscriptions.* The fees Shopify charges merchants varies with a number of merchant-specific features, including website design elements, whether merchants want ''Shopify checkout'' to work on

Continued

provided information on (1) how many negative option sellers comply with ROSCA by offering only telephonic cancellation, (2) what specific costs they would face to provide an online cancellation mechanism, or (3) whether they would build such functionality themselves or use a third-party payment processor or hosting platform to provide it for them, we estimate such costs to range between $0 and $532.05 per firm.

Accordingly, the Commission assumes that most online marketers of negative option plans will face minimal IT costs of coming into compliance with the cancellation requirements of the final Rule.[608]

As noted previously, telemarketers have substantial control over both how long the consent process takes and how long it takes a consumer to complete a cancellation over the telephone. If compliance with the final Rule expedites the cancellation process over the phone, telemarketers may experience cost-savings associated with such resources. Furthermore, no telemarketers or call centers that provide services to telemarketers submitted comments relating to what costs telemarketers would incur to bring cancellation mechanisms into compliance with the final Rule. Because of this, and because the Commission has previously found that only 2,000[609] of 106,000 firms selling negative options were telemarketers (and no commenter has disputed this finding), the Commission proceeds as if telemarketers face no incremental costs in complying with the final Rule's cancellation requirements. However, to reduce any potential downward bias[610] this might introduce into the compliance cost estimate, the Commission does not subtract the estimated number of telemarketers (2,000) from the total estimated number of online negative option marketers in its calculations of costs. Similarly, the Commission lacks data on how many of the 106,000 firms selling negative option plans currently offer only in-person or by-mail cancellations.[611] The final Rule requires such firms to add a cancellation mechanism that consumers can easily use in a remote manner, *e.g.,* through interactive electronic media or by telephone.

Lastly, the Commission considers the initial year recordkeeping costs required by the Rule, which are estimated in section XIII to be $6.54 million when aggregated across all 106,000 firms.

Because of the aforementioned data limitations emerging from the comment record, the Commission applies the findings of the experimental research above, which looked only at online sellers, to the full number of firms, 106,000, that it has previously estimated to be marketers of negative option plans. This approach comports with a general proposition made by the report submitted by IAB.[612]

Accordingly, the Commission makes the following estimates of initial year compliance costs.

Familiarization costs: All 106,000 firms selling negative options will collectively incur final Rule familiarization costs of between $35.97 million and $341.22 million.

Disclosure costs: 19,875 firms (*i.e.,* .1875 × 106,000) will incur no costs in bringing their disclosures into compliance with the requirements of the final Rule because their disclosures are already compliant. The remaining 86,125 firms will collectively incur costs of between $3.96 million (*i.e.,* $45.95 × 86,125) and $39.58 million (*i.e.,* $459.50 × 86,125) to make their disclosures compliant with the final Rule.

Cancellation costs: 19,875 firms (*i.e.,* .1875 × 106,000) will incur no costs in bringing their cancellation mechanisms into compliance with the final Rule. 66,250 firms (*i.e.,* .625 × 106,000) collectively will incur costs of between $3.04 million (*i.e.,* 1 × $45.95 × 66,250) and $24.35 million (*i.e.,* 8 × $45.95 × 66,250) to bring their online cancellation mechanisms into compliance with the final Rule by relabeling consumer-facing elements of their existing cancellation architecture. 19,875 firms (*i.e.,* .1875 × 106,000) collectively will incur costs of between $0 and $10.57 million (*i.e.,* 19,875 × $532.05) to bring their telephonic cancellation mechanisms into compliance with the final Rule.

The Commission notes that this analysis does not quantify costs for the firms selling negative option plans that offer only in-person or by-mail cancellation. The Commission assumes that, in complying with this final Rule, these firms will choose to provide the alternative cancellation method (by phone, online, or both) that makes the most economic sense. The Commission also assumes that the cost of processing a cancellation over the phone should be similar to or less than the cost of processing a cancellation in person or by-mail for these firms. Therefore, the Commission assumes that these firms will not incur significant compliance

social media platforms in addition to the merchant's own website, how many of the merchant's employees will have the ability to log-in to the merchant's Shopify account, etc. (*see https://aureatelabs.com/blog/shopify-website-development-cost*). So, although what merchants pay to use Shopify may vary across firms, the incremental cost of using Shopify for consumer subscription account management is assumed to be zero. *See also* Hoofnagle, FTC–2023–0033–1137 (''There are scores of companies like Chargebee that help companies manage subscriptions . . . . Compliance with new rules is inexpensive because policy changes can be made programmatically in dashboards'' provided by entities such as Chargebee.'').

[608] No commenter to the ANPR or NPRM, and no comment, expert report, or testimony in relation to the informal hearing provided estimates of compliance costs firms would incur that were specific to the features of the Rule as then-proposed that remain in the final Rule.

[609] *See* NPRM, 88 FR 24733.

[610] Because telemarketing firms are such a small share of all firms that will be covered by the final Rule, the Commission does not expect this treatment of telemarketers (or, indeed, even a total exclusion of telemarketers from the analysis) to impart a significant bias.

[611] Three trade associations, who have some members who either sell or offer cancellation mechanisms in-person, submitted comments that were not sufficiently detailed to permit Commission staff to estimate the number of firms that both sell and cancel in-person or through the mail. For example, IHRSA (FTC–2023–0033–0863) commented many of its members allow several options for agreement termination through simple online solutions including online account management, email cancellation requests, and specific online cancellation buttons or forms, adding many of these options are currently available for members who have purchased their membership either online or in person. The International Carwash Association (''ICA''), FTC–2023–0033–1142, commented on subscription-related revenues of member firms (noting more than half, and sometimes more than 80%, of store revenues can be attributable to subscription sales), but not on the number of firms that sell subscriptions or how many subscriptions they sell. Similarly, although it commented subscriptions could be purchased in person, on the world wide web, via a mobile app, or at an automated teller, it provided no data on the relative shares of subscription purchases through these channels or the cancellation mechanisms made available to consumers. The objections ICA raised to a Rule requiring its members to offer cancellation by any method other than in-person strongly suggests that most member firms currently only offer cancellation that way, suggesting that those who sell on the internet, via a mobile app and (possibly) at an automated teller may already be in violation of ROSCA if in-person cancellations are a violation of ROSCA's ''simple cancellation mechanism'' requirement. IFA (FTC–2023–0033–0856) provided data from its database on the number of franchisees operating fitness establishments, spa/massage studios, entertainment facilities, and preventative healthcare facilities in the U.S., but provided no information on what share of firms sold subscriptions or the media through which consent was obtained or cancellation mechanisms were offered. In a later comment (FTC–2024–0001–0009), IFA noted consumers of member firms used the alternative of ''freezing'' their memberships at rates of 10%–40% but did not provide information on what the ''freezing'' mechanism was or what cancellation mechanisms were available to consumers.

[612] *See* Carrigan-Walster, FTC–2024–0001–0026 (employing a similar assumption: ''Many firms using negative option marketing present their offers through the web. For those firms that present offers through other means, web developer time is used as a proxy for worker time to create the presentation of the offers.'').

costs to provide an alternative cancellation method.

Recordkeeping costs: Collectively, firms will incur recordkeeping costs of $6.54 million annually.

Total Initial Year Costs: Summing costs enumerated above, the Commission estimates the costs of the Rule in the first year will range between $49.52 and $422.26 million. These costs are presented in Table 6. The Commission assumes that these costs will be incurred by the end of the initial year following the Rule's implementation.

TABLE 6—TOTAL INITIAL YEAR COMPLIANCE COSTS

[In millions, 2023 dollars]

	Low	High
Familiarization Costs	$35.97	$341.22
Disclosure Costs	3.96	39.57
Cancellation Mechanisms Costs	3.04	34.93
Recordkeeping Costs	6.54	6.54
Total Initial Year Costs	49.52	422.26

(3) Ongoing Compliance Costs, Years 2 Through 10

Compliant disclosures, cancellation paths, and consumer-facing information about cancellation mechanisms will form a ''template'' that can be used without any incremental compliance costs as new subscription products are added to a marketer's retinue of products offered for sale via a negative option plan. The information relevant to the sale of a new product may be ''dropped'' into the template in a fill-in-the-blank way. The Commission assumes marketers, in the ordinary course of business, know what is required for the disclosures (*e.g.,* the amounts consumers will be charged, when, by date or frequency, such charges will occur, when consumers must act to stop recurring charges, etc.) and consider the costs of entering this information into established disclosure templates to be a routine cost of doing business, not an incremental cost required by compliance with the final Rule. The same will also be true for negative option plans that are telemarketed or sold in person; once a telemarketing script or an in-person sales disclosure form is developed in the initial year of compliance, it becomes a template that readily can be used as new subscription products are offered over time. Accordingly, once a marketer comes into compliance with the final Rule there should be no incremental costs of ongoing compliance with respect to disclosures and cancellation mechanisms, and the costs of adding, changing, or deleting products the marketer offers for sale via negative option will be no different from what they would have been absent the final Rule.

The Commission can seek redress or civil penalties for violations of the final Rule. Absent the final Rule, enforcement actions against unfair or deceptive negative option practices would be brought under section 5 where civil penalties are not available and where, post-*AMG,* it is difficult to obtain redress. Accordingly, some negative option marketers may pay closer attention to underlying claims made for products marketed using negative option sales because of the monetary relief available for violations of the final Rule relative to a section 5 enforcement action. This, however, is no different than what any firm should do to assure that it is not in violation of section 5, and the Commission considers the costs of attentiveness to section 5 compliance as part of the existing regulatory baseline, not as costs that are incremental to complying with the final Rule.

The U.K.'s ''Impact Assessment'' of its regulatory treatment of subscription plans did not estimate ongoing compliance costs because ''the size of these costs . . . are likely small in comparison to the one-off cost and benefits.'' [613] In further support of this, the ''Impact Assessment'' cited a report that found that on-going costs were meaningful only in relation to sending reminders to consumers about their subscriptions, and only for firms that used postal mail delivery and not electronically delivered reminders.[614] The final Rule does not contain a ''reminder'' requirement, and so the ongoing costs of sending reminders to consumers, small though they may be, are not ongoing costs of compliance with the final Rule.

The experts' report submitted by IAB estimated 10 hours of attorney time for annual compliance checks for the Rule proposed in the NPRM. Because the final Rule has removed the most complex (and, therefore, costly) features of the proposed Rule (*e.g.,* double consent, the treatment of ''saves'' in cancellation flows, and the issuance of annual ''reminders'' for some subscriptions), the Commission assumes half of the annual compliance check hours assumed in IAB's experts' report, five hours, is an upper bound on attorney hours needed for annual compliance checks. Moreover, the Commission assumes that some firms will incur no incremental annual compliance check costs, either because their pre-existing business practices followed what the final Rule requires or because the platforms or payment processors they use provide compliant disclosures and cancellation flows.[615]

Accordingly, the Commission estimates the aggregate annual costs of compliance checks to range between $0 and $44.97 million (*i.e.,* 106,000 × 5 hours × $84.84/hour). Inclusive of recordkeeping costs, total ongoing costs range between $6.54 million (*i.e.,* $0 + $6.54 million) and $51.51 million (*i.e.,* $44.97 million + $6.54 million).

(4) Summary of Total Costs

Table 7 presents the initial and recurring costs of this Rule in each year, as well as the present discounted value and annualized costs over 10 years using a 2 percent discount rate. The Commission estimates that in Year 1, the initial costs will range between $49.52 and $422.26 million. In each of the following years, the Commission estimates that the recurring costs will range between $6.54 and $51.51 million. The Commission estimates that the

[613] U.K. ''Impact Assessment'' (2023) at 30.

[614] ''We note for example, that Ofcom assessed . . . the business costs of providing customers with notifications at the end of their contracts. These involved possible ongoing costs related to identifying customers that needed notifications on an ongoing basis and providing them with the notification. After consultation with stakeholders, Ofcom only estimated the costs of providing consumers with letters, on the basis that only this medium had significant ongoing costs.'' *Id.*

[615] See discussion in section VII.B.1.a.2 of this SBP and n.146.

present discounted value of costs over ten years, using a 2 percent discount rate, will range between $100.89 and $826.15 million. The Commission estimates that these costs, annualized over ten years using a 2 percent discount rate, would range between $11.23 and $91.97 million per year.

TABLE 7—TOTAL QUANTIFIED COSTS

[In millions, 2023 dollars]

Year	Low	High
1	$49.52	$422.26

Annualized Costs over 10 years, 2% discount rate	11.23	91.97

(d) Sensitivity Analysis

As a sensitivity analysis, the Commission considers an alternative method that does not rely on data from historical enforcement matters for distributing subscription cancellations across the baseline cancellation methods used to estimate quantified benefits. This alternative method assumes the majority of subscriptions are enrolled online and can be cancelled online in the baseline; whereas, in the main analysis, the majority of subscriptions are enrolled online and can only be cancelled by phone in the baseline. Compared with the main analysis, this alternative method produces lower total quantified benefits by $419.77 to $449.53 million annualized per year, yet the estimated range of quantified benefits still exceeds the estimated range of quantified costs.

(1) Number of Cancellations by Enrollment and Baseline Cancellation Method

Under this sensitivity analysis, the Commission assumes that the baseline number of subscriptions and cancellations is the same as in the main analysis. The Commission also assumes the number of in-person subscriptions, as proxied for by gym memberships, is the same as in the main analysis. What differs here is the approach for determining the share of cancellations likely to occur through online and telephone methods.

The main analysis uses enforcement data to determine the share of cancellations likely to occur through online and telephone methods. This data may suffer from selection bias if, among other factors, only the more egregious violations are pursued through enforcement methods. This approach also assumes no marketers of negative option plans comply with this Rule in the baseline. Further, because the data only include resolved cases and resolved cases tend to be older, they are less likely to reflect the current state of the market.

In this alternative analysis, the Commission uses statistics discussed in the NPRM—that 106,000 firms offer negative option plans and 2,000 of those firms are telemarketers.[616] Based on that, the Commission assumes 1.9 percent (*i.e.,* 2,000/106,000) of subscriptions and cancellations are enrolled and cancelled over the phone in the baseline. The Commission then assumes the remaining cancellations of subscriptions that were not enrolled over the phone or in person were instead enrolled online.[617]

To estimate the distribution of baseline cancellation methods of subscriptions enrolled online, the Commission uses the results from an experiment in which a researcher consented to 16 online subscriptions between August 2 to October 4, 2022 and then canceled each one, recording the time it took to cancel along with a variety of other obstacles faced in cancelling.[618] Of the 16 online subscriptions, three were found to be easy to cancel online, indicating they are likely in compliance with this Rule; three required phone calls to cancel; and the remaining 10 had a non-straightforward online cancellation method. Based on these results, the Commission assumes 18.75 percent (*i.e.,* 3/16) of online subscriptions have Rule-compliant cancellation methods in the baseline; 18.75 percent (*i.e.,* 3/16) of online subscriptions require telephone cancellation in the baseline; and 62.5 percent (*i.e.,* 10/16) of online subscription offer non-Rule-compliant online cancellations in the baseline.

Table 8 provides the number of subscription cancellations each year distributed across the enrollment and regulatory baseline cancellation methods: online enrollment and telephone cancellation; online enrollment and non-Rule-compliant online cancellation; online enrollment and Rule-compliant online cancellation; telephone enrollment and telephone cancellation; and in-person enrollment.

[616] *See* NPRM, 88 FR 24733.

[617] The Commission acknowledges this excludes subscriptions that are enrolled by mail, likely resulting in an overestimate of the number of subscriptions enrolled online.

[618] *See* Sinders (2023). Among the obstacles noted for otherwise seemingly simple online cancellations were that some websites did not use straight forward terms, such as ''unsubscribe'' or ''cancel,'' and instead put the cancellation path under titles such as ''auto-renew'' or ''edit plan.''

TABLE 8—SENSITIVITY ANALYSIS: CANCELLATIONS BY ENROLLMENT AND BASELINE CANCELLATION METHOD

[In millions]

Year	Online enrollment, telephone cancellation	Online enrollment, non-compliant online cancellation	Online enrollment, compliant online cancellation	Telephone enrollment, telephone cancellation	In-person enrollment
1	63.79	212.63	63.79	6.87	14.62
2	64.28	214.27	64.28	6.93	14.73
3	64.78	215.92	64.78	6.98	14.84
4	65.27	217.56	65.27	7.03	14.96
5	65.76	219.21	65.76	7.08	15.07
6	66.26	220.85	66.26	7.14	15.18
7	66.66	222.19	66.66	7.18	15.27
8	67.06	223.54	67.06	7.22	15.37
9	67.46	224.88	67.46	7.27	15.46
10	67.87	226.23	67.87	7.31	15.55

(2) Estimating Total Benefits

To estimate total quantified benefits under this sensitivity analysis, the Commission uses the same matching of enrollment and baseline cancellation methods to per-cancellation benefit estimates as in the main analysis. The only difference here is that the Commission assumes consumers who experience Rule-compliant online cancellations in the baseline will not see any additional benefit as a result of this final Rule.

As in the main analysis, the Commission multiplies the number of cancellations in each category by the matched per-cancellation benefit on the low- and the high-end and then sums across all five categories to obtain total quantified benefits each year. Those totals are presented in Table 9 below. In the first year following implementation of the final Rule, the Commission estimates the benefits under this sensitivity analysis will range between $254.85 million and $4.88 billion. In Year 10, the Commission estimates the benefits will range between $271.15 million and $5.20 billion. Using a 2 percent discount rate, the Commission estimates the present discounted value of benefits over 10 years to range between $2.36 and $45.28 billion. Annualized over 10 years using a 2 percent discount rate, the Commission estimates the benefits to range between $263.06 million and $5.04 billion per year. These annualized benefits estimates are between $419.77 and $449.53 million less per year than the estimates from the main analysis.

TABLE 9—SENSITIVITY ANALYSIS: ESTIMATES OF BENEFITS

[In millions, 2023 dollars]

Year	Low	High
1	$254.85	$4,883.26
2	256.82	4,921.01
3	258.79	4,958.77

Annualized Benefits over 10 years, 2% discount rate	263.06	5,040.58
Difference in Annualized Benefits from Main Analysis	−419.77	−449.53

4. *An explanation of the reasons for the determination of the Commission that the final Rule will attain its objectives in a manner consistent with applicable law and the reasons the particular alternative was chosen.*

As discussed above in sections I, II, and VII.A, the Commission determines the following deceptive or unfair practices are widespread in the negative option marketplace and cause consumer harm: (1) material misrepresentations made while marketing goods or services with negative option features; (2) failure to provide important information about material terms prior to obtaining consumers' billing information and charging consumers; (3) lack of informed consumer consent; and (4) failure to provide consumers with a simple cancellation method, including failure to honor cancellation requests, refusal to provide refunds to consumers who unknowingly enrolled in programs, denying consumers refunds and forcing them to pay to return the unordered goods, and requiring consumers to cancel using a different method than the one used to sign up for the program.

The final Rule amendments prohibit sellers from misrepresenting material facts in connection with promoting or offering for sale a good or service with a negative option feature, require negative option sellers to disclose certain important information about negative option features, obtain a consumer's express informed consent and maintain records of consumer consent for three years after the initial transaction (unless the seller satisfies

the technological exemption), and provide consumers a simple mechanism for cancellation. In promulgating the final Rule, the Commission sought to enhance consumer protections while avoiding detailed, prescriptive requirements that would impede innovation.

5. *A summary of any significant issues raised by the comments submitted during the public comment period in response to the preliminary regulatory analysis and a summary of the assessment by the Commission of such issues.*

Several commenters (*e.g.,* NCTA, IAB) raised concerns over the Commission's conclusions regarding the economic effect of the proposed Rule. NCTA asserted the NPRM lacked any meaningful cost-benefit analysis, suggesting compliance with the proposed Rule would result in significant costs to its members.[619] Among other things, NCTA said its members would be required to implement changes to their existing customer processes, review and revise existing disclosures, and revamp recordkeeping systems. During the informal hearing process, NCTA further argued it could cost major cable operator members between $12–25 million to comply with the proposed Rule.[620] Additional commenters also suggested compliance with the proposed Rule would cost more than what the Commission estimated. None of them, however, offered any empirical analysis of the issue. In response to these comments, and following the presiding officer's recommended decision, the Commission provides the detailed cost-benefit analysis above in Section X.B.3.

XI. Final Regulatory Flexibility Act Analysis

The Regulatory Flexibility Act (''RFA''), 5 U.S.C. 601–612, requires the Commission to conduct an Initial Regulatory Flexibility Analysis (''IRFA'') with a proposed rule and a Final Regulatory Flexibility Analysis (''FRFA''), if any, with a final rule, unless the Commission certifies the rule will not have a significant economic impact on a substantial number of small entities.[621] The Regulatory Flexibility Act further states the required elements of the FRFA may be performed in conjunction with or as part of any other agenda or analysis required by any other law if such other analysis satisfies the provisions of the FRFA.[622]

In the NPRM, the Commission provided an IRFA, stating its belief that the proposal will not have a significant economic impact on small entities, and solicited comments on the burden on any small entities that would be covered. Specifically, the Commission acknowledged it did not have sufficient empirical data to determine whether the proposed amendments may affect a substantial number of small entities; therefore, the Commission sought comment on the percentage of affected companies that qualify as small businesses.

The Commission reviewed and considered the comments in response to the NPRM and determined, as an alternative to finalizing the proposed Rule in its entirety, to modify the Rule. In particular, the Commission decided to limit the material terms to be disclosed immediately adjacent to consent for the negative option feature; remove the limitation on saves and the accompanying recordkeeping requirement; remove the annual reminder provision; and modify the length of the recordkeeping requirement for verification of consent by fixing it to three years and provide an alternative method of compliance. After careful consideration of the comments and following the Commission's determination not to finalize the proposed Rule in its entirety, the Commission certifies that the final Rule will not have a significant economic impact on a substantial number of small entities. Nevertheless, because the Commission included an IFRA in the NPRM, the Commission has also performed an FRFA below, and comments to the IFRA are discussed below.

A. A statement of the need for, and objectives of, the Rule.

The Commission describes the need for and the objectives of the final Rule in section X.B.1 to the Final Regulatory Analysis.

B. A statement of the significant issues raised by the public comments in response to the Initial Regulatory Flexibility Analysis, a statement of the assessment of the agency of such issues, and a statement of any changes made in the proposed Rule as a result of such comments.

Several commenters raised issues about the proposed Rule's economic impact on small businesses. For instance, NFIB asked the Commission to adopt a special provision that would limit enforcement of the Rule against small businesses (fewer than 50 employees) to instances of willful or repeated violations, and set up a program for education on compliance.[623] IFA and IHRSA encouraged the Commission to conduct a ''Small Business Regulatory Impact Analysis'' to determine how the proposal will impact small businesses.[624] IHRSA stated that small businesses in the health and fitness industry operate at ''much different capacity'' than larger industries, noting 44% of U.S. small businesses have less than three months of cash reserves, making them more vulnerable to disruptions.[625] Similarly, ACT App Association noted that roughly 20% of small business startups fail in the first year due to scarcity in financial resources.[626]

Other commenters, including PDMI, ESA, Joint Small Business Digital Economy Innovators, and ICA, generally stated the proposed Rule would impose unnecessary and undue burdens on small businesses, but did not offer any detailed empirical data for the Commission to consider.[627]

In response, the Commission first notes its sensitivity to small businesses' concerns. It provides numerous free resources through the Bureau of Consumer Protection Business Center web page[628] to assist businesses of all sizes in complying with the law and will engage in consumer and business education campaigns about this Rule. Second, in consideration of comments regarding regulatory burden, the Commission clarifies or modifies the Rule in several significant ways: (1) it defines ''material'' and provides several concrete categories of material facts to ensure businesses have a clear understanding of how it will interpret materiality under the Rule; (2) it limits the number of terms that must mandatorily appear ''immediately adjacent'' to the request for consent to

[628] *https://www.ftc.gov/business-guidance.*

the negative option feature; (3) it removes the requirement to obtain separate affirmative consent to ''the rest of the transaction'' and modifies the recordkeeping requirement; (4) it removes the saves and annual reminder requirements, which also should reduce recordkeeping and compliance burdens. Additionally, the Commission delays the effective date of the final Rule for 180 days to allow time for implementation (except for the provisions related to misrepresentations and other procedural requirements, which should not be an added burden for businesses already complying with the law and which take effect 60 days after publication of the final Rule).

C. The response of the agency to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration in response to the proposed Rule, and a detailed statement of any change made to the proposed rule in the final Rule as a result of the comments.

The Small Business Administration did not file comments in response to the proposed Rule.

D. A description of and an estimate of the number of small entities to which the Rule will apply or an explanation of why no such estimate is available.

The final Rule affects sellers, regardless of industry, engaged in making negative option offers, defined by the final Rule to mean any person ''selling, offering, charging for, or otherwise marketing goods or services with a Negative Option Feature.''[629] Small entities in potentially any industry could incorporate a negative option feature into a sales transaction.[630] The Commission is unaware, however, of any source of data identifying across every industry the number of small entities that routinely utilize negative option features. Although the NPRM requested comments on the percentage of affected companies that qualify as small businesses, and some trade association commenters indicated that some of their members were small businesses, these comments did not identify either the number or share of their small business members that sold negative option contracts.

E. A description of the projected reporting, recordkeeping, and other compliance requirements of the Rule, including an estimate of the classes of small entities which will be subject to the requirement and the type of professional skills necessary for preparation of the report or record.

The estimates of the recordkeeping requirements under the final Rule are set out within the Paperwork Reduction Act analysis in section XII below. As mentioned above, the Commission preliminarily determined the impact of the proposed requirements on small entities is most likely not significant. The small entities potentially covered by these amendments will include all such entities subject to the Rule (*e.g.,* all entities selling goods or services through negative option programs). The professional skills necessary for compliance with the proposed amendments would include sales and clerical personnel. The Commission requested comment on these issues.

In the NPRM, The FTC estimated the majority of firms subject to the recordkeeping requirements already retained these types of records in the normal course of business. The FTC anticipated many transactions subject to the final Rule would be conducted via the internet, minimizing burdens associated with compliance. Additionally, most entities subject to the final Rule were likely to store data though automated means, which reduces compliance burdens associated with record retention. Furthermore, regarding the disclosure requirements, the Commission stated it was likely the substantial majority of sellers routinely provide these disclosures in the ordinary course as a matter of good business practice. Moreover, many State laws already require the same or similar disclosures as the Rule would mandate. Finally, some negative option sellers are already covered by ROSCA and the TSR and thus subject to similar disclosure requirements.

Commenters provided additional comments, suggesting small businesses will be significantly impacted, and the Commission underestimated the burdens. Recordkeeping and disclosure costs associated with the Rule became one of the issues designated for the informal hearing, after which the presiding officer determined ''the issue is not genuinely disputed,'' noting the failure of interested parties to ''provide any evidence to establish what the costs *would be,*'' as opposed to generalized complaints ''costs will be *higher* than the NPRM's estimates.''[631] As explained in the Paperwork Reduction Act estimates below and elsewhere in this SBP, the Commission made changes to the Rule based on the record. Specifically, the Commission determined to specify and thereby limit the types of disclosures required, narrow the scope of entities covered (by excluding those solely involved in ''promoting'' negative option plans), curtail the length of time for retaining records (to only three years), and establish an option for sellers to eliminate having to keep records of consent if they have the requisite processes in place. Because neither the Commission nor the presiding officer at the informal hearing received evidence to dispute the recordkeeping and disclosure costs figures in the NPRM, the Commission adopts the NPRM's analysis. Given the narrower scope of the final Rule, that analysis should be more conservative and tend to overstate the burden.

F. A description of the steps the agency has taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final Rule and why each one of the other significant alternatives to the Rule considered by the agency which affect the impact on small entities was rejected.

In formulating the proposed amendments, the Commission made every effort to avoid imposing unduly burdensome requirements on sellers. To that end, the Commission avoided, where possible, proposing specific, prescriptive requirements that could stifle marketing innovation or otherwise limit seller options in using new technologies.

As explained above, in response to comments regarding regulatory burden, the Commission clarifies or modifies the Rule in several significant ways: (1) it defines ''material'' and provides several concrete categories of material facts to ensure businesses have a clear understanding of how it will interpret materiality under the Rule; (2) it limits the number of terms that must mandatorily appear ''immediately adjacent'' to the request for consent to the negative option feature; (3) it removes the requirement to obtain separate affirmative consent to ''the rest of the transaction'' and modifies the recordkeeping requirement; (4) it removes the saves and annual reminder requirements, which also should reduce recordkeeping and compliance burdens. Additionally, the Commission delays the effective date of the final Rule for 180 days to allow time for implementation (except for the provisions related to misrepresentations and other procedural requirements, which should not be an added burden

[629] Rule § 425.2(g).

[631] Recommended Decision by Presiding Officer, *https://www.regulations.gov/comment/FTC-2024-0001-0042* (emphasis in original).

for businesses already complying with the law and which take effect 60 days after publication of the final Rule).

XII. Paperwork Reduction Act

The Paperwork Reduction Act (''PRA''), 44 U.S.C. 3501 *et seq.,* requires Federal agencies to obtain Office of Management and Budget (''OMB'') approval before collecting information directed to ten or more persons. The current Rule contains various provisions that constitute information collection as defined by 5 CFR 1320.3(c), the OMB regulations implementing the PRA. In January 2024, OMB approved continuation of the Rule's existing information collection (OMB Control No. 3084–0104). The final Rule makes changes in the Rule's recordkeeping and disclosure requirements that will increase the PRA burden as detailed below. Accordingly, the Commission is submitting the final Rule and a Supplemental Supporting Statement to OMB for review under the PRA.[632] The associated burden analysis follows.

A. The Proposed Rule

In the NPRM, the Commission provided time and cost estimates for the proposed Rule's recordkeeping and disclosure requirements, and solicited comments about their associated costs, including on: (1) whether the disclosure, recordkeeping, and reporting requirements are necessary, including whether the resulting information will be practically useful; (2) the accuracy of our burden estimates, including whether the methodology and assumptions used are valid; (3) how to improve the quality, utility, and clarity of the disclosure requirements; and (4) how to minimize the burden of providing the required information to consumers.[633]

The NPRM also included staff's estimate that the burden for recordkeeping compliance would be 53,000 hours and the estimated burden for disclosures would be 212,000 hours, for a total of 265,000 hours. These estimates are explained below.

Number of Respondents. FTC staff estimated there are 106,000 entities offering negative option features to consumers. This estimate is based primarily on data from the U.S. Census North American Industry Classification System (NAICS) for firms and establishments in industry categories wherein some sellers offer free trials, automatic renewal, prenotification plans, and continuity plans. Based on NAICS information as well as its own research and industry knowledge, FTC staff identified an estimated total of 530,000 firms involved in such industries.[634] However, FTC staff estimated that only a fraction of the total firms in these industry categories offer negative option features to consumers. For example, few grocery stores and clothing retailers, which account for approximately a third of the of the total estimate from all industry categories, are likely to regularly offer negative option features. In addition, some entities included in the total may qualify as common carriers, exempt from the Commission's authority under the FTC Act. Accordingly, the Commission estimated approximately 106,000 business entities (20%) offer negative option features to consumers.

Recordkeeping Hours. FTC staff estimated the majority of firms subject to the Rule already retain the types of records in the normal course of business that would be required by the proposed Rule. Under such conditions, the time and financial resources needed to comply with disclosure requirements do not constitute ''burden'' under the PRA.[635] Moreover, staff anticipated that many transactions subject to the Rule are conducted via the internet and most entities subject to the Rule are likely to store data though automated means, which reduces compliance burdens associated with record retention. Accordingly, staff estimated that 53,000 entities subject to the Rule will require approximately one hour per year to comply with the Rule's recordkeeping requirements, for an annual total of 53,000 burden hours.

Disclosure Hours. Staff anticipated that the substantial majority of sellers already routinely provide the disclosures that would be required by the proposed Rule. For these sellers, the time and financial resources associated with making these disclosures do not constitute a ''burden'' under the PRA because they are a usual and customary part of regular business practice. 5 CFR 1320.3(b)(2). Moreover, many State laws require the same or similar disclosures as the Rule mandates. In addition, approximately 2,000 negative option sellers are already covered by the TSR and subject to its disclosure requirements. Accordingly, FTC estimated the disclosure burden required by the Rule will be, on average, two hours each year for each seller subject estimated to be subject the Rule, for a total estimated annual burden of 212,000 hours.

Estimated Annual Labor Cost. To estimate labor costs for recordkeeping requirements, staff multiplied the 53,000 hours to comply with the proposed Rule's recordkeeping provisions by a clerical wage rate of $18.75/hour.[636] The result is an annual cost of approximately $993,750.

To estimate annual labor costs for disclosures for all entities, staff multiplied the 212,000 hours to comply with the proposed Rule's disclosure provisions by a sales personnel wage rate of $22.15/hour.[637] The result is an annual cost of approximately $4,695,800.

Thus, the estimated annual labor costs were $5,689,550 [($993,750 recordkeeping) + ($4,695,800 disclosure)].

Estimated Annual Non-Labor Cost. The NPRM stated capital and start-up costs associated with the Rule's recordkeeping provisions are *de minimis.* Any disclosure or recordkeeping capital costs involved with the Rule, such as equipment and office supplies, would be costs borne by sellers in the normal course of business.

B. Comments Received and Informal Hearing

The NPRM sought comments on the PRA analysis and stated, ''comments should provide any available evidence and data that supports their position, such as empirical data.'' [638] The Commission did not receive such evidence. A few commenters from businesses and industry groups, however, raised generalized concerns

[632] The PRA analysis for this rulemaking focuses strictly on the information collection requirements created by and/or otherwise affected by the amendments.

[633] 88 FR 24734.

[634] Examples of these industries include sellers of software, streaming media, social media services, financial monitoring, computer security, fitness services, groceries and meal kits, dietary supplements, sporting goods, home service contracts, home security systems, office supplies, pet food, computer supplies, cleaning supplies, home/lawn maintenance services, personal care products, clothing sales, energy providers, newspapers, magazines, and books. The NAICS does not provide estimates for all of these categories. Where such data is unavailable, the staff has used its own estimates based on its knowledge of these industry categories.

[635] Under the PRA, the time, effort, and financial resources necessary to comply with the collection of information that would be incurred by persons in the normal course of their activities (*e.g.,* in compiling and maintaining business records) does not constitute a burden under the Rule where the associated recordkeeping is a usual and customary part of business activities. 5 CFR 1320.3(b)(2).

[636] This figure is derived from the mean hourly wage shown for Information and Record Clerks. *See* Bureau of Labor Statistics, ''Occupational Employment and Wages—May 2021,'' at Table 1 (Mar. 31, 2022) (National employment and wage data from the Occupational Employment Statistics survey by occupation, May 2021), *https://www.bls.gov/news.release/pdf/ocwage.pdf.*

[637] This figure is derived from the mean hourly wage shown for Sales and related occupations. *See id.*

[638] 88 FR 24730.

that the NPRM underestimated PRA-related costs.[639]

As noted earlier, the Commission set an informal hearing, at the request of interested parties, and appointed Administrative Law Judge Carol Fox Foelak as the presiding officer.[640] Based on submissions by interested parties, and other information in the record, the presiding officer designated two disputed issues of material fact, including, ''What will the recordkeeping and disclosure costs associated with the proposed rule be?'' [641]

Based on the record, the presiding officer concluded, ''There is insufficient evidence to make a finding concerning the . . . recordkeeping and disclosure costs associated with the proposed rule,'' and ''in the absence of evidence, the issue is not genuinely disputed.'' [642] The presiding officer further explained: ''IAB made a well-reasoned argument that the costs will be *higher* than the NPRM's estimates, generalizing from limited estimates that it, IFA, and NCTA provided. However, it did not provide any evidence to establish what the costs *would be.*'' [643]

C. Final PRA Analysis

As previously discussed, the Commission made changes to the Rule based on the record. Some of these changes, in turn, affect the PRA analysis. Specifically, the Commission determined to specify and thereby limit the types of disclosures required, narrow the scope of entities covered (by excluding those solely involved in ''promoting'' negative option plans), curtail the length of time for retaining records (to only three years), and establish an option for sellers to eliminate having to keep records of consent if they have the requisite processes in place. Neither the Commission nor the presiding officer at the informal hearing received evidence to dispute the specific PRA-related figures in the NPRM. For the final Rule, the Commission adopts the following PRA analysis.

Number of Respondents. The Commission received no evidence to dispute the NPRM's statements on the number of entities offering negative option features to consumers, so the Commission adopts the NPRM estimate that there are 106,000 such entities. Although the final Rule is narrower in that it excludes the term ''promote'' from its scope, the Commission retains the estimate of 106,000 entities for the purposes of this analysis, which would be more conservative and tend to overstate the burden.

Recordkeeping Hours. The Commission received no evidence to dispute the NPRM's statements on recordkeeping under the PRA. As the final Rule is narrower, the time and financial resources needed to comply with disclosure requirements still do not constitute ''burden'' under the PRA.[644] Accordingly, the Commission adopts the NPRM estimate that 53,000 entities subject to the Rule will require approximately one hour per year to comply with the Rule's recordkeeping requirements, for an annual total of 53,000 burden hours.

Disclosure Hours. Similarly, the Commission received no evidence to dispute the NPRM's statements on disclosure hours under the PRA. As the final Rule narrowed and delineated the types of disclosures required, the time and financial resources associated with making these disclosures is even less than under the proposed Rule, which also did not constitute a ''burden'' under the PRA because they are a usual and customary part of regular business practice. 5 CFR 1320.3(b)(2). Accordingly, the Commission adopts the NPRM estimate that the disclosure burden required by the Rule will be, on average, two hours each year for each seller subject estimated to be subject the Rule, for a total estimated annual burden of 212,000 hours.

Estimated Annual Labor Cost. The Commission received no evidence to dispute the NPRM's statements on labor costs under the PRA. For the final Rule, the Commission updates its labor cost estimates by using more recent wage data. For recordkeeping, staff multiplied the 53,000 estimated hours to comply with the Rule's recordkeeping provisions by a clerical wage rate of $20.94/hour,[645] to yield an annual cost of approximately $1,109,820. For disclosure compliance, staff multiplied the 212,000 estimated hours by an hourly wage rate for sales personnel of $25.62,[646] to yield an annual cost of $5,431,440. Thus, the estimated total annual labor costs are $6,541,260 [($1,109,820 recordkeeping) + ($5,431,440 disclosure)].

Estimated Annual Non-Labor Cost. The Commission received no evidence to dispute the NPRM's statements that capital and start-up costs associated with the Rule's recordkeeping provisions are *de minimis* under the PRA. The Commission adopts those findings.

List of Subjects in 16 CFR Part 425

Advertising, Consumer protection, Trade practices.

■ For the reasons stated in the preamble, the Federal Trade Commission revises 16 CFR part 425 to read as follows:

PART 425—RULE CONCERNING RECURRING SUBSCRIPTIONS AND OTHER NEGATIVE OPTION PROGRAMS

Sec.
425.1 Scope.
425.2 Definitions.
425.3 Misrepresentations.
425.4 Important information.
425.5 Consent.
425.6 Simple cancellation (''Click to Cancel'').
425.7 Relation to State laws.
425.8 Exemptions.
425.9 Severability.

Authority: 15 U.S.C. 41 through 58.

§ 425.1 Scope.

This Rule contains requirements related to any form of negative option program in any media, including, but not limited to, Interactive Electronic Media, telephone, print, and in-person transactions.

§ 425.2 Definitions.

Billing Information means any data that enables any person to access a consumer's account, such as a credit card, checking, savings, share or similar account, utility bill, mortgage loan account, or debit card.

---

[639] Sirius XM, FTC–2023–0033–0857; SCIC, FTC–2023–0033–0879; Coalition, FTC–2023–0033–0884; ETA, FTC–2023–0033–1004; Direct Marketing Companies, FTC–2023–0033–1016. In addition, one commenter seemingly confused PRA-related costs with full implementation of the Rule, but still offered only generalized points. *See* Asurion, FTC–2023–0033–0878. Another commenter queried whether the Commission's estimate of the number of firms offering negative option features include B2B sales with automatic renewal clauses. ETA, FTC–2023–0033–1004. The staff estimate did not seek to exclude such sellers.

[640] Hr'g Notice, 88 FR 85525.

[641] Recommended Decision by Presiding Officer, *https://www.regulations.gov/comment/FTC-2024-0001-0042.*

[642] Recommended Decision by Presiding Officer, *https://www.regulations.gov/comment/FTC-2024-0001-0042.*

[643] Recommended Decision by Presiding Officer, *https://www.regulations.gov/comment/FTC-2024-0001-0042.*

[644] Under the PRA, the time, effort, and financial resources necessary to comply with the collection of information that would be incurred by persons in the normal course of their activities (*e.g.,* in compiling and maintaining business records) does not constitute a burden under the Rule where the associated recordkeeping is a usual and customary part of business activities. 5 CFR 1320.3(b)(2).

[645] This figure is derived from the mean hourly wage shown for Information and Record Clerks. *See* Bureau of Labor Statistics, ''Occupational Employment and Wages, May 2023, 43–9061 Office Clerks, General,'' *https://www.bls.gov/oes/currenT/oes439061.htm.*

[646] This figure is derived from the mean hourly wage shown for Sales and related occupations. *See id.*

Charge, Charged, or *Charging* means any attempt to collect money or other consideration from a consumer, including but not limited to causing Billing Information to be submitted for payment, including against the consumer's credit card, debit card, bank account, telephone bill, or other account.

Clear and Conspicuous means that a required disclosure is easily noticeable (*i.e.,* difficult to miss) and easily understandable by ordinary consumers, including in all of the following ways:

(1) In any communication that is solely visual or solely audible, the disclosure must be made through the same means through which the communication is presented. In any communication made through both visual and audible means, such as a television advertisement, the disclosure must be presented simultaneously in both the visual and audible portions of the communication even if the representation requiring the disclosure is made in only one means.

(2) A visual disclosure, by its size, contrast, location, the length of time it appears, and other characteristics, must stand out from any accompanying text or other visual elements so that it is easily noticed, read, and understood.

(3) An audible disclosure, including by telephone or streaming video, must be delivered in a volume, speed, and cadence sufficient for ordinary consumers to easily hear and understand it.

(4) In any communication using an Interactive Electronic Medium, such as the internet, mobile application, or software, the disclosure must be unavoidable.

(5) The disclosure must use diction and syntax understandable to ordinary consumers and must appear in each language in which the representation that requires the disclosure appears.

(6) The disclosure must comply with these requirements in each medium through which it is received, including all electronic devices and face-to-face communications.

(7) The disclosure must not be contradicted or mitigated by, or inconsistent with, anything else in the communication.

(8) When the representation or sales practice targets a specific audience, such as children, older adults, or the terminally ill, "ordinary consumers" includes members of that group.

Interactive Electronic Medium is any electronic means of communicating (except via telephone calls), including internet, mobile application, text, chat, instant message, email, software, or any online service.

Material means likely to affect a person's choice of, or conduct regarding, goods or services.

Negative Option Feature is a provision of a contract under which the consumer's silence or failure to take affirmative action to reject a good or service or to cancel the agreement is interpreted by the negative option seller as acceptance or continuing acceptance of the offer, including, but not limited to:

(1) An automatic renewal;

(2) A continuity plan;

(3) A free-to-pay conversion or fee-to-pay conversion; or

(4) A pre-notification negative option plan.

Negative Option Seller means the person selling, offering, charging for, or otherwise marketing a good or service with a Negative Option Feature.

§ 425.3 Misrepresentations.

In connection with promoting or offering for sale any good or service with a Negative Option Feature, it is a violation of this part and an unfair or deceptive act or practice in violation of section 5 of the Federal Trade Commission Act ("FTC Act") for any Negative Option Seller to misrepresent, expressly or by implication, any Material fact, including any of the following:

(a) The Negative Option Feature or any term of the Negative Option Feature, including consumer consent, any deadline to prevent or stop a Charge, or the cancellation of the Negative Option Feature;

(b) Cost;

(c) Purpose or efficacy of the underlying good or service;

(d) Health or safety; or

(e) Any other Material fact.

§ 425.4 Important information.

(a) *Disclosures.* In connection with promoting or offering for sale any good or service with a Negative Option Feature, it is a violation of this part and an unfair or deceptive act or practice in violation of section 5 of the FTC Act for a Negative Option Seller to fail to disclose to a consumer, prior to obtaining the consumer's Billing Information, all Material terms, regardless of whether those terms directly relate to the Negative Option Feature, and including but not limited to:

(1) That consumers will be Charged for the good or service, or that those Charges will increase after any applicable trial period ends, and, if applicable, that the Charges will be on a recurring basis, unless the consumer timely takes steps to prevent or stop such Charges;

(2) Each deadline (by date or frequency) by which the consumer must act to prevent or stop the Charges;

(3) The amount (or range of costs) the consumer will be Charged and, if applicable, the frequency of the Charges a consumer will incur unless the consumer takes timely steps to prevent or stop those Charges; and

(4) The information necessary for the consumer to find the simple cancellation mechanism required pursuant to § 425.6.

(b) *Form and content of required information.* (1) Clear and Conspicuous: Each disclosure required by paragraph (a) of this section must be Clear and Conspicuous.

(2) Placement:

(i) The disclosures required by paragraphs (a)(1) through (4) of this section must appear immediately adjacent to the means of recording the consumer's consent for the Negative Option Feature; and

(ii) The disclosures required by paragraph (a) of this section (including, but not limited to, the disclosures required by paragraphs (a)(1) through (4) of this section) must appear before obtaining the consent required pursuant to § 425.5.

(3) Other Information: All communications, regardless of media, must not contain any other information that interferes with, detracts from, contradicts, or otherwise undermines the ability of consumers to read, hear, see, or otherwise understand the disclosures required by paragraph (a) of this section.

§ 425.5 Consent.

(a) *Express informed consent.* In connection with promoting or offering for sale any good or service with a Negative Option Feature, it is a violation of this part and an unfair or deceptive act or practice in violation of section 5 of the FTC Act for a Negative Option Seller to fail to obtain the consumer's express informed consent before Charging the consumer. In obtaining such expressed informed consent, the Negative Option Seller must:

(1) Obtain the consumer's unambiguously affirmative consent to the Negative Option Feature offer separately from any other portion of the transaction;

(2) Not include any information that interferes with, detracts from, contradicts, or otherwise undermines the ability of consumers to provide their express informed consent to the Negative Option Feature; and

(3) Keep or maintain verification of the consumer's consent for at least three years. However, if the seller can

demonstrate by a preponderance of the evidence that it uses processes ensuring no consumer can technologically complete the transaction without consent, such seller does not have to maintain these records for such transactions.

(b) *Requirements for Negative Option Features covered in the Telemarketing Sales Rule.* Negative Option Sellers covered by the Telemarketing Sales Rule must comply with all applicable requirements provided in 16 CFR part 310, including, for transactions involving preacquired account information and a free-to-pay–conversion feature, obtaining from the customer, at a minimum, the last four (4) digits of the account number to be charged and making and maintaining an audio recording of the entire telemarketing transaction as required by 16 CFR part 310.

(c) *Documentation of unambiguously affirmative consent for written offers.* Except for transactions covered by the preauthorized transfer provisions of the Electronic Fund Transfer Act (15 U.S.C. 1693e) and Regulation E (12 CFR 1005.10), a Negative Option Seller will be deemed in compliance with the requirements of paragraph (a)(1) of this section for all written offers (including over the internet or phone applications), if that seller obtains the required consent through a check box, signature, or other substantially similar method, which the consumer must affirmatively select or sign to accept the Negative Option Feature and no other portion of the transaction. The consent request must be presented in a manner and format that is clear, unambiguous, non-deceptive, and free of any information not directly related to the consumer's acceptance of the Negative Option Feature.

§ 425.6 Simple cancellation (''Click to Cancel'').

(a) *Simple mechanism required for cancellation.* In connection with promoting or offering for sale any good or service with a Negative Option Feature, it is a violation of this Rule and an unfair or deceptive act or practice in violation of section 5 of the FTC Act for the Negative Option Seller to fail to provide a simple mechanism for a consumer to cancel the Negative Option Feature; avoid being Charged, or Charged an increased amount, for the good or service; and immediately stop any recurring Charges.

(b) *Simple mechanism at least as simple as consent.* The simple mechanism required by paragraph (a) of this section must be at least as easy to use as the mechanism the consumer used to consent to the Negative Option Feature.

(c) *Minimum requirements for simple mechanism.* At a minimum, the Negative Option Seller must provide the simple mechanism required by paragraphs (a) and (b) of this section through the same medium the consumer used to consent to the Negative Option Feature, and:

(1) For cancellation by Interactive Electronic Medium, the simple cancellation mechanism must be easy to find when the consumer seeks to cancel. Compliance with the disclosure required under § 425.4(a)(4) does not discharge this obligation. In no event shall a consumer be required to interact with a live or virtual representative (such as a chatbot) to cancel if the consumer did not do so to consent to the Negative Option Feature.

(2) For cancellation by telephone call, the Negative Option Seller must promptly effectuate cancellations requested by the consumer via a telephone number that is answered or records messages, made available during normal business hours, and not more costly to use than the telephone call the consumer used to consent to the Negative Option Feature.

(3) For cancellation of consent obtained in person, in addition to offering cancellation, where practical, via an in-person method similar to that the consumer used to consent to the Negative Option Feature, the Negative Option Seller must offer the simple mechanism through an Interactive Electronic Medium or by providing a telephone number. The alternate simple mechanism required by this paragraph must satisfy all requirements of paragraphs (c)(1) and (2) of this section, as applicable. If the Negative Option Seller offers the alternate mechanism by providing a telephone number, the seller shall not erect a cost-barrier to cancellation by imposing any unnecessary or unreasonable cost for the cancellation call.

§ 425.7 Relation to State laws.

(a) *In general.* This part shall not be construed as superseding, altering, or affecting any State statute, regulation, order, or interpretation relating to negative option requirements, except to the extent it is inconsistent with the provisions of this part, and then only to the extent of the inconsistency.

(b) *Greater protection under State law.* For purposes of this section, a State statute, regulation, order, or interpretation is not inconsistent with the provisions of this part if it affords any consumer greater protection than provided under this part.

§ 425.8 Exemptions.

Any person to whom this part applies may petition the Commission for a partial or full exemption. The Commission may, in response to petitions or on its own authority, issue partial or full exemptions from this part if the Commission finds application of this part's requirements is not necessary to prevent the acts or practices to which this part relates. The Commission shall resolve petitions using the procedures provided in 16 CFR 1.31. If appropriate, the Commission may condition such exemptions on compliance with alternative standards or requirements to be prescribed by the Commission.

§ 425.9 Severability.

The provisions of this part are separate and severable from one another. If any provision is stayed or determined to be invalid, the remaining provisions shall continue in effect.

By direction of the Commission, Commissioners Holyoak and Ferguson dissenting.

April J. Tabor,

Secretary.

Note: The following statements will not appear in the Code of Federal Regulations.

Statement of Commissioner Rebecca Kelly Slaughter

As is common in rulemaking proceedings, this Final Rule that the Commission promulgates is somewhat different from what it originally proposed—clarified, narrowed, and ultimately improved by the process of grappling with the substantial record of comments submitted by the public. I extend my heartfelt thanks to everyone who submitted comments; to the talented staff in our Division of Enforcement and the East Central Regional Office who diligently shepherded this proceeding, thoroughly considered all those comments, and recommended thoughtful revisions; and to my colleagues for their deep engagement with this issue of great importance, including former Chairman Joe Simons, under whose leadership the Commission initiated this rulemaking proceeding.

I write separately to draw attention to the comment record about a provision that the Commission proposed but ultimately does not finalize, proposed § 425.7, which would have required annual reminders of subscriptions that do not involve the delivery of physical goods.[1] Americans understand the importance and value of such a requirement; many have discovered that they or their parents had been paying for years or even decades for a service wholly unused, such as a dial-up internet service from the

[1] *See* Negative Option Rule, 88 FR 24716, 24736 (proposed Apr. 24, 2023) (''Annual reminders for negative option features not involving physical goods.'') (to be codified at 16 CFR 425.7), *https://www.federalbregister.gov/documents/2023/04/24/2023-07035/negative-option-rule.*

1990s.[2] The reason that the Commission declines to finalize this proposal is not that it lacks policy merit but that the record in total does not support its inclusion in the Final Rule as proposed.[3] Of course, we are always mindful that our authority under the FTC Act to issue rules under section 18 has limits; sometimes, as here, those limits prevent us from codifying in a rule practices that we might, as a matter of policy, prefer to require explicitly.

Congress and State legislatures, by contrast, have plenary authority to require such a reminder. This spring, for example, in a show of bipartisanship, Virginia Governor Glenn Youngkin signed into law legislation sponsored by Delegate Michelle Lopes Maldonado, H.B. 744, which requires that subscriptions that renew annually provide to the consumer a notice of the upcoming renewal and the opportunity to cancel via between 30 and 60 days before the consumer is charged for the renewal.[4] The comment record compiled in this rulemaking proceeding strongly supports the wisdom of Federal and State legislators' carefully considering adopting such a law, and the Final Rule's omission of such a provision should be understood only as a reflection of the Commission's cautious approach to its jurisdictional limits and not as related to the merits of a policy that requires annual reminders for subscription services.

Dissenting Statement of Commissioner Melissa Holyoak

''Article I of the Constitution vests 'all legislative Powers herein granted' in Congress. 'By vesting the lawmaking power in the people's elected representatives, the Constitution sought to ensure not only that all power would be derived from the people, but also that those entrusted with it should be kept in dependence on the people.' ''[1] Whenever we engage in rulemaking, the Commission should recall that Article I of the Constitution vests legislative powers in Congress, not with agencies. Because of that, it is elected officials that delineate the boundaries, and set the requirements, that we as Commissioners must adhere to. I believe the Commission exceeds those boundaries and requirements in amendments to the Negative Option Rule, 16 CFR part 425, (''Rule'') it finalizes today. Instead of pursuing targeted enforcement efforts or finalizing a rule consistent with the Commission's authority under section 18 of the FTC Act,[2] the Commission has used its limited resources to promulgate a broader regulation that may not survive legal challenge.[3]

The likely unlawful character of the rule is compounded by the Majority's race to cross the finish line. Why the rush? There is a simple explanation. Less than a month from election day, the Chair is hurrying to finish a rule that follows through on a campaign pledge made by the Chair's favored presidential candidate.[4]

The Majority votes today to approve a final trade regulation rule amendment to the existing negative option rule. This amendment greatly expands the prior rule, which had covered now-rare prenotification plans (*e.g.,* book-of-the-month clubs)—and goes well beyond what existing laws, such as the Restore Online Shoppers' Confidence Act (''ROSCA''),[5] Telemarketing Sales Rule (''TSR''),[6] or Regulation E,[7] require. The now-capacious Rule creates potential civil penalty liability for: any misrepresentation of material fact made in connection with the marketing of a product or service that has a negative option feature (§ 425.3); failure to disclose all material terms before obtaining billing information in connection with a negative option (§ 425.4); failure to obtain express informed consent before charging in connection with a negative option (§ 425.5); and failure to provide a simple mechanism for cancelling a negative option (§ 425.6). The Rule also preempts inconsistent State laws (§ 425.7).

I respectfully dissent for three reasons. First, this rulemaking did not follow the FTC Act's section 18 requirements for rulemaking because: (1) the Rule is much broader than the ''area of inquiry'' proposed by the advance notice of proposed rulemaking (''ANPR''); (2) the Rule fails to define with specificity acts or practices that are unfair or deceptive, improperly generalizing from narrow industry-specific complaints and evidence to the entire American economy; and (3) the Rule fails to demonstrate that the unfair or deceptive acts or practices related to negative option billing are ''prevalent.''[8] Second, the Rule's breadth incentivizes companies to avoid negative option features that honest businesses and consumers find valuable. Third, the Rule represents a missed opportunity to make useful amendments to the preexisting negative option rule within the scope of the Commission's authority.

Such amendments could have provided greater clarity to businesses about the patchwork of Federal laws pertaining to negative options and lawfully used our section 18 rulemaking authority to fill potential gaps including, for example, cancellation requirements. Indeed, I am very concerned that consumers are sometimes misled by companies using deceptive negative option features. The Rule represents a missed opportunity to devote scarce staff resources to bringing enforcement actions related to negative option features using the clear tools that Congress gave us, rather than conducting an overbroad rulemaking that cost years of staff time to propose and finalize, but will likely not survive legal challenge.

Today's rulemaking did not need to end this way. Had political leadership at the Commission taken more time to engage with other Commissioners to refine and improve the Rule, my vote and statement would look very different. Instead, less than a month from November 5, the Chair has put political expediency over getting things right. Unfortunately, pushing politically motivated rulemakings has not been the exception with the Majority.[9] Today, I believe we are seeing another low in our abuse and misuse of the tools Congress has given us. Rather than engage in blatant electioneering to advance political ends, the Commission should have

instead focused on stewarding its resources effectively and in ways that restore our institutional legitimacy, not further undermine it.

I. The historical context surrounding Congress's enactment of rulemaking requirements in section 18 of the FTC Act is important. Congress passed the Magnuson-Moss Warranty Act in 1975, which imposed exacting requirements and limitations on rulemaking regarding unfair or deceptive acts or practices.[10] In the 1970s, the Commission tried to use its rulemaking and unfairness authority aggressively—for example, ''to ban all advertising directed to children on the grounds that it was 'immoral, unscrupulous, and unethical' and based on generalized public policies to protect children.'' [11] In response, Congress refused to fund the Commission, shutting it down for several days.[12] Even this harsh rebuff did not completely cool Congressional ire with the ''National Nanny'' (as the Washington Post—no bastion of conservative thought—facetiously dubbed the Commission).[13] A 1979 Senate Report found that the agency's rulemaking efforts were filled with ''excessive ambiguity, confusion, and uncertainty.'' [14] In 1980, Congress legislated to limit the Commission's authority, by imposing additional procedural obligations on section 18 rulemaking.[15] Among other things, Congress created additional procedural rights, well beyond the Administrative Procedure Act's baseline procedural requirements, such as requiring the FTC to issue an ANPR with numerous specific requirements, which the Commission must submit to Congress, for each rulemaking.[16]

Congress' harsh reaction to the FTC's overreach only makes sense if we understand that section 18 was created and then expanded not to give the Commission free-ranging rulemaking authority, but to curb it. We should be exacting in following the requirements of section 18, lest we risk repeating history—drawing Congressional ire that that could further limit our authority and budget. Indeed, section 18's rulemaking requirements, while demanding, are the means of assuring that we act within the parameters established by Congress.

[10] Magnuson-Moss Warranty Act of 1975, Public Law 93–637, 88 Stat. 2183.

[16] *Id.*

As an initial matter, this Rule's procedural irregularities begin with how the Rule was finalized in a compressed time frame. Given the rigorous demands of section 18 rulemaking, historically, it has taken the Commission, on average, 5.57 years to issue a rule after the Magnuson-Moss procedures were enacted.[17] That, apparently, was too much time and procedure for the Majority. In 2021, during the pendency of this rulemaking, the Commission made changes to its rules of practice,[18] over objections from the Commissioners in the Minority, to limit the efficacy of section 18's procedural safeguards and compress rulemaking timeframes.[19] Among other things, the Commission revised the Rules of Practice so as to remove selection of the Presiding Officer from an independent judge and assign that role to the Chair; strip the Presiding Officer of significant control over the hearing process; and narrow opportunities for the public to help determine which factual issues are in dispute.[20] Then-Commissioners Phillips and Wilson dissented, noting: ''What the[se] changes—adopted without public input—in fact do is fast-track regulation at the expense of public input, objectivity, and a full evidentiary record.'' [21]

Apparently not content with even these procedural shortcuts and compressed timeframe, political leadership now speeds to the finish line with minimal opportunity for Commissioner engagement on the final Rule. There should be ample opportunity for robust consideration and dialogue leading up to a Commission vote on any regulation, and especially for a highly consequential rule. Such opportunity for dialogue may assuage concerns, produce constructive changes, and ultimately lead to a better result. Indeed, in the past where political leadership has been willing to engage and make needed modifications preceding votes, that consideration and engagement have been very valuable and led to bipartisan support for Commission actions.

Here, however, the time period for me to review this economy-wide Rule was a matter of weeks. Those weeks were also packed with dozens of cases, one other rulemaking, and other policy matters. (Remarkably, the Chair had this draft final Rule for some time before it was circulated to the other Commissioners.) Reviewing the NPRM was no substitute for robust discussion and

negotiation related to the final Rule's language and statement of basis and purpose, as the final Rule differs in important ways from the rule as proposed. The push to finalize is inexcusable, particularly because it is a discretionary rulemaking with no due date (imposed by Congress or otherwise). For those tracking the Rule and national politics closely, this rush to the finish line (and less than a month from a Presidential election) is no surprise. This Rule is connected to the current administration's efforts relating to so-called junk fees (which are beginning to make a regular appearance before elections [22]), and it has been in the spotlight for some time, including at the White House [23] and now on the campaign trail.[24]

But elevating political goals comes at a high price, harms policy efforts that might otherwise benefit consumers, and undermines the Commission's legitimacy. Publicly appearing to refuse to keep an open mind on a final rule or to prejudge complex policy questions, along with an apparent unwillingness to reconsider various aspects of a rulemaking may create PR buzz for the campaign trail and score political points. But that posture creates real legal risk for the Rule. Statements from the White House [25]

and related statements from the Chair[26] concerning this rule—and other matters related to her tenure or connected to her party's campaign efforts[27]—raise the possibility that foreordained outcomes and political goals curtailed considering the rulemaking record with an open mind and without prejudgment, as law requires.[28] Today's sprint to the finish line has shortchanged the kind of deliberation and thoughtful engagement Congress deemed appropriate when it established rulemaking requirements under the Magnuson-Moss Act.

In addition to my concern about these irregularities, I am convinced that this rulemaking has failed to satisfy section 18's requirements for rulemaking in three ways. First, the Commission is issuing a broad final rule even though the ANPR was far narrower. This mismatch means that the Commission failed to provide in its ANPR the ''brief description of the area of inquiry under consideration, the objectives which the Commission seeks to achieve, and possible regulatory alternatives under consideration by the Commission'' that section 18 requires.[29] The mismatch is the result of leadership changes and priorities. The ANPR was voted out in 2019 by a bipartisan Commission under then-Chair Joseph J. Simons.[30] It sought public comments about centralizing existing legal requirements regarding negative options and filling gaps via section 18 rulemaking related to disclosures, consent, and cancellation.[31] The current Majority took the bipartisan ANPR and politically supercharged it.

Importantly, the ANPR did not contemplate broader regulation prohibiting all misrepresentations of material fact related to products that have negative option features. The ANPR tailored its inquiry by ''. . . highlighting five basic section 5 requirements that negative option marketing must follow to avoid deception'': (1) disclosure of material terms of a negative option offer; (2) clear and conspicuous disclosures; (3) pre-purchase disclosures; (4) consent; (5) cancellation.[32] Absent from this list is anything about prohibiting all misrepresentations of material fact related to any product that happens to have a negative option feature. Similarly, when the ANPR stated that the Commission was seeking comment ''to reduce consumer harm created by deceptive or unfair negative option marketing,'' it specified the Commission's interest pertained to ''disclosures, consumer consent, and cancellation.''[33] Again, absent from that list was anything about prohibiting all misrepresentations of material fact related to marketing of any product that has a negative option feature.

When Commission leadership changed in 2021, the ''area of inquiry'' changed as well. Almost immediately, the Commission under Chair Khan disrupted this particular rulemaking process to issue an Enforcement Policy Statement Regarding Negative Option Marketing[34]—sub-regulatory guidance on the very same topic as the rulemaking itself. The Commission then issued a Notice of Proposed Rulemaking (''NPRM'') in 2023 that introduced into the rulemaking—for the first time—the notion of prohibiting misrepresentations related to marketing of products with negative option features.[35] Former Commissioner Christine S. Wilson dissented from the issuance of the NPRM for this (among other) reasons. In her dissenting statement, Commissioner Wilson explained: ''Importantly, we did not seek comment in the ANPR about whether an expanded negative option rule should address general misrepresentations; no comments are cited in the NPRM to support the inclusion of these provisions.''[36]

[26] *See, e.g.,* Lina Khan (@linakhanFTC), *X.com* (Aug. 12, 2024) (''As @POTUS notes, @FTC's proposal would require that firms make it as easy to cancel a subscription as it is to sign up. Too often people have to jump through endless hoops—or end up stuck paying for services they don't want. Our rule would end this tax on your time & money.''), *https://x.com/linakhanFTC/status/1823094653962289640.* That Tweet came in response to the President unequivocally saying, ''[w]e're making it easier to cancel subscriptions and memberships,'' and signaling the proposal would be finalized consistent with the NPRM. *See* President Biden (@POTUS), *supra* note 25. Other statements are similarly probative of apparent conclusions being reached about the contours of the final rule. *See, e.g.,* Chair Lina M. Khan, Remarks at Center for American Progress, at 3–4 (Sept. 25, 2024) (''We've also unfortunately seen a rise in subscription traps. We've all been there. Every month, you're paying for that gym membership you don't really use, or streaming services you never signed up for in the first place. But it's absurdly difficult to actually cancel these services. You have to call customer service and spend an hour on the phone with a bot before you finally get through to a human being. Customer Service then transfers you to Memberships. They transfer you to Cancellations. And then suddenly the call drops and you have to do it all over again. It can feel like you're stuck in some type of endless doom loop. And many people understandably just give up—and pay dozens if not hundreds of dollars for subscriptions they don't want or need. And of course, that's kind of the point: to wear you down and keep taking your money, month after month. I'm excited that the Commission will be considering finalization of a 'click to cancel' rule that would require companies to make it just as easy to cancel a subscription as it is to sign up for one.''), *https://www.ftc.gov/system/files/ftc_gov/pdf/20240925-remarks-chair-khan-center-for-american-progress.pdf; see also* Chair Lina M. Khan, Remarks at Strike Force on Unfair and Illegal Pricing Public Convening, at 2 (Aug. 1, 2024) (''We're currently working toward finalizing our 'click to cancel' rule. Too often, businesses require people to jump through endless hoops just to cancel a subscription. Customers end up paying dozens if not hundreds of dollars a month in subscriptions they want to escape. Our proposed rule would require that companies make it as easy to cancel a subscription as it is to sign up for one—ending this tax on people's time and money.''), *https://www.ftc.gov/system/files/ftc_gov/pdf/2024.08.01-remarks-chair-khan-strike-force-public-convening.pdf.* In light of such statements unambiguously reflecting a firm belief in the need for regulatory action—and all but committing to the proposed solution—it is risible to suggest this rule was not effectively baked well before the Commission's vote.

[31] 84 FR 52393, 52394 (Oct. 2, 2019) (''The Commission seeks comments on ways to improve its existing regulations for negative option marketing, a common form of marketing where the absence of affirmative consumer action constitutes assent to be charged for goods or services. Negative option offers are widespread in the marketplace and can provide substantial benefits for sellers and consumers. However, consumers cannot reap such benefits when marketers fail to make adequate disclosures, bill consumers without their consent, or make cancellation difficult or impossible. Over the years, such problematic negative option practices have remained a persistent source of consumer harm, often saddling consumers with recurring payments for products and programs they did not intend to purchase or did not want. In the past, the Commission has sought to address such practices through individual law enforcement cases and a patchwork of regulations. Nevertheless, problems persist, and consumers continue to submit thousands of complaints to the FTC each year about negative option marketing. To address these concerns, the Commission seeks comments on ways to improve existing regulatory requirements, including whether it should use its rulemaking authority under the FTC Act to expand the scope and coverage of the existing Negative Option Rule.'').

[36] Dissenting Statement of Comm'r Christine S. Wilson, *Notice of Proposed Rulemaking, Negative Option Rule,* at 3 (Mar. 23, 2023), *https://www.ftc.gov/system/files/ftc_gov/pdf/p064202_commissioner_wilson_dissent_negative_option_rule_finalrevd_0.pdf.*

The Statement of Basis and Purpose (''SBP'') accompanying the final Rule cursorily dismisses concerns about the ANPR's adequacy, dubiously arguing that section 18 requires no such ''specificity'' in describing the area of inquiry.[37] But the whole purpose of section 18's requirement of a description of what the Commission aims to do is to elicit public comment to inform the Commission about its choices. Indeed, section 18 requires an ANPR to invite interested parties to provide ''suggestions or alternative methods for achieving such objectives.'' [38] Parties cannot possibly include alternative methods if the ANPR wholly fails to identify the objective, *i.e.,* regulating misrepresentations in marketing of products with negative option features.

It is telling that the ANPR here only elicited 17 comments,[39] while the NPRM (which made clear that the Commission was significantly expanding its focus) elicited 16,000 comments.[40] The narrowness of the ANPR meant the Commission could not, consistent with section 18, proceed to a much broader NPRM.[41] In choosing to interpret the ANPR (and the 17 comments it elicited) as sufficient predicate for the much-expanded NPRM, the Commission cut itself off from valuable public comments at important early stages (especially as to regulatory alternatives) and ignored the rulemaking guardrails that Congress carefully established to forestall nondelegation concerns that might otherwise exist.[42]

The second procedural failing lies in the Commission's failure to ''prescribe . . . rules which define with specificity acts or practices which are unfair or deceptive acts or practices'' as Section 18 requires.[43] ''Because the prohibitions of section 5 of the Act are quite broad, trade regulation rules are needed to define with specificity conduct that violates the statute and to establish requirements to prevent unlawful conduct.'' [44] Section 425.3 of the Rule fails Section 18's specificity requirements. Section 425.3 prohibits any misrepresentation of material fact made in connection with the sale or promotion of a product that has a negative option feature.

Unfairness explicitly requires a cost-benefit analysis relating to the practices at issue.[45] Meanwhile, deception is a subset of the broader unfairness authority. With its focus on reasonableness and materiality, no cost-benefit analysis is required because the Commission has historically argued that deceptive practices are always harmful. So far, so good. But both unfairness, and particularly deception, require the Commission to provide sufficient evidence for a reviewing court to evaluate whether the Commission has met the legal predicate for either theory (particularly as it relates to reasonableness and materiality). While the Rule provides examples of material misrepresentations, those are merely examples. Indeed, the Commission ignores the specificity requirement by generalizing from poorly sampled past agency cases. Whatever the merits of the past cases, the Majority does not remotely come close to explaining how the evidence in those limited cases is similar to the myriad contexts an economy-wide rule would inevitably apply to.

Indeed, the Rule is not limited to misrepresentations relating to deceptive terms of negative option features (or some other specific, deceptive conduct), but instead, applies broadly to any material fact. Nor does the Rule require that the consumer actually use the negative option feature; the mere presence of a negative option feature would render any misrepresentation of material fact subject to the Rule. Taken together, the Rule is nothing more than a back-door effort at obtaining civil penalties in any industry where negative option is a method to secure payment. The Rule's application to any misrepresentation therefore fails to meet Section 18's ''specificity'' requirement,[46] and will no doubt invite serious legal challenge on this basis.[47]

The Supreme Court's decision in *AMG,* which held the language of Section 13(b) does not authorize the Commission to obtain equitable monetary relief,[48] limited the Commission's ability to seek money for first-time violations of the FTC Act. The Commission is still able, however, to seek monetary remedies for violation of rules issued under Section 18.[49] Here, the Final Rule effectively transforms Section 5's broad prohibition on unfair or deceptive practices into a Section 18 rule, allowing the Commission to expand its ability to seek money. Indeed, because negative option features are widely used in a variety of industries, the Rule greatly expands that ability. While I generally support *legislation* that would grant the FTC authority under Section 13(b) to obtain court orders for redress or disgorgement (with whatever guardrails Congress deems fit), the Commission should not circumvent legislative prerogative via improper Section 18 rulemaking.

The third significant procedural flaw in this rulemaking is that the Commission failed to appropriately establish the ''prevalence'' of unfair and deceptive practices related to all negative option features for all products in all markets and all media (*i.e.,* with respect to the scope of this rule). According to Section 18, the Commission may issue an NPRM ''only where it has reason to believe that the unfair or deceptive acts or practices which are the subject of the proposed rulemaking are prevalent.'' [50] Section 18 further provides:

The Commission shall make a determination that unfair or deceptive acts or practices are prevalent under this paragraph only if—

(A) it has issued cease and desist orders regarding such acts or practices, or

(B) any other information available to the Commission indicates a widespread pattern of unfair or deceptive acts or practices.[51]

In the SBP, the Commission argues that it has satisfied this standard for its economy-wide rulemaking because it has issued more than 35 cases ''challenging harmful negative option practices'' and has received ''tens of thousands of consumers complaints.'' [52] This evidence may well suggest that *some* unfair and deceptive acts related to negative option offers are indeed prevalent. But these statistics do not establish prevalence of misrepresentations of material fact related to products with negative option features, any more than the number of FTC cases and consumer complaints involving the internet means that the entire internet should be the subject of a Section 18 rulemaking prohibiting misrepresentations.

If similarity among complaints and cases only at the highest level of generality constitutes the ''prevalence'' sufficient to ground an economy-wide rulemaking, then a ''prevalence'' determination is in fact no meaningful guardrail on the Commission's conduct at all, creating precisely the type of non-delegation concerns that Section 18's guardrails were meant to prevent. Canons of ''avoidance'' warn us to avoid adopting interpretations that would render statutes unconstitutional.[53] To avoid precisely that fate, ''prevalence'' must require more than what the Commission has shown here.

A final concern here. The Rule's failure to define with specificity the acts or practices which are unfair or deceptive, combined with the rule's preemption of inconsistent

L. J. 1945, 1949 (1997) (providing examples of cases in which the Supreme Court construed a statute so as to avoid a constitutional question).

State laws,[54] seems likely to create confusion and, ultimately, may harm consumers. The Second Circuit rebuked the Commission for a similar approach in a prior rulemaking after the Commission had ''fail[ed] . . . to define with specificity the acts or practices which are unfair or deceptive.'' [55] Absent ''a specification of the acts or practices which the Commission deems deceptive,'' the Court explained that ''the breadth of the preemption provision is such that it places in issue an indefinite variety of [S]tate laws and regulations'' that were relevant to the underlying contractual relationships. Similarly, here, State laws govern the types of conduct today's Rule attempts to regulate.[56] One risk of misguided Federal regulation is that it can confuse or jeopardize State laws and enforcement. Given the Rule's lack of specificity, it raises that concern.

II. The Rule is troubling not only procedurally but also substantively. By singling out representations made in connection with negative option billing models and subjecting these representations to civil penalties or other monetary relief, it tilts the playing field in ways that are likely to pervert business incentives. For example, businesses may avoid using negative option billing models, even when businesses and consumers could derive significant value from them.

One might argue that no shift in incentives will happen for honest businesses because the Rule only addresses misrepresentations of material fact. In other words, all an honest business needs to do to avoid civil penalties is to tell the truth about products and services that involve negative option billing. But what constitutes a misrepresentation can sometimes be in the eye of the beholder (that is, a Commissioner).[57] Even honest businesses will have reason to reconsider the use of negative option billing now that it means subjecting themselves to potential civil penalties for misreading Commission tea leaves.[58] And businesses will also need to factor in the compliance costs associated with implementing this Rule's disclosure, consent, and cancellation requirements—prescriptive requirements that are absent for other billing models or less prescriptive under existing law, such as ROSCA.

These shifting incentives matter to consumers because the reason that honest businesses adopt negative option billing is to lower transaction costs between consumers and firms. For example, say I want to watch a particular streaming service at my convenience. I don't want to be bothered with signing up and paying a fee each month that I log on; I want negative option billing—a subscription—to reduce the friction in my streaming experience. Raising the transaction costs will reduce a business's sales and the utility consumers derive from these services. In other words, in our good intentions, we may harm the consumers and competition we are supposed to protect.[59]

The Rule purports to address any overbreadth by including, consistent with the Commission's Rules of Practice,[60] an ''Exemptions'' provision, which provides: ''Any person to whom this Rule applies may petition the Commission for a partial or full exemption.'' [61] In response to such petition, ''[t]he Commission may . . . issue partial or full exemptions from this part if the Commission finds application of the Rule's requirements is not necessary to prevent the acts or practices to which the Rule relates.'' [62]

But the ''Exemptions'' provision does nothing to reduce the burden on firms from the overbreadth of the Rule's coverage of all misrepresentations of material fact. Rather, taken together, they effectively shift the burden of crafting a tailored rule to regulated entities. And, once again, it appears that the Commission is tilting the playing field in a manner that is likely to harm both consumers and competition. Small businesses and new market entrants are less likely to be able to afford the potentially costly legal fees needed to petition the Commission to obtain an exemption. Even for businesses that can afford to use the exemption process, this process will impose costs on businesses, who will pass on those costs to consumers. Raising potential costs for consumers through an improperly promulgated rule is not a desirable outcome at any time, but especially not in an inflationary economy. Businesses and consumers will not be alone in bearing increased costs. Conducting the exemption process will continue to drain FTC staff resources—reducing the time that our talented staff could devote to enforcing the clear authorities Congress has given us, such as ROSCA.[63]

A final point here. I also have concerns about the Commission's economic analysis of the quantifiable benefits that may result from the Rule's substantive requirements. For example, the Commission's estimate related to the upper bound of the Rule's benefits for consumers who cancel subscriptions with in-person enrollment is based in part on the complaints of 25 individual consumers in a single industry,[64] and a number of other simplifying assumptions.[65] But this self-selected group of 25 consumers does not comprise a random sample, even among people who were not able to cancel subscriptions with in-person enrollment on their first attempt.[66] It is at least possible that other individuals who cancelled subscriptions in person had different experiences or expectations than these particular consumers—and therefore did not voice any complaint. Indeed, given that consumer experiences and expectations may vary significantly across industries and products, there is no reason to believe that balancing of harms and benefits of these consumers can be appropriately extrapolated to the entire economy. Thus, the Commission's estimated benefits are not based on what could be characterized as a representative sample. Without knowing the frequency of consumers having significant difficulty cancelling in-person subscriptions, it is not possible to assess how much weight to place on the estimate of the high end of the range of benefits from the proposed rule. Most of the difference between the low-end and high-end estimates of benefits is driven by the estimate of the high end of the benefits for in-person subscriptions.

III. This Rule is particularly disappointing because it represents two missed opportunities. In 2019, a bipartisan Commission unanimously voted in favor of

[54] 16 CFR 425.7(a) (''Relation to State Laws'') (''*In General.* This part shall not be construed as superseding, altering, or affecting any State statute, regulation, order, or interpretation relating to negative option requirements, except to the extent it is inconsistent with the provisions of this part, and then only to the extent of the inconsistency.'').

[55] *See Katharine Gibbs School,* 612 F.2d at 667.

[56] *See, e.g.,* SBP at 145–46, 214.

[57] *Cf.* Statement of Comm'r Christine S. Wilson Concurring In Part and Dissenting In Part, *FTC* v. *Neurometrix, Inc.,* FTC Matter No. 1723130 (Feb. 28, 2020), (disagreeing with the majority of the Commission on claim interpretation and substantiation for certain claims), *https://www.ftc.gov/system/files/ftc_gov/pdf/2024.08.01-remarks-chair-khan-strike-force-public-convening.pdf.*

[58] Some businesses were already subject to disclosure requirements under existing laws such as ROSCA and the TSR. But those laws are more limited. For example, ROSCA section 8403 states that for goods or services sold through a negative option feature, the seller must ''clearly and conspicuously disclose all material terms of the transaction before obtaining the consumer's billing information.'' 15 U.S.C. 8403.

[59] Concurring and Dissenting Statement of Comm'r Melissa Holyoak, *Social Media and Video Streaming Services Staff Report,* FTC Matter No. P205402, at 18–19 (Sept. 19, 2024) (''The core of this agency's mission is to protect consumers. Unfortunately, recent years have seen some Commissioners take a narrow view of that mission and where harms emanate from . . . . [W]e should also protect the American people from harms that follow when we fail to robustly and comprehensively scrutinize our own policy efforts and advocacy, including for economic effects, and to anticipate potential unintended consequence.''), *https://www.ftc.gov/system/files/ftc_gov/pdf/commissioner-holyoak-statement-social-media-6b.pdf; cf.* Dissenting Statement of Comm'r Melissa Holyoak, Joined by Comm'r Andrew N. Ferguson, *In re Rytr, LLC,* FTC Matter No. 2323052, at 5 (Sept. 25, 2024) (''We must protect consumers through robust enforcement. Indeed, the Commission is at its best when it does so. But we must also think carefully about the potential harms to consumers and innovation that attend misguided enforcement. Today's misguided complaint and its erroneous application of section 5 will likely undermine innovation in the AI space. I therefore respectfully dissent.''), *https://www.ftc.gov/system/files/ftc_gov/pdf/holyoak-rytr-statement.pdf.*

[60] 16 CFR 1.25, 1.31.

[61] 16 CFR 425.8.

[62] *Id.*

[63] To be clear, my concern is not with the exemption process itself (or its inclusion in the Rule), but with the enormous work it must do to compensate for the overbreadth of the provision regarding misrepresentations.

[64] *See, e.g.,* SBP at 171 (''Notwithstanding IHRSA's assertion that many fitness clubs offer online cancellation, at least 25 individual consumers submitted comments attesting to the difficulties of canceling gym memberships.'').

[65] *Id.* at 173 (''Based on these comments, the Commission makes the simplifying assumption that the worst gym membership cancellation experiences involve three failed attempts at cancellation, each costing one hour of time, and that, because of those cancellation failures, three unwanted monthly charges were processed.''); *see id.* at 169–70 (explaining how, in its economic analysis for the Rule, ''the Commission proxies the per-cancellation benefits of an additional, remote, method of cancellation by looking at those benefits in the context of gym memberships'').

[66] *See id.* at 171.

issuing the ANPR, which was intended to (1) consolidate the requirements from various laws the FTC enforces, providing businesses who have to navigate this patchwork with greater clarity, thereby benefiting both consumers and businesses; and (2) explore whether a Section 18 rule should fill any gaps ''when marketers fail to make adequate disclosures, bill consumers without their consent, or make cancellation difficult or impossible.'' [67] Today's final Rule could have stayed that prudent course rather than expanding in scope and complexity as it has under this Commission.

The second missed opportunity has taken place every day since the Commission expanded the scope of the rulemaking. This Commission chose to devote scarce staff resources to this overbroad rulemaking—one that seems likely to be challenged in court, which will lead to even more taxpayer-funded expenses—rather than direct our talented staff to draft a rule within the scope of our authority or bring enforcement actions using clear legal authorities like ROSCA and TSR. In my time at the Commission, I have voted in support of numerous ROSCA cases, including *NGL,*[68] *Care.com,*[69] and *Legion Media,*[70] and numerous TSR cases, including *Career Step,*[71] *Carshield,*[72] and *Panda Benefit Services.*[73] As I have said elsewhere, I believe the Commission is at its best when it focuses on enforcing the law, not writing it.[74] But I am not reflexively opposed to rulemaking where Congress has delegated the Commission relevant authority and we act consistent with that authority.[75] Unfortunately, that is not what today's Rule is. Instead, we have an ill-disguised political maneuver from the Majority in the form of a rule, one rushed to publication to advance the prospects of the Chair's preferred presidential candidate.

I dissent.

FEDERAL TRADE COMMISSION

16 CFR Part 464

RIN 3084–AB77

Trade Regulation Rule on Unfair or Deceptive Fees

AGENCY: Federal Trade Commission.

ACTION: Final rule.

SUMMARY: The Federal Trade Commission (''FTC'' or ''Commission'') is issuing a final trade regulation rule entitled ''Rule on Unfair or Deceptive Fees'' (''rule'' or ''final rule'') and Statement of Basis and Purpose addressing certain unfair or deceptive practices involving fees or charges for live-event tickets and short-term lodging: bait-and-switch pricing that hides the total price by omitting mandatory fees and charges from advertised prices; and misrepresenting the nature, purpose, amount, and refundability of fees or charges. The final rule specifies that it is an unfair and deceptive practice for businesses to offer, display, or advertise any price of live-event tickets or short-term lodging without clearly, conspicuously and prominently disclosing the total price. The rule also requires businesses to clearly and conspicuously make certain disclosures before a consumer consents to pay. The rule further specifies that it is an unfair and deceptive practice for businesses to misrepresent any fee or charge in any offer, display, or advertisement for live-event tickets or short-term lodging.

DATES: This rule is effective May 12, 2025.

ADDRESSES: Copies of this document are available on the Commission's website, *www.ftc.gov*.

VIII. Congressional Review Act

I. Background

When shopping for a good or service, consumers want to know: how much? It is a bedrock principle of FTC law that price is material to a consumer's decision about whether to purchase a good or service. Consumers look for prices to comparison shop and to weigh what a good or service might be worth. Most consumers also rely on price to answer critical budgeting questions such as: Can I afford this hotel or short-term rental for my upcoming vacation? Can I afford these concert tickets? Unfortunately, consumers face widespread and growing unfair and deceptive fee practices that make it much harder to find out: how much will this cost?

There is nothing new about businesses using bait-and-switch tactics to reel in and deceive consumers. The Commission has a long history of bringing enforcement actions against these unfair and deceptive practices. Quoting a misleading, artificially low price and then adding in mandatory fees and other charges throughout the buying process—a practice known today as drip pricing—is a quintessential example of bait-and-switch pricing and is a practice that falls squarely within the scope of the Commission's long history of work to protect consumers. While today this practice goes by a different name, the playbook has not changed: lure in consumers with a low price, then hit them with a higher price after they have invested in the transaction and sunk time and effort into trying to buy a good or service for an illusory price. Behavioral and economic research explains that piecemeal numbers and explanations cannot cure the deception or mitigate the harms to consumers when businesses employ these pricing tactics. Often consumers finish the transaction without an accurate understanding of the total price of goods or services.

In recent years, bait-and-switch pricing has garnered widespread public attention. Consumers have cried foul when they discovered the cost of their hotel stays were significantly higher than expected due to a mandatory, hidden "resort fee," typically charged for services that consumers expected to be a part of staying in a hotel. Consumers have also complained when they tried to purchase tickets to a live event, only to find out that the quoted ticket price almost doubled by the time they reached the final checkout page. Consumers have confronted a host of mysterious, mandatory, "convenience," "processing," or "service" charges that are either non-descript or otherwise misleading. These practices are frustrating for consumers when they shop for travel and entertainment especially because these purchases can be significant expenditures. This rulemaking record is replete with individual stories of consumers inundated by bait-and-switch pricing and misleading fees and charges.

For example, an individual commenter lamented the pervasiveness of bait-and-switch pricing tactics across everyday purchases:

> Like almost every American consumer, I have had to pay these "junk fees" in various circumstances. I consider myself reasonably well informed, yet have been surprised by them, because they keep [c]ropping up in unexpected places. Like many, I've experienced them in hotels, with car rentals and telecom providers. In these instances, the consumer has no real recourse, as the bargaining power is wholly unequal. However, these fees are now impacting every aspect of commerce. "Convenience" fees have impacted me with food service. "Facility" fees charges at fitness facilities. Credit card fees in excess of the actual interchange fees being charged at restaurants. It's endless, ubiquitous and makes it extremely difficult for consumers to make informed decisions.[1]

As another individual commenter aptly put it, "It's one thing to be on guard when walking down a dark alley, but being on guard every time you want to take a vacation, go to a concert, fly home to see a sick loved one—that's just not fair."[2]

It is no surprise that, once bait-and-switch pricing tactics are used by some businesses to obscure the cost of a good or service, they tend to spread. Businesses that want to compete on the true price of their offering are undercut by businesses that use hidden or misleading fees to display an artificially low price. As studies confirm, in such instances, consumers cannot shop for price effectively. This forces businesses into a race to the bottom and results in more and more businesses using hidden and misleading fees to remain competitive. When these types of fees are eventually revealed, consumers are left frustrated with a new and unexpected higher price and misleading fees and charges that prevent them from having a real understanding of what they are getting in return for these additional fees.

The Rule on Unfair or Deceptive Fees addresses these problems directly in the live-event ticketing industry and the short-term lodging industry, which includes temporary sleeping accommodations at a hotel, motel, inn, short-term rental, vacation rental, or other place of lodging. These two industries have engaged in bait-and-switch pricing tactics for years. The rule ensures that when businesses advertise a price for live-event tickets or short-term lodging, it is the total price, and when they explain a fee or charge, the description is truthful. In simple terms: tell consumers the real price and do not lie about the fees or charges. The final rule does this by addressing two specific and prevalent unfair and deceptive practices: (1) bait-and-switch pricing that hides the total price of live-event tickets and short-term lodging by omitting mandatory fees and charges from advertised prices, including through drip pricing, and (2) misrepresenting the nature, purpose, amount, and refundability of fees or charges. The rule has two main

[1] FTC–2023–0064–0886 (Individual Commenter).

[2] FTC–2023–0064–1576 (Individual Commenter).

components. First, the final rule requires businesses that offer a price for live-event tickets or short-term lodging to disclose the total price, inclusive of most mandatory charges, and to make sure that the total price is disclosed more prominently than other pricing information, except the final amount of payment. Second, the final rule prohibits misrepresentations about fees or charges in any offer, display, or advertisement for live-event tickets and short-term lodging.

The final rule is tailored to target these specific unfair and deceptive pricing practices, while preserving flexibility for live-event ticket and short-term lodging businesses. The rule does not prohibit any one type of fee, nor does it prohibit specific pricing practices such as itemization of fees or dynamic pricing. The rule does not require that all fees be included when offering a price—just mandatory ones. The rule gives businesses discretion to list optional fees selected by the consumer and government and shipping charges separately. The discretion to set prices remains squarely with businesses; the rule simply requires that they tell consumers the truth about prices for live-event tickets and short-term lodging.

A. Advance Notice of Proposed Rulemaking

The Commission published, on November 8, 2022, an advance notice of proposed rulemaking (''ANPR'') [3] under the authority of section 18 of the Federal Trade Commission Act (''FTC Act'') [4] to address certain unfair or deceptive acts or practices involving fees. The ANPR described the Commission's history of taking law enforcement action against, and educating consumers about, unfair or deceptive practices relating to fees, and it asked a series of questions to help inform the Commission about whether such practices are prevalent and, if so, whether and how to proceed with a notice of proposed rulemaking (''NPRM''). The Commission was particularly interested in the following practices that it identified as the subjects of investigations, enforcement actions, workshops, research, and consumer education: (a) misrepresenting or failing to disclose clearly and conspicuously, on any advertisement or in any marketing, the total price of any good or service for sale; (b) misrepresenting or failing to disclose clearly and conspicuously, on any advertisement or in any marketing, the existence of any fees, interest, charges, or other costs that are not reasonably avoidable for any good or service; (c) misrepresenting or failing to disclose clearly and conspicuously whether fees, interest, charges, products, or services are optional or required; (d) misrepresenting or failing to disclose clearly and conspicuously any material restriction, limitation, or condition concerning any good or service that may result in a mandatory charge in addition to the cost of the good or service or that may diminish the consumer's use of the good or service, including the amount the consumer receives; (e) misrepresenting that a consumer owes payments for any product or service the consumer did not agree to purchase; (f) billing or charging consumers for fees, interest, goods, services, or programs without express and informed consent; (g) billing or charging consumers for fees, interest, goods, services, or programs that have little or no added value to the consumer or that consumers would reasonably assume to be included within the overall advertised price; and (h) misrepresenting or failing to disclose clearly and conspicuously, on any advertisement or in any marketing, the nature or purpose of any fees, interest, charges, or other costs.

The Commission specifically sought public comment on the prevalence of such practices and the costs and benefits of a rule that would require upfront inclusion of mandatory fees whenever consumers are quoted a price, including by asking a series of questions to solicit data and commentary. The Commission took comments for sixty days, extended the comment period by an additional thirty days,[5] and carefully considered the more than 12,000 comments received.[6]

B. Notice of Proposed Rulemaking

Based on the substance of the comments received in response to the ANPR, as well as the Commission's history of enforcement and other information, on November 9, 2023, the Commission published an NPRM, which proposed an industry-neutral rule that would prohibit misrepresenting the total price of goods or services by omitting mandatory fees from advertised prices and misrepresenting the nature and purpose of fees.[7] The NPRM described the comments received in response to the ANPR and examined the Commission's prior enforcement actions and other responses concerning unfair and deceptive fees. In the NPRM, the Commission stated that it has reason to believe that certain unfair or deceptive acts or practices involving fees are prevalent, specifically: (1) misrepresenting the total price of goods and services by omitting mandatory fees from advertised prices and (2) misrepresenting the nature and purpose of fees. After discussing the comments and explaining its considerations in developing a proposed rule, the Commission also posed specific questions for comment and provided explanation of the proposed rule text. Finally, the NPRM set out the Commission's proposed regulatory text.[8] The Commission took public comments for sixty days, and extended the comment period for an additional thirty days.[9]

In response to the NPRM, the Commission received over 60,800 comments from stakeholders representing a wide range of viewpoints and industries.[10] These stakeholders

[3] Advance notice of proposed rulemaking; request for public comment: Unfair or Deceptive Fees Trade Regulation Rule Commission Matter No. R207011, 87 FR 67413 (Nov. 8, 2022). [4] 15 U.S.C. 57a(b)(2). Section 18 authorizes the Commission to promulgate, modify, or repeal trade regulation rules that define with specificity acts or practices that are unfair or deceptive in or affecting commerce within the meaning of section 5(a)(1) of the FTC Act, 15 U.S.C. 45(a)(1).

[5] Notice; extension of public comment period: Unfair or Deceptive Fees Trade Regulation Rule, 88 FR 4796 (Jan. 25, 2023).

[6] Publicly posted comments are available to view through *Regulations.gov* under Docket ID FTC–2022–0069 at *https://www.regulations.gov/docket/FTC-2022-0069/comments.*

[7] Notice of proposed rulemaking; request for public comment: Trade Regulation Rule on Unfair or Deceptive Fees, 88 FR 77420 (Nov. 9, 2023). In accordance with section 18(b)(2)(C) of the FTC Act, 15 U.S.C. 57a(b)(2)(C), on October 10, 2023, the Commission sent notices to the House Committee on Energy and Commerce and the Senate Committee on Commerce, Science and Transportation seeking comment concerning the utility and scope of the trade regulation rule proposed in the NPRM and including the full text of the NPRM.

[8] NPRM, 88 FR 77483.

[9] Notice of proposed rulemaking; extension of public comment period: Trade Regulation Rule on Unfair or Deceptive Fees, 89 FR 38 (Jan. 2, 2024).

[10] Publicly available comments are available to view through *Regulations.gov* under Docket ID FTC–2023–0064 at *https://www.regulations.gov/document/FTC-2023-0064-0001/comment.* As noted on *Regulations.gov*, not every comment is made publicly available. For example, ''[a]gencies may redact or withhold certain Comment Submissions . . . , such as those containing . . . duplicate/near duplicate examples of a mass-mail campaign. Therefore, the total in the Number of Comments Posted Box may be lower than the total in the Comments Received Box.'' *See https://www.regulations.gov/faq*, Frequently Asked Questions, General FAQs, Find Dockets, Documents, and Comments FAQs, answer to *How are Comments counted and posted to Regulations.gov?.* In this rulemaking, *Regulations.gov* identified ten mass-mail campaigns as part of the total number of comments received

included numerous individual consumers and consumer groups who described examples and experiences with the unfair and deceptive fee practices identified by the Commission. Commenters also included a range of business owners, trade associations, and other industry groups; academics; and government officials and agencies from all levels of government. While some commenters raised concerns and recommended specific modifications to, or exemptions from, the Commission's proposal, the overwhelming majority of commenters strongly supported the Commission's proposed rule.

The proposed rule received widespread support in comments from Federal,[11] State, and local [12] elected officials; State Attorneys General; [13] Federal,[14] State, and local [15] government agencies; public policy and consumer advocates,[16] including housing advocates [17] and advocates for the incarcerated or formerly incarcerated; [18] university public policy advocates and clinics; [19] academics; [20] legal services providers; [21] and industry members from a broad range of market sectors, including online merchants,[22] live-event ticketing,[23] and hotels and other short-term lodging.[24] These commenters supporting the rule confirmed the prevalence of hidden and misrepresented fees throughout the economy, across large and small industries subject to the Commission's jurisdiction, ranging, for example, from travel, live events, restaurants, delivery, rental housing, and correctional services to carpet cleaning, dietary supplements, moving companies, and gyms. These commenters supported the rule for its benefits to both consumers and honest businesses.

Individual consumers overwhelmingly supported the rule. Out of 60,853 total comments received, a mass mailing of close to 48,186 consumer commenters stated that they supported ''the FTC's efforts to protect American consumers and crack down on unscrupulous businesses that tack on junk fees at the end of the purchasing process,'' and urged the Commission ''to pass this rule to not only save consumers tens of billions of dollars each year, but to level the playing field for honest businesses who are transparent about their costs and

of over 60,800. One mass-mail campaign alone accounted for close to 48,200 comments, and all mass-mail campaigns combined accounted for more than 57,400 comments. Because comments within each mass-mail campaign are highly similar, only representative comments of each mass-mail campaign are publicly posted on *Regulations.gov*. In addition to representative mass-mail comments, the more than 3,300 comments that *Regulations.gov* did not identify as belonging to a mass-mail campaign are publicly posted. The Commission received and considered all filed comments, including all mass-mail comments.

fees.'' [25] Other mass mailings contained similar comments in support. In a mass mailing of about 344 comments, consumer commenters made near-identical statements to the aforementioned mass mailing and added: ''Junk fees are monies a business tacks on at the end of the purchasing process instead of being transparent about the full price upfront. These fees are common when people are purchasing airline and concert tickets, booking hotel rooms, paying utility bills, and renting apartments.'' [26] A mass mailing submitted by about 315 consumer commenters stated, ''I support cracking down on hidden junk fees that cost Americans billions of dollars each year.'' [27] A mass mailing by about nineteen consumer commenters stated, ''For too long, individuals have been subjected to misleading practices, such as the omission of mandatory fees from advertised prices and misrepresentation of the nature and purpose of fees. These practices not only erode trust but also hinder informed decision-making by consumers.'' [28] A mass mailing by about thirteen consumer commenters simply urged: ''Stop junk fees!'' [29] Additional comments from individual consumers also supported the rule.

Other commenters opposed the rule, sought exemptions from the rule, or expressed concern about the rule's definitions or application to specific pricing scenarios. They included a Federal government agency; [30] national business groups and public policy advocates,[31] including tax groups and advisors; [32] academics; [33] representatives from auto dealers and service providers; [34] app-based delivery platforms; [35] financial and real estate settlement services; [36] franchised businesses; [37] representatives of housing providers,[38] including apartment associations [39] and a housing advertising platform; [40] hospitality groups, including hotel [41] and restaurant associations; [42] funeral and cemetery providers; [43] gaming associations; [44] telecommunications providers; [45] live-event venues; [46] a law firm; [47] providers of communications services to incarcerated people; [48] and other sectors.[49] The commenters argued that the FTC failed to establish the prevalence of the defined unfair and deceptive practices and failed to conduct an adequate cost-benefit analysis, and that the proposed rule would interfere with established pricing models, could not be applied to all pricing scenarios, would overlap with other laws and regulations, or would exceed the FTC's rulemaking authority or jurisdiction.

Members of the restaurant industry voiced opposition to the proposal. A mass mailing from about 4,650

restaurant owners criticized the rule as a one-size-fits-all approach that would be unworkable for the restaurant industry. In addition, members of the rental housing industry also submitted comments in opposition to the proposed rule. A mass mailing from about 3,781 members of the rental housing industry stated that it is virtually impossible to predict and disclose in advertisements total prices that include all mandatory fees that residents could incur during lease terms. The Commission does not address the specific issues raised by these industries and others that fall outside the scope of this final rule.[50]

C. Informal Public Hearing

On March 27, 2024, the Commission published an initial notice of informal hearing, which also served as the final notice of informal hearing (''Informal Hearing Notice'').[51] The Informal Hearing Notice was published in accordance with section 18(b)(1) of the FTC Act, 15 U.S.C. 57a(b)(1), which requires the Commission to provide an opportunity for an informal hearing in section 18 rulemaking proceedings. The Informal Hearing Notice identified eight commenters to the NPRM that requested an informal hearing in accordance with the requirements of 16 CFR 1.11(e), as well as nine additional commenters that requested the opportunity to make an oral presentation if the Commission was to hold an informal hearing at others' requests. A number of commenters, including several who requested an informal hearing, proposed potential disputed issues of material fact for the Commission's consideration.[52] The Commission reviewed these potential issues and concluded in its Informal Hearing Notice that there were no disputed issues of material fact to resolve at the hearing.

On April 24, 2024, the Commission conducted an informal public hearing. In the Informal Hearing Notice, which was formally approved by vote of the Commission, the Commission's Chief Presiding Officer, the Chair, designated the Honorable Jay L. Himes, an Administrative Law Judge for the Federal Trade Commission, to serve as the presiding officer of the informal hearing. Seventeen interested parties were identified in the Informal Hearing Notice,[53] and six of them made documentary submissions in support of their hearing testimony.[54] Fifteen interested parties made presentations,[55] and two did not appear at the hearing.[56] The majority of interested parties that appeared spoke in support of the proposed rule. However, several voiced opposition to the rule, explained perceived problems with the proposed rule text, or argued that the Commission incorrectly concluded that there were no disputed issues of material fact raised in response to the NPRM.

II. The Legal Standard for Promulgating the Rule

The Commission is promulgating 16 CFR part 464 (''final rule'' or ''rule'') pursuant to section 18 of the FTC Act, 15 U.S.C. 57a, which authorizes the Commission to promulgate, modify, and repeal trade regulation rules that define with specificity acts or practices in or affecting commerce that are unfair or deceptive within the meaning of section 5(a)(1) of the FTC Act, 15 U.S.C. 45(a)(1).[57] Whenever the Commission promulgates a rule under section 18(a)(1)(B), the rule must include a Statement of Basis and Purpose (''SBP'') that addresses: (1) the prevalence of the acts or practices addressed by the rule; (2) the manner and context in which the acts or practices are unfair or deceptive; and (3) the economic effect of the rule, taking into account the effect on small businesses and consumers.[58] The Commission summarizes in this section its findings regarding each of these requirements.

Substantial evidence exists supporting the prevalence of bait-and-switch pricing and misleading fees and charges economy-wide as well as in the live-event ticketing and short-term lodging industries. As documented by the rulemaking record, the Commission's work on these pricing issues for over a decade, and the complementary actions of the Commission's local, State, and international counterparts, these specific practices are widespread across the economy and are harmful to consumers and honest businesses. Nevertheless, the Commission has decided, in its discretion, to focus this final rule on the industries in which the Commission first evaluated drip pricing—live-event ticketing and short-term lodging—and have a long history of harming consumers and honest competitors.

The Commission notes that the harms of bait-and-switch pricing and the misrepresentation of fees and charges are particularly pronounced in industries such as these, in which most transactions occur online. Consumers trying to comparison shop across multiple websites, or even on the same website, when deciding what tickets to purchase or where to travel are unable to do so effectively because some businesses hide the true total price and instead force consumers to go to different sites and click through multiple web pages for each offer to learn the true total price.

Consumer harm is also pronounced in these industries because the offered goods and services are often identical (as is the case with live-event tickets), or nearly identical (as is the case with competing short-term lodging offers in a particular destination and for a particular star rating), and the most salient feature is the total price, which is shrouded from consumers. Indeed, for some consumers, hotel rooms are interchangeable so long as the location, star rating, and reviews are similar

[58] 15 U.S.C. 57a(b)(3). In addition, section 22(b)(2) of the FTC Act, 15 U.S.C. 57b–3(b)(2), requires the Commission to prepare a final regulatory analysis, which it discusses in section V.

across offers, and what matters most is the total price.

In the future, the Commission may address these unfair and deceptive practices across industries as discussed in the NPRM. For now, however, the Commission will address unfair and deceptive pricing practices in other industries using its existing section 5 authority.

A. Prevalence of Acts or Practices Addressed by the Rule

As discussed herein, and in the NPRM, the Commission finds that unfair or deceptive pricing practices involving bait-and-switch pricing and misleading fees or charges are prevalent throughout the economy and affect, or have the potential to affect, virtually every purchasing transaction a consumer undertakes, including decisions about basic goods or services; where to live, dine, stay, or travel; and what events to attend. Specifically, the Commission finds that the following unfair or deceptive practices relating to fees are prevalent generally throughout the economy and specifically in the live-event ticketing and short-term lodging industries: (1) bait-and-switch pricing practices that hide the total price of goods or services by omitting mandatory fees and charges from advertised prices, including through drip pricing, and (2) misrepresenting the nature, purpose, amount, and refundability of fees or charges.

Section 18 of the FTC Act instructs that the Commission may determine that unfair or deceptive acts or practices are prevalent if: ''it has issued cease and desist orders regarding such acts or practices'' or ''any other information available to the Commission indicates a widespread pattern of unfair or deceptive acts or practices.'' [59] In support of its preliminary finding that these practices are prevalent, the NPRM cited enforcement evidence, including prior work by the Commission, complementary actions by State Attorneys General, private lawsuits, and international actions to address unfair or deceptive pricing practices, as well as comments received in response to the ANPR.[60] The NPRM also described legislative and regulatory action taken by multiple States to address unfair or deceptive fees.

To support its prevalence determination herein as to the economy generally, and as to the live-event ticketing and short-term lodging industries specifically, the Commission reiterates that it has a long history of enforcement actions, as well as a plethora of other information, indicating a widespread pattern of bait-and-switch pricing practices, including drip pricing and misleading fees or charges. In addition, the Commission's prevalence determination is further supported by the Commission's workshops and warning letters relating to bait-and-switch pricing and misleading fees or charges; the behavioral and economic research documenting consumer harm from these practices; and consumer surveys and reports. The Commission also relies on the great majority of the more than 60,800 comments filed in response to the NPRM—one of the largest number of comments filed in any Commission rulemaking to date—including comments by consumers, consumer groups, academics, businesses, and government officials highlighting the prevalence of these unfair and deceptive practices and urging the Commission to promulgate a final rule to combat them.

As explained in the NPRM, the Commission has a long history of enforcement actions targeting unfair and deceptive bait-and-switch pricing tactics concerning hidden fees [61] and misrepresentations regarding the nature and purpose of fees.[62] The takeaway

Tex. June 21, 2006) (alleging defendants placed charges on consumer telephone bills despite representations that there would be no charges or

from this enforcement history is clear—businesses cannot hide or misrepresent the true cost of a good or service or mislead consumers about the nature, purpose, amount, or refundability of fees or charges. Some commenters suggested consent orders are not cease-and-desist orders that the Commission can rely upon to support a finding of prevalence, but that is incorrect. The FTC Act makes clear when it intends to exclude consent orders from the ambit of ''cease and desist orders,'' and does not do so in section 18.[63]

In addition to the Commission's enforcement actions, for more than a decade, the Commission has engaged with the public and issued guidance to industry on issues related to bait-and-switch tactics, including drip pricing, and the misrepresentation of fees or charges. The Commission first engaged with the public on the concept of drip pricing in 2012 by convening a conference, titled ''The Economics of Drip Pricing,'' to bring together economists and marketing academics to ''examine the theoretical motivation for drip pricing and its impact on consumers, empirical studies, and policy issues pertaining to drip pricing.'' [64] Several psychological theories were discussed at this conference, and these theories explain why consumers cannot reasonably avoid making errors when the total price is not revealed upfront.[65] Following the workshop, Commission staff sent warning letters to hotels and online travel agents that were not adequately disclosing resort fees or including those fees in the total price.[66] These hotels and online travel agents were employing drip pricing tactics as well as another bait-and-switch pricing tactic, partitioned pricing, to inadequately disclose resort fees and hide the total price of a hotel stay. Partitioned pricing consists of dividing a price into multiple components without ever disclosing the total and leaving consumers to figure out the true total price on their own. Hotels, for example, might separately list the room rate and ''resort fee'' but never add them up and quote an all-inclusive total price. In 2017, the Commission's Bureau of Economics published a report that reviewed the existing literature on drip pricing and partitioned pricing and examined the costs and benefits of disclosing hotel resort fees.[67] The report found that ''[u]nless the total price is disclosed up front, separating resort fees from the room rate is unlikely to result in benefits that offset the likely harm to consumers.'' [68] Specifically,

> separating mandatory resort fees from posted room rates without first disclosing the total price is likely to harm consumers by increasing the search costs and cognitive costs of finding and choosing hotel accommodations. Forcing consumers to click through additional web pages to see a hotel's resort fee increases the cost of learning the hotel's price. Separating the room rate from the resort fee increases the cognitive costs of remembering the hotel's price. When it becomes more costly to search and evaluate an additional hotel, a consumer's choice is either to incur higher total search and cognitive costs or to make an incomplete, less informed decision that may result in a more costly room, or both.[69]

The report observed that hotels could eliminate these costs to consumers by including the resort fee in the advertised price; bundling the same resort services with the room and charging the same total price; listing the components of the total price separately, as long as the total price is the most prominently disclosed price; or changing to unbundled, optional resort services which would not be included in the advertised price.[70] Finally, the report did not find ''any benefits to consumers from separately-disclosed mandatory resort fees that could not be achieved by first listing the total price and then disclosing the resort fee.'' [71]

In 2019, the Commission hosted a workshop and issued a staff perspective report that examined pricing and fees in the live-event tickets market.[72] The report observed,

> On most primary and resale platforms, the ticket price a consumer first sees is not what the consumer will pay. Mandatory fees, such as 'venue' and 'ticket processing' fees, bulk up the price–often by as much as thirty percent . . . . The late disclosure of fees increases search costs for consumers and makes it harder to comparison shop.[73]

The report remarked that ''[a]ll of the workshop panelists who discussed the fees issue, including each participating ticket seller that does not currently provide upfront all-in pricing, favored requiring all-in pricing through federal legislation or rulemaking.'' [74]

The Commission's finding of prevalence is further supported by the complementary enforcement actions brought by its law enforcement partners, most of which have resulted in orders prohibiting bait-and-switch pricing and misrepresenting fees and charges in the short-term lodging, live-event ticketing, delivery services, rental cars, travel, and tax filing preparation services

---

obligations); *FTC* v. *Mercury Mktg. of Del., Inc.,* No. 00–cv–3281, 2004 WL 2677177, *1 (E.D. Pa. Nov. 22, 2004) (finding defendants billed consumers without their consent after misleading consumers about introductory internet packages); Complaint ¶¶ 25–27, *FTC* v. *Stewart Fin. Co.,* No. 1:03–cv–02648 (N.D. Ga. Sept. 4, 2003) (alleging in part that defendants package undisclosed add-on products with consumer loans and in some cases describe those add-on products as mandatory); Complaint ¶¶ 19–21, 24, *FTC* v. *Hold Billing Serv., Ltd.,* No. SA–98–CA–0629–FB (W.D. Tex. July 16, 1998) (alleging defendants had previously added third-party charges to consumers' phone bills without permission by using sweepstakes entry forms as contracts to authorize charges); Complaint ¶¶ 18, 33, 56–58, *FTC* v. *Lake,* No. 8:15–cv–00585–CJC–JPR (C.D. Cal. Apr. 14, 2015) (alleging defendants misrepresented that trial loan payments or reinstatement fee payments would be held in escrow and refunded to the consumer if the loan modification was not approved); *FTC* v. *Hope for Car Owners, LLC,* No. 2:12–CV–778–GEB–EFB, 2013 WL 322895, at *3–4 (E.D. Cal. Jan. 24, 2013) (finding that the FTC sufficiently stated a claim for misrepresentation of the refundability of vehicle loan modification fees and entering default judgment); Amended Complaint ¶¶ 38–39, 58–60, *FTC* v. *U.S. Mortg. Funding, Inc.,* No. 9:11–cv–80155–JIC (S.D. Fla. July 26, 2011) (alleging defendants misrepresented that an upfront loan modification fee was refundable); *FTC* v. *Nat'l Bus. Consultants, Inc.,* 781 F. Supp. 1136, 1143 (E.D. La. 1991) (finding that ''defendants' misrepresentations regarding the ease with which the 'performance deposit' could be refunded composed a large part of the various and sundry misrepresentations'').

[63] *Compare* 15 U.S.C. 45(m) (excluding consent orders from the type of cease and desist orders that could support an action for civil penalties under 15 U.S.C. 45(m)(1)(B)) *and* 108 Stat. 1691 (1994) (amending 15 U.S.C. 45(m) to add ''other than a consent order'' after the term ''cease and desist order'') *with* 15 U.S.C. 57a(b)(3) (stating that the Commission may make a determination of prevalence if ''it has issued cease and desist orders regarding such acts or practices or any other information available to the Commission indicat[ing] a widespread pattern of unfair or deceptive acts or practices''). Even if consent orders and the investigations that lead up to them are not ''cease and desist orders,'' in making a determination of prevalence, the Commission can still rely upon them as ''other information.''

industries.[75] Indeed, a group of State Attorneys General wrote in support of a finding of prevalence of these practices across industries, including event ticket sellers, and hotels and other short-term lodging providers.[76] They have attempted to address some, but not all, of these fees in their own States.[77] The State Attorneys General cited a number of cases across industries demonstrating that bait-and-switch pricing and misleading fees are ''a chronic, prolific problem confronting many consumers across numerous sectors of the economy.'' [78] Further, they agreed with the Commission's assertion that ''charges that misrepresent their nature and purpose are unfair and deceptive because they mislead consumers and make it more difficult for truthful businesses to compete on price.'' [79] The Commission takes note of legislative and regulatory efforts in Minnesota, California, Pennsylvania, New York, Massachusetts, and North Carolina to combat hidden and misleading fees [80] which further support its finding of prevalence.

Comments submitted by Federal and State elected officials echoing the widespread practice of misleading consumers about total prices and fees or charges further strengthen the Commission's prevalence finding. For example, U.S. Senator Amy Klobuchar stated that she held a hearing focusing on the lack of transparency in the live-event ticketing industry as well as a hearing on fees in the rental housing market that prevent renters from having meaningful opportunities to compare prices.[81] U.S. Senator Robert Casey discussed a report released on January 24, 2024, ''Additional Charges May Apply: How Big Corporations Use

Reg. 5 (Dec. 8, 2023) (Proposed Regulations 940 C.M.R. 38.00: Unfair and Deceptive Fees) (proposed regulation stating that it is an unfair and deceptive practice to misrepresent or fail to disclose at the time of initial presentation of the price of any product the total price of that product inclusive of all fees, interest, charges, or other expenses necessary or required in order to complete the transaction).

[81] FTC–2023–0064–3271 (U.S. Senate, Sen. Amy Klobuchar).

Hidden Fees to Nickel, Dime, and Deceive American Families,'' tracking the variety of junk fees facing Pennsylvania families, including in the short-term lodging industry.[82] A group of Congressional representatives raised concerns regarding misleading fees and a lack of price transparency in the rental housing market.[83] Concerns over unfair and deceptive pricing were also raised by a variety of State legislators and officials.[84] There has also been significant bipartisan interest in passing legislation targeting fees in the live-event ticketing and short-term lodging industries.[85]

The Commission also takes notice of the work of its international counterparts, as well as private lawsuits in the United States concerning unfair and deceptive fee practices. Regulatory actions in Canada, Australia, the European Union, and the United Kingdom with respect to such conduct include paragraph 74.01(1.1) of the Canadian Competition Act,[86] the Australian Competition and Consumer Protection Act of 2010,[87] EU Directive 2005/29/EC of the European Parliament and of the Council,[88] and the UK Digital Markets, Competition and Consumers Act 2024.[89] In addition, private lawsuits filed against businesses in the live-event ticketing, short-term lodging, banking, and delivery service industries challenging these practices lend further support to the Commission's prevalence determination.[90]

[82] FTC–2023–0064–3135 (U.S. Senate, Sen. Robert P. Casey, Jr. noted that his report ''details how corporations use hidden fees to deceive consumers and increase corporate profits, which leaves families paying more than they should and puts honest businesses at a disadvantage.'') The report is available at *https://www.casey.senate.gov/imo/media/doc/greedflation_junk_fees3.pdf*.

[83] FTC–2023–0064–2858 (U.S. House of Representatives, Rep. Maxwell Alejandro Frost, Rep. Jimmy Gomez, Rep. Barbara Lee, Rep. Rashida Tlaib, Rep. Kevin Mullin, Rep. Dwight Evans, Rep. Judy Chu, Rep. Greg Casar, Rep. Dan Goldman, and Rep. Salud Carbajal stated that the rule would help eliminate some of the barriers to those seeking rental housing as renters ''often face ambiguous or misleading fees'' and ''bring much needed transparency to the rental housing market.'').

[84] FTC–2023–0064–2341 (Massachusetts House of Representatives, Rep. Lindsay Sabadosa); FTC–2023–0064–1411 (Arizona House of Representatives, Rep. Analise Ortiz); FTC–2023–0064–3072 (Michigan Senate and House of Representatives, Sen. Darrin Camilleri, Sen. Mary Cavanagh, and Rep. Betsy Coffia); FTC–2023–0064–3079 (Montana State Senate, Senate Democratic Caucus, Sen. Pat Flowers, Sen. Susan Webber, Sen. Andrea Olsen, Sen. Edie McClafferty, Sen. Jen Gross, Sen. Janet Ellis, Sen. Shane Morigeau, Sen. Ellie Boldman, Sen. Ryan Lynch, Sen. Christopher Pope, Sen. Mike Fox, Sen. Denise Hayman, Sen. Willis Curdy, and Sen. Mary Ann Dunwell); FTC–2023–0064–3103 (Florida House of Representatives, Rep. Angela Nixon); FTC–2023–0064–3123 (Syracuse, New York, City Auditor Alexander Marion); FTC–2023–0064–3117 (Maryland House of Delegates, Del. Julie Palakovich Carr); FTC–2023–0064–3149 (North Carolina House of Representatives, Rep. Julie von Haefen); FTC–2023–0064–3237 (North Carolina House of Representatives, Rep. Pricey Harrison).

[85] *See, e.g.,* Transparency In Charges for Key Events Ticketing Act (''TICKET Act''), H.R. 3950, sec. 2, 118th Cong. (as engrossed in the House, May 15, 2024) (among other provisions, requiring ticket sellers, including secondary markets and exchanges, to clearly and conspicuously disclose the total ticket price for an event in any advertisement and each time the ticket is displayed in the purchasing process, and to provide an itemized list of the base ticket price and each fee or charge prior to completion of the purchase; violations of the TICKET Act would be treated as violation of a rule defining an unfair or deceptive act or practice under section 18(a)(1)(B) of the FTC Act); No Hidden Fees on Extra Expenses for Stays Act of 2023 (''No Hidden FEES Act of 2023''), H.R. 6543, sec. 2(a), 118th Cong. (as engrossed in the House, June 11, 2024) (among other provisions, prohibiting providers of short-term lodging, including providers of a website or other centralized platform that advertises or otherwise offers the price of a reservation for short-term lodging, from advertising, displaying, marketing, or otherwise offering for sale, including through a direct offering, third-party distribution, or metasearch referral, a price of a reservation that does not include each mandatory fee; violations of sec. 2(a) would be treated as violation of a rule defining an unfair or deceptive act or practice under section 18(a)(1)(B) of the FTC Act).

The Commission takes notice of additional indications of prevalence identified in response to the NPRM. Commenters to the NPRM noted that unfair or deceptive pricing practices exist economy-wide.[91] For instance, Consumer Reports conducted a nationally representative survey and found that many consumers experienced unexpected fees in a variety of industries and that more than two-thirds of Americans report paying more in hidden fees now than they did five years ago.[92] Similarly, Consumer Federation of American submitted an extensive compilation of stories from consumers about their experiences with junk fees that recounted hidden and misleading fees being applied across a wide range of industries.[93] Truth in Advertising, Inc. provided a sampling of consumer complaints it had received over the years and noted the pervasiveness of hidden and misleading fees in multiple industries, including event ticket sales, hotel and travel companies, short-term lodging, internet apps, automobile rentals, communication services, carpet cleaning, auto/truck sales, dietary supplement orders, food services, airlines, moving services, credit unions and banks, payday lending services, gym memberships, outlet stores, sports betting, and online auctions.[94] Public Citizen commented about ''the widespread use of the deceptive practice of charging undisclosed fees by major industries . . . including communication carriers, air carriers, ticket sales, auto dealers, credit card companies, cable giants, and property owners,'' as well as ''event ticketing, hotels, funeral homes,'' and other industries.[95] Additionally, AARP pointed to a myriad of confusing fees charged by assisted living facilities.[96] Commenters also noted that instances of unfair and deceptive fees or charges have increased over time.[97]

Commenters also raised concerns about the prevalence of hidden fees in specific industries such as live-event ticketing and short-term lodging. The American Society of Travel Advisors, Travel Technology Association, and a travel agent observed that, despite increased scrutiny over hotel resort fees, there remains little uniformity in pricing practices, and bait-and-switch pricing remains an issue.[98] Multiple commenters raised continued concerns over hidden fee pricing practices in the live-event ticketing market. TickPick, LLC observed the ''widespread'' deceptive practice of bait-and-switch pricing rampant in this industry. Chamber of Progress noted that deceptive and unfair fees are ''rampant in some industries and pose clear threats to consumers,'' including ''hotel stays, live sports or concert tickets, and airline tickets.'' Future of Music Coalition commented that they have worked to ''deal[ ] with the scourge of junk fees in various parts of the economy,'' including live touring. The Charleston Symphony affirmed that ''requiring sellers to disclose the total price clearly and conspicuously[ ] addresses a pressing issue in the nonprofit performing arts sector.'' [99]

Despite the overwhelming evidence supporting the prevalence of bait-and-switch pricing and misleading fee practices economy-wide, a minority of commenters argued that the Commission has failed to meet its burden of establishing prevalence. Some commenters contended that the Commission's evidence focuses on a small number of problematic industries and does not demonstrate prevalence in every single industry across the economy.[100] Some commenters similarly contended that the proposed rule was an attempt to impose a ''one-size-fits-all'' solution on distinct industries, not all of which are engaging in unfair or deceptive practices, and thus the proposed rule is overbroad and not supported by the requisite evidence of prevalence.[101]

First, the Commission disagrees that it must find that the unfair or deceptive act or practice is widespread within every individual context or industry to issue a rule targeting a specific practice across industries. To begin with, the Commission's prevalence findings need only have ''some basis or evidence'' to show ''the practice the FTC rule seeks to regulate does indeed occur.'' [102] While many trade regulation rules promulgated under section 18 focus on a particular industry, as discussed in

[91] *See, e.g.,* FTC–2023–0064–3216 (Demand Progress Education Fund noted that consumers face surprise or ''bogus'' fees across industries, including rental housing, cell phone service, utilities, and ticketing, and cited a Consumer Reports study finding that 85% of Americans have dealt with fees of this nature.).

[92] FTC–2023–0064–3205 (Consumer Reports noted the prevalence of unexpected fees in live entertainment or sporting events, hotels, telecommunication services, gas or electric utilities, air travel, credit cards, auto loans and purchases, and personal banking services.).

[93] FTC–2023–0064–3160 (Consumer Federation of America submitted the compilation as Appendix B to its comment.).

[95] FTC–2023–0064–3302 (Public Citizen).

[96] FTC–2023–0064–2885 (AARP argued these fees are not well understood by potential residents and that renters are charged ''many superfluous fees, including application fees, credit check fees, pet fees, excessive late fees, utility-related fees, mail sorting fees, inspection fees, convenience fees, common area fees, guest fees, trash fees, notice fees, security deposit fees, check cashing fees, cleaning or repair fees, and other mandatory fees for services that a renter does not need or want.'').

[97] *See, e.g.,* FTC–2023–0064–3290 (U.S. Public Interest Research Group Education Fund commented that consumers have faced more unfair and deceptive fees as consumers ''have become accustomed to online transactions.''); FTC–2023–0064–3090 (Atlanta Legal Aid Society, Inc. noted the ubiquity of unfair and deceptive fees and that these types of fees in the rental housing context have been steadily rising for years.).

[98] FTC–2023–0064–3106 (American Society of Travel Advisors stated that resort fees are disclosed in a highly inconsistent manner, even between hotels doing business under the same brand name.); FTC–2023–0064–3293 (Travel Technology Association commented that hotels have been known to surprise guests at check-in with these fees and ''guests have no reasonable recourse but to pay them.''); FTC–2023–0064–3077 (Far Horizons Travel, by its owner, a travel agent of almost 40 years, called hotel fees ''out of control'' and stated: ''I am appalled by these fees and how much they have risen over the years. . . . They say it's for extra amenities but that is not always the case and more often not the case at all.'').

[99] FTC–2023–0064–3212 (TickPick, LLC); FTC–2023–0064–3137 (Chamber of Progress); FTC–2023–0064–3230 (Future of Music Coalition); FTC–2023–0064–3105 (Charleston Symphony).

[100] FTC–2023–0064–3143 (ACA Connects—America's Communication Association argued that the NPRM contained no meaningful discussion of prevalence of unfair or deceptive pricing disclosures with respect to communication services.); FTC–2023–0064–3186 (National LGBT Chamber of Commerce and the National Asian/Pacific Islander American Chamber of Commerce & Entrepreneurship argued that ''prepared food and grocery delivery applications . . . have demonstrated transparency and accessibility, providing clear explanations about fees.''); FTC–2023–0064–3292 (National Association of Theatre Owners argued that the NPRM failed to demonstrate prevalence with respect to the theatre industry, identifying only fifty comments received in response to the ANPR that reference movie theatre convenience fees.); FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP argued that the Commission has failed to reliably demonstrate the prevalence of unfair or deceptive fees across any industry or sector.); FTC–2023–0064–3233 (NCTA—The Internet & Television Association argued that the only mention of telecommunication fees is anecdotal, and the Commission has failed to show prevalence with respect to any NCTA member.); FTC–2023–0064–3263 (Flex Association stated that ''[t]he Commission has not pointed to evidence of any prevalent consumer harm that justifies imposing new pricing and disclosure rules on app-based delivery platforms.''); FTC–2023–0064–3130 (International Cemetery, Cremation & Funeral Association argued that over the last several reviews of the Funeral Rule the Commission has not found evidence of widespread consumer abuse among cemeteries or third-party suppliers.).

[101] FTC–2023–0064–3258 (National Taxpayers Union Foundation); FTC–2023–0064–3173 (Center for Individual Freedom argued that the Commission was overly reliant on lodging, ticketing, and restaurants in justifying an economy-wide rule.); FTC–2023–0064–3251 (National RV Dealers Association argued the proposed rule ''is an overextension from this drip pricing concern, and not only strays from the FTC's traditional areas of concern but also risks impeding the normal business operations and innovation across a multitude of sectors.'').

[102] *Pa. Funeral Dirs. Ass'n.* v. *FTC,* 41 F.3d 81, 87 (3d Cir. 1994).

section IV.A.1, others apply to specific practices across industries regardless of product or service, such as the Cooling-Off Period for Door-to-Door Sales Rule (the ''Cooling-Off Rule''), the Rule on the Preservation of Consumers' Claims and Defenses (the ''Holder Rule''), the Rule on Retail Food Store Advertising and Marketing Practices (the ''Unavailability Rule''), the mail, Internet, or Telephone Order Merchandise Rule (the ''Mail Order Rule''), the Rule on the Use of Prenotification Negative Option Plans (the ''Negative Option Rule''), the Rule on Impersonation of Government and Businesses (the ''Impersonator Rule''), and the Rule on the Use of Consumer Reviews and Testimonials.[103] While the Commission agrees that minimal evidence of a practice would be insufficient to meet the prevalence standard, section 18 did not require the Commission to find for its economy-wide rulemakings that every industry engaged in sales made at a consumer's home or at certain other locations (Cooling-Off Rule), used credit contracts (Holder Rule), offered products at an advertised price when they did not have the advertised products in stock (Unavailability Rule), or had a robust mail, internet or telephone order business (Mail Order Rule); or that every industry used negative options (Negative Option Rule), had an issue with impersonating government agencies or businesses (Impersonator Rule), or used and abused reviews (Rule on the Use of Consumer Reviews and Testimonials). Imposing such a standard would artificially limit the Commission's rulemaking authority under section 18 in a way that does not align with the Commission's mandate or the text of the statute, which focuses on acts or practices generally and never mentions the need to define markets or industries. As explained herein and in the NPRM, the information evidencing prevalence of bait-and-switch pricing and misleading fees more than meets section 18's standard for prevalence for the economy generally, and for the live-event ticketing and short-term lodging industries, specifically, by demonstrating that the practices are widespread and, further, that such practices are occurring across a wide range of industries.

Second, the Commission notes that, even when commenters challenged the application of the rule to specific pricing scenarios or to their own industries, they also appeared to concede that advertising a base price to which mandatory fees are added later is a frequent practice even in their own industries. While some commenters raised genuine challenges or questions about the application of the rule, others attempted to conflate such genuine challenges with their desire to continue to use drip or partition pricing.

As discussed in section III.B.1, commenters from some ticket sellers did not contest that their advertised prices failed to include all mandatory fees and to provide the total price of goods or services. Instead, they attempted to explain why they engaged in those practices.

Finally, some commenters from industries other than live-event ticketing and short-term lodging argued that the Commission's NPRM failed to establish prevalence because of the following reasons: the cited cases focused on inapplicable fact patterns or resulted in settlement; the cited conferences called for additional research rather than regulatory strategy, or were narrow in scope as to the industries covered; and the resort fee warning letters failed to result in enforcement action.[104] Commenters such as the U.S. Chamber of Commerce argued that the enforcement record should rely only on cease-and-desist orders or ''extensive empirical research.'' [105] Other commenters also raised concerns about a lack of empirical research.[106] These commenters overlook section 18's clear instruction that the Commission's prevalence determination can be based on ''any other information available to the Commission'' that indicates a widespread pattern, which the Commission thoroughly laid out in the NPRM and expands upon herein.

In sum, the Commission's enforcement history, workshops, and reports, together with the record of this rulemaking and the enforcement cases brought by the Commission's local, State, and international enforcement counterparts fully support a finding that bait-and-switch pricing that hides the total price of goods or services and misrepresenting the nature, purpose, amount, and refundability of fees or charges are prevalent across the economy, including in the live-event ticketing and short-term lodging industries.[107] Despite the evidence that these specific practices are prevalent economy wide, the Commission will first focus its rulemaking authority on combatting these practices in the live-event ticketing and short-term lodging industries, the two industries in which the Commission first began evaluating drip pricing more than a decade ago and for which there is a long history of consumer harm.

B. Manner and Context in Which the Acts or Practices Are Deceptive or Unfair

The final rule curbs certain unfair or deceptive pricing practices by requiring

[103] 16 CFR part 429; 16 CFR part 433; 16 CFR part 424; 16 CFR part 435; 16 CFR part 425; 16 CFR part 461; 16 CFR part 465.

[104] FTC–2023–0064–3127 (U.S. Chamber of Commerce argued the NPRM failed to cite any cases holding that late in time fee disclosures are unfair or deceptive and the settlements described by the Commission only raised the failure of companies to disclose certain applicable fees prior to purchase or at all.).

[105] *Id.*

[106] FTC–2023–0064–3152 (Building Owners & Managers Association et al. commented that the proposed rule ''lacks any reasonable factual underpinning as applied to the rental housing industry because it is not based on any statistical data relevant to the industry,'' but is ''based solely upon anecdotal, conclusory, and non-representative justification.''); FTC–2023–0064–3172 (New Jersey Apartment Association stated that the NPRM lacked ''statistical basis'' for claims that unfair and deceptive fees were an issue in the rental housing context and that the Commission relied on anecdotal evidence.).

[107] *See, e.g., supra* notes 66, 67, 72, 75, 80, 85, 90 (detailing the Commission's enforcement history, workshops, and reports, class action lawsuits, state and local enforcement and regulations, and other efforts to curb unfair or deceptive pricing practices in the live-event ticket and short-term lodging industries). The Commission also received thousands of comments from individual consumers detailing bait-and-switch pricing and deceptive fees in the live-event ticket and short-term lodging industries in response to the ANPR and the NPRM. *See, e.g.,* FTC–2023–0064–0820 (Individual Commenter stated ''I was just considering buying some event tickets on Vivid Seats and was shocked to see that they add a full 33% in bogus fees.''); FTC–2023–0064–0058 (Individual Commenter stated: ''The worst offenders are ticket sellers/resellers, who advertise baseline ticket prices in their search engines and then include some unknown amount of fees when it's time to pay.''); FTC–2023–0064–0102 (Individual Commenter stated: ''I recently went to a MLB game and the fees were $21 for a $75 ticket or greater than 20%. I went to a concert and the tickets were $55 but the fees brought the price to over $100. On both cases, the fees were not disclosed until the payment screen.''); FTC–2023–0064–0145 (Individual Commenter described purchasing tickets to a musical: ''Nearly 20% of the total cost was for fees that were not disclosed until I was at the payment step ($119 ticket + $4.55 order processing fee + $4.00 facility charge + $20.50 service fee). I don't understand what any of those fees are actually for.''); FTC–2023–0064–0040 (Individual Commenter described hotel resort fees as ''egregious and opaque'' and stated they learned of an additional $50 per night resort fee upon check-in: ''I asked what the purpose of the fee was and was told by the staff person, 'I'm not really sure.' ''); FTC–2023–0064–1462 (Individual Commenter stated: ''Recently I found an ''affordable'' hotel in a city and booked a 4 night stay, but was not informed until after I checked in that parking cost extra each day . . . . which made the hotel no longer affordable for me''); FTC–2023–0064–0977 (Individual Commenter described spending hours trying to book a hotel to face ''mandatory hotel fees for a pool, a gym and 24 hour security totalled $50/night''); FTC–2023–0064–0152 (Individual Commenter stated that fees through services including Airbnb and VRBO are ''often vague and undefined'' and described fees including a ''host fee,'' ''booking fee,'' ''safety fee,'' and ''resort fee'').

truthfulness and transparency in pricing for live-event ticketing and short-term lodging. Truthful, timely, and transparent pricing, including the nature, purpose, and amount of any fees or charges imposed, is critical for consumers—and also for honest businesses. The legal underpinning of the rule, or the manner and context in which the acts or practices defined by the rule are unfair or deceptive, is not complex. By identifying and targeting pricing tactics that hide the true price of live-event tickets and short-term lodging from consumers, the rule's central provisions prohibit conduct that is inherently deceptive or unfair, including: (1) offering prices that do not include all mandatory fees or charges and (2) misrepresenting the nature, purpose, amount, and refundability of fees or charges, and the identity of the good or service for which the fees or charges are imposed. Thus, the final rule will allow American consumers to make better-informed purchasing decisions when purchasing live-event tickets or deciding where to stay on a short-term basis and level the playing field for honest businesses in these industries that truthfully, timely, and transparently disclose their pricing information.

A representation, omission, or practice is deceptive under section 5 of the FTC Act if it is likely to mislead consumers acting reasonably under the circumstances and is material to consumers—that is, it would likely affect the consumer's conduct or decisions with regard to a good or service.[108] Price is a material term.[109] It is a deceptive practice to misrepresent the price of a good or service,[110] including through a deceptive first contact.[111] Through its false savings cases, the Commission repeatedly found that it was deceptive under section 5 to present an inflated list price or comparison price, from which consumers were misled to believe that the business offered a lower-than-normal price.[112] The inverse—luring consumers to a good or service with a false low price—is also deceptive.[113] For example, in *In re Filderman Corp.,* 64 F.T.C. 427 (1964), the Commission found that the defendant violated section 5 both when it displayed misleading list prices and when it later imposed mandatory service charges on top of the advertised price.[114] Once a consumer has been lured in by deception, including about the cost of the good or service, it is well established that a later disclosure cannot cure that deception.[115] Thus, bait-and-switch pricing, where the initial contact with a consumer shows a lower or partial price without including mandatory fees, violates the FTC Act even if the total price is later disclosed.

A practice is considered unfair under section 5 if: (1) it causes, or is likely to cause, substantial injury; (2) the injury is not reasonably avoidable by consumers; and (3) the injury is not outweighed by benefits to consumers or competition.[116] Pricing that is not truthful or transparent causes or is likely to cause substantial injury; such injury is not reasonably avoidable by consumers or outweighed by benefits to consumers or competition.

Drip pricing and other bait-and-switch tactics that hide the true price cause substantial injury, as the Commission discusses in detail in section V.E, by leading consumers to buy more goods or services, pay more for those goods or services, and incur higher search costs than they otherwise would have if they had been presented with the true price upfront. Studies have shown that consumers spend more money on the same goods when faced with drip pricing, *i.e.,* when they are not shown the total price upfront, but instead are shown a base price, with mandatory fees or charges added later

[116] 15 U.S.C. 45(n).

throughout the buying process.[117] Where mandatory fees or charges are disclosed at the same time as, but separately from, the base price, consumers are still harmed. The practice of dividing the price into multiple components without disclosing the total, generally referred to as partitioned pricing, distorts consumer choice.[118] Consumers confronted with partitioned pricing, on average, underestimate the total price of the good or service, likely because they use mental shortcuts to estimate price that do not fully account for each component.[119]

In addition, consumers who wish to compare prices incur additional search costs to make direct comparisons of goods or services when the full price is not disclosed upfront.[120] For example, in an online transaction to book a hotel room, consumers cannot simply view the first price displayed on each website, but instead need to navigate to subsequent pages or even enter all their payment information and reach the checkout page for each website to determine the true total price of their hotel stay.[121] The same is true on live-event ticketing websites. As TickPick, LLC noted, ''[m]ajor ticketing marketplaces often require consumers to enter their credit card or other payment information prior to disclosing mandatory fees. On these marketplaces, the full purchase price is only disclosed after payment information is collected.'' [122] Under such circumstances, consumers waste time and effort pursuing an offer that is not actually available at the promised price. Such search costs that result from unfair or deceptive practices are legally cognizable injuries under the FTC Act.[123]

Misrepresented fees also cause or are likely to cause substantial injury—they harm consumers as well as businesses that do not engage in these practices. For example, as discussed in section III.C, a hotel might charge a resort fee when only typical and ordinary accommodations and amenities are offered, an environmental fee that serves no environmental purpose, or a fee misrepresented as a government charge. As TickPick, LLC put it, misrepresented fees trick consumers into paying more and ultimately inhibit competition by providing an unfair advantage to businesses that misrepresent their fees.[124] Likewise, when businesses misrepresent fees, consumers are unable to make informed choices about the value of the fee or charge, or the good or service it represents, because their understanding of the fee or charge is predicated on false, vague, or otherwise misleading information. As such, consumers are unable to understand what they have purchased, or to which charges they have consented.[125]

Consumers cannot reasonably avoid these harms. As explained in the NPRM, studies suggest that cognitive bias may prevent consumers from reasonably avoiding injury caused by unfair and deceptive pricing practices.[126] Several behavioral studies explain why consumers cannot reasonably avoid making errors when the true price is not displayed upfront. Behavioral research shows that consumers who first learn of a lower price do not properly adjust their calculations when additional fees are added, thereby underestimating the total price.[127] It also shows that consumers attach value to things they perceive to be theirs and, once consumers begin the purchase process, their perception shifts so that stopping the transaction feels like a loss.[128] The research shows that consumers who already have invested in an endeavor, such as by taking time to make selections on a travel or live-event ticket website, continue that endeavor even if they would pay less if they began again elsewhere.[129] Lastly, consumers necessarily incur search costs when mandatory fees are obscured because it takes them longer to discover the full price within a single transaction and to comparison shop across transactions.[130] Notably, it is unlikely that the market can correct for these injuries because once the practice of displaying incomplete initial prices takes hold, honest businesses will struggle to compete. For example, as noted in the NPRM, one market participant in the live-event ticketing industry, StubHub, unilaterally adopted all-in pricing in 2014 but soon reverted back to its original model after it lost significant market share when customers

incorrectly perceived StubHub's prices to be higher.[131]

The consumer injury caused by these bait-and-switch pricing practices is not outweighed by any benefits to consumers or competition. Consumers receive no benefit from businesses that use drip pricing, partitioned pricing, or misleading price presentation while they obscure the total price. To the extent that consumers could benefit from itemized information about price components, such itemization can be done in conjunction with clear total price information. Consumers receive no benefit from businesses partitioning or breaking up mandatory price components while they obscuring the total price.

Likewise, as discussed in section V.E, there is no benefit to competition, as honest businesses that disclose all-inclusive total prices lose market share to businesses that do not. Bait-and-switch pricing and misleading fees undermine the ability of honest businesses to compete on price and therefore diminish the competitive pressure in a market that pushes prices downward. As a result, these practices lead to higher prices than would be supported in a competitive marketplace. The Antitrust Division of the U.S. Department of Justice noted that ''companies that impose mandatory hidden fees'' have ''an unfair advantage over honest brokers'' and interfere with consumers' ability to ''choose between competitors based on the important considerations of price and what, exactly, the consumer is purchasing.'' [132] Some commenters, including those from the live-event ticketing and short-term lodging industries, noted that bait-and-switch pricing not only confuses consumers, but harms honest businesses that offer truthful, timely, and transparent pricing because their prices initially may seem higher than competitors that use bait-and-switch pricing and misleading fees. For example, TickPick, LLC commended the Commission for proposing to curb the widespread practice of bait-and-switch pricing and observed that ''the proposed rule would significantly benefit consumers and competition in the live-event ticketing industry.'' [133] The American Society of Travel Advisors argued that, in addition to consumer harm, ''the imposition of undisclosed fees also unfairly places honest retailers—those that do disclose the full, all-in price upfront—at a competitive disadvantage relative to those that do not.'' [134]

A minority of commenters stated that hidden and misleading fees do not harm consumers. For instance, the Competitive Enterprise Institute argued that consumers' search costs do not increase when advertisements lack a single total price, as the consumer is better informed after watching the advertisement despite the omission.[135]

While the commenter conceded that consumers may benefit more if a total price is disclosed, the commenter argued that any harm could be easily avoidable by consumers calculating the total themselves.[136] Some commenters also argued that these types of fees often benefit consumers and are openly disclosed.[137] Indeed, the American Gaming Association stated that resort fees enhance a consumer's stay, distinguish resorts from more standard lodging offerings, are openly disclosed to consumers, and often appear several times throughout the search and purchasing process. As the Commission already noted, drip and partitioned pricing and other bait-and-switch pricing harm consumers for numerous reasons, including because consumers underestimate the total price of a good or service, overconsume, overpay, and waste time. The U.S. Chamber of Commerce argued that there are pro-consumer and pro-competitive justifications for this type of pricing, including allowing for dynamic pricing strategies and preventing consumers from paying for services that they do not use.[138] The rule, however, does not prohibit the use of dynamic pricing strategies, itemization, or offering optional goods or services for consumers to select; it simply prohibits offering a price that is not inclusive of all mandatory fees and charges, as well as prohibiting misrepresented fees and charges.

As stated herein, the Commission and courts have previously recognized that price is a material term [139] and that it is a violation of section 5 of the FTC Act to misrepresent the price of a good or service.[140] Commenters emphasized the materiality of price to consumers.[141] The commenters who argue that bait-and-switch pricing does not harm consumers ignore the large body of literature demonstrating that drip pricing and partitioned pricing have a negative impact on consumers and competition. The economic analysis in Section V provides additional discussion regarding the economic harms from bait-and-switch pricing tactics, including drip pricing and partitioned pricing in the live-event and short-term lodging industries.

C. The Economic Effect of the Rule

As part of the rulemaking proceeding, the Commission solicited public comment and data (both qualitative and quantitative) on the economic impact of the proposed rule and its costs and benefits. In issuing this final rule, the Commission has carefully considered the comments received and the costs and benefits of each provision, taking into account the effects on small businesses and consumers, as discussed in more detail in sections V and VII.

The record demonstrates that the most significant anticipated benefits of the final rule are promoting transparent pricing, facilitating comparison shopping for consumers, and leveling

[141] *See, e.g.,* FTC–2023–0064–3162 (BBB National Programs Inc. stated that BBB National Advertising Division ''precedent is clear that the advertised price for a product or service is among one of the most material terms to a consumer's purchasing decision.'').

the playing field for businesses in the live-event ticketing and short-term lodging industries. By prohibiting drip pricing, the final rule also will promote social trust, which is a necessary component of successful market interactions.[142] Most participants in a market transaction do not have prior experience with one another and consumers must rely on some degree of trust that the business will provide the good or service in question, at the stated price and quality level. Without social trust, it would be costlier for both consumers and businesses to acquire all the necessary information to participate in the market. While there has been less research on the relationship between social trust and previous market interactions, there is some evidence that bad market experiences can reduce social trust.[143] Thus, prohibiting these types of deceptive and unfair practices will promote social trust, which can be a measure of a well-functioning market.[144]

Another beneficial consequence would be the expansion of the remedies available for violations of the final rule, including the ability to more effectively obtain monetary relief for consumers who have been deceived about the true total price of live-event tickets or short-term lodging. This is particularly critical given the U.S. Supreme Court's decision in *AMG Capital Mgmt., LLC* v. *FTC,* 593 U.S. 67 (2021), which held that equitable monetary relief, including consumer redress, is not available under section 13(b) of the FTC Act.[145] Under the final rule, the Commission will now be able to seek court-ordered consumer redress in one Federal district court action brought under section 19(a)(1), rather than the longer, less efficient, two-step process for obtaining redress under section 19(a)(2).[146] By allowing the Commission to secure redress more efficiently, this rule will also allow the Commission to conserve its limited enforcement resources for other mission priorities.

As an additional benefit, the rule will enable the Commission to seek civil penalties against violators. The FTC Act generally does not allow the Commission to obtain civil penalties against those who engage in unfair or deceptive acts or practice in violation of section 5(a) of the FTC Act. Section 5(m)(1)(A) of the FTC Act does, however, authorize the Commission to seek civil penalties in court for violations of trade regulation rules, such as the final rule here.[147] The ability to obtain civil penalties provides two benefits. First, court-ordered civil penalties give the Commission the ability to ensure that violators do not retain the profits they earn by engaging in the unfair or deceptive pricing practices prohibited by the rule. Second, the potential for civil penalties will deter violations and provide a strong incentive for businesses providing live-event tickets and short-term lodging to provide truthful and transparent pricing information in compliance with the rule, which will have consumer welfare benefits and will benefit honest competition.[148]

When promulgating a final rule, the Commission must prepare a final regulatory analysis, which is contained in section V. The final regulatory analysis contains an estimated cost-benefit analysis of the final rule, as well as a more in-depth discussion of the comments the Commission received in response to the NPRM. In addition, the Commission's final regulatory flexibility analysis, which is contained in section VII, discusses the final rule's economic impact on small entities.

III. Section-by-Section Analysis

The Commission has carefully considered the rulemaking's extensive comment record. It has weighed considerations raised by individual consumers, businesses (including small businesses), industry advocates, consumer advocates, labor representatives, academics, and other law enforcement bodies. After considering these comments, the Commission finalizes this rule to address a subset of the specific unfair and deceptive practices identified in the NPRM. The rule will help ensure that consumers shopping for live-event tickets and short-term lodging see advertised prices that include all mandatory fees, can obtain such goods or services at those prices, and know what they are paying for. The rule promotes honest and transparent pricing for consumers and a level playing field for businesses.

Numerous public comments in support of and in opposition to the rule included discussions of the definitions and substantive provisions of the proposed rule, and made various recommendations. The Commission considered comments pointing out confusion about specific phrases in the proposed rule, particularly phrases that commenters found vague or overbroad. The Commission also took notice of comments that suggested some entities or transactions would be subject to overlapping Federal regulations regarding pricing disclosures that could result in confusion to consumers or businesses. In addition, the Commission appreciated comments from industry that identified potential gaps in how the proposed rule would interact with certain types of pricing practices.

The Commission makes a number of changes to the final rule. Notably, the Commission narrows the application of the final rule to offers, displays, or advertisements of a covered good or service—*i.e.,* live-event tickets or short-term lodging. The Commission recognizes that many comments to the proposed rule focused on the application of the rule to specific industries or pricing scenarios. As a result of the Commission's decision to limit this final rule to live-event ticketing and short-term lodging, the

[146] *See* 15 U.S.C. 57b(a)(1) and (2); *see also* NPRM, 88 FR 77438 (discussing impact of *AMG Cap. Mgmt.*). When the Commission has reason to believe that the rule has been violated, the Commission can commence a Federal court action to ask a Federal judge to determine liability and, if proven, require violators to provide redress. *See* 15 U.S.C. 57b(a)(1), (b). Without the rule, the path to court-ordered redress is longer. The Commission must first conduct an administrative proceeding to determine whether the respondent engaged in unfair or deceptive acts or practices in violation of section 5(a) of the FTC Act. If the Commission finds that the respondent did so, the Commission issues a cease-and-desist order, which might not become final until after the resolution of any resulting appeal to a Federal court of appeals. Then, to obtain redress, the Commission must initiate a second action in Federal district court, in which it must prove that the violator engaged in objectively fraudulent or dishonest conduct in order to obtain court-ordered redress. *See* 15 U.S.C. 57b(a)(2), (b).

[147] *See* section 5(m)(1)(A) of the FTC Act, 15 U.S.C. 45(m)(1)(A) (providing that those who violate a trade regulation rule "with actual knowledge or knowledge fairly implied on the basis of objective circumstances that such act is unfair or deceptive and is prohibited by such rule" are liable for civil penalties for each violation). In addition, any entity or person who violates such a rule (irrespective of the state of knowledge) is liable for any injury caused to consumers by the rule violation. The Commission may pursue such recovery in a suit under section 19(a)(1) of the FTC Act, 15 U.S.C. 57b(a)(1).

[148] NPRM, 88 FR 77447–48.

Commission need not respond to each of these comments at this time.

In addition, wherever possible, the Commission works to reduce burden on, and maintain pricing flexibility for, businesses. Finally, the Commission provides guidance and explanation to respond to specific questions and hypotheticals posed by commenters to help give additional clarity to businesses. The following discussion provides a section-by-section analysis of the NPRM's proposed provisions and the provisions adopted in the final rule, as well as a discussion of the comments received and the Commission's responses.

A. § 464.1 Definitions

Proposed § 464.1 contained definitions for the following terms: ''ancillary good or service''; ''business''; ''clear(ly) and conspicuous(ly)''; ''government charges''; ''pricing information''; ''shipping charges''; and ''total price.'' The Commission received various comments with respect to these definitions, including particular industries' requests for exemption from the definition of ''business'' and other suggestions. Section 464.1 of the final rule adopts these definitions, in some instances with minor modifications for clarification, and adds a definition for ''covered good or service.'' In the definition-by-definition analysis, the Commission discusses each definition proposed in the NPRM, any changes to the definition's text, the added definition, and other comments relevant to the definitions section that are not otherwise addressed in the discussion of the final rule's substantive provisions.

1. Ancillary Good or Service

Proposed § 464.1(a) in the NPRM defined ''ancillary good or service'' as ''any additional good(s) or service(s) offered to a consumer as part of the same transaction.'' This definition was relevant to the definition of ''total price,'' in proposed § 464.1(g), which specified that any mandatory fees or charges for such goods or services would be included in total price. Commenters proposed modifications to the definition of ''ancillary good or service'' but, following review of those comments and as discussed in this section, the Commission declines to adopt the suggested modifications. Final § 464.1 adopts the definition of ''ancillary good or service'' without modification.

Several commenters recommended that the Commission modify the definition of ''ancillary good or service'' to state that fees charged by a third party must be included in total price if those fees are part of the same transaction.[149] As stated in the NPRM, if a business advertises a price for a good or service that requires an ancillary good or service provided by another entity, the charge for the mandatory ancillary good or service must be included in total price. Additionally, the NPRM made clear that the definition includes goods and services (whether from the seller or third parties) offered as part of the same transaction, because it included examples of mandatory ancillary goods or services that may be offered by third-party providers but are part of the same transaction, such as a payment processing fee for an online transaction. Accordingly, the Commission does not believe that it is necessary to modify the definition of ''ancillary good or service'' to clarify that fees charged by a third party must be included in total price if those fees are part of the same transaction.

Several commenters also suggested that the Commission add language referring to a reasonable consumer in the definition of ''ancillary good or service,'' to clarify that only goods or services that a ''reasonable consumer'' would expect to be included must be included in total price.[150] The Commission does not believe that adding ''reasonable consumer'' to the definition of ''ancillary good or service'' is necessary, as the reasonable consumer standard is implicit in the rule text. Under longstanding precedent, the Commission examines conduct from the perspective of a consumer acting reasonably under the circumstances.[151] If a representation or practice affects or is directed primarily to a particular group, the Commission examines reasonableness from the perspective of an ordinary member of that group.[152] Accordingly, the Commission does not believe it is necessary to modify the definition of ''ancillary good or service'' to refer to a reasonable consumer.

One commenter argued, in the context of online movie ticket purchases, that online convenience fees are reasonably avoidable because consumers can purchase tickets in-person at a theater without incurring the fees.[153] Although a movie ticket is not a covered good or service, similar convenience fees are common in the live-event ticketing industry. The Commission disagrees with the commenter that online convenience fees are reasonably avoidable: If a consumer must pay a service or other fee in order to purchase tickets online (*i.e.,* as part of the same transaction), then such a fee must be included in total price when it appears online. In addition, using vague fee descriptions, such as an unspecified ''convenience'' fee, may violate §§ 464.2(c) and 464.3 by failing to disclose clearly and conspicuously, and by misrepresenting, the nature or purpose of fees or the identity of the good or service for which fees or charges are imposed.

Another commenter argued that the definition of ''ancillary good or service'' should ''not turn on whether the good or service is 'offered' to a consumer but whether it is 'required to be purchased' by the consumer.'' [154] The commenter proposed that the Commission

[154] FTC–2023–0064–3206 (Motor Vehicle Protection Products Association et al.).

incorporate the word ''mandatory'' into the definition of ''ancillary good or service.'' The Commission disagrees with this proposed modification. As discussed in the NPRM, an ancillary good or service may be mandatory or optional. Whether the cost of the ancillary good or service must be incorporated into total price turns on whether the good or service is mandatory, which depends on the facts of a transaction.[155] For example, if a hotel offers a consumer the option to purchase or decline a trip protection plan with a room reservation, the plan would be an optional ancillary good or service because the consumer has the option to decline the trip insurance. Conversely, a hotel may require all guests to purchase a daily breakfast voucher. In this case, the hotel guest cannot avoid being charged for the voucher, and it is a mandatory ancillary good or service. If a business charges payment processing fees that the consumer cannot reasonably avoid, such fees would be for a mandatory ancillary good or service.

It is also possible that a good or service may be mandatory in one transaction but optional in another.[156] For example, if a hotel allows a guest to purchase amenities such as bottled water or pool towels for an additional fee but permits each guest to supply their own water or pool towels, such amenities would be optional ancillary goods or services. If, however, the hotel requires all patrons to use the hotel-provided amenities for a fee, then the amenities would be mandatory ancillary goods or services. Because ancillary goods or services may be either mandatory or optional, the Commission declines to add the word ''mandatory'' into the definition of ''ancillary good or service.''

Some commenters also asked the Commission for additional guidance as to when a good or service might be considered ancillary, particularly if a good or service includes variable costs.[157] The Commission addresses pricing scenarios, including those pertaining to contingent or variable fees, in section III.B.1.a. Another commenter stated that the use of the word ancillary was unclear, because it ''implies a relationship between a primary object and the ancillary object'' and does not include guidance concerning the primary object.[158] The Commission cannot identify in every possible situation which good or service would be the ''primary object'' versus an ancillary good or service because such a determination is fact-specific and will depend on the goods or services offered by individual businesses.

For the foregoing reasons, and based on its review of the comments received, the Commission adopts the definition of ''ancillary good or service'' set forth in the NPRM. As discussed in section III.A.8, to address comments and clarify the rule, the Commission modifies the definition of total price to further clarify that under final § 464.2(a), Businesses may exclude from total price fees or charges for any optional ancillary good or service.

2. Business

Proposed § 464.1(b) defined ''business'' as ''an individual, corporation, partnership, association, or any other entity that offers goods or services, including, but not limited to, online, in mobile applications, and in physical locations.'' As part of the NPRM, the Commission also proposed a carve-out for certain motor vehicle dealers required to comply with the Combating Auto Retail Scams Trade Regulation Rule (''CARS Rule''),[159] and for the carve-out to become effective upon the CARS Rule's effective date. The CARS Rule provides for certain pricing disclosure requirements and prohibits misrepresentations. Final § 464.1 adopts the first sentence of the proposed definition of ''business,'' but removes the carve-out for motor vehicles required to comply with the CARS Rule because of the final rule's narrowed scope.

In the NPRM, the Commission sought input as to whether it should modify the proposed definition of ''business'' to exclude certain businesses, or whether it should add a definition of ''covered business'' to narrow the businesses subject to the rule. The NPRM also included several questions concerning how to define ''covered business'' in the event the Commission opted to adopt such a definition. The Commission received broad support for an industry-neutral rule from individual commenters, consumer groups, and industry organizations. Commenters cited the prevalence of hidden and deceptive fees across a variety of industries and argued that broad exemptions would create an uneven economic playing field and confuse consumers by creating unpredictability across industries.[160] Conversely, the Commission received numerous comments asking that it narrow the rule to specific industries, including, for example, live-event ticketing and short-term lodging. Several commenters also urged the Commission to exempt certain industries, arguing that the rule would pose challenges for those industries or that those industries are already subject to existing regulations.

Following its review of the comments, the Commission narrows application of the final rule to covered goods or services, those involving live-event tickets or short-term lodging. While the comments demonstrated that bait-and-switch pricing and misleading fees and charges inflict harms on consumers across the economy, the rulemaking record reveals longstanding concerns with these unfair and deceptive practices within the live-event ticketing and short-term lodging industries in particular. The final rule addresses these industries first. The Commission addresses the definition of ''covered good or service'' in section III.A.4.

The Commission received comments requesting modifications to various definitions, including the definition of ''business,'' or wholesale exemptions from the proposed rule's coverage related to issues in particular industries, including auto dealers and service providers,[161] app-based delivery platforms,[162] financial services

[155] *See infra* section III.A.8.a.

[156] The Commission notes that several commenters misinterpreted the definition of ''Ancillary Good or Service'' as necessarily being optional. *See, e.g.,* FTC–2023–0064–3145 (Association of National Advertisers, Inc. stated that ''Ancillary fees, by definition, are not 'mandatory' and should not be characterized as 'mandatory' fees subject to the proposed disclosure requirements.''); FTC–2023–0064–1425 (Iowa Bankers Association stated, ''While the definition of Total Price includes 'mandatory' Ancillary Goods or Services, the actual definition [of Ancillary Good or Service] seems to speak to the discretionary aspect of this term.''). The Commission reiterates that the rule text is clear: Ancillary Goods or Services may be mandatory or optional, depending on the facts of a particular transaction.

[162] *E.g.,* FTC–2023–0064–3263 (Flex Association); FTC–2023–0064–3202 (TechNet); FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP).

providers,[163] franchised businesses,[164] funeral service providers,[165] rental housing,[166] restaurants and other food and beverage service providers,[167] telecommunications providers,[168] vending machine retailers,[169] movie theaters,[170] health and fitness centers,[171] higher education institutions,[172] recreational vehicles and marine crafts,[173] and towing companies.[174] The Commission's decision to narrow the final rule to covered goods or services renders these requests inapplicable, and as such, the Commission does not address them at this time.

The Commission received comments from various third-party travel service providers, including online travel agencies and travel advisors, arguing that third-party travel intermediaries and advisors are situated differently from underlying travel service providers and may be subject to existing Department of Transportation (''DOT'') regulations. Online travel agencies and travel advisors routinely offer, display, or advertise prices of covered goods or services to consumers, including businesses, which is conduct covered by the final rule. One industry group representing travel advisors argued that travel advisors do not set the price of underlying travel products and rely on the sellers of such products to provide accurate pricing information.[175] The commenter requested that the Commission include a ''safe harbor mechanism'' to protect travel advisors who may rely on inaccurate pricing information provided by sellers. The Commission declines to exclude travel advisors from the rule or to provide them with a safe harbor. The Commission addresses in section III.B.1.f requests for immunity for third-party intermediaries.

The Commission also received comments from online travel agencies seeking an exemption from the rule for airfare or bundled products that include airfare, arguing that the FTC Act does not confer jurisdiction over airlines and, further, that DOT's Full Fare Advertising Rule requires certain pricing disclosures for airfare.[176] As noted in the NPRM, the Commission's enforcement of its rule is subject to all existing limitations of the law and the Commission cannot bring a complaint to enforce its rule if doing so would exceed the Commission's jurisdiction or constitutional limitations. The Commission declines to exempt online travel agencies from the rule. However, the Commission notes that, where there is overlap between this rule and the DOT's Full Fare Advertising Rule on the treatment of government charges (*i.e.,* in the context of bundled travel packages, such as for airfare and hotels, the Full Fare Advertising Rule requires the inclusion of government taxes and fees in the total price), complying with both rules is feasible. While this rule permits businesses to exclude government charges from total price, it does not require them to do so.

The Commission received a comment from a gaming association seeking an exemption for Federally recognized Indian Tribes and Tribal entities as governments that act for the benefit of their tribal citizens.[177] The commenter asserted that the Commission does not generally exercise regulatory authority over such entities. The comment focused on Tribal government casinos and explained that Tribal casino revenues are used for essential Tribal government services and community development, including education, healthcare services, housing, and infrastructure development.[178]

The Commission recognizes that some Tribal Government casinos and other businesses may operate as hotels or live-event venues, or may otherwise offer goods or services that fit within the definition of covered good or service. Nevertheless, the Commission declines to exempt Federally recognized Indian Tribes and Tribal entities from coverage under the final rule. The FTC Act is a law of general applicability that applies to such entities, as well as individual members thereof.[179] The Commission recognizes that, in some instances, these entities may be organized in such a way that they are outside FTC jurisdiction, but whether a given Tribe or Tribal business is a corporation within the scope of the FTC Act is a fact-dependent inquiry.[180] The Commission is not aware of any evidence to suggest that the final rule would disproportionately impact such entities or that it would have any impact on their ability to continue to use revenues for government services or community development.

The Commission received a comment seeking an exemption for all franchised businesses. The commenter raised concerns that franchised businesses may lose out on the benefit of national

[180] *See, e.g., AMG Servs.,* 2013 WL 7870795, at * 22–23 (holding there was a genuine dispute of material fact barring summary judgment on question of whether Tribal chartered corporations were for-profit corporations under the FTC Act).

advertising campaigns, asserting that ''[u]nder the Proposed Rule, national marketing campaigns are only workable if all franchised businesses in a franchise system adhere to the same pricing regime (including pass-through fees), regardless of the economic demands of the market in which they operate.'' [181] The commenter also raised concerns particular to restaurant franchises.[182]

The Commission declines to exclude franchised businesses from the final rule. As the commenter notes, franchised businesses include hotels, restaurants, and fitness centers, among other businesses. The Commission's addition of the ''covered good or service'' definition narrows the rule's application to businesses that make available live-event tickets or short-term lodging and moots the commenter's concerns regarding restaurants or other franchises. Further, the final rule applies equally to franchised and non-franchised businesses, including hotels. The commenter has not provided any evidence to suggest that the rule will disproportionately impact franchised businesses. As to the commenter's contention that application of the rule will negatively impact franchised businesses' ability to benefit from national advertising campaigns, the Commission addresses commenters' questions and concerns about national advertising campaigns in section III.B.1.d.

The commenter also urged the Commission to exclude from the rule sellers of franchises (''franchisors'') subject to the FTC's Disclosure Requirements and Prohibitions Concerning Franchising Rule (''Franchise Rule''), arguing that the rule's total price requirement would undermine the Franchise Rule's requirement to itemize specific fees.[183] Two commenters representing franchised businesses (''franchisees''), however, urged the Commission to address ''the types of fees that are charged to franchisees by franchisors,'' which are not subject to the Franchise Rule.[184]

The Franchise Rule, 16 CFR part 436, requires franchisors, in connection with the offer or sale of a franchise, to provide prospective franchisees with specific information about the fees and charges necessary to begin operation of the franchised business, including the estimated initial investment, expected fees, and other expenses.[185] Because the final rule is limited to prices for covered goods or services and ancillary goods or services offered as part of the same transaction, it would not apply to an offer or sale of a franchise, including a hotel franchise. However, the Commission reiterates that franchised businesses must comply with the final rule in its entirety when selling covered goods or services.

One industry group recommended that the definition of ''business'' be limited to ''an individual, corporation, partnership, association, or any other entity that offers goods or services to consumers,'' with the purpose of exempting business-to-business transactions from the scope of the final rule.[186] Another industry group similarly requested that the Commission exempt business-to-business transactions from the scope of the final rule.[187] As set forth in section III.B.1.f, the Commission believes that application of the rule to business-to-business transactions is appropriate and necessary to provide the Commission with the tools necessary to seek redress from businesses that violate the law. The final rule covers both business-to-consumer transactions and business-to-business transactions, so no modification to the definition of ''business'' is required.

3. Clear(ly) and Conspicuous(ly)

Proposed § 464.1(c) in the NPRM defined ''clear(ly) and conspicuous(ly),'' consistent with longstanding FTC practice, as ''a required disclosure that is difficult to miss (*i.e.,* easily noticeable) and easily understandable,'' and listed proposed specifications for ''visual disclosure[s],'' ''audible disclosure[s],'' and ''any communication using an interactive electronic medium.'' Among other specifications, the definition explained that the disclosure ''must be made through the same means through which the communication is presented.'' The proposed definition also provided that disclosures ''must use diction and syntax understandable to ordinary consumers and must appear in each language in which the representation that requires disclosure appears'' and ''must not be contradicted or mitigated by, or inconsistent with, anything else in the communication.'' The proposed definition further made clear that for ''representations or sales practice[s]'' targeting specific audiences, ''such as children, older adults, or the terminally ill, 'ordinary consumers' includes reasonable members of that group.'' The Commission finalizes the definition of ''clear(ly) and conspicuous(ly)'' proposed in § 464.1(c) with minor clarifications to harmonize the language and terminology used in this provision with the terminology used in recent rulemakings and agency guidance.

Specifically, proposed § 464.1(c) provided that a required disclosure must be ''difficult to miss (*i.e.,* easily noticeable).'' Final § 464.1 reverses the order of the phrases ''easily noticeable'' and ''difficult to miss,'' and, thus, provides that a required disclosure must be ''easily noticeable (*i.e.,* difficult to miss).'' Additionally, in final § 464.1, the Commission adds language to clarify that required disclosures must be ''easily understandable by ordinary consumers.'' In final § 464.1, the Commission deletes reference to ''reasonable'' members of a specifically targeted group. Each of these modifications is to comport with the Commission's recently finalized Trade Regulation Rule on the Use of Consumer Reviews and Testimonials and the Negative Option Rule, as well as the Commission's Endorsement Guides.[188] Moreover, as noted in section II.B., the Commission examines conduct from the perspective of a consumer acting reasonably under the circumstances, and if a representation or practice affects or is directed primarily to a particular group, the Commission examines reasonableness from the perspective of an ordinary member of that group.[189] In final § 464.1, the Commission also includes ''mobile

applications'' within the definition of ''clear(ly) and conspicuous(ly).'' This addition clarifies that ''mobile applications'' constitute interactive media devices under item (4) of the definition. The Commission does not believe that these modifications substantively alter the definition of ''clear(ly) and conspicuous(ly).''

The Commission declines to adopt several modifications to the definition of ''clear(ly) and conspicuous(ly)'' proposed by a consumer group. First, the commenter suggested that the Commission add ''limited English proficient consumers'' to the list of specific audience-types that a representation or sales practices may target in proposed § 464.1(c)(8) to make clear that disclosures are understandable for both English and limited-English speakers.[190] The Commission does not believe such a modification is necessary. While the definition includes examples of specific audiences who may be targeted by particular sales practices or representations, the use of ''such as'' is intended to make clear these are examples, rather than an exhaustive list of categories of consumers who may be targeted. The Commission further notes that final § 464.1 requires that the disclosures ''must appear in each language in which the representation that requires the disclosure appears.''

The commenter also suggested that the Commission add language to require that disclosures on interactive electronic media ''be capable of being printed and saved in an easily readable format.'' [191] The Commission does not believe such a modification is necessary. The definition considers the various types of media through which consumers and businesses transact and, for all types of media, the definition requires the disclosures to be ''easily noticeable (*i.e.,* difficult to miss).'' Thus, the Commission believes that the definition provides businesses with flexibility to continue transacting effectively and efficiently through different media, while ensuring sufficient consumer understanding of required disclosures. The commenter further proposed that the rule clarify that disclosures must be concise to discourage businesses from ''listing hundreds of optional fees, identifying fees that would not be applicable to the consumer, providing a description that uses complex jargon, [or is] unnecessarily lengthy.'' [192] The definition already addresses these concerns by setting forth what ''clear(ly) and conspicuous(ly)'' means: using simple terms that provide sufficient information about how businesses can formulate disclosures that are easily understandable and noticeable to consumers. The definition provides that disclosures ''must stand out from any accompanying text or other visual elements'' to be ''easily noticed, read, and understood.''

An automobile industry group urged the Commission to remove ''required disclosure'' from the definition of ''clear(ly) and conspicuous(ly),'' arguing that ''the NPRM is silent on what those required disclosures actually are.'' [193] The Commission disagrees and notes that the final rule modifies § 464.2(a) through (c) to provide greater clarity concerning what needs to be disclosed, including total price and other information related to fees or charges that were excluded from total price, and the nature, timing, and prominence of those disclosures. Those modifications are discussed in detail in section III.B.

One commenter on behalf of members in the financial services industry asserted that the definition of ''clear(ly) and conspicuous(ly)'' may conflict with requirements of certain financial services regulations, which do not generally require a certain text size or placement, but do require that certain disclosures be made with ''equal prominence and in close proximity to certain trigger terms.'' [194] The Commission does not believe that financial services regulations are implicated by the final rule's more narrow application to covered goods or services. Nonetheless, the Commission notes that the definition does not require a particular text size or placement; the definition states that ''clear(ly) and conspicuous(ly)'' requires a visual disclosure to ''stand out from any accompanying text or other visual elements so that it is easily noticed, read, and understood.''

A commenter on behalf of marketing and advertising businesses criticized the proposed definition of ''clear(ly) and conspicuous(ly)'' as imposing ''prescriptive visual and audio disclosure[s] . . . that may not cleanly map onto all advertising mediums'' and argued that a business's compliance obligations may not be clear if the business relies on advertising mediums not mentioned in the definition.[195] The commenter urged the Commission to allow for sufficient flexibility ''to better accommodate current and future advertising mediums that may not allow for the contemplated disclosures,'' in particular to make it easier for small businesses to comply with the rule.[196] The commenter did not provide any examples of advertising media that would make it difficult to comply with the rule and did not suggest alternative language. Similarly, a commenter representing app-based delivery platforms noted the limited space for disclosures on delivery platforms and asserted that the rule lacked clarity as to how such platforms should comply.[197]

The Commission believes that the definition of ''clear(ly) and conspicuous(ly)'' provides basic, common-sense, and flexible principles to address current and future advertising media. For example, the definition requires that visual disclosures be in a size and font that consumers will easily notice and not be obscured by other text and that audible disclosures be at a volume, speed, and cadence that consumers will easily understand. In keeping with longstanding Commission interpretation and guidance, the definition does not mandate specific fonts, text-size, or volume, or otherwise impose a one-size-fits-all approach. Instead, it provides substantial flexibility to businesses in meeting the rule's disclosure requirements so long as consumers take away an accurate understanding of the disclosure. The Commission has published multiple resources to assist businesses in ensuring that disclosures are clear and conspicuous, including a guide specifically geared toward digital and mobile advertising.[198]

4. Covered Good or Service

In the NPRM, the Commission solicited comment on whether it should narrow the businesses covered by the rule to particular industries or to covered businesses, and if so, how to define covered businesses.[199] The final rule includes a definition for ''covered good or service'' to include: (1) Live-event tickets; or (2) Short-term lodging, including temporary sleeping accommodations at a hotel, motel, inn, short-term rental, vacation rental or other place of lodging. Under § 464.2(a),

[199] NPRM, 88 FR 77481, Question 14.

the final rule requires businesses that offer, display, or advertise any price of a covered good or service to clearly and conspicuously disclose the total price. In addition, § 464.3 of the final rule prohibits businesses that offer, display, or advertise a covered good or service from misrepresenting any fees or charges.

The Commission received comments encouraging it to adopt an industry-neutral rule and urging it not to limit the rule's application to particular industries, as well as comments conversely urging it to limit the rule to live-event ticketing and short-term lodging industries. One advocacy group argued that narrowing application of the final rule to a subset of industries would ''create an unlevel playing field'' and alter competitive incentives.[200] Other commenters argued that hidden or deceptive fees are present across industries and often impact vulnerable populations.[201] Several commenters did not specifically address the Commission's question regarding whether to add a definition of ''covered business'' or how to define ''covered business,'' but instead submitted comments highlighting unfair and deceptive pricing practices in certain industries, and encouraging the Commission to adopt a final rule applicable to those industries. Those included comments concerning the motor vehicle industry;[202] delivery applications;[203] the financial services industry;[204] the restaurant industry;[205] the movie theater industry;[206] tax preparation services;[207] and the health care industry.[208]

Several commenters specifically urged the Commission to ensure that the rental housing industry would be subject to the final rule, including in any definition of ''covered business,'' to mitigate unfair or deceptive fees imposed on renters.[209] The Commission also received numerous comments from individual consumers, consumer and policy organizations, elected officials, legal service providers, and housing advocates highlighting unfair and deceptive fees in the rental housing industry.[210] Conversely, advocates from

[209] FTC–2023–0064–2888 (Housing Policy Clinic, University of Texas School of Law stated, ''it is essential for the rule to cover the rental housing industry in order to mitigate the harmful impacts of unfair and deceptive fees on renters.''); FTC–2023–0064–2858 (U.S. House of Representatives, Rep. Maxwell Alejandro Frost, Rep. Jimmy Gomez, Rep. Barbara Lee, Rep. Rashida Tlaib, Rep. Kevin Mullin, Rep. Dwight Evans, Rep. Judy Chu, Rep. Greg Casar, Rep. Dan Goldman, and Rep. Salud Carbajal encouraged an industry-neutral rule but urged the Commission at minimum to include live-event ticketing, short-term lodging, and the rental housing industries in the final rule.); FTC–2023–0064–3275 (Berkeley Center for Consumer Law & Economic Justice et al. commented that: ''Exempting landlords from the Rule as other commenters have proposed would deprive the Commission of a critical tool to challenge purveyors of junk fees charged in connection with a basic necessity of life, one that is disproportionately relevant to low-income consumers.'').

[210] *See, e.g.,* FTC–2023–0064–3218 (National Consumer Law Center collected consumer comments highlighting: ''a 'technology fee' addendum that adds 1% fee of total rent on top of rental cost''; ''an extra $255 in mandatory fees, for services I don't even want''; and ''water, sewer, and garbage fees would be charged over and above the base rent we agreed to . . . [that] could add as much as $250 extra per month to our rent.''); FTC–2023–0064–3271 (U.S. Senator Amy Klobuchar commented discussing a hearing conducted concerning rental housing competition and noting that: ''[R]enters are often hit with numerous junk fees that are only disclosed to them when signing a lease—frequently after the renter has already given notice to end a prior lease. . . . As a result, renters struggle to meaningfully compare the cost of various housing options.''); FTC–2023–0064–2888 (Housing Policy Clinic, University of Texas School of Law commented: ''This lack of transparency robs tenants of their opportunity to fairly participate in comparison shopping in the rental housing market and can seriously disrupt their financial well-being and housing stability.''); FTC–2023–0064–3218 (National Consumer Law Center commented: ''With respect to the rental housing market, the proposed rule would benefit consumers and competition. By requiring disclosure of the actual cost of an apartment, the rule would help renters to comparison shop and enable them to find housing that fits their budget.''); FTC–2023–0064–3225 (CED Law described undisclosed fees experienced by its clients and stated: ''Up front disclosure of all mandatory fees and accurate representation of all fees charged would go a long way towards ensuring low income renters like those we represent in Colorado understand what their monthly housing

Continued

the rental housing industry urged the Commission to exempt rental housing providers from any definition of ''covered business.'' [211] A rental housing advertising platform urged the Commission to adopt a definition of ''covered business'' that excludes third-party advertising platforms, arguing that third-party platforms do not direct pricing and ''are not best positioned to meet the requirements of the proposed rule.'' [212]

On the other hand, the Commission also received comments in support of a narrow definition of ''covered business'' limited to the live-event ticketing and short-term lodging industries, including from members of those industries.[213] The U.S. Chamber of Commerce recommended limiting the definition of covered businesses to ''the live-event ticketing and/or short-term lodging industries,'' arguing that unique aspects of these markets, including a robust secondary market for live-event tickets and pressures on third-party lodging intermediaries ''to advertise the lowest price to consumers to optimize search outcomes,'' have shaped FTC research on all-in pricing and appropriate remedies.[214] One academic commenter likewise recommended a definition of ''covered business'' limited to live-event ticketing and short-term lodging, stating that these industries have been subject to extensive research showing ''their use of across-the-board drip pricing to be harmful.'' [215]

Commenters from the live-event ticketing industry supported a rule applicable to their industry, emphasizing that a total price requirement will aid consumers and businesses alike if applied across the entire industry.[216] For example, TickPick, a secondary ticket marketplace, commented that it already provides consumers with all-in pricing and supports ''eliminating drip pricing from the live-event ticketing industry,'' arguing that ''widespread use of hidden and/or misleading fees harms consumers and market competition.'' [217] StubHub similarly commented that it ''strongly supports efforts to increase price transparency for consumers nationwide with the federal adoption of all-in pricing'' in the live-event ticketing industry. According to StubHub, in 2014, it decided to display the all-in price to consumers in the hopes of encouraging the remainder of the industry to follow suit; however, it ''had no choice but to revert to its former pricing display,'' which used dripped fees, because other platforms continued to rely on drip pricing, making StubHub's all-in prices appear higher than other platforms.[218] Live Nation and its subsidiary, Ticketmaster North America, likewise expressed concern that, absent a nationwide rulemaking to implement all-in pricing, ''the current market realities present barriers to implementing all-in pricing,'' because adopting all-in pricing ''absent a mandate creates a first-mover disadvantage.'' [219] Live Nation stated that the rule would ''increase pricing transparency for fans and support competition in the ticketing industry.'' [220]

The Commission also received support from the representatives of the short-term lodging industry for the rule's application to that industry. The American Society of Travel Advisors commented that ''the rule as proposed would greatly benefit consumers of hotel and other short-term lodging services'' and applauded the proposed rule's prohibition on misleading fees.[221] The American Hotel & Lodging Association also expressed support for implementation of clear total price requirements and encouraged the Commission to ''ensure that any final rule it promulgates . . . apply broadly to all industry participants,'' including intermediaries such as online travel agencies, short-term rental platforms, and metasearch sites.[222] The American Gaming Association, a trade group representing the casino industry, contended that fees are adequately disclosed and provide value to consumers, but stated that, if applied to the lodging industry, the rule should be applied ''equitably across the industry. . . . including search engines, online travel agencies, and other third-party vendors.'' [223]

---

expenses will be before being locked into a lease agreement.''); FTC–2023–0064–0146 (Individual Commenter stated they pay fees including for trash, electricity, and ''some other junk fees'' and argued that rental providers ''should be forced to disclose all fees before lease signing and never be able to add fees after the lease has been signed.''); FTC–2023–0064–0157 (Individual Commenter highlighted mandatory added fees and charges not disclosed in listed rental prices and stated: ''Landlords should not be allowed to force tenants into paying these fees with no opt out or if the fees are allowed, then the landlord must add that to the total monthly rent in advertisements so prospective tenants have an accurate scope of what the real monthly costs are.''); FTC–2023–0064–0229 (Individual Commenter described an apartment company with fees: ''[I]ncluding a $20 mos. fee for package delivery. It's a mandatory add-on. Many people do not get packages. Including myself.''); FTC–2023–0064–0923 (Individual Commenter stated their rental ''requires a number of fixed, non-negotiable mandatory fees. . . . In my opinion, these fees allow the company to advertise a lower monthly rental rate, intentionally making it difficult for a prospective tenant to comparison shop and compare rents from different organizations.'').

[220] *Id.*

[221] FTC–2023–0064–3106 (American Society of Travel Advisors).

[222] FTC–2023–0064–3094 (American Hotel & Lodging Association).

[223] FTC–2023–0064–2886 (American Gaming Association). As discussed in section II, bait-and-switch pricing, including drip pricing, harms consumers even when charges are subsequently disclosed.

As described in section II, the Commission has determined, in its discretion, to focus this final rule on the live-event ticketing and short-term lodging industries. The Commission recognizes that substantial evidence exists to support a finding of the prevalence of bait-and-switch pricing and misleading fees throughout the economy; nevertheless, the Commission elects to use its rulemaking authority incrementally by first combatting these unfair and deceptive practices in the two industries in which the Commission first began evaluating drip pricing and that have a history of bait-and-switch pricing tactics and misleading fees. Indeed, commenters representing the live-event ticket and short-term lodging industries recognized the need for the Commission's rulemaking and generally supported the rule's application to those industries.

As described in this section, the Commission received comments supporting a definition of ''covered business'' that is limited to the live-event ticketing and short-term lodging industries.[224] The Commission also received comments emphasizing the need for a level playing field among businesses and allowing consumers to comparison shop.[225] For reasons described herein, the final rule applies to a defined set of covered goods or services, rather than to covered businesses. Because some businesses in the live-event ticketing and short-term lodging industries provide goods or services outside of those industries, a narrowing of the businesses covered by the rule rather than a narrowing of the goods or services covered by the rule, might unintentionally create an uneven playing field. As a result, the Commission instead narrows the rule to the defined covered goods and services of live-event tickets and short-term lodging. The Commission notes that the rule also applies to ancillary goods or services, defined as additional goods or services offered to consumers as part of the same transaction.

The NPRM also solicited comment as to how to define businesses that offer either live-event ticketing or short-term lodging, if the final rule were narrowed to covered businesses.[226] A third-party ticketing marketplace commented that it ''supports inclusion of the live-event ticketing industry as a 'covered business' and is comfortable with the proposed definition of 'businesses in the live-event ticketing industry . . . .' '' [227] The final rule's inclusion of live-event tickets in the definition of ''covered good or service'' is consistent with the proposed definition of covered business in the NPRM.

With respect to the proposed definition of the short-term lodging industry, the American Hotel & Lodging Association commented that the Commission should define short-term lodging as: ''a hotel, motel, inn, short-term rental, or other place of lodging that advertises at a price that is a nightly, hourly, or weekly rate.'' [228] One commenter representing the rental housing industry expressed concern that the proposed definition of short-term lodging ''could mean different things to different people, and that could be (mis)applied to rental housing industry,'' including, for example, where an apartment community provides temporary corporate housing subject to the same leasing agreements as longer-term tenants or where a resident extends a lease agreement for a few weeks or months.[229] Conversely, another commenter representing the rental housing industry explained that for rental housing, ''the landlord-tenant relationship involves an ongoing contractual relationship, typically at least a year-long commitment.'' [230]

The final rule incorporates portions of the American Hotel & Lodging Association's suggested definition of short-term lodging and the Commission modifies the rule text proposed in the NPRM to refer to hotels, motels, inns, short-term rentals, vacation rentals, or other places of lodging. The Commission declines to limit the definition of short-term lodging based on the advertised payment period or length of stay. In some instances, short-term lodging may include home shares and vacation rentals, such as through platforms like Airbnb or VRBO, that offer short-term rental accommodations for durations as long as several months. The Commission clarifies that, with the addition of a definition for ''covered good or service,'' it does not intend to cover rental housing providers at this time. When a rental housing provider offers a short-term extension on a lease, the extension typically would not be considered short-term lodging under the rule. Similarly, an apartment community that offers temporary corporate housing subject to the same conditions as its long-term leases typically would not be considered short-term lodging under the rule. On the other hand, a hotel that offers discounted extended stays typically would be considered short-term lodging under the rule. Whether any particular good or service is short-term lodging within the rule's definition of ''covered good or service'' will depend on the specific factual circumstances. In addition, the Commission may provide additional business guidance to address nuanced pricing scenarios that may arise.

5. Government Charges

Proposed § 464.1(d) in the NPRM defined ''government charges'' as ''all fees or charges imposed on consumers by a Federal, State, or local government agency, unit, or department,'' and specified that government charges did not encompass fees or charges that the government imposes on a business and that a business chooses to pass on to consumers. The proposed rule permitted businesses to exclude government charges from total price. The Commission received comments supporting and critiquing the proposed rule's treatment of government charges. Final § 464.1 adopts this provision with minor modifications to add ''Tribal'' fees and charges and to clarify that the definition of ''government charges'' includes ''the fees or charges imposed on the transaction by a Federal, State, Tribal, or local government agency, unit, or department.''

One consumer group supported the NPRM's exclusion of fees or charges that businesses choose to pass onto consumers from the definition of ''government charges'' (thus requiring their inclusion in total price), and expressed concern that businesses may inflate such fees to pad profits, rather than accurately reflect amounts paid in fees or charges to the government.[231] Two academic commenters similarly supported the distinction between fees

or charges imposed on consumers and those that a business chooses to pass onto consumers, stating that the latter should be incorporated into total price to avoid creating a loophole that would undermine the rule.[232]

On the other hand, the Commission received several comments expressing concern over the NPRM's definition of ''government charges'' as including only those charges ''imposed on consumers.'' Two commenters argued that the proposed definition failed to consider nuances in tax law across States and localities. They pointed out, for example, that several State laws formally impose sales tax on businesses, rather than on consumers.[233] Under the proposed definition, sales tax in those States would need to be included in total price, while sales tax in other States could be excluded from total price. These and other commenters also noted that many States prohibit the inclusion of sales tax in total price, which would result in direct conflict between the proposed rule and State laws that formally impose sales tax on businesses.[234] Relatedly, one tax policy organization noted variation in how State laws treat hotel occupancy taxes, with most State laws defining hotel occupancy taxes as imposed on the hotel operator and just six States defining hotel occupancy taxes as imposed on the consumer. Under the proposed definition of ''government charges,'' the commenter stated, hotel operators in all but six States would be required to include occupancy taxes in total price.[235] As such, these commenters argued that the proposed definition is unworkable and noted that businesses will spend considerable time and resources in understanding the legal incidence of Federal, State, and local taxes.[236]

Industry groups also urged the Commission to modify the definition of ''government charges'' to include charges and fees that the government expressly permits, and sometimes requires, businesses to pass through to consumers.[237] One commenter noted that businesses may be required to ''unfairly absorb'' the cost of these government charges.[238] Commenters also expressed concern that incorporating pass-through taxes that consumers understand and have come to expect into total price would obscure government fees, resulting in less pricing transparency, because consumers will not understand that the additional costs stem from the imposition of government fees.[239] Relatedly, two industry groups argued that consumers should be made aware through transparent pricing that additional costs stem from government taxes and fees, rather than requiring businesses to include them in total price.[240]

After considering the comments, the Commission modifies the definition of ''government charges'' from those fees or charges ''imposed on consumers'' to those ''imposed on the transaction.'' As such, it eliminates the potential distinction between fees and charges for the transaction a government imposes directly on consumers and those imposed on businesses. Businesses may not exclude from total price fees and charges that are wholly distinct from the relevant transaction, such as a proportional share of a business's income or property taxes, because they would not be government charges that were ''imposed on the transaction by a Federal, State, Tribal, or local government agency, unit, or department.''

An online travel agency submitted a comment identifying concerns about a potential conflict between the definition of ''government charges'' and DOT's Full Fare Advertising Rule, 14 CFR 399.84, which requires tax-inclusive pricing for certain travel products, including airline tickets and bundled vacation packages (*e.g.,* airline tickets and hotel stays purchased together).[241] Specifically, the commenter asserted that the final rule should require that hotels and short-term lodging providers incorporate government charges into total price because, otherwise, consumers shopping for bundled vacation packages—which are subject to the Full Fare Advertising Rule—could see different prices from consumers who shop separately for flights and lodging. The commenter also argued that the rule should require that taxes and government-imposed fees be included in advertised lodging prices, consistent with DOT's Full Fare Advertising Rule. The Commission declines to require only short-term lodging providers, as opposed to live-event ticket sellers and other businesses covered by the rule, to incorporate government charges into total price. However, the Commission notes that while the final rule provides that businesses ''may'' exclude government charges from total price, nothing in the rule prevents businesses from advertising prices inclusive of those charges, as required by DOT's Full Fare Advertising Rule.

Finally, an industry group representing certain Federally recognized Arizona Indian Tribes that operate gaming entities urged the Commission to include fees or charges imposed on consumers by ''tribal'' agencies, units, or departments in the definition of ''government charges,'' to recognize taxes or fees that Tribes might impose.[242] The Commission agrees and adds the word ''Tribal'' to the definition of ''government charges'' to clarify that businesses may exclude from total price fees or charges imposed on a transaction by a Tribal government.

The Commission notes that the modifications in the final rule to the definition of ''government charges'' represent a narrowing of the final rule. businesses must still make the disclosures required by § 464.2(c) in connection with government charges and are prohibited by § 464.3 from misrepresenting the nature, purpose,

amount, or refundability of government charges.

6. Pricing Information

Proposed § 464.1(e) in the NPRM defined ''pricing information'' as ''any information relating to any amount a consumer may pay.'' The final rule references pricing information in one provision: § 464.2(b). As discussed in section III.B.2, final § 464.2(b) is limited to covered goods or services and requires that, in any offer, display, or advertisement that represents any price of a covered good or service, a business disclose the total price more prominently than any other pricing information. However, where the final amount of payment for the transaction is displayed, the final amount of payment must be disclosed more prominently than, or as prominently as, the total price.

A commenter from the financial services industry asserted that the proposed definition of ''pricing information'' would be inappropriate for ''standard bank products, such as checking, savings, CDs, consumer loans, etc.'' and failed to address the treatment of interest rates for products and services governed by existing financial regulations.[243] The commenter's concerns about the definition of ''pricing information'' are inapplicable because the final rule, including § 464.2(b), is limited to covered goods or services. Accordingly, the final rule adopts the proposed definition of ''pricing information'' at § 464.1 without modification.

7. Shipping Charges

Proposed § 464.1(f) in the NPRM defined ''shipping charges'' as ''the fees or charges that reasonably reflect the amount a business incurs to send physical goods to a consumer through the mail, including private mail services.'' The NPRM made clear that businesses are not permitted to artificially inflate the cost of shipping, and, instead, shipping charges must reasonably reflect the cost incurred to send goods to consumers. Final § 464.1 adopts the proposed definition of ''shipping charges,'' with a minor modification to clarify that shipping charges incurred through private mail and shipping services such as FedEx and UPS, or by freight, fall within the definition.

One trade association raised numerous concerns about the proposed definition of ''shipping charges.'' First, the commenter argued that the proposed definition fails to consider the unpredictability of shipping fees, noting that precise costs are difficult for retailers to determine because shipping costs are frequently based on quotes or estimates subject to change based on the carrier.[244] The commenter noted that businesses may face challenges using certain shipping methods, including consolidating shipment of multiple orders or using rail service for partial shipment, which it argued can be particularly difficult to predict. Second, the commenter asked that the Commission modify the definition of ''shipping charges'' to explicitly permit the use of flat rate shipping, explaining that many businesses have existing agreements with major freight carriers to provide flat rate shipping. For example, the commenter asked whether the use of flat rate shipping charges would be considered unlawful if the business shipped a small, lightweight item for which the actual shipping costs are less than the flat rate to ship. Finally, the commenter argued that the use of the phrase ''reasonably reflect'' in the definition is ambiguous and asked that the Commission clarify whether the definition includes a scienter requirement. Two commenters also asserted that the rule would ''force'' businesses to disclose proprietary shipping calculations in a threat to free market competition.[245]

The Commission's use of the phrase ''reasonably reflect'' is intended to allow for flexibility in determining shipping costs. The Commission recognizes that precise shipping costs may not be knowable until the end of a transaction, and, for that reason, the final rule permits businesses to exclude shipping charges from total price. The rule does not require that the cost of shipping reflect an exact certainty. Moreover, the rule does not require businesses to disclose proprietary information pertaining to relationships with freight or shipping providers because the rule does not require that shipping charges be excluded from total price; instead, the rule permits businesses to exclude shipping charges from total price if they choose. The final rule does not prohibit businesses from incorporating the cost of shipping into total price and thereby providing shipping to consumers at no additional charge. Nor does the final rule prohibit the use of flat rate shipping or shipping costs based on national averages. Instead, the language is intended to prevent businesses from inappropriately excluding from total price costs unrelated to shipping.

One live-event ticket platform supported the proposed rule's exclusion of certain shipping costs from total price, noting that the cost to ship physical tickets may vary based on factors determined later in the transaction, such as the location of the buyer.[246] The commenter also noted that a variety of delivery and shipping methods may be available to consumers purchasing live-event tickets, some of which may be mandatory and therefore included in total price.[247] The Commission emphasizes that certain fees do not fall within the definition of ''shipping charges,'' including online ''convenience'' or other fees charged, for example, by online ticket agencies to electronically ''deliver'' tickets or other processing fees associated with certain online purchases. The Commission further notes that an online convenience or other fee for electronic delivery of a ticket should be included in total price if a consumer cannot obtain the ticket as part of the same transaction (*i.e.,* online) without incurring a fee. While the Commission received comments raising concerns about incorporating the cost of delivery, as opposed to shipping, into total price,[248] the Commission is not aware of any evidence that such concerns would apply to sales of live-event tickets or short-term lodging.

Finally, the Commission also received a range of comments regarding handling costs. Some commenters urged the Commission to amend the definition of ''shipping charges'' to clarify that internal handling costs do not constitute shipping costs and therefore must be included in total price.[249] The comments related to handling costs involving goods or services covered by the broader proposed rule in the NPRM.[250] While the Commission has not received any evidence that the

[250] FTC–2023–0064–3146 (Institute for Policy Integrity, New York University School of Law); FTC–2023–0064–1294 (James J. Angel, Ph.D., CFP, CFA, Professor, Georgetown University, McDonough School of Business); FTC–2023–0064–3267 (National Retail Federation).

concerns raised in these comments would impact covered goods or services, the Commission clarifies that internal handling costs must be included in total price. The Commission does not believe that a modification to the ''shipping charges'' definition is necessary, however, because the definition specifically states that shipping charges include only those costs that reasonably reflect the cost to ''send physical goods'' to consumers. The Commission does not believe that handling charges, like the cost to store goods or labor costs associated with preparing items for shipment, reflect the costs to ''send physical goods'' to consumers. Accordingly, handling charges are not shipping charges and must be included in total price.

8. Total Price

Proposed § 464.1(g) in the NPRM defined ''total price'' as ''the maximum total of all fees or charges a consumer must pay for a good or service and any mandatory ancillary good or service, except that shipping charges and government charges may be excluded.'' Although some commenters stated that the proposed definition was not flexible enough to account for all pricing models, the Commission believes the modified definition of ''total price'' is narrowly tailored to protect consumers by addressing the identified unfair and deceptive practice of hiding costs by omitting mandatory fees from advertised prices for covered goods or services. Consumers must be able to purchase and use goods or services at the advertised total price.

Final § 464.1 differs from the proposed definition of ''total price''[251] to the extent the definitions of ''government charges'' and ''shipping charges,'' as discussed in section III at A.5 and A.7, are modified. In addition, the Commission clarifies in final § 464.1 that businesses also may exclude from total price any fees or charges for optional ancillary goods or services. Further, the Commission notes herein that the rule does not directly address concerns that fees imposed in connection with covered goods or services are ''excessive''; the rule does not cap, ban, or prohibit the charging of any fees, but requires certain disclosures and prohibits misrepresentations to prevent unfair or deceptive pricing practices.

As detailed herein, the Commission declines to accept commenters' recommendations to define ''mandatory,'' to exclude ancillary goods or services from the ''total price'' definition, to modify the ''maximum total'' requirement, or to require the inclusion of shipping charges and government charges in total price. However, the Commission clarifies in final § 464.2(c) that businesses must disclose the final amount of payment for the transaction before a consumer consents to pay.

(a) Mandatory Fees

Commenters noted that the rule does not define ''mandatory,'' and expressed concern about identifying mandatory fees to be included in total price.[252] Some commenters recommended that the Commission clarify the distinction between ''core'' goods and services and ancillary goods or services,[253] provide guidance as to which ancillary goods or services are mandatory,[254] and modify the ''total price'' definition to exclude the reference to mandatory ancillary goods or services.[255]

The Commission has considered these comments and declines to accept these proposed modifications to the definition of ''total price.'' The definition of ''total price'' specifies that it includes the cost of the goods and services being offered and any mandatory ancillary goods or services, subject to certain exceptions. The Commission retains in the definition of ''total price'' fees and charges for ''any mandatory ancillary good or service'' as necessary to protect consumers from the identified unfair and deceptive practice of hidden fees.

The Commission also declines to modify the rule to add a definition of ''mandatory fees.'' The Commission cannot identify in advance a definitive list of mandatory fees because whether a particular fee will be mandatory or optional will depend on the specific facts of an individual business transaction, as described in section III.A.1.

Ancillary goods or services can be either optional or mandatory depending on whether businesses require consumers to purchase them or if they are necessary to make the principal goods or services fit for their intended purpose. If businesses offer ancillary goods or services and require consumers to purchase them to complete transactions for or to use the covered goods or services being offered, the ancillary goods or services are mandatory and their cost must be included in total price.

In the NPRM, the Commission sought comment on whether it was clear that the reference in the definition of ''total price'' to ''all fees or charges a consumer must pay for a good or service and any mandatory ancillary good or service'' includes (1) all fees or charges that are not reasonably avoidable and (2) all fees or charges for goods or services that a reasonable consumer would expect to be included with the purchase.[256] Commenters disagreed on whether the rule text is clear that ''total price'' includes unavoidable fees and fees based on consumer expectations, and recommended clarifying the definition of ''total price'' in this regard or adding a definition of mandatory fees.[257] Other commenters argued that the two types of fees described are themselves vague and unclear.[258]

Businesses should consider, in the context of their specific business practices, the Commission's guidance that mandatory fees include charges that consumers cannot reasonably avoid and charges for goods or services that a reasonable consumer would expect to be included with the purchase because they are necessary to make primary goods or services fit for their intended purpose. The Commission reiterates the guidance about total price that it provided in the NPRM: It is well established that it is deceptive to offer goods or services that are not fit for the purpose for which they are sold. By offering goods or services, businesses impliedly represent that the goods or services are fit for their intended purpose; reasonable consumers would expect that, when they purchase a good or service, they will be able to use it for

[251] Although one commenter expressed concern that businesses would use different terms for Total Price, and thereby create confusion, the rule does not mandate that Businesses use the term Total Price. *See* FTC–2023–0064–3290 (U.S. Public Interest Research Group Education Fund).

[252] *See, e.g.,* FTC–2023–0064–3133 (National Multifamily Housing Council and National Apartment Association); FTC–2023–0064–3134 (U.S. Department of Transportation, Federal Motor Carrier Safety Administration); FTC–2023–0064–3145 (Association of National Advertisers, Inc.).

that purpose.[259] It is therefore deceptive to advertise a total price for a primary good or service that does not include fees for additional purchases that are necessary to render the primary good or service fit for its intended purpose.

Further, businesses cannot treat additional purchases that are necessary to render covered goods or services fit for their intended purpose as optional and exclude the costs of these additional purchases from total price. For example, businesses cannot treat credit card surcharges or processing fees as optional and exclude them from total price if they do not provide consumers with other payment options. The rule does not require, as some commenters suggested, the inclusion of fees for truly optional ancillary goods or services in total price.[260] Nonetheless, such fees and their nature, purpose, and amount still must be clearly and conspicuously disclosed before the consumer consents to pay and cannot be misrepresented.

Commenters expressed the concern that businesses could misrepresent mandatory fees as optional, for example, by including them by default in bills, requiring consumers to opt out from them, or using other deceptive practices, and recommended that the Commission include safeguards in the rule to prevent these practices.[261] The Commission determines that the rule adequately protects consumers from the posited scenarios without modification. businesses cannot characterize fees as optional and exclude them from total price when businesses require consumers to purchase the good or service for which the fees are charged and employ practices, such as default billing or opt-out provisions, that effectively take away consumers' ability to consent to the fees. For example, a previously undisclosed resort fee that a hotel discloses at check-in is not an optional fee if the hotel will charge the fee unless the guest challenges the fee. Final § 464.3 prohibits misrepresenting the nature, purpose, amount, and refundability of fees, including misrepresenting mandatory fees as optional fees from which consumers must opt out.[262]

Whether fees for ancillary goods or services must be included in total price will depend on the specific factual circumstances. The inclusion of the defined term ''ancillary good or service'' in the definition of ''total price'' clarifies that total price includes ''additional good(s) or service(s) offered to a consumer as part of the same transaction.'' Businesses cannot exclude mandatory fees from total price simply by characterizing them as not part of the same transaction if, in fact, they are.

(b) Maximum Total

The rule provides that ''total price'' is the ''maximum total'' of all mandatory fees except identified permissible exclusions. Some commenters objected to defining ''total price'' as the maximum total, arguing that it could discourage advertising discounted rates or misrepresent actual costs and interfere with comparison shopping.[263] Other commenters suggested that the reference to maximum total would require businesses that enter into continuous service contracts with consumers (*e.g.,* subscriptions) to include in total price all mandatory fees that might arise over the duration of a contract, which they argued would be difficult to determine at the time the rule requires a total price disclosure.[264] Some commenters argued that continuous service contracts that reflect negotiated transactions do not raise ''bait and switch'' concerns and that total price is adequately disclosed in such contracts.[265]

The Commission has considered comments relating to the ''maximum total'' requirement and retains that language in the definition of ''total price.'' The Commission determines that such language is necessary to protect consumers from advertised total prices that are deceptively lower than what businesses actually charge. As the Commission noted in the NPRM, ''[t]he use of the phrase 'maximum total' would allow businesses to apply discounts and rebates after disclosing total price.'' [266] Since all businesses are subject to the maximum total requirement for covered goods or services, the resulting level playing field would allow for comparison shopping. The Commission does not agree that disclosures in contracts or agreements adequately protect consumers from deceptive advertising that omits mandatory fees.

Commenters questioned how businesses should handle conditions or limitations on advertised prices.[267] Businesses must comply with the rule and other disclosure requirements, including those related to material conditions or limitations.[268] Businesses that advertise prices that are not attainable by consumers because the prices are conditioned on undisclosed material conditions, restrictions, or limitations may fail to disclose and misrepresent total price.

(c) Itemization

The rule neither requires, nor prohibits, the itemization of mandatory fees that must be included in total price. The Commission notes that final § 464.2(c) requires disclosure of the nature, purpose, and amount of fees or charges imposed on the transaction that have been excluded from total price but declines to modify the regulatory text proposed in the NPRM to otherwise require or prohibit the itemization of fees.

Some commenters recommended that the rule not require itemization.[269] Other commenters stated that including mandatory fees in total price would obscure the nature and purpose of the fees and provide less information to consumers,[270] while others

[259] NPRM, 88 FR 77432.

[260] *See, e.g.,* FTC–2023–0064–2891 (Mary Sullivan, George Washington University, Regulatory Studies Center, noted that ''purely optional'' subscription services, such ''optional features that are installed in automobiles, like satellite radio'' are ''not deceptive and unfair'' but are instead efficient. She further contended that the proposed rule lacks specificity as to these types of ''purely optional'' services.)

Continued

recommended that the rule require itemization to provide more information to consumers and to protect other transaction participants by disclosing where mandatory fees go.[271] Other commenters recommended that the rule prohibit itemization because fees could be arbitrary or invented by businesses and itemizing them could misrepresent their nature and purpose.[272]

The Commission has considered the comments and declines to require or prohibit the itemization of mandatory fees, except as provided by § 464.2(c). Section 464.2 of the rule permits, but does not require, itemization of the components of total price, and therefore allows businesses to break out transaction inputs, consistent with laws that require itemization. When businesses choose to itemize mandatory fees that are a part of total price or itemize fees pursuant to § 464.2(c), total price must be displayed more prominently than itemized fees. Further, § 464.3 prohibits misrepresenting itemized fees.

(d) Exclusions From Total Price

The definition of ''total price'' in final § 464.1 is modified from the proposed definition to the extent that the definitions of ''government charges'' and ''shipping charges'' are modified, as discussed in section III at A.5 and A.7. Finally, the definition of ''total price'' clarifies that businesses may exclude fees or charges for optional ancillary goods or services.

(e) Intersection With IRS Requirements

One commenter sought clarification as to the intersection of the total price requirements with Internal Revenue Service (''IRS'') requirements regarding charitable gifts.[273] The commenter specifically highlighted a scenario in which charitable contributions are made concurrent with ticket sales. The Commission is not aware of—and indeed, the commenter did not cite to—any specific conflict with the final rule. Instead, the commenter asked about the rule's intersection with the IRS's Substantiation and Disclosure Requirements. Based on the Commission's review, the IRS Substantiation and Disclosure Requirements pertain to substantiation requirements for donors who contribute to charitable organizations or causes, and disclosure requirements for charitable organizations that provide goods or services to donors for certain contributions. The Commission's rule has no bearing on, and does not change or impact, any of these IRS requirements. The commenter also stated that ''the concept of 'refundability''' is ''not common in charitable giving.'' As set forth in section III.B.3, the Commission eliminates the requirement that businesses affirmatively disclose the refundability of each fee or charge imposed; however, § 464.3 still prohibits businesses from misrepresenting a fee's refundability.

B. § 464.2 Hidden Fees Prohibited

Proposed § 464.2(a) and (b) in the NPRM provided, respectively, that it would be a violation of the rule for a business to ''offer, display, or advertise an amount a consumer may pay without clearly and conspicuously disclosing total price'' and that ''[i]n any such offer, display, or advertisement that contains an amount a consumer may pay, a business must display total price more prominently than any other pricing information.'' As discussed herein, final § 464.2 makes certain modifications to proposed § 464.2(a) and (b) and consolidates all provisions related to disclosures by relocating proposed § 464.3(b), with certain modifications, to final § 464.2(c).

As discussed in section III.B.1 and III.B.2, to address commenter concerns that ''an amount a consumer may pay'' is vague and overbroad, the Commission modifies final § 464.2(a) and (b) as compared to the NPRM proposals to focus their required disclosures on offers, displays, or advertisements that include ''any price of a covered good or service.'' Final § 464.2(b) also clarifies that, in any offer, display, or advertisement that represents any price of a covered good or service, total price must be more prominent than other pricing information, except if the final amount of payment for a transaction is displayed, the final amount of payment must be more prominent than, or as prominent as, total price.

As discussed in section III.B.3, the Commission also consolidates all provisions related to required disclosures under § 464.2 of the rule and, therefore, codifies proposed § 464.3(b) with certain modifications at final § 464.2(c). Proposed § 464.3(b) specified that businesses must disclose clearly and conspicuously, and before the consumer consents to pay, the nature and purpose of any amount a consumer may pay that is excluded from total price. The Commission clarifies that, in line with the narrower scope of the rule, the trigger requiring disclosures in final § 464.2(c) is ''before the consumer consents to pay for any covered good or service.'' As with final § 464.2(a) and (b), final § 464.2(c) also eliminates the reference to ''any amount a consumer may pay'' to narrow the focus of the disclosures required by § 464.2(c)(1) to ''any fee or charge imposed on the transaction that has been excluded from total price.''

Final § 464.2(c) also differs from the NPRM proposal in that it explicitly requires disclosure of the amount, nature, and purpose of any fees or charges imposed on the transaction that have been excluded from total price and the identity of the good or service for which the fees or charge is imposed, as well as the final amount of payment for the transaction. Importantly, to preserve choice and control for businesses, § 464.2(c)'s disclosures with respect to government charges and shipping charges are only required if a business elects to permissibly exclude such charges from total price. Similarly, § 464.2(c)'s disclosures with respect to fees for optional ancillary goods or services are only required if the consumer has elected to purchase such goods or services as part of the same transaction and the business has excluded their fees from total price. Nothing in the final rule requires a business to disclose commercially sensitive information regarding the components of its total price.

The Commission discusses herein changes to the text of the proposed provisions and addresses substantive comments about these provisions, including how § 464.2 would apply to specific pricing scenarios discussed in the comment record.

1. § 464.2(a)

Proposed § 464.2(a) in the NPRM provided that it would be a violation of the rule for a business to ''offer, display, or advertise an amount a consumer may pay without clearly and conspicuously disclosing total price,'' which was defined in proposed § 464.1(g) as ''the maximum total of all fees or charges a consumer must pay for a good or service and any mandatory ancillary good or service, except that shipping charges

(FreedomWorks); FTC–2023–0064–3263 (Flex Association); FTC–2023–0064–3258 (National Taxpayers Union Foundation).

[271] *See, e.g.,* FTC–2023–0064–3304 (Recording Academy stated: ''Price itemization is the only way to ensure pricing is transparent and that all parties involved in setting the ticket's total price are held accountable for what they charge.''); FTC–2023–0064–3230 (Future of Music Coalition); FTC–2023–0064–3250 (National Independent Talent Organization); FTC–2023–0064–3283 (National Consumer Law Center, Prison Policy Initiative, and advocate Stephen Raher stated that itemization is necessary to clarify opaque charges in the context of consumer correctional services.); FTC–2023–0064–3290 (U.S. Public Interest Research Group Education Fund).

[272] *See, e.g.,* FTC–2023–0064–3212 (TickPick, LLC).

[273] FTC–2023–0064–3195 (League of American Orchestras et al.).

and government charges may be excluded.'' In final § 464.2(a), the Commission changes the reference to ''an amount a consumer may pay'' to the more limited ''any price of a covered good or service.'' Final § 464.2(a) also further clarifies that businesses may exclude from total price fees or charges for any optional ancillary good or service. The Commission makes these modifications to address NPRM comments and to clarify the rule. The comments relating to the exclusion from total price of charges for any optional ancillary good or service, and the Commission's reasons for allowing these exclusions, are discussed in section III at A.1 and A.8.

Commenters argued that the reference to ''an amount a consumer may pay'' in proposed § 464.2(a) and in other sections (*i.e.,* proposed §§ 464.2(b) and 464.3(b)) was overbroad and that the Commission failed to consider its application to various pricing scenarios.[274] In response to these comments, the Commission finalizes § 464.2(a) with modification to limit the total price disclosure requirement from each time businesses ''offer, display, or advertise an amount a consumer may pay'' to only when they ''offer, display, or advertise any price of a covered good or service.'' The Commission also provides guidance regarding the application of § 464.2(a) to various types of fees and pricing scenarios, including: contingent fees; ticket service fees; credit card surcharges; dynamic pricing and national advertising; rebates, bundled pricing, and discounts; and online marketplaces in section III.B.1.a through f.

(a) Contingent Fees

Under certain circumstances discussed herein, total price can exclude certain fees that businesses cannot calculate in advance because they necessarily are contingent on consumer behavior or choice; unknown, external factors; or pricing models that include variable fees. The Commission notes that whether certain contingent fees cannot be calculated and are truly unknown at the time the rule requires disclosures may depend on the specific factual circumstances. The Commission is not persuaded by the comments to change the rule as it applies to contingent fees.

Certain commenters remarked that, in some instances, businesses cannot quote an all-inclusive price due to unknown fees arising from consumer behavior and choices during and after the purchasing process; unknown, external factors; or pricing models that have variable rates such as hourly rates or rates based on guest count and consumption. Indeed, some commenters argued that the Commission's failure to recognize the existence of variable marketplace fees is a significant oversight of the proposed rule.[275] Other commenters observed that concerns about variable marketplace fees are overblown and stated that the Commission should prohibit charging such fees if the full amount of such fees cannot be calculated in the upfront price.[276]

The Commission finds that, to the extent that certain fees are contingent on later conduct or choices by a consumer after purchase (*e.g.,* pet fees, fees for late payments, fees for property damage at a rental accommodation, or smoking in a non-smoking hotel room), these fees are not mandatory for purposes of the transaction, and as such, do not need to be included in total price.[277] The Commission notes that fees that are unavoidable by the consumer, regardless of conduct or choices, are not contingent. Ultimately, if a business cannot ascertain whether certain fees or charges apply until after concluding a purchase or transaction, the business need not include such fees or charges in total price. Whether mandatory fees are truly unknown due to reasons beyond a business's control will depend on specific factual circumstances.

Businesses should include in total price other fees that may vary depending on a consumer's choices during the purchase process or transaction as soon as consumers provide the business with the information needed to determine the applicability or amount of those fees. Indeed, some commenters discussed different scenarios in which total price depends on a consumer's choices while buying a good or service, such as season and flexible ticket packages for the arts.[278] According to some commenters, consumers expect fees arising from their personal choices and customizations to be disclosed only after providing additional information to, or negotiating with, sellers. Businesses can include in their advertisements ''starting at'' or base prices to deal with situations in which ultimate price may depend on a consumer's selection of various ticketing and lodging options, but only if consumers can in fact obtain the

[274] *See, e.g.,* FTC–2023–0064–3206 (Motor Vehicle Protection Products Association et al. commented that proposed § 464.3, in referring to any amount a consumer may pay, goes ''far broader than 'fees''' and ''the use of the verb 'may' suggests that even offers of goods or services—or, frankly, even goods or services that 'may be' available but not actually offered—impermissibly and imprudently stretches this section.'').

[275] *See, e.g.,* FTC–2023–0064–3127 (U.S. Chamber of Commerce stated that variable fees should be excluded from Total Price because: fees that ''vary based on volume, transaction type, and region'' cannot be assessed until consumers take some action; requiring their inclusion in Total Price ''could less efficiently spread costs, undermine consumer choice, and eliminate price competition on certain cost inputs''; and ''[t]he NPRM also provides no reason to think that variable or dynamic pricing is necessarily deceptive or unfair across all industries and sectors of the economy.''); FTC–2023–0064–3137 (Chamber of Progress expressed concern about the rule's impact on variable pricing models, including delivery platforms, where ''the prices for delivery or other services increase as the size of the order increases,'' which it asserts is ''a more efficient way of distributing costs than flat rates'' and asserted it is not clear how such platforms would comply with the rule ''without creating confusion for customers or misrepresenting prices.''); FTC–2023–0064–3173 (Center for Individual Freedom argued that: ''Acknowledging the distinct roles and objectives of both flat and variable fees in different industries is crucial, and the proposed rule's failure to recognize the benefits of variable pricing structures, which allow fees to scale based on the nature of the items or services purchased, is a significant oversight.''); FTC–2023–0064–3258 (National Taxpayers Union Foundation stated that under the rule, ''it will be nearly impossible for businesses using variable prices to display the Total Price at all times, because businesses are unable to predict consumer's choices.''); FTC–2023–0064–3202 (TechNet urged the Commission to exclude from Total Price ''fees that are variable or unknowable,'' such as in e-commerce marketplaces, or the rule ''would complicate the communication of pricing in situations where the 'total price cannot practically be determined' in advance.''); FTC–2023–0064–3263 (Flex Association commented that app-based delivery platforms could be ''forced to change the way they price entirely—moving from variable . . . to static fees . . . that would not benefit consumers''); FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP commented that the proposed rule failed to consider reliance on dynamic pricing that depends on consumer choices throughout the buying process).

[276] *See, e.g.,* FTC–2023–0064–3134 (U.S. Department of Transportation, Federal Motor Carrier Safety Administration recommended that the rule prohibit ''charging variable mandatory ancillary fees if the full amount of such variable fees cannot be calculated in the upfront price.''); FTC–2023–0064–3275 (Berkeley Center for Consumer Law & Economic Justice et al. asserted that concerns ''that it is impossible to accurately estimate all fees in advance of providing a complex service'' or fees dependent on consumer choice, are ''easily resolvable with minimal effort and creativity on the part of vendors.'').

[277] *See, e.g.,* FTC–2023–0064–3233 (NCTA—The internet & Television Association commented that the definition of ''Total Price'' is ambiguous as ''it does not clearly address fees that are contingent on later actions by particular consumers . . . such as for unreturned equipment or late payment of the consumer's bill'' and encouraged the Commission to ''resolve the ambiguity by, among other things, making clear in the rule itself that contingent or avoidable fees are to be excluded from the Total Price.'').

[278] *See, e.g.,* FTC–2023–0064–3195 (League of American Orchestras et al. requested the Commission's ''consideration for season-based and flexible ticket packages in which multiple and variable options are available to ticket-buyers, and the total price will vary based on selection.'').

advertised ticket or lodging for the ''starting at'' or base price.[279]

Businesses still must clearly and conspicuously disclose the nature, purpose, and amount of such fees or charges and the identity of the good or service for which they are imposed, and the final amount of payment, before a consumer consents to pay or, if the applicability of a fee or charge is contingent on later conduct or choices by a consumer after purchase, as soon as such circumstances arise. Businesses also must not mispresent those or other fees or charges, including total price.

(b) Ticket Service Fees

Businesses operating in the live-event ticketing industry, including venues, ticket sellers, and ticket resellers, historically have imposed on consumers a host of charges in addition to the ticket's face value that are dripped in throughout the purchasing process. One of the rule's principal purposes is to give consumers upfront knowledge of the true cost of a good or service, including mandatory charges, without being forced to navigate through a time-intensive search and transaction. A broad swath of industry members supported a nationwide total price requirement for ticket pricing,[280] although some industry commenters expressed concerns with certain aspects of the rule. The Commission addresses commenters' concerns herein.

Some industry members emphasized that the added fees are their primary source of revenue, since they typically do not share in the revenue from the ticket's face value.[281] Industry members and an academic commenter also stated that certain added fees pay for valuable services such as delivery and the convenience of selecting a seat from home.[282] An industry member emphasized, however, that although consumers do expect additional fees, businesses nonetheless should clearly disclose a ticket's true, all-in price (*i.e.,* total price).[283] Another industry member commented that unless an added fee is truly optional, it should be included in total price.[284] The Commission reiterates that businesses are not prohibited from charging fees; instead § 464.2(a) requires the disclosure of total price, including fees for mandatory ancillary goods or services, when a price for a good or service is displayed, while § 464.2(c) requires disclosures about fees being imposed on the transaction that have been permissibly excluded from total price, including for optional ancillary goods or services, before a consumer consents to pay for a covered good or service. The Commission further reiterates that, in an online transaction, fees such as for payment processing, electronic ticket ''delivery,'' ''convenience,'' or similar add-on ticketing fees are mandatory and must be included in total price if a consumer cannot obtain the covered good or service as part of the same transaction (*e.g.,* online) without incurring the fee. Final § 464.3 also prohibits businesses from misrepresenting the nature or purpose, or the identity of the good or service for which fees are imposed.

Some industry members expressed concern that the rule would prohibit itemization of fees in addition to total price, while others argued that it should prohibit such itemization.[285] The Commission clarifies that, so long as total price is displayed clearly and conspicuously, and more prominently than any itemized fees, the rule does not prohibit businesses from itemizing the

[279] In some instances, advertising prices as a base or starting price can be deceptive, depending on the relevant limiting or qualifying criteria. In such instances, the material terms, conditions and obligations upon which receipt and retention of the base or starting price are contingent should be set forth clearly and conspicuously at the outset of the offer so as to leave no reasonable probability that the terms of the offer might be misunderstood.

[280] *See, e.g.,* FTC–2023–0064–3266 (StubHub, Inc. submitted a comment supporting nationwide all-in pricing and including Total Price in every advertisement to consumers and throughout the transaction.); FTC–2023–0064–3105 (Charleston Symphony commented: ''[R]equiring sellers to disclose the total price clearly and conspicuously[ ] addresses a pressing issue. . . . Predatory practices in the secondary ticket sales market pose a significant threat to artists, venues, audiences, and the future of nonprofit arts organizations, impacting the integrity of the ticket-buying process and eroding audience confidence.''); FTC–2023–0064–3122 (Vivid Seats stated that it ''supports additional consumer disclosures, including all-in pricing,'' but the rule should ''apply equally across all parts of the live-events ticketing industry,'' so consumers can compare prices and businesses that display total prices will not be at a competitive disadvantage.); FTC–2023–0064–3241 (National Association of Ticket Brokers submitted a comment supporting all-in pricing, but noting that it would only work if ''(i) it was required of every ticket seller and (ii) there was rigorous and expeditious enforcement.''); FTC–2023–0064–3306 (Live Nation Entertainment and its subsidiary Ticketmaster North America commented that they ''support[ ] a definition of all-in pricing that requires the first price for a live-event ticket shown to consumers to be the price ultimately charged at checkout (exclusive of state and local taxes and optional add-ons).''); *see also* FTC–2023–0064–3264 (Mark J. Perry, Ph.D., Professor Emeritus of Economics at University of Michigan-Flint and Senior Fellow Emeritus at the American Enterprise Institute, ''urge[d] the FTC to ensure that any rule requiring all-in pricing in live events apply equally to all market participants.''); FTC–2023–0064–2856 (National Football League stated that if the live-event ticket industry is included in the rule's coverage, the Commission must ''include all sellers of live-event tickets to prevent inconsistencies in its application.'').

[281] *See, e.g.,* FTC–2023–0064–3122 (Vivid Seats commented that service fees ''are the TRM's [ticket resale marketplace's] sole source of revenue and provide the capital necessary to operate the TRM.''); FTC–2023–0064–3306 (Live Nation Entertainment and its subsidiary Ticketmaster North America commented that a ticket service charge ''compensates the venue for hosting the event and the ticketing company for distributing tickets and related services—important since venues and ticketing companies typically do not share in revenues attributable to a ticket's face value.'').

[282] *See, e.g.,* FTC–2023–0064–3122 (Vivid Seats commented that delivery fees cover costs associated with delivering a ticket.); FTC–2023–0064–3306 (Live Nation Entertainment and its subsidiary Ticketmaster North America); FTC–2023–0064–3292 (National Association of Theatre Owners commented: ''These fees allow moviegoers to purchase tickets and select their seats from home, and this service requires ongoing support and management, entailing operational costs that are offset by convenience fees. At the same time customers can avoid the convenience fee altogether by purchasing directly at the box office.'') FTC–2023–0064–3264 (Mark J. Perry, Ph.D., Professor Emeritus of Economics at University of Michigan-Flint and Senior Fellow Emeritus at the American Enterprise Institute, commented that ticket resale marketplaces offer numerous valuable services to ticket sellers and buyers that a single seller or buyer could not access otherwise, including access to buyers or tickets, inventory management, seller and customer support, secure financial transactions, and guarantees.'').

[283] FTC–2023–0064–3306 (Live Nation Entertainment and its subsidiary Ticketmaster North America commented: ''Because the practice of adding these charges to the ticket's face value has been so longstanding, consumers have come to expect service fees when purchasing a ticket to a live entertainment event—but it is impossible for consumers to anticipate the amount of applicable fees because those rates are set by hundreds of different venues and can vary accordingly.'' The commenter continued, ''Consumers therefore need clear disclosures about the true price of a ticket, including the elements that constitute the all-in price.'').

[284] FTC–2023–0064–3266 (StubHub, Inc. supported the exclusion of ''fees for optional add-on features selected at the discretion of the consumer.'' As an example, the commenter stated, ''[I]n some instances, consumers may not have a choice on delivery method. In those cases, delivery fees are mandatory and should be included in the [Total Price] because the consumer has no discretion to choose. In other instances, consumers have multiple delivery options at different price points.'').

[285] *See, e.g.,* FTC–2023–0064–3230 (Future of Music Coalition commented that ''adopting all in pricing without itemization [of the base ticket price or face value and of fee amounts] would be a gift to . . . predatory resellers.''); FTC–2023–0064–3250 (National Independent Talent Organization stressed ''the need for an itemized breakdown of ticket fees'' and called for ''fees to be clearly itemized throughout the purchasing process.''); FTC–2023–0064–3304 (Recording Academy commented: ''Price itemization is the only way to effectively regulate transparent pricing in a manner that truly informs the consumer about how their dollar is being spent . . . . Additionally, price itemization is the only way to effectively hold third party fees and charges in check.''). *But see* FTC–2023–0064–3212 (TickPick, LLC commented that the rule ''must prohibit the itemization of fees and charges that make up the Total Price (other than breaking out government taxes and shipping fees) in order to prevent harm from hidden and/or misleading fees.'' The commenter stated concerns that such fees were ''arbitrary'' and ''any secondary ticketing marketplace that itemizes mandatory fees and charges is arguably misrepresenting the 'nature and purpose of any amount a consumer may pay.' '').

charges imposed on a transaction. However, any such itemization must not misrepresent the nature, purpose, amount, or refundability of the itemized fees, including the identity of the goods or services for which they are being charged.

(c) Credit Card and Other Payment Processing Surcharges

The rule requires businesses to include credit card surcharges or processing fees in total price only if they choose to make payment by credit card mandatory. If, on the other hand, credit card use is optional because consumers can use multiple payment options, those fees do not need to be included in total price. If the consumer chooses to use a credit card, businesses must clearly and conspicuously disclose the nature, purpose, and amount of any credit card surcharge before the consumer consents to pay. Some commenters expressed concern about the rule's application to credit card fees but, as discussed herein, the Commission was not persuaded by the comments to change the proposed rule as it applies to such fees.

Many commenters expressed concern that the rule would require total price to include credit card processing fees or prohibit businesses from passing through such fees to consumers. This was of particular concern to small businesses.[286] Numerous industry members also commented that requiring such fees to be part of total price would reduce price transparency and penalize customers who want or need to pay with cash.[287]

Various commenters suggested that if businesses properly disclose credit card processing charges and provide alternate payment methods, both consumers and businesses would benefit.[288] Commenters noted that, when appropriately disclosed, consumers can avoid such fees by choosing another form of payment.[289] An academic commenter suggested that prominent disclosure of a credit card surcharge in advance, so consumers can avoid it, would benefit consumers and reduce business costs more than requiring such charges to be included in total price.[290] A tenant advocacy legal clinic that generally supported requiring credit card processing charges to be included in total price, suggested that such charges might be reasonably avoidable if disclosed in advance to let consumers use a different payment method.[291] Another academic commenter recommended that the Commission clarify that, while credit card surcharges need not be included in total price, a business can only pass through the actual amount of the charge and must clearly and conspicuously disclose any markup it imposes.[292]

The Commission notes that the rule does not prohibit a business from charging or passing through credit card fees if otherwise allowed by law. The rule does not affect State laws that prohibit credit card surcharges. Whether credit card charges must be included in total price, however, depends on whether a business makes such fees mandatory, for example, by not providing any other payment option for the transaction. For example, if a consumer is purchasing a ticket online, there must be another online payment option that does not require a fee, not merely an option to go in person to the box office to purchase the ticket with cash for no additional fee.

In other words, if there is no other payment option for an offered transaction, or if every payment option requires a fee or charge, such fees are mandatory and must be included in total price.[293] But, if a business offers consumers multiple viable payment options for the offered transaction, so that paying with a credit card is optional, then credit card fees need not be included in total price. The same is true for debit card surcharges and other payment processing fees.

A business that provides at least one viable method to pay for the offered transaction without a fee, chooses to pass through payment processing fees to consumers, and excludes such fees from total price would have to clearly and conspicuously disclose the nature, purpose, and amount of the processing fees before a consumer consents to pay. In addition, nothing in the rule prohibits businesses that accept multiple viable forms of payment from advertising two prices, one that includes credit card or other payment processing fees and one that does not. It is the Commission's understanding that some businesses already do this, and such a strategy is consistent with the rule.

In addition, under final § 464.3, a business that offers, displays, or advertises a covered good or service cannot misrepresent the nature, purpose, amount, or refundability of credit card or other fees. Since the rule does not prohibit itemization, a business may choose to also itemize mandatory credit card fees so long as they are included in total price and total price is displayed more prominently. The voluntary itemization of mandatory credit card fees addresses commenters' concerns that consumers will not understand the different costs affecting businesses.

(d) Dynamic Pricing and National Advertising

Some commenters expressed concern that the total price requirements will interfere with dynamic pricing strategies where total price is not fixed but changes based on supply, demand, or other factors.[294] The rule does not bar

[286] *See, e.g.,* FTC–2023–0064–3217 (Bowling Proprietors' Association of America); FTC–2023–0064–2755 (Caffe! Caffe!); FTC–2023–0064–3114 (Shine Beer Sanctuary); FTC–2023–0064–1456 (MED Murphy St. Enterprise); *see also, e.g.,* FTC–2023–0064–2953; FTC–2023–0064–2972 (Over 4,600 comments submitted through a National Restaurant Association mass mailing campaign misinterpreted the rule as ''eliminating the use of fees and surcharges.'').

[293] This approach is consistent with the Telemarketing Sales Rule, which requires sellers and telemarketers to disclose, in a clear and conspicuous manner, the total cost of a good or service, which would include any applicable credit card or other payment processing charges, before a consumer consents to pay for that good or service. 16 CFR 310.3(a)(1)(i) and (a)(2)(i).

[294] *See, e.g.,* FTC–2023–0064–3195 (League of American Orchestras et al. observed: ''It would be harmful to paint all dynamic pricing strategies as 'unfair.' Nonprofit performing arts organizations often use variable pricing strategies to both maximize the earned revenue that supports the nonprofit performing arts workforce, as well as to offer reduced or free-of-charge ticketing options for community-based partners.''); FTC–2023–0064–3230 (Future of Music Coalition stated that dynamic pricing ''can certainly be used in ways that frustrate consumers'' but ''can also solve practical problems.'' It is ''often used by nonprofit arts presenters in non-problematic ways.'' The commenter noted, however, that ''disclosure of specific dynamic pricing strategies and tools, whether manual or algorithmic[,] will only help

Continued

businesses from engaging in dynamic pricing, but adjusted prices must include all known mandatory fees and the advertised good or service must be actually available to consumers at the quoted price. The Commission's review of the comments did not identify any persuasive reason to change the rule as it applies to dynamic pricing.

A few commenters noted that the rule could interfere with businesses' ability to engage in national advertising or to advertise to a broad audience because mandatory fees may vary by location, as is often the case with franchisee costs and delivery costs.[295] One commenter argued that the rule would require either impractical and challenging geo-targeted advertising or advertising a ''maximum total price'' to any potential consumer in the businesses' footprint, which would overstate the price that most consumers need to pay and defeat comparison shopping.[296] The commenter also noted that ''[a]lternatively, companies might respond to the proposed rule by omitting pricing from advertising altogether, an option that would defeat the [Commission's] goal of ensuring consumers have access to accurate and reliable cost information as they shop for services.''[297]

The Commission determines that shipping charges may be excluded from total price. As to other charges that may vary by time or location, businesses can comply with the rule by advertising a maximum total price either by region or nationwide. The Commission understands that many businesses already engage in regional or geo-targeted advertising that enables flexibility for pricing by time and locality. Since the rule applies to all businesses offering covered goods or services, it levels the playing field and preserves comparison-shopping even when advertised prices are maximum totals.

(e) Rebates, Bundled Pricing, and Other Discounts: Compliance When Promotional Pricing Models Have Different Fees

Promotional pricing models, such as two-for-one deals, bulk or bundled pricing, unbundled or a la carte pricing, rebates, or other discounts, can change the price a consumer ultimately may pay. Section 464.2(a)'s total price disclosure requirement applies whether a consumer is purchasing a single covered good or service, multiple covered goods or services, or covered goods or services combined with ancillary goods or services, as well as when a discount or other promotion affects the final amount of payment. If a consumer applies a discount or otherwise qualifies for a promotional price, the business can update the total price displayed. The Commission provides clarification herein to address commenter concerns about the rule as it applies to promotional pricing models.

Some commenters expressed concern that the rule's total price requirement would prohibit or discourage businesses from offering promotional prices to consumers.[298] Two industry groups commented that the potential difficulty of incorporating promotions into total price might discourage businesses from offering them.[299] A competition policy group agreed and suggested modifications might be ''necessary to ensure that the proposed rules do not interfere with such pricing models.''[300]

The Antitrust Division of the U.S. Department of Justice commented that ''[c]ompetition between companies that offer bundled and unbundled pricing for core products and value-added features can play an important role in preserving consumer choice . . . and unbundled pricing can empower consumers who prefer to pay only for what they value.''[301] The Antitrust Division further commented that the proposed rule ''does not affect companies' ability to offer consumers a choice whether to buy unbundled features that do not impose mandatory fees.''[302] However, it asserted that ''[w]hen companies use unbundled offerings to disguise mandatory fees, they undermine the value to competition of that unbundled option.''[303]

The rule does not prohibit businesses from using bundled, discount, or similar pricing models if, when the business advertises any price of a covered good or service, it discloses the total price the consumer must pay for the good or service. The rule also does not require businesses to incorporate different pricing models into a single price; rather, under the rule, businesses advertising any price of a covered good or service must only display the maximum total price. For example, a hotel can display a regular total price and a loyalty program member total price. Businesses also can display total price under a promotional pricing model, such as a bundled price or a promotion advertising, ''stay three nights, get one night free,'' when and to the extent that model applies. The Commission notes that offering, displaying, or advertising a general [x]% or $[y] discount, without displaying the price of a covered good or service, does not require the disclosure of total price under the rule.

(f) Online Marketplaces

The rule covers sellers and online marketplace platforms or other intermediaries in the same manner as other businesses that offer covered goods or services. Various commenters, however, highlighted the challenges some businesses may face in implementing the rule if it is applied equally to all online marketplace stakeholders. The Commission's review of the comments, as discussed herein, did not identify any persuasive reason to change the rule as it applies to online marketplaces for covered goods or services.

Some commenters stated that certain businesses offering, displaying, or advertising goods and services in an online marketplace often must rely on other entities for accurate information about pricing and expressed concern about liability under the rule if they receive inaccurate pricing information. This concern arose both from intermediaries that display prices provided by sellers and from sellers who offer their goods or services through an intermediary. Intermediaries are concerned about facing liability if they post prices that are inaccurate because the seller of the good or service did not provide complete and accurate pricing information. Commenters also expressed concern about liability when sellers list their good or service for sale on a platform but are not in control of how the platform displays information about pricing.[304]

Travel Technology Association (''Travel Tech''), for instance, observed the complex and multi-layered information flow from travel service providers, such as hotels, motels, inns, vacation rentals, and other short-term lodging providers, to different types of intermediaries which operate either as business-to-business, consumer-facing, or both, and include online travel agents, metasearch engines, global distribution systems, travel management companies, short-term rental platforms, ''brick-and-mortar'' or offline travel agents, tour operators, and wholesalers.[305] Travel Tech explained that travel service providers determine the rates, terms, and mandatory fees, including resort fees, applicable to their travel services, and that only travel service providers know whether the nature and purpose of any fee they impose is accurate.[306] Travel Tech members, which consist of the aforementioned intermediaries, use the information provided to them directly from travel service providers, or indirectly through other intermediaries, to aggregate, sort, and display offers on their sites and applications, and consumers in turn use this information to compare offers and make informed choices.[307] Travel Tech and one of its members, Skyscanner, a metasearch engine, suggested that the rule should immunize intermediaries from liability if travel service providers or other upstream distributors ''fail to provide accurate, complete, and timely pricing information and such downstream [i]ntermediaries have made reasonable efforts to receive such information.''[308] Both commenters further requested that the Commission make clear that travel service providers would be engaging in an unfair or deceptive practice if they provide inaccurate, incomplete, or untimely pricing information to intermediaries or seek remuneration from intermediaries for information necessary for them to comply with any final rule.[309] Finally, Travel Tech further requested that the Commission clarify that the rule applies to any business that supplies or advertises pricing to consumers so all are held to the same standard.[310]

The American Hotel & Lodging Association, a national association representing all segments of the U.S. lodging industry, including hotel owners, beds & breakfasts, State hotel associations, and industry suppliers, also stressed that a final rule must apply broadly to all industry participants, including online travel agencies, short-term rental platforms, and metasearch sites.[311] The commenter noted that the industry broadly is moving to implement the clear publishing of total price (including all mandatory, non-government fees) for lodging, so that consumers can more easily navigate the myriad of choices they have when it comes to places to stay.[312]

The Commission declines to adopt blanket immunity from the rule for intermediaries that depend on providers of live-event tickets and short-term lodging for accurate pricing information. The Commission, clarifies, however, that the final rule applies to business-to-business (''B2B'') transactions as well as business-to-consumer transactions. Businesses such as travel service providers that sell or advertise through intermediaries must provide such entities with accurate pricing information (including about total price, as well as mandatory and optional fees). Platforms and other intermediaries that offer, display, or advertise covered goods or services and ancillary goods or services or allow third party sellers to do so must disclose the total price of the goods and services, including all mandatory and optional fees and, if applicable, provide third-party sellers with all necessary information to calculate the total price. The rule's coverage of B2B transactions in this manner protects not only individual consumers from hidden and misleading fees, but also businesses.

The Commission also notes that at least one commenter, the International Franchise Association, argued that the rule should exempt B2B transactions, without providing any compelling justification for why bait-and-switch pricing, including drip pricing, and the misrepresentation of fees and charges should be allowed in transactions involving businesses.[313] This commenter noted that, for example, ''[f]ranchised hotels advertise large event spaces for consumers' weddings and business conventions'' and the rule ''could be applied against these businesses if they fail to display total price even though no *consumer* is ever misled or deceived.''[314] The prohibition in section 5 of the FTC Act against unfair or deceptive acts or practices does not include any limitation on the ''consumers'' who can be injured. Relying on this authority, the Commission has long interpreted the FTC Act to apply to cases where the harmed consumers are businesses, particularly small- and medium-sized businesses.[315]

[304] *See, e.g.,* FTC–2023–0064–3258 (National Taxpayers Union Foundation stated that Total Price may be difficult or impossible to implement with third-party marketplaces because ''while the platform may control the display of prices, it is sellers and not the platform that sets [sic] the prices.''); FTC–2023–0064–3293 (Travel Technology Association stated that intermediaries may be ''similarly situated to consumers in that they are also dependent on Travel Service Providers such as hotels to provide accurate, complete, and timely information before booking.''); FTC–2023–0064–3262 (Skyscanner Ltd. highlighted ''the numerous and complex ways in which metasearch sites receive pricing information directly from hotels and other short-term lodging providers'').

Continued

The Commission clarifies that it does not intend to treat intermediaries as the publisher or speaker of information about pricing or as controlling the manner of its display where the intermediary is not responsible, in whole or in part, for such content or display.[316] However, if intermediaries are responsible, in whole or in part, for offering, displaying, or advertising any price, including any portion thereof, of a covered good or service, then within the scope of that responsibility, they must give sellers the information necessary to calculate total price and, when uniquely situated to do so, such intermediaries must ensure that they display total price. For example, if an intermediary charges a fee for access to its platform and the seller passes the fee through to consumers, the intermediary must provide the seller with accurate information about the fee's amount so the seller can accurately calculate total price, or otherwise ensure that the total price is displayed. Travel service providers and other sellers, by the same token, must provide intermediaries with accurate price information.

Whether an intermediary, seller, or other business is responsible for offering, displaying, or advertising a price of a covered good or service, may be a fact- and law-specific determination in which the Commission can consider issues of participation in, and control of, unfair or deceptive practices, as well as contractual obligations between sellers and platforms and other intermediaries, and the applicability of other Federal laws. The Commission will consider issuing and updating business guidance to address particular or nuanced scenarios, as it has done as a complement to other rulemakings.[317]

2. § 464.2(b)

Proposed § 464.2(b) in the NPRM required businesses to display total price more prominently than any other pricing information in any offer, display, or advertisement that contains an amount a consumer may pay. Following review of the comments, the Commission finalizes § 464.2(b) with three modifications. First, as already discussed in this section, the Commission limits the requirements of § 464.2, including § 464.2(b), to covered goods or services. Second, as discussed in section III.B.1, the Commission narrows the disclosure trigger in § 464.2(a) and (b) to ''an offer, display, or advertisement that represents any price of a covered good or service.'' Third, as discussed herein, final § 464.2(b) clarifies the prominence requirement with respect to the final amount of payment for a transaction. Final § 464.2(b) thus provides that, in any offer, display, or advertisement that represents any price of a covered good or service, a business must disclose the total price more prominently than any other pricing information. However, where the final amount of payment for the transaction is displayed, the final amount of payment must be disclosed more prominently than, or as prominently as, the total price.

Various commenters voiced support for proposed § 464.2(b)'s requirement that total price must be displayed more prominently than other pricing information.[318] Certain commenters stated that the prominence requirement will prevent consumer confusion as to the true price of a good or service.[319] Some commenters suggested strengthening the prominence requirement or adding guidance about it.[320] Other commenters also suggested clarifying that the phrase ''an amount a consumer may pay'' refers only to truly mandatory ancillary goods or services.[321] On the other hand, some

[318] *See, e.g.,* FTC–2023–0064–3266 (StubHub, Inc. agreed with the FTC's proposal to require Total Price in every offer, display, or advertisement presented to consumers and that Total Price must be consistently displayed throughout the transaction); FTC–2023–0064–3306 (Live Nation Entertainment and its subsidiary Ticketmaster North America supported ''requir[ing] the first price for a live-event ticket shown to consumers to be the price ultimately charged at checkout (exclusive of state and local taxes and optional add-ons). This price should be clearly displayed on the initial landing page and easily discernible.'' The commenter proposed adding the phrase, ''from the first instance a consumer sees a price for a good or service'' to the end of proposed § 464.2(a) and moving the phrase, ''as soon as pricing information is provided to the consumer'' before ''more prominently than any other Pricing Information'' in proposed § 464.2(b).); FTC–2023–0064–3290 (U.S. Public Interest Research Group Education Fund commented: ''[T]he Total Price should be provided first and with the most prominence. Businesses must not be allowed to confuse consumers with a barrage of numbers.''); FTC–2023–0064–1939 (Tzedek DC).

[319] *See, e.g.,* FTC–2023–0064–3290 (U.S. Public Interest Research Group Education Fund); FTC–2023–0064–1939 (Tzedek DC commented that proposed § 464.2(b) ''will prevent companies from hiding the real cost of goods and services in fine print or making the total cost difficult to find.'').

[320] *See, e.g.,* FTC–2023–0064–3196 (South Carolina Department of Consumer Affairs commented: ''Guidance on how the business can simultaneously comply with the 'Clearly and Conspicuously' requirement and the prominence requirement may help with business comprehension and compliance.'' The commenter suggested adding ''a definition addressing the different mediums by which the offer, display or advertisement may be relayed to a consumer (visual, audio, print, online)'' and providing ''examples of compliance with the requirement of prominent display'' such as ''in a visual disclosure presentation of the Total Price in bolded typeface at least two points larger than any other Pricing Information or 14-point font, whichever is larger, satisfies the prominence requirement.'').

[321] *See, e.g.,* FTC–2023–0064–3275 (Berkeley Center for Consumer Law & Economic Justice et al. suggested modifying proposed § 464.2(b) to include: ''[A] Business must not automatically include Ancillary Goods or Services in the Total Price or automatically select Ancillary Goods or Services for purchase on behalf of the consumer.''); FTC–2023–0064–3160 (Consumer Federation of America et al. made a similar suggestion and stated it would ''ensure that 'must pay' is interpreted to include

industry commenters stated that the prominence requirement may have unintended consequences that could harm consumers, such as consumers not noticing an offered discount or a business deciding not to provide any pricing information.[322] As noted in section III.B.1.e, nothing in the rule prohibits a business from adjusting total price to account for any applied discounts or other promotional pricing and, given strong market incentives, the Commission disagrees with comments that the rule's prohibitions against hidden and misleading fees will deter businesses from advertising prices.[323]

Final § 464.2(b) also clarifies how the prominence requirement applies to the final amount of payment for a transaction. The Commission recognizes that the final amount of payment, now an explicitly required disclosure under final § 464.2(c), may differ from total price due to various factors, such as the exclusion from total price of certain fees or charges, including for any optional ancillary good or service, or the application of promotional pricing models. The Commission determines that both total price and the final amount of payment are material to consumers. The Commission therefore clarifies that, when the final amount of payment is displayed, it must be displayed as prominently as, or more prominently than, total price. The modification avoids a potential unintended consequence of the rule, which may have been read to require total price to obscure the final amount of payment.

The Commission determines that, with these modifications, § 464.2(b)'s prominence requirement is clear, understandable, and unambiguous.

3. § 464.2(c)

In final § 464.2, the Commission consolidates all proposed disclosure requirements; therefore, proposed § 464.3(b) is codified at final § 464.2(c). Proposed § 464.3(b) would have required businesses to disclose clearly and conspicuously, before the consumer consents to pay, the nature and purpose of any amount a consumer may pay that is excluded from total price, including the fee's refundability and the identity of the good or service for which the fee is charged. Final § 464.2(c) largely adopts the disclosure requirements of proposed § 464.3(b), with certain modifications. Specifically, final § 464.2(c) requires businesses to disclose clearly and conspicuously, before the consumer consents to pay for any covered good or service: The nature, purpose, and amount of any fee or charge imposed on the transaction that has been excluded from total price and the identity of the good or service for which the fee or charge is imposed, but not the fee's refundability; and the final amount of payment for the transaction.

The Commission makes these modifications, as discussed herein, in response to the comments and to address related concerns. One commenter recommended that the Commission provide greater specificity about which fees excluded from total price must be disclosed under this provision, and require the itemized disclosure of such fees.[324] Some commenters argued that the provision was vague and overbroad, and that its application to ''any amount a consumer may pay'' would make complying with the provision impracticable and result in excessive disclosures that would confuse consumers into believing that all disclosed fees apply to them when they might not.[325] One commenter recommended that the rule allow the required disclosures to be made at the time goods or services are selected.[326] Commenters argued that requiring businesses to explain how fees will be used is not reasonable and may require the disclosure of confidential, proprietary, or commercially sensitive information, such as the business rationale for imposing fees and the specific uses to which businesses put fees.[327] Other commenters recommended that the rule require the disclosure of the optional nature of optional fees[328] and regulate opt-in and opt-out procedures for fees.[329]

The Commission modifies the NPRM proposal so that final § 464.2(c) requires businesses to disclose separately the amount, as well as the nature and purpose, of each fee or charge imposed on the transaction for the covered good or service that is excluded from total price, and the final amount of payment, before the consumer consents to pay. The Commission determines that these modifications are necessary for price transparency and to protect consumers who would reasonably expect to know the nature, purpose, and amount of fees they will have to pay, as well as the

any fee or charge that is included by default and that the consumer must pay unless they take affirmative action to opt-out or avoid it.'' The commenter proposed adding guidance that: ''A consumer must pay a fee or charge if the fee or charge is not reasonably avoidable or if the consumer must pay the fee or charge unless they take affirmative action to avoid it. An ancillary good or service is mandatory if a reasonable consumer would expect the good or service to be included with the purchase.'').

[322] *See, e.g.,* FTC–2023–0064–3293 (Travel Technology Association commented that if Total Price is ''clearly and conspicuously'' displayed, a prominence requirement is unnecessary and ''discounts would have to be less prominent than the Total Price, potentially leading to a consumer missing out on a deal that may have saved them money or led to a more enjoyable vacation.'' The commenter suggested that the rule be more flexible ''so that Intermediaries can use their expertise to relay the most appropriate information to consumers.''); FTC–2023–0064–3296 (Bay Area Apartment Association commented that the prominence requirement could have a ''chilling effect on the content of commercial speech,'' with some rental housing providers choosing ''not to include pricing information in their advertisements, and instead invite prospective residents to learn about pricing on their website or to call their leasing office,'' thereby ''undermining a key objective (better consumer awareness of the price of goods and service[s]) the rule is intended to accomplish.'').

final amount of payment, before they consent to pay.

To provide clarification and address commenter concerns about potential overbreadth and vagueness, the Commission narrows the NPRM proposal so that final § 464.2(c) requires the disclosures in connection with ''any fee or charge imposed on the transaction that has been excluded from total price'' instead of ''any amount a consumer may pay.'' The provision therefore requires the disclosure, before the consumer consents to pay, of the nature, purpose, and amount of government charges, shipping charges, and any other fee or charge, such as for optional ancillary goods or services, that permissibly were excluded from total price but are being imposed on the transaction.

Final § 464.2(c) also explicitly requires disclosure of ''the final amount of payment for the transaction,'' as that amount may differ from total price due to, for example, the application of promotional pricing or the addition of any fees or charges permissibly excluded from total price, including for any optional ancillary goods or services. Where the final amount of payment is displayed, as discussed in section III.B.2, final § 464.2(b) requires it to be at least as prominent as, or more prominent than, total price.

In most instances, the disclosure about the nature, purpose, and amount of the excluded charge or fee will be minimal. For example, using the defined term ''shipping charges'' is likely to convey the nature and purpose of such charges. For government charges, a phrase like ''sales tax'' or ''hotel occupancy tax'' would convey the nature and purpose of an imposed sales tax or hotel occupancy tax. Similarly, in most instances, simply identifying the ancillary good or service for which a charge applies, such as ''valet parking,'' will sufficiently convey the nature and purpose of the charge.

Some commenters observed that the timing of ''before the consumer consents to pay'' is unclear. One commenter cautioned that the language of the rule may open the door to the types of bait-and-switch pricing that the total price disclosure requirement is meant to prevent.[330] Other commenters recommended that the Commission clarify the meaning of the phrase ''before the consumer consents to pay'' and the timing of the required disclosures, for example, by specifying that it means before businesses obtain consumers' billing information.[331]

The Commission clarifies that, although when a consumer consents to pay may depend on the facts and circumstances surrounding the transaction, § 464.2(c) requires businesses to clearly and conspicuously disclose the nature, purpose, and amount of any fees or charges imposed on the transaction that have been excluded from total price and the identity of the good or service for which the fee or charge is imposed, as well as the final amount of payment for the transaction, before consumers are required to pay cash or provide their payment information. The Commission notes that a default setting that automatically opts-in consumers to pay for goods or services does not constitute consent to pay nor does it satisfy § 464.2(c)'s disclosure requirements.

As part of final § 464.2(c), the Commission does not adopt the NPRM's proposed requirement to affirmatively disclose each fee's refundability. The Commission determines that requiring clear and conspicuous disclosure of each fee's refundability may be impractical for businesses and confusing to consumers due to extensive qualifications or other requirements for refunds. Such extensive, itemized disclosures may impede the Commission's goal of ensuring consumers receive clear and accurate pricing information. However, the Commission finalizes § 464.3's prohibition on misrepresenting a fee's refundability.

C. § 464.3 Misleading Fees Prohibited

Both practices that the Commission identified in the NPRM as unfair or deceptive involve misleading practices: (1) bait-and-switch pricing that hides the total price of goods or services by omitting mandatory fees from advertised prices, including through drip pricing, and (2) misrepresenting the nature, purpose, amount, and refundability of fees or charges. Proposed § 464.3(a) would have prohibited any business from misrepresenting the nature and purpose of any amount a consumer may pay, including the refundability of such fees and the identity of any good or service for which fees are charged.[332]

The Commission finalizes proposed § 464.3(a) in § 464.3 with some modifications. Specifically, final § 464.3 prohibits any business, in any offer, display, or advertisement for a covered good or service, from misrepresenting any fee or charge, including its nature, purpose, amount or refundability, and the identity of the good or service for which it is imposed. The Commission adds the phrase ''covered goods or services'' to reflect the narrower scope of the final rule. The Commission also adds ''amount'' to ''nature'' and ''purpose,'' and clarifies that the prohibited misrepresentations concern ''any fee or charge'' instead of ''any amount a consumer may pay.'' This modified provision makes plain that, in connection with covered goods or services, businesses cannot misrepresent the nature, purpose, amount, or refundability of any fee or charge, including government charges, shipping charges, any fees or charges for optional ancillary goods or services, or any mandatory fees or charges. In making these modifications, the Commission has considered recommendations and alternatives suggested in NPRM comments, discussed herein.

The Commission noted in the NPRM that it had received comments in response to the ANPR stating that sellers often misrepresent the nature or purpose of fees, leaving consumers wondering what they are paying for, believing fees are arbitrary, or concerned that they are getting nothing for the fees charged. The Commission received similar comments in response to the NPRM.

The Attorneys General of nineteen States and the District of Columbia commented that fee misrepresentations ''mislead consumers and make it more difficult for truthful businesses to compete on price.'' [333] Commenters supported prohibiting fee misrepresentations because truthful information benefits both consumers and businesses.[334] A commenter

[330] FTC–2023–0064–3160 (Consumer Federation of America et al.).

[331] *See, e.g.,* FTC–2023–0064–3160 (Consumer Federation of America et al.); FTC–2023–0064–3146 (Institute for Policy Integrity, New York University School of Law); FTC–2023–0064–3283 (National Consumer Law Center, Prison Policy Initiative, and advocate Stephen Raher); FTC–2023–0064–3191 (Community Catalyst et al.).

[332] As noted *supra* section III.B, the Commission redesignates proposed § 464.3(b) as final § 464.2(c) to consolidate all provisions related to disclosures in final § 464.2.

[333] FTC–2023–0064–3215 (Attorneys General of the States of North Carolina and Pennsylvania, along with Attorneys General of the States or Territories of Arizona, Colorado, Connecticut, Delaware, District of Columbia, Hawaii, Illinois, Maine, Michigan, Minnesota, New Jersey, New York, Oklahoma, Oregon, Vermont, Washington, and Wisconsin stated: ''[C]harges that misrepresent their nature and purpose are unfair and deceptive because they mislead consumers and make it more difficult for truthful businesses to compete on price.'' The Attorneys General asserted that ''this provision is another straightforward, commonsense approach that should not significantly burden businesses.'').

[334] *See, e.g.,* FTC–2023–0064–3275 (Berkeley Center for Consumer Law & Economic Justice et al. asserted: ''Prohibiting misrepresentation of the

recommended that the Commission clarify that the provision includes misrepresentations about fees included in total price and fees excluded from total price.[335]

Commenters stated that businesses misrepresent fees by using language that is vague and not understandable to consumers,[336] and provided examples of various types of misrepresentations about the nature and purpose of fees, such as ''service'' fees that may not go to service employees, ''environmental'' fees that may not have an environmental purpose, ''resort'' fees for ordinary accommodations or amenities,[337] and fees misrepresented as government charges.[338] Commenters also stated that businesses may misrepresent the mandatory or optional nature of fees, or their amount, and recommended that the Commission clarify that prohibiting misrepresentations about the nature and purpose of fees includes misrepresentations about their mandatory or optional nature.[339] Another commenter argued that businesses can misrepresent fees when they itemize mandatory fees that are arbitrary and are not for identified goods or services, and recommended that the Commission clarify that businesses must have adequate substantiation for itemized fees.[340] Commenters also argued that businesses misrepresent fees when they do not provide the goods or services for which fees are charged or provide nothing of value,[341] and when fees fail to reflect the cost of the goods or services provided.[342]

The American Hotel & Lodging Association and other commenters described the misleading fees provision as unnecessary given the Commission's existing authority under section 5 of the FTC Act to police misleading fees.[343] It is true that section 5, which prohibits unfair or deceptive practices, has long been used to protect against misrepresentations regarding material terms of a transaction, including price. False claims about fees or charges, as well as those claims that lack a reasonable basis, are inherently likely to mislead. However, the Commission disagrees with commenters' contentions that the rule's prohibitions on misrepresentations are unnecessary given the existing section 5 authority. As explained in section V, the final rule is necessary to: (1) ensure all businesses offering covered goods or services are held to the same standard so that consumers can effectively comparison shop; (2) level the playing field for these businesses so that they can compete based on truthful pricing information; and (3) increase deterrence by allowing courts to impose civil penalties and enabling the Commission to more readily obtain redress and damages for consumers through section 19(b) of the FTC Act. As it has become increasingly common for businesses offering covered goods or services to charge or itemize discrete fees over the course of a transaction, a specific prohibition on pricing misrepresentations is necessary to ensure consumers receive truthful information about the charges and fees they incur, and businesses are able to compete based on truthful information.[344]

---

identity and nature of fees further serves the Commission's mandate to promote fair business practices and competition.''); FTC–2023–0064–2892 (Community Legal Services of Philadelphia stated that the rule's ''prohibition on misrepresentation regarding the nature and cost of fees would also be extremely beneficial for low-income renters, who often face inflated fees that can contribute to housing insecurity.''); FTC–2023–0064–3268 (Housing and Eviction Defense Clinic, University of Connecticut School of Law stated: ''Prohibiting misleading fees will not only properly inform the tenants of the charges but also hold the landlords accountable for their fees.'').

[335] FTC–2023–0064–3283 (National Consumer Law Center, Prison Policy Initiative, and advocate Stephen Raher stated that § 464.3(a) should make clear that it prohibits misrepresentations regarding any amount included in Total Price as well as any other fee or charge the consumer may pay, including ''Shipping Charges, Government Charges, fines, penalties, optional charges, voluntary gratuities, and invitations to tip,'' and proposed adding specific text to that effect.).

[336] *See, e.g.,* FTC–2023–0064–3268 (Housing & Eviction Defense Clinic, University of Connecticut School of Law stated that rental fees may be ''for something the landlord/property manager cannot explain.''); FTC–2023–0064–3283 (National Consumer Law Center, Prison Policy Initiative, and advocate Stephen Raher stated the rule should clarify that descriptions of fees which are not understandable to reasonable consumers misrepresent their nature and purpose.); FTC–2023–0064–3275 (Berkeley Center for Consumer Law & Economic Justice et al. cited research showing that ''many businesses characterize their hidden and unexpected fees using vague or anodyne language that fails to succinctly explain to the consumer exactly what the fee is for.'').

[337] *See, e.g.,* FTC–2023–0064–1939 (Tzedek DC expressed support for the misleading fees provision because it ''will prevent companies from making misleading claims about a fee, in example, a company charging a 'staff service fee' that does not go to employees.''); FTC–2023–0064–3106 (American Society of Travel Advisors noted: ''While admittedly there is no universally accepted industry definition of what constitutes a 'resort,' hotels offering only typical or ordinary accommodations and/or amenities but nevertheless characteriz[ing] their fees as such misrepresent the nature of the property being booked.''); FTC–2023–0064–3275 (Berkeley Center for Consumer Law & Economic Justice et al. identified ''environmental fees'' as one example of fees that may ''serve[ ] no apparent environmental sustainability or conservation purpose.'').

[338] *See, e.g.,* FTC–2023–0064–3275 (Berkeley Center for Consumer Law & Economic Justice et al. stated that ''environmental'' fees ''are likely designed to trick consumers into thinking that the added cost is either a government-imposed tax to protect the environment, or a salutary contribution to somehow 'offset' any negative environmental impact caused by the good or service'' when they may be ''charged simply to boost a business's profits.''); FTC–2023–0064–3106 (American Society of Travel Advisors noted that ''use of terms such as 'destination fee' . . . will inevitably mislead many consumers into mistakenly believing that it represents a tax or government surcharge that must be collected from the consumer and passed on to a local jurisdiction.'').

[339] *See, e.g.,* FTC–2023–0064–3275 (Berkeley Center for Consumer Law & Economic Justice et al. argued that the rule could be strengthened by clarifying that the misleading fees provision applies to mandatory and optional fees.); FTC–2023–0064–3160 (Consumer Federation of America et al. stated that the FTC should make clear that the misleading fees provision applies to mandatory and optional fees.).

[340] FTC–2023–0064–3212 (TickPick, LLC argued: ''Due to the arbitrary nature of the components that make up the Total Price of a ticket, any secondary ticketing marketplace that itemizes mandatory fees and charges is arguably misrepresenting the 'nature and purpose of any amount a consumer may pay.' [343] *See, e.g.,* FTC–2023–0064–3094 (American Hotel & Lodging Association).

[344] Given the prevalence of the defined unfair or deceptive practices regarding the misrepresentation

Continued

Other commenters described the misrepresentations provision as vague and overbroad.[345] The Commission carefully considered comments that suggested the language proposed in the NPRM prohibiting misrepresentations lacked specificity and was vague or overbroad, particularly the phrase ''any amount a consumer may pay.'' In final § 464.3, the Commission modifies the NPRM proposal to replace ''any amount a consumer may pay'' with a reference to ''any fee or charge.'' In the NPRM, the Commission stated that ''[o]ther characteristics included in the nature and purpose of a charge, such as the amount of the charge and whether it is refundable, are also material.'' [346] To elaborate on this point in the final rule text, the Commission specifies that the ''amount'' of any fee or charge cannot be misrepresented. Taken together, these modifications provide clarity to businesses that they cannot misrepresent the nature, purpose, amount, or refundability of any fee or charge excluded from total price, including government charges, shipping charges, any fees or charges for optional ancillary goods or services, or any other itemized or totaled fee or charge, including total price and the final amount of payment.

Final § 464.3 prohibits misrepresentations about material pricing terms of a transaction. The nature, purpose, amount, and refundability of fees or charges and the identity of the good or service for which they are imposed are material characteristics that affect the value to consumers of the covered goods or services being offered and businesses' ability to compete on price. As the Commission noted in the NPRM, whether a consumer is required to pay a charge, the amount of the charge, and what goods or services they will receive in exchange for the charge, is necessarily material information that affects a consumer's choice about whether to consent to a charge.[347] Other characteristics included in the nature, purpose, and amount of a charge, such as whether it is refundable, are also material.

Under final § 464.3, businesses cannot misrepresent the nature, purpose, amount, or refundability of fees or charges and the identity of the goods or services for which they are imposed.[348] For example, it would be a misrepresentation to characterize fees as mandatory when they are optional, or to characterize fees as optional when they are mandatory or consumers are automatically opted-in to pay them.[349] Representations that fees are for identified goods or services when those goods or services are not provided would also be a misrepresentation. Further, although the rule does not govern how businesses set their prices, if a business represents that it is charging a fee for a specific good or service, but the amount of the fee does not reflect the cost of that good or service, that may be evidence that the business has misrepresented the nature or purpose of the fee.

Misrepresentations can result from failing to disclose material conditions or limitations relating to fees and charges, for example, material conditions or limitations that would affect consumers' ability to purchase covered goods or services at advertised prices.[350] Describing a good or service as fully refundable without disclosing material limitations on refundability (*e.g.,* refunds are only accepted for a specified amount of time) would also be misleading.

The American Hotel & Lodging Association expressed the concern that businesses may use inconsistent descriptions of similar fees and confuse consumers in disclosing the nature and purpose of fees or the identity of the goods or services for which fees are imposed.[351] Using vague language or fee descriptions (*e.g.,* unspecified service or convenience fees) that do not accurately inform consumers of the nature or purpose of fees or charges or the identity of the good or service for which the fee or charge is imposed misrepresents those fees. In addition, it would be misleading if a business conflates fees so that consumers are unable to determine their nature, purpose, or the identity of the goods or services for which the fees are charged. Whether fee descriptions are adequate to avoid misrepresenting their nature, purpose, or the identity of goods or services for which they are charged will be case specific and may depend on the context.

Another commenter argued that the rule would unfairly hold online travel agencies and other intermediaries liable for fee misrepresentations when only travel service providers can know whether representations about the nature and purpose of fees are accurate.[352] As discussed in section III.B.1.f, complying with the rule would require businesses that sell or advertise covered goods or services through platforms to provide the platforms with accurate pricing information. Contractual relationships and the rule's application to B2B transactions should ensure that businesses that rely on other parties for pricing information receive accurate pricing information.

One commenter argued that charging consumers for ''speculative tickets'' in the live-event sector is deceptive because it is tantamount to ''charging consumers for something that doesn't exist,'' and suggested the rule should ''prohibit sellers or resellers from charging the consumer for buying something the seller doesn't own, or that does not even exist.'' [353] The

of total costs and the nature and purpose of fees, the Commission finds that it is necessary to require both affirmative disclosures and a prohibition of misrepresentations, instead of limiting the rule to prohibiting misrepresentations. *See supra* Parts II.A and II.B.

[345] *See, e.g.,* FTC–2023–0064–3094 (American Hotel & Lodging Association); FTC–2023–0064–3206 (Motor Vehicle Protection Products Association et al.).

[346] NPRM, 88 FR 77434.

[347] NPRM, 88 FR 77432; *Deception Policy Statement,* 103 F.T.C. 110, 175, 182–183, 183 n.55 (listing, respectively, ''misleading price claims'' among those that the FTC has found to be deceptive, and claims or omissions involving cost among those that are presumptively material); *see also FTC* v. *FleetCor Techs, Inc.,* 620 F. Supp. 3d 1268, 1303–04 (N.D. Ga. 2022) (finding that representations about transaction fees and discounts were material).

[348] As the Commission noted in the NPRM, if a delivery application includes an invitation to tip a delivery driver without disclosing that a portion of the tip is allocated to offset the delivery driver's base wages or benefits, it would violate § 464.3 in addition to other laws or regulations relating to the distribution of tips. *See* Complaint ¶¶ 50–51, *In re Amazon.com, Inc.* (''*Amazon Flex*''), No. C–4746 (FTC June 9, 2021) (alleging respondents falsely represented that 100% of tips would go to the driver in addition to the pay respondents offered drivers).

[352] FTC–2023–0064–3293 (Travel Technology Association).

[353] FTC–2023–0064–3108 (Christian L. Castle, Esq.; Mala Sharma, President, Georgia Music Partners; and Dr. David C. Lowery, founder of musical groups Cracker and Camper Van

Commission notes that the final rule does not directly address the sale of speculative tickets. However, a business that represents that tickets are in fact available when they are not may violate §§ 464.2(c) and 464.3 by failing to disclose clearly and conspicuously, and by misrepresenting, the identity of the good or service for which fees or charges are imposed.

Commenters opposed the misrepresentation provision in the context of negotiated contracts because negotiations arguably allow consumers to seek clarification about fees.[354] The Commission, however, has not identified any justification for excluding contracts from the misleading fees provision. Truthful fee disclosures in contract negotiations are material to consumers. One commenter recommended providing a safe harbor from the misleading fees provision if businesses clearly and conspicuously disclose fees and make either no statement or an accurate statement about the nature and purpose of fees.[355] The Commission declines to grant a safe harbor from the misleading fees provision when businesses make affirmative disclosures. Whether disclosures are adequate, clear and conspicuous, and not misleading are issues that may depend on the specific facts and circumstances of the transaction.

The NPRM identified and sought comment on the proposed rule's intersection with existing Federal rules and regulations containing prohibitions on misrepresentations: the Business Opportunity Rule,[356] the Mortgage Acts and Practices Advertising Rule (Regulation N),[357] the Mortgage Assistance Relief Services Rule (Regulation O),[358] the amendments to the Negative Option Rule,[359] and the Telemarketing Sales Rule.[360] The Commission did not receive substantive comments about overlap or conflict with these rules.[361] The Commission is not aware of any evidence that there is a conflict between these rules and the final rule. The Commission believes it is possible for businesses to comply with each of them, as applicable.

D. § 464.4 Relation to State laws

Proposed § 464.4 addressed preemption and the proposed rule's relation to State statutes, regulations, orders, or interpretations, including State common law (hereinafter ''State law''). Proposed § 464.4(a) provided that the rule would not supersede or otherwise affect any State law unless the State law is inconsistent with the rule, and then only to the extent of the inconsistency. Proposed § 464.4(b) specified that a State law providing consumers with greater protections than the rule does not, solely for that reason, make the State law inconsistent with the rule. When a State law offers greater (or, in some circumstances, even lesser) protection than the rule, if businesses can comply with both, they are not inconsistent. Thus, as commenters noted, the rule would establish a regulatory floor rather than a ceiling.[362] After reviewing the comments, the Commission adopts the provision as proposed in the NPRM.

The Commission finds it has the authority to promulgate regulations that preempt inconsistent State laws under section 5 of the FTC Act. Even without an express preemption provision, Federal statutes and regulations preempt conflicting State laws. Under the Supreme Court's conflict preemption doctrine, a Federal statute or regulation impliedly preempts State law when it is impossible for the regulated parties to comply with both the Federal and the State law, or when a State law is an obstacle to achieving the full purposes and objectives of the Federal law.[363] ''Federal regulations have no less pre-emptive effect than [F]ederal statutes.'' [364] Accordingly, the rule preempts a State law only to the extent it is inconsistent with the rule and compliance with both is impossible, or it is an obstacle to achieving the full purposes and objectives of the rule. To provide a clear explanation of the Commission's intent and the rule's scope of preemption, the rule includes an express preemption provision at § 464.4.[365]

Numerous commenters supported proposed § 464.4(b)'s targeted approach of preempting only inconsistent parts of State laws.[366] Some commenters,

Beethoven, and a lecturer at the University of Georgia Terry College of Business).

[354] *See, e.g.,* FTC–2023–0064–2918 (Elite Catering + Event Professionals opposed the misrepresentations provision for private food services contracts because ''[t]hroughout the contracting process, there are ample opportunities for the customer to seek clarification or negotiate the applicability of the price and fees.'').

[355] FTC–2023–0064–3016 (National Federation of Independent Business proposed modifying the rule as follows: ''(a) . . . [I]t is an unfair and deceptive practice . . . for a Business to: (i) misrepresent the total cost of a good or service by omitting a mandatory fee from the advertised price of the good or service; or (ii) misrepresent the nature and purpose of such a mandatory fee.'' The commenter also proposed exempting any business from that requirement if it discloses the fee clearly and conspicuously ''before a consumer becomes obligated to pay the fee'' and ''either makes no statement about the nature and purpose of the fee or makes an accurate statement of the nature and purpose of the fee.'').

Continued

however, stated that the rule should completely preempt all State laws to provide greater consistency and clarity and to lower compliance costs,[367] particularly when State laws provide greater protections.[368] However, if a business subject to both the rule and a State law that imposes greater protections does not want to use different practices for that State versus the rest of the country, it can choose to comply with both by using a single set of practices consistent with the greater protections afforded under the applicable State law. Nothing in the rule prohibits businesses from giving consumers greater protections than the rule requires. Another commenter expressed concern that some State laws create loopholes that allow businesses to mischaracterize fees as government charges that they then can exclude from total price.[369] The Commission discusses issues related to the rule's treatment of government charges in section III.A.5 and notes here that final § 464.3 would prohibit misrepresenting that a fee is a Government Charge, or otherwise misrepresenting the nature, purpose, amount, or refundability of any fee or charge.

Other commenters suggested that the Commission provide compliance guidance that addresses when State law differs from the rule and identify which State laws are not preempted.[370] Some commenters suggested that existing State and local industry regulations can make the rule unnecessary, duplicative, and confusing due to conflicting requirements.[371] The Commission reiterates that a State law is preempted only to the extent it conflicts with the rule's requirements and complying with both is impossible, or it is an obstacle to achieving the full purposes and objectives of the rule. A State law can provide greater protections and, solely for that reason, will not be inconsistent with the rule; a business can comply with both. A business also can comply with both when the State law provides lesser protections, although businesses still would have to comply with the greater protections of the rule. Only if a State law provides conflicting requirements, and a business cannot comply with both, or it is an obstacle to achieving the full purposes and objectives of the rule, will the State law be preempted, and then only to the extent of that conflict or obstacle.

Moreover, preemption furthers a primary goal of the final rule, discussed in section V.A: to provide a uniform, minimum standard for pricing disclosures for covered goods or services that is easy for businesses and consumers to understand. The Commission also determines, as discussed in section V.B, that declining to issue this final rule and continuing to rely solely on State laws and piecemeal adjudication would be less effective. The Commission believes the final rule's establishment of nationwide minimum standard will functionally reduce many variations among State laws,[372] because businesses will have to conform their practices to meet the rule's standards for covered goods or services to the extent those standards exceed or directly conflict with State law requirements. Moreover, to the extent State law is not inconsistent with the final rule, additional State authority and resources will only serve to further protect consumers and competition. To that end, the Commission will continue to work with its State law enforcement partners in battling unfair and deceptive pricing disclosure practices.[373] For the reasons stated herein, the Commission adopts § 464.4 as proposed.

E. § 464.5 Severability

The Commission includes a severability clause at final § 464.5, which provides that, if any provision of the final rule is held to be invalid or unenforceable either by its terms, or as applied to any person, industry, or circumstance, or stayed pending further agency action, the provision shall be construed to continue to give the maximum effect to the provision permitted by law. It further provides that any such invalidity shall not affect the application of the provision to other persons, industries, or circumstances, or the validity or application of other provisions. Final § 464.5 also states that, if any provision or application of the final rule is held to be invalid or unenforceable, the provision or application shall be severable from the final rule and shall not affect the remainder thereof. This provision confirms the Commission's intent, as discussed herein, that the final rule be given the maximum effect permitted by law even if a reviewing court stays or invalidates any provision, any component of any provision, or any application of the rule, in whole or in part, to any person, industry, or circumstance.

In issuing this final rule, as discussed in section II.A and II.B, the Commission finds bait-and-switch pricing tactics and misleading fee practices to be unfair and deceptive because they deceive consumers about the true cost of goods and services, prevent price comparison, and harm competitors that do accurately disclose true cost. The Commission also finds such practices to be widespread and to affect many types of consumer purchasing transactions, particularly with respect to covered goods or services. The Commission adopts this rule to comprehensively address the practices and to provide a consistent, administrable standard with respect to covered goods or services. The Commission finds in section V.E that, for covered goods or services, the benefits of the rule exceed its costs.

At the same time, the Commission finds that each of the provisions,

[372] The Commission has made similar findings in previous regulations. *See, e.g.,* Final rule: Non-Compete Clause Rule, 89 FR 38342, 38453–54 (May 7, 2024) (finding that the Non-Complete Clause Rule sets a Federal floor that will reduce the variations in a patchwork of State regulations); Promulgation of Trade Regulation Rule and Statement of Its Basis and Purpose: Cooling-Off Period for Door-to-Door Sales, 37 FR 22934, 22958 (Oct. 26, 1972) (finding that, when State laws ''give the consumer greater benefit and protection . . ., there seems to be no reason to deprive the affected consumers of these additional benefits,'' but when State laws do not, ''the rule would supply the needed protection or be construed to supersede the weak statute to the extent necessary to give the consumer the desired protection.'').

[373] *See, e.g.,* Final Trade Regulation Rule: Trade Regulation Rule; Funeral Industry Practices, 47 FR 42260, 42287 (Sept. 24, 1982) (codified at 16 CFR part 453) (noting the purpose of the rule's provision addressing relation of the rule to State law is ''to encourage federal-state cooperation by permitting appropriate state agencies to enforce their own state laws that are equal to or more stringent than the trade regulation rule'').

components of the provisions, and applications of the final rule operate independently, and that the evidence and findings supporting each stand independent of one another. The Commission finds that realizing the benefits of the rule does not require the joint adoption or operation of each provision. In addition, while the Commission believes applying the same restrictions to all pricing representations would provide even greater overall benefits, as explained in Parts II.B and V.B, the Commission finds the benefits of the final rule exceed the costs as to covered goods or services, both overall and with respect to each substantive provision of the rule. For covered goods or services, as discussed in section V.E, ample data show the rule would have positive quantified net benefits, including by reducing search costs, as well as unquantified reductions in deadweight loss and consumer frustration. Similarly, consumers would benefit from the misleading fees prohibition even if the requirement to disclose total price were stayed or invalidated. The benefits would also justify the costs if the total price provision were further limited to either just the live-event ticketing or just the short-term lodging industry.

Based on the available data, the Commission concludes that, even if the rule were more limited in scope or if it applied to a more limited set of transactions, such as to a single industry or to particular circumstances, it would still achieve some of the Commission's objectives and the benefits of the rule would still exceed the costs. Although a more limited scope or application would change the magnitude of the overall benefit of the final rule, it would not undermine the valid and measurable benefit of, and justification for, the remaining provisions or applications of the final rule. Thus, were a court to stay or invalidate any provision, any component of any provision, or any application of the rule, the Commission intends the remainder of the rule to remain in force.

As described in section V.B, the Commission considered alternatives to the final rule that would have applied the rule to other transactions or industries or expanded it to all goods and services within the Commission's jurisdiction. The Commission finds that each such alternative would be an appropriate exercise of the Commission's authority under sections 5 and 18 of the FTC Act as stand-alone regulations because disclosure of total price in any type of transaction or industry—whether or not the same is required in other transactions or industries—mitigates the harms caused by the unfair or deceptive pricing tactics in those transactions or industries to which the rule does apply. At the same time, as discussed in parts I and II.A, the Commission finds bait-and-switch pricing tactics and misleading fee practices are widespread and potentially growing. As a result, the Commission may later find that a rule of expanded or even general applicability, to the extent of its jurisdiction, would be appropriate and would result in benefits to consumers and competition that are greater in magnitude than a rule with more limited applicability. However, such findings do not invalidate this final rule's quantifiable positive benefits, in whole or in part.

Accordingly, the Commission considers and intends each of the provisions adopted in the final rule to be severable, within each provision, from other provisions in Part 464, and as applied to different persons, industries, or circumstances. In the event of a stay or invalidation of any provision, any component of any provision, or of any provision as it applies to certain persons, conduct, or industry, the Commission's intent is to otherwise preserve and enforce the final rule to the fullest possible extent. Therefore, if a reviewing court were to stay or invalidate a particular application of the final rule, or a provision thereof, as to certain persons, industries, or circumstances, other businesses that remain covered by the rule should be required to comply with the applicable provisions of the final rule that remain in effect.

IV. Challenges to the FTC's Legal Authority To Promulgate the Rule

As explained in the NPRM and section II, this rule is consistent with decades of FTC adjudications and enforcement actions addressing the standards governing unfair or deceptive pricing practices.[374] The Commission issues this rule to prevent prevalent unfair or deceptive acts or practices and to promote compliance in a manner that accounts for and balances the needs of consumers and regulated entities. The rule falls squarely within the Commission's legal authority, is based on substantial evidence in the rulemaking record, and clearly defines specific unfair and deceptive practices regarding fees or charges.

The Commission received comments supporting, discussing, or questioning its authority to promulgate the final rule. Commenters supporting the Commission's authority noted the rule falls squarely within the Commission's mandate to prevent unfair and deceptive acts and practices through rulemaking under sections 5 and 18 of the FTC Act.[375] Commenters questioning the Commission's rulemaking authority typically advanced one of three arguments. First, some commenters argued that requiring disclosures related to pricing is a major question that Congress has not given the Commission authority to address.[376] Second, some commenters argued that if the rule was in fact consistent with the Commission's authority under sections 5 and 18 of the FTC Act, Congress had impermissibly delegated this authority to the Commission.[377] Third, some commenters argued that the disclosures required by the rule violate the First Amendment.[378] In addition to these arguments, one commenter asserted that the rule is invalid because the

Commission is unconstitutionally structured.[379] Finally, some commenters asserted the Commission has not complied with the Administrative Procedure Act (''APA'').[380]

Most of the commenters challenging the Commission's authority represent businesses that offer goods or services other than covered goods or services. Thus, the concerns raised by these commenters may not be relevant to the narrowed scope of the final rule. Further, the NPRM's industry-neutral approach was central to nearly all of the critiques of the rule that raised questions regarding the Commission's authority to promulgate the rule; while the Commission disagrees with such critiques, they are not applicable to this final rule, which focuses on two industries, live-event tickets and short-term lodging. Notably, the vast majority of comments from businesses offering live-event tickets and short-term lodging and their direct representatives did not raise challenges to the Commission's authority to promulgate the rule.[381] Nevertheless, the Commission has considered the comments challenging its authority and explains in this section why it disagrees with those.

A. Major Questions Doctrine

Some commenters invoked the major questions doctrine to argue that the Commission lacks authority to adopt the rule. Commenters argued the rule raises a major question because addressing consumer fees and pricing across industries is of vast political and economic significance.[382] Some commenters also argued that the rule is broader than the agency's prior rules, based on the assertion that the rule regulates pricing.[383] Commenters concluded that Congress has not authorized the Commission to promulgate the rule.[384]

The major questions doctrine, as the Supreme Court recently explained in *West Virginia* v. *EPA,* 597 U.S. 697 (2022), applies to '' 'extraordinary cases' . . . in which the 'history and the breadth of the authority that [the agency] has asserted,' and the 'economic and political significance' of that assertion, provide a 'reason to hesitate before concluding that Congress' meant to confer such authority.'' [385] When an agency claims a '' 'transformative expansion in [its] regulatory authority,' '' it ''must point to 'clear congressional authorization' for the power it claims.'' [386]

Having considered the factors that the Supreme Court has used to identify major questions, the Commission, as discussed herein, concludes that the final rule does not implicate the major questions doctrine. The FTC does not claim a transformative change in its rulemaking authority. The final rule comports with the history and breadth of prior rules that the FTC has promulgated pursuant to its existing rulemaking authority, which Congress conferred to allow the Commission to address prevalent unfair or deceptive practices. Even if the major questions doctrine did apply, the Commission concludes that Congress provided clear authorization for the Commission to promulgate this rule.

1. The Rule Does Not Address a Major Question

(a) The Commission Has a Long History of Addressing Unfair or Deceptive Acts or Practices Related to Pricing Information

Identifying unfair or deceptive acts or practices related to the disclosure of the price and purpose of goods and services is at the core of the Commission's mandate under section 5.[387] The Commission has the authority to address these unfair or deceptive acts or practices both through case-by-case enforcement, either administratively or in Federal court, or through rulemaking if the unfair or deceptive practices are prevalent as established by the rulemaking record. The Commission may choose case-by-case adjudication or rulemaking at its discretion.[388]

The Commission's authority to promulgate rules to define with specificity unfair or deceptive acts or practices under section 18 of the FTC Act, 15 U.S.C. 57a, is not extraordinary and is undisputed, resting on firm historical footing.[389] Indeed, when consumers have faced bait-and-switch tactics in the past, including being unable to get accurate material information about what they must pay and what they will receive in return, the Commission has repeatedly issued rules that define unfair or deceptive acts or practices related to the disclosure of that material information.[390] For example,

[379] FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP).

[380] *See, e.g., id.;* FTC–2023–0064–3133 (National Multifamily Housing Council and National Apartment Association); FTC–2023–0064–3152 (Building Owners & Managers Association et al.); FTC–2023–0064–3263 (Flex Association); FTC–2023–0064–3294 (International Franchise Association).

[381] The International Franchise Association, which represents franchised businesses offering short-term lodging, raised challenges to the Commission's authority to promulgate the rule. IFA's comment, however, primarily focused on the NPRM's industry-neutral scope and its implications for franchised businesses that do not offer Covered Goods or Services. Regarding the short-term lodging industry specifically, IFA's comment challenged certain aspects of the Commission's estimate of compliance costs, which are addressed in section V. *See* FTC–2023–0064–3294 (International Franchise Association).

[382] *See, e.g.,* FTC–2023–0064–3263 (Flex Association); FTC–2023–0064–3127 (U.S. Chamber of Commerce); FTC–2023–0064–3152 (Building Owners & Managers Association et al.); FTC–2023–0064–3202 (TechNet); FTC–2023–0064–3133 (National Multifamily Housing Council and National Apartment Association); FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP). While commenters suggested that the rule would have ''political and economic significance,'' no commenters pointed to any specific political significance.

the Commission initiated the rulemaking resulting in the Rule on Retail Food Store Advertising and Marketing Practices (the ''Unavailability Rule''), 16 CFR part 424, based in part on findings in a Commission report that items priced at or below the advertised price were frequently unavailable and that in ''a very substantial majority of the instances of the deviations, the prices marked on the items were higher than the advertised price.'' [391]

As discussed in parts I and II, there is nothing new about businesses using bait-and-switch tactics to reel in and deceive consumers, just as there is nothing new about the Commission exercising its authority to limit such tactics and the harms they cause.[392] This rule is tailored to address practices squarely within the scope of the Commission's core work to protect consumers: bait-and-switch pricing tactics, including drip pricing, and misrepresentations regarding a material term. As described in section II.A and II.B, the Commission adopts this rule now because bait-and-switch tactics, including drip pricing, and misrepresentations as to the nature and purpose of fees and charges are prevalent and continue to harm consumers. This is precisely what section 18 of the FTC Act envisions and is consistent with the Commission's exercise of the same authority in the past.

(b) Commenters' Claims About the Scope of the Acts or Practices Covered by the Rule Are Inapplicable or Overstated

Commenters suggested that the major questions doctrine is implicated simply because the rule proposed by the NPRM was industry-neutral.[393] The Commission disagrees. Congress authorized the Commission to prevent unfair or deceptive practices in or affecting commerce across the economy while specifying a limited number of industries, activities, or entities that are exempt.[394] These comments are inapposite, however, because the final rule is limited to covered goods or services: live-event ticketing and short-term lodging.

Commenters also contended that the rule implicates a major question because it regulates pricing practices broadly or supposedly will have effects on a wide array of pricing strategies.[395] The Commission disagrees. The rule focuses on hidden mandatory fees or charges that obscure the total price of a covered good or service and misrepresentations about the nature, purpose, amount, and refundability of fees or charges. The rule has no effect on many pricing practices and strategies, including a business's fundamental decision about what price to charge consumers for its goods or services.[396] Nor does the rule affect a business's ability to use dynamic pricing, to offer or use sales, discounts, rebates, or special offers, or to truthfully itemize fees and costs so long as the business accurately describes the total price upfront.[397] With respect to mandatory fees, the rule does not prevent businesses from continuing to charge such fees as a pricing strategy, itemizing them in addition to stating the total price, or from providing non-misleading information about those fees. Indeed, a number of commenters have misunderstood the rule to act as a prohibition or limitation on itemization; as explained in section III, truthful itemization is not prohibited.

In sum, the rule does not address a major question because it focuses on traditional types of unfair or deceptive acts or practices that have long been the subject of Commission rulemaking and enforcement activity and targets only those acts or practices.

2. Congress Provided the Commission With a Clear Grant of Authority To Promulgate This Rule

Even if the final rule did present a major question, the FTC Act provides clear authorization for the rule. In cases involving major questions, courts expect Congress to ''speak clearly'' if it wishes to assign the disputed power.[398] In the FTC Act, Congress vested the Commission with enforcement powers and the authority to promulgate rules to carry out the Commission's mandate to prevent unfair or deceptive acts or practices.[399] Rather than trying to define all unfair or deceptive acts and practices, Congress empowered the Commission to respond to changing market conditions and to identify conduct that is unfair or deceptive.[400]

When the Commission was created by the FTC Act in 1914, the Act prohibited ''unfair methods of competition'' in

---

or practice to ''[m]ispresent the cost . . . of the business opportunity or the goods or services offered to a prospective purchaser''); Funeral Rule, 16 CFR 453.2(a) and (b) (defining as an unfair or deceptive act or practice to ''fail to furnish accurate price information disclosing the cost to the purchaser for each of the specific funeral goods and funeral services used in connection with the disposition of deceased human bodies'' and requiring funeral providers to provide specific price lists in writing).

[391] Statement of Basis and Purpose: Retail Food Store Advertising and Marketing Practices, 36 FR 8777, 8777–78 (May 13, 1971) (citing a Bureau of Economics staff report titled ''Economic Report on Food Chain Selling Practices in the District of Columbia and San Francisco''). Similarly, when the Commission later amended the Unavailability Rule, it again stressed that food retailers must not engage in bait and switch advertising—where the seller advertises an unavailable good at a low price to get the consumer in the door—or deception regarding availability of advertised goods. Final amendments to trade regulation rule: Amendment to Trade Regulation Rule Concerning Retail Food Store Advertising and Marketing Practices, 54 FR 35456, 35462–63 (Aug. 28, 1989).

[394] 15 U.S.C. 45.

[395] Commenters did not argue or provide substantive support for any argument that a major question was raised by proposed § 464.3(a), which would have prohibited any Business from misrepresenting the nature and purpose of any amount a consumer may pay, including its refundability and the identity of any good or service for which it is charged. The Commission is finalizing § 464.3 more narrowly to prohibit any Business, in any offer, display, or advertisement for a Covered Good or Service, from misrepresenting any fee or charge, including its nature, purpose, amount, or refundability, and the identity of the good or service for which it is imposed.

[396] *See supra* section I (''The discretion to set prices remains squarely with businesses; the rule simply requires that they tell consumers the truth about those prices.'').

[400] *See* S. Rep. No. 75–221, at 2 (1937) (report on Amendments to the Federal Trade Commission Act (S.1077), explaining Congress's reasoning in granting the Commission authority in 1914 to define specific unfair methods of competition, and then applying the same reasoning to the proposed grant of authority to prohibit unfair or deceptive acts or practices: ''The committee gave careful consideration to the question as to whether it would attempt to define the many and variable unfair practices . . . or whether it would by a general declaration . . . condemn[ ] unfair practices, leav[ing] it to the Commission to determine what practices were unfair.'' The Committee ''concluded that the latter course would be the better, for the reason . . . that there were too many unfair practices to define, and after writing 20 of them into the law it would be quite possible to invent others.''); *see also* H.R. Rep. No. 93–1606, at H 12060 (1974) (Conf. Rep.) (report on Consumer Product Warranty and Federal Trade Commission Improvement Act, stating: ''[section 18] is an important power by which the Commission can fairly and efficiently pursue its important statutory mission.'' Further, ''[b]ecause the prohibitions of section 5 of the Act are quite broad, trade regulation rules are needed to define with specificity conduct that violates the statute and to establish requirements to prevent unlawful conduct.'').

section 5 and granted the Commission authority to promulgate rules to effectuate the Act's provisions in section 6(g), including the prohibition on unfair methods of competition.[401] The Act did not expressly prohibit deception. While deception could qualify as an unfair method of competition, courts required the Commission to show harm to competition or rivals in each instance; harm to consumers alone was insufficient to meet the standard.[402] In response, Congress amended the FTC Act in 1938 to include a prohibition, not just against unfair methods of competition, but against unfair or deceptive acts or practices as well.[403]

Congress affirmed the Commission's authority to issue rules like the one here through amendments to the FTC Act in 1975 and 1980. First, in the Magnuson-Moss Warranty Act of 1975, Congress added section 18 of the FTC Act, 15 U.S.C. 57a, confirming the Commission's authority to issue rules that ''define with specificity acts or practices which are unfair or deceptive acts or practices,'' and requiring the Commission to follow specific procedures for promulgating rules.[404] Among the substantially completed rules at the time were the Rule on the Preservation of Consumers' Claims and Defenses[405] and the Mail Order Rule,[406] which proposed to define as an unfair or deceptive act—and upon promulgation did so define—certain conduct that the rulemaking record showed was causing harm across various industries. As Congress added procedural requirements to the Commission's rulemaking authority through section 18, Congress did not limit these existing cross-industry rules targeting unfair or deceptive acts or practices, but instead created an exception under which the Commission could finalize them without following section 18's procedural requirements.[407]

Congress again confirmed the Commission's authority to promulgate rules defining unfair and deceptive acts or practices in 1980 when it enacted section 22 of the FTC Act, 15 U.S.C. 57b–3(b), as part of the Federal Trade Commission Improvements Act of 1980.[408] Section 22 imposes certain additional procedural requirements the Commission must follow when it promulgates any ''rule,'' including rules promulgated under section 18. Section 22(b) contemplates the FTC's authority to promulgate rules that are substantive and economically significant by requiring, for example, that the Commission conduct a cost-benefit analysis.[409] In addition, section 22(a) imposes the same requirements on amendments to existing rules if they may ''have an annual effect on the national economy of $100,000,000 or more,'' ''cause a substantial change in the cost or price of goods or services,'' or ''have a significant impact upon'' persons and consumers.[410] Thus, Congress explicitly authorized the Commission to issue rules and amendments that address major economic questions, so long as the rulemaking complies with section 22.

The Commission has exercised its authority to promulgate numerous rules and rule amendments defining unfair or deceptive acts or practices pursuant to sections 18 and 22.[411] Central to many of these rules is a rulemaking record establishing that businesses misrepresent or fail to disclose certain material terms in a transaction, including information related to price, and that these practices are unfair or deceptive.[412] Unlike in *West Virginia* v. *EPA,* courts have upheld Commission rules similar to the one here—that prohibit misrepresentations, define unfair or deceptive conduct, and require specific disclosures to avoid deception—against a myriad of legal challenges.[413]

In sum, this is a far cry from a situation where Congress ''conspicuously and repeatedly'' declined to grant the agency the claimed power.[414] Quite the opposite—Congress has conspicuously and repeatedly confirmed that promulgating a rule like this final rule is precisely how Congress expects the Commission to use its rulemaking authority. For these reasons, even if the final rule involves a major question, Congress has clearly delegated to the Commission the authority to address that question.

B. Non-Delegation Doctrine

One commenter contended that the Commission's issuance of the rule violates the non-delegation doctrine.[415] The commenter argued that, given the rule's breadth, section 5 lacks an intelligible principle if it authorizes the Commission to promulgate the rule. The commenter asserted that the rule regulates pricing economy-wide and that Congress has not made ''the necessary fundamental policy-decision'' underlying the rule. The commenter

also asserted that the Commission's authority to promulgate the rule is an unconstitutional delegation under a "history and tradition test," citing to a dissenting opinion in *Gundy* v. *United States,* 588 U.S. 128 (2019).[416] The Commission disagrees. The Commission notes that this commenter's argument that the proposed rule violated the non-delegation doctrine was predicated on its assertion that the proposed rule regulated "the disclosing and collecting [of] consumer fees for all businesses."[417] Since the focus of the final rule is narrowed to covered goods or services, the comment may not be relevant to the final rule. Nevertheless, the Commission addresses the arguments herein.

"Only twice in this country's history has the Court found a delegation excessive, in each case because 'Congress had failed to articulate *any* policy or standard' to confine discretion."[418] Article I of the Constitution vests the Federal government's legislative powers in Congress, and Congress may not delegate those powers to an executive agency absent an intelligible principle to guide the exercise of discretion.[419] The "intelligible principle" standard is "not demanding."[420] This is because of the practical understanding that " 'in our increasingly complex society, replete with ever changing and more technical problems,' . . . 'Congress simply cannot do its job absent an ability to delegate power under broad general directives.' "[421] For that reason, the Supreme Court has repeatedly held that "a statutory delegation is constitutional as long as Congress 'lay[s] down by legislative act an intelligible principle to which the person or body authorized to [exercise the delegated authority] is directed to conform.' "[422]

As described throughout section IV.A, Congress, the Commission, and the courts have long understood the Commission's mandate to prevent both unfair and deceptive acts or practices as providing intelligible principles to guide the exercise of the Commission's discretion. In *A.L.A. Schechter Poultry Corp.* v. *United States,* 295 U.S. 495 (1935), the Court observed that conduct that fell within the ambit of section 5 of the FTC Act was "to be determined in particular instances, upon evidence, in the light of particular competitive conditions and of what is found to be a specific and substantial public interest."[423] The Court ultimately concluded that Congress properly delegated authority to the FTC under the FTC Act based, among other things, on the subject matter and procedural requirements Congress placed on the Commission—which involves "notice and hearing," "appropriate findings of fact supported by adequate evidence," and "judicial review."[424]

FTC rulemaking under section 18 features similar procedural safeguards to FTC adjudication and thus comports with the nondelegation doctrine for the same reasons. For example, section 18's rulemaking process requires the Commission to: (1) notify Congress; (2) publish multiple public notices of the proposed rulemaking; (3) provide all interested persons the opportunity to "submi[t] . . . written data, views, or arguments"; (4) consider all submissions; (5) provide the opportunity for an informal hearing; (6) determine, based on all available information, that the unfair or deceptive acts or practices are prevalent; and (7) determine, based on the rulemaking record, that the final rule is appropriate. In addition, once the rule is finalized, it is subject to judicial review in a court of appeals.[425] The rulemaking process thus "may actually be fairer to regulated parties than total reliance on case-by-case adjudication" because the process allows all interested parties the opportunity to weigh in by submitting data, views, and arguments and by participating in a hearing.[426] In this rulemaking, interested parties had numerous opportunities to be heard by the Commission, including through ninety-day public comment periods on both an advance notice of proposed rulemaking and a notice of proposed rulemaking, as well as an informal hearing. These procedures helped to ensure that the Commission properly applied its statutory mandate when adopting the rule to prevent prevalent unfair and deceptive practices concerning hidden and misleading fees.

Like the FTC's Act's procedural requirements, the subject matter requirements that apply to the FTC's statutory authority are well established. With respect to unfairness, Congress articulated in section 5(n) of the FTC Act the factors the Commission must apply.[427] For deception, virtually all courts have adopted the three-part test put forward by the Commission in its Deception Policy Statement: (1) there is a representation, omission, or practice that (2) is likely to mislead consumers acting reasonably under the circumstances, and (3) the representation, omission, or practice is material.[428] For decades, courts have reviewed and upheld the Commission's application of unfairness and deception authority in enforcement actions and rules. Moreover, the Supreme Court has recognized the ability of regulators, courts, and regulated entities to distinguish deceptive from nondeceptive claims or advertisements under section 5 of the FTC Act.[429] In sum, the subject matter requirements of the FTC Act's statutory authority as to unfair and deceptive practices are well settled.

Finally, the Supreme Court has not adopted the commenter's suggested "history and tradition test" as the applicable standard for determining whether congressional delegation of authority is constitutional. The intelligible principle test is binding precedent on that question, and the final rule complies with the intelligible principle test.

C. First Amendment

Some commenters argued that § 464.2 impermissibly prohibits and compels speech in violation of the First

[416] *Id.* (citing *Gundy,* 588 U.S. at 159 (Gorsuch, J., dissenting, joined by Roberts, C.J. and Thomas, J.)).

Amendment.[430] The Commission disagrees. The rule addresses unfair and deceptive conduct and does not otherwise affect businesses' ability to express truthful and accurate price information.

1. Comments

Some commenters argued the rule's disclosure requirements compel speech in violation of the First Amendment. Some commenters also contended that § 464.2 would prohibit businesses from advertising aspects or parts of truthful and accurate price information. They argued that conditioning the ability to provide some truthful information—such as a partial price without including certain fees—on total price being disclosed violates the First Amendment.[431] Commenters asserted that consumers are not injured where a business presents a price that omits fees or fails to add up the fees for the consumer. They argued that this type of price information is useful and truthful even if it is only partial. A commenter argued that how the price of goods and services is displayed is a message under the First Amendment and the rule's requirement that total price be displayed clearly and conspicuously is unconstitutional compelled speech.[432] One academic commenter supported the rule and argued it does not unconstitutionally compel speech because it only requires disclosure of factual, non-controversial information, without which the prices disclosed or advertised would be misleading.[433]

Some commenters argued the requirement to disclose total price clearly and conspicuously should be subject to strict scrutiny,[434] while others argued it should be reviewed under a heightened scrutiny standard[435] or intermediate scrutiny.[436] One commenter argued that the rule is a content-based regulation subject to strict scrutiny because, where a business presents any type of price information, it is required to display total price and in a particular way—*i.e.,* clearly, conspicuously, and prominently.[437] The commenter argued that the Commission failed to demonstrate the rule directly advances any compelling government interest. Another commenter argued that price information is commercial speech subject to intermediate scrutiny and that the rule fails to meet the standard because, even if some price displays without total price are deceptive, not all such displays are deceptive.[438]

Some commenters asserted that the rule's application to credit card surcharges and government charges violated the First Amendment. An industry commenter interpreted the rule to require all credit card surcharges to be included in total price. The commenter argued that this amounts to a ban on presenting credit card surcharges to consumers, which is regulation of commercial speech that violates merchants' First Amendment rights. The commenter cited to several State laws banning credit card surcharges or fees, but allowing cash discounts, that were struck down by Federal courts of appeals.[439] Two commenters argued that the rule's allowance for government charges to be excluded from total price—while other fees or charges cannot be excluded—amounts to content-based regulation of speech that provides preferential treatment to the government.[440] One commenter argued that the rule would allow businesses to conceal government charges and shows favoritism for government speech to assist it in raising tax revenues; the commenter proposed the alternative of marginally raising the tax rate.[441] The commenter also argued that the rule is underinclusive because total price does not include government charges, arguing that consumers suffer the same harm of being surprised by government fees as with non-government charges required to be included in total price. Finally, other commenters recommended that the Commission adopt a rule that only prohibits deceptive conduct without requiring specific affirmative disclosures.[442]

2. Legal Standard

The Commission finds that businesses' First Amendment rights are adequately protected because § 464.2's compelled disclosures are in a commercial context and meet the longstanding legal standards governing commercial speech. Courts apply one of two standards in the context of commercial speech. In *Cent. Hudson Gas & Electric Corp.* v. *Pub. Serv. Comm'n of N.Y.,* 447 U.S. 557, 563–64 (1980), the Supreme Court established the analytical framework for determining the constitutionality of a regulation of commercial speech that is not misleading and does not involve illegal activity. Under that framework, described as intermediate scrutiny, the regulation must: (1) serve a substantial governmental interest; (2) directly advance this interest; and (3) not be more extensive than necessary to serve the government's interests.[443] The third prong does not require the government to adopt the least restrictive means. Instead, it simply calls for a '' 'fit' between the legislature's ends and the means chosen to accomplish those ends . . . a fit that is not necessarily perfect, but reasonable.'' [444]

The Supreme Court's ''precedents have applied a lower level of scrutiny to laws that compel disclosures in certain contexts,'' such as in commercial speech, as set forth in *Zauderer* v. *Office of Disciplinary Counsel,* 471 U.S. 626 (1985).[445] Contrary to commenters'

[430] *See, e.g.,* FTC–2023–0064–3028 (Competitive Enterprise Institute); FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP); FTC–2023–0064–3233 (NCTA—The internet and Television Association); FTC–2023–0064–3016 (National Federation of Independent Business). In opposing § 464.2, the commenters did not argue that § 464.3, which simply prohibits misrepresentations related to prices and fees, implicates the First Amendment.

[431] *E.g.,* FTC–2023–0064–3028 (Competitive Enterprise Institute provided examples of pricing information it argued was not unfair or deceptive that involve drip pricing with disclaimers, contingent pricing, and partition pricing.) The Commission addresses in section III.B.1 when and to what extent the rule covers these types of information and also explains why the omission of Total Price is unfair and deceptive in those circumstances.

[432] FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP).

[440] FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP); FTC–2023–0064–3233 (NCTA—The Internet & Television Association).

[441] FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP ''assume[d]'' that in allowing government charges to be excluded from Total Price, the Commission aims to ''rais[e] tax revenues'' because the Commission believes ''disclosing a tax upfront will lead to fewer people making purchases, resulting in a decline in revenue''). The commenter did not address the fact that the Commission does not have authority over taxation, or whether the commenter's proposed alternative of raising marginal tax rates would fulfill the Commission's goal in this rulemaking of preventing unfair or deceptive conduct related to mandatory fees and charges. The Commission finds that marginally raising the tax rate is not a viable alternative because the Commission does not have taxing authority and raising the tax rate would not achieve the Commission's stated goal of preventing unfair or deceptive conduct.

assertions, compelled speech in the commercial context is neither unequivocally prohibited nor subject to strict scrutiny under the First Amendment. Rather, the First Amendment permits required disclosures that are: (1) factual and uncontroversial; (2) reasonably related to the government's interest—here, preventing unfair and deceptive commercial practices that harm consumers; and (3) not ''unjustified or unduly burdensome.'' [446] The final rule's disclosure requirements satisfy these parameters.

3. The Rule's Disclosure Requirements Are Constitutional Under Zauderer

Section 464.2 applies to speech that is, at its core, commercial—the disclosure and advertising of the price for goods and services.[447] It requires precisely the type of disclosure the Supreme Court has confirmed is constitutional under *Zauderer.*[448] In *Zauderer,* the Supreme Court considered a challenge to government-compelled commercial speech in an advertisement by an attorney. The advertisement stated that certain types of cases were handled on a contingent fee basis for which the client owed no legal fees if the lawsuit was unsuccessful. The State required such advertisements to disclose that clients may be liable for litigation costs even if their lawsuit is unsuccessful. The attorney argued such a requirement was compelled speech in violation of the First Amendment. The Supreme Court disagreed. Noting that the disclosure applied to commercial advertising, the Court held that an advertiser's ''constitutionally protected interest in *not* providing any particular factual information in his advertising is minimal.'' [449] The Court concluded, ''The State's position that it is deceptive to employ advertising that refers to contingent-fee arrangements without mentioning the client's liability for costs is reasonable enough to support a requirement that information regarding the client's liability for costs be disclosed.'' [450] The Court also noted that attorneys were not prevented from conveying information to the public—they were merely required ''to provide somewhat more information than they might otherwise be inclined to present . . . in order to dissipate the possibility of consumer confusion or deception.'' [451]

Section 464.2 satisfies all prongs of *Zauderer.* First, § 464.2 only requires businesses to disclose factual and noncontroversial pricing information, by incorporating known mandatory fees or charges into total price, with exceptions, and by disclosing certain other customary pricing information before a consumer consents to pay. As described in section II.B, the purpose of the rule is to ensure that consumers know the total amount they will have to pay because this information is material to consumer decision making.

Second, parts II.B and III lay out in detail how the rule is reasonably related to—and, in fact, directly advances—the government's interest in preventing unfairness and deception in the marketplace. Preventing unfair and deceptive conduct is the Commission's mandate under sections 5 and 18 of the FTC Act.[452] And based on voluminous comments from the public as well as significant empirical evidence, the Commission finds that consumers seeking to purchase covered goods or services are likely to be deceived and harmed if the required disclosures are not made.

Finally, § 464.2 is neither unduly burdensome nor unjustified. The Commission set forth the justification for the required disclosures in parts II and III, including the harms to consumers and to competition from drip or partitioned pricing. Further, the rule does not impose an undue burden; businesses offering covered goods or services are simply required ''to provide somewhat more information than they might otherwise be inclined to present.'' [453] The rule merely requires clear and conspicuous display of total price if other pricing information is displayed, and requires certain pricing and informational disclosures before the consumer consents to pay. As described in detail in section III, the final rule permits businesses to exclude from total price certain mandatory fees or charges that industry commenters stated would be impractical or burdensome for inclusion in total price.

The Commission disagrees with a commenter who seemed to argue that because the rule imposes disclosure requirements as to ''how'' total price is displayed, the rule ''offends the First Amendment'' by compelling speech.[454] In so arguing, the commenter cited to *303 Creative, LLC* v. *Elenis,* 600 U.S. 570 (2023). The Supreme Court in *303 Creative* considered an as-applied challenge to the Colorado Anti-Discrimination Act (''CAD'') by a sole proprietor who designed individualized websites the Court concluded ''qualify as pure speech,'' with each website being an ''original, customized creation.'' [455] While the Court in that case held that the CAD violated the First Amendment as applied to the plaintiff, the rule here is distinguishable from the facts of *303 Creative.* First, both price

[455] *303 Creative,* 600 U.S. at 587–88.

and how price is displayed (here, how total price is displayed) relate solely to proposing a commercial transaction and to the economic interests of the speaker and its audience.[456] Second, the Court based its decision in *303 Creative* on the unique nature of the plaintiff's work, noting the plaintiff ''does not seek to sell an ordinary commercial good.'' [457] In comparison, the rule merely requires the display of the total price of a covered good or service—live-event tickets and short-term lodging—which is core commercial speech.

Therefore, the Commission finds that the disclosure requirements are consistent with the compelled speech analysis under *Zauderer.* Clear, conspicuous, and prominent disclosure of total price in advertisements, displays, or offers, and the disclosure of complete pricing information of covered goods or services before the consumer consents to pay, directly advance the Commission's interest in preventing deception and harm. The rule's requirements enable consumers to receive the information they need to make informed purchasing decisions about live-event tickets and short-term lodging based on complete and truthful information.

4. The Rule Does Not Prohibit Truthful Speech

Commenters asserted that the rule amounts to a prohibition on the display of truthful price information in violation of the First Amendment because the rule prohibits certain information (like partial prices without mandatory fees) from being displayed without displaying total price. Commenters also asserted that, because the rule prohibits certain displays of price, like parts of prices without fees, it should be evaluated under *Central Hudson.* The Commission disagrees. First, the commenters ''overlook[ ] material differences between disclosure requirements and outright prohibitions on speech.'' [458] The rule does not prevent businesses from conveying information to the public and, in particular, it does not prohibit the disclosure of the components of total price. Businesses remain free to describe, disclose, or convey price, fee, and charge information.[459] Put differently, the rule permits any truthful pricing claims an advertiser wants to make; what it forbids is half-truths that omit total price.

Section 464.2 does require a business that displays certain pricing information about covered goods or services to also provide factual and non-controversial information in the form of total price. Although total price may be ''somewhat more information than they might be otherwise inclined to present,'' such a requirement is allowed by *Zauderer.*[460] With the rule's requirement that total price be clear, conspicuous, and prominent, the Commission balances industry commenters' stated desire to display other price information with its finding that total price is a necessary piece of price information for consumers if any other price information is displayed.[461]

Because the rule does not restrict truthful speech, and because the conduct the rule addresses (advertising prices without mandatory fees) is deceptive, the Commission need not apply the *Central Hudson* factors. Nevertheless, the rule would meet them. Under *Central Hudson,* the regulation must serve a substantial governmental interest, must directly advance that interest, and must not be more extensive than necessary to serve the government's interest.[462] As outlined in parts II and III, the rule serves the substantial governmental interest of providing material price information to consumers purchasing live-event tickets and short-term lodging to allow them to make accurate price comparisons and informed purchasing decisions, and to allow businesses to compete on price in a level playing field. And consistent with the third prong of *Central Hudson,* the rule is no more extensive than necessary to serve the government's interests in preventing unfairness, deception, and harm, as the rule simply requires clear, conspicuous, and prominent display of total price. *Central Hudson* acknowledges that the government can regulate the format of advertising, including by requiring a disclosure.[463]

The Commission also disagrees with commenters arguing the rule violates is overinclusive and would prohibit some displays of partial price that are not deceptive or unfair without the display of total price. Again, because truthful itemization of price components is not prohibited by the rule, commenters' contention that the rule is a prohibition on speech misses the mark. The Commission finds, however, that the display of the price of a good or service without disclosing total price clearly, conspicuously, and prominently is unfair and deceptive and harms consumers and honest competitors. Because the third prong of *Central Hudson* does not require the government to use the least restrictive means necessary to advance its interest, the rule would be constitutional even if it prohibited displaying partial price in instances that, in isolation, may not be unfair or deceptive. The same is true under *Zauderer,* where the Court held that the State's ''assumption that substantial numbers of potential clients would be . . . misled'' about the possibility that they would be responsible for litigation costs—in contrast to proving that all potential clients would be misled—was sufficient to meet the standard.[464]

The Commission addresses in section III commenters who argued that it should adopt alternative policies, such as prohibiting misrepresentations and allowing businesses to disclose amounts or fees as they wish. As relevant here, commenters argued that the Commission should adopt those alternatives because they would not violate the First Amendment. The Commission finds that the rule, including § 464.2, does not violate the First Amendment. Given the Commission's finding that failure to disclose total price is unfair and deceptive, the rule's affirmative disclosure requirements are needed to achieve the Commission's goal of preventing this unfair and deceptive conduct.

[456] *See* cases cited *supra* note 447 (defining commercial speech).

[457] *303 Creative,* 600 U.S. at 593–94.

[458] *Zauderer,* 471 U.S. at 650.

[459] Of course, Businesses offering, displaying, or advertising a Covered Good or Service cannot misrepresent the nature, purpose, amount, or refundability of any fee or charge under § 464.3; this requirement is consistent with the First Amendment. *See Ibanez* v. *Fla. Dep't of Bus. & Prof'l. Regul.,* 512 U.S. 136, 142 (1994) (''false, deceptive, or misleading commercial speech may be banned'' (citations omitted)). Commenters did not argue § 464.3 violates the First Amendment.

[460] *Zauderer,* 471 U.S. at 650.

[461] Indeed, the *Zauderer* Court noted that ''because disclosure requirements trench much more narrowly on an advertiser's interests than do flat prohibitions on speech, 'warning[s] or disclaimer[s] might be appropriately required . . . in order to dissipate the possibility of consumer confusion or deception.' '' *Id.* at 651 (citation omitted).

[462] *Cent. Hudson Gas & Elec. Corp.,* 447 U.S. at 566.

[463] *See id.* at 570–71 (''To further its policy of conservation, the Commission could attempt to restrict the format and content of Central Hudson's advertising. It might, for example, require that the advertisements include information about the relative efficiency and expense of the offered service, both under current conditions and for the foreseeable future.'').

[464] *Zauderer,* 471 U.S. at 652–53.

5. The Rule's Treatment of Credit Card Fees and Government Charges Does Not Violate the First Amendment

The rule does not violate the First Amendment in its treatment of credit card fees and government charges. First, as noted in section III.B.1.c, the rule does not prohibit a business from charging or passing through credit card fees if otherwise allowed by law. The rule also does not affect State laws that prohibit credit card surcharges. Whether credit card charges must be included in total price depends on whether a business makes such fees mandatory. If a business offers consumers multiple viable payment methods for the offered transaction, so that paying with a credit card is optional, then credit card fees are not for a ''mandatory ancillary good or service'' under the rule and need not be included in total price. In addition, where credit card fees are mandatory, the rule does not prohibit businesses from itemizing them as long as they are also included in total price. Accordingly, there is no merit to commenters' concerns that consumers will not understand the impact of costs affecting businesses, since businesses can itemize those costs under the rule.

The Commission also disagrees with commenters' argument that § 464.2 violates the First Amendment as a content-based regulation because it does not require businesses to include government charges in total price. One commenter, who argued the point in detail, relied on *Barr* v. *American Ass'n of Political Consultants, Inc.,* 591 U.S. 610 (2020), in which the Supreme Court held that an exclusion for collectors of government debt from the Telephone Consumer Protection Act (''TCPA''), which generally prohibits robocalls, violated the First Amendment. A majority agreed that the exclusion for collectors of government debt was severable—the prohibition on robocalls was upheld.

The exclusion provision in the TCPA addressed in *Barr* is distinguishable from the final rule in several ways. At the outset, the rule does not favor government charges unequivocally. While the rule allows businesses to exclude government charges from total price, it does not require businesses to do so. Businesses have a choice—they may include government charges in total price. Second, the commenter makes specific and erroneous assumptions about the Commission's reasoning for excluding government charges from total price, such as that the Commission's interest in adopting the rule includes favoring taxes and increasing tax revenue. Tax revenues have no bearing on the Commission's decision to adopt this rule. As noted in section III.A.5, consumers have come to understand and expect sales tax to be added at the end of a purchase, and there are other Federal, State, and local laws that have specific requirements about disclosing taxes and other government charges. In addition, in many online transactions, businesses are unable to fully calculate certain components of government charges until a consumer provides their location information. Thus, the Commission has good reason to allow businesses to exclude government charges from total price if they choose.[465]

D. Commission Structure

One commenter argued the Commission is unconstitutionally structured because the Commissioners are shielded from removal and asserts that *Humphrey's Executor* v. *United States,* 295 U.S. 602 (1935), either no longer applies or was wrongly decided by the Supreme Court.[466] The same commenter asserted that the Commission's administrative law judges are unconstitutionally appointed by the Commission Chair and are unconstitutionally shielded from removal.[467] The Commission disagrees.

In *Humphrey's Executor,* the Supreme Court addressed the crux of the commenter's first argument and concluded that the Commission's structure is constitutional. In that case, President Roosevelt sought to remove a Commissioner without cause. The Court held that the FTC Act authorized removal of Commissioners only on the grounds specified in the statute (''inefficiency, neglect of duty, or malfeasance in office'') and that this limitation on the President's removal power was constitutional given the ''character of the [C]ommission and the legislative history which accompanied and preceded the passage of the act.'' [468] The commenter's arguments that *Humphrey's Executor* is no longer applicable are unavailing. The Supreme Court's decision is not rendered any less binding because Congress has refined the Commission's authorities during the course of its more than 100-year tenure.[469] The key policy rationale underlying *Humphrey's Executor* remains valid today. The Commissioners collectively act as an adjudicatory body, and the for-cause removal standard ensures that they are free from ''suspicion of partisan direction'' or ''political domination or control.'' [470] Congress has similarly provided for-cause removal standards for the members of many other non-Article III tribunals composed of multiple members who perform adjudicatory functions as an expert body within a specific area of the law.[471]

Next, the commenter incorrectly asserted that administrative law judges are appointed by the Chair and are unconstitutionally shielded from removal. The commenter argued that under *Free Enter. Fund* v. *Pub. Co. Accounting Oversight Bd.,* 561 U.S. 477 (2010), administrative law judges must be appointed by the full Commission and that the appointment process for administrative law judges at the FTC is unconstitutional because administrative law judges are appointed by the Commission Chair alone.[472] The commenter is mistaken. The Commission voted in December 2023 to approve the appointment of Administrative Law Judge Jay L. Himes.[473] The Chief Presiding Officer—here, the Chair pursuant to 16 CFR 0.8—then selected Judge Himes to be the presiding officer for this rulemaking, and Judge Himes was properly designated as the presiding officer in the Commission's notice of informal hearing.[474]

In response to the commenter's contention that the removal protections for the Commission's administrative law judges are unconstitutional, the Commission notes that the Supreme Court has recognized in recent decisions that Congress may constitutionally

[465] The Commission modifies the definition of ''Government Charges'' from those fees or charges ''imposed on consumers'' to those ''imposed on the transaction'' to limit the potential distinction between fees and charges imposed directly on consumers and those imposed on Businesses. *See supra* section III.A.5.

[473] Press Release, Fed. Trade Comm'n, *FTC Announces Appointment of Jay L. Himes as New Administrative Law Judge* (Mar. 12, 2024), *https://www.ftc.gov/news-events/news/press-releases/2024/03/ftc-announces-appointment-jay-l-himes-new-administrative-law-judge.*

[474] Initial notice of informal hearing; final notice of informal hearing; list of Hearing Participants; requests for submissions from Hearing Participants: Trade Regulation Rule on Unfair or Deceptive Fees, 89 FR 21216 (Mar. 27, 2024); *see also* 16 CFR 0.8, 1.13.

restrict the President's at-will removal power with regard to inferior officers.[475] In *Collins* v. *Yellen,* 594 U.S. 220 (2021), for example, the Court declined to ''revisit . . . prior decisions allowing certain limitations on the President's removal power,'' [476] which include the ''good cause'' protections for inferior officers ''with limited duties and no policymaking or administrative authority'' described by the Court in *Seila Law LLC* v. *CFPB,* 591 U.S. 197 (2020).[477] In *Free Enter. Fund,* the Court held removal protections for Public Company Accounting Oversight Board members unconstitutional and contrasted the duties of those members with the lesser duties of administrative law judges: ''[U]nlike members of the [Public Company Accounting Oversight] Board,'' administrative law judges (1) ''perform adjudicative rather than enforcement or policy making functions,'' or (2) ''possess purely recommendatory powers.'' [478] The FTC's administrative law judges fit squarely within both of those descriptions.

Even if the appointment procedures and removal protections of administrative law judges were unconstitutional because of their role as inferior officers under Article II, the constitutionality of the rule would not be in question because presiding officers under section 18 are not ''officers'' under Article II. Notably, while the presiding officer in the Informal Hearing for this rulemaking happened to be an administrative law judge, neither section 18(c)(1)(B) nor the Commission's rules implementing that provision require an administrative law judge to preside over section 18 informal hearings.[479]

Instead, the presiding officer is a specific, temporary designation made under section 18(c) and its implementing rules, 16 CFR 1.11 through 1.13. The Supreme Court's framework for distinguishing between officers and employees asks whether an individual ''exercise[s] significant authority pursuant to the laws of the United States'' and occupies a position that is ''continu[ous] and permanent.'' [480] For presiding officers, neither is true. As relevant here, the role of the presiding officer in section 18 rulemakings—assisting in the collection of necessary information for the rulemaking to proceed, ensuring hearings proceed methodically, and maintaining the rulemaking record [481]—is not policymaking; that role is reserved for the Commission.[482] Moreover, an administrative law judge, whether or not he or she is serving as a presiding officer, cannot initiate a rulemaking, decide its subject, decide whether a rule should issue, or establish its content. The Commission performs all of these functions.[483]

As an initial matter, the Commission determines whether an informal hearing will be conducted; presiding officers do not have discretion over whether the hearing will occur. The presiding officer simply ''presides over the rulemaking proceedings'' and, when appropriate, makes a ''recommended decision based upon the findings and conclusions of such officer.'' [484] The presiding officer's powers in the conduct of the hearing are also limited. For example, the officer may not extend the time allotted for the informal hearing beyond a certain period ''unless the Commission, upon a showing of good cause, extends the number of days for the hearing.'' [485] The commenter is correct that the presiding officer is initially chosen by the ''chief presiding officer,'' who is the Chair of the FTC under 16 CFR 0.8. However, the formal assignment of that presiding officer to a particular hearing is in the initial notice of informal hearing, which is issued by vote of the Commission. Although the presiding officer reports to the chief presiding officer, again, the powers of the two together amount to no more than conducting the informal hearing and making a recommended decision based on the presiding officer's findings to the Commission.[486] All substantive decisions are made by the Commission. These are temporary assignments that begin and end with the informal hearing process.

Accordingly, neither the Commission's structure nor the role of the presiding officer in section 18 violates the Constitution.

E. Administrative Procedure Act

Several commenters asserted the Commission has not complied with the APA.[487] The Commission disagrees. The Commission complies with the APA's requirements, including by explaining the rule's relationship to the unfair and deceptive conduct the Commission seeks to prevent and by responding to all significant comments.[488] As explained herein, the Commission also complies with the additional requirements of sections 18 and 22 of the FTC Act.

Commenters claimed that the rule is arbitrary and capricious because it is not based on sufficient facts or data, and lacks a rational connection between the facts and the regulatory choices.[489] These commenters argued that the factual record does not support the Commission's decision to promulgate an industry-neutral rule or to apply the rule to particular industries.[490] One commenter criticized various substantive aspects of the rule including its breadth, consideration of alternatives, and costs.[491] The commenter also argued that the rule is duplicative and could lead to regulatory confusion.[492]

The Commission has carefully reviewed and considered the comments and information it received in this rulemaking. As a preliminary matter, the NPRM engaged in extensive discussion concerning the comments received in response to the ANPR and followed up with additional questions and requests for empirical data and proposed rule text. Likewise, the analysis contained throughout this SBP, particularly Parts III–VII, similarly

engages with and considers the additional significant comments and information received in response to the NPRM. Commenters raising questions regarding APA compliance primarily critiqued the industry-neutral nature of the proposal advanced in the NPRM. The Commission disagrees with these critiques. The Commission, however, has determined to limit this final rule to covered goods or services and need not address arguments regarding the application of the rule to a wide range of industries at this time. Further, both the NPRM and this SBP explain in detail the factual record and its relationship to the provisions finalized in the rule. While empirical data is not required, the Commission in section V presents an analysis for the final rule, identifying benefits, such as reductions in consumer search cost time and deadweight loss, and quantifying compliance costs. Finally, in section V.E.2.d, the Commission finds that the rule's benefits to the public will exceed its costs.

V. Final Regulatory Analysis Under Section 22 of the FTC Act

Under section 22 of the FTC Act, when the Commission promulgates any final rule as a ''rule'' as defined in section 22(a)(1), it must include a ''final regulatory analysis.'' 15 U.S.C. 57b–3(b)(2). The final regulatory analysis must contain: (1) a concise statement of the need for, and objectives of, the final rule; (2) a description of any alternatives to the final rule that were considered by the Commission; (3) an explanation of the reasons for the Commission's determination that the final rule will attain its objectives in a manner consistent with applicable law and the reasons the particular alternative was chosen; (4) an analysis of the projected benefits, any adverse economic effects, and any other effects of the final rule; and (5) a summary of any significant issues raised by the comments submitted during the public comment period in response to the Preliminary Regulatory Analysis, and the Commission's assessment of such issues. 15 U.S.C. 57b–3(b)(2)(A) through (E). The Commission analyzes each of these components in the following final regulatory analysis.

The Commission has the authority to promulgate this rule under section 18 of the FTC Act, 15 U.S.C. 57a, which authorizes the Commission to promulgate, modify, and repeal trade regulation rules that define with specificity acts or practices in or affecting commerce that are unfair or deceptive within the meaning of section 5(a)(1) of the FTC Act, 15 U.S.C. 45(a)(1). In explaining the need for, and objectives of, the rule, the Commission observes that a clear rule is the best way to accomplish its goals of: (1) ensuring that consumers receive truthful, timely, and transparent information about price to permit them to comparison shop effectively and (2) leveling the playing field for honest competitors. In addition, a clear rule would deter the defined unfair or deceptive pricing practices by enabling the Commission to more readily obtain monetary relief and civil penalties. The Commission carefully considered several alternatives to the rule, including terminating the rulemaking and pursuing a broader, industry-neutral alternative. The Commission determined that the alternative of terminating the rulemaking would not accomplish these objectives. As explained in section II, the Commission finds that bait-and-switch pricing and misleading fees and charges are prevalent economy-wide, but chooses to begin by tackling these practices in the live-event ticketing and short-term lodging industries, where the Commission first began evaluating drip pricing more than a decade ago and which have a long history of harming consumers and businesses. The final rule will attain its objectives of promoting truthful, timely, and transparent pricing, comparison shopping, and fair competition in the live-event ticketing and short-term lodging industries in a manner consistent with applicable law. The Commission will rely on its existing section 5 authority in pursuing case-by-case enforcement actions against businesses in other industries that engage in the specific unfair and deceptive pricing practices that are the subject of the industry-specific coverage in this rule.

The Commission's final regulatory analysis indicates that adoption of the rule will result in benefits to the public that exceed the costs. As described further herein, the rule will not only result in significant benefits to consumers but also improve the competitive environment in the live-event ticketing and short-term lodging industries, particularly for small, independent, or new firms. One such benefit is that the final rule will reduce deadweight loss. ''Deadweight loss'' is a term used to describe the loss of efficiency or economic welfare, a cost to society, that occurs when resources are not used as efficiently as possible. At a competitive equilibrium, in which the marginal benefit for consumers equals the marginal cost for firms, there is no deadweight loss. When firms, including those in the live-event ticketing and short-term lodging industries, engage in bait-and-switch tactics, consumers purchase more goods and services than they would otherwise because they do not understand the full price. In other words, in such cases, consumers overconsume beyond the quantity necessary for competitive equilibrium. This overconsumption is a deadweight loss because, if they had full information, consumers would shift their spending toward more beneficial and efficient spending patterns that reflect their true preferences. Deadweight loss is discussed more fully in section V.E.2.a.ii.

The rule provides a net benefit to society if its benefits exceed its costs. The Commission quantifies the incremental benefits for the live-event ticketing and short-term lodging industries and shows that the rule's benefits exceed the costs in these industries.

The Commission reviewed the comments relating to its Preliminary Regulatory Analysis, some of which challenged the Commission's estimation of the rule's potential costs and benefits. In response to these comments, the Commission herein clarifies its analysis and adds a sensitivity analysis to the baseline estimation. The Commission concludes that these comments do not affect the Commission's finding that the potential benefits of the rule exceed the potential costs.

A. Concise Statement of the Need for, and Objectives of, the Final Rule

The Commission believes the final rule is needed to ensure that consumers receive truthful, timely, and transparent information about the total price of goods or services, including the nature, purpose, and amount of any fees or charges imposed on the transaction, so that they can effectively comparison shop and budget their spending dollars when deciding what live-event tickets to purchase or where to stay when traveling. Although bait-and-switch pricing and misleading fees are already unlawful unfair or deceptive acts or practices under section 5 of the FTC Act, the Commission concludes that a clear rule is the best way to accomplish its goal of preventing the rule's defined, specific unfair and deceptive pricing practices in the live-event ticketing and short-term lodging industries while fostering a level playing field for honest competitors to be able to compete truthfully and fairly based on price. In addition, the final rule aims to increase deterrence of the defined unfair or deceptive pricing practices in these industries by enabling the Commission

to more readily obtain redress for injury to consumers through section 19(a)(1) of the FTC Act, 15 U.S.C. 57b(a)(1), and by allowing courts to impose civil penalties where appropriate. The Commission believes that the rule will accomplish these goals without significantly burdening businesses and will provide significant benefits to consumers and honest competitors.

The record of this rulemaking is replete with comments from consumers, consumer groups, industry members, academics, and policy organizations, as well as officials and agencies across all levels of government, emphasizing the importance of consumers' ability to effectively comparison shop and businesses' ability to honestly compete against each other based on price. Regardless of industry, consumers want to comparison shop when deciding where to purchase their goods or services from among various competing offers. In many instances, consumers have found it increasingly difficult, if not impossible, to effectively comparison shop because businesses fail to provide the total price when they display a purported amount a consumer will pay for a good or service. Consumers are also misled as to the nature, purpose, amount, and refundability of fees and charges, and are unable to make informed choices about the value of the fee or charge, or the good or service it represents, because their understanding of the fee or charge is predicated on deceptive omissions or false or misleading information. As a result, consumers are harmed because they consume more goods or services, pay more for a good or service, and incur higher search costs than they otherwise would have if they had been presented with the total price upfront and truthful, timely, and transparent information regarding fees and charges. Businesses that honestly present the total price of a good or service and accurately disclose the nature, purpose, and amount of fees and charges are at a competitive disadvantage to those that mislead consumers by presenting purportedly lower prices and inaccurate information about fees and charges. As explained in section II, the record, as well as the Commission's law enforcement actions, outreach, and other engagement with businesses and consumers, support a finding that these practices pervade the economy across industries. Fundamentally, the rule will help consumers make informed decisions when comparison shopping and level the playing field for honest businesses in the live-event ticketing and short-term lodging industries, two industries that have a long history of bait-and-switch pricing and misrepresentations regarding fees and charges.

In addition, the final rule is necessary to allow the Commission to recover redress more efficiently in cases where there is quantifiable consumer harm resulting from bait-and-switch pricing and misleading fees and charges. The final rule will also deter live-event ticketing and short-term lodging businesses from engaging in these practices by allowing for the imposition of monetary relief in the form of consumer redress and civil penalties.

In 2021, the Supreme Court in *AMG Capital Mgmt., LLC* v. *FTC,* 593 U.S. 67, 82 (2021), held that section 13(b) of the FTC Act [493] did not authorize the Commission to seek, or a court to order, equitable monetary relief for consumers such as restitution or disgorgement. The *AMG* ruling has made it significantly more difficult for the Commission to return money to injured consumers, particularly in cases that do not involve rule violations.[494]

Since *AMG,* the primary means for the Commission to return money unlawfully taken from consumers has been through section 19 of the FTC Act, 15 U.S.C. 57b, which provides two paths for consumer redress. One path, under section 19(a)(2), typically requires the Commission to first conduct an administrative proceeding to determine whether the respondent violated the FTC Act; if the Commission finds that the respondent did so, the Commission can issue a cease-and-desist order, which might not become final until after the resolution of any appeals. To obtain monetary relief, the Commission then must initiate a separate action in Federal court under section 19 and, in that action, the Commission must prove that the violator in the administrative action engaged in objectively fraudulent or dishonest conduct.[495]

The more efficient path to monetary relief is under section 19(a)(1), which allows the Commission to recover redress in a single Federal court action for violations of a Commission rule relating to unfair or deceptive acts or practices.[496] Under the rule, the Commission will now be able to use the section 19(a)(1) pathway to obtain redress for losses attributable to the specific unfair or deceptive practices the rule defines and prohibits.

In addition, the final rule will allow courts to impose civil penalties under section 5(m)(1)(A) of the FTC Act, 15 U.S.C. 45(m)(1)(A). Civil penalties will provide the deterrence necessary to incentivize compliance with the law, even in cases when it is difficult to quantify consumer harm.

Overall, the rule's prohibition of bait-and-switch pricing tactics, including drip pricing, and misleading fees in the live-event ticketing and short-term lodging industries expands the Commission's enforcement toolkit and allows it to deliver on its consumer protection mission by stopping and deterring harmful conduct in these industries and making consumers whole when they have been harmed. The unfair or deceptive acts or practices involving bait-and-switch pricing and misleading fees encompassed by this final rule are prevalent and harmful to consumers and honest competitors. Thus, the unlocking of additional remedies through this rulemaking—particularly, the ability to obtain redress for consumers injured by misconduct and civil penalties against violators, where appropriate—will allow the Commission to more effectively police and deter unfair or deceptive pricing practices in these industries.

B. Alternatives to the Final Rule the Commission Considered, Reasons for the Commission's Determination That the Final Rule Will Attain Its Objectives in a Manner Consistent With Applicable Law, and the Reasons the Particular Alternative Was Chosen

In analyzing the potential costs and benefits of the proposed rule, the Commission considered several alternatives, including terminating the rulemaking and a broader rule alternative. As the Commission observed in the NPRM, one potential alternative is to terminate the rulemaking and rely instead on the Commission's existing tools to combat unfair or deceptive practices relating to pricing, such as consumer education and enforcement actions brought under sections 5 and 19(a)(2) of the FTC Act. However, terminating the rulemaking would deprive consumers of live-event tickets and short-term lodging of quantifiable time savings, and unquantifiable benefits including reduced frustration, less consumer

[493] 15 U.S.C. 53(b).

[494] *See* NPRM, 88 FR 77436–38, nn.122, 211, 232 (discussing *AMG*).

[495] *See* 15 U.S.C. 57b(a)(2) (''If the Commission satisfies the court that the act or practice to which the cease and desist order relates is one which a reasonable man would have known under the circumstances was dishonest or fraudulent, the court may grant relief under subsection (b) of this section.'').

[496] Certain statutes, such as the Restore Online Shoppers' Confidence Act, 15 U.S.C. 8401 through 8405, include provisions that treat violations of the statute as a violation of a rule for purposes of section 19(a)(1). *See, e.g.,* 15 U.S.C. 8404(a).

stress, and improved economic efficiency through a reduction of deadweight loss, as outlined in section V. Implementation of the rule also strengthens the Commission's enforcement program against unfair or deceptive pricing practices in the live-event ticketing and short-term lodging industries.

As noted in the NPRM, given the strong indicators that bait-and-switch pricing, including drip pricing, and misleading fees and charges are prevalent and worsening across industries, the Commission considered adopting a final rule that would have applied to all industries nationwide. The Commission declines to adopt such an industry-neutral rule at this time and instead chooses, in its discretion, to use its rulemaking authority incrementally. The Commission's rule first targets the two industries where the Commission first began evaluating drip pricing more than a decade ago and where consumer harm has been longstanding and continues to be pronounced. As noted in section II, most transactions in the live-event ticketing and short-term lodging industries occur online, where bait-and-switch pricing and misleading fees and charges have the highest potential to thwart the rule's stated objectives, namely price transparency and timeliness, as well as comparison shopping. In addition, consumers are often presented with identical offers (as is the case with live-event ticketing) or near-identical offers (as is the case with short-term lodging), and as such, price is the most salient feature for consumers in these transactions.

The NPRM also discussed, and the Commission also considered, a small business exemption. Small businesses, which may have smaller profit margins, may be disproportionately affected by initial compliance costs associated with § 464.2's disclosure requirements. On the other hand, a rule exempting small businesses would fail to accomplish the rule's core objectives of transparency in pricing and facilitating comparison shopping because consumers would continue to be subject to a mix of pricing disclosures in the live-event ticketing and short-term lodging industries that could include bait-and-switch pricing and misleading fees. As one commenter noted, ''Small businesses will benefit from the rule because it eliminates the deceptive practices that keep consumers from being able to comparison shop.'' [497] The commenter also stated that a small business ''exception will undermine the ability of consumers to make purchasing decisions based on transparent and honest information.'' [498] A small business exemption could also reduce consumer benefits arising from increased price transparency across markets and lower consumer confidence regarding whether the rule applies to specific purchases.

Excluding small businesses could also harm honest competition because such an exemption might impose more uncertainty and compliance costs for businesses to determine whether the rule applies to them. In addition, as noted in section III, some industry commenters favored a rule that applied equally to all industry members, to facilitate comparison shopping and avoid the creation of competitive advantages.

Some commenters, as noted in section III, expressed frustration with fees or charges they described as ''excessive'' or ''worthless.'' As discussed in the NPRM, an alternative to the final rule could be to explicitly prohibit excessive or worthless fees or charges in the live-event ticketing and short-term lodging industries. This alternative may benefit consumers who pay excessive amounts for goods or services in these industries or for fees or charges that provide them little to no value, allowing them instead to save their money or spend it elsewhere.

The Commission declines to adopt an alternative rule prohibiting worthless or excessive fees or charges, because doing so may raise additional questions for these industries and for the Commission regarding how to assess the value of fees or charges. In addition, the final rule may already accomplish some of the benefits of such an alternative. For example, the final rule requires total price to include all mandatory fees or charges (with limited exceptions for government charges and shipping charges). Transparency and competition on price could then disincentivize live-event ticketing and short-term lodging businesses from incorporating such fees into their pricing schemes altogether. In addition, consumer confusion related to the purpose or value of fees or charges would be addressed by the final rule's requirement to disclose the nature, purpose, and amount of any fees or charges lawfully excluded from total price, as well as the prohibition against misrepresenting any fees or charges.

In sum, the rule accomplishes the Commission's objectives in the areas of live-event ticketing and short-term lodging consistent with applicable law, while providing the Commission additional time to consider further action. As explained in section V.E, the Commission believes the rule's benefits exceed the costs of the rule. Notably, the Commission believes, as detailed in Parts II, III, and V, that the rule also will result in additional tangible benefits from consumers' ability to accurately comparison shop for live-event tickets and short-term lodging. Therefore, the Commission finds in this final regulatory analysis that adoption of the rule will result in benefits to the public that exceed the costs.

C. The NPRM's Preliminary Regulatory Analysis

In the Economic Analysis of Costs and Benefits of the Proposed Rule in section VII.C of the NPRM (hereafter, ''Preliminary Regulatory Analysis''), the Commission described the anticipated effects of the proposed rule and quantified the expected benefits and costs to the extent possible. For each benefit or cost quantified, the analysis identified the data sources relied upon and, where relevant, the quantitative assumptions made. The Preliminary Regulatory Analysis measured the benefits and costs of the proposed rule against a baseline in which the Commission did not promulgate a rule addressing the unfair or deceptive practices of presenting incomplete or inaccurate pricing information that obscures total price and misrepresenting the nature and purpose of fees. Several of the benefits and costs were quantifiable for specific industries, but the Commission found that benefits at the economy-wide level were not quantifiable. The Preliminary Regulatory Analysis discussed the bases for uncertainty in the estimates.

In the Preliminary Regulatory Analysis, the Commission performed a break-even analysis under various assumptions to determine the required benefits necessary to justify the estimated costs. Under the assumptions of high-end compliance costs and a 7% discount rate, the Commission found that if the average benefit to consumers from the proposed rule exceeded $6.65 per year over ten years, then the proposed rule's benefits would exceed its quantified economy-wide compliance costs. The expected benefit could be a result of reduced consumer search time, of increased consumer surplus from more efficient purchasing decisions, or a combination of the two. The Commission found in the Preliminary Regulatory Analysis that if the proposed rule resulted in savings from reduced search time that exceeded 15.82 minutes per consumer per year over ten years, then the benefits from reduced search time alone would

[497] FTC–2023–0064–3302 (Public Citizen).

[498] *Id.*

exceed quantified compliance costs under the assumption of high-end costs and a 7% discount rate.

D. Significant Issues Raised by Comments, the Commission's Assessment and Response, and Any Changes Made as a Result

In this section, the Commission summarizes its assessment of, and response to, the major concerns, comments, and suggestions raised by commenters about the Preliminary Regulatory Analysis. The Commission received comments about the Preliminary Regulatory Analysis from industry groups, law firms, consumer advocacy groups, think tanks, consumers, and business owners. Section V.D.1 addresses comments about the Commission's cost estimates, section V.D.2 addresses comments about the Commission's the benefits estimates, and section V.D.3 addresses comments specific to the economy-wide break-even analysis.

1. Comments on Costs

In section V.D.1.a through d, the Commission addresses four major comments regarding the NPRM's cost estimates: (a) the estimated costs are too low; (b) there are unquantified costs to firms; (c) there are unquantified costs to consumers; and (d) there are unquantified costs to third parties. Section V.D.1.e addresses commenter concerns about costs that may stem from applying the rule to variable, dynamic, or contingent fees.

(a) Public Comments: Estimated Costs Are Too Low

Commenters from members and representatives of the live-event ticketing and short-term lodging industries, among others, argued that estimated costs in the NPRM were too low because the analysis underestimated the number of attorney, data scientist, and web developer hours needed to comply with the proposed rule.[499] These commenters contended that some businesses will require more time than the assumed average estimates of labor hours used in the Preliminary Regulatory Analysis. The Commission acknowledges the possibility that some businesses will incur a greater number of hours to comply with the final rule, but notes that this is consistent with the Preliminary Regulatory Analysis because the employee hour estimates used represent averages. These estimates capture the fact that some businesses will require more time than the average and some will require less. The Commission received additional comments with similar concerns about the Commission's compliance hours estimates as they apply to other specific industries such as movie theater ticketing, delivery apps, restaurants, bowling, and cable and broadband, which are no longer subject to the final rule.[500] However, the Commission's argument that the compliance hours represent averages holds more broadly.

Two commenters in the live-event ticketing industry provided alternative estimates of average employee hours necessary to comply with the rule. Vivid Seats stated that, from its experience implementing upfront pricing as a ticket seller in three states, the Commission underestimated the employee hours needed for live-event ticket sellers by at least a factor of five.[501] Conversely, another live-event ticket seller, TickPick, commented that, for the most part, live-event ticketing companies would incur an immaterial cost to implement all-in pricing because ''the technology already exists within ticketing platforms to eliminate drip pricing and would simply need to be applied to events in the U.S.'' [502] Again, the Commission notes that the estimated employee hours reflect an average and, as these commenters stated, it is possible that firms like Vivid Seats may require more hours, while others, like TickPick, may require fewer.

The National Restaurant Association stated that it would take restaurants at least twenty hours a year to reoptimize menu prices because the Commission's estimates did not account for supply chain issues that may change prices or consider that some restaurants may offer seasonal menus.[503] The Preliminary Regulatory Analysis omitted these costs because they are not a result of the rule; restaurants will face supply chain fluctuations and seasonal changes to their menus regardless of the rule.[504] However, this is no longer a concern in the final rule, which does not apply to restaurants.

The Office of Advocacy of the United States Small Business Administration (''SBA Office of Advocacy'') argued that costs estimated in the Preliminary Regulatory Analysis are too low because data scientist and web developer hours should be ongoing costs, rather than one-time costs.[505] It argued that ''the FTC should assume a percentage of firms that in the previous year were in compliance will not be the following year.'' The Commission does not believe that these ongoing costs are attributable to the rule. Once firms have adjusted to the rule, making sure new pricing strategies comply with the rule is considered a part of the normal course of business, as is ensuring compliance with other existing laws and regulations.

Some commenters identified purported costs that were either already captured in the economic analysis or would not be affected by the rule. The U.S. Chamber of Commerce and SBA Office of Advocacy argued that the Preliminary Regulatory Analysis did not account for the time needed to train staff to provide new upfront prices to customers for in-person, online, and phone sales.[506] The Commission believes training time, to the extent that it exists, is already captured in the assumed range of data scientist and web developer hours, which the Commission has noted serves as a proxy for any rule-associated costs from adjusting pricing strategies and displaying prices to consumers. Another commenter argued that businesses would need to ''hire graphic designers to make advertisements look appealing and web designers or software engineers to rebuild entire websites.'' [507] In addition, it argued that the Preliminary Regulatory Analysis did not account for

costs needed to replace physical ads, subway ads, and billboards and speculated that would take ''thousands of hours.'' The final rule has no bearing on a firm's decision to engage graphic designers to ensure its advertisements are ''appealing,'' and the Commission does not believe—and commenters have failed to cite evidence demonstrating—that the need to update prices will require rebuilding entire websites. Moreover, as discussed in more detail in section V.E.3.a, the estimated range of web developer time is a proxy for any costs associated with changing price displays to comply with the rule.

Two commenters argued that the Preliminary Regulatory Analysis underestimated costs because the wage rates for attorneys and data scientists were too low and were not the same as, for example, attorneys fees.[508] One commenter stated that the estimated wages did not account for overhead costs or reflect the higher costs of hiring outside counsel and data scientists and suggested using $306 in attorney wages and $59 in data scientist wages to reflect these higher costs.[509] In response to these suggestions, the Commission conducted a sensitivity analysis that multiplied wage rates by two to reflect overhead and hiring costs for the short-term lodging and live-event ticket industries. The results of the sensitivity analysis are provided in section V.E.3.b.i and do not impact the Commission's assessment that the benefits exceed the costs. The Commission received two additional comments with similar concerns about the Commission's wage estimates as they apply to the restaurant industry and the innovation economy, which are no longer subject to the final rule.[510]

(b) Public Comments: Unquantified Costs to Firms

The NPRM noted that there are unquantified costs of the rule, primarily in the form of unintended consequences to consumers as they adjust to upfront pricing. In addition, commenters identified additional types of unquantified costs to firms.

An academic commenter argued that there may be unintended consequences to firms from partial compliance.[511] The commenter stated that no firm would want to be the first in its market to comply, and the resulting ''partial or uneven compliance would cause compliant firms to lose business to firms that ignored the rule. Implementing coordinated compliance for the entire economy would be difficult with the [Commission's] limited resources.'' The Commission believes that the partial compliance described by this commenter is the current status quo in the absence of a rule. Currently, some firms impose drip pricing, and these firms may have a competitive advantage over those that do not impose drip pricing. Under the rule, the Commission expects all firms in the short-term lodging and live-event ticket industries to provide total price, which is an improvement relative to the status quo. If, as the commenter argues, some degree of partial compliance remains, the potential competitive advantage from non-compliance would be similar to the status quo, with the additional risk to non-compliant firms of law enforcement actions with potential exposure to consumer redress and penalties. In other words, even with some degree of partial compliance after the final rule, such an equilibrium would still result in more benefits for consumers than a world without the final rule. The commenter's concern that implementing coordinated compliance for the whole economy may be difficult is mitigated in the final rule, which only applies to two industries. In addition, while the Commission may have limited enforcement resources, it expects consumer behavior regarding fees to adjust over time due to the final rule. Once upfront pricing becomes the new norm, consumers will expect to see total prices displayed upfront and will be more likely to punish firms that ignore the rule by taking their business elsewhere. Therefore, any partial compliance is likely to be temporary.

Nine commenters stated the NPRM's assertion that the rule will provide a harmonized legal framework for all States is incorrect because, as discussed in section III, the rule only preempts State laws if they are inconsistent with the rule.[512] Commenters noted that an added layer of regulation is an additional cost for businesses as they determine whether they are compliant with the various rules to which they are subject. The Commission updates the final regulatory analysis to reflect this concern as it applies to covered goods or services, but notes that the cost was already captured by the assumption that all firms within the live-event ticketing and short-term lodging industries will spend on average one hour to determine whether the rule applies to them.

One commenter asserted that ''[t]he Commission erroneously disclaims the possibility of losses to producer surplus.'' [513] The commenter argued that the Commission's statement that consumer surplus is reduced due to consumer search costs under drip pricing ignores the countervailing increase of producer surplus. The commenter further contended that the Preliminary Regulatory Analysis omits that, under drip pricing, consumers purchase more expensive products, which amounts, in part, to a transfer of surplus from consumers to sellers. The Commission acknowledges the transfer of surplus due to higher prices. However, the commenter incorrectly assumes that the movement of surplus from consumers to producers will be a one-to-one transfer and presupposes that there will be no increase in consumer search time or deadweight loss. As is discussed in section V.E.2.a.i, the increased, unnecessary consumer search time due to drip pricing results in a net cost to society—no one benefits from the additional hours consumers collectively spend searching for price information and then being surprised with a higher final amount at the time of purchase. In addition, as is discussed in section V.E.2.a.ii, inefficient overconsumption under drip pricing generates a deadweight loss. Inefficiently high spending under drip pricing thus results in a cost to society in the form of higher search costs and a deadweight loss in addition to a transfer of surplus from consumers to sellers in the form of higher seller revenue. Overall, this results in a net loss to society.

Lastly, some commenters representing the communications services industry noted that there are unquantified costs to cable, broadband, and wireless providers due to similar upfront pricing requirements from the FCC.[514] The

Commission's decision to narrow the final rule to covered goods or services renders these comments inapplicable.

(c) Public Comments: Unquantified Costs to Consumers

The NPRM noted that there may be unquantified costs of the rule in the form of consumer confusion as consumers adjust to upfront pricing. Commenters argued there were several additional unquantified costs to consumers. One commenter suggested that consumers would experience higher search time if companies limit or eliminate price advertising to avoid the regulatory risk of providing an inaccurate total price.[515] The Commission reiterates that the rule does not require firms to eliminate price advertising; rather the rule requires covered firms to present total price to consumers whenever businesses offer, display, or advertise any price of a covered good or service. The Commission believes that unnecessarily high consumer search time and anticompetitive effects resulting from different pricing strategies are already a problem absent the rule, where firms advertise a mix of dripped prices, upfront prices, and no prices. The commenter did not provide evidence for why, under the rule, some firms are, or would be, unable to advertise total price or why it would result in higher search time and a less competitive equilibrium than the status quo. The Commission received two additional comments with similar concerns as they apply to the telecommunications and rental housing industries, which are no longer subject to the final rule.[516]

Two commenters also suggested there might be potentially higher consumer search time if businesses unbundle previously bundled options in an effort to reduce the advertised price in response to the rule, stating that hotels, for example, may make amenities such as wi-fi, gym access, and parking pay-per-use.[517] The Commission acknowledges that some businesses may unbundle previously bundled options but reiterates that the rule prohibits businesses from treating features as optional if they are necessary to render the good or service fit for its intended use. The Commission also notes that consumers are likely to punish firms that unbundle features that they expect to be included in total price by taking their business elsewhere. A commenter also speculated that there may be an increase in deadweight loss if businesses set inefficiently high prices as they reoptimize prices or seek to cut costs by reducing the quality of goods and services.[518] The Commission believes this is unlikely. Under the rule, there will be competitive pressure to adjust both price and product quality to more efficient levels when firms must present total price. As discussed in section V.E.1.b, drip pricing sometimes leads consumers to underestimate the total price of a good or service. The result is that consumers start transactions not understanding that the final amount of payment will be higher than what they are willing or able to pay. For example, consumers may book premium seats to a concert believing they could afford the purchase, only to realize afterward that the total price was understated. Had they understood the final amount of payment, they would have selected seats at a lower price point or skipped the concert altogether. The final rule will help ensure that consumers' preferences, both in terms of cost and quality, can be realized.

One industry group argued that because intermediary travel websites rely on short-term lodging firms for accurate price information, the proposed rule may incentivize these firms to charge intermediaries a premium for accurate pricing information, "knowing that the intermediaries face significant regulatory risk without access to such information." [519] The commenter suggested that these additional costs could be passed onto consumers without adding any value. As explained in section III, the Commission reiterates that the rule requires businesses that sell or advertise through intermediaries to provide the intermediaries with accurate pricing information (including about mandatory and optional fees). The rule's coverage of business-to-business transactions protects consumers when they purchase goods or services, the sellers that do business with intermediaries, and the intermediaries themselves. The Commission further notes that hotels are already free to charge travel websites and intermediaries money in exchange for pricing information, yet they do not because these travel websites and intermediaries allow the hotels to reach more consumers. In addition, under the status quo, intermediaries already contend with different fee practices across short-term lodging firms and are required to ensure they consistently disclose pricing information to consumers; the final rule should obviate the need for intermediaries to deal with inconsistent fee practices moving forward. Therefore, the final rule should not change any incentives relative to the status quo, and it is unlikely that hotels will change their behavior in this respect as a result of the rule.

A commenter disagreed with the Commission's statement that consumer confusion will be a temporary cost as prices adjust.[520] The commenter also argued that consumers may inefficiently under-consume when confronted with higher upfront prices. The Commission believes that consumers who may inefficiently under-consume due to the rule because they are anticipating hidden fees are the same consumers who are accurately accounting for hidden fees and efficiently consuming under the status quo. The percentage of consumers who expect and anticipate hidden fees is likely to be very small because, as discussed in the NPRM, empirical and theoretical models consistently show that consumers strongly and systematically underestimate the full price they will pay when faced with drip pricing, and they pay more than they otherwise would in a transparent marketplace.[521] Therefore, if these consumers are savvy enough to adjust their expectations and accurately account for hidden fees under the status quo, then it is likely that they will quickly adjust their expectations after the final rule becomes effective and any under-consumption will be temporary.

The commenter also misinterpreted the results of a study conducted in the live-event ticketing market, Blake et al. (2021) (the "Blake Study"), in an effort to support the claim that seeing total price will deter consumers from making efficient and economically desirable purchases.[522] The Blake Study found

[522] FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP, discussing Blake, *supra* note 521).

that providing an upfront total price reduces both the quantity and quality of purchases relative to the inefficiently high levels of quantity and quality purchased under dripped prices. In other words, when consumers do not have truthful, timely, and transparent information about the final price, they purchase goods of higher quality and make more purchases than they would if they had full information. The commenter incorrectly implied that this reduction amounts to inefficient underconsumption when, in fact, it represents a return to an efficient level and quality of consumption compared to drip pricing. The authors explicitly concluded: ''Our empirical results support our hypotheses: price obfuscation distorts both quality and quantity decisions.'' [523]

Five industry groups identified what they incorrectly labeled as three additional types of unquantified costs for consumers. The ''costs'' identified actually are either transfers from consumers to producers (resulting in no net loss for society) or reflect misunderstandings of the rule. These commenters claimed that prices would increase as businesses pass compliance costs onto consumers,[524] that prohibiting businesses from displaying partitioned pricing would decrease transparency for consumers,[525] and that forcing businesses to display all optional fees upfront would overload and confuse consumers with often irrelevant information.[526] None of these are true costs resulting from the final rule. First, increased prices that result from the sellers' increased compliance costs are a transfer of consumer surplus to producer surplus and do not result in a cost to society. Second, the rule does not prohibit itemization. As long as total price is clear and conspicuous and most prominent, businesses are free to display the components of total price if they so choose. Finally, the rule does not require businesses to display all optional fees upfront. Rather, businesses must disclose clearly and conspicuously, before the consumer consents to pay, the nature, purpose, and amount of any fee or charge imposed on the transaction that been excluded from total price.

One policy organization commented on the study [527] cited in the NPRM that shows partitioned pricing decreases consumers' ability to accurately recall total costs and increases their demand.[528] The commenter argued that the conclusion cited in the NPRM does not follow from the study because participants who recalled a lower price could have known the total cost but misunderstood the question to be asking for the base price excluding the fees. This interpretation is incorrect because there was no ambiguity in the study question at issue; it explicitly asked for the total cost inclusive of all fees.

(d) Public Comments: Unquantified Costs to Third Parties

One commenter argued that, as consumer expectations adjust to upfront prices, inefficiently low spending may affect other businesses in the supply chain such as manufacturers, packagers, shippers, and warehouses.[529] The commenter also argued that lower spending may affect live-event venues and ticket resellers due to decreased sales in food, drinks, and merchandise. In addition, the commenter claimed that lower spending will lead to lower sales tax revenue for State and local governments, causing them to borrow more money at high interest rates, raise taxes, or eliminate services. As discussed in detail in section V.E.2.c, the Commission believes that any inefficient underconsumption due to consumer confusion is likely to be temporary, as are any resulting costs to third parties.

(e) Public Comments: Costs From Incorporating Contingent Fees Into Total Price

Several commenters, including industry groups, policy organizations, and an academic, expressed concern that it would be difficult for firms to display total price in cases where total price is unknown because it depends on consumer conduct or choices.[530] In cases where price is determined through customization, total price may not be known until after consumers have finalized their selection of options. The Commission addresses contingent fees in section III.

2. Comments on Benefits

Section V.D.2.a addresses the concern of some commenters that the NPRM's benefit calculations are too high, and section V.D.2.b outlines several unquantified benefits identified by commenters.

(a) Public Comments: Benefits Are Too High

One commenter argued that benefits are too high because the Preliminary Regulatory Analysis overestimated consumer search costs that result from drip pricing.[531] It argued that consumers benefit from seeing an advertisement with dripped fees compared to their position before seeing any advertisement. The Commission believes this is not the correct comparison to make when determining whether consumer search time will change as a result of the rule; a more apt comparison considers consumer benefit when faced with total price versus drip pricing. The Commission expects that the rule will decrease consumer search time, because consumers will spend less time searching for total price under the rule's framework versus a dripped pricing framework.

A commenter argued that the rule's estimated benefits are too high because the value-of-time estimate of $24.40 is too high.[532] The $24.40 figure is calculated by taking 82% of the 2022 mean hourly Housing wage from the Bureau of Labor Statistics. A meta-analysis of eleven studies conducted between 2004–2015 finds that the value of time as a percentage of mean wage is about 82% in the United States.[533] In addition, previous studies indicate that, over time, people's time has become more valuable as a fraction of what they earn.[534] So, it is possible that the current percentage in 2024 may actually be higher than 82%. The final regulatory analysis in section V.E updates the value of time using the same method but

[534] *Id.*

with the more recent 2023 mean hourly wage.

The commenter further asserted that it would be more accurate to calculate the value of time as a percentage of the median hourly wage instead of the mean hourly wage, stating that ''the mean wage is driven by a few outliers.'' [535] Relying on the median hourly wage, however, would be incorrect and reflects a misunderstanding of how the value of time is calculated. The value of time initially was calculated as an absolute dollar amount per hour in the studies reviewed by the Hamermesh (2016) paper, and then expressed as a percentage of the mean hourly wage at that time. That percentage can be applied to the current mean hourly wage to calculate an updated value of time. If the Commission expressed the value of time as a percentage of the median wage, this would not be a ''more accurate'' calculation of the value of time as the commenter suggests, but simply a different way of expressing the same value of time estimated by Hamermesh (2016).

The commenter also argued that the Commission's valuation of time estimate is inaccurate because some consumers may have lower valuations of time, such as consumers who earn no wages or lower wages, and consumers who ''enjoy shopping'' and may not believe they incur costs from searching.[536] These concerns are consistent with the Commission's estimated value of time, which captures an average of a representative group of American consumers across eleven studies; some individuals will have lower valuations of time, and some will have higher.

Furthermore, the Commission distinguishes between efficient and inefficient searching by consumers. Consumers, based on their preferences, may find some amount of search, or comparison shopping, to be beneficial to their consumption choices. A consumer will naturally choose an efficient level of search such that the marginal benefit of discovering an additional different price or comparable good equals the marginal cost of the time and effort to perform the additional search. The Commission recognizes the purpose of this efficient level of search and does not count it as a harm. When consumers face drip pricing, they must spend additional time and effort to acquire full pricing information allowing them to properly comparison shop. This additional time and effort results in an inefficient level of search that harms consumers with no countervailing benefit. In the Commission's final regulatory analysis, the estimate of cost savings through reduced search time is based on the estimated difference between consumer search time under drip pricing and consumer search time under upfront pricing; that is, the estimate is based solely on the estimate of the inefficient level of search.

Finally, another commenter argued that benefits are too high in the short-term lodging calculation because the Preliminary Regulatory Analysis estimated the reduction in listings viewed as a result of the proposed rule using data from a study done in the live-event ticketing market.[537] However, the Commission's base number of listings viewed under the status quo was taken from studies conducted in the short-term lodging industry. The live-event ticketing study provided a scaling factor that the Commission used to estimate a percentage reduction in listings viewed in response to the rule. The commenter neither demonstrated why the Commission's method overestimated the reduction in listings viewed nor provided the Commission with additional data.

(b) Public Comments: Unquantified Benefits

The NPRM identified the rule's unquantified benefits, primarily a reduction in deadweight loss as consumers make more efficient purchasing decisions. Several comments from consumer and worker protection groups identified additional unquantified benefits of the rule to low-income households,[538] incarcerated people and their families,[539] and to restaurant workers.[540] Although these comments no longer apply to the final rule, the Commission acknowledges that the broader rule was likely to positively impact some vulnerable populations like those discussed in the comments and may have had second-order effects on housing security and the labor market.

One commenter also recommended that the Commission further explain or quantify why the rule would result in enforcement resource savings as stated in the NPRM.[541] The Commission does not quantify the net effect of the rule on enforcement resources due to a lack of data, but discusses in detail the rule's enforcement benefits in section V.A. Based on its experience, the Commission finds that the resources it needs to expend under the two-step pathway pursuant to section 19(a)(2) are typically greater because the Commission needs to initiate two separate proceedings.

3. Comments on the Economy-Wide Break-Even Analysis

In this section, the Commission addresses comments specific to the economy-wide break-even analysis of the Preliminary Regulatory Analysis. Section V.D.3.a addresses comments that argued the Commission's break-even analysis contained incorrect assumptions or errors; section V.D.3.b addresses comments that claimed a break-even analysis is not enough to justify an economy-wide rule; and section V.D.3.c addresses a comment that argued the break-even analysis is satisfactory and recommended further analysis to strengthen it.

(a) Public Comments: Break-Even Analysis Has Incorrect Assumptions or Contains Errors

Three commenters argued that the Commission's assumption that 90% of firms are already in compliance with the proposed rule was inaccurate.[542] This comment does not apply to the final rule, which no longer contains an economy-wide analysis. However, the Commission reaffirms its break-even calculation in the Preliminary Regulatory Analysis, and acknowledges uncertainty regarding the number of firms in the economy that currently employ unfair or deceptive fees or charges and that would need to incur additional costs to comply with the rule. To address the uncertainty, the Preliminary Regulatory Analysis provided both the break-even benefits required if 90% of firms in the economy are already compliant with the rule, as well as the break-even benefits required if 50% of the firms were already compliant with the rule.

[535] FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP).

[536] *Id.*

[537] FTC–2023–0064–3127 (U.S. Chamber of Commerce).

[539] FTC–2023–0064–3283 (National Consumer Law Center, Prison Policy Initiative, and advocate Stephen Raher).

[540] FTC–2023–0064–3248 (DC Jobs With Justice on behalf of Fair Price, Fair Wage Coalition).

[541] FTC–2023–0064–3146 (Institute for Policy Integrity, New York University School of Law).

[542] FTC–2023–0064–3233 (NCTA—The Internet & Television Association); FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP); FTC–2023–0064–3294 (International Franchise Association).

One commenter also argued that the $6.65 average annual per-consumer benefit number in the Preliminary Regulatory Analysis is too low because the Commission calculated the necessary break-even benefit level by dividing estimated costs by all U.S. adults, rather than only consumers who make live-event ticket and short-term lodging purchases.[543] The Commission emphasizes that the $6.65 figure from the Preliminary Regulatory Analysis is an average per-person benefit. In the same way that the estimated attorney hours assumes that some small businesses will not hire an attorney to ensure compliance, the benefit per consumer figure reflects the fact that some adults will not encounter dripped fees. The Commission does not dispute that some consumers will see much higher benefits than others. The same argument applies to the final rule, where the Commission recalculates the average annual per-consumer break-even benefit level using only the costs from covered goods or services.

Finally, the same commenter contended that both the one-time and annual costs for the high-end estimates in table 2 of the Preliminary Regulatory Analysis were calculated incorrectly.[544] This comment no longer applies to the final rule, which does not contain an economy-wide break-even analysis.

(b) Public Comments: Break-Even Analysis Is Not Enough To Justify an Economy-Wide Rule

Some commenters disagreed that the rule should apply to the whole economy when the Preliminary Regulatory Analysis quantifies a net benefit for two industries and relies on a break-even analysis for the remainder of the economy.[545] Other commenters similarly stated that the Preliminary Regulatory Analysis should include an industry-by-industry cost-benefit analysis.[546] The final rule is limited to only covered goods or services, which are offered by the live-event ticketing and short-term lodging industries.

The Commission emphasizes that a break-even analysis is encouraged by OMB Circular A–4 when there are unquantifiable costs or benefits, and affirms that its break-even analysis in the Preliminary Regulatory Analysis is consistent with OMB guidance.[547] In the final regulatory analysis, the Commission identifies some of the unquantified benefits to the rule and provides a similar break-even analysis for the live-event ticketing and short-term lodging industries. The Commission also provides benefit-cost analyses demonstrating that the quantified benefits exceed the quantified costs.

(c) Public Comments: Break-Even Analysis Is Satisfactory

Conversely, another commenter noted that the Commission's break-even analysis is satisfactory and suggested the Commission provide further analysis to support the conclusion that time savings resulting from the rule are likely to exceed the break-even threshold.[548] Although this comment no longer applies to the final rule, which focuses on addressing hidden and misleading fees in the live-event ticketing and short-term lodging industries, the Commission acknowledges that there is economic support for a broader rule.

E. Economic Regulatory Analysis of the Final Rule's Costs and Benefits

The Commission has narrowed the application of the final rule to a limited set of covered goods or services, which comprise live-event ticketing and short-term lodging. This in turn necessitates revisions to the Preliminary Regulatory Analysis. The final regulatory analysis no longer includes the economy-wide break-even analysis. The Commission provides the per-consumer break-even benefit levels for the live-event ticketing and short-term lodging industries, as well as quantified benefits and costs for these industries. After incorporating these revisions and updating numbers based on recent data releases, the Commission confirms in the final regulatory analysis that the benefits of the rule exceed the costs. Specifically, the Commission estimates that the quantified benefits of the rule will exceed its quantified costs, and the Commission believes that the total benefits of the rule (quantified and unquantified) will outweigh its total costs (quantified and unquantified).

The Commission discusses in the final regulatory analysis the projected impact of the rule's prohibition on offering, displaying, or advertising any price of a covered good or service without clearly and conspicuously disclosing total price, as well as the rule's prohibition on misrepresentations regarding any fee or charge, including the nature, purpose, amount, or refundability of any fee or charge, and the identity of the good or service for which the fee or charge is imposed. The Commission's analysis also assesses the impact of the rule's required disclosures of the nature, purpose, and amount of any fee or charge imposed on the transaction that has been lawfully excluded from total price, the identity of the good or service for which the fee or charge is imposed, and the final amount of payment. When possible, the Commission quantifies the benefits and costs and notes where some potential benefits and costs are unquantified. If a benefit or cost is quantified, the sources of the data relied upon are indicated. If an assumption is needed, the Commission makes clear which quantities are being assumed.

The Commission uses ten years for the time period of analysis because the Commission's trade regulation rules are subject to review every ten years. Tables 1 and 2 summarize the main findings of the final regulatory analysis. Table 1 presents the potential costs, benefits, and resulting net benefits for the live-event ticketing and short-term lodging industries. Quantified benefits in these industries derive from time savings consumers would experience due to greater price transparency, leading to more efficient shopping processes. Quantified costs derive from the costs firms would incur to comply with the rule.

[548] FTC–2023–0064–3146 (Institute for Policy Integrity, New York University School of Law).

The quantified net benefits for the live-event ticketing and short-term lodging industries are positive. There are also unquantified benefits, which may arise from a reduction in deadweight loss as consumers experience greater price transparency and make fewer mistake purchases. Unquantified costs may stem from potential adjustment costs or consumer confusion as expectations adjust under the rule.

For both quantified benefits and costs, the final regulatory analysis provides a range representing the set of assumptions that result in a ''low-end'' or ''high-end'' estimate. These estimates are calculated as present values over a ten-year period. Benefits and costs are more valuable to society the sooner they occur. A discount rate (3% or 7%) is used to adjust estimated benefits and costs for differences in timing; a higher discount rate is associated with a greater value for benefits and costs in the present.[549]

BILLING CODE 6750–01–P

[549] We use 3% and 7% for the discount rate, consistent with Office of Management and Budget's guidance. OMB Circular A–4, *supra* note 547.

BILLING CODE 6750–01–C

As discussed in more detail in section V.E.3, the Commission only quantifies benefits from reductions in consumer search costs. However, the Commission notes there are likely additional consumer benefits in the form of reduced deadweight loss. Since the Commission is unable to quantify all of the final rule's potential benefits, the final regulatory analysis instead calculates the minimum value for the average consumer that the final rule would need to generate in order for its benefits to outweigh its quantified costs. Table 2 presents low-end and high-end estimates of the total quantified costs and the necessary ''break-even benefit'' per consumer. Under the high-end cost assumptions with a 7% discount rate, the Commission's analysis finds that each consumer would need to experience a benefit of $0.33 per year over ten years for the rule's benefits to exceed its quantified compliance costs. Under the low-end cost assumptions with a 3% discount rate, that per-consumer amount is $0.08 per year over ten years. As noted, the Commission believes that the necessary break-even benefit per consumer is likely between $0.08 and $0.33 per year over ten years, depending on which set of assumptions is used.

Table 2 – Summary of Quantified Costs and Break-Even Benefits of Rule

		Present Value Over a 10-Year Period	
		Low-end Estimate	**High-end Estimate**
Total Quantified Costs	7% discount rate	$168,444,159	$602,764,086
Total Quantified Costs	3% discount rate	$168,444,159	$644,153,722
Break-even Benefit Per Consumer Per Year	7% discount rate	$0.09	$0.33
Break-even Benefit Per Consumer Per Year	3% discount rate	$0.08	$0.29

Note: "Low-End Estimate" reflects all scenarios that jointly result in lower estimates of benefits or costs and "High-End Estimate" reflects all scenarios that jointly result in higher estimates of benefits or costs.

1. Economic Rationale for the Final Rule

The final rule addresses the economic problem of incomplete and insufficient price information by businesses that shroud the full price from the consumer during parts of the purchasing process, which harms both consumers and honest competitors. Not including mandatory fees in the full price when consumers start the purchasing process for a good or service may result in a market failure. Firms may shroud the full price to the consumer through the practice of ''drip pricing,'' which is ''a pricing technique in which firms advertise only part of a product's price and reveal other charges later as the customer goes through the buying process.'' [550] Discovering the lowest full price prior to a final purchase by going through the checkout process with multiple firms is inefficient and involves additional consumer search costs. In some cases, taking the time to search for the full price from one firm may result in the consumer losing the opportunity to purchase the product from another firm. Drip pricing and the resulting imposition of additional search costs make it more difficult for consumers to compare prices across platforms, which may soften price competition in the market.[551]

A market failure may also occur when firms shroud full price through non-aggregated partitioned pricing, in which all of the components of the full price (base price, fees, etc.) are presented to consumers without the full price itself.[552] Non-aggregated partitioned pricing, like drip pricing, imposes costs on consumers by requiring them to spend additional time to calculate the full price for themselves. Consumers tend to underestimate the full price when faced with partitioned pricing, and this underestimation leads to an increase in demand. The increased demand from erroneous price calculations, in turn, leads to inefficient overconsumption by consumers.

(a) Shrouded Pricing as a Cause of Market Failure

A well-functioning market depends, in part, on consumers having accurate information regarding the price, and other attributes, of the goods or services being offered. Firms that engage in drip pricing or employ partitioned pricing create a friction in the operation of the market by imposing costs on consumers to acquire price information. Several economic harms may arise from this friction. First, holding consumer choices and prices fixed, the added search cost to acquire price information harms consumers with no countervailing benefit to firms. Second, because shrouded prices make comparison shopping more difficult, consumers might make suboptimal consumption decisions. In fact, consumers may find it too costly to search for full and accurate price information for some or all goods or services under consideration. The lack of full price information may lead consumer demand to become less sensitive, *i.e.,* less elastic, to changes in price, and consumers will accept higher (quality-adjusted) prices than they would if they were fully informed with clear and upfront pricing. This, in turn, leads to a third effect: since shrouded prices make it harder for consumers to compare prices, some firms may gain market power that allows them to raise prices or decrease quality.[553] Firms may further distort the market outcome by changing the products they offer to consumers relative to a market where prices are transparent.

The Commission discusses further the first of these effects, the added search costs incurred by consumers to acquire complete price information, in section V.E.2.a.i and quantifies these costs in the live-event ticketing and short-term lodging industries in section V.E.3.c and V.E.3.d. The Commission discusses the welfare impact of the second of these effects, the distortion of consumers' decisions due to lack of full information, in this section. The third effect, firms increasing their market power in response to increases in search costs, would exacerbate any welfare losses caused by the distortion of consumers' decisions due to the lack of full price information. However, the Commission lacks the data to quantify or distinguish their effects on deadweight loss.

The distortion of consumers' decisions due to the lack of full price information, the second effect discussed in the previous paragraph, can be illustrated through a simple model of supply and demand. For simplicity of exposition, the analysis assumes that there are many firms, each selling a homogeneous product (*i.e.,* good or service). The analysis further assumes that firms can adjust their prices and pricing strategies, but that the quality of the product is fixed.[554]

A useful starting point is to consider the baseline market outcome where consumers are fully informed; that is, consumers know the full price upfront (either because firms state the full price upfront or because consumers can fully and correctly predict any add-on prices). Since all firms sell the same product, competition will lead all firms to set equal prices at marginal cost. Figure 1 illustrates the baseline market outcome. The curve $D_{upfront}$ represents consumers' demand when they are fully informed. The supply curve S represents the marginal cost to firms of producing a given quantity of the product. The intersection of $D_{upfront}$ with S, denoted by point A, at quantity $Q_{upfront}$ and price $P_{upfront}$, represents the outcome. The analysis will refer to this as the ''fully informed outcome.'' At point A, the marginal benefit to consumers from consuming one additional unit is equal to the marginal cost to firms from the production of one more unit of the product.

As long as there are no externalities (*i.e.,* impacts on third parties beyond the consumers and firms under consideration) from the consumption of the product, this outcome is efficient; that is, point A represents the consumption level of the product that provides the greatest benefit to society. The benefit to society is measured by the sum of the benefit to consumers, called consumer surplus, and the benefit to firms, called producer surplus or profit. Consumer surplus is the net benefit consumers experience from consuming the product after accounting for their expenditure on the product. Consumer surplus is given by the difference between the area of trapezoid *ACFG,* the value to consumers from consuming $Q_{upfront}$ units of the product, and the area of rectangle *ABFG,* the total expenditure on the product ($P_{upfront} * Q_{upfront}$); thus, consumer surplus is given by the area of triangle *ABC.* Producer surplus is the net benefit to firms from selling the product after accounting for their costs to provide the product. Producer surplus is given by the difference between rectangle *ABFG,* the total revenue from the product, and the area of trapezoid *AEFG,* the cost to firms from producing $Q_{upfront}$ units of the product; thus, producer surplus is given by the area of triangle *ABE.* The net benefit to society is then given by the area of triangle *ACE.*

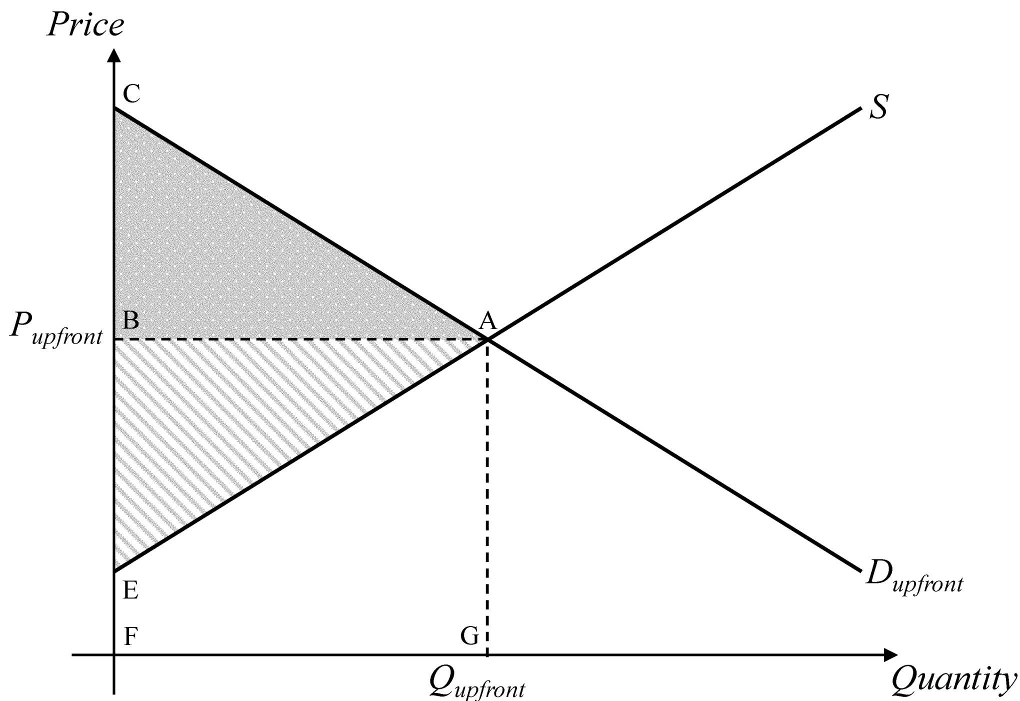
Model of Add-On Pricing, 120 Q.J. Econ. 585 (2005), *https://www.jstor.org/stable/25098747.*

[552] Morwitz, *supra* note 527.

[553] Baye, *supra* note 521.

[554] These assumptions are made for exposition purposes to abstract from the issues of market power in pricing and strategic interactions between firms. The general ideas from this simple framework extend to differentiated products and strategic interactions between a smaller number of firms.

Figure 1– Fully Informed Outcome



As previously discussed, shrouded pricing makes it more difficult for consumers to ascertain the full price of the product. In the case of drip pricing, consumers will see the base price before seeing additional mandatory price components such as convenience fees. Consumers may or may not be unaware of the additional fees at the time they make a purchase decision. If consumers are fully aware of the additional fees, or anticipate them correctly, the outcome remains point *A,* which is efficient. However, there is evidence that consumers respond differently to a change in the base price offered upfront than to changes in the fees disclosed separately from the base price. Specifically, economic studies provide evidence that consumers react less to price changes through fees than they do to price changes through the base price.[555] That is, consumer demand is less elastic to the fee component of the full price than it is to the base price. One possible rationale for this phenomenon is that consumers are fully aware of base prices but are not, or only partially, aware of fees.

The Commission analyzes the impact drip pricing has on market outcomes in the previous framework in two stages. The analysis starts by examining the case where consumers are completely unaware of the additional fees, namely, they assume that the base price offered upfront is the full price. The analysis then examines the case where consumers are aware that a fee might be added later but do not correctly estimate the size of this fee. Note that this case may arise under a variety of circumstances. For example, all consumers could be partially aware of the fees, some consumers could be fully aware of the fees while others are totally unaware, or there could be a mixture of consumers exhibiting different degrees of awareness.

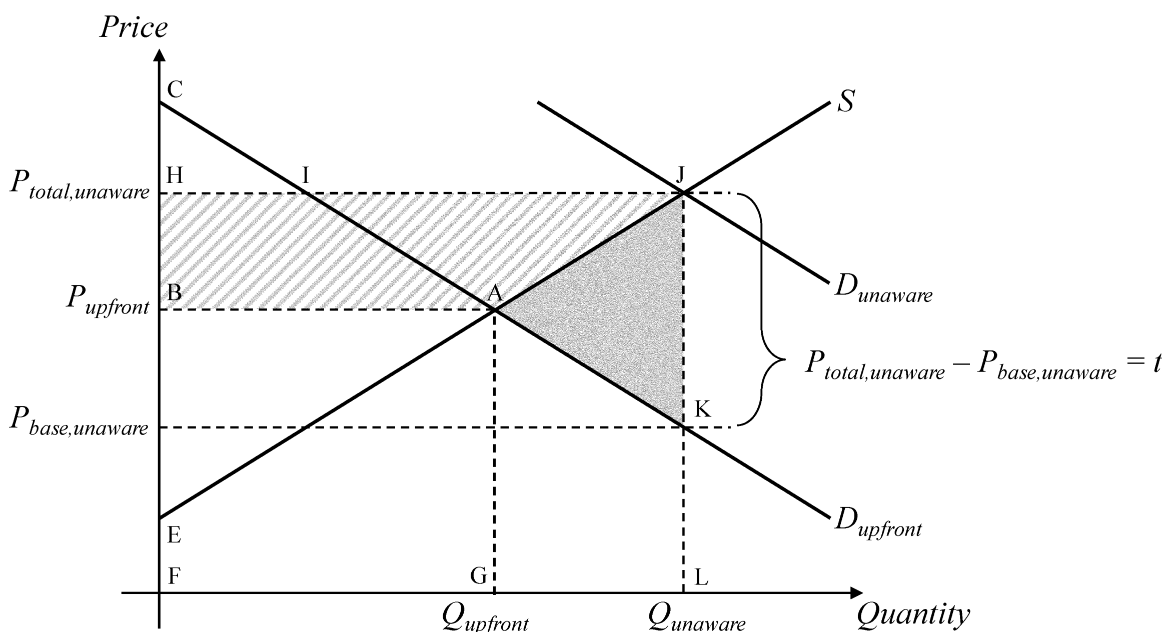
In the first stage of the analysis, $P_{base,unaware}$ denotes the base prices firms offer upfront, and $P_{total,unaware}$ denotes the full price firms charge, which is equal to the base price plus t, the sum of mandatory per unit fees not included in the base price: $P_{total,unaware} = P_{base,unaware} + t$.[556] Consumers determine their consumption according to $P_{base,unaware}$, unaware that they are actually going to pay $P_{total,unaware}$. This difference between the price consumers believe they are paying and the price firms are actually charging leads to an expansion in consumer demand relative to demand when consumers are fully informed. Specifically, as illustrated by Figure 2, the firms' deception causes an upward shift in demand equal to the price difference, t, from $D_{upfront}$ to $D_{unaware}$. The intersection of $D_{unaware}$ with S, illustrated by point J, at quantity $Q_{unaware}$ and price $P_{total,unaware}$,represents the outcome when consumers are unaware of the fee and only observe the base price.[557]

[555] Blake, *supra* note 521; Raj Chetty et al., *Salience and Taxation: Theory and Evidence,* 99 Am. Econ. Rev. 1145 (2009), *https://doi.org/10.1257/aer.99.4.1145.*

[556] For simplicity of exposition, the analysis assumes that all firms follow the same shrouding strategy and set the same *t.*

[557] This shift is entirely analogous to the shift that would occur from a government subsidy. When a subsidy is provided, the price consumers pay is lower than the price charged by firms.

Figure 2 – Market Distortion Caused by Shrouded Pricing when Consumers are Fully Unaware



Consumer surplus is now equal to the area of triangle *CHI* minus the area of triangle *IJK.* Relative to the fully informed outcome, consumer surplus decreases by the area of trapezoid *ABHI,* the decrease in consumer surplus due to the price increase, and the area of triangle *IJK,* the decrease in consumer surplus due to the deceptive pricing strategy. Producer surplus is now equal to the area of triangle *EHJ.* It increases, relative to the fully informed outcome, by the area of trapezoid *ABHJ.* This trapezoid illustrates the transfer of surplus from consumers to firms due to the deceptive practice of shrouded pricing. The net effect on society is now the area of triangle *ACE* minus the area of triangle *AJK.* Relative to the fully informed outcome, the benefit to society decreases by the area of triangle *AJK* (the combined change in consumer and producer surplus). This decrease in social surplus is the harm, also referred to as deadweight loss, caused by the full shrouding of the fee.

The analysis now turns to the case where consumers are aware of the possibility of additional fees but do not fully anticipate their magnitude. As previously discussed, academic research suggests that this might be the case.[558] This reduced salience would increase quantity demanded and incur a deadweight loss compared to the fully informed outcome (illustrated in Figure 1), although both the increase in quantity demanded and the deadweight loss would be smaller than in the case where consumers were fully unaware of the fees (illustrated in Figure 2). Essentially, the aggregate demand curve will lie somewhere between the upfront demand curve in Figure 1 and the fully shrouded demand in Figure 2. This aggregate demand can come from (the same) partial awareness by all consumers or a mixture of different degrees of awareness by different consumers. A technical appendix in section V.E.6 provides a more detailed model of the impact of consumers' partial awareness.

In summary, the shrouding of prices distorts the market outcome by leading consumers to consume more than they would if they were fully aware of the full price. The overconsumption by consumers leads to a social cost in the form of deadweight loss because the resources used to produce the product would have been put to better use if consumer demand had not been distorted in this manner. The deadweight loss from the inefficient consumption level is one component of the welfare loss generated by drip pricing, in addition to the increase in consumer search costs and the possible shift in pricing and product offerings due to increased market power. Collectively, these effects represent a market failure.

Shrouded pricing likely cannot be mitigated by competitive forces alone once it has become pervasive in a market. Although consumers would prefer upfront full prices, it is unlikely that an individual firm in a market with shrouded prices could increase its market share by providing its full price upfront. Under the expectation of shrouded prices, consumers may inadvertently interpret such a firm's upfront full price as a higher base price, with fees added separately, leading the firm to lose, rather than gain, business. The distortion of consumer expectations caused by shrouded pricing thus prevents a shift to upfront pricing through competition.

In many markets, goods and services are differentiated, with higher quality items selling at higher prices. In such markets, drip pricing may lead to outcomes characterized by inefficiently high qualities in addition to the inefficiently high quantities previously discussed.[559] Consumers may respond to fully disclosed prices in these markets by purchasing goods or services of lower, more efficient quality in addition to purchasing lower, more efficient quantities of goods or services.

(b) Shrouded Pricing as a Source of Biased Expectations

As explained in section V.E.1.a, firms have incentives to distort consumer demand toward an inefficient equilibrium. This inefficiency may also

[558] Blake, *supra* note 521; Chetty, *supra* note 555.

[559] This phenomenon has been observed, for example, in the live-event ticketing industry. *See* Blake, *supra* note 521.

arise in a behavioral context.[560] By shrouding full prices through drip or partitioned pricing, a firm may bias its consumers' price expectations. For example, consumers may respond to dripped prices by anchoring their beliefs on the base price and, thus, systematically underestimate the price of the good or service.[561] This underestimation, whether by all consumers, or a subset of consumers, leads to a similarly inefficient equilibrium in which the good or service is overconsumed and society suffers a deadweight loss.

Several studies show how consumer behavior changes because of drip pricing. One study found that when optional surcharges are dripped, individuals are more likely to select a more expensive option (after including surcharges) than what they would have chosen under upfront pricing.[562] Even when the participants became aware of the additional fees, they were reluctant to restart the purchase process because they perceived high search costs from doing so and inaccurately assumed that all firms charge the same fees. A different economics experiment found that consumers encountering drip pricing are more likely to make purchasing mistakes if they are uncertain about the extent of the drip pricing.[563]

Another prominent study looked at how consumers respond to the salience of sales tax on goods, which affects the full price of a product.[564] In this study, when the grocery store displayed the full price of each item on shelves as part of a field experiment, people purchased fewer goods relative to the control scenario in which sales tax was added at checkout, despite knowing that the final price being charged had not changed. In 2014, StubHub conducted an experiment in which some consumers were presented with upfront prices inclusive of fees while other consumers were presented a base price upfront with fees hidden until checkout. This experiment revealed that presenting consumers with full prices upfront reduced both the quantity and quality of tickets purchased relative to presenting consumers with dripped prices.[565]

2. Economic Effects of the Final Rule

The model of incomplete price information, described in section V.E.1.a, provides a framework for assessing the potential costs, benefits, and transfers associated with the final rule in the live-event ticketing and short-term lodging industries. The rule will result in positive net benefits if it allows consumers to learn total price more easily, improves consumer comprehension of fees and charges as they relate to total price, facilitates comparison shopping, reduces search costs, or otherwise allows consumers to make choices that increase net welfare. The Commission believes the rule will accomplish these goals in the live-event ticketing and short-term lodging industries.

The Commission finds in section V.E.1 that consumer demand in the live-event ticketing and short-term lodging industries is distorted by incomplete price information—in simple terms, consumers respond to lower base prices even if fees are revealed or added up later in a transaction. Thus, if a seller in these industries uses hidden fees, that seller may acquire a larger market share by advertising lower initial prices than other sellers not using hidden fees. Absent the rule, competitive forces will drive other firms in these industries to also use hidden fees, as has become evident as noted in section II.B. If firms do not use hidden fees, they may have to accept a lower market share, even though their full prices to consumers are similar to (or lower than) their competitors. Thus, the Commission finds that with the final rule, firms that currently do not use drip pricing will no longer face the competitive pressure to employ hidden fees and may experience higher revenue if consumers can more easily compare prices across firms. The Commission also finds that the rule will generate costs as firms that currently employ hidden or misleading fees adjust how they convey prices to consumers.

Overall, the Commission expects the rule will increase economic efficiency through improved consumer price calculations, resulting in reduced deadweight loss and reduced consumer search time that exceeds the costs to firms of providing more transparent pricing. It may also facilitate price comparison by consumers, increase competition among sellers, and put downward pressure on prices. Due to a lack of data, it is difficult to fully quantify all the potential effects of the final rule. Where there may be impacts that the Commission is unable to quantify, it provides a qualitative description.

(a) General Benefits of the Final Rule

Consumers will benefit from the rule in several ways. In addition to reductions in search costs and deadweight loss, which are described in greater detail herein, the Commission expects there to be unquantified benefits for consumers from the rule, including reduced frustration and consumer stress associated with surprise fees that distort the purchasing process.

i. Reductions in Search Costs

Consumers will save time searching for the total price of live-event tickets and short-term lodging as a result of the rule. In a well-functioning market, consumers find it beneficial to comparison shop for low prices. When mandatory fees are obscured or misrepresented, however, consumers learn the full price at the end of the process and may need to re-assess whether they wish to purchase at a higher price than originally expected or to look for other options. Consumers incur longer search times to discover full prices and make informed purchasing decisions. The final rule will eliminate the need for additional, inefficient amounts of time to determine total price from sellers that do not already provide total price upfront. The Commission quantifies the reduction in search costs in the live-event ticketing and short-term lodging industries.

ii. Reductions in Deadweight Loss

As discussed in section V.E.1.a, incomplete pricing information may distort consumer demand. This distortion will lead to an inefficient market equilibrium and generate deadweight loss, which results from consumers purchasing higher quantities of the good or service than they would if fully informed. Under the final rule, consumers will learn total price upfront. Thus, the rule will likely mitigate distorted consumer demand and prevent welfare-reducing transactions. Resources supporting overconsumption will become available for better societal use, and the deadweight loss will be reduced or eliminated.

The disclosure of total price may also reduce mistake purchases with respect to product quality. Drip pricing can lead consumers to purchase goods of inefficient quality; the final rule will allow consumers to choose more efficient levels of quality. The Commission does not quantify the reduction in deadweight loss but finds

[562] Shelle Santana et al., *Consumer Reactions to Drip Pricing,* 39 Mktg. Sci. 188 (2020), *https://doi.org/10.1287/mksc.2019.1207*.

[563] Rasch, *supra* note 521.

[564] Chetty, *supra* note 555.

[565] *See* Blake, *supra* note 521.

that it is a positive benefit to the final rule.

(b) Welfare Transfers

The Commission expects that prices in the live-event ticketing and short-term lodging industries will adjust in response to the transparency facilitated by the rule. These price adjustments transfer welfare from one side of the market to the other; consumer welfare will increase, and producer profits will decrease by the same amount. Typically, transfers of welfare from one set of people in the economy to another are documented in a regulatory analysis, but do not change net social welfare.[566] Consequently, while it is likely that the rule will result in transfers of welfare, the Commission does not attempt to estimate these transfers.

(c) General Costs of the Final Rule

Firms in the live-event ticketing and short-term lodging industries will likely do a basic regulatory review to determine how the rule applies to them.[567] Firms that are not already in compliance with the rule may incur additional costs to re-optimize the price of goods and services. These firms may also incur costs to adjust how they display pricing information to disclose total price whenever the price of a good or service is displayed. For example, firms may need to update websites or reprint advertisements to comply with the rule.

In addition, the Commission notes that there may be other indirect short-term costs that the Commission cannot quantify. For instance, consumers who are used to an existing pricing structure that separately discloses mandatory fees at the end of the purchase process may mistakenly make inefficient purchases while adjusting to the new regime of upfront total price. Specifically, consumers accustomed to dripped live-event ticketing fees may initially under-consume when shopping for tickets with upfront total price. The societal cost of such inefficiencies would be temporary and decrease as consumers adjust to the truthful, timely, and transparent pricing required by the rule.

While the rule allows businesses to exclude shipping charges from total price until the point at which a consumer may consent to pay, the rule requires any internal handling costs that were previously disclosed at the end of the purchase process to be incorporated in total price. Since shipping and handling charges are sometimes combined, businesses may have to change how they account for handling costs and how they advertise shipping and handling costs to comply with this provision.

3. Quantified Welfare Effects

This section quantifies the potential benefits and costs of the final rule for the live-event ticketing industry and the short-term lodging industry. The Commission provides quantitative estimates where possible for these industries, and it describes benefits and costs that can only be assessed qualitatively. The Commission estimates that the quantified benefits will exceed the quantified costs, and the Commission believes that the total benefits (quantified and unquantified) will outweigh the total costs (quantified and unquantified) of the rule.

(a) Quantified Compliance Costs

The Commission quantifies the compliance costs for both industries utilizing assumptions about the number of hours required to determine and, if necessary, come into compliance with the final rule. The Commission expects that, in response to the final rule, firms will initially determine whether and how the rule applies to their current pricing and fee disclosure practices. The Commission assumes firms with current practices that align with the final rule will incur, at most, one hour of lawyer time to confirm compliance. This hour of lawyer time is a proxy for the average amount of time firms will need to determine whether the final rule applies to them. For example, some firms may not employ an attorney at all but may instead have a staff member review the rule.

The Commission does not have data on the exact costs noncompliant firms will incur to comply with the final rule. Some firms already may have developed tools to comply with the rule because they operate in jurisdictions, such as California, with existing similar all-in pricing requirements. Coming into compliance with the rule should be relatively easy for these firms. For other firms, complying with the final rule may require additional time and costs. To capture both the variation and uncertainty of costs across the two industries, the analysis includes a series of low- and high-end assumptions about the number of hours required to comply with the rule.[568] For example, the Commission's analysis assumes that firms not presently compliant will employ a low end of five hours and a high end of ten hours of lawyer time to determine necessary steps to comply with the rule. While some firms may forgo legal advice, this range of lawyer time serves as a proxy for any costs associated with understanding and preparing to comply with the rule.

The final rule's requirement to display total price may lead to shifts in consumer demand and, consequently, market equilibria. In response, firms transitioning away from drip pricing may need to determine new optimal prices. The Commission's analysis assumes that these price re-optimizations will require firms to incur a one-time, upfront cost of data scientist time to perform this work. The analysis assumes firms not presently compliant will employ a low-end of forty hours and a high-end of eighty hours of data scientist time. Similar to the use of lawyer hours in estimating compliance costs, this range of data scientist time serves as a proxy for any costs associated with adjusting pricing strategies in response to the rule.[569]

The Commission expects that the drip pricing employed by firms not presently compliant with the rule is, in many cases, manifested in online sales. In such cases, firms also will need to adjust advertised prices as well as purchase processes for online sales, and the analysis assumes these adjustments require firms to incur a one-time, upfront cost of web developer time. The analysis assumes firms not presently compliant will employ a low end of forty hours and a high end of eighty hours of web developer time to become

[566] *See* OMB Circular A–4, *supra* note 547 (''Transfer payments are monetary payments from one group to another that do not affect total resources available to society. A regulation that restricts the supply of a good, causing its price to rise, produces a transfer from buyers to sellers.'' Even though a ''net reduction in the total surplus (consumer plus producer) is a real cost to society, [ ] the transfer from buyers to sellers resulting from a higher price is not a real cost since the net reduction automatically accounts for the transfer from buyers to sellers.'').

[567] This basic regulatory review also captures the time it takes for firms to determine how a nationwide rule interacts with any state-level regulations to which they are already subject.

[568] The Commission requested additional information on potential compliance hours in the NPRM, but it did not receive consistent data. Therefore, the Commission uses the same set of assumptions on hours as used in the NPRM but notes that the live-event ticketing and short-term lodging industries are likely to have already established systems necessary to comply with the final rule due to operating in jurisdictions with similar regulations.

[569] It is possible that presently compliant firms would also need to reoptimize prices in response to shifts in market equilibria. That is, the shift in an industry's equilibrium resulting from the rule could be significant enough that all firms in the industry, compliant or not, would need to adjust prices. Firms regularly reoptimize prices in response to market shifts, but it is possible that this price adjustment would require already compliant firms to incur additional costs. The Commission solicited, but did not receive, the data necessary to quantify this potential cost to firms.

compliant with the final rule.[570] Once firms are compliant with the rule, any future changes to pricing displays or purchasing systems are not a direct consequence of the rule. Since the rule will not take effect for four months, some of these pricing display and advertising updates may come at no additional cost to certain firms. Many firms regularly update their pricing displays and advertisements. Any firms that would, in their normal course of business, update their displays and advertising during the four month window prior to the rule taking effect would not incur the additional one-time cost of updating their displays and advertisements in response to the rule. Because the Commission lacks data on these business practices, the Commission conservatively assumes that all firms not presently compliant with the rule will incur these costs. As such, the Commission's analysis likely represents an overestimate of compliance costs.

It may be the case that once the firm incurs the one-time transition costs, there are no additional costs. For a low-end estimate of costs, the Commission's analysis assumes annual costs are $0 because there are zero additional hours of labor. However, it may be the case that, as firms transition into compliance with the final rule, firms need to reevaluate their pricing policies to ensure continued compliance by employing additional lawyer time on an annual basis. Available data do not allow the Commission to estimate the exact annual compliance costs firms may incur as various industries adapt to the final rule. For the high-end cost estimate, the Commission's analysis assumes firms require an average of ten hours of lawyer time for annual compliance checks. The Commission recognizes some firms may not utilize lawyer time but may delegate compliance to non-attorney employees and still incur annual compliance costs. Data on non-lawyer compliance costs are not available, and these potential annual compliance costs are proxied with lawyer time with the implicit assumption that non-attorney employee hourly wages are lower than lawyer wages.

Table 3 presents the total compliance costs as the sum of the industry-specific compliance costs described in more detail in section V.E.3.c and V.E.3.d. The cost of employee time is monetized using wages obtained from the Bureau of Labor Statistics' May 2023 National Occupational Employment and Wage Estimates for the live-event ticketing industry.[571] For the short-term lodging industry, the analysis uses industry-specific wages associated with the North American Industry Classification System (''NAICS'') codes.

---

[570] The U.S. Department of Transportation also uses an assumption of 80 hours of time to reprogram flight quotation websites for the Enhancing Airline Passenger Protections II rule. U.S. Dep't Transp., *Preliminary Regulatory Analysis: Enhancing Airline Passenger Protections II* (May 24, 2010), *https://www.regulations.gov/document/DOT-OST-2010-0140-0003* (''Consumer Rule II'').

[571] U.S. Bureau Lab. Stat., Occupational Employment and Wage Statistics, *May 2023 National Occupational Employment and Wage Estimates United States* (May 2023), *https://www.bls.gov/oes/current/oes_nat.htm* (''OEWS National''); U.S. Bureau Lab. Stat., Occupational Employment and Wage Statistics, *Occupational Employment and Wages, May 2023: 15–2051 Data Scientists* (May 2023), *https://www.bls.gov/oes/current/oes152051.htm* (''OEWS Data Scientists'') (providing the hourly wages for data scientists); U.S. Bureau Lab. Stat., Occupational Employment and Wage Statistics, *Occupational Employment and Wages, May 20231: 15–1254 Web Developers* (May 2023), *https://www.bls.gov/oes/current/oes151254.htm* (''OEWS Web Developers'') (providing the hourly wages for web developers); U.S. Bureau Lab. Stat., Occupational Employment and Wage Statistics, *Occupational Employment and Wages, May 2023: 23–1011 Lawyers* (May 2023), *https://www.bls.gov/oes/current/oes231011.htm* (''OEWS Lawyers'') (providing the hourly wages for lawyers). This assumption is valid if hours spent in compliance activities would otherwise be spent in other productive work-related activities, the social value of which is summarized by the employee's wage. To the extent that these activities can be accomplished using time during which employees would otherwise be idle in the absence of a rule, our estimates will overstate the welfare costs of the final rule.

Table 3 – Total Compliance Costs

	Firms that Already Comply with Final Rule	Firms that Do Not Already Comply with Final Rule	
One-time Hours for Regulatory Familiarization or Compliance		**Low-end Estimate**	**High-end Estimate**
Lawyer Hours	1	5	10
Data Scientist Hours	0	40	80
Price Display Adjustment Hours	0	40	80
Recurring (Annual) Hours for Compliance			
Lawyer Hours	0	0	10
Total Present Value Costs (Annual + One Time) for Live-Event Ticketing and Short-Term Lodging			
Total @ 7% Discount Rate	$30,495,217	$137,948,942	$572,268,869
Total @ 3% Discount Rate	$30,495,217	$137,948,942	$613,658,505
Grand Total			
Total @ 7% Discount Rate		$168,444,159	$602,764,086
Total @ 3% Discount Rate		$168,444,159	$644,153,722

Table 4 presents the ten-year per-firm annualized compliance costs for the live-event ticketing and short-term lodging industries, separated by firms already in compliance, which incur a one-time compliance check, and firms not presently in compliance, which incur both one-time and recurring costs. Compliance costs for the short-term lodging industry are further disaggregated into costs for U.S. hotels and U.S. home share hosts. Costs to foreign hotels and home share hosts are discussed in section V.E.3.d.ii.

Table 4 – Per Firm Annualized Compliance Costs

	Firms that Already Comply with Final Rule	Firms that Do Not Already Comply with Final Rule	
Live-Event Ticketing		**Low-End**	**High-End**
Annualized Compliance Cost Per Firm @ 7% Discount Rate	$84.84	$648	$2,144
Annualized Compliance Cost Per Firm @ 3% Discount Rate		$534	$1,916
Short-Term Lodging (Hotels - U.S. Only)		**Low-End**	**High-End**
Annualized Compliance Cost Per Firm @ 7% Discount Rate		$527	$2,011
Annualized Compliance Cost Per Firm @ 3% Discount Rate		$434	$1,825
One-Time Cost (Firms Already in Compliance)	$95.60		
Short-Term Lodging (Home Share Hosts)		**Low-End**	**High-End**
One-Time Cost of Price Re-Optimization		$30.42	$91.27

(b) Break-Even Analysis

To have a positive net benefit, the final rule's benefits must outweigh its costs. The Commission calculates the break-even benefit per consumer based on the quantified costs presented in section V.E.3.b.[572] That is, the Commission determines the minimum value the final rule would need to generate for the average consumer for its total benefits to outweigh its quantified costs. The rule's benefits may include reduced search costs, reduced deadweight loss, and reduced psychological distress or frustration from surprise fees. For this analysis, the Commission considers costs in annualized terms—the average discounted cost of compliance per year over 10 years.[573] As such, the analysis expresses the break-even benefit as an average benefit per consumer per year over ten years.[574]

From Table 3, under the assumption that firms and consumers discount future years at 3%, the Commission's analysis estimates that the final rule may result in costs as high as $644 million over 10 years. Assuming instead a discount rate of 7% for future years, the analysis estimates that the final rule may result in costs as high as $603 million over ten years. To determine the break-even benefit, the Commission's analysis begins with the total present value of total costs and calculates the annualized total costs across both industries.[575] Next, the Commission calculates what the break-even benefit would be per consumer, according to the following formula:

Per Consumer Annualized Benefits ≥ (Annualized Quantified Compliance Costs/Population)

Table 5 presents the results of this break-even analysis. According to the 2020 Census, there are 258,343,281 adults living in the United States. Thus, the analysis divides the estimates of annualized costs by the number of U.S. adults to find the average consumer benefit per year for 10 years required to exceed quantified compliance costs. For example, if the final rule results in an average benefit to consumers that exceeds $0.33 per year over ten years, then the final rule's benefits exceed its quantified compliance costs under the high-end assumption and an assumed 7% discount rate.

Table 5 also provides the break-even benefit per consumer in terms of minutes saved as a result of the final rule. According to the Bureau of Labor Statistics' Occupational Employment Statistics, the average hourly wage of U.S. workers in 2023 was $31.48, and recent research suggests that individuals living in the U.S. value their non-work time at 82% of average hourly earnings. Thus, the value of non-work time for the average U.S. worker would be $25.81 per hour.[576] If the analysis divides the

[572] In section V.E.3.c and V.E.3.d, the Commission quantifies the final rule's net social benefits for the live-event ticketing and short-term lodging industries.

[573] For purposes of discounting and annualizing costs, the analysis assumes that firms incur one-time costs immediately, at the beginning of year 1, and potential costs of annual compliance checks at the end of each year.

[574] Benefits to consumers, such as reductions in search costs, will accrue continually over time. For simplicity, the break-even analysis assumes that annualized benefits accrue all at once at the end of each year. As such, the break-even analysis may overestimate the benefits required to outweigh costs.

[575] While total costs are higher with a smaller discount rate, annualized costs are higher with a larger discount rate due to higher upfront costs and lower recurring costs.

[576] *See* OEWS National, *supra* note 571 (providing the mean hourly wage); Hamermesh,

break-even dollar benefit per consumer, using the high-end assumptions and a discount rate of 7% ($0.33), by the value of saved search time ($25.81/hour) and converts to minutes, the break-even saved search time per consumer is 0.77 minutes. That is, if the final rule results in savings from reduced search time that exceed 0.77 minutes per consumer per year over ten years, then the benefits solely from reduced search time will exceed quantified compliance costs.[577] Although the Commission acknowledges that benefits of the final rule may vary across consumers, as some consumers may be more likely than others to consume live-event tickets and/or short-term lodging, the Commission finds it highly likely that consumers would experience average search time savings of this amount.

Table 5 – Break-Even Analysis

Break-Even Benefit Per Consumer ($)	**Low-End Estimate**	**High-End Estimate**
Live-Event Ticketing and Short-Term Lodging		
Total @ 7% Discount Rate	$0.09	$0.33
Total @ 3% Discount Rate	$0.08	$0.29
Break-Even Time Savings Per Consumer (Minutes)		
Live-Event Ticketing and Short-Term Lodging		
Total @ 7% Discount Rate	0.22	0.77
Total @ 3% Discount Rate	0.18	0.68

There are a few important caveats to this break-even analysis. This analysis may overestimate the number of noncompliant firms in the live-event ticketing and short-term lodging industries. In that case, this assumption leads to an overestimate of both costs and necessary break-even benefits. On the other hand, there may be more firms not already in compliance with the final rule, in which case this assumption results in an underestimate of both costs and break-even benefits.

The Commission cannot forecast all potential consequences and costs. This break-even analysis does not account for any unquantified benefits or costs due to unintended consequences. However, if the benefits from reduced deadweight loss caused by consumers' incomplete price information, reduced search time, and beneficial unintended consequences outweigh the costs from compliance and harmful unintended consequences, then the rule results in positive net social benefits. The Commission believes benefits will exceed the costs.

i. Sensitivity Analysis: Assume Higher Wage Rates

The Commission received comments regarding the wage rates used in the cost estimation. To address these comments, this section provides the break-even analysis described in section V.E.3.b using rates that are double the average wage rate obtained from the Bureau of Labor Statistics May 2023 National Occupational Employment and Wage Estimates.[578] Specifically, the wage rates used for this analysis are $169.68 for lawyer time to review compliance, $114.46 for data scientist time to re-optimize pricing, and $91.90 for web developer time. Using these higher wage rates, the break-even benefit required to exceed quantified compliance costs is provided in Table 6.[579]

supra note 533 (providing the value of consumer time).

[577] Assuming a 3% discount rate and the high-end assumptions, the break-even time saved per consumer per year would be 0.68 minutes.

[578] *See* sources cited *supra* note 571, including OEWS National (providing the mean hourly wage); OEWS Data Scientists (providing the hourly wages for data scientists); OEWS Web Developers (providing the hourly wages for web developers); and OEWS Lawyers (providing the hourly wages for lawyers).

[579] Wages are doubled in this sensitivity analysis, but the break-even benefit per consumer does not exactly double because not all costs depend on wages. One component of the cost calculation in the short-term lodging industry is the cost to home share hosts of re-optimizing prices. This cost is evaluated using an estimate of hosts' hourly value of time rather than wages, which is not doubled. Therefore, the break-even benefits per consumer presented in Table 6 are slightly less than double those in Table 5.

Table 6 – Break-Even Sensitivity Analysis (Doubled Wages)

Break-Even Benefit Per Consumer ($)	Low-End Estimate	High-End Estimate
Live-Event Ticketing and Short-Term Lodging		
Total @ 7% Discount Rate	$0.16	$0.59
Total @ 3% Discount Rate	$0.13	$0.52
Break-Even Time Savings Per Consumer (Minutes)		
Live-Event Ticketing and Short-Term Lodging		
Total @ 7% Discount Rate	0.37	1.36
Total @ 3% Discount Rate	0.31	1.21

The break-even analysis under the assumption of doubled wages implies that if the final rule results in an average benefit to consumers that exceeds $0.59 per year over ten years, then the final rule's benefits exceed its quantified compliance costs under the high-end assumption and an assumed 7% discount rate. In terms of minutes saved per consumer, the high-end cost assumptions with doubled wages and a 7% discount rate imply that if the final rule results in savings from reduced search time that exceed 1.36 minutes per consumer per year over ten years, then the benefits solely from reduced search time will exceed quantified compliance costs.

(c) Quantified Benefits and Costs: Live-Event Ticketing Industry

This section analyzes the final rule's quantified benefits and costs in the live-event ticketing industry. Quantified benefits are limited to the expected reductions in search costs to consumers. Since there is an additional, unquantified benefit of reduced deadweight loss, which is discussed conceptually in section V.E.2.a.ii, the net benefit estimated in the following analysis is conservative. The Commission finds that the quantified benefits and costs indicate that the rule will have a positive net benefit, even without accounting for the unquantified benefit of reducing deadweight loss.

Consumers in the live-event ticketing industry are often surprised by mandatory fees at the end of the purchase process.[580] In 2022, online event ticket sales were reported to be $8.1 billion.[581] Live events include concerts (30.3%), sporting events (33%), and dance, opera, and theater productions (12.4%).[582] For many consumers, there are no close substitutes for the specific product that they wish to purchase: a ticket to attend a live event. Thus, when consumers are presented with surprise mandatory fees, the consumer either pays the full price including the fees, spends time searching for a new option such as a different seat or a different seller, or forgoes the purchase entirely.

The live-event ticketing industry is unique relative to other industries because there is a large and robust secondary market. A given ticket to an event may be sold in the primary market, and then resold multiple times in the secondary market. It is difficult to fully quantify how many live-event ticket purchases are made in the U.S., how many involve mandatory fees, and the typical amount of the fee. Many live-event ticket sellers appear to include some kind of fee, although the size and type of the fees vary across sellers.[583] In a non-generalizable sample, the GAO found live-event ticketing fees in primary and secondary ticket markets averaged 27% and 31% of the ticket's price, respectively.[584]

Following White House and Congressional calls for disclosure of hidden fees, and after the ANPR was announced, some ticket sellers pledged to show all-in prices when the consumer begins the purchase process.[585] However, absent the final rule, market forces would likely return to the equilibrium of hidden mandatory fees. In fact, the National Association of Ticket Brokers and StubHub, Inc. submitted comments to the ANPR in support of a rule requiring all-in pricing, but commented that such a rule would only be effective if applied to all ticket sellers and rigorously enforced.[586] As discussed in section III.B.1.b, the

[586] FTC–2022–0069–6089 (ANPR) (National Association of Ticket Brokers); FTC–2022–0069–6079 (ANPR) (StubHub, Inc.).

Commission received similar comments in response to the NPRM emphasizing that the benefit of the rule requires industry-wide coverage so that no single seller is allowed to charge surprise fees at the end of the transaction. If any seller utilizes hidden fees, they may capture a larger market share by advertising lower initial prices. Absent a Federal rule applying to all sellers, competitive forces might drive ticket sellers to return to the use of hidden fees. Thus, the Commission's analysis quantifies benefits and costs relative to the baseline equilibrium where sellers do not disclose total price upfront.

In this final live-event ticketing net benefit analysis, the Commission updates firm counts, wage rates, any inflation-adjusted values, value of time, and 10–K live-event ticket revenue information to reflect the most recent available data. The Commission was unable to update any numbers from IBISWorld Reports.

i. Live-Event Ticketing: Estimated Benefits of the Final Rule

(a) Consumer Time Savings When Shopping for Live-Event Tickets

The final rule requires disclosure of total price inclusive of all fees or charges that a consumer must pay in order to use the good or service for its intended purpose. Required disclosure of total price and prohibitions on misrepresentations save consumers time when shopping for a live-event ticket by requiring the provision of salient, material information upfront and eliminating time spent pursuing ticket offers priced above the amount the consumer is willing to spend, also known as the consumer's reservation price.

The Commission's analysis assumes that, as a result of the rule, the total time spent by a consumer conducting the transaction will decrease, because some consumers will reduce the number of ticket listings they view prior to making a ticket purchase. For example, the Blake Study examined an experiment on StubHub where fees were presented upfront to some consumers and at the end of the purchase to others.[587] The experiment found that the percentage of consumers who only view one listing is 74% when fees are presented at the end of the transaction versus 83% when fees are presented upfront. Using the distribution of listings viewed by consumers as reported in the Blake Study, the analysis calculates that the reduction in the average number of listings a consumer views when fees are displayed upfront is 0.1525 listings.

To calculate the reduction in consumer search time resulting from upfront pricing, the Commission requires information on the length of time a consumer spends viewing a single listing. The Commission is not aware of any data available on this. However, many ticket sellers utilize a ''countdown clock'' where the selected tickets in the consumer's shopping cart expire and are returned to the marketplace. During this countdown clock, a consumer who was unhappy with the revealed total price could search for another ticket without losing the original ticket. The Commission uses this range of countdown clock time as a proxy for a low-end and high-end estimate of the time spent viewing a listing. These countdown clocks range from five to ten minutes per ticket transaction.[588] Multiplying the assumed length of a ticket transaction of five or ten minutes by the estimated reduction in viewed listings from the Blake Study results in a search time savings of 0.7625 to 1.525 minutes per consumer transaction.[589]

Next, the Commission's analysis estimates the number of consumer purchases of live-event tickets. Live Nation (which owns Ticketmaster) reported selling over 329 million fee-bearing tickets in the primary and secondary markets using the Ticketmaster system in its 2023 10–K SEC filing.[590] However, this figure combines North American and international ticket sales. Live Nation also reported that slightly more than two-thirds of concert events were in North America, so the analysis applies that proportion to the total combined ticket sales and assumes that Ticketmaster sold more than 221 million tickets in North America. To estimate the number of tickets sold solely in the U.S., the analysis then also adjusts the number of tickets by the share of North American GDP attributable to the U.S. (0.87 in 2023), which results in an estimated 192 million tickets sold in the primary and secondary markets by Ticketmaster in the U.S.[591]

To find the total number of tickets sold in the U.S. by all live-event ticket sellers, the Commission's analysis extrapolates from Ticketmaster's ticket sales using its market share. However, Ticketmaster's market share is uncertain. In 2010, the Department of Justice found that Ticketmaster had maintained a market share of more than 80% for the previous fifteen years.[592] If the Commission's analysis assumes that Ticketmaster still has an 80% share of the live-event ticket market (which includes both primary and secondary ticket markets), it can estimate the total number of tickets sold in the U.S. by dividing Ticketmaster's ticket sales in the U.S. by 80%. This provides a low-end estimate of the number of tickets sold in the U.S. of 240 million tickets.

However, Ticketmaster did not begin selling in the secondary market until after it merged with Live Nation. Based on publicly available information, the Commission is uncertain of Ticketmaster's market share in the secondary market for tickets.[593] If Ticketmaster does not have 80% of the ticket market (both primary and secondary), the number of tickets sold in the U.S. would exceed the low-end estimate of 240 million tickets. To generate a high-end estimate of the total number of tickets sold in the U.S., the Commission's analysis uses the reported revenue for the full online ticket sales industry provided by the private research firm IBISWorld and calculates Ticketmaster's revenue share of the industry. IBISWorld reports the online ticket sales industry, including both primary ticket sellers and ticket

[587] Blake, *supra* note 521.

[588] Ticketmaster states that the amount of time it imposes varies by event but references a five-minute purchasing period. *FAQ's: Why does Ticketmaster enforce a time limit when making purchases online?,* Ticketmaster.com.au, *https://www.ticketmaster.com.au/h/faq.html.* Based on a small, non-representative sample of ticket purchase attempts, StubHub appears to generally offer ten minutes to complete a ticket purchase.

[589] *See also* Consumer Rule II, *supra* note 570, at 39. The Preliminary Regulatory Impact Analysis for Consumer Rule II assumed airfare consumers would save five minutes of search and estimation time if all websites provided full-fare information upfront.

[591] U.S. GDP in 2023 was estimated to be $27.36 trillion and GDP for North America was estimated to be $31.4 trillion. *IMF DataMapper United States Datasets,* IMF.org, *https://www.imf.org/external/datamapper/profile/USA; IMF DataMapper North America Datasets,* IMF.org, *https://www.imf.org/external/datamapper/profile/NMQ.* The Commission's analysis adjusts North American tickets (221 million) by 87% to estimate the number of tickets sold in the United States, resulting in 192 million.

[592] *See* Christine A. Varney, Assistant Attorney General, Antitrust Division, U.S. Dep't of Justice, *Remarks at the South by Southwest Conference: The TicketMaster/Live Nation Merger Review and Consent Decree in Perspective* (Mar. 18, 2010), *https://www.justice.gov/atr/speech/ticketmasterlive-nation-merger-review-and-consent-decree-perspective.*

[593] The Live Nation 10–K, *supra note* 590, does not separate out tickets sold by Ticketmaster in the primary versus secondary markets. Ticketmaster now sells tickets on the secondary market, which includes several other sellers such as StubHub, Inc., Vivid Seats, TickPick, LLC, Ace Ticket, Alliance Tickets, Coast to Coast Tickets, and others.

resellers, earned $12.5 billion in revenue in 2023.[594] The Live Nation 10–K reported ticketing revenue of $3 billion in 2023, which suggests that Ticketmaster has a 24% revenue share of the online ticketing industry.[595] The Commission's analysis extrapolates a high-end estimate of the total number of tickets sold in the U.S. by dividing Ticketmaster ticket sales in the U.S. by 24%, which results in an estimate of 801 million live-event tickets sold in the U.S.

Lastly, the reduction in search time of 0.7625 to 1.525 minutes is per consumer purchase, not per ticket purchase. The Commission's analysis assumes that the average consumer purchase is between 1.5 and 3 tickets.[596] Thus, the total number of tickets sold is divided by 1.5 or 3 to arrive at an estimated range for the number of consumer purchases. The analysis estimates the range of live event consumer purchases in the U.S. to be 80 million on the low end and 534 million on the high end.

When multiplied by the number of transactions per year, the reduction in minutes spent viewing ticket listings will generate a total time savings of 1.02 million to 13.6 million hours per year. Using the value of non-work time for the average U.S. worker of $25.81 per hour, the Commission's analysis estimates that the total benefit from time savings for completed transactions is roughly $26.3 million to $350.6 million per year, depending on how conservative its assumptions are. Table 7 presents the expected benefits of time savings over the next ten years in present value.

BILLING CODE 6750–01–P

---

[594] *See https://www.ibisworld.com/industry-statistics/market-size/online-event-ticket-sales-united-states/.*

[595] Assuming Ticketmaster's market share is equivalent to its revenue share (of the primary and secondary markets) also assumes that the average price of a ticket sold by Ticketmaster is the same as (or lower than) the average price of a ticket sold by the rest of the industry. If, however, the average price of a ticket sold by Ticketmaster is higher than average prices in the rest of the industry, then Ticketmaster's revenue share is higher than its ticket share, and the extrapolation understates the total number of tickets sold in the U.S.

[596] The Commission does not currently have information on the average number of tickets purchased in a transaction. However, there is reason to believe the average would be greater than one because most venues limit the number of tickets that can be purchased in a given transaction, suggesting that there is consumer demand for purchases of more than a single ticket. The limit is dependent on the event. Ticketmaster, *Why is there a ticket limit?, https://help.ticketmaster.com/hc/en-us/articles/9781245025937-Why-is-there-a-ticket-limit.*

Table 7 – Live-Event Ticketing: Estimated Benefits of Time Savings for Completed Transactions

		Low-End Benefit Estimate	High-End Benefit Estimate
Completed Transactions			
Minutes Viewing Live-Event Ticket Listing		5	10
Reduction in Average Number of Listings Viewed		0.1525	0.1525
Minutes Saved per Transaction		0.7625	1.525
Number of Tickets Sold in the United States		240,441,841	801,472,804
Average Number of Tickets in a Purchase		3	1.5
Number of Consumer Purchases		80,147,280	534,315,203
Hours Saved Per Year		1,018,538	13,580,511
Value of 1 hour of non-work time		$25.81	
Total $ Saved per year		$26,292,142	$350,561,889
Abandoned Transactions		***Unquantified***	***Unquantified***
Reductions in Deadweight Loss		***Unquantified***	***Unquantified***
Total Quantified Benefits (10 Years)	**7% Discount Rate**	$184,665,001	$2,462,200,015
Total Quantified Benefits (10 Years)	**3% Discount Rate**	$224,277,302	$2,990,364,023

Note: Benefits have been discounted to the present value at both 3% and 7% rates. The total number of tickets sold in the U.S. market is estimated using the reported number of tickets sold in the primary and secondary market in the 2023 Live Nation 10-K.[597] This number of tickets is adjusted first by the proportion of North American events, and then by the share of North American GDP attributable to the U.S. Lastly, the total number of tickets is estimated by dividing the tickets sold by TicketMaster by the market share of TicketMaster. Wage rates are taken from the U.S. Bureau of Labor Statistics and adjusted by the consumer value of time reported in Hamermesh (2016).[598] The Commission relied upon publicly available sources of data in its calculations.

BILLING CODE 6750–01–C

(b) Additional Unquantified Benefits: Reductions in Deadweight Loss and Abandoned Transactions

Due to the incomplete price information problem described in section V.E.1, the final rule requiring ticket sellers to show total price of tickets upfront will likely result in a reduction of deadweight loss. Recent research suggests that when consumers know total prices for tickets upfront, consumers are better able to find the tickets that match their desired quantity and quality (seat type or location).[599] The analysis does not quantify the reduction in deadweight loss, but such a reduction is a positive benefit of the rule.

Another unquantified benefit to the final rule is a potential decrease in abandoned transactions. For example, in some cases, once the additional information impacting full price is revealed, consumers may fully abandon the transaction (*i.e.,* not purchase any ticket). Although the Commission solicited comment in the NPRM on the

[597] Live Nation 10–K, *supra* note 590.

[598] OEWS National, *supra* note 571; Hamermesh, *supra* note 533.

[599] Blake, *supra* note 521. Live-event tickets are an example of a differentiated product; there are higher quality tickets (*e.g.,* better views, more comfortable seats, cover from the elements) that are associated with higher price tiers. Blake et al. find that consumers who face drip pricing purchase more expensive, higher quality tickets than they would if provided with upfront pricing.

frequency of, and the reasons for, abandoned transactions in the live-event ticket market to help quantify this benefit, it did not receive this data and cannot determine the quantity of such abandoned transactions and the amount of time spent pursuing them. As a result, this benefit is unquantified.

ii. Live-Event Ticketing: Estimated Costs of the Final Rule

This section describes the potential costs of the final rule's provisions and provides quantitative estimates where possible. For live-event ticketing, the cost of employee time is again monetized using wages obtained from the Bureau of Labor Statistics' May 2023 National Occupational Employment and Wage Estimates.[600] Because live-event ticketing is not associated with a specific NAICS code, the Commission uses wages at the national level rather than the industry-specific wages that are used to calculate costs for the short-term lodging industry.

The costs to sellers from the rule include a review of whether the rule applies, and, if the firm is not currently compliant with the rule, one-time costs to comply with the rule, as well as recurring annual costs to review and ensure ongoing compliance. The Commission's analysis presents two cost scenarios corresponding to different assumptions of how many hours are required to comply with the rule and how many firms would be affected by the rule. The analysis presents these as low-end and high-end cost scenarios.

To estimate costs for the entire live-event ticket-selling industry, the Commission's analysis calculates the cost per seller and multiplies that by the number of sellers in the industry. There is some uncertainty about the number of live-event ticket sellers that would be affected by the rule because, while the NAICS classification system does not define a classification solely for ticket sellers, two different NAICS codes might include ticket sellers. The GAO Report used the NAICS code 561599, which is ''All Other Travel Arrangement and Reservation Services.''[601] This NAICS category includes 1,442 firms; some live-event ticket sellers, such as Tickets.com and Vivid Seats, use this classification.[602] Other live-event ticket sellers, such as Ticketmaster and StubHub, however, are classified as NAICS code 7113, which is ''Promoters of Performing Arts, Sports, and Similar Events,'' and includes 7,998 firms.[603] As a high-end estimate of the number of live-event ticket sellers, the Commission's analysis uses the sum of the firms within these two NAICS code and assumes there are 9,440 firms potentially impacted by the final rule.[604]

The 9,440 figure is potentially over-inclusive, as many firms within NAICS code 561599 and 7113 do not directly sell tickets or charge mandatory fees, and thus would not be impacted by the final rule. The private research firm IBISWorld estimated that the number of firms in the online live-event ticket selling industry was 3,326.[605] The Commission's analysis uses the 3,326 figure as a low-end estimate of the number of firms.

Next, the Commission's analysis estimates the number of hours a firm would spend complying with the rule. As with assumptions regarding the number of firms, the following estimation utilizes low-end and high-end values for the number of hours necessary for compliance. Because many ticket sellers operate in other countries that currently have requirements similar to the final rule (Canada, Australia, the United Kingdom, and the European Union member states), ticket sellers already may have incorporated any changes required by the final rule to their operating practices. The websites already may be programmed; the lawyers already may be prepared to advise on compliance with the rule; and the data scientists already may have determined the optimal pricing strategy. Thus, sellers would have relatively low costs to transition to all-in pricing in the U.S.[606]

In this low-end cost scenario, because live-event ticket sellers already are prepared to advertise total prices to consumers, the one-time, upfront cost of determining optimal prices and updating the purchase systems in terms of the number of required hours is negligible. The Commission's analysis assumes five hours of lawyer time to determine if the rule applies, forty hours of data scientist time to re-optimize pricing strategy, and forty hours of web developer time to edit and reprogram the website to display upfront prices. For the low-end cost scenario, the analysis also assumes there are no annual costs after the firm has incurred the one-time transition costs.

In the high-end cost scenario, the Commission's analysis assumes that ticket sellers have not laid the groundwork to comply with the rule. The high-end cost scenario assumes sellers require twice the number of hours to determine optimal prices, re-program the website to include total price, and review and confirm compliance. Thus, the one-time costs include 10 hours of lawyer time, 80 hours of data scientist time, and eighty hours of web developer time. For the high-end cost estimate, the analysis assumes there are recurring annual costs of ten hours of lawyer time per year to review and confirm compliance.[607]

BILLING CODE 6750–01–P

[600] OEWS National, *supra* note 571.

[601] NAICS code 561599 ''comprises establishments (except travel agencies, tour operators, and convention and visitors bureaus) primarily engaged in providing travel arrangement and reservation services.'' U.S. Census Bureau, North American Industry Classification System, *561599 All Other Travel Arrangement and Reservation Services* (2022), *https://www.census.gov/naics/?input=561599&year=2022&details=561599*.

[602] U.S. Census Bureau, 2021 SUSB Annual Datasets by Establishment Industry (Dec. 2023), *https://www.census.gov/data/datasets/2021/econ/susb/2021-susb.html*.

[603] *Id.*

[604] Note that some live-event ticket sellers may be organized as non-profit entities and thus could fall outside of the Commission's jurisdiction. The Commission did not find data on the proportion of ticket sellers that are non-profits and thus uses the full number of firms. If a non-trivial number of ticket sellers are outside the jurisdiction of the Commission and not subject to the provisions of the rule, then the total costs to ticket sellers is overestimated.

[605] Ticket Sales Industry Report, *supra* note 581.

[606] FTC–2023–0064–3212 (TickPick, LLC commented: ''For the most part, ticketing marketplaces would incur an immaterial cost to implement all-in pricing. Internationally, major ticket marketplaces are already required to comply with true all-in pricing in Canada and the United Kingdom. The technology to display tickets inclusive of fees in the form of a toggle is a widely available functionality. Put differently, the technology already exists within ticketing platforms to eliminate drip pricing and would simply need to be applied to events in the U.S.'').

[607] FTC–2023–0064–3122 (Vivid Seats commented: ''We believe that the FTC is underestimating the amount of employee time required by at least a factor of five.''). The Commission notes that other commenters stated the transition to upfront pricing for ticket sellers would be as simple as a toggle switch and that most ticket sellers already have the capability to provide Total Price due to existing regulations in other countries. *See, e.g.,* FTC–2023–0064–3212 (TickPick, LLC); FTC–2023–0064–0132 (Individual Commenter who purchased tickets from GameStop and StubHub noted that ''on all of these sites the fees are not explained until the final page unless you go find the toggle to include fees as you are looking for tickets''); FTC–2023–0064–3207 (Consumer Reports noted a consumer who commented: ''While I appreciate that TM [Ticketmaster] now has the option to view all your fees up front as part of the price if you toggle that option, its totally insane that fees can be 25% of the cost at LEAST.''); FTC–2022–0069–6162 (ANPR) (Recording Academy noted that ''StubHub allows the consumer to toggle 'Show prices with estimated fees' filter during the ticket search''). The Commission did not receive any definitive data on the number of hours this change would take and thus retains the low-end and high-end hours estimates presented in the NPRM.

Table 8 – Live-Event Ticketing: Estimated Costs of Compliance

		Low-End Cost Estimate	High-End Cost Estimate
Number of Live-Event Ticket Sellers		3,326	9,440
Hours to Determine Optimal Pricing (Data Scientist Hours)		40	80
Hours to Update Purchasing Systems to Reflect Total Price (Website Developer Hours)		40	80
Hours to Determine how Rule Applies (Lawyer Hours)		5	10
Hourly Wage Rate Data Scientist		$57.23	$57.23
Hourly Wage Rate Website Developer		$45.95	$45.95
Hourly Wage Lawyer to Review Compliance		$84.84	$84.84
One-Time Fixed Cost to Include Fees Upfront		**$15,137,956**	**$85,930,432**
Hours for Reviewing Rule and Compliance (Annual)		0	10
Hourly Wage Lawyer to Review Compliance		$84.84	$84.84
Total Costs per year		**$0**	**$8,008,896**
Total Quantified Costs (10 Years) (One-Time + Annual)	**7% Discount Rate**	**$15,137,956**	**$142,181,566**
Total Quantified Costs (10 Years) (One-Time + Annual)	**3% Discount Rate**	**$15,137,956**	**$154,247,939**
Annualized Compliance Cost Per Firm	7% Discount Rate	$648.02	$2,144.43
Annualized Compliance Cost Per Firm	3% Discount Rate	$533.56	$1,915.53

Note: Costs have been discounted to the present at both 3% and 7% rates. The high-end estimate of firms is the sum of the number of firms in NAICS code 561599 and NAICS code 7113 reported by the U.S. Census Bureau.[608] The Commission relied upon publicly available sources of data in its calculations.

iii. Live-Event Ticketing: Net Benefits

In Table 9, the Commission's analysis presents net benefits using the quantified benefits and costs discussed in section V.E.3.c.i and V.E.3.c.ii. To calculate the low-end of the range for net benefits, the analysis subtracts the total quantified costs using the high-end cost assumptions from the total quantified benefits using the low-end benefit assumptions. For the high-end of the range for net benefits, the analysis subtracts the low-end estimate of total quantified costs from the high-end estimate of total quantified benefits.

[608] U.S. Census Bureau, *2021 SUSB Annual Datasets by Establishment Industry, supra* note 602. Hourly wages are from the Bureau of Labor Statistics. *See* sources cited *supra* note 571, including OEWS Data Scientists (providing the hourly wages for data scientists); OEWS Web Developers (providing the hourly wages for web developers); and OEWS Lawyers (providing the hourly wages for lawyers).

Table 9 – Live-Event Ticketing: Estimated Net Benefits

		10-Year Period	
		Low-End Estimate	**High-End Estimate**
Total Quantified Benefits	7% Discount Rate	$184,665,001	$2,462,200,015
Total Quantified Benefits	3% Discount Rate	$224,277,302	$2,990,364,023
Total Quantified Costs (One-Time + Annual)	7% Discount Rate	$15,137,956	$142,181,566
Total Quantified Costs (One-Time + Annual)	3% Discount Rate	$15,137,956	$154,247,939
		(Low Benefits – High Cost)	**(High Benefits – Low Cost)**
Net Benefits (10 Years)	7% Discount Rate	$42,483,435	$2,447,062,058
Net Benefits (10 Years)	3% Discount Rate	$70,029,362	$2,975,226,066

Note: Benefits have been discounted to the present at both 3% and 7% rates.

Using various assumptions, the quantified benefits and costs imply that the rule will have a positive net benefit, even without accounting for the additional benefit of reducing deadweight loss.

iv. Live-Event Ticketing: Uncertainties

The Commission's ability to precisely estimate benefits and costs is limited due to uncertainties in key parameters. The quantified benefits and costs for the live-event ticketing industry rely on a set of assumptions, based on the best available public information. When the data are unclear, the analysis relies on assumptions that generate a range of low-end and high-end estimates. In Table 10, the analysis summarizes those key assumptions and their effect on the resulting estimate of quantified benefits and costs.

BILLING CODE 6750–01–P

Table 10 – Live-Event Ticketing: Summary of Key Uncertainties

Assumption or Uncertainty in Benefits Calculation	**Impact on Benefits**
The analysis assumes that Ticketmaster sales of tickets in North America are proportional to events in North America.	Adjusting total Ticketmaster tickets sold (North America + International) by the proportion of events in North America may overestimate or underestimate tickets sold in North America.
The analysis assumes that the total tickets sold in the U.S. are proportional to Ticketmaster share of ticket market revenue.	Market share extrapolation based on revenue share may underestimate or overestimate the total number of tickets sold in the U.S.
The analysis assumes the number of tickets purchased in the average consumer transaction (1.5 or 3 tickets per consumer).	Adjusting the total tickets sold by the number of tickets in the average transaction may overestimate or underestimate the total number of consumer transactions.
The analysis assumes that reduction in consumer search due to upfront pricing is estimated by the Blake Study that shows a reduction of 0.16 listings viewed on StubHub with upfront pricing.	Assuming that upfront pricing will lead to exactly 0.16 fewer listings viewed may underestimate total search time reduced, because it does not account for consumers using other purchasing systems (ticket selling competitors).
The analysis assumes that consumers spend between five to ten minutes viewing a listing. This assumption is based on shopping cart clocks from Ticketmaster and StubHub sale pages.	Assuming consumers use the full timer clock to view a listing may overestimate transaction time, which would overestimate the benefits of reduced search time.
Assumption or Uncertainty in Costs Calculation	**Impact on Costs**
The analysis assumes that the number of firms selling tickets is the sum of firms in potential NAICS codes.	The analysis may overestimate total number of firms affected if a large proportion of firms in these NAICS codes are not subject to the final rule.
The analysis assumes that the number of firms selling tickets is the number provided in the IBISWorld Ticket Sales Industry Report.	The analysis may underestimate total costs if there is a meaningful number of firms selling tickets offline.
The analysis assumes that the number of hours to comply with the rule is comprised of specified hours of lawyer time, data analyst time, and web developer time.	The analysis may overestimate costs per firm if many firms either already comply or have the systems in place to easily comply with the rule. Also, the analysis may underestimate costs if compliance requires a greater number of hours.

BILLING CODE 6750–01–C

(d) Quantified Benefits and Costs: Short-Term Lodging Industry

Businesses in the short-term lodging industry, which include both traditional hotels[609] as well as home share options like Airbnb and VRBO, often charge a variety of mandatory add-on fees. These fees are typically either disclosed upfront but separately from the base price (a practice known as partitioned pricing), or revealed just before payment, after the consumer has clicked through multiple pages of a listing (a practice known as drip pricing). Sometimes, these fees are not disclosed at all or are disclosed only when a consumer checks out at the conclusion of their stay. These fees may include mandatory surcharges referred to by hotels as ''resort fees,'' ''amenity fees,'' or ''destination fees.'' Hotels often justify charging these fees as necessary to cover the costs of amenities that are not reflected in the base rate, such as Wi-Fi, pool and gym access, towels, parking, or shuttle services. Home share websites like Airbnb and VRBO may include mandatory fees such as ''cleaning fees,'' ''service fees,'' or ''host fees.'' These fees are mandatory and do not depend on the consumer's use of the amenities or services.

Consumer behavior studies have shown that both partitioned pricing and drip pricing cause consumers to underestimate the full price of the product, even when all components of the price are disclosed upfront.[610] As a result, disclosing mandatory surcharges separately from the room rate without more prominently disclosing total price is likely to harm consumers by increasing search costs and reducing consumer surplus.[611] These fees may reduce consumer surplus if consumers respond by booking a room that is more expensive than the room they would have chosen under upfront total pricing. Partitioned pricing and drip pricing may also increase search costs if consumers spend more time looking at additional listings in search of a cheaper hotel.

One industry group states that 6% of U.S. hotels charge mandatory fees, which amounts to over $2.5 billion paid in resort fees annually by U.S. consumers.[612] This number underestimates how much U.S. consumers pay in mandatory fees because it does not include fees from finding accommodations on the home share market through websites like Airbnb and VRBO, or fees incurred from booking at foreign hotels with U.S.-facing websites. Resort fees in the U.S. average 3.9% of the per-night cost of a room, and can exceed 20% of the per-night cost, especially at lower cost hotels.[613]

This section analyzes the final rule's quantified benefits and costs in the short-term lodging industry. Quantified benefits are limited to the expected reductions in search costs to consumers. Since there is an additional, unquantified benefit of reduced deadweight loss, which is discussed conceptually in section V.E.2.a.ii, the net benefit estimated in the following analysis is conservative. The Commission finds that the quantified benefits and costs indicate that the rule will have a positive net benefit, even without accounting for the unquantified benefit of reducing deadweight loss.[614]

i. Short-Term Lodging: Estimated Benefits of the Final Rule

As a result of the final rule, the Commission expects that the time consumers spend searching for short-term lodging will decrease because prices will be easier to compare within and across websites. Some consumers will reduce the number of short-term lodging listings they view prior to booking or spend less time understanding and assessing the full price.[615] In its analysis, the Commission makes the conservative and simpler assumption that the time spent viewing a listing remains the same, and that consumers reduce the number of listings they view. Table 11 quantifies the benefits of such time savings and provides low- and high-end estimates to account for uncertainty in the available statistics.

The Commission's analysis focuses on the benefits that accrue to consumers who book rooms from within the United States on any U.S.-facing website, which can include bookings at both domestic and foreign short-term lodgings. Short-term lodgings include both traditional hotels as well as rooms booked through home share websites like Airbnb and VRBO. In this section, the Commission outlines how it calculates the benefits listed in Table 11 as well as the assumptions made. The table reports a set of basic search statistics used in the calculation, the savings per year for consumers who book at U.S. short-term lodgings, the savings per year for consumers who book at foreign short-term lodgings with U.S.-facing websites, and the combined total savings for all U.S. consumers per year.

Although not all short-term lodgings charge resort fees, the lack of a unified standard of upfront pricing across listings makes comparing prices difficult and time consuming for consumers. Even a single short-term lodging website can vary in whether listings have hidden fees. Different hotel brands belonging to the same larger hotel company may impose hidden fees for listings in some cities but not in others. Some listings may note whether resort fees are included in the base price, but in very fine print under the listed price. Some listings may not say anything, requiring consumers to click through the listing to learn whether there are hidden fees at the end of the booking process. Given that a minimum of 6% of hotels[616] impose drip or partitioned pricing, and the average hotel shopper visits seventeen travel websites before booking,[617] consumers

[609] Throughout this section, we use ''hotel'' as an umbrella term for hotels, motels, inns, short-term rentals, vacation rentals, traditional bed and breakfasts, hostels, and other places of lodging.

[610] Shelanski, *supra* note 550.

[612] FTC–2023–0064–3094 (American Hotel & Lodging Association); Bjorn Hanson, U.S. Lodging Industry Fees and Surcharges Forecast to Increase to a New Record Level in 2018—$2.93 Billion, and Another Record Anticipated for 2019—the Newest Emerging Category is ''Resort Fees'' for Urban Luxury and Full Service Hotels (Aug. 27, 2018), *https://bjornhansonhospitality.com/fees-%26-surcharges*.

[613] Sally French & Sam Kemmis, *How to Avoid Hotel Resort Fees (and Which Brands Are the Worst),* NerdWallet (updated Aug. 1, 2024, 11:53 a.m. PDT), *https://www.nerdwallet.com/article/travel/hotel-resort-fees*.

[614] In this final short-term lodging net benefit analysis, the Commission updates firm counts, wage rates, any inflation-adjusted values, value of time, and 10–K hotel revenue information to reflect the most recent available data. The Commission was unable to update any numbers from IBISWorld Reports.

[615] The drip pricing literature suggests that, because time to view one listing is lower under upfront pricing, a subset of consumers may view more listings rather than fewer because the cost of viewing an additional listing has decreased. Sullivan, *supra* note 611. It is unclear how this affects total search time. If the higher number of listings viewed is offset by the lower time it takes to view each listing, the total search time will be lower under upfront pricing for this subset of consumers. If total time increases, it can be classified as ''good'' search time for this subset of consumers because it results in consumers purchasing their preferred hotel room. Alternatively, another group of consumers could view fewer listings because upfront prices allow consumers to compare rooms more easily and select their preferred hotel room more quickly. Blake, *supra* note 521. The total search time for these consumers will decrease. The Commission's analysis focuses on the latter group of consumers because the change in their search time represents a decrease in ''bad'' or unnecessary searches caused by drip pricing.

[616] FTC–2023–0064–3094 (American Hotel & Lodging Association).

[617] Chris Anderson & Saram Han, *The Billboard Effect: Still Alive and Well,* 17 Cornell Hosp. Rpt. 1 (2017), *https://hdl.handle.net/1813/70982*. The Commission calculates the average number of websites visited by summing the average number of

are likely to encounter at least one website that imposes dripped or partitioned pricing in their search for a hotel. Even if consumers complete their whole search and booking process without visiting any websites that impose hidden resort fees, the fact that there could be hidden fees creates uncertainty and may cause consumers to click through more listings than they otherwise would have to learn if the initial price is truly the final price. Therefore, the Commission quantifies the benefits for all U.S. consumers who book a room in a given year, regardless of whether they interacted with a website that imposed dripped or partitioned pricing.

(a) Search Statistics

The Commission uses two different studies to calculate low- and high-end estimates for the average number of minutes it takes to view one listing. On the low end, the analysis uses statistics on Airbnb user search behavior collected by Fradkin (2017) to calculate that consumers spend 9.48 minutes to view one listing.[618] On the high end, the analysis uses a hotel search cost model developed by Chen and Yao (2016) to calculate the average search cost per listing.[619] Using this average search cost, the Commission estimates that consumers spend 14.18 minutes viewing one listing. Appendix B in section V.E.7 contains calculation details for both estimates. Using the estimates from each study as low- and high-end estimates ensures that the analysis captures user search behavior when shopping on home share websites like Airbnb and when shopping for a traditional hotel.

To estimate the reduction in average listings viewed due to dripped or partitioned pricing, the Commission's analysis uses results on the average reduction in listings viewed under upfront pricing from an experiment in the live-event ticket industry.[620] That study found that the average reduction in listings viewed under upfront pricing was 10.6% of the mean listings viewed under drip pricing. For the low-end estimate, the analysis applies the same proportion to the mean listings viewed by Airbnb users in Fradkin (2017) (2.367 listings, proxied by number of contacts) and finds a reduction of 0.25 listings. On the high end, the Commission applies this to the mean listings viewed by hotel searchers in Chen and Yao (2016), 2.3 listings, and finds a reduction of 0.24 listings.[621]

Multiplying these numbers by the minutes to view one listing results in 2.39 to 3.47 minutes saved per transaction. These are likely conservative estimates, given that they assume consumers only view one website before booking a room. As previously stated, one study suggested that consumers visit an average of seventeen websites before booking.[622] The average reduction in listings viewed may also underestimate benefits from eliminating dripped and partitioned pricing because it is more difficult to adapt to the wide variability of fees in the short-term lodging industry than it is in the live-event ticketing industry, where listings have the same percentage fee. Short-term lodgings have different fees, and the number of lodgings with such fees will vary across markets.

Finally, as is described in detail in section V.E.3.b, the Commission's analysis uses $25.81 as the value of one hour work time.

(b) U.S. Hotels and Home Shares

Next, the Commission calculates the total savings per year for U.S. consumers who book at U.S. short-term lodgings, which includes both U.S. hotels and home shares. The Commission's analysis finds the total number of nights booked in the U.S. in 2022 by dividing the total revenue the U.S. short-term lodgings industry earned from rooms by the average daily rate (''ADR'').[623] The ADR is the average revenue per room-night booked in the U.S. The total number of nights booked in the U.S. in 2022 that would potentially be affected by this rule is about 1.29 billion.

Dividing the total number of nights booked by the average number of nights per booking gives 715 million total bookings.[624] About 91.8%, or 657 million, of these bookings are made by U.S. consumers.[625] Finally, the Commission calculates the total savings for U.S. consumers per year by multiplying the number of bookings made by U.S. consumers by the minutes saved per transaction and the value of time for consumers. This results in total savings ranging from about $674 million to $980.3 million.

(c) Foreign Hotels and Home Shares with U.S.-Facing websites

To estimate the number of foreign short-term lodging bookings made by U.S. consumers, the Commission uses the fact that 96% of all trips taken by U.S. consumers are domestic.[626] Multiplying the number of bookings made by U.S. consumers by $((1-0.96)/0.96)$ gives 27.4 million foreign bookings. The total savings for this category ranges from about $28.1 to $40.8 million.

(d) All Hotels and Home Shares

Together, U.S. and foreign bookings amount to about 683.9 million bookings per year. This corresponds to between 27.2 and 39.6 million hours saved by U.S. consumers per year, and between

OTAs, Hotel Sites, TripAdvisor, and Other Meta websites visited sixty days prior to reserving a room.

[618] Andrey Fradkin, *Search, Matching, and the Role of Digital Marketplace Design in Enabling Trade: Evidence from Airbnb* (MIT Initiative on the Digit. Econ., Working Paper, 2017), *https://ide.mit.edu/wp-content/uploads/2017/07/SearchMatchingEfficiency.pdf*.

[619] Yuxin Chen & Song Yao, *Sequential Search with Refinement: Model and Application with Click-Stream Data,* 63 Mgmt. Sci. 4345 (2016), *https://doi.org/10.1287/mnsc.2016.2557*.

[620] Blake, *supra* note 521.

[621] Although the Commission is basing its estimate about reduction in listings on data that comes from the ticketing industry, this method results in the most conservative reduction of viewed listings compared to other methods. The most relevant study from the hotel search cost literature estimates that improvements in hotel rankings (which may be loosely comparable to removing drip pricing) reduces search costs by $11.50. *See* Raluca M. Ursu, *The Power of Rankings: Quantifying the Effect of Rankings on Online Consumer Search and Purchase Decisions,* 37 Mktg. Sci. 530 (2018), *https://doi.org/10.1287/mksc.2017.1072.* Given the Commission's estimates of the time to view one listing (between 9.48 and 14.18 minutes), this suggests an average reduction of between 2.95 and 1.95 listings viewed, which is implausible given that various papers find the average number of listings viewed at baseline to be between 2 and 3. Thus, while some papers find substantially higher search costs than the Commission's method, these findings reinforce that, if anything, the benefits estimates presented here are likely conservative.

[622] *See* Anderson & Han, *supra* note 800. It is unclear whether the relationship between websites viewed and time saved is linear, as consumers may save less time on the fifteenth website they view than they do on the first. As such, it is difficult to extrapolate from the Commission's estimates to the total time saved for consumers who view multiple websites. Therefore, to remain conservative in its estimate of benefits, the Commission's analysis assumes that consumers visit only one website.

[623] Revenue equals about $192.23 billion. [628] Hollander, *supra* note 624.

(e) Additional Unquantified Benefits: Reductions in Deadweight Loss and Abandoned Transactions

As is discussed in section V.E.2.a.ii, the final rule requiring short-term lodgings to display total price of rooms will likely result in a reduction of deadweight loss. When consumers are not provided total price at the beginning of the booking process, sellers likely are able to charge higher prices than under the final rule. The rule's total price requirement may provide consumers with more complete pricing information so that they can make informed decisions about short-term lodging reservations, thus reducing deadweight loss. The Commission does not quantify the reduction in deadweight loss but acknowledges that it is a positive benefit to the final rule.

In some cases, once total price is provided, consumers may fully abandon the transaction (*i.e.,* not book any room). Since lodging cost is only a part of overall trip cost, abandoning a transaction may be less likely for short-term lodging than other industries. In that case, the unquantified benefit is likely to be small. The Commission solicited comment in the NPRM on the frequency of, and reasons for, abandoned transactions in the short-term lodging industry to help quantify this benefit, but did not receive adequate information in response, so this benefit remains unquantified.

ii. Short-Term Lodging: Estimated Costs of the Final Rule

The Commission herein describes the final rule's potential costs to the short-term lodging industry and, where possible, provides quantitative estimates of those costs. The costs to hotels from the final rule include a review of whether the rule applies and, in cases of noncompliance with the final rule, one-time costs to come into compliance and recurring annual costs to ensure ongoing compliance. The cost of employee time is monetized using wages obtained from the Bureau of Labor Statistics' National Industry-Specific Occupational Employment and Wage Estimates.[629] The Commission uses wages specific to the Traveler Accommodation industry (associated with NAICS code 721100). This industry includes traditional hotels and motels, casino hotels, bed and breakfast inns, hostels, and home share platforms.[630] The Commission also quantifies the cost to individual home share hosts in the form of a one-time cost to adjust prices on home share listings.

Table 12 outlines the estimated costs of the final rule. Panel A shows the costs for U.S. hotels and home share hosts; Panel B shows the costs for foreign hotels and home share hosts who post listings on U.S.-facing websites;[631] and Panel C shows the total combined costs for both groups.

(a) Panel A: U.S. Hotels and Home Share Hosts

There are 49,216 U.S. hotels associated with the ''Traveler Accommodation'' NAICS code. Of these firms, 6% impose resort fees, bringing the high-end number of U.S. firms affected to 2,953. The low-end number of firms affected is 2,948 after removing Marriott International, Inc., Omni Hotels Management Corporation, Choice Hotels International, Inc., Hilton Worldwide Inc., and Hyatt Hotels Corporation to account for the possibility that these hotels will eliminate dripped and partitioned pricing from their websites regardless of this rule to comply with any existing or forthcoming settlements with various State Attorneys General.[632]

Next, the Commission's analysis estimates the number of hours a U.S. hotel would spend complying with the final rule. The analysis assumes all hotels that do not impose dripped or partitioned pricing will spend one hour of lawyer time determining if the final rule requires any changes to their advertising. Hotels that are not presently compliant with the rule will incur additional costs to come into compliance. In the low-end estimate, the analysis assumes that, because many hotels have websites facing other countries that already have similar requirements to the final rule (*e.g.,* Canada, Australia, and the European Union member states), hotels already may have the experience and infrastructure required to incorporate the necessary changes to their operating practices. In this scenario, hotels have relatively low costs to transition to all-in pricing for their U.S.-facing websites. The analysis assumes five hours of lawyer time to determine how the final rule applies to the firm, forty hours of data scientist time to re-optimize the pricing strategy, and forty hours of web developer time to edit the website to display total prices and make other requisite disclosures.

In addition to hotels, the final rule also would affect individuals who participate in the home share market by listing their properties for short-term rentals on websites like Airbnb and VRBO. The Commission's analysis estimates the total number of home share hosts in the U.S. by starting with the number of Airbnb hosts in the U.S. who post home share listings (not including larger bed and breakfast or hostel establishments) and extrapolating to the full U.S. market using Airbnb's

[629] U.S. Bureau Lab. Stat., Occupational Employment and Wage Statistics, May 2023 National Industry-Specific Occupational Employment and Wage Estimates: NAICS 721100—Traveler Accommodation (May 2023), *https://www.bls.gov/oes/current/naics4_721100.htm* (''OEWS Traveler Accommodation'').

[630] NAICS code 721100 does not capture intermediary travel websites, which display pricing information and offer booking options for various short-term lodging firms. Because these intermediaries constantly update pricing information obtained directly from short-term lodging firms (*see, e.g.,* FTC–2023–0064–3293, Travel Technology Association), and do not need to reoptimize prices or drastically change displays themselves, the Commission believes that intermediary firms will not face additional compliance costs from the rule.

[631] The Commission's analysis includes costs to foreign hotels with U.S.-facing websites because complying with the rule may cause them to pass through some costs to U.S. hotel shoppers. The Commission is unable to quantify what percentage of costs will be passed through; to be conservative, the analysis includes all costs to foreign hotels and home share hosts.

[632] In 2021, Marriott agreed to a settlement with the Commonwealth of Pennsylvania, Office of the Attorney General, in which Marriott agreed to include mandatory resort fees in the base rate of its hotel rooms on the first page of the booking process. Assurance of Voluntary Compliance, *Commonwealth* v. *Marriott Int'l, Inc.,* No. GD–21–014016 (Pa. Ct. C.P. Nov. 16, 2021). In 2023 and 2024, Marriott entered into similar settlements with the Offices of the Attorney General in both the State of Nebraska and the State of Texas. Assurance of Voluntary Compliance, *Texas* v. *Marriott Int'l, Inc.,* No. 2023–CI09717 (Tex. Dist. Ct. May 16, 2023); Order Approving Assurance of Voluntary Compliance, *Nebraska* v. *Marriott Int'l, Inc.,* No. CI 23–3860 (Neb. Dist. Ct. Jan. 18, 2024). In 2023, Omni and Choice Hotels both agreed to similar multi-state settlements with the Offices of the Attorney General in the State of Colorado, the Commonwealth of Pennsylvania, and the State of Nebraska. *See, e.g.,* Assurance of Discontinuance, *In re Choice Hotels Int'l Inc. Resort Fees* (Colo. Sept. 21, 2023); Assurance of Discontinuance, *In re Omni Hotels Mgmt. Corp. Resort Fees* (Colo. Nov 9, 2023); Assurance of Voluntary Compliance, *Commonwealth* v. *Omni Hotels Mgmt.,* GD–23–013056 (Pa. Commw. Ct. Nov. 9, 2023); Assurance of Voluntary Compliance, *Commonwealth* v. *Choice Hotels Intl., Inc.,* GD–23–011023 (Pa. Commw. Ct. Sept. 21, 2023); Order Approving Assurance of Voluntary Compliance, *Nebraska* v. *Choice Hotels Int'l, Inc.,* No. CI 23–3269 (Neb. Dist. Ct. Sept. 27, 2023); Order Approving Assurance of Voluntary Compliance, *Nebraska* v. *Omni Hotels Mgmt. Corp.,* No. CI 23–3641 (Neb. Dist. Ct. Oct. 27, 2023). Choice Hotels agreed to an additional settlement with the Oregon Department of Justice. Assurance of Voluntary Compliance, *In re Choice Hotels, Int'l, Inc.,* No. 23–CV–39128 (Or. Cir. Ct. Sept. 21, 2023). In 2024, Hilton Hotels agreed to a settlement with the State of Nebraska, Office of the Attorney General. Final Consent Judgment, *Nebraska* v. *Hilton Dopco, Inc.,* No. CI 19–2366 (Neb. Dist. Ct. Jan. 29, 2024). Finally, Hyatt Hotels faces an ongoing lawsuit filed in 2023 by the State of Texas, Office of the Attorney General, which seeks to require Hyatt to display full prices in the initial advertised price of any hotel room. Plaintiff's Original Pet., *Texas* v. *Hyatt Hotels Corp.,* No. C2023–0884D (Tex. Dist. Ct. May 15, 2023).

U.S. market share.[633] On the low-end, the analysis assumes that each host will take one hour to reprice each listing. Hosts have, on average, 1.18 listings, resulting in 1.18 hours of time per host.[634] The value of time comes from the same source as in Table 11.

In the high-end cost scenario, the Commission's analysis assumes that hotels have not laid the groundwork for upfront pricing. The analysis assumes under this scenario that hotels require twice the number of hours to determine optimal prices, re-program the website to include total price, and review and confirm compliance. Thus, the one-time costs for hotels include ten hours of lawyer time, eighty hours of data scientist time, and eighty hours of web developer time. The analysis further assumes home share hosts spend three hours repricing each listing, resulting in 3.5 hours per host.

In addition to the one-time costs, the Commission's analysis also assumes hotels incur annual costs of between zero to ten hours of lawyer time per year to review and confirm compliance with the final rule.[635] The total costs, which include both the one-time fixed cost and the annual costs for the next ten years in present value, range from $35.9 million to $107.8 million using a 7% discount rate, and from $35.9 million to $112 million using a 3% discount rate. The Commission also finds that the per firm annualized cost to U.S. hotels that are not presently compliant with the rule ranges from $527 to $2,011 using a 7% discount rate, and from $434 to $1,825 using a 3% discount rate. Home share hosts in the U.S. incur an average one-time cost between $30.42 to $91.27.

All ranges of lawyer, data scientist, web developer, and home share host time used in the analysis serve as proxies for any costs associated with reviewing and ensuring compliance, adjusting pricing strategies, ensuring consumers are presented with total price, and re-evaluating home share listings, respectively, in response to the final rule.

(b) Panel B: Foreign Hotels and Home Share Hosts

The Commission acknowledges that non-U.S. firms and home share hosts with U.S.-facing websites may bear compliance costs from the final rule that may be passed on to consumers. Therefore, the Commission estimates these costs using the best available data. Estimating costs for foreign hotels and home share hosts using the same method in Panel A would be difficult because there are no reliable estimates for the number of foreign hotels and home share hosts or for the relevant international wage rate for lawyers, data scientists, and web developers. The Commission's analysis instead estimates foreign costs by extrapolating from the estimated U.S. costs in Panel A. Since the U.S. hotel industry's global market share is about 14.5%,[636] the one-time and annual costs for foreign hotels each can be calculated by multiplying the one-time and annual costs for U.S. hotels by $(1-0.145)/0.145$. This method captures the cost of all foreign hotels, including ones that will not be subject to the final rule because they do not have U.S.-facing advertising. Therefore, the costs to foreign hotels may be overestimated.

The Commission's analysis uses the percentage of Airbnb's U.S. revenue (43%)[637] as a proxy for the U.S. home share market's global market share. Using this proxy, the analysis estimates the one-time cost for foreign home share hosts to be equal to the total one-time cost for U.S. home share hosts multiplied by $(1-0.43)/0.43$. The total one-time and annual foreign hotel and home-share costs for the next ten years in present value range from $117.4 million to $352.8 million using a 7% discount rate, and from $117.4 million to $377.9 million using a 3% discount rate. The Commission is unable to provide the per firm annualized cost for foreign hotels and non-U.S. home share hosts because the number of foreign hotels and home share hosts is not known.

(c) Panel C: All Hotels and Home Share Hosts (US + Foreign)

The total cost for all affected hotels and home share hosts over ten years in present value is estimated to be from $153.3 million to $460.6 million using a 7% discount rate and from $153.3 million to $489.9 million using a 3% discount rate.

BILLING CODE 6750–01–P

[633] *See* Clark Shultz, *Airbnb increases market share in latest read from M Science,* Seeking Alpha (June 6, 2022 1:32 p.m. ET), *https://seekingalpha.com/news/3846023-airbnb-increases-market-share-in-latest-read-from-m-science* (providing Airbnb's market share); Thibault Masson, *Airbnb Host Data: Who are Airbnb hosts? Why are individual hosts more important than professional ones?,* Rental Scale-Up (updated Dec. 19, 2020), *https://www.rentalscaleup.com/airbnb-host-data-who-are-airbnb-hosts-why-are-individual-hosts-more-important-than-professional-ones/* (providing the statistics used to estimate the number of Airbnb home share hosts in the U.S.). The estimated total number of home share hosts in the U.S. is 675,603, which is calculated as 504,000/.746, where 504,000 is the number of Airbnb home share hosts in the U.S. and .746 is Airbnb's U.S. market share. The number of Airbnb home share hosts is calculated as 560,000 * .9 = 504,000, where 560,000 is the number of Airbnb hosts in the U.S., and 90% of these hosts are individual hosts (people who rent individual rooms or entire primary homes rather than traditional bed and breakfasts or hostels; traditional bed and breakfasts or hostels are already captured in the hotel firms defined by Traveler Accommodation NAICS code 721100).

[634] The average number of listings per host is calculated from the total number of U.S. listings and the total number of U.S. hosts. Steve Deane, *2022 Airbnb Statistics: Usage, Demographics, and Revenue Growth,* Stratos Jet Charters, Inc. Blog (Jan. 4, 2022), *https://www.stratosjets.com/blog/airbnb-statistics/* [*https://web.archive.org/web/20220219093345/https://www.stratosjets.com/blog/airbnb-statistics/*] (providing the total number of U.S. listings); Masson, *supra* note 633 (providing the total number of U.S. hosts).

[635] Since home share hosts are not operating large, sophisticated firms and will likely not spend additional time ensuring compliance beyond year one, the analysis assumes home share hosts do not incur annual costs due to the rule.

[636] The U.S. hotel industry's global market share in 2022 is calculated by adding the revenues reported in the IBISWorld Reports for ''Hotels and Motels in the US,'' ''Casino Hotels in the US,'' and ''Bed and Breakfast and Hostel Accommodations in the US,'' and dividing it by the global revenue found in IBISWorld Global Hotels & Resorts Industry Report. Hotels & Motels Industry Report, *supra* note 623; Bed & Breakfast Industry Report, *supra* note 623; Demetrios Berdousis, *Casino Hotels in the US,* IBISWorld (Jan. 2023).

Total Costs Over 10-Year Period (One-Time + Annual)	**7% Discount Rate**	**$35,898,819**	**$107,792,756**
Total Costs Over 10-Year Period (One-Time + Annual)	**3% Discount Rate**	**$35,898,819**	**$112,045,993**
A.4 U.S. Hotels and Home Share Hosts: Per Firm and Per Host Costs			

Annualized Cost Per Firm	7% Discount Rate	$527	$2,011
Annualized Cost Per Firm	3% Discount Rate	$434	$1,825
One-Time Cost Per Home Share Host		$30.42	$91.27
Panel B: Foreign Hotels and Home Share Hosts			
B.1. Foreign Hotels and Home Share Hosts: One-Time Costs			
Total Cost for Foreign Hotels		$90,447,636	$155,038,835
Total Cost for Foreign Home Share Hosts		$26,959,747	$80,879,242
Total One-Time Fixed Costs		**$117,407,383**	**$235,918,077**
B.2. Foreign Hotels and Home Share Hosts: Annual Costs			
Total Annual Costs		**$0**	**$16,639,899**
B.3. Foreign Hotels and Home Share Hosts: Total Costs			
Total Costs Over 10-Year Period (One-Time + Annual)	**7% Discount Rate**	**$117,407,383**	**$352,789,764**
Total Costs Over 10-Year Period (One-Time + Annual)	**3% Discount Rate**	**$117,407,383**	**$377,859,790**
Panel C: All Hotels and Home Share Hosts (U.S. + Foreign)			
Total One-Time Fixed Costs		$153,306,202	$323,883,053
Total Annual Costs		$0	$19,462,929
Grand Total Costs Over 10-Year Period (One-Time + Annual)	**7% Discount Rate**	**$153,306,202**	**$460,582,520**
Grand Total Costs Over 10-Year Period (One-Time + Annual)	**3% Discount Rate**	**$153,306,202**	**$489,905,783**

Note: Costs over ten years have been discounted to the present at both 3% and 7% rates. The number of U.S. hotels is from the U.S. Census Bureau NAICS code 721100.[638] The statistic that 6% of U.S. hotels impose drip pricing comes from a hotel industry commenter to the NPRM.[639] All hourly wages come from the U.S. Bureau of Labor Statistics.[640] The value of time for home share hosts is the hourly wage rate adjusted by the consumer value of time.[641] The total cost for foreign hotels is calculated by extrapolating from the total cost for U.S. hotels using the U.S. global market share of the short-term lodging industry from IBISWorld Industry Reports.[642] The total cost for foreign home share hosts is calculated by extrapolating from the total cost for U.S. home share costs using Airbnb's U.S. revenue as a percentage of its total revenue, as reported in Airbnb's 2023 10-K Filing.[643]

BILLING CODE 6750–01–C

iii. Short-Term Lodging: Net Benefits

Table 13 presents the net benefits of the final rule in the short-term lodging industry using the quantified benefits and costs discussed in section V.E.3.d.i and V.E.3.d.ii. To calculate the low-end of the range for net benefits, the Commission's analysis subtracts the total costs using the high-end cost assumptions from the total benefits using the low-end benefit assumptions. For the high-end of the range for net benefits, the analysis subtracts the total costs using the low-end cost assumptions from the total benefits using the high-end benefit assumptions.

[638] U.S. Census Bureau, *2021 SUSB Annual Datasets by Establishment Industry, supra* note 602.

[639] FTC–2023–0064–3094 (American Hotel & Lodging Association).

[640] OEWS Traveler Accommodation, *supra* note 629.

[641] *See* OEWS National, *supra* note 571 (providing the mean hourly wage); Hamermesh, *supra* note 533 (providing the value of time).

[642] *See infra* section V.E.3.d.ii.b (describing the calculations).

[643] Airbnb 10–K, *supra* note 637.

The quantified benefits and costs imply that the final rule will have a positive net benefit, even without accounting for the unquantified benefit of reducing deadweight loss.

Table 13 – Short-Term Lodging: Estimated Net Benefits Over 10-Year Period

		Low-End	High-End
Total Benefits	**7% Discount Rate**	$4,931,159,488	$7,171,936,592
Total Benefits	**3% Discount Rate**	$5,988,937,469	$8,710,381,378
Total Costs (One-Time + Annual)	**7% Discount Rate**	$153,306,202	$460,582,520
Total Costs (One-Time + Annual)	**3% Discount Rate**	$153,306,202	$489,905,783
		(Low Benefits – High Cost)	**(High Benefits – Low Cost)**
Net Benefits	**7% Discount Rate**	$4,470,576,968	$7,018,630,389
Net Benefits	**3% Discount Rate**	$5,499,031,686	$8,557,075,175

Note: Benefits have been discounted to the present at both 3% and 7%.

iv. Short-Term Lodging: Uncertainties

The Commission's ability to precisely estimate benefits and costs is limited due to uncertainties in key parameters. The quantified benefits and costs for the short-term lodging industry rely on a set of assumptions based on the best available public information. When the data are unclear, the analysis uses sets of assumptions that would generate a range of low- and high-end estimates. Table 14 summarizes the key assumptions and how they may affect the resulting estimate of quantified benefits and costs. When possible, the analysis underestimates benefits and overestimates costs in order to conservatively estimate net benefits.

BILLING CODE 6750–01–P

Table 14 – Short-Term Lodging: Summary of Key Uncertainties

Assumption or Uncertainty in Benefits Calculation	Impact on Benefits
The analysis assumes that reduction in average listings viewed is proportional (as a percentage of the baseline mean) to the reduction in average tickets viewed in the Blake Study.	This likely underestimates benefits because, unlike tickets on a ticketing platform, short-term lodgings vary substantially both within and across locations in the magnitude of the resort fees they charge. In addition, the hotel search cost literature finds search cost savings from improved hotel ranking (which may be comparable to removing drip pricing) that are very large and imply bigger reductions in average listings viewed.
The analysis assumes that because 96% of all trips taken by U.S. consumers are domestic, 96% of all rooms booked by U.S. consumers are located in the U.S.	Trips taken does not necessarily equal rooms booked, and it is likely that only some subset of trips taken by U.S. consumers also correspond to a room booking. If the true percentage of domestic bookings is greater than 96%, the estimate of the number of foreign hotel bookings will be too small, resulting in underestimated benefits. If it is less than 96%, the estimate of foreign hotel bookings will be too large, resulting in overestimated benefits.
The analysis assumes consumers only visit one travel website before booking a room.	If consumers visit more than one website before booking, the average reduction in listings viewed in response to the rule may be larger than estimated, resulting in underestimated benefits.
Assumption or Uncertainty in Costs Calculation	**Impact on Costs**
The analysis assumes 6% of all firms in the short-term lodging industry impose drip pricing.	The American Hotel & Lodging Association commented that "only 6% of hotels nationwide charge a mandatory resort/destination/amenity fee." The analysis assumes that this means that 6% of firms, not 6% of all establishments (physical hotel buildings), impose drip pricing. If actually 6% of all establishments impose drip pricing, then the estimate likely overestimates the number of firms that impose drip pricing, leading to inflated costs. For example, if all chain hotels impose drip pricing for at least one of their establishments and none or very few independent hotels do, the number of firms would be much smaller than 6% of all firms.
The analysis assumes that the number of hours to comply with the final rule is comprised of specified hours of lawyer time, data analyst time, and web developer time.	The analysis may overestimate costs per firm if many firms either already comply or have the systems in place to easily comply with the rule. Also, the analysis may underestimate costs if compliance requires a greater number of hours.

The analysis assumes Airbnb's market share in the U.S. home share industry is the same as its share of total hosts in the U.S.	If Airbnb's share of hosts is smaller than its market share, then the extrapolation to give the number of home share hosts in the U.S. (and therefore their total costs) will be underestimated. It will be overestimated if Airbnb's share of hosts is larger than its market share.
The analysis assumes the number of hours each Airbnb host spends repricing listings due to the final rule.	Costs may be overestimated if hosts spend less or no time repricing. Costs may be underestimated if hosts spend more time repricing.
The analysis assumes that the U.S. hotel industry's global market share by revenue is the same as its global market share by cost.	Costs for foreign hotels may be underestimated if the U.S. hotel industry's true global cost share is smaller and overestimated if the U.S. hotel industry's true global cost share is bigger.
The analysis assumes that the percentage of revenue Airbnb made in the U.S. is the same as the U.S. home share market's global market share.	Costs for hosts outside of the U.S. may be underestimated if the U.S. home share market's true global market share is smaller and overestimated if the U.S. home share market's true global market share is bigger.
The analysis assumes that 100% of all costs to foreign hotels with U.S.-facing advertising will be passed onto U.S. consumers.	The analysis includes costs to foreign hotels with U.S.-facing advertising because complying with the rule may cause them to pass through some costs to U.S. hotel shoppers. The Commission is unable to quantify what percentage of costs will be passed through. Although it may be trivial, to be conservative, the analysis includes all costs to foreign hotels and home share hosts. This inflates the cost estimates, resulting in a smaller, more conservative net benefit.

BILLING CODE 6750–01–C

4. Economic Evaluation of Alternatives

As an alternative to the rule, the Commission considered not pursuing rulemaking and instead relying on its existing tools of enforcement actions and consumer education. This approach is equivalent to a no-action baseline and would result in no incremental benefits or costs. The prevalence of drip pricing and hidden mandatory fees would persist.

The Commission also alternatively considered, as discussed in the Preliminary Regulatory Analysis, promulgating an industry-neutral version of the rule. The Commission was unable to quantify economy-wide benefits and provided a break-even analysis using quantified compliance costs for the entire economy.[644] The economy-wide break-even analysis implied there would be positive net benefits to the rule if the benefit per consumer was at least $6.65 per consumer per year over a ten-year period assuming a 7% discount rate or at least $5.95 assuming a 3% discount rate. The Commission estimated that per firm annualized costs for an economy-wide rule would be between $691 and $2,010 assuming a 7% discount rate and between $569 and $1,803 assuming a 3% discount rate.

[644] The break-even analysis provided in the Preliminary Regulatory Analysis utilized the same set of assumptions regarding the high-end and low-end numbers of hours required for firms to comply with the proposed economy-wide rule. The preliminary break-even analysis also made a set of assumptions about what proportion of the economy currently complied with the provisions of the proposed rule.

The Commission sets forth additional alternatives to the final rule that it considered in section V.B but does not have sufficient data to prepare a quantitative analysis of those alternatives.

5. Summary of Results

The Commission's final regulatory analysis catalogs and, where possible, quantifies the incremental benefits and costs of the final rule for the live-event ticketing and short-term lodging industries. The Commission estimates that the quantified benefits of the rule will exceed its quantified costs, and the Commission believes that the total benefits of the rule (quantified and unquantified) will outweigh the total costs (quantified and unquantified). The Commission estimates that the benefits of the final rule over the next ten years accruing solely from reduced consumer

search costs in the live-event ticketing industry range from $184 million to $2.46 billion under an assumed 7% discount rate, and $224 million to $2.99 billion using an assumed 3% discount rate. The Commission estimates compliance costs for live-event ticketing firms over the ten-year period to be between $15 million and $142 million using a 7% discount rate, and between $15 million and $154 million using a 3% discount rate.

For the short-term lodging industry, the Commission estimates ten-year benefits to consumers from reduced search costs to range from $4.93 billion to $7.17 billion using a 7% discount rate, and between $5.99 billion and $8.71 billion using a 3% discount rate. The Commission estimates compliance costs for short-term lodging firms for the ten-year period to be between $153 million and $461 million using a 7% discount rate and between $153 million and $490 million using a 3% discount rate.

The Commission also provides a break-even analysis using quantified compliance costs that are aggregated for the live-event ticketing and short-term lodging industries. The break-even analysis demonstrates that there are positive net benefits to the rule if the benefit per consumer is at least $0.33 per consumer per year over a ten-year period using a 7% discount rate. The break-even analysis does not account for costs from unintended consequences of the rule or the potential benefits from reducing deadweight loss by providing consumers with full information.

6. Appendix A: Model of Market Distortion Caused by Drip Pricing

Measuring the deadweight loss, the surplus transfer from consumers to firms, and the shift in quantity demanded requires a quantification of consumers' aggregate level of awareness. Academic research provides a model that relates consumers' partial awareness to the resulting shift in aggregate demand.[645] Specifically, the model assumes, based on empirical evidence, the elasticity of demand with respect to the fee equals the elasticity of demand with respect to the base price scaled by a factor of θ, where $0 < \theta < 1$. This factor, θ, serves as a measure of consumers' awareness of the fee. When consumers are fully aware of the fee, $\theta = 1$; when consumers are completely unaware, $\theta = 0$. As a working example, if demand is given by the equation $Q(P_{base},t) = a + bP_{base} + ct$, where $a, b,$ and c are constants, the previous assumption implies that $c = \theta b$. At $\theta = 1$, shrouding the fee has no effect, and the demand function simplifies to $Q(P_{total}, t) = a + bP_{total}$. At $\theta = 0$, shrouding the fee leaves consumers completely unaware of it, and demand is solely a function of the base price: $Q(P_{base}, t) = a + bP_{base}$. Assuming $0 < \theta < 1$, instead, one may note that, for any given change in the base price and the corresponding change to the quantity demanded, a larger change in the fee would be needed to effect the same change in quantity, reflecting consumers' partial awareness of, and decreased sensitivity to, the fee.

[645] Chetty, *supra* note 555.

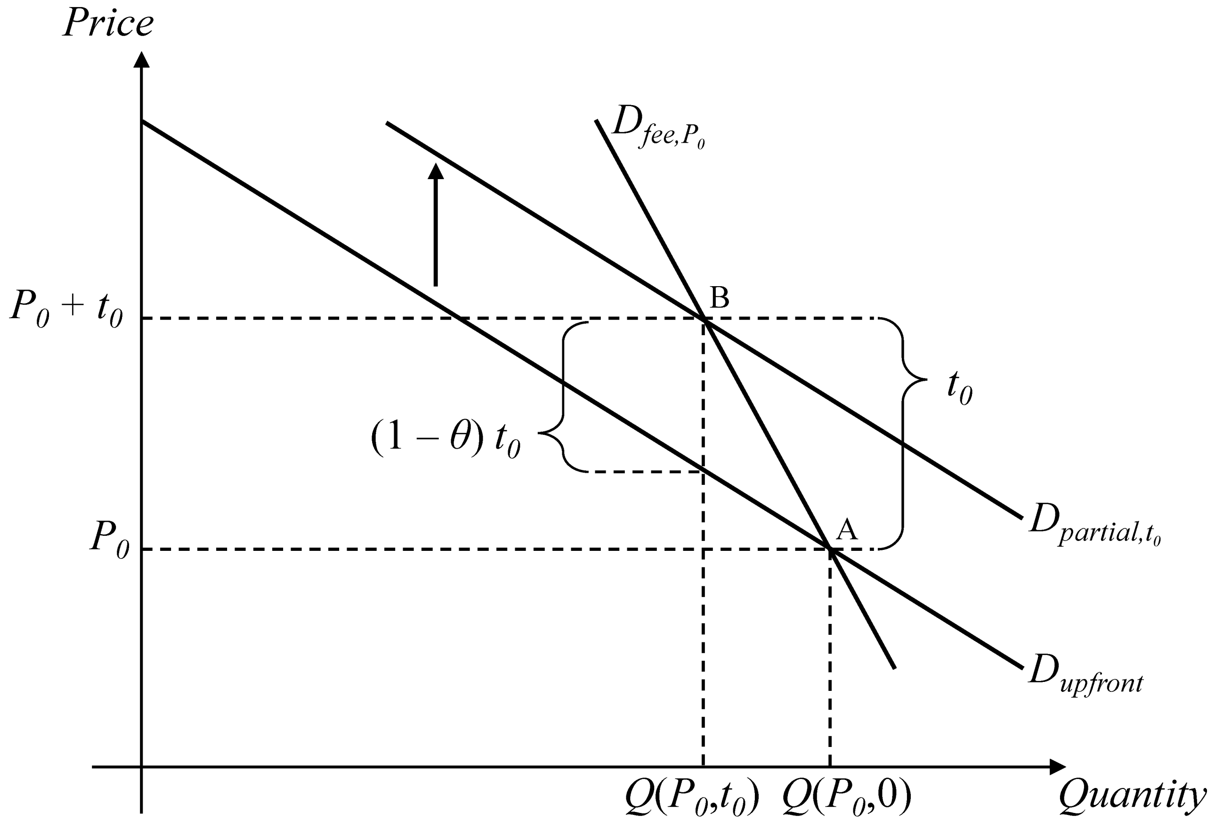
BILLING CODE 6750–01–P

As seen in Figures 1 & 2, D_{upfront} represents the inverse demand function, P_{total} as a function of Q, when $t = 0$, that is, when $P_{\text{total}} = P_{\text{base}}$. For this inverse demand function, changes to the full price, P_{total}, occur only through changes in the base price, P_{base}. For the working example, the inverse demand function is given by $P_{\text{total}}(Q) =- \frac{a}{b} + \frac{1}{b}Q$. For example, when there is no fee and the full price of the product is P_0, demand is $Q(P_0, 0)$, as illustrated by point A in Figure 3. To consider how demand responds to changes in the fee, one may fix P_{base} and let t vary. With the base price fixed at P_0, D_{fee,P_0} represents the inverse demand function relating quantity demanded and the full price when changes in the full price occur only through changes in the fee. That is, as t increases, demand moves up and to the left along D_{fee,P_0}. For the working example, D_{fee,P_0} is given by $P_{\text{total}}(Q) =- \frac{a}{\theta b} - \frac{1-\theta}{\theta} P_0 + \frac{1}{\theta b} Q$. One may note that D_{fee,P_0} is steeper than D_{upfront}, i.e., the slope of D_{fee,P_0}, $\frac{1}{\theta b}$, is greater in magnitude than the slope of D_{upfront}, $\frac{1}{b}$, since $0 < \theta < 1$. This difference in slopes graphically captures the difference in consumers' elasticities relative to the fee and to the base price. If the fee is set to t_0, then demand decreases from $Q(P_0, 0)$, point A, to $Q(P_0, t_0)$, point B.

If the fee is then fixed at t_0, one may consider changes in demand as the base price varies once again. In Figure 3, D_{partial,t_0} represents the inverse demand function when $t = t_0$. For the working example, D_{partial,t_0} is given by $P_{\text{total}}(Q) =- \frac{a}{b} + (1-\theta)t_0 + \frac{1}{b}Q$. For this example, one may note that D_{partial,t_0} equals D_{upfront} shifted up by $(1-\theta)t_0$, and it runs through point B. When $\theta = 1$, e.g., consumers are fully aware of the fee, D_{partial,t_0} coincides with D_{upfront}. That is, the partitioning of the full price into a base price

and a fee has no impact on demand. When θ = 0, e.g., consumers are completely unaware of the fee, D_{partial,t_0} coincides with D_{unaware}. Outside of these extreme cases, D_{partial,t_0} lies between the upfront demand curve and the fully shrouded demand curve, and θ quantifies the shift in aggregate demand caused by shrouded fees.

Figure 3 – Demand Shift Caused by Shrouded Pricing when Consumers are Partially Unaware

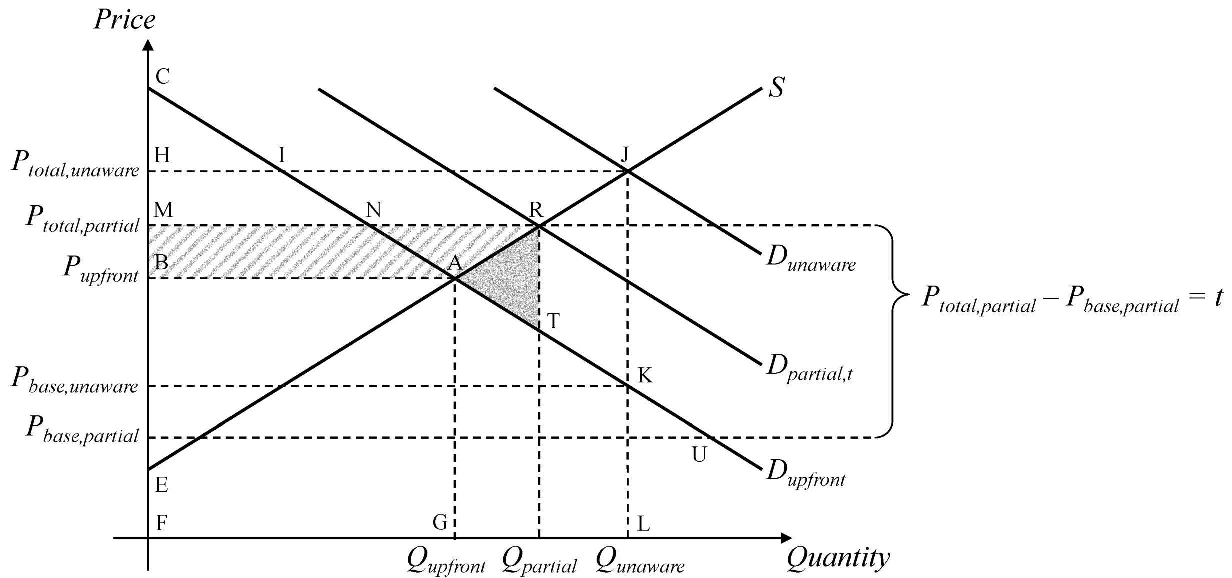


BILLING CODE 6750–01–C

Figure 4 illustrates how consumers' partial awareness of fees impacts the effect of shrouded pricing on consumer and producer surplus. The intersection of D_{partial} with *S*, illustrated by point *R*, at quantity Q_{partial} and price $P_{\text{total,partial}}$, represents the outcome when consumers are partially aware of the fee. In this figure, $D_{\text{fee},P_{\text{base,partial}}}$ (not shown) would go through point *U* (equivalent to point *A* in Figure 3) and point *R* (equivalent to point *B* in Figure 3). For comparison, in the case of complete unawareness (θ = 0), $D_{\text{fee},P_{\text{base,unaware}}}$ (not shown) would go vertically through point *K* (equivalent to point *A* in Figure 3) and point *J* (equivalent to point *B* in Figure 3). As illustrated in Figure 4, the more consumers are aware of the fee, *i.e.,* the larger the θ, the smaller the market clearing full price and, hence, the base price, must be. As an additional example, when consumers are fully aware of the fee (θ = 1), the market clearing full price under shrouded pricing equals the market clearing price under upfront pricing, P_{upfront}, and the base price, $P_{\text{base,aware}}$ (not shown), is lower than $P_{\text{base,partial}}$.

Consumer surplus is now equal to the area of triangle *CMN* minus the area of triangle *NRT*. Producer surplus is now equal to the area of triangle *EMR*. The deceptive shrouding of the price leads to a transfer of surplus from consumers to firms equal to the area of trapezoid *ABMR* as well as an additional decrease in consumer surplus not captured by firms, the deadweight loss, equal to the area of triangle *ART*. The surplus transfer from consumers to firms and the deadweight loss are both smaller in this case of partial awareness relative to the case where consumers are completely unaware of the fee. That is, the harm caused by the firms' deception is mitigated by the extent to which consumers are aware of and account for the fee.

Figure 4 – Market Distortion Caused by Shrouded Pricing when Consumers are Partially Unaware



7. Appendix B: Short-Term Lodging Industry Minutes per Listing Calculations

(a) Low-End Estimate of Minutes per Listing Calculation

The Commission's analysis uses the Airbnb user search statistics reported in Fradkin (2017) [646] to obtain a low-end time estimate to view one listing after clicking on it. The paper provides data on a random sample of users who searched for short-term rentals on Airbnb in a large U.S. city. It reports search behavior separately for all searchers and for searchers who contacted the host, either to inquire about a listing or to book it. The analysis uses those numbers to calculate search behavior for the group of searchers who did not send a contact. The relevant statistics for these three groups are summarized in Table B.1.

''Average unique listings seen'' includes all listings users see on a search result page, including listings users do not click on. ''Average time spent browsing'' includes entering search parameters, scrolling through results, and viewing listings after clicking on them. ''Average number of contacts'' is the average number of times searchers contacted a host for a listing. Since contacting the host requires users to click on the listing, the analysis uses this as a proxy for number of clicked-on listings.

Table B.1

	(1) All Searchers	(2) Searchers who sent at least one contact	(3) Searchers who did not send a contact
Observations	12,241	4,426	7,815
Average unique listings seen	68.53	87.81	57.61
Average time spent browsing (min)	35.77	57.87	23.25
Average number of contacts (proxy for clicks)		2.37	

From the third column, we calculate:

Time to view each listing without clicks = Average time spent browsing/ Average unique listings seen = 23.253/57.61 = .40 minutes per listing.

Because the average time spent browsing for the group in column (2) is inclusive of the amount of time spent sending contacts, not just viewing listings that were not contacted, we use the preceding value calculated from the group in column (3) to estimate the

[646] Andrey Fradkin, *Search, Matching, and the Role of Digital Marketplace Design in Enabling Trade: Evidence from Airbnb,* (MIT Initiative on the Digit. Econ., Working Paper, 2017), *https://ide.mit.edu/wp-content/uploads/2017/07/SearchMatchingEfficiency.pdf.*

following that applies to searchers in column 2:

Time spent viewing listings without clicks = Time to view each listing without clicks * Average unique listings seen = .40 * 87.812 = 35.44 minutes

and

Average total time viewing listings after clicking = Average time spent browsing − Time spent viewing listings without clicks = 57.874 − 35.44 = 22.43 minutes.

Finally, we calculate time to view one listing:

Time per listing = Average total time viewing listings after clicking/ Average number of contacts = 22.43/2.367 = 9.48 minutes per listing.[647]

(b) High-End Estimate of Minutes per Listing Calculation

The Commission's analysis uses the hotel search cost model developed by Chen and Yao (2016)[648] to calculate a high-end estimate of minutes to view one listing. The paper uses data from consumer search behavior when booking hotels in four major international cities on an anonymous major U.S. online travel website.

A search is defined as a listing click-through, and the search cost for a listing is specified as:

$C_{ij} = C_i\,(TimeConstraint_i,\ Slot_j) = \exp(\gamma_{i0} + \gamma_{i1} TimeConstraint_i + \gamma_{i2} Slot_j) = \exp(3.07\ -\ .05 * TimeConstraint_i + .01 * Slot_j)$

where $TimeConstraint_i$ is the number of days between consumer i's search and her check-in. $Slot_j$ is the slot position of the j-th search. The exponential operator ensures that the costs are positive. The gammas are mean levels of cost coefficients.

Using this formula, the analysis can find that the mean search cost per listing when 30 days in advance (the sample average) is exp(3.07 − (.05*30)) = $4.81 per listing. The inflation adjusted value is $6.10.

The resulting total search cost is then $6.10 per listing * 2.3 searches on average = $14.04. This total cost can be conceptualized as the number of minutes of viewing listings multiplied by the consumer's value of time. Using $25.81 per hour as the value of time, the time spent viewing listings is ($14.04/ $25.81 per hour) * 60 minutes per hour = 32.62 minutes.

The minutes to view one listing is then calculated as 32.62 minutes/2.3 searches = 14.18 minutes per listing.

VI. Paperwork Reduction Act

The Paperwork Reduction Act (''PRA''), 44 U.S.C. 3501–3520, requires Federal agencies to seek and obtain OMB approval before collecting information directed to ten or more persons. The term ''collection of information,'' as used in the PRA, includes any requirement or request for persons to obtain, maintain, retain, report, or publicly disclose information.[649] The PRA analysis requires an estimate of the burden associated with a collection of information.[650]

Upon publication of the NPRM, the Commission submitted an associated clearance request with a Supporting Statement to OMB for review under the PRA. In response, OMB filed a comment on December 11, 2023 (OMB Control No. 3084–0176), requesting that the Commission resubmit the clearance request upon the finalization of the proposed rule.[651] Accordingly, simultaneously with the publication of this final rule, the Commission is resubmitting its clearance request and a Supplemental Supporting Statement to OMB for review under the PRA. For the reasons discussed below, the Commission has made adjustments to its initial burden analysis. The Commission's updated burden analysis follows.

A. Disclosures Related to Final § 464.2(a) Through (c)

Final § 464.2(a) through (c) provide clarity as to how businesses should disclose total price, optional exclusions from total price, and the final amount of payment. This information is readily available to businesses, and many businesses already disclose this information in the course of their regular business activities. However, the Commission is aware that in some instances the requirements in final § 464.2(a) through (c) may require some businesses to display readily available information more clearly. OMB guidance is unclear regarding whether, and to what extent, requiring displays of information to be clearer amounts to a collection of information. The Commission is of the view that the rule's requirements regarding disclosure of total price, exclusions from total price and the final amount of payment are unlikely to qualify as collections of information. Nevertheless, the Commission includes this analysis out of an abundance of caution and not because it concedes that such standard pricing disclosures constitute collections of information.

Final § 464.2(a) provides it is an unfair and deceptive practice for a business to offer, display, or advertise any price of a covered good or service without clearly and conspicuously disclosing total price, which is defined in final § 464.1 to permit the exclusion of government charges, shipping charges, and fees or charges for any optional ancillary good or service. While businesses may exclude these charges from total price in offers, displays, and advertisements, final § 464.2(c) provides that, before a consumer consents to pay for any covered good or service, a business must disclose clearly and conspicuously: The nature, purpose, and amount of any fee or charge imposed on the transaction that has been excluded from total price and the identity of the good or service for which the fee or charge is imposed; and the final amount of payment for the transaction. Final § 464.2(b) relatedly provides that in any offer, display, or advertisement that represents any price of a covered good or service, total price must be disclosed more prominently than any other pricing information; however, where the final amount of payment for the transaction is displayed, it must be more prominent than, or as prominent as, total price. As discussed in section III, the Commission is not finalizing the proposed affirmative refundability disclosure requirement.

As part of the NPRM, the Commission assumed that, except for the proposed affirmative refundability disclosure requirement, the Commission's proposal was limited to disclosure activities that businesses already perform in the course of their regular business activities. However, following its review

[647] The numerator of ''Time per listing'' is an underestimate because ''Time spent browsing without clicks'' may capture some time spent viewing clicked-on listings that did not result in a contact. The denominator of ''Time per listing'' is also an underestimate because the number of listings clicked on is proxied using the number of listings users inquire about or book. Users may click on more listings than just the ones they want to inquire about or book. The two values are related. If the true denominator is higher than estimated, then the true numerator also will be higher. Higher listing clicks beyond those that resulted in a contact means more time spent viewing clicked-on listings that did not result in a contact. The ratio should remain about the same.

[649] 44 U.S.C. 3502(3); 5 CFR 1320.3(c).

[650] 5 CFR 1320.8(a)(4).

[651] *See* Office of Info. and Regul. Aff., Office of Mgmt. and Budget, OMB Control Number History for OMB Control Number 3084–0176, *https://www.reginfo.gov/public/do/PRAOMBHistory?ombControlNumber=3084-0176#.*

of the comments,[652] the Commission determines that, although many businesses already make the disclosures required by final § 464.2(a) through (c) in the usual course of their regular business activities, it is possible that some businesses in the live-event ticketing and short-term lodging industries may nonetheless incur incremental labor costs in ensuring that their disclosure activities are fully aligned with the requirements that are set forth in final § 464.2(a) through (c). As a result, out of an abundance of caution, the Commission updates its burden analysis in recognition of these comments. As described in section VI.A.5, however, the estimated costs may be overestimated.

1. Number of Respondents

The Commission estimates that there are 12,393 entities that may incur additional incremental labor costs to refine their disclosure activities so that they are fully compliant with final § 464.2. This estimate of 12,393 entities takes the high-end estimate of the number of firms in the United States in the live-event ticketing industry (9,440 firms) and the number of firms in the United States in the short-term lodging industry (2,953) that will incur additional compliance costs related to disclosure activities.

2. Estimated One-Time Hour Burden

In section V.E.3, the Commission estimates the cost of adjusting the presentation of advertised prices and the purchase process for online sales. The final regulatory analysis in section V assumes live-event ticketing and short-term lodging firms not presently compliant with the final rule will employ a low end of forty hours and a high end of eighty hours of web developer time to become compliant with the final rule. For purposes of this PRA analysis, the Commission uses the midpoint of the range of web developer hours presented in section V.E.3; that is, the Commission assumes sixty hours of web developer time will be necessary to adjust advertised prices and purchase processes to comply with final § 464.2's disclosure requirements.[653] Once firms adjust advertised prices and purchase process displays to be compliant with the final rule, any future changes to pricing displays or purchasing systems are part of the regular course of business and are not a direct consequence of the rule. The Commission finds that any ongoing additional costs associated with these activities are de minimis. Thus, the Commission estimates the total web developer hours to adjust price displays and purchase processes is 743,580 hours (12,393 firms × 60 web developer hours per firm).

3. Estimated One-Time Labor Costs

The estimated one-time labor cost that live-event ticketing and short-term lodging firms may incur to comply with final § 464.2's disclosure requirements is $32,990,931. This total is calculated by summing the labor costs for the live-event ticketing and short-term lodging industries. The labor cost for the live-event ticketing industry is calculated by applying the hourly wage for web developer time in the live-event ticketing industry of $45.95 to the estimate of 60 hours of web developer time multiplied by the number of U.S. firms in the live-event ticketing industry that incur additional compliance costs ($45.95/hour × 60 hours per firm × 9,440 firms) resulting in $26,026,080.[654] The labor cost for the short-term lodging industry is calculated by applying the hourly wage for web developer time in the short-term lodging industry of $39.31 to the estimate of sixty hours of web developer time multiplied by the number of U.S. firms in the short-term lodging industry that incur additional compliance costs ($39.31/hour × 60 hours per firm × 2,953 firms) resulting in $6,964,851.[655] The total for the two industries is $32,990,931 ($26,026,080 + $6,964,851).

4. Estimated One-Time Non-Labor Costs

The capital and start-up costs associated with the final rule's disclosure are de minimis. Any disclosure capital costs involved with the final rule, such as equipment and office supplies, would be costs borne by businesses in the normal course of business.

5. Projected Labor Costs Likely Overestimated

In preparing its burden estimate for compliance with final § 464.2(a) through (c), the Commission considered comments noting that some businesses may incur incremental labor costs to come into compliance with the rule, though commenters did not submit specific data for the Commission to evaluate this contention. As a result, the Commission's updated burden calculation relies in part on cost assumptions from its final regulatory analysis in section V. Applying these cost assumptions as one-time fixed costs in this burden analysis likely generates an overestimate of incremental labor costs for a number of reasons. First, the number of respondents that will have to make changes to their price displays and offers is likely to be significantly inflated. Since the Commission announced its NPRM, California's Honest Pricing Law, SB 478, which was amended by SB 1524, went into effect, making it illegal for businesses to advertise or list prices that do not include all mandatory fees or charges other than certain government taxes and shipping costs. As such, many national firms doing business in California, including live-event ticketing and short-term lodging firms, will already have incurred costs to develop the capabilities to comply with the Commission's rule even if they are currently only fully deploying such capabilities in California. Similar legislative and regulatory efforts have been enacted in New York, Massachusetts, North Carolina, Minnesota, Tennessee, Connecticut, Maryland, and Colorado.[656] Second, to the extent that live-event ticketing and short-term lodging firms opt to present all-inclusive total prices that obviate the need for the disclosures set forth in final § 464.2(b) through (c), such firms will require less web developer time to

[652] *See, e.g.,* FTC–2023–0064–3238 (Gibson, Dunn & Crutcher LLP argued that businesses would need to hire, among other professionals, web designers or software engineers ''to rebuild entire websites.'' In addition, it argued that the Preliminary Regulatory Analysis did not account for costs needed to replace physical ads, subway ads, and billboards and speculated that would take ''thousands of hours.''); FTC–2023–0064–2856 (National Football League called on the Commission to reexamine the estimated compliance costs because it did not adequately take into account ''the additional legal, developer, and data personnel time that would be required from live-event industry participants—and especially industry participants dealing in large volumes of live-event ticket sales in complying with a final rule.''); FTC–2023–0064–3122 (Vivid Seats commented: ''We believe that the FTC is underestimating the amount of employee time required by at least a factor of five.'').

[653] Brick-and-mortar firms that do not currently comply with the rule would update the price presentation and purchase process by printing new price displays, revising advertising campaigns, adding required disclosures, and potentially updating websites. The Commission uses web developer hours as a proxy for any costs associated with updating the price presentation and purchase process to become compliant with the final rule.

[654] The estimated mean hourly wages for a web developer are $45.95. OEWS Web Developers, *supra* note 571.

[655] The estimated mean hourly wages for a web developer are $39.31 in the short-term lodging industry. OEWS Web Developers, *supra* note 571.

[656] *See, e.g.,* N.Y. Arts & Cult. Aff. Law sec. 25.01–25.33 (McKinney 2023) (Effective Jun. 30, 2022); An Act Ensuring Transparent Ticket Pricing, H. 259, 193rd Gen. Court (Mass. 2023); S. 607 (2023–2024 Session) (N.C. 2023) (Enacted July 9, 2024); 2023 Minn. H.B. 3438 (Enacted May 20, 2024) (Minn.); H.B. 1231 (113th G.A.) (Tenn.) (Enacted May 24, 2023); Conn. Gen. Stat. § 53–289a (2023); S.B. 329 (2024 Reg. Sess.) (Md.); S.B. 329 (2024 Reg. Sess.) (Md.) (Enacted May, 9, 2024); H.B. 23–1378 (2024 Reg. Sess.) (Colo.) (Enacted June 5, 2024).

comply, and the Commission is likely overestimating total labor hours.

B. Prohibited Misrepresentations Under Final § 464.3

Final § 464.3, which the Commission proposed in similar form as § 464.3(a), sets forth that in any offer, display, or advertisement for a covered good or service, it is an unfair and deceptive practice for a business to misrepresent any fee or charge, including its nature, purpose, amount, or refundability, and the identity of the good or service for which the fee or charge is imposed. Consistent with the NPRM's discussion of proposed § 464.3(a), the Commission notes that final § 464.3 does not impose any information collection requirement for the purpose of the PRA. Rather than imposing any affirmative disclosure, reporting, or recordkeeping obligations,[657] final § 464.3 merely prohibits businesses from making certain misrepresentations that are already prohibited under section 5 of the FTC Act. As noted in the NPRM, any additional costs that might be associated with these prohibitions are de minimis.[658]

VII. Regulatory Flexibility Act—Final Regulatory Flexibility Analysis

The Regulatory Flexibility Act (''RFA''), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, requires an agency to provide an Initial Regulatory Flexibility Analysis (''IRFA'') and Final Regulatory Flexibility Analysis (''FRFA'') of any final rule subject to notice-and-comment requirements, unless the agency head certifies that the regulatory action will not have a significant economic impact on a substantial number of small entities.[659] In developing the final rule, the Commission carefully considered whether the rule would have a significant impact on a substantial number of small entities. The Commission continues to believe that the final rule's impact will not be substantial for most small entities and, in many cases, will likely positively impact small businesses by enabling them to compete fairly in the marketplace with larger players. However, the Commission cannot fully quantify the impact the final rule will have on such entities. Therefore, in the interest of thoroughness and an abundance of caution, the Commission has prepared the following FRFA for this final rule.

In the NPRM, the Commission provided an IRFA and solicited comments on the burden on any small entities that would be covered.[660] The Commission received comments in response to the IRFA.[661] The Commission received comments from two industry groups requesting that the Commission conduct a Small Business Regulatory Impact Analysis to analyze the impact of small businesses in particular industries.[662] The Commission also received comments from small business owners and industry groups in support of the rule and its impact on small businesses, as well as from commenters concerned about potential costs to small businesses. Consistent with the requirements of the FRFA, the Commission has considered the comments received, and the final rule's impact on small entities, including alternatives to the final rule.

The Commission thoroughly considered the feedback it received from the SBA Office of Advocacy, the Small Business Majority, and other commenters in developing the final rule. The Commission modifies the proposed rule in response, in part, to such feedback. The Commission will continue to engage with small business stakeholders to facilitate implementation of, and compliance with, the final rule and other guidance as necessary to assist small entities in complying with the rule.

Based on the Commission's expertise, and after careful review and consideration of the entire rulemaking record—including the more than 60,800 comments the Commission received in response to the NPRM, empirical research on how bait-and-switch pricing tactics, including drip pricing and partitioned pricing, harm consumers and honest competitors, and the Commission's Final Regulatory Analysis in section V—the Commission adopts this final rule focused on covered goods or services with certain additional revisions to reduce compliance burdens on small businesses and other entities. To begin with, because this final rule is limited to covered goods or services, many industries that have significant small business participants are no longer covered. Second, the Commission adopts an extended compliance date—120 days—to ensure that small businesses have adequate time to come into compliance with the rule's requirements.[663] Third, as discussed in section III, in response to feedback from commenters representing the interests of small businesses, the Commission clarifies in this SBP that businesses may exclude from total price pass-through credit card or other payment processing fees if they give consumers a viable payment alternative without a fee (*e.g.,* cash is accepted). In addition, as discussed in section III, the final rule adopts definitions of government charges to increase flexibility for businesses, including small businesses.

A. Statement of the Need for, and Objectives of, the Rule

The Commission describes the need for, and objectives of, the rule in section V.A. The legal basis for the rule is section 18 of the FTC Act, 15 U.S.C. 57a, which authorizes the Commission to promulgate, modify, and repeal trade regulation rules that define with specificity acts or practices in or affecting commerce that are unfair or deceptive within the meaning of section 5(a)(1) of the FTC Act, 15 U.S.C. 45(a)(1).

B. Significant Issues Raised by Comments, the Commission's Assessment and Response, and Any Changes Made as a Result

Commenters, including the Small Business Majority, argued that the IRFA failed to appropriately assess the impact of the proposed rule on small businesses.[664] The NPRM assumed that of the total estimated firms in the United States (6,140,612),[665] only a

The Small Business Administration, Office of Advocacy raised similar criticisms of the proposed rule. *See* U.S. Small Bus. Admin., Office of Advocacy, Re: Trade Regulation Rule on Unfair or Deceptive Fees FTC–2023–0064–0001, *https://advocacy.sba.gov/wp-content/uploads/2024/03/Comment-Letter-Trade-Regulation-Rule-on-Unfair-or-Deceptive-Fees.pdf.* The Commission addresses that comment *infra* section VII.C.

[662] FTC–2023–0064–3269 (IHRSA—The Health & Fitness Association); FTC–2023–0064–3294 (International Franchise Association). The Commission notes that the final rule is limited to Covered Good or Services, which does not include the health and fitness industry.

[663] A 120-day compliance date after publication in the **Federal Register** complies with the requirements of the Congressional Review Act that a ''major rule'' may not take effect fewer than sixty days after the rule is published in the **Federal Register.** 5 U.S.C. 801(a)(1)(3).

[664] FTC–2023–0064–3251 (National RV Dealers Association); FTC–2023–0064–2367 (Small Business Majority).

[665] The number of firms used in the NPRM was provided by the United States Census Bureau's Statistics of United States Businesses. U.S. Census Bureau, *2020 SUSB Annual Datasets by Establishment Industry* (Mar. 2023), *https://www.census.gov/data/datasets/2020/econ/susb/2020-susb.html.*

small fraction (818,178 or about 13%) would incur additional costs beyond the initial one-hour compliance review to comply fully with the proposed rule. Commenters, including the Small Business Majority, argued that the IRFA failed to appropriately assess the impact of the proposed rule on small businesses.[666] For the purpose of the IRFA, the Commission concluded that the proposed rule would not have a significant economic impact on a substantial number of small entities and solicited comment on its analysis, including the submission of supporting or contradictory empirical data. The Commission did not receive any data or other evidence to suggest that the number of firms incurring additional costs should be higher. The Commission anticipates that modifications made in the final rule will reduce the number of businesses that are likely to incur additional costs.

These commenters further asserted the rule's proposed economic analysis underestimated the cost of attorneys' fees and ongoing costs to comply with the rule.[667] The Commission addresses comments and concerns related to its economic analysis in section V, including estimates for attorneys' fees and ongoing compliance costs.

The same commenters also noted that the Commission's IRFA failed to appropriately consider alternatives to the proposed rule for small businesses.[668] The Commission disagrees. The NPRM stated that the Commission had considered alternatives, including: (1) a rule that would exempt small businesses from the proposed rule; (2) a rule that would apply to online-only businesses; (3) alternatives that would otherwise narrow the scope of the proposed rule, including limiting application of the rule to Covered Businesses as defined in the NPRM; or (4) terminating the rulemaking entirely. Consistent with the NPRM, the Commission declines to exempt small businesses, including those that offer live-event ticketing and short-term lodging, from the rule to avoid creating uncertainty across businesses as to whether the rule applies to them, to avoid creating unfair competitive advantages for those businesses that engage in bait-and-switch pricing and misrepresent fees, and to ensure maximum consumer benefits from increased price transparency. The NPRM also invited comment on questions and concerns related to small businesses, including the estimated number of small businesses and the impact on those businesses, as well as alternatives to the rule for small businesses. The Commission's FRFA includes further discussion of the alternatives considered in section V.B.

The Small Business Majority noted that many small businesses lack access to legal staff and ''run the risk of occupying a substantial amount of time to understand how exactly they need to adjust their pricing models to comply with the new rule.'' [669] As a result, the Small Business Majority encouraged the Commission to provide guidance to small businesses, including through outreach, education, and compliance guidance, as well as working directly with small businesses, to help small businesses comply with the final rule.[670] The Commission highlights and discusses herein that, in response to the comments, the final rule both narrows the NPRM proposal as well as clarifies it in certain respects, thereby decreasing the burden on small businesses. The SBP also discusses various pricing scenarios raised by commenters, and the Commission believes that such discussion will aid businesses, including small businesses, in complying with the final rule. Finally, the Commission routinely provides guidance and conducts outreach to businesses on complying with the FTC Act and regulations that it enforces and, as required by law, the Commission will publish a small entity compliance guide to assist small businesses in complying with the rule.

The Commission received numerous comments from industry groups and individual small business owners, including comments highlighting the benefits of the proposed rule on small businesses, as well as comments identifying certain concerns about application of the proposed rule to small businesses. The Commission addresses many of these comments in other parts of the SBP, including section III, and accordingly incorporates that analysis into its FRFA, and addresses the remainder of these comments herein.

Some commenters argued that fees help small businesses offset rising costs and staff salaries and benefits, especially for small businesses operating on thin margins.[671] One industry group argued that the rule might place small businesses at a competitive disadvantage compared to larger businesses.[672] As discussed in Parts III and V, the Commission narrows the scope of the rule to address concerns affecting small businesses by, for example, modifying the definition of government charges and addressing factual scenarios and questions concerning application of the rule to small businesses, including related to credit card surcharges and contingent fees. In making these clarifications and modifications, the Commission narrows the total price requirement for, and thereby reduces the compliance burden on businesses, including small businesses, offering covered goods or services. As discussed in section VII.C, the Commission is also adopting an extended 120-day compliance date to allow more time for businesses, including small businesses, to assess and come into compliance with the final rule.

Conversely, other commenters noted that bait-and-switch practices and misleading fees harm small businesses, and that the rule will help small businesses.[673] One State representative asserted that the final rule would help small businesses because small businesses that advertise the entire price of their goods and services are at a competitive disadvantage compared to larger businesses that advertise lower prices and only disclose fees at the end of a transaction.[674] Consumer advocacy groups urged the Commission not to exempt small businesses, arguing that consumers and small businesses alike will benefit from greater pricing transparency and a prohibition on deceptive pricing.[675] The Commission also received numerous individual comments, including from small business owners, expressing support for

the rule, because it would benefit small businesses.[676]

The Commission notes that the final rule does not prohibit any business offering live-event ticketing or short-term lodging from charging consumers fees or raising prices to support necessary operating costs, such as labor costs or rising expenses. The final rule instead requires that such charges and fees be incorporated in total price and that they not be misleading.

C. Comment by the Small Business Administration, Office of Advocacy, the Commission's Assessment and Response, and Any Changes Made as a Result

The SBA Office of Advocacy filed a comment requesting that the Commission ''prepare a supplemental initial regulatory flexibility analysis that fully considers the economic impact of the proposed rulemaking on small entities and alternatives that may reduce that burden,'' as well as ''clarify that this rulemaking will not apply to small non-profit organizations.'' [677] The SBA Office of Advocacy argues that the Commission's IRFA did not comply with the requirements of the Regulatory Flexibility Act because it ''fail[ed] to provide an accurate description of the small entities to which the proposed rule will apply,'' and failed to provide ''an accurate description of the costs associated with the compliance requirements.'' [678] According to the SBA Office of Advocacy, the Commission also ''failed to consider significant alternatives that would minimize any significant economic impact of the proposed rule on small businesses.'' [679] The Commission has considered this comment, which it further summarizes herein, and responds as follows.

The SBA Office of Advocacy recommended that the Commission count small businesses using NAICS-code specific thresholds defined by the SBA, rather than using a threshold of 500 employees.[680] In response to this comment, the Commission now uses the NAICS-code specific thresholds set by the SBA to determine the number of small businesses in the Final Regulatory Flexibility Analysis contained in section VII.D.

The comment further contended that ''there are other alternatives that the FTC should have considered in its IRFA,'' such as ''exempting certain sectors of small businesses or imposing a limit on certain fees'' and ''allowing businesses more time to comply with the rule.[681] The Commission did consider such alternatives and narrows the scope of the final rule to covered goods or services, thereby limiting the rule's application to only those businesses, including small businesses, that offer, display, or advertise such goods or services. The Commission declines, however, to impose a limit on the amount of fees, so long as they are disclosed and not misleading in accordance with the rule's requirements, including as discussed in section III.

As to the suggestion to give businesses more time to comply with the rule, the Commission adopts a compliance date of 120 days after publication of the final rule in the **Federal Register**. The final rule will go into effect, and compliance with the final rule will be required, on that date. This extended timeline considers comments received from the SBA Office of Advocacy and small businesses, underscoring the time it might take to come into compliance with the final rule. For example, some small businesses may decide to seek outside guidance about whether they need to make adjustments to come into compliance, while others will conduct their own compliance review.[682] The Commission finds 120 days should be enough time even for small businesses conducting their own compliance review, and that a 120-day period between publication in the **Federal Register** and the rule's compliance date appropriately balances the interests of small businesses with the interests of protecting consumers. Further, in addition to guidance in this SBP, the Commission also will publish a small entity compliance guide to assist small businesses in complying with the rule.

Finally, the SBA Office of Advocacy ''encourages the FTC to clarify that this rulemaking will not apply to non-profits.'' [683] The final rule can be enforced to the full scope of the Commission's jurisdiction. Congress empowered the Commission to ''prevent persons, partnerships, or corporations'' from engaging in ''unfair or deceptive acts or practices in or affecting commerce.'' [684] To fall within the definition of ''corporation'' under the FTC Act, an entity must be ''organized to carry on business for its own profit or that of its members.'' [685] These FTC Act provisions, taken together, have been interpreted in Commission precedent [686] and judicial decisions [687] to mean that the Commission lacks jurisdiction to prevent section 5 violations by a corporation not organized to carry on business for its own profit or that of its members. The Commission stresses, however, that both judicial decisions and Commission precedent recognize that not all entities claiming tax-exempt status as non-profits fall outside the Commission's jurisdiction.[688] ''Congress took pains in drafting § 4 [15 U.S.C. 44] to authorize the Commission to regulate so-called nonprofit corporations, associations and all other entities if they are in fact profit-making enterprises.'' [689]

D. Description and Estimate of the Number of Small Entities To Which the Rule Will Apply

The final rule covers businesses that offer short-term lodging and live-event tickets. Small businesses that currently comply with the final rule will have a relatively trivial cost of assessing whether they are currently in

compliance, and the Commission assumes these firms will require at most one hour of lawyer time to confirm compliance. Small businesses that offer covered goods or services and currently do not disclose total price will incur additional costs to adjust advertised prices, their marketing campaigns, and the consumer purchase process to comply with the rule.

Using the size standards set by the SBA,[690] the Commission calculates that there are potentially as many as 9,034 small firms in the U.S that may sell tickets for live events.[691] For the economic regulatory analysis in section V, the Commission assumes all live-event ticketing firms will incur additional costs to adjust advertised prices, their marketing campaigns, and the consumer purchase process to comply with the rule. The Commission notes that there may be some live-event ticket sellers that are currently in compliance and will therefore have a trivial cost of compliance with the final rule.

For the short-term lodging industry, the Commission separately estimates there are as many as 675,603 home share hosts in the U.S. The Commission assumes that these home share hosts are all considered small entities. Using the NAICS-code specific thresholds set by the SBA, the Commission calculates that there are potentially as many as 2,798 small firms within NAICS code 7211 (''Accommodation'').[692]

E. Description of the Projected Reporting, Recordkeeping, and Other Compliance Requirements

The final rule contains no reporting or recordkeeping requirements; however, the final rule imposes disclosure obligations. Only small entities that offer, display, or advertise covered goods or services must comply with the rule and, therefore, will incur compliance costs. To comply with the final rule, small entities that offer, display, or advertise any price of a covered good or service are required to disclose the total price clearly and conspicuously and, generally, more prominently than any other pricing information. Small entities must also disclose other imposed fees and charges before a consumer consents to pay and must not misrepresent any fee or charge. For firms that already comply with the final rule, the one-time indirect cost per firm is assumed to be, at most, one hour of lawyer time for regulatory familiarization. This cost is excluded from the Regulatory Flexibility Analysis since such familiarization is not a compliance requirement.

For small businesses subject to the rule that are not currently in compliance with the rule's requirements, the Commission has determined that firms will need to adjust advertised prices, marketing campaigns, and the purchase process to comply with the rule. These firms may also incur recurring annual costs of additional lawyer time to assess and confirm annual compliance. As discussed in more detail in section V, the Commission estimates that direct compliance costs in the live-event ticketing industry, over a ten-year period, would result in annualized costs of $648–$2,144 per firm assuming a 7% discount rate or $534–$1,916 per firm assuming a 3% discount rate. U.S. home share hosts would incur one-time costs re-optimizing prices of $30.42–$91.27. The Commission also estimates direct compliance costs for U.S. hotels, over a ten-year period, would result in annualized costs of $527–$2,011 per firm assuming a 7% discount rate or $434–$1,825 per firm assuming a 3% discount rate. These estimates, however, are for firms of all sizes; the Commission has not separately estimated the costs for small businesses specifically.

F. Discussion of Significant Alternatives the Commission Considered That Would Accomplish the Stated Objectives of the Final Rule and That Would Minimize Any Significant Economic Impact of the Final Rule on Small Entities

The Regulatory Flexibility Act requires that agencies include a description of the steps the agency has taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and the other significant alternatives to the rule considered by the agency which affect the impact on small entities was rejected.[693] Statutory examples of ''significant alternatives'' include different requirements or timetables that take into account the resources available to small entities; the clarification, consolidation, or simplification of compliance and reporting requirements under the rule for small entities; the use of performance rather than design standards; and an exemption from coverage of the rule, or any part thereof, for small entities.[694]

In the NPRM, the Commission sought comment on various potential alternatives to the proposed rule, including alternatives that were tailored to the needs of small businesses and that addressed the impact (including costs) that would be incurred by businesses to comply with the proposed rule.[695] Specifically, the Commission sought comment on the estimated number and the nature of small business entities for which the proposed rule would have a significant economic impact, whether the proposed rule would have a significant economic impact on a substantial number of small entities, and if so, how it could be modified to avoid such an impact, as well as whether the proposed definition for ''business'' should exclude certain businesses, including small businesses meeting the SBA's definition of a ''small business concern'' and the SBA's Table of Size Standards, or simply certain limited-service and full-service restaurants meeting such requirements.[696] The Commission also inquired as to whether the ''total price'' definition should exclude mandatory charges by restaurants for service performed for the customer in lieu of tips, as defined by the Department of

[690] *See* U.S. Small Bus. Admin., Table of Small Bus. Size Standards, *https://www.sba.gov/document/support-table-size-standards.*

[691] The Commission uses the latest data available from the Census Bureau's Statistics of U.S. Businesses database, available based on firm revenue and firm size. U.S. Census Bureau, Stat. of U.S. Bus. (last revised July 9, 2024), *https://www.census.gov/programs-surveys/susb.html.* The calculation of 9,034 live-event ticketing firms is likely an overestimate of the number of small businesses due to data incompatibility and the use of the high-end assumption regarding how live-event ticketing firms are categorized using NAICS codes. The U.S. SBA sets different revenue thresholds for different NAICS codes. However, the Statistics of U.S. Businesses does not necessarily report the number of firms with earnings under those particular thresholds. Therefore, the Commission calculates there may be as many as 3,094 firms in NAICS code 711310 with receipts under the SBA threshold of $40 million, 4,358 firms in NAICS code 711320 with receipts under $25 million (an overestimate given the SBA threshold of $22 million for NAICS code 711320), and 1,582 firms in NAICS code 561599 with receipts under $35 million (an overestimate given the SBA threshold of $32.5 million for NAICS code 561599).

[692] *Id.* The calculation of 2,798 small hotels firms is likely an overestimate of the number of small businesses due to data incompatibility. The U.S. SBA sets a revenue threshold of $9 million for NAICS code 721191 and NAICS code 721199. However, the Statistics of U.S. Businesses does not report number of firms for those particular thresholds. Therefore, the Commission calculates there are as many as 42,186 firms in NAICS code 721110 with receipts under the SBA threshold of $40 million, 101 firms in NAICS code 721120 with receipts under the SBA threshold of $40 million, 2,960 firms in NAICS code 7211191 with receipts under $10 million (an overestimate given the SBA threshold), and 1,384 firms with receipts under $10 million (an overestimate given the SBA threshold).

[693] 5 U.S.C. 604(a)(6).

[694] *See* 5 U.S.C. 603(c).

[695] NPRM, 88 FR 77479–83.

[696] *Id.*

Labor.[697] The Commission also considered alternatives that would otherwise narrow the scope of the proposed rule, including limiting application of the rule to ''Covered Businesses'' as defined in the NPRM, ultimately adopting a variation of this approach in the final rule.

The Commission requested this information to minimize the final rule's burden on all businesses, including small entities. As explained through this SBP, the Commission has considered the comments and alternatives proposed by the commenters, including the SBA Office of Advocacy, and finds that the final rule will not create a significant impact on small entities. Indeed, the type of deception that will be unlawful under the final rule is already unlawful under the FTC Act, but the final rule would allow the Commission to obtain monetary relief more efficiently than it could solely under section 19(a)(2) of the FTC Act (*i.e.,* without a rule violation), thereby deterring current and would be violators of the FTC Act.

In its Preliminary Regulatory Analysis, the Commission described an alternative to the proposed rule, namely, to terminate the rulemaking and rely instead on the Commission's previously existing tools, such as consumer education and enforcement actions brought under sections 5 and 19 of the FTC Act, to combat the specified unfair or deceptive pricing practices. The Commission believes that promulgation of the rule will result in greater net benefits to the marketplace while imposing no additional burdens beyond what is required by the FTC Act. As the Commission describes further in section V, the rule will not only result in significant benefits to consumers but also improve the competitive environment, particularly for small, independent, or new firms. Therefore, the rule appears to be superior to this alternative for small entities.

As discussed herein, the Commission narrows the rule by adding a definition for ''covered good or service'' that is limited to Live-event tickets or Short-term lodging. The Commission also modifies the definition of government charges to replace the language that included only those government charges levied ''on consumers,'' with language clarifying that any government charge ''imposed on the transaction'' may be excluded from total price. Finally, the Commission addresses in section III how the rule would apply to credit card processing fees and contingent fees charged by small businesses.

[697] *Id.,* 88 FR 77481.

The Commission notes that it has designed the final rule to minimize compliance costs for all businesses. As stated in section V, the Commission estimates that direct compliance costs in the live-event ticketing industry, over a ten-year period, would result in annualized costs of $648–$2,144 per firm assuming a 7% discount rate or $534–$1,916 per firm assuming a 3% discount rate. U.S. home share hosts would incur one-time costs re-optimizing prices of $30.42–$91.27. The Commission also estimates direct compliance costs for U.S. hotels, over a ten-year period, would result in annualized costs of $527–$2,011 per firm assuming a 7% discount rate or $434–$1,825 per firm assuming a 3% discount rate. Based on the available evidence, the Commission does not believe that the analysis in section V is fundamentally different for small entities. For this reason, the Commission is not creating an exception for small entities or creating different regulatory requirements for small entities.

The Commission also is not delaying the effective date of the final rule solely for small entities. The final rule's effective date is 120 days after publication in the **Federal Register** on May 9, 2025. In the Commission's view, the rule's effective date of May 9, 2025 will afford small entities sufficient time to comply with the final rule, and commenters have not provided evidence that more time is necessary. The Commission declines to set different effective dates for small businesses and larger businesses because the final rule's core objectives include promoting comparison shopping for consumers and leveling the playing field for honest competitors. For all of the reasons stated, these objectives would be thwarted in a marketplace where certain businesses must comply with the rule's requirements for a period of time while others have more time to continue engaging in unfair or deceptive pricing practices.

VIII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs has designated this rule as a ''major rule,'' as defined by 5 U.S.C. 804(2).

List of Subjects in 16 CFR Part 464

Advertising, Consumer protection, Trade practices.

■ For the reasons set forth above, the Federal Trade Commission adds part 464 to chapter I of title 16 of the Code of Federal Regulations to read as follows:

PART 464—RULE ON UNFAIR OR DECEPTIVE FEES

Sec.

464.1 Definitions.
464.2 Hidden fees prohibited.
464.3 Misleading fees prohibited.
464.4 Relation to State laws.
464.5 Severability.

Authority: 15 U.S.C. 41 through 58.

§ 464.1 Definitions.

Ancillary good or service means any additional good(s) or service(s) offered to a consumer as part of the same transaction.

Business means an individual, corporation, partnership, association, or any other entity that offers goods or services, including, but not limited to, online, in mobile applications, and in physical locations.

Clear(ly) and conspicuous(ly) means a required disclosure that is easily noticeable (*i.e.,* difficult to miss) and easily understandable by ordinary consumers, including in all of the following ways:

(1) In any communication that is solely visual or solely audible, the disclosure must be made through the same means through which the communication is presented. In any communication made through both visual and audible means, such as a television advertisement, the disclosure must be presented simultaneously in both the visual and audible portions of the communication even if the representation requiring the disclosure is made in only one means.

(2) A visual disclosure, by its size, contrast, location, the length of time it appears, and other characteristics, must stand out from any accompanying text or other visual elements so that it is easily noticed, read, and understood.

(3) An audible disclosure, including by telephone or streaming video, must be delivered in a volume, speed, and cadence sufficient for ordinary consumers to easily hear and understand it.

(4) In any communication using an interactive electronic medium, such as the internet, a mobile application, or software, the disclosure must be unavoidable.

(5) The disclosure must use diction and syntax understandable to ordinary consumers and must appear in each language in which the representation that requires the disclosure appears.

(6) The disclosure must comply with these requirements in each medium through which it is received, including all electronic devices and face-to-face communications.

(7) The disclosure must not be contradicted or mitigated by, or

inconsistent with, anything else in the communication.

(8) When the representation or sales practice targets a specific audience, such as children, older adults, or the terminally ill, ''ordinary consumers'' includes members of that group.

Covered good or service means:

(1) Live-event tickets; or

(2) Short-term lodging, including temporary sleeping accommodations at a hotel, motel, inn, short-term rental, vacation rental, or other place of lodging.

Government charges means the fees or charges imposed on the transaction by a Federal, State, Tribal, or local government agency, unit, or department.

Pricing information means any information relating to an amount a consumer may pay.

Shipping charges means the fees or charges that reasonably reflect the amount a business incurs to send physical goods to a consumer, including through the mail, private mail and shipping services, or by freight.

Total price means the maximum total of all fees or charges a consumer must pay for any good(s) or service(s) and any mandatory ancillary good or service, except that government charges, shipping charges, and fees or charges for any optional ancillary good or service may be excluded.

§ 464.2 Hidden fees prohibited.

(a) It is an unfair and deceptive practice and a violation of this part for any business to offer, display, or advertise any price of a covered good or service without clearly and conspicuously disclosing the total price.

(b) In any offer, display, or advertisement that represents any price of a covered good or service, a business must disclose the total price more prominently than any other pricing information. However, where the final amount of payment for the transaction is displayed, the final amount of payment must be disclosed more prominently than, or as prominently as, the total price.

(c) A business must disclose clearly and conspicuously, before the consumer consents to pay for any covered good or service:

(1) The nature, purpose, and amount of any fee or charge imposed on the transaction that has been excluded from total price and the identity of the good or service for which the fee or charge is imposed; and

(2) The final amount of payment for the transaction.

§ 464.3 Misleading fees prohibited.

In any offer, display, or advertisement for a covered good or service it is an unfair and deceptive practice and a violation of this part for any business to misrepresent any fee or charge, including: the nature, purpose, amount, or refundability of any fee or charge; and the identity of the good or service for which the fee or charge is imposed.

§ 464.4 Relation to State laws.

(a) *In general.* This part will not be construed as superseding, altering, or affecting any State statute, regulation, order, or interpretation relating to unfair or deceptive fees or charges, except to the extent that such statute, regulation, order, or interpretation is inconsistent with the provisions of this part, and then only to the extent of the inconsistency.

(b) *Greater protection under State law.* For purposes of this section, a State statute, regulation, order, or interpretation is not inconsistent with the provisions of this part if the protection such statute, regulation, order, or interpretation affords any consumer is greater than the protection provided under this part.

§ 464.5 Severability.

If any provision of this part is held to be invalid or unenforceable by its terms, or as applied to any person, industry, or circumstance, or stayed pending further agency action, the provision shall be construed so as to continue to give the maximum effect to the provision permitted by law and such invalidity shall not affect the application of the provision to other persons, industries, or circumstances or the validity or application of other provisions. If any provision or application of this part is held to be invalid or unenforceable, the provision or application shall be severable from this part and shall not affect the remainder thereof.

By direction of the Commission, Commissioner Ferguson dissenting.

Joel Christie,

Acting Secretary.
